

Doncaster Local Records Centre Constitution

Doncaster Metropolitan Borough Council, Directorate of Economy & Environment, Built and Natural Environment Team, Civic Office, Waterdale, Doncaster, DN1 3BU.

Tel: 01302 734891
Email: brc@doncaster.gov.uk

This document describes the status, structures and operating arrangements of Doncaster Local Records Centre (DLRC).

1. The work of DLRC.....	page 1
2. Where and how DLRC operates.....	page 2
3. How DLRC is constituted.....	page 3
4. How DLRC Partnership operates and is accountable.....	page 4
5. How DLRC communicates and reports.....	page 5
6. How DLRC is funded.....	page 5
7. Reviewing and updating the Constitution.....	page 6

1. The work of DLRC

- 1.1 Doncaster Local Records Centre (hereinafter DLRC) has evolved over the last century thanks to the efforts and expertise of local naturalists, in association with Doncaster Metropolitan Borough Council (hereinafter DMBC). More than 120 years of biological recording have resulted in DLRC becoming the central point for the collection, validation, interpretation and historical recording of local environmental records. Its role and functions remain fundamentally the same, as defined below:
- 1.2 DLRC is ***'a not-for-profit service run in partnership for public benefit, which collects, collates, manages and disseminates information of known quality relating to wildlife, wildlife sites and habitats for the Doncaster Borough.'***
- 1.3 Specifically, DLRC collects, validates, manages and makes available detailed information about plants, animals, wildlife sites and habitats within the DMBC administrative area. This also includes access to a physical archive including Herbaria, taxidermy specimens and an invertebrate collection, which are maintained at Doncaster Museum (see 'where DLRC operates' below). DLRC functions may also include the commissioning and practical collection of environmental data, interpretation of biological records, training and educational outreach work, as part of an enhanced service.

- 1.4 DLRC does not hold local archaeological records although these may be present as incidental site data; these are available from the South Yorkshire Sites and Monuments Record managed by the South Yorkshire Archaeology Service. DLRC does not hold or maintain a current record of local badger setts and activity, which is available from the South Yorkshire Badger Group. Please refer to DLRC's policy on how it deals with confidential or sensitive data. DLRC collects and holds sites data for Local Geological Sites including Regionally Important Geological Sites, but additional geological and geomorphological data (both of historical nature and for non-designated sites) may be available from Doncaster Geological Records Centre managed by the Sheffield Area Geology Trust.
- 1.5 The main aim of DLRC is to work in partnership with a range of stakeholders to store and maintain an up-to-date picture of the health and character of the Borough's wildlife resource for present and future generations. The dissemination, interpretation and use of these data by data contributors and enquirers are important tools in recording and monitoring environmental change, informing wildlife conservation and management efforts, environmental education and research and shaping development plans and proposals.
- 1.6 Examples of DLRC work areas include:
- Development, implementation and monitoring of the Local Biodiversity Action Plan, Botanical Atlas, and Doncaster's Audit of priority species;
 - Supporting the business of Doncaster's Local Sites Partnership;
 - Informing strategic land-use planning and specific development management proposals;
 - Conservation project development;
 - Environmental study and research;
 - Other environmental data enquiries.

2. Where and how DLRC operates

- 2.1 Doncaster Metropolitan Borough is the largest metropolitan borough in the country, covering 580 square kilometres, and hosting a rich diversity of geology, habitats and species. More than half a million species records representing Doncaster's biodiversity are stored on DLRC's electronic Recorder 6 database, managed and maintained by the Biological Records Officer based at Civic Office, Waterdale, Doncaster DN1 3BU. The database is held on a networked installation on a secure server and is password protected at the workstation(s). The database is backed up to this secure server on a programmed basis. Paper originals of records are held in an archive facility at Doncaster Museum and this archive has recently been catalogued with support from Doncaster Naturalists Society. This archive may be accessed by special arrangement with Doncaster Museum Service.
- 2.2 Information may be accessed by contacting the Biological Records Officer or by prior appointment at Doncaster Museum. All data requests, contributions and enquiries should be directed, in the first instance, to the Biological Records Officer. Please note that the information stored at Civic Office is in electronic format and includes personal data as part of the full data record. It is not possible to view publicly these data either independently or accompanied at a workstation and a specific data request should be completed in accordance with DLRC procedures.

Data requests can be completed via:

- a data request form accessed through the DLRC webpages;
- by email
- A postal request sent to Biological Records Officer, Directorate of Economy & Environment, Civic Office, Waterdale, Doncaster, DN1 3UB

Telephone enquiries about the service should use 01302 734891

2.3 Supporting literature, reference materials and specimens are also maintained at Doncaster Museum. Some of these can be accessed by special arrangement with Doncaster Museum Service.

2.4 To support and facilitate the sharing of data with local contributors and users of the Museum Service, the Biological Records Officer holds regular open sessions at the Museum. These provide an opportunity for local naturalists to have support in accessing and providing records both to the database and the Museum archive.

2.5 As set out above, a number of local services and stakeholders work together to form Doncaster's Local Record Centre, and this includes occasional support and data exchange with organisations and individuals from outside of the Borough. Most notably the Doncaster Local Record Centre is a member/shareholder of the Yorkshire Environmental Data Network (YEDN). The objective of the YEDN is to promote the understanding and protection of the environment and furthering the collection and availability of environmental data for the North of England, by amongst other means:

- enabling, supporting and maintaining an information technology system to provide access to environmental data;
- enabling and promoting the consolidation and sharing of environmental information; and
- promoting the maintenance of accurate environmental information.

The benefits of being a member of the YEDN are:

- Access to continued IT system development that will improve data collation and interpretation for environmental and spatial planning functions,
- Involvement in the development of best practice standards for data administration and use,
- Involvement in the development of the national accreditation system, which is likely to become the benchmark for quality environmental decision making,
- Wider access to funding including sources currently unavailable to individual centres.

3. How DLRC is constituted

3.1 Doncaster Local Records Centre is a resource hosted and supported by DMBC, whilst a partnership-based Steering Committee advises on its operation and direction. As part of the hosting arrangement Doncaster Council provides office space and resources as well as technical (data management, GIS, IT), financial, legal and personnel, and other support.

3.2 The Steering Committee oversees the operation of DLRC and is an unincorporated partnership between Council officers and key conservation partners which include

representatives from Natural England, the Yorkshire Wildlife Trust and Doncaster Naturalists' Society.

- 3.3 A number of environmental organisations and researchers contribute data and information to the Centre and in return, (along with DMBC and the DLRC Committee) have free access to all non-sensitive information held by DLRC. This allows them to, amongst other things, put their records into a regional context (see DLRC's '**Data Access and Exchange**' and '**Confidentiality**' policies).
- 3.4 As a member of YEDN, DLRC will in time contribute data to the NBN Atlas through the YEDN, and similarly data available to the YEDN will be shared with Local Record Centres.. The establishment of YEDN regulates the current relationship between Local Record Centres within the region. The business description of YEDN permits it to engage in all aspects of regional data supply and collation without affecting the ability of the Local Record Centres to operate at a local level.

4. How DLRC Partnership operates and is accountable

- 4.1 The Biological Records Officer is responsible for the day-to-day up-keep and management of the electronic database and dissemination of data, whilst the Museum Service is responsible for DLRC resources on their premises.
- 4.2 The Biological Records Officer will work in accordance with all relevant DMBC policies and procedures (including DLRC policy statements). The Biological Records Officer and his/her work will be overseen through the existing management arrangements of DMBC which will remain accountable for all official business of DLRC.
- 4.3 The Biological Records Officer's manager will chair a committee (the Steering Committee) the remit of which will be to review and discuss current DLRC policy and any issues arising. The Steering Committee will meet on a regular basis (approximately annually). This meeting will include an annual review of DLRC's work programme and business, and potential future priorities and work streams. An up-to-date list of committee membership, official roles/posts and responsibilities will be maintained.
- 4.4 The committee may make recommendations to DMBC (the host organisation and signatory to the YEDN Partnership) in relation to DLRC. DMBC will inform the Steering Committee of its actions in light of any recommendations, including the reasons for any recommendations which are not taken forward.
- 4.5 DLRC policies and procedures will be published on the web pages and include:
 - Data Access and Exchange Policy
 - DLRC Charging Policy
 - DLRC Confidentiality Policy
 - DLRC Data Validation Policy and Procedure
 - DLRC Legacy Data Statement
 - DLRC Data Transfer Statement
 - DLRC Data Transfer License (Individuals)
 - DLRC Data Transfer License (Organisations)
 - Data Security Policy

- 4.6 Responses to data enquiries will be provided in accordance with Freedom of Information request guidelines and DMBC's Customer Service Charter.
- 4.7 The Steering Committee will nominate a member to liaise between DLRC and the YEDN, and who will be responsible for reporting back to the Committee.
- 4.8 DLRC is accredited by the Association of Local Environmental Records Centres (ALERC). ALERC lays down procedures and standards to which LRCs should aspire in order to provide a high and consistent standard of practice and service. This accreditation is reviewed every five years.

5. How DLRC communicates and reports

- 5.1 DLRC will utilise available resources to communicate its business and services to the wider public, clients and internal stakeholders. This includes the use of web pages on the DMBC website to provide information about its services, the data held, current policies, priorities and procedures.
- 5.2 The website also includes an e-form to submit data to DLRC, although DLRC will accept records in alternative formats as long as the mandatory data are provided to validate and complete the record.
- 5.3 DLRC will aim to tailor its response to enquirers to meet their data requirements, and have regard to the findings of any future Equality Impact Assessments.
- 5.4 DLRC will aim to maximise communication of its services through Local Authority Services and the work of its Partners.
- 5.5 As part of an enhanced LRC function, DLRC may undertake outreach work (presentations, training, workshops etc) to raise environmental awareness and communicate and promote its role and work.
- 5.6 DLRC will exchange data with YEDN, to be shared with the NBN Atlas.
- 5.7 There will be a regular meeting of the DLRC steering committee.

6. How DLRC is funded

- 6.1 DLRC staff, service support and accommodation are funded by DMBC, and supported by the voluntary skills and expertise of its partners. The fees that the service generates are utilised to contribute towards the collection of new data, particularly with respect to maintaining an up-to-date evidence base for designated sites. The fees are also used to contribute towards the proactive dissemination of data, i.e. by making some data available through electronic means. These costs are largely met by DMBC, however the fee income helps support the continuation of key aspects of this service as identified above.
- 6.2 DLRC will publish a Charging Policy which will be subject to regular review.

7. Reviewing and updating the Constitution.

7.1 This document will be updated as required, including amendments resulting from the consideration of any recommendations made by the Local Records Centre Steering Committee.
