The employment requirement is largely made up of Site 001 and 941 (M18 J6 & RHADS Site 1) (Table 4). It is unclear how these spatially concentrated employment sites in peripheral areas away from town centres will meet future employment needs. It is disingenuous to say they are accessible via a range of transport modes when it will mainly be car. Allocating such road reliant sites is counter to the opportunities needed to combat climate change, Para 4.31 compounds this by associating the potential for employment growth in the north of the Borough to a putative A1-A19 link road, for which no proposals are actually shown, but if these proposals do emerge towards the end of the plan period then clearly that employment land would not come on-stream until much nearer to the 2050 date for the UK to achieve net zero carbon. In short, this is a 20th century economic vision based on Doncaster’s continuing obsession with building roads and peripheral employment sites, and it has no place in preparing the Borough for the realities of the mid 21st century that will be defined by how places respond to the challenges of climate change. PROPOSED CHANGE As we have consistently argued, Doncaster needs to provide evidence of how its economic growth ambitions are compatible with meeting future employment needs in a genuinely sustainable way. We are unconvinced that a growth strategy focusing on road-based distribution and logistics is compatible with this, but if it is then the evidence must be provided to demonstrate it. Otherwise, the Plan is enabling a flawed growth strategy, and both must be revised. Specifically, we consider that the focus on a small number of very large, peripheral sites needs to be replaced with a much finer-grain approach addressing the skills and needs of different communities across the Borough, accompanied by a plan to de-carbonise the employment patterns of the Borough.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The responses to the Issues and Options Consultation highlighted that jobs/sites do not need to be located next to the people they serve. Also the market analysis of the sites/jobs requirements shows that there is a strong continued demand for large sites for logistics with the M18 corridor being the preferred location. The Employment Land Review (Colliers 2019) and Employment Land Need Assessment demonstrate this. The Local and its policies should be read as a whole as it considers the issue of climate change and resilience. It has also been subject to Sustainability Appraisal. For example, Policy 13 sets out improvements to the Strategic Transport Network (including public transport) which will ensure that employment sites can be accessed by all modes of transport.
The Local Plan in some cases fails to... the policies and proposals needed to guide development to the right places whilst protecting and improving the environment and people’s quality of life.” In particular, any Residential Area that has a boundary or near location (200m) to a Policy 4: Employment Allocation Policy 5: Employment Policy Area The effect on Residential Areas that have boundaries or are within 200m to Policy 4 & 5 are or can be Poor Mental & Physical Health, Disturbed random Sleep patterns, Anxiety, Depression, to name but a few. Caused by, Fear of Toxic Emissions or Explosion 24-hour process noise 24-hour random noise from delivery or business activities Pollution Heavy / Increased Traffic Unsightly Industrial Landscape All of which in the past have failed to be controlled or stopped by Planning or enforcement due to lack of local / government Policy support. This also contradicts, para 13.1, 13.2, 13.3 Policy 51: Health Policy 55: Pollution It also fails to consider, HSE Consultation Mapping impacts and Explosion zones, Restrictions on B2 General Industry activities involving C.O.M.A.H. sites (Control of Major Accident Hazards), or Hazardous substance usage and storage with B2 & B8 When any Policy Area which has a boundary or location within 200m of a Residential Area. The witnessed current effect of the above is causing Residential displacement (people moving or wanting to move away from long established Residential areas). This has caused poor mental and physical health for those that have left or still remain. General Note. I have not come across any new road designs to facilitate the ever increasing need to allow car school runs and drop offs with several known reports of car/pupil incidences in the last year. I also see no new/existing road development schemes within our area to facilitate the ever-increasing traffic, cars and lorries, which these Policies 4&5 generate. Regardless of there placement next to a motorway network they still generate a draw of traffic within and through our towns and villages without restriction or control. All comments are provided from a layman’s point of view and are not meant to be defamatory in anyway. I also apologise if my views/comments are actually covered already within the 386 pages of the Plan. PROPOSED CHANGE It has to be made clear without questionable doubt or appeal that, any activity or Policy within say a respected boundary of 250m from any Residential property or Area can only operate within, B1 b/c or retail. Only operate with set limited hours including its running of process plant and machinery, infrastructure, business activities, deliveries, people and vehicle movements. Not emit noise of any level or singular frequency or tone. Not create COMAH/HSE Zoning have no detrimental effect to local amenities however “contested” For example, Policy 11: A) 2. & 3. B), should also be included within relevant policies such as Policy 4 & 5, but also expanded to cover issues highlighted above. Policy 4&5 should be tested against, Traffic Loading Environmental impact Residential Health & wellbeing Impact extending 250m beyond its boundaries to cover issues above. Policy 4&5 should only apply if sited 250m away from any Residential Area or Property Otherwise, the following should apply, B1 b/c or retail only. Only operate with set limited activity hours including its running of process plant, machinery, deliveries, people and vehicle movements. Not emit noise of any level or singular frequency or tone or multitone. Not create COMAH/HSE Zoning have no detrimental effect to local amenities however “contested”. It’s difficult to illustrate my point and its impact without past examples used as a test against the new policies. I am happy to discuss these if needed. But one thing I can assure you currently when it reaches any planning stage, it becomes too late for a whole list of reason. Policy plans should start the protection filter. Some references that may be of use. Seveso Directive provides guidance on policy with regards to Protecting the environment, health and our economy. Separation distances between chemical establishments and sensitive land use areas.

Summary:

Insufficient protection given to existing residential areas that have a boundary close to (200m suggested) an employment site. Impact on health with proximity of employment development caused by: o Fear of toxic emissions or explosion o 24hr process noise o 24 hr random noise o Pollution o Increased traffic o Negative Impact on landscape. All of the above contradict policies 51 Health and 55 pollution. Potentially hazardous uses should be restricted on employment sites close to residential areas (200mt suggested) Employment Policies should be amended to restrict what type of development and on operations on an employment site close to a residential area including: o B1 b/c or retail use only. o Limitations on hours for plant/machinery use, deliveries, vehicle movement. o Noise limitations o No hazardous use o No loss of local amenity. Parts A2 & 3B of Policy 11 should be included in Policy 4 & 5. Policy 4 & 5 should be tested against: o Traffic loading o Environmental impact o Residential health & well being o Impacts extending 250m beyond employment site boundary to cover above issues. No evidence of new road schemes to facilitate increased traffic from proposed employment sites in Thorne area.

Response:

The Local Plan allocates new employment sites to meet the identified requirement for land. All sites have to be ‘sustainable’, and are assessed against a range of criteria including Health and Safety, Access, Air Quality etc. (The sustainability Report by independent consultants ‘Wood’ is available on our website). No development should in theory have (on balance) a negative impact that outweighs the positive. Uses on sites. The uses of employment sites falls into three broad categories, Office, Industrial & Manufacturing and Warehousing in terms of the Local Plan allocations. It is not over prescriptive on the specific types of use. More detail of specific use is covered in the Planning Application process. Any allocated site would still need planning permission before any development. Any uses must fail within the boundaries of the ‘B’ type uses (i.e. Employment type) permitted on allocated employment sites. Any uses that could potentially cause a health and safety issue are strictly covered by Government regulations. Plus, it is the duty of an employer to provide a safe working environment for both workers and the surrounding area.
(regardless of the proximity of a residential area). Any negative impacts identified in the planning application process should be mitigated against and 'conditions' can be placed on any permission. Any uses on existing employment sites that are perceived to be causing a health and safety issue, a hazardous use, pollution or highways issue can be dealt with through Planning Enforcement. Any reported problems can be checked and resolved. Traffic Any new development has the potential to increase traffic on the roads. 'Highways capacity' is one of the criteria in the sustainability Appraisal (criteria 8b (i)). The impacts of new development have been looked at by the Councils 'Highways' team and also Highways England. No new development should cause a problem to the highways network and if any is highlighted mitigation will be needed. It is often the case that mitigation for increased traffic is achieved with improved movement management (traffic lights, junction improvements etc.) Regarding the suggestion for a 200mt boundary between employment sites. In review of the sites put forward as potential employment sites and those proposed for allocation it is not possible to only allocate sites that are more than 200mt from a residential area. In terms of the 'Sustainability Appraisal' any sites 200mt from an urban area would be likely to score 'negative impacts' in several of the assessment criteria (see Sustainability Assessment)

Policy 4 identifies sites for employment uses and specifies the employment use types that would be supported. Policy 5 supports employment policy areas for employment uses. Minerals can only be worked where they occur. However, it is acknowledged that hydrocarbons can be won using alternative techniques such as directional drilling where conditions allow. Opposition to hydrocarbon developments often orientates around locational factors such as proximity to residential properties and in countryside areas access and landscape impact. As a consequence, the industry is often encouraged or redirected to industrial areas. It is therefore important that the Policies are flexible to allow other uses on the land allocations that may not fall within the identified use classes and particularly which may be temporary in nature, small in footprint and would not prejudice the longer term intention for development.

Summary:
Policy 4 identifies sites for employment uses and specifies the employment use types that would be supported. Policy 5 supports employment policy. Hydrocarbons can be won using directional drilling and industry is redirected to industrial areas. The policy needs to be flexible to allow for other use classes, especially if they are temporary.

Response:
Comment noted. The local plan should be read as a whole and other uses will be permitted where relevant considerations have been addressed.
Tests of Soundness:

Comment:
Emerging Policy 5 'Employment Policy Areas (Strategic Policy)' indicates that Employment Policy Areas, as defined on the Proposals Map, will continued to be supported primarily for employment uses. However, other uses will be supported provided that they meet a number of criteria set out by Policy 5. TVI support the criteria-based approach contained within Policy 5 which allows for some flexibility in uses on sites identified as 'Employment Policy Areas' in addition to employment. Area B of the land identified in Plan 1 is identified as an Employment Policy Area. TVI consider the identification of their land identified as 'Area B' as an Employment Policy Area to be sound, with Policy 5 allowing for suitable flexibility in the type of uses which could be accommodated on the site.

Summary:
TVI consider the identification of their land identified as 'Area B' as an Employment Policy Area to be sound, with Policy 5 allowing for suitable flexibility in the type of uses which could be accommodated on the site.

Comment:

Summary of Policy 5 Employment Policy Areas 4.89 Emerging Policy 5 indicates that Employment Policy Areas, as defined on the Proposal Map, will continue to be supported primarily for employment uses. However, other uses will be supported provided that they meet a number of criteria set out by policy 5 in accordance with NPPF which seeks to ensure that employment land is not protected for employment use if there is no reasonable prospect of land being used for that purpose. Soundness of the Policy 5 Employment Policy Areas 4.90 We consider that Policy 5 is sound in that it complies with NPPF to ensure that the employment land is not protected in perpetuity if there is no prospect of the land being used for that purpose. 4.91 However, as a result, the policy provides the potential for existing employment land to be lost over the plan period. This supports our objection to policy 4 of the plan and reasoning that alternative, additional sites should be provided in the west of the borough to provide choice and flexibility for occupiers in this area. 4.92 Paragraph 4.33 highlights that employment sites in the west of the borough have been under pressure for other uses (mainly housing). This is particularly evident in Edlington where the UDP employment site to the north east of Broomhouse Lane Industrial Estate obtained planning permission for residential development resulting in the remaining industrial estate being constrained by existing other uses and Green belt. 4.93 As referred to in our response to Policies 2 and 3, it is considered necessary to allocate additional employment sites in the west of the borough to provide sufficient choice and flexibility to existing businesses in the area. The presence of employment uses and businesses in the main towns and service towns and villages to the west of the borough play a significant role in the sustainability of these deprived areas. It is therefore important to provide sufficient land for choice, flexibility and churn in these areas to maintain the strong, sustainable and cohesive communities as recognised in the overall strategy.

Summary:

Policy 5 is sound, but the policy provides the potential for existing employment land to be lost over the plan period. This supports our objection to policy 4 of the plan and reasoning that alternative, additional sites should be provided in the west of the borough. Paragraph 4.33 highlights that employment sites in the west of the borough have been under pressure for other uses (mainly housing) and is evident in Edlington. As referred to in our response to Policies 2 and 3, it is considered necessary to allocate additional employment sites in the west of the borough to provide sufficient choice and flexibility to existing businesses in the area.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.
Summary of Policy 5 Employment Policy Areas

4.89 Emerging Policy 5 indicates that Employment Policy Areas, as defined on the Proposal Map, will continue to be supported primarily for employment uses. However, other uses will be supported provided that they meet a number of criteria set out by policy 5 in accordance with NPPF which seeks to ensure that employment land is not protected for employment use if there is no reasonable prospect of land being used for that purpose. Soundness of the Policy 5 Employment Policy Areas

4.90 We consider that Policy 5 is sound in that it complies with NPPF to ensure that the employment land is not protected in perpetuity if there is no prospect of the land being used for that purpose. 4.91 However, as a result, the policy provides the potential for existing employment land to be lost over the plan period. This supports our objection to policy 4 of the plan and reasoning that alternative, additional sites should be provided in the west of the borough to provide choice and flexibility for occupiers in this area. 4.92 Paragraph 4.33 highlights that employment sites in the west of the borough have been under pressure for other uses (mainly housing). This is particularly evident in Edlington where the UDP employment site to the north east of Broomhouse Lane Industrial Estate obtained planning permission for residential development resulting in the remaining industrial estate being constrained by existing other uses and Green belt. 4.93 As referred to in our response to Policies 2 and 3, it is considered necessary to allocate additional employment sites in the west of the borough to provide sufficient choice and flexibility to existing businesses in the area. The presence of employment uses and businesses in the main towns and service towns and villages to the west of the borough play a significant role in the sustainability of these deprived areas. It is therefore important to provide sufficient land for choice, flexibility and churn in these areas to maintain the strong, sustainable and cohesive communities as recognised in the overall strategy.

Response:

Please see the ‘Site Selection Methodology’ for the reasoning for sites being selected for allocation or rejected. The sites proposed for allocation are the ones (in the Councils Local Plan process) selected to be the most deliverable, marketable and sustainable to meet the forecast need for new sites to support jobs growth and economic ambitions. The forecast land requirement is based on work undertaken by Peter Brett Associates (see evidence base) that looked at potential jobs growth across the Borough (detailed to 38 employment type sectors). From the forecast job numbers a land requirement was calculated. This calculation included additional land for Choice, Churn and Other uses to build in flexibility (see - Employment land Needs Assessment 2019 update for a more in depth explanation of the land calculation)
We support the requirement that the sites allocated for Housing development will be developed in accordance with the Development Requirements set out in Appendix 2. These Development Requirements will provide certainty to both developers and to the local communities precisely what will and will not be permitted on each site. By alerting potential developers of the considerations for each site, they will assist in delivering sustainable development.

Response:
Support welcomed
Our position on Policy 6 Housing Allocations, and paras 4.80 to 4.85 on land supply, should be seen in the context of our comments on Policy 3 above. That is to say, we do not find them unsound in themselves, but they would need to be modified to provide for our recommended approach to Policy 3.

Summary:
Position on Policy 6 should be seen in the context of the position on Policy 3. CPRE do not find them unsound in themselves, but they would need to be modified to provide for the recommended approach to Policy 3.

Response:
Policy 3 and 6 are in accordance with each other as drafted
Policy 6 is not considered to be sound as it is not positively prepared or consistent with national policy for the following reasons: The HBF are keen that the Council produces a plan which can deliver against its housing requirement. To do this it is important that a strategy is put in place which provides a sufficient range of sites to provide enough sales outlets to enable delivery to be maintained at the required levels throughout the plan period. The HBF and our members can provide valuable advice on issues of housing delivery and would be keen to work proactively with the Council on this issue. The HBF also strongly recommends that the plan allocates more sites than required to meet the housing requirement as a buffer. This buffer should be sufficient to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the NPPF requirements for the plan to be positively prepared and flexible. The HBF recommends an appropriate contingency (circa 20%) to the overall housing land supply to provide sufficient flexibility for unforeseen circumstances and in acknowledgement that the housing requirement is a minimum not a maximum figure. The HBF does not wish to comment upon the acceptability or otherwise of individual sites. It is, however, important that all the sites contained within the plan are deliverable over the plan period and planned to an appropriate strategy. The Council’s assumptions on sites in relation to delivery and capacity should be realistic based on evidence supported by the parties responsible for housing delivery and sense checked by the Council based on local knowledge and historical empirical data. The HBF representations are submitted without prejudice to any comments made by other parties on the deliverability of specific sites included in the overall HLS, 5 YHLS and housing trajectories. However, the HBF do have some concerns about the delivery of homes and seek assurance that the housing requirement will be delivered.

Policy 6 is not considered to be sound as it is not positively prepared or consistent with national policy. It is important that a strategy is put in place which provides a sufficient range of sites to provide enough sales outlets to enable delivery to be maintained at the required levels throughout the plan period. The HBF recommends that the plan allocates more sites than required to meet the housing requirement as a buffer. This buffer should be sufficient to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the NPPF requirements for the plan to be positively prepared and flexible. The HBF recommends an appropriate contingency (circa 20%) to the overall housing land supply to provide sufficient flexibility for unforeseen circumstances and in acknowledgement that the housing requirement is a minimum not a maximum figure. The HBF does not wish to comment upon the acceptability or otherwise of individual sites. It is, however, important that all the sites contained within the plan are deliverable over the plan period and planned to an appropriate strategy. The HBF representations are submitted without prejudice to any comments made by other parties on the deliverability of specific sites included in the overall HLS, 5 YHLS and housing trajectories. However, the HBF do have some concerns about the delivery of homes and seek assurance that the housing requirement will be delivered.

Response:
The Local Plan does have a buffer due to the housing figures not accounting for a number of matters, including windfalls, delivery beyond the plan period and potential housing at the airport. This matter is discussed more in the Housing Topic Paper.
Plan Period: The plan period runs from 2015 to 2035; however, the plan period for land supply runs from 2018 and, in the case of housing only runs until 2033 (Table 5). This is an unnecessary complication and must be revised to ensure the plan period and supply period run from the same dates. At the current time, the Plan is not considered to be sound because it fails to provide an appropriate strategy in relation to housing supply, contrary to the NPPF (para. 35). Housing Trajectory: The Housing Trajectory set out in Figure 3 confirms that the requirement of 920dpa will not be reached in the final 9 years of the plan period and 550dpa (Standard Method Requirement) will not be achieved for 7 years of the plan period. Indeed, the trajectory drops off to approximately 100 dwellings in the final year. This approach would have the following significant and fundamental harmful issues: - Failure to meet annual housing requirement - the OAN should be a minimum figure to be achieved on an annual basis - this is acknowledged within Appendix 12 of the draft Local Plan which confirms that net dwelling completions will be monitored each year against a target of 920dpa - although as advised in response to Policy 3, the annual requirement should be 1,073 dpa rather than 920dpa, in accordance with the Council's own evidence contained within the PBA report. The Council should therefore be making provision for the delivery of 1,073 dwellings each year throughout the plan period. The Council's proposal to exceed 1,000dpa in the earlier years of the plan does not justify the significant decline in delivery proposed in later years. - Significant Adverse Practical/Economic Effects - the differentiation between the levels of growth sought at the start of the plan period and those in the later years will have significant adverse economic impacts for Doncaster. The dramatic shift from higher levels of provision to under-provision will lead to a significant drop in job availability within the construction industry and a significant decline in economic input from the house building industry in Doncaster in the later years of the plan. The housing delivery strategy must therefore be revised to ensure it sustains growth across the plan period and does not lead to a decline in Doncaster's economy in the later years of the plan. It would be inappropriate for the Council to simply redistribute the housing delivery across the trajectory because this would affect delivery and artificially suppress demand, which would be an unsound approach. Importantly, sites with planning permission have a combined capacity of 9,318 dwellings (draft Plan para. 4.73) and hence it would now be impossible for the council to redistribute and control when these sites are delivered. It is contended that additional sites should be allocated, for the reasons provided elsewhere in Theakston Estates' representation, and that the housing trajectory should be amended to show the delivery of more new homes from 2026/27 onwards. Based on the position as outlined above, the strategy for delivery of housing in Doncaster is not positively prepared and fails to support growth, and hence the Plan is not sound. It is clear therefore that the delivery strategy must be revised and the Council must allocate additional sites for housing, in addition to those currently proposed. Delivery in the Main Urban Area Theakston Estates does not consider that the Plan is sound because of the distribution of the sites identified does not align with the strategy in draft Policy 3 to direct "at least 50% of new homes" to the MUA. Indeed, there would be a shortfall against this figure. Policy 6 provides details of the sites with planning permission and the allocations which will deliver the housing requirement provided in Policy 3. Delivery between 2015 -2018 Between 2015 - 2018 the following has been delivered: Settlement: Main Urban Area 1st April 2015 - 31st March 2016 (net): 459 (44.8%) 1st April 2016 - 31st March 2017 (net): 555 (52.9%) 1st April 2017 - 31st March 2018 (net): 426 (44.8%) Settlement: Borough Total 1st April 2015 - 31st March 2016 (net): 1,025 1st April 2016 - 31st March 2017 (net): 1,440 Total: 11,461). A copy of the summary tables containing these figures is appended to this representation. Although the requirement of Policy 3 for at least 50% of new homes to go in the MUA, between April 2015 to March 2018, only 44.8% of new homes have been delivered in this area. As such there is already an under delivery against the requirement for at least 50% of new homes to be delivered in the MUA. Furthermore, Table 5 advises that the net completions for the first 3 years is 3,400. However, the actual figure (based on the figures contained in the Council's Residential Land Availability Report) is 3,211. There has therefore been 189 fewer completions than the figures provided in Table 5. Housing Allocations in the MUA: The allocation for the next 15 years in the MUA is 7,211 dwellings or 7,441 by the end of the plan period (2035) (para. 16.22). Table H1(B) also identifies that a further 151 dwellings will come forward beyond the plan period. Table 5 identifies that the Allocations plan period supply from Tables H1 and H2 total 16,115. However, the Allocations plan period supply in the MUA is 7,411 which is 46% of the allocations supply, this is less that the requirement that at least 50% of the total is delivered in the MUA. Indeed, 50% of 16,115 is 8,058 (not 7,411) and hence there is a need to allocate at least 647 more dwellings in this area using the current Plan figures. Summary Taking into account the sites that have been delivered between 2015 - 2018 and the allocations up to the end of the plan, it is clear that less than 50% of new homes will be delivered in the MUA. Taking into account the strategy above, as well as Theakston Estates response to Policies 2 and 3, the housing requirement should be 1,073 dpa to reflect the evidence base and 64% of new homes should be delivered in the MUA. Queries: Table 5 advises that there are 585 units with permission as at 1/4/2018 that are not included in the allocation supply. These consist of sites of 5+ units in the Defined Villages and those of 1-4 units throughout the borough. It is not clear how many of these units are located in the MUA. Paragraph 4.74 advises that these sites will help to address the additional 2 years of the plan period requirement. However, if these sites have planning permission, it is likely that the majority of these units will be delivered over the next few years and will not help to address the additional 2 years of the plan period requirement. Policy 3 and paragraph 16.20 provide a target that at least 50% of the Borough total, or 6,805 - 7,315 new houses, are allocated to the MUA. However, it is not clear how these figures have been calculated, as 50% of the overall requirement of 18,400 (between 2015 - 2035) is 9,200, whilst 50% of 13,230 (between 2018 - 2033) is 6,615. The first sentence within paragraph 4.77 refers to the first 15 year period of the plan (2018-2035). However, the period 2018 - 2035 is 17 years rather than 15 years. The approach within the Plan is very confusing as references are made to the
Plan running to both 2033 and 2035. This should be clarified and it should be made clear that the Plan period runs to 2035. Reserve Development Sites Paragraph 4.82 advises that the Reserve Development Sites have a capacity of 1,483, whilst Table H3(A) identifies that of these 749 dwellings lie within the MUA. Paragraph 4.82 states that: "These are sites where there is currently doubt about whether they could be developed in the plan period, due to HS2 Safeguarding Route, and/or where allocations cannot be justified in accordance with a sequential approach to addressing flood risk". This paragraph goes on to advise that new applications will be approved where flood risk sequential and exceptions tests and other development requirements can be satisfactorily addressed. It is also stated that any complications on these sites will contribute to meeting the plan period housing requirement but have not been factored into the housing supply. Our client has fundamental concerns about the inclusion of the Reserved Development Sites in the Plan. On one hand, paragraph 4.82 advises that there is doubt that the sites can be developed and whether allocations can be justified, whilst at the same time this paragraph goes on to support the principle of development on these sites during the plan period, provided sequential and exception tests can be passed. Paragraph 16.22 advises that the "Reserved Development Sites are generally sites that failed the Sequential Test at plan-making stage so any future development proposals on these sites still need to demonstrate a successful pass of the Sequential Test of part of any future application." As these sites are not deliverable/developable they should have no status in the Plan. The NPPF is clear that: "Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future)". (para. 155) (Lichfields emphasis) "Development should not be allocated or permitted if there are reasonable available sites appropriate for the proposed development in areas with a lower risk of flooding" (para. 158). (Lichfields emphasis) In this case, there is an alternative site (Land at Scawsby Lane) that is developable and deliverable and which lies within flood zone 1. Importantly, removing a site from the Green Belt is a sound approach rather than delivering new housing in flood zones 2 or 3. This is because the Green Belt is a planning policy designation rather than a physical constraint whereby a built development could have serious safety issues. Our client submits that the Land at Scawsby Lane is a logical and sustainable location to deliver new housing and it would make an important contribution towards meeting the housing need in the MUA. The site extends to around 39 ha and is bound to the north by Green Lane and the Roman Ridge; to the east by existing development off Emley Drive; to the south by Barnsley Road (A635); and to the west by Scawsby Lane. Land to the west of Scawsby Lane is also within our client’s control and is a proposed community parkland which would be delivered as part of the residential development. It is considered that the site could deliver approximately 800 new homes. The site has been assessed in the Doncaster HELAA Update 2017-2018 as being Suitable (but with national policy constraints or physical constraints), Available and Deliverable/Developable with an overall timeframe of 6-10 years. Subject to appropriate consents, our client is confident that delivery could be secured within years 1-5 and have been approached directly by a number of national and regional house builders. The extract from the HELAA Housing Map is provided below. (SEE EMAIL FOR MAP) As the site has been identified as a deliverable and developable site, our client has sought to understand any concerns for developing the site and have responded accordingly. In doing so, we have considered the assessments of the site in the various evidence base documents, including those in the Sustainability Appraisal (August 2019); Green Belt Review; Site Selection and Results report; Heritage Impact Assessment and Archaeological Scoping Assessment. These findings from these assessments are briefly summarised below. The various assessments conclude that there are archaeological constraints to developing the site which relate mainly to the likely presence of a deserted medieval village to the south of the site. There are also heritage considerations due to the presence of the Roman Ridge (Scheduled Monument) to the north and the grade II listed Tudor Cottage and Scawsby Hall to the south. This representation responds to the concerns identified by the Council. Green Belt Review We have also considered the Council’s Green Belt Review (Stage 3 Green Belt sites Re-appraisal - 9 May 2017) which concludes that the site has an "Moderate Case for inclusion in further site selection work". Sustainability Appraisal and Housing & Employment Site Selection Methodology & Results Report The Sustainability Appraisal (August 2019) concludes that: "it is noted that this is a very large site where there would be scope for sensitive site layout and design of a scheme that could avoid areas of archaeological significance whilst still delivering an extension with significant capacity. In conclusion, although the site has been identified as performing the same through the Green Belt Review Phase 3 as other sites at the settlement where being proposed for allocation, there are sites that perform slightly better through the Sustainability Appraisal and sufficient allocations now identified." (Lichfields emphasis) This assessment indicates that the site has been rejected on the basis of the Sustainability Appraisal. It is recognised that the Sustainability Appraisal has assessed a site capacity of 969 homes, whilst our client is proposing a development of approximately 800 homes on this site, which is a smaller site than that assessed in the Sustainability Appraisal. Theakston Estates therefore requests that the Council reassess this site. Indeed, Theakston Estates submitted a representation in response to the 'Doncaster Local Plan Information Consultation: Draft Policies and Proposed Sites' consultation in October 2018 where further details were provided, including the proposed indicative masterplan and an archaeological report. However, it does not appear that these representations have been considered by the Council in the updated "Sustainability Appraisal of the Doncaster Local Plan 2015-2033: Publication Version" (August 2019). The "Doncaster Local Plan - Housing & Employment Site Selection Methodology & Results Report" (Publication Version, June 2019) has proposed sites at Alverley Lane, Balby (site ref. 115) and Land adjacent to 163 Sheffield Road, Warmworth (site ref: 003) for housing. These sites currently lie within the Green Belt. A comparison of the scores given to these sites in the 2019 Sustainability Appraisal against the score of Land at Scawsby Lane (site ref. 436) is provided in the following table. Site Ref: 115 Site Name: Alverley Lane, Balby Positive Score: 15 Negative Score: 7 Overall Score: 8 Site Ref: 003 Site Name: Land adjacent to 163 Sheffield Road, Warmworth Positive Score: 14 Negative Score: 7 Overall Score: 7 Site Ref: 436 Site Name: Land at Scawsby Lane Positive Score: 18 Negative Score: 9 Overall Score: 9 Overall Score: 8 Over All Score: 8 Overall Score: 8 Over All Score: 5. Archaeological and Heritage Impact Assessment Within the representations identified, we append a report by Northern Archaeological Associates Ltd (NAA) dated October 2018 which assesses the archaeological constraints and identifies mitigation measures to limit the impact of developing the site. This report was submitted with the representations in October 2018. In terms of the Roman Ridge Scheduled Monument, NAA's assessment considers that the section adjacent to the site represents a relatively short section of a much larger monument. The Roman Ridge is generally 1-2m in height and approximately 10m in width and is primarily comprised by a tarmac route with grass verge and/or mixed shrub and tree hedgerow on each side. Therefore, the main character of this section of Roman Road is that of an enclosed corridor contained by hedgerows which retains a sense of rural character and limits views of built development. NAA's assessment considers that the development of the site would have no physical impact on the Scheduled Monument and that any impact upon its setting can be limited through an appropriately designed scheme. The recommended mitigation measures include: Reinforcing planting along those sections of the route where hedgerows are either missing or low; - Applying a buffer zones of at least 10m between the Roman Road and the development line which is consistent with the existing development to the south east of the site; and - Incorporating accessible open space into this buffer zone with access links to the Roman Road. Additionally, interpretation and knowledge panels could also be provided to enhance and further local understanding of the Roman Ridge. Application of the above would enable access and better appreciation of the Scheduled Monument, providing a new public benefit to a section which is not currently publically accessible. NAA's assessment also considered the potential earthwork remains of the deserted medieval village (DMV) and a review of the LiDAR imagery indicates.
that these remains are likely to be present in the southern field which is under pasture. The LiDAR imagery indicates that in the southern field the remains are likely to be a combination of crofts and tofts, road and ridge and furrow. Any cropmarks which have been identified are common across this part of South Yorkshire and are not considered to be a constraint to development. NAA’s recommended mitigation strategy is to exclude the southern field from the development, given the reasonable survival of the DMV, and retain this as an area of publicly accessible open space within the development. The development should also minimise tree planting, drainage infrastructure and other works which could result in ground disturbance. The suggested mitigation would mean that this area would form an attachment to the green corridor along Barnsley Road, creating new opportunities to link paths through the development, community parkland and to the north and onto the Roman Ridge bridleway. This would enhance permeability and access between existing public footpaths and the various heritage and community assets in the area. Lichfields has considered the potential impact of the development on above ground heritage assets. Tudor Cottage (Listed Grade II) dates from the second quarter of the nineteenth century. The cottage faces across Scawsby Lane to the ancillary farm buildings associated with Scawsby Hall. It is likely that it was built as farm accommodation (possibly for a farm manager). It does not appear to have been associated with any particular neighbouring buildings or land use with its strongest association being with the building to the south of Barnsley Road. Scawsby Hall (Listed Grade II) is a mid-seventeenth-century farmhouse set back from Barnsley Road behind a sizeable front garden and is associated with a number of ancillary buildings now converted from farm use to a pub and restaurant. By retaining the southern fields as public open space, Scawsby Hall and Tudor Cottage will both be separated from proposed development. The wider site to the north of these heritage assets does not contribute to the significance of these listing buildings and, therefore, developing this part of the site will not harm their significance. It is therefore concluded that through careful masterplanning an acceptable scheme can be delivered that is sensitive to the historic environment. As such, archaeology and heritage are not issues that preclude the wider site development and Theakston Estates contend that the negative score in the Sustainability Appraisal against 'Heritage Impacts' should be amended to a neutral observation. Pollution to Surface Water Bodies The Sustainability Appraisal, at Table 8.3, also identifies potential significant negative effects relating to "Pollution to Surface Water Bodies". Other elements of the Sustainability Appraisal do not reference this effect. Therefore, as stated in the Theakston Estate representations in October 2018, it is suspected that there is an error with the assessment as it is unclear how the development would result in pollution to surface water bodies. Furthermore, the only water body identified on the Environment Agency’s map would be located in the southern field which is to be excluded from the development. There is a field drain which runs through the site in an west to east direction however this is dry for the majority of the year. In addition, any concerns would be dealt with at the planning application stage and the required mitigation measures would be secured by planning conditions. The assessment should be amended to a neutral observation. Indicative Masterplan We have attached an indicative masterplan for the site, which includes an indicative layout for the site east of Scawsby Lane which could deliver around 800 houses together with a new school and other community shops and facilities. The proposals also include a community parkland to the west of the Scawsby Lane. The indicative masterplan was discussed in the representations submitted to the Council in October 2018. As detailed in the Council’s Settlement Background Paper (2018), "there is a deficiency in open space (be it formal, informal, allotments, public parks, woodlands and nature conservation areas)" and that additional housing delivery “without improving existing open spaces or delivering new open space, must be avoided to prevent this from worsening”. The paper also states that "sport and recreation activity is below the national average, with the borough facing relatively high levels of obesity and ill health”. The community parkland on adjacent land to the west of Scawsby Lane will include new sports facilities; a woodland play area and trails; allotments and new habitats for wildlife. This represents a significant benefit and aligns with the NPPF (February 2019) which states that plans: "should also set out ways in which the impact of removing land from the Green Belt can be offset through compensatory improvements to the environmental quality and accessibility of remaining Green Belt land". (Lichfields' emphasis) (para. 138) This would directly support efforts to address the current issues relating to open space deficiencies and obesity rates identified in the Settlement Background Paper. It also responds directly to the Local Plan objectives including no. 13 which seeks to “provide new or improved health, sport and recreational facilities and green infrastructure to create quality communities and address deficits in provision”. As part of the proposals to east of Scawsby Lane, the masterplan includes provision for a new school community and hub with shops and facilities. As shown on the plan, the proposals could also deliver additional education benefits by providing land for playing fields or car parking to support the operation of existing schools located to the south of Barnsley Road. These recommendations identified in the assessments by NAA and Lichfields have been also been incorporated into the indicative masterplan. The masterplan clearly demonstrates how the southern field can be retained as public open space which would limit any impact of the development on the DMV archaeological remains whilst also maintaining the setting to the nearby Grade II listed buildings. The proposed access road into the development would be taken from Barnsley Road, although its exact route will be informed by further archaeological investigation to limit any impact on below ground remains. Along the northern boundary, the Roman Ridge would not be affected by the development and the proposed masterplan incorporates a buffer zone together with additional landscaping to limit any impacts to its setting. Notwithstanding this, the assessments by Lichfields and NAA recommend that links to the Roman Ridge are included to enable the historic route to contribute further to the network of pedestrian and cycle access. Overall, whilst the locality has a number of heritage assets associated with it, the masterplan demonstrates that consistency with the conservation and enjoyment of the historic environment. The heritage assets will be incorporated into the wider proposals in a way which is consistent with their conservation, which contributes to the distinctiveness of the area and which allows them to contribute to the wider benefits to the proposals. Re-Assessment of the Land at Scawsby Lane To ensure a sound Plan, Theakston Estates request that the Council re-assesses the site within their Sustainability Statement and take the following into account. The negative scores against 'heritage impacts' and 'pollution to surface water bodies' should be changed to a neutral score in light of the information provided earlier in this representation. These two changes would amend the total negative score to 8 and the overall score to 7, which is the same overall score as site reference 003. Importantly, in light of the proposals shown on the indicative masterplan, the Sustainability Appraisal scoring should be amended as follows: - 'Heritage Assets' should be changed from a negative to a positive score; - the proposals include the provision of community shops and other facilities; - 'Biodiversity - should be changed from a negative to a positive score given that the proposals include the provision of extensive wildlife habitats which will deliver a substantial net gain; and - 'Access to Public Open Space' should be changed from a single to a double positive score given that a most extensive area of community parkland is proposed on adjacent land which is likely to include new sports facilities, a woodland play area and trails, allotments and wildlife habitats. Taking into account these changes, together with the above in relation to heritage impacts and water pollution, the sustainability score should be amended to a positive score of 14 and a negative score of 5. This provides a total score of 9, which is higher than the other two Green Belt sites which are proposed to be removed from the Green Belt and allocated for housing. The scoring in the Sustainability Appraisal is therefore wrong and the Plan has been based on false evidence, contrary to the NPPF. Summary Scawsby Lane (ref. 436) is a logical and sustainable location to deliver housing growth and our client requests that it is allocated in the Plan and on the Policies Map for housing development. The provision of additional community facilities on the site together with the proposed community woodland on land to the west of Scawsby Lane means that this is the only site which can deliver a substantial package of benefits in line with paragraph 138 of the NPPF (February 2019). The overall development package has a higher sustainability score that the other two Green Belt sites which have been assessed through the Sustainability Appraisal are proposed to be allocated for housing. The scoring in the Sustainability Appraisal is therefore wrong and the Plan has been based on false evidence, contrary to the NPPF. PROPOSED CHANGE As explained in response to question 6, the strategy for the delivery of housing in
Doncaster has not been positively prepared and fails to support growth. To ensure a sound plan that is consistent with the NPPF (February 2019) (para. 35), the delivery strategy must be revised and additional sites for housing must be allocated, in addition to those currently proposed, to ensure that a minimum annual delivery figure of 920 dwellings can be achieved every year (notwithstanding Theakston Estates' response to Policy 3 regarding the need to increase the housing requirement to at least 1,073 dpa). Importantly, it is critical that additional sites are identified within the MUA to ensure that the housing allocations in this area reflect the requirement of Policy 2 which is to deliver at least 50% of new homes in the MUA (notwithstanding Theakston Estates’ response to Policy 2 that this figure should be 64%). The approach to including the Reserve Development Sites in the Plan is fundamentally flawed and cannot be justified, especially given that some of these sites are subject to flood risk. As these sites are not deliverable / developable they should have no status in the Plan. To ensure a sound Plan that provides the most appropriate strategy and accords with the NPPF (paragraphs 35, 155 and 158), references to these sites must be removed and other less constrained and more suitable sites should be allocated. The Land at Scawsby Lane is a logical and sustainable location to deliver new housing and as such should be allocated for this use within the Plan and on the Policies Map. This site was previously proposed for housing but was rejected on archaeological grounds. However, as demonstrated in response question 6, this matter has now been addressed and the site is available, deliverable and developable for a residential development. Importantly, the Council's scoring of the site in the Sustainability Appraisal is incorrect any re-assessment will identify that it performs better than the two Green Belt sites which are proposed for housing.

Summary:
The plan period is 20 years (2015 - 35), but the supply is only 2018 - 2035 - an unnecessary complication. The plan must be revised to ensure these match. It is currently unsound as it fails to provide an appropriate strategy in relation to housing supply. The housing trajectory shows that 920 dpa will not be reached in the final 9 years of the plan period, and 550 dpa (standard methodology requirement) will not be achieved for 7 years of the plan period, and the trajectory drops to approximately 100 dwellings in the final year. This creates fundamental harmful issues: - Failure to meet the housing requirement, which should be a minimum of 920 dpa as per the draft plan (or, as advised, 1,073). Provision should be made for 1,073 dpa throughout the plan period, and proposing to exceed the requirement in early years does not justify the decline in later years. - Significant adverse practical / economic effects: the differentiation between levels of growth at the beginning and end of the plan period will have significant economic impacts on Doncaster. The shift from higher levels of provision to under - provision will lead to a significant drop in job availability within construction and a significant decline in economic output from the construction industry and house building industry in Doncaster in the later years of the plan. The delivery strategy must be revised to ensure it sustains growth across the plan period and doesn’t lead to decline in Doncaster’s economy in the later years of the plan. It would be inappropriate to redistribute the delivery across the trajectory as this would affect delivery and artificially suppress demand, which would be unsound. Sites with permission have 9,318 dwellings and it would be impossible for the council to redistribute and control when these sites are delivered. Instead, additional sites should be allocated, and the trajectory amended to show higher delivery from 2026/27 onwards. Based on this the plan is unsound at the strategy must be revised, and more sites must be allocated. Despite the requirement for 50% of new homes in the urban area, only 44.8% has been delivered in the area 2015 - 18. As such, there is already under delivery against the requirement. Table 5 says delivery is 3,400, in the first 3 years, but the actual figures according to the RLA is 3,211 or 189 fewer than stated. The 15 year allocation in the urban area is 7,211, or 7,411 by 2035. Table 5 notes the allocations plan period supply from tables H1 and H2 is 16,115, however the supply in the urban area is 7,411, which is 46% of the allocations supply (less than the 50% allocated to the urban area). 50% of 16,115 is 8,058 and therefore 647 more dwellings are needed according to plan figures. This means that the annual requirement should be 1,073 dpa and 64% of homes should be delivered in the urban area. Queries: - Table 5 advises there are 585 units with permission not included in the supply (defined villages and permissions with 1 - 4 units. These are stated to help supply in the last two years, however if these are delivered now, they will not help later in the plan period. - Policy 3 and paragraph 16.20 provide a target of 50% of the borough total or 6,805 - 7,315 new houses are allocated in the urban area, however it is not clear how this has been calculated (50% 2015 - 35 is 9,200 and 50% 2018 - 33 is 6,615). The first sentence of 4.77 refers to 15 years 2018 - 35, however this is 17 years. The approach is very confusing and needs clarifying. - There are concerns about the Reserve Development Sites in the Plan. On one hand, para. 4.82 advises that there is doubt they can be developed or allocations justified, whereas the paragraph goes on to support the principle of development on these sites, subject to sequential and exception tests. As these sites are not deliverable / developable they should have no place in the plan. Para. 155 and 158 of the NPPF are clear on flood risk. Scawsby Lane (436) is logical and sustainable. It was rejected on archaeological grounds. Given its availability, no reserve site should pass a sequential test in the Local Plan. Site 436: - Should be removed from the Green Belt - logical and sustainable that can help meet urban area housing needs - Land to west by Scawsby Lane is also in the same ownership and proposed as a country park alongside residential development for 800 homes. - The HELAA notes the site is deliverable and developable within 6 - 10 years overall. The client is confident delivery could be secured in years 1 - 5. The client has sought to understand concerns about the site and acted accordingly and has read relevant DMBC reports: The Sustainability Appraisal: indicates that the site was rejected on the basis of this report. The capacity assessed in this report (969) is actually now approx. 800 homes and so Theakston Estates request the report is re-done. Previous information submitted to the Council in 2018 does not appear to have been considered in the published Sustainability Appraisal. Two urban area Green Belt sites have been promised: 033 and 115. Below are the compiled scores: Site Ref: 115 Site Name: Alverley Lane, Balby Positive Score: 15 Negative Score: 7 Overall Score: 8 Site Ref: 003 Site Name: Land adjacent to 163 Sheffield Road, Warmworth Positive Score: 14 Negative Score: 7 Overall Score: 7 Site Ref: 436 Site Name: Land at Scawsby Lane Positive Score: 13 Negative Score: 8 Overall Score: 5 With regards to archaeology, a report is appended which assesses the archaeological constraints and identifies mitigation measures to limit development impacts. Furthermore, it is considered the Roman Ridge in this location an enclosed corridor enclosed by hedgerows and therefore retains rural character and limits the views of development. The appended report considers development would not physically impact on this, and impacts can be mitigated through design such as reinforcing planting, applying buffer zones between development and the Roman Ridge, and incorporating open space in the buffer zone. Knowledge panels could also be provided to enhance the local understanding of the Roman Ridge - a new public benefit. The assessment also shows that there is likely a deserted medieval village with potential remaining earthworks in the southern field. LiDAR imagery indicates that in the southern field the remains are likely to be a combination of crofts and tents, road and ridge and furrow. Any crooks which have been indicated are common across this part of South Yorkshire and are not considered to be a constraint to development. The report recommends this is excluded from development and made open space, which would help facilitate a green corridor along Barnsley Road with better access and permeability. The proposals will also ensure the listed buildings are separated from the development and the wider site does not impact on these buildings, nor would development harm their significance. It is considered careful master planning can help manage heritage impacts, and therefore the Sustainability score for heritage impacts should be neutral. There is also an error in the report related to the conclusion that the development will have a negative impact on pollution to surface water bodies - it is unclear how. Any concerns would be dealt with at application stage, the assessment should again be neutral. An indicative masterplan is attached showing 800 new homes, a new school and other community shops and facilities, as well as a community park land to the west of Scawsby Lane. This would help address deficiencies in open space highlighted in the Settlement Background Paper. The parkland would include sports facilities, woodland play, allotments and wildlife habitats. This is a significant benefit which aligns with NPPF para. 138, the Settlement Background Paper and Local
Plan Objective 13. Playing fields could also deliver additional education benefit by providing provision or car parking to support the existing schools on Barnsley Road. The masterplan details how this can all be achieved. To ensure a sound plan, Theakston Estate recommends the site should be reassessed in the Sustainability Appraisal to change heritage impacts and pollution to surface water bodies to neutral (bringing the site in line with 033). Scoring should also be amended for 'Access to existing centre', 'biodiversity', and 'access to public open space' as the site can provide outcomes which are not currently recognised. This would give the Sustainability Appraisal a score of 9 - higher than the other Green Belt sites. The current scoring is wrong and based on false evidence - contrary to NPPF. Proposed change: Site 436 should be allocated in the Plan, and the housing requirement for the plan period, the share for the urban area, the use of reserve development sites and the Sustainability Appraisal are all incorrect.

Response:
See response to the comments made by the Representation to Policies 2 and 3. Sites have been selected in line with the Site Selection Methodology. Responses to Representations in respect to the Sustainability Appraisal are set out in the Addendum to the SA Report published at Submission.
Objection is made to the proposed housing requirement for Sprotbrough Village (identified as that part of Sprotbrough west of the A1(M)) from the rest of Sprotbrough and the Doncaster Urban Area and allocating new housing to this part of Sprotbrough inevitably meant any new housing would have to be in the Green Belt, since all the land surrounding the area is Green Belt. Thus the only reason for any encroachment into the Green Belt was because DMBC planners had decided to divide Sprotbrough into two areas and allocate 1.05% of new housing to the area west of the A1(M) on the basis of its "share" of Doncaster's overall housing requirements and not on any identified need in that part of Sprotbrough. The Parish Council is unaware if any attempt has ever been made to make an objective assessment of Sprotbrough's housing needs. These are not "exceptional circumstances" in accordance with the National Planning Policy Framework. On the contrary, they arise as a result of a deliberate decision to develop into the Green Belt which the Parish Council believe is totally unnecessarily, even though there are plenty other suitable areas of land around Doncaster. According to the council's Housing and Economic Land Availability Assessment (HELAA) "there is no shortage of suitable and deliverable/developable land in the borough to meet the emerging Local Plan's development needs for the plan period 2015 - 2032." The Parish Council strongly believes that there is no justification for more houses to be built which encroach into the Green Belt around this area. Any new housing in the area would add substantially to the existing infrastructure problems.

Summary:

Objection is made to the proposed housing requirement for Sprotbrough Village (identified as that part of Sprotbrough west of the A1(M)) from the rest of Sprotbrough and the Doncaster Urban Area and allocating new housing to this part of Sprotbrough inevitably meant any new housing would have to be in the Green Belt, since all the land surrounding the area is Green Belt. Thus the only reason for any encroachment into the Green Belt was because DMBC planners had decided to divide Sprotbrough into two areas and allocate 1.05% of new housing to the area west of the A1(M) on the basis of its "share" of Doncaster's overall housing requirements and not on any identified need in that part of Sprotbrough. The Parish Council is unaware if any attempt has ever been made to make an objective assessment of Sprotbrough's housing needs. These are not "exceptional circumstances" in accordance with the National Planning Policy Framework. On the contrary, they arise as a result of a deliberate decision to develop into the Green Belt which the Parish Council believe is totally unnecessarily, even though there are plenty other suitable areas of land around Doncaster. According to the council's Housing and Economic Land Availability Assessment (HELAA) "there is no shortage of suitable and deliverable/developable land in the borough to meet the emerging Local Plan's development needs for the plan period 2015 - 2032." The Parish Council strongly believes that there is no justification for more houses to be built which encroach into the Green Belt around this area. Any new housing in the area would add substantially to the existing infrastructure problems.

Response:

It has been deemed that there is a clear separation given the village is separated by both Green Belt and the A1. Sprotbrough Village is a sustainable location in its own right and has a relatively modest housing target for which a suitable site has been found. Exceptional Circumstances are explained in the Green Belt Topic Paper; it is not true to say that a housing requirement means Green Belt will be released (as shown at Mexborough), rather in the case of the site at Sprotbrough it was deemed justifiable. It should also be noted that were Sprotbrough Village part of the Main Urban Area, then the housing requirement would increase for the urban area and this site may still be a suitable option when considered amongst other Main Urban Area sites.
Tests of Soundness:

Comment:

3.57 The development requirements for the site as set out in Appendix 2 are generally considered to be reasonable and appropriate. However, there is no reference within the information to how the required education contribution will be calculated or what the green infrastructure and public open space requirements will be for the site. Recommendations

3.58 Details of how the required education contribution will be calculated should be included within the requirements information, or, if our recommendation is implemented, a reference to Policy 66 / the relevant supplementary planning or CIL document should be included. 3.59 Details of what the green infrastructure and public open space requirements will be for the site should be included within the requirements information, or, if our recommendation is implemented, a reference to Policies 27, 29 and 30 should be included. Justification

3.60 The development requirements set out in Appendix 2 are inadequately clear.

Summary:
The developer requirements in Appendix 2 are generally considered to be reasonable and appropriate, however there should be clear reference as to how the education contribution will be calculated, and what the green infrastructure and open space requirements are for the site. Details of how the required education contribution will be calculated should be included within the requirements information, or, if our recommendation is implemented, a reference to Policy 66 / the relevant supplementary planning or CIL document should be included. Details of what the green infrastructure and public open space requirements will be for the site should be included within the requirements information, or, if our recommendation is implemented, a reference to Policies 27, 29 and 30 should be included. As drafted the requirements are inadequately clear.

Response:

Policies in the local plan provide clarity on developer contributions, such as public open space. Sites have been assessed by colleagues in Education to determine where there are likely to be a need for contributions to increase capacity. A standard Department for Education formula is used.
Objection is made to Table 5 of the Plan that sets out the housing requirement. The text indicates that the requirement is variable between the bottom and top of the requirement range, but the table sets out the requirement at the top of the range. It is therefore unclear. The Plan should allocate sites and plan for the top of the range figure, and allocate sufficient land to meet the remaining requirements for the 17 years of the Plan. The table as drafted allocates land for 15 years rather than 17 years and appears to under allocate the residual requirement which is 15,000 new homes. The supply figures in the table do not reconcile with the figures at paragraph 16.21. Some of this issue relates to the fact that sites with planning permission are also allocated. Allocating sites with permission is confusing the plan and sites with permission do not need to be specifically allocated. The Plan should be clear about what the contribution of the sites with Planning Permission is and how this number is discounted, and what are the new allocations. The Plan is imprecise as drafted.

Summary:
Objects to Table 5 - indicates the requirement is variable between the bottom and top of the range but the table sets out the requirement at the top of the range and is therefore unclear. Should allocate sites and plan for the top of the range and enough sites for the remaining 17 years of the plan period rather than for the 15 years and under allocates the residual requirement of 15,000 new homes. The supply figures in Table 5 do not reconcile with the figures at para 16.21. Some of the issues relates to the large number of sites with permission being allocated which confuses the plan and such sites do not need to be allocated. The Plan should be clear about contribution from permissions and new allocations.

Response:
Believe the table sets out the position clearly. Table 5 does not correlate with para. 16.21 as the former is a borough wide total and the latter is only related to the Main Urban Area. If every settlement delivered at the top of the range there would be an oversupply of housing. They are designed to allow some areas to deliver more or less based on local circumstances and site availability, whilst ensuring that overall the borough meets its housing targets. This has been achieved. The plan delivers enough housing to meet it’s 20 year requirement, and can show how it will deliver enough housing for the 15 year period 2018 - 33 and the remaining 2 years, as well as demonstrate supply via completions for the years 2015 - 18. Chapter 16 and the Housing Topic Paper show the sites which are permissions, and those which are non-permissioned allocations.
Reason: We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Area: Chapter 4: Strategic Approach

Policy: Policy 6: Housing Allocations

Tests of Soundness: Positively prepared Justified Effective Consistent with national Legally Compliant

Comment:

It is proposed to use the bottom of the range of the housing requirement in calculating the five year supply, equating to the base requirement only. The Plan however is predicated on delivering land to meet the base requirements and the economic uplift. It is not the right approach to calculating a five year housing land requirement to ignore part of the housing requirement and base the supply on a partial element of the requirement. This will give a false picture of the five year land supply required to deliver the housing needs identified in the Local Plan. The plan should be amended to make it clear that the five year supply is based on the full housing requirement of the Local Plan. PROPOSED CHANGE 6. Provide a housing land supply calculation based on the full housing requirement. As explained in detail above.

Summary:

Should not calculate SYHLS using the bottom of the range which ignores part of the housing requirement and gives a false picture of the 5-year land supply required to deliver housing need identified in the plan. Should be amended to make clear it will be calculated based on the full housing requirement.

Response:

Both the use of a range and using the Standard Methodology figure is supported in Planning Practice Guidance / NPPF.
Comment Ref: C/Policy 6/03431/1/004  
Organisation: Persimmon Homes (Yorkshire) Ltd

Reason: We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 4: Strategic Approach

Policy: Policy 6: Housing Allocations

Comment: 

In order to ensure that the Council produces a plan which can deliver against its housing requirement it is important that a strategy is put in place which provides a sufficient range of sites to provide enough sales outlets to enable delivery to be maintained at required levels. It is important that the levels of development proposed for each settlement is informed by appropriate analysis of the deliverability and viability of the sites. Persimmon Homes can provide valuable advice on issues of housing delivery and would be keen to work proactively with the Council on this issue. It is no use continually promoting growth in locations if there is little or no prospect of them being brought forward. There are instances in the plan where historic allocations have been carried forward where delivery is questionable. This policy should allocate more sites than the housing requirement in order to provide a buffer sufficient to provide for likely under-delivery on a proportion of sites. This would be consistent with national policy as it would be positively prepared. A sufficient buffer (of around 20%) would allow for unforeseen circumstances on some sites including under delivery from major strategic sites and for the potential failure of delivery on a number of sites.

Summary: 

To ensure that the Council produces a plan which can deliver against its housing requirement it is important that a strategy is put in place which provides a sufficient range of sites to provide enough sales outlets to enable delivery to be maintained at required levels. It is important that the levels of development proposed for each settlement is informed by appropriate analysis of the deliverability and viability of the sites. Persimmon Homes can provide valuable advice on issues of housing delivery and would be keen to work proactively with the Council on this issue. It is no use continually promoting growth in locations if there is little or no prospect of them being brought forward. There are instances in the plan where historic allocations have been carried forward where delivery is questionable. This policy should allocate more sites than the housing requirement in order to provide a buffer sufficient to provide for likely under-delivery on a proportion of sites. A sufficient buffer (of around 20%) would allow for unforeseen circumstances on some sites including under delivery from major strategic sites and for the potential failure of delivery on a number of sites.

Response: 

Assessment of the ability of sites to deliver their housing has been undertaken and work is explained in the HELAA, the Site Selection Methodology and the Viability Report. There may be a number of reasons UDP allocations have not come forward but are re-allocated, including the fact they may be Council owned and never marketed. As set out in the Housing Topic Paper, a buffer of additional sites is unnecessary as the housing calculations do not factor in a number of additional sources of supply, such as windfalls, small sites of 1 - 4 units, housing delivering beyond the plan period and the prospect of additional housing at the airport (amongst other sources). These thus create a buffer.
Comment: We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Area: Chapter 4: Strategic Approach

Policy: Policy 6: Housing Allocations

Tests of Soundness: Positively prepared, Effective, Legally Compliant

Comment:

It is proposed to use the bottom of the range of the housing requirement in calculating the five year supply, equating to the base requirement only. The Plan however is predicated on delivering land to meet the base requirements and the economic uplift. It is not the right approach to calculating a five year housing land requirement to ignore part of the housing requirement and base the supply on a partial element of the requirement. This will give a false picture of the five year land supply required to deliver the housing needs identified in the Local Plan. The plan should be amended to make it clear that the five year supply will be based on the full housing requirement of the Local Plan. PROPOSED CHANGE 5. Provide a housing land supply calculation based on the full housing requirement. As explained in detail above.

Summary:

Objects to the housing requirement being expressed as a range with the bottom being used to calculate 5YHLS; it is not the right approach to base on a partial element of the requirement and gives a false picture of the 5YHLS required to deliver housing needs identified in the Local Plan. Proposed change - amend to make clear 5YHLS will be based on full housing requirement.

Response:

Both the use of a range and using the Standard Methodology figure is supported in Planning Practice Guidance / NPPF.
2.90 The development requirements for new development sites are set out in Appendix 2 of the draft plan. However, there is no reference within the plan as to how the required education contribution will be calculated or what the precise green infrastructure and public open space requirements will be for the site. We object to this approach. Recommendations

2.91 Details of how the required education contribution will be calculated should be included within the requirements information, or, if our recommendation is implemented, a reference to Policy 66 / the relevant supplementary planning or CIL document should be included.

2.92 Details of what the green infrastructure and public open space requirements will be for the site should be included within the requirements information, or, if our recommendation is implemented, a reference to Policies 27, 29 and 30 should be included.

Justification

2.93 The development requirements set out in Appendix 2 are likely to be ineffective and have a directly detrimental impact on viability if clarity of contributions expected is not set out within the Local Plan or supplementary planning documents. This undermines the soundness of the Local Plan.

Response:

Policies in the local plan provide clarity on developer contributions, such as public open space. Sites have been assessed by colleagues in Education to determine where there are likely to be a need for contributions to increase capacity. A standard Department for Education formula is used.

Tests of Soundness: Positively prepared Effective Legally Compliant
Justified Consistent with national
Comment:
Objection is made to Table 5 of the Plan that sets out the housing requirement. The text indicates that the requirement is variable between the bottom and top of the requirement range, but the table sets out the requirement at the top of the range. It is therefore unclear. The Plan should allocate sites and plan for the top of the range figure, and allocate sufficient land to meet the remaining requirements for the 17 years of the Plan. The table as drafted allocates land for 15 years rather than 17 years and appears to under allocate the residual requirement which is 15,000 new homes. The supply figures in the table do not reconcile with the figures at paragraph 16.21. Some of this issue relates to the fact that sites with planning permission are also allocated. Allocating sites with permission is confusing the plan and sites with permission do not need to be specifically allocated. The Plan should be clear about what the contribution of the sites with Planning Permission is and how this number is discounted, and what are the new allocations. The Plan is imprecise as drafted. Table 5 Housing land supply calculations. It is proposed to use the bottom of the range of the housing requirement in calculating the five year supply, equating to the base requirement only. The Plan however is predicated on delivering land to meet the base requirements and the economic uplift. It is not the right approach to calculating a five year housing land requirement to ignore part of the housing requirement and base the supply on a partial element of the requirement. This will give a false picture of the five year land supply required to deliver the housing needs identified in the Local Plan. The plan should be amended to make it clear that the five year supply is based on the full housing requirement of the Local plan. PROPOSED CHANGE 3. Provide consistency between the housing requirement calculations, the supply and the allocated sites. 4. Redistribute the full housing requirement to include the service towns and villages. 6. Provide a housing land supply calculation based on the full housing requirement. As explained in detail above.
Summary:
Objects to Table 5 - indicates the requirement is variable between the bottom and top of the range but the table sets out the requirement at the top of the range and is therefore unclear. Should allocate sites and plan for the top of the range and enough sites for the remaining 17 years of the plan period rather than for the 15 years and under allocates the residual requirement of 15,000 new homes. The supply figures in Table 5 do not reconcile with the figures at para 16.21. Some of the issues relates to the large number of sites with permission being allocated which confuses the plan and such sites do not need to be allocated. The Plan should be clear about contribution from permissions and new allocations.
Response:
Believe the table sets out the positon clearly. Table 5 does not correlate with para. 16.21 as the former is a borough wide total and the latter is only related to the Main Urban Area. If every settlement delivered at the top of the range there would be an oversupply of housing. They are designed to allow some areas to deliver more or less based on local circumstances and site availability, whilst ensuring that overall the borough meets its housing targets. This has been achieved. The plan delivers enough housing to meet it’s 20 year requirement, and can show how it will deliver enough housing for the 15 year period 2018 - 33 and the remaining 2 years, as well as demonstrate supply via completions for the years 2015 - 18. Chapter 16 and the Housing Topic Paper show the sites which are permissions, and those which are non-permissioned allocations.

Enough sites have been included to meet the housing requirement over the plan period. As set out in the Housing Topic Paper, a buffer of additional sites is unnecessary as the housing calculations do not factor in a number of additional sources of supply, such as windfalls, small sites of 1 - 4 units, housing delivering beyond the plan period and the prospect of additional housing at the airport (amongst other sources). These thus create a buffer.
Comment: As highlighted in the Doncaster Settlement Profiles (2018): "despite having the smallest population of the Service Towns and Villages, Finningley scores well for service provision, with three primary and three secondary services found here" (page 67) (Emphasis added). This further supports the identification of the site for sustainable residential development out with the existing restrictive development limit. Additionally, within this supporting evidence document (the Doncaster Settlement Profile), our client’s land is identified as a ‘Housing Site Option’ within the Countryside on the edge of the Finningley settlement. The site was rejected for housing as the Council’s analysis stated it is “greenfield and countryside and would form an extension to the settlement. Given Finningley can meet most of its housing target via permissions (being just 5 short of its target of 55), it is not considered that such an extension into the countryside is necessary, nor can it be justified.” However, Swan Homes Ltd contests this as much of the site is in fact brownfield land. In addition, as discussed above, the DLP’s ambition to fail to meet its targets for Finningley is not sound within the bounds of the NPPF, and therefore cannot be used here to justify the rejection of this site which would help the DLP meet these targets for Finningley. Within the Settlement Audit, Finningley scores well for having a primary school, GP Service, pharmacy, POS and a secondary bus service. Despite not having a 'Town Centre' as defined in the settlement audit, it has a number of services and amenities distributed across the settlement. It should also be noted that a train station has been anticipated for the neighbouring Robin Hood Airport, which would serve Finningley when completed, further enhancing the settlement’s connectivity. The NPPF (paragraph 78) encourages linkages between smaller settlements and villages identifying that housing should be located where it will enhance or maintain the vitality of rural communities, especially where this will support local services and acknowledges that development in one village may support services in nearby villages. In the DLP, the settlement of Finningley is described as being part of a cluster of villages with Finningley, alongside Auckley-Hayfield Green, being described as providing a service function for the other villages. This makes clear that Finningley, within this support network of villages could accommodate further residential development in the area such as our client’s proposed site.

Summary: Comments on the Finningley settlement profile. Settlement profiles indicate that Finningley scores well and could support additional homes.

Response: Finningley is the smallest settlement with an allocated supply and also has the lowest level of service provision out of the settlements earmarked for allocations. It therefore has a modest housing target commensurate with it’s size and service levels, and can largely meet this requirement through commitments.
The plan period runs from 2015 to 2035 however the plan period for land supply runs from 2018 and, in the case of housing only runs until 2033 (Table 5). This is an unnecessary complication and must revised to ensure the plan period and supply period run from the same dates. This complication is highlighted by para 4.77 of the Plan which mistakenly quotes a 15 year period of the plan running from 2018-2035). The Housing Trajectory set out in Figure 3 confirms that the requirement of 920dpa will not be reached in the final 9 years of the plan period and 550dpa (Standard Method Requirement) will not be achieved for 7 years of the plan period. Additionally, the trajectory of housing supply over the plan period presented in Figure 3 of the DLP suggests that the overall allocations mean that the DLP is actively planning to fail to meet its targets in the Plan’s later years. From 2026/27 onwards, the supply fails to meet the Local Plan Allocation Requirement (920dpa), and from 2028/29, the supply also fails to meet the Standard Methodology Local Housing Need Requirement (550dps as at 2019). Despite this averaging out to meet the overall 15 year supply targets, the uneven distribution means that the DLP is anticipating failure to meet targets in its latter years, which goes against the principles of the NPPF which outlines that plans should ‘provide a positive vision for the future’ and ‘be prepared positively, in a way that is aspirational but deliverable’ (paragraphs 15 and 16 of NPPF). There are a number of significant and fundamental issues with this approach as outlined below: - Fails to meet annual housing requirement - the OAN should be a minimum figure to be achieved on an annual basis - this is acknowledged within Appendix 12 of the draft Local Plan which confirms that net dwelling completions will be monitored each year against a target of 920dpa. The Council should therefore be making provision for delivery of a minimum of 920 each year throughout the plan period. The Council’s proposal to exceed 920dpa in the earlier years of the plan does not justify the significant decline in delivery proposed in later years. - Practical/Economic Implications - the differentiation between the levels of growth sought at the start of the plan period and those in the later years will have significant adverse economic impacts for Doncaster. The dramatic shift from over-provision to under-provision will lead to a significant drop in job availability within the construction industry and a significant decline in economic input from the house building industry in Doncaster in the later years of the plan. The housing delivery strategy must therefore be revised to ensure it sustains growth across the plan period and does not lead to a decline in Doncaster’s economy in the later years of the plan. Based on the position as outlined above, the strategy for delivery of housing in Doncaster is not positively prepared and fails to support growth. It is clear therefore that the delivery strategy must be revised and the Council must allocate additional sites for housing in addition to those currently proposed to ensure that a minimum annual delivery figure of 920 dwellings can be achieved every year. As drafted, Policy 6 is not sound as it is not positively prepared and is inconsistent with the NPPF for the reasons set out. The allocation of additional housing land, including our Client’s land at Finningley would provide an opportunity help to meet this shortfall in housing supply both in Finningley directly and in the wider Council-wide context.

Summary:
Policy 6 - Housing Allocation. Housing Strategy. 1. Para. 4.77 should read (2018-2033) not (2018-2035). 2. Fails to meet annual housing requirement. Should be a minimum figure to achieved annually (920). 3. Shift from over provision in early plan period to under provision later will have economic implications - job losses in construction industry. 4. Growth must be sustained across the plan period.

Response:
1 - agree, this has been amended; 2 - Both the use of a range and using the Standard Methodology figure is supported in Planning Practice Guidance / NPPF; 3 / 4 - the trajectory is further explained in the Housing Topic Paper, but over the plan period the plan will deliver more than the required housing supply.
Comment: Appendix 2 sets out site by site development requirements for the development of the allocated sites and identifies additional work or studies that may need to be undertaken and specific developer contributions which may be required. Appendix 2 identifies the proposed allocations on plan area by area. For ‘Site 350/407 The Avenue/Rose Hill Rise, Cantley, MUA’ reference is made to the design brief prepared for the site and identifies the following issues: archaeology; biodiversity; design; the requirement for Transport Assessment and Travel Plan; trees and hedgerows; public open space. This is a useful guide within the design process, but resolution of the issues identified will be a matter for the detailed design stage. Broadly speaking, Appendix 2 is helpful in identifying the issues to be resolved, the need for additional work or studies and potential requirements for development. It acknowledges that the issues identified are not an exclusive list and any departure from that will need to be justified. However, it should also acknowledge that the final requirements of the scheme and the ultimate form and quantum of development will be a matter for negotiation at the detailed design stage. This is in order to ensure the most effective use of land whilst safeguarding and improving the environment (in accordance with para 117 of the NPPF) and to provide clarity about design expectations but not to be prescriptive, allowing a suitable degree of variety (para 126 of the NPPF). Ultimately the potential of the site to accommodate and sustain an appropriate amount and mix of development should be optimised (para 127 e). Objection is therefore made to the introductory paragraph which should be amended to read: "Appendix 2 Development Requirements The Site Development Requirements set out various and specific requirements for the development of the allocated sites and identify potential additional work or studies that may need to be undertaken or where specific developer contributions may be required. The requirements cover issues such as archaeology, design, education contributions, etc., but they are not an exclusive list. The protection of identified on-site features or specific land use requirements, and the need to submit particular assessments or details, will be a matter for agreement between the developer and local planning authority during the detailed development management stage in order to ensure the most effective use of land. Site Development Requirements have not been identified where sites have been granted planning permission or development has commenced, or where a site does not require specific development guidelines." Reason: In order to make the Plan effective and compliant with national policy.

Summary:
Local Plan Appendix 2 - Developer Requirements o Resolution of the issues identified will be a matter for the details design stage. o Object to the introductory paragraph. It should be amended to conform to NPPF Representation includes a suggested rewording of Appendix 2 (see rep)

Response:
The introductory text is considered justified and helps to set out the issues that will need to be addressed through subsequent applications.
Comment: 2.1 This section of the representation statement provides comment on the Local Plan Publication Version Consultation Document. 2.24 Policy 6 states that housing allocations to deliver the housing requirement and distribution set out in Policy 3 are shown on the Policies Map and set out in Tables H1 (A-O) and Tables H2 (A-Q). There are no sites with planning permission or proposed as allocations in Clayton. 2.25 As set out in these representation statement, whilst changes have been made to Policies 2 and 3 since the previous consultation, the changes do not go far enough to support sustainable rural communities. It is considered that small scale development should be supported in villages that are located in close proximity to larger villages / settlements such that they have a functional relationship. 2.26 There are limited opportunities for infill development in Clayton and the Council’s current approach effectively prevents any further development in this village, removing choice for the younger generation who wish to remain in the village and support the local community. As previously highlighted, Clayton is not an isolated settlement but is located close to Thurnscoe which has a range of services and facilities, along with a train station. The NPPF clearly supports development in villages which would support other villages nearby. 2.27 ID Planning has reviewed the built extent of Clayton to identify opportunities for small scale developments to support this village and its community. The plan below identifies sites which it is considered provide appropriate and suitable development parcels for allocation. These sites are all in the control of Frickley and Warmsworth Estate who support the identification of these sites within the settlement limits. (SEE EMAIL FOR PLAN: Clayton - Sites Suitable for Development Limit Extension)

Summary: Whilst changes have been made to Policies 2 and 3 since the previous consultation, the changes do not go far enough to support sustainable rural communities. It is considered that small scale development should be supported in villages that are located in close proximity to larger villages / settlements such that they have a functional relationship. There are limited opportunities for infill development in Clayton and the Council’s current approach effectively prevents any further development in this village, removing choice for the younger generation who wish to remain in the village and support the local community. A review has been submitted of small scale developments to support the village and its community.

Response: It is deemed that when villages are close to larger settlements (as they often are), it is a more sustainable approach to deliver housing in the larger settlements. Policy 2 allows for infilling in Green Belt villages, and also development in the countryside (subject to caveats) in villages to the east, in line with NPPF para. 78. However, the Settlement Audit has shown that many villages have limited to no service provision. The Housing Topic Paper explains this further.
Comment Ref: C/Policy 6/05319/1/011

Attend Examination: Attend Hearing

Reason: The matters raised in our representation go to the heart of the Local Plan. It is considered that attendance at the relevant hearing sessions will allow further comment to be made where appropriate.

Area: Chapter 4: Strategic Approach

Policy: Policy 6: Housing Allocations

Tests of Soundness: 

Comment:

It is important that the levels of development proposed for each settlement is informed by appropriate analysis of the deliverability and viability of the sites. It is no use continually promoting growth in locations if there is little or no prospect of them being brought forward. Specific allocations for Carcroft and Skellow are referred to in a series of subsequent tables; Table H1(M) indicates housing allocations with planning permission (at 1st April 2018); Table H2(N) identifies Housing Allocations without planning permission (at 1st April 2018); and Table H3(E) identifies reserve development sites. The tables themselves are contained in Chapter 16. Chapter 16 paragraphs 16.195 to 16.205 set out the settlement specific approach to Carcroft-Skellow. Within the explanatory text (para 16.195) it suggests that Carcroft-Skellow is the largest settlement in the Service Towns and Villages tier of the settlement hierarchy, with a good level of services and access to services in Adwick Woodlands. Paragraph 16.197 acknowledges the settlement is tightly bound by Green Belt and extensive areas are also covered by flood zone. Over the Plan period, paragraphs 16.198 and 199 explain the settlement function and role of Carcroft Skellow identifying the housing requirement (of 250 units) over the Plan period to meet its baseline (local needs) requirement of 16 units per year. Our comments on the housing requirement (Policy 3) are highlighted above suggesting an increase over the Plan period along with a settlement specific figure (in a range) for Carcroft-Skellow. As justified at paragraph 16.198 the approach to Carcroft-Skellow would appear fundamentally unsound, as it does not represent "positive planning". If one accepts the 16 dwellings per year as a minimum, this would suggest that over the 20 year plan period as set out in the Publication DLP a minimum requirement of 320 dwellings. If as we suggest the Plan period is extended by two years to accord with the Framework there would be a minimum requirement of 352 dwellings. Furthermore as we explain the housing requirement should increase along with the inclusion of a 20% buffer for non delivery. This would suggest a minimum requirement for Carcroft-Skellow of around 425 to 450 dwellings over the Plan period to be identified through site allocations. Paragraphs 16.203 to 16.205 set out the approach to housing allocations in the settlement. Broadly we accept the approach outlined in the DLP that in the absence of opportunities within the defined urban area exceptional circumstances are demonstrated such that it is necessary to review the Green Belt around the settlement and for land to be removed from the Green Belt. We suggest that land at Ings Lane falls into this category. Existing supply [Table H1(M) at 01/04/2019] relates to a single commitment for 7no. dwellings at Suite Express House (Site Reference 1076). That being the case, we agree with the approach of the Council to allocate land to provide housing during the Plan period along with a reserve site to be brought forward should the main allocation not deliver at the appropriate rate.

Summary:

- Levels of growth at each settlement should be supported by analysis of deliverability and viability.
- Carcroft Skellow should have a higher housing requirement figure.
- Suggest plan period extended by 2 years and buffer include for none delivery of some sites.
- The minimum requirement for C&S should be 425 to 450 dwellings over the plan period (identified through allocations).
- Accept approach that some Greenbelt sites are required - suggest 'Ings Lane' site should be allocated.

Response:

Consideration has been given to the viability and delivery of sites, the Settlement Strategy informed where housing should be directed and then sites were sought to deliver this through a Call for Sites which were assessed through the HELAA. This is explained in the Site Selection Methodology. Carcroft has a share of the baseline, which was assessed as appropriate for a settlement of its size and service provision, as explained in the Housing Topic Paper. It is also constrained in large parts by areas of flood risk, including part of the site promoted at Ings Lane. The Local Plan does have a buffer due to the housing figures not accounting for a number of matters, including windfalls, delivery beyond the plan period and potential housing at the airport. This matter is discussed more in the Housing Topic Paper.
A reserve development site is identified at Table H3(E) off Owston Road, Carcroft comprising 3.3 hectares of land with an indicative capacity of 93 dwellings. Text at paragraph 16.205 indicates the suitability of this site is questionable given flood risk constraints. It states that the flood risk constraints have not been met through the planmaking stage, suggesting that these will be dealt with through any subsequent planning application. In our view it is an unsound consideration if it is not demonstrated that the site is suitable for a vulnerable use such as housing. It is notable that the Owston Road site remains an allocation from the 2001-16 Unitary Development Plan, marked on the Proposals Map and listed under saved Policy PH1 (Page 114) as PH1 (3/15) Land at Owston Road, Carcroft extending to 3.4 hectares to deliver 84 dwellings. It is clear from the Council’s Public Access that there has been little developer interest in the site. We would question therefore whether it is a suitable and deliverable site given that it has been identified as available for at least two decades. In light of the above we have fundamental concerns with regard to the Settlement Strategy for Carcroft-Skellow, where the Council is seeking to not meet the demonstrable requirement set out in its own plan. In attempting to meet that suppressed requirement, it reasonable to state that one of the identified sites at Owston Road, Carcroft is not suitable or deliverable.

Summary:
- Suggest reserve site 'Owston Road' Carcroft is not suitable or deliverable as it is a flood risk and has not had any developer interest in last 20 years.
- Therefore, settlement strategy fails to meet the needs of Carcroft Skellow.

Response:
The Reserve Development Sites are not relied on to deliver housing to areas or to deliver the spatial strategy. They are additional areas where development would be supported subject to constraints being overcome. The housing requirement in Carcroft - Skellow is being met via the allocation of site 165/186.
The comprehensive Masterplan must also be informed by a proper understanding to the potential impact which any redevelopment of this area might have upon the historic environment. Although there are no designated heritage assets within the area defined on the Proposals map, given the proximity of this site to the Roman Road from Lincoln to Doncaster, there is a high likelihood of important archaeological remains in this area some of which may, potentially, be of national importance. The National Planning Policy Framework makes it clear that nondesignated archaeological sites that are demonstrably of equivalent significance to a Scheduled Monument should be considered as being subject to the same Policies as for a designated heritage asset (i.e. that ‘great weight’ should be given to their conservation and that substantial harm or loss to such remains should be wholly exceptional). In further developing the Masterplan it will be important to understand what archaeology may be present on this site and how these might need to be addressed in any development proposals. There are also numerous buildings and structures associated with the former RAF Finningley from its time as part of No. 3 Bomber command in the 1930s and 40s and as a base for Vulcan Bombers during the 1950s. An evaluation of the impact of the future proposals will need to understand the importance of these structures to our understanding of the development of the airfield and aviation history. Immediately to the east of the airport is Finningley Village Conservation Area which contains the Church of the Holy Trinity and St Oswald which is a Grade I Listed Building. In line with national policy guidance, any development proposals will need to demonstrate what impact they are likely to have upon the setting of these assets and, if they are likely to result in harm, how it is envisaged that that harm will be removed or reduced. PROPOSED CHANGE Add an additional Section as part of the Explanation setting out the considerations in terms of the historic environment.
The justification to this Policy should explain what is envisaged as being a development which supports the 'aviation history' of Finningley. There numerous buildings and structures still remaining on this site associated with the former RAF Finningley from its time as part of No. 3 Bomber command in the 1930s and 40s and as a base for Vulcan Bombers during the 1950s. It is hoped that it would involve some recognition of this legacy and, if possible, that any strategy should seek to retain some of its historic aviation buildings. PROPOSED CHANGE Amend accordingly.

The explanatory text should set out what is envisaged by development that supports the aviation history of Finningley as well as there being a strategy to retain some of the historic aviation buildings.

Response:
It is not proposed to incorporate Historic England's request as such proposals in the operational area of the Airport would likely fall under permitted development rights. It is also noted that a planning application has recently been granted for the new facility/visitor attraction housing the Vulcan Bomber. Policies in the Local Plan address matters such as Listed Buildings (Policy 37) and Conservation Areas (Policy 38) and the whole plan should be read together.
The proposals for growth at the airport are unsustainable, unsound and unjustified. 1. Local planning authorities have a duty under Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) to ensure that plans 'contribute to the mitigation of, and adaptation to, climate change'. There is no evidence of this approach towards Policy 7. This duty means that local plans should be based on evidence relating to the Climate Change Act targets (including identifying baseline carbon emissions data), and monitoring of plans in annual monitoring reports should demonstrate how development is contributing to meeting those targets. Doncaster Sheffield Airport's (DSA) plan for transformational growth can only be supported in the context of a carbon pathway to net zero greenhouse gas emissions by 2050, with binding carbon targets. This pathway should include domestic and international aviation emissions and a commitment to amend the programme of interventions to meet those targets. 2. During development of this version of the Local Plan, climate change has developed into an existential threat and emergency. The October 2018 Special Report from the Intergovernmental Panel on Climate Change (IPCC) concluded that in order for warming to stay below 1.5°C, human-caused CO2 emissions must fall to net zero by 2050 or earlier (note 1 - October 2018, http://www.ipcc.ch/report/sr15/) which will require ‘rapid and far reaching transitions’ that are ‘unprecedented in scale’ and imply deep emissions reductions in all sectors. The Committee on Climate Change (CCC) published its response to the IPPC’s report (note 2 - Net Zero The UK’s contribution to stopping global warming, Committee on Climate Change, May 2019), and in June 2019 the Government accepted the Committee’s advice and amended the 2050 target under the Climate Change Act to require net-zero greenhouse gas emissions by that date. 3. DfT has yet to report on its 2018 consultation on the Future of UK airports 2050, a document that relied on aviation emissions increasing from 37.3MtCo2e in 2016 to 39.9Mt in 2050, or a 7% increase. However, in its 2019 progress report (note 3 - Reducing UK Emissions: 2019 Progress Report to Parliament, Committee on Climate Change July 2019) the CCC recommends the formal inclusion of aviation emissions in the Climate Change Act targets and a long term strategy for aviation that reflects net zero by 2050. In accepting the CCC advice on the IPCC report the Government stated that emissions should reach net-zero across the whole economy (i.e. including international aviation and shipping) and that the aim would be to reach net-zero emissions without recourse to international credits (or ‘offsets’), consistent with the Committee’s advice (note 4 - House of Commons Hansard (12 June 2019) Net Zero Emissions Target, Volume 661, Columns 673 and 682.). Consequently, although the Government does not have in place a framework for aviation carbon reduction, it is clearly its intent to develop one. 4. The current planning consent for the airport limits aircraft movements to 57,000 per annum with the airport having seen an average of 16,000 movements per annum over the last 3 years. It currently moves about 1million passengers per annum (mppa) and 7,000t of freight per annum (note 5 - https://www.caa.co.uk/Data-and-analysis/UK-aviation-market/Airports/Datasets/UK-Airport-data/Airport-data-2018/ ), although fully realised it could handle 25mppa and 250,000t of cargo (note 6 - Sheffield City Region Integrated Rail Plan, July 2019). The Interim Masterplan aims for increases of between 4mppa (core growth strategy) and 7mppa (high growth strategy) by 2037, and for between 70,000t and 170,000t of freight for the same respective scenarios. Both these appear unrealistic based on historical data for DSA (Doncaster Sheffield Airport). Since the airport opened in 2005 passenger numbers have largely remained below 1mppa and only rose above that figure in the last 3 years. Freight movements have fluctuated well below 1,000t per annum and in the last 3 years have fallen by nearly 25%. The emissions for freight transfer are always higher by air compared to road, let alone by rail or sea (note 8 - The various emission factors for freight transfer KgCO2 per tonne km are that air freight is by far the highest; HGV freight on average emits less than a quarter of the least emitting air freight - so it would always be more carbon efficient to transship freight S+N or N+S by road rather than air - but the most carbon efficient freight transport is by rail and ship - see DEFRA 2008 Guidelines to Defra’s GHG Conversion Factors: Reducing UK Emissions: 2019 Progress Report to Parliament, Committee on Climate Change July 2019). 5. Transport is the one sector that has failed to meet its carbon budgets, with the sector’s emissions at the same level in 2016 as they were in 1990 (note 9 - 2016 UK Greenhouse Gas Emissions Final figures, BEIS, 2018, Table 6). Surface transport is the largest-emitting sector in the UK, accounting for 23% of UK emissions (note 10 - Net Zero Technical Report Committee on Climate Change, May 2019, Figure 5.1) with cars accounting for the majority of them. Even with a shift to electric vehicles, the level of reduced car mileage needed to meet the UK carbon budget by 2030 is estimated to be between 20% and 60%, depending on the speed of the switch to electric vehicles and how fast the electricity powering them is decarbonised (note 11 - More than electric cars, FoE, May 2019). It is therefore imperative that traffic reduction is implemented urgently. The scale of the effort required has been shown by work done by the Tyndall Centre for both the West Yorkshire Combined Authority and Sheffield City Council (note 12 - https://www.sheffield.gov.uk/content/dam/sheffield/docs/your-city-council/climate-change/Sheffield_Report_V1.3.1.pdf). 6. In that context both the Airport Surface Access Strategy and access to the housing and employment market must be based on demand management of road capacity and development of sustainable alternative modes. NPPF para 103 requires significant development to be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. A robust approach should be taken towards travel to and from the site using the Institution of Mechanical Engineers’ Transport Hierarchy 2013 (note 13 - https://www.imeche.org/policy-and-press/reports/detail/transport-hierarchy), the Transport for New Homes Checklist 2019, and NPPF para 110. The proposal for improved access to the M18 would encourage journeys by car to both the airport and any new development. Demand management of traffic with investment in alternatives modes of travel and travel planning must be implemented. 7. The proposal for a southern link from the DSA station, creating a loop to allow ECML expresses to serve the airport cannot be justified based on the past history of the airport.
which suggests that neither the passenger nor the freight base exists to support it. A less ambitious intervention to create a station on the Lincoln line at DSA should be substituted. 8. The approach towards development at the airport refers to the requirement for a comprehensive Masterplan, which would include an up-to-date airport surface access strategy. At this current time the only document available to us is the 2018 Interim Consultation Report on the Masterplan 2018-2037 which was published by the airport owners and not subject to wider stakeholder involvement in its development. It is essential that the process for developing the masterplan is implemented. 9. Given the uncertainty surrounding the approach to climate change for both surface access and aviation, and DSA's history there should be serious concerns about the implementation and delivery of Policy 7. PROPOSED CHANGE Amend opening sentence of Policy 7: Growth and investment at Doncaster Sheffield Airport (in areas defined in the Policies Map), will only be supported in the context of a carbon reduction pathway to net zero by 2050, with binding targets, for the Borough and in line with the following principles: 7H) Access to the Airport must be shown to be compatible with an up to date Airport Surface Access Strategy (ASAS) to enable easy access through a range of travel modes, predominantly public transport, from the Borough, City Region and the wider region. Car parking for users of the airport will be limited in order to demand management travel by private car. There will be a presumption against provision of airport car parking in off-site locations outside the area of the airport growth plan. Amend J) 3. by adding Travel to and from the site will be based on the sustainable travel hierarchy which promotes walking, cycling, public transport and car sharing in preference to single occupancy car use for movement of people, and encourages efficient and sustainable freight. Travel plans for both business and residential development will be required. (See our new proposed policy Transport Hierarchy) The text to support this policy in paras 5.33-5.35 (including the second para 5.31) should be amended to remove the improved connection to the M18. Reference should be made to both the Transport Hierarchy and the Transport and the Transport for New Homes Checklist in 5.31 (under transport) and/or para 5.34.

Summary:
The proposals for airport growth are unsustainable, unjustified and unsound: Local Planning Authorities have a duty under Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) to ensure that plans 'contribute to the mitigation of, and adaptation to, climate change'. There is no evidence of this with Policy 7. The duty means Local Plans should be based on evidence relating to the Climate Change Act targets (including identifying baseline carbon emissions data), and annual monitoring reports should demonstrate how development is contributing to these targets. Airport proposals can only be supported in the context of the pathway to zero net emissions by 2050. This pathway should include domestic and international aviation emissions and a commitment to amend the programme of interventions to meet those targets. During the process of the Local Plan, climate change has developed into an existential threat and emergency. The government has set a target to reach zero net emissions by 2050. The DfT have (in their progress report on "Futures of UK airports 2050" - note 3 - Reducing UK Emissions: 2019 Progress Report to Parliament, Committee on Climate Change July 2019) accepted that aviation emissions should be included in the Climate Change Act Targets and net zero carbon by 2050. Although the government does not have in place a framework for aviation carbon reduction, it clearly aims to develop one. The DSA Masterplan is unrealistic when considered against historic passenger and cargo growth. Emissions for freight transfer by air are always higher than land or sea. The current planning consent for the airport limits aircraft movements to 57,000 per annum with the airport having seen an average of 16,000 movements per annum over the last 3 years. It currently moves about 1million passengers per annum (mppa) and 7,000t of freight per annum (note 5 - https://www.caa.co.uk/Data-and-analysis/UK-airaviation-market/Airports/Datasets/UK-Airport-data/Airport-data-2018/), although fully realised it could handle 25mppa and 250,000t of cargo (note 6 - Sheffield City Region Integrated Rail Plan, July 2019). The Interim Masterplan aims for increases of between 4mppa (core growth strategy) and 7mppa (high growth strategy) by 2037, and for between 70,000t and 170,000t of freight for the same respective scenarios. d in 2005 passenger numbers have largely remained below 1mppa and only rose above that figure in the last 3 years. Freight movements have fluctuated well below 1,000t per annum and in the last 3 years have fallen by nearly 25%. Transport is the sector that has failed to meet its carbon budgets. The Airport Surface Access Strategy and access to housing / employment sites must be based on demand management and development of sustainable alternative modes. Proposed M18 improvements would encourage journeys by car to both the airport and new developments. Demand management of traffic with investment in alternatives modes of travel and travel planning must be implemented. The ECM link is unjustified base on history of the airport which suggests neither the passenger or the freight demand exists. It should be substituted for the station on the Lincoln line. The airport approach needs a comprehensive Masterplan with an up to date surface access strategy. The only document available is the 2018 airport masterplan prepared by the airport owners and not subject to wider stakeholder involvement in its development. There should be serious concerns about the implementation and delivery of Policy 7. PROPOSED CHANGE Amend opening sentence of Policy 7: Growth and investment at Doncaster Sheffield Airport (in areas defined in the Policies Map), will only be supported in the context of a carbon reduction pathway to net zero by 2050, with binding targets, for the Borough and in line with the following principles: 7H) Access to the Airport must be shown to be compatible with an up to date Airport Surface Access Strategy (ASAS) to enable easy access through a range of travel modes, predominantly public transport, from the Borough, City Region and the wider region. Car parking for users of the airport will be limited in order to demand management travel by private car. There will be a presumption against provision of airport car parking in off-site locations outside the area of the airport growth plan. Amend J) 3. by adding Travel to and from the site will be based on the sustainable travel hierarchy which promotes walking, cycling, public transport and car sharing in preference to single occupancy car use for movement of people, and encourages efficient and sustainable freight. Travel plans for both business and residential development will be required. (See our new proposed policy Transport Hierarchy) The text to support this policy in paras 5.33-5.35 (including the second para 5.31) should be amended to remove the improved connection to the M18. Reference should be made to both the Transport Hierarchy and the Transport for New Homes Checklist in 5.31 (under transport) and/or para 5.34.

Response:
Climate change is a theme that runs through the whole plan and the plan is intended to be read as a whole. Policies in the chapter fully promote sustainable forms of travel such as walking and cycling. A Climate Change Topic Paper has been prepared for Submission stage. The DSA masterplan is not replicated verbetim in the Local Plan, and Policy 7 seeks to support elements of it, but also provides checks on some elements such as housing growth, which is linked to job delivery. All proposals around the airport are effectivley linked to its success, which the Council supports. The ECML will not come forward unless there is a robust business case for doing so, however should it come forward, this would represent a genuine step change for the airport and the Borough. The Council acknowledges that the airport masterplan does not cover a range of matters and has been prepared by the airport operator. This is why Policy 7 requires the formulation of a 'blueprint', which will show how the airport proposals can be delivered holistically and cover a range of areas that need to be covered. This will be produced between the Council, airport operator, stakeholders and local community.

**Comment:**  
Proposed Housing Allocations Site Ref: 940 Location: Airport Objection: Would only be justifiable on basis of robust sustainability strategy with regard to new railway access and carbon reduction strategy. **PROPOSED CHANGE** Delete the proposed allocations for the reasons shown in our table above.

**Summary:**  
Site 940 would only be justifiable on the basis of a robust sustainability strategy with regards to new railway access and carbon reduction strategy. **Proposed change:** delete the proposed allocation

**Response:**  
Site 940 will remain as an allocation, and is deemed a suitable site for the reasons set out in Policy 7, and within the parameters set out in this policy. Reject deletion of the policy.
We have an outstanding objection to the application for Doncaster Sheffield Airport due to the number of concerns with regards to loss of designated sites and biodiversity, inadequate survey information and masterplan information. We also outlined our objections in the previous local plan consultation. Whilst we would refer you to our objections previously submitted, we would like to reiterate that the airport proposals are contrary to NPPF guidance and Policies 30 and 31 of this local plan draft. Policy 7 K does not consider the impacts to Local Wildlife Sites (LWS) and the difficulty to achieve green infrastructure across the site. The masterplan currently put forward is consequently highly insufficient. Furthermore within explanation paragraph 5.26, we feel that there is no evidence of the first stage of the mitigation hierarchy being followed with regards to this application (avoidance). Whilst we appreciate that avoidance of impacts is difficult due to the topography of the site, no alternatives appear to have been considered to prove the requirement of overriding public interest to allow for impacts with little to no mitigation. We believe that, in accordance with Policy 30 of this Local Plan, all LWS on and adjacent to site should be retained with a suitable buffer provided to protect their functionality. The current buffers around the sites such as Finningley Big Wood are not considered sufficient to protect its function due to the heavy landscaping and fragmentation from nearby sites. Further consideration for the protection of ecological corridors therefore also needs to be further considered and is not evidenced within any of the current documents. Furthermore, Policy 31 of this Local Plan states DEFRA’s biodiversity metric must be utilised to show a minimum of 10% net gain on the site. In accordance with our response to DEFRA on consultation of this metric, a multiplier must be utilised to reflect the value of the designated sites to be lost.

Objections raised at the previous consultation still stand. Airport proposals are contrary to NPPF guidance and Policies 30 and 31 of the draft Local Plan. Policy K needs to consider Local Wildlife Sites and the difficulty in achieving green infrastructure across the site. The masterplan is highly insufficient. Furthermore, as per para. 5.26, there is no evidence that the first stage of the mitigation hierarchy being followed with the new application (avoidance).

The masterplan is an airport document, which will be supplemented by a detailed blueprint developed by the Council, airport operator and local community. As set out in the subtext to Policy 7, the blueprint must cover, amongst other things, the environment. The subtext clarifies that the blueprint must include a green infrastructure strategy, as well as cover biodiversity protection, and how biodiversity net gain will be achieved. The plan should be read as a whole, and Policy 7 sits alongside 30 and 31, and are not contrary to these.
### Summary:

Policy 7. continued. The draft Local Plan divorces DSA from its role in the wider spatial strategy. This is significant because it overlooks the existing demand for jobs (and by association the requirement for homes and labour supply) associated with role of DSA as a growth driver. This also raises issues of consistency with national policy, given the ability of DSA to support a prosperous rural economy. Specifically, the spatial strategy fails to recognise that a number of settlements in close proximity to DSA, including Finningley and Auckley-Hayfield, have significant potential to support sustainable patterns of development associated with the delivery of housing and economic growth consistent with paragraphs 78 and 83 of the National Planning Policy Framework 2019 and achievement of the airport's objectives. It is therefore not justified that the proposed spatial strategy, and the approach to the scale and distribution of housing outlined in proposed Policy 3, does not support any contribution to the economic-led component of housing growth at Service Towns and Larger Villages in close proximity to DSA. This only applies to 'Main Towns' identified as potentially suitable to deliver up to 10% of the economic-led growth requirement. We advocate that suitable sites, sustainably located in relation to settlements at Finningley and Auckley-Hayfield, and which complement the strategy for DSA, should be identified to meet the need for jobs-led growth in the overall housing requirement. It is appropriate that such sites contribute towards the Borough's identified housing needs without delivery being directly linked to jobs growth at DSA. It should also be noted that the DSA Masterplan 2018-2037 'Interim Consultation Summary Report' (August 2018) (p.41) identifies that, in terms of demand for residential development to support the airport's objectives, surrounding settlements already demonstrate high volumes of property transactions. This is a strong indicator of local demand and reflects that pressure for housing in the local area already reflects the area's significant contribution to the wider sub-region. This is best addressed through the plan-led approach.

### Response:

DSA has been factored in to the Peter Bretts work. It has always been acknowledged that the case for DSA is separate to the wider spatial strategy. The settlements of Auckley - Hayfield Green and Finningley also have housing requirements and are set out in the spatial strategy and a housing target attributed to them. It should be noted that if the airport delivers the growth envisaged, then Auckley - Hayfield Green will deliver a level of housing on a par with Main Town targets. It is therefore felt that the area is delivering a sufficient amount of housing for its size, and there is no need to allocate additional land in settlements adjacent to the airport. The outcome of consultation was that economic led growth should be delivered in the Main Urban Area and Main Towns, and smaller areas should receive housing to meet local needs only.

2.49 In relation the potential for job growth at DSA, the draft Local Plan looks to divorce DSA from its role in the wider spatial strategy. This is significant because it overlooks the existing demand for jobs (and by association the requirement for homes and labour supply) associated with role of DSA as a growth driver. This also raises issues of consistency with national policy, given the ability of DSA to support a prosperous rural economy. Specifically, the spatial strategy fails to recognise that a number of settlements in close proximity to DSA, including Finningley and Auckley-Hayfield, have significant potential to support sustainable patterns of development associated with the delivery of housing and economic growth consistent with paragraphs 78 and 83 of the National Planning Policy Framework 2019 and achievement of the airport's objectives. It is therefore not justified that the proposed spatial strategy, and the approach to the scale and distribution of housing outlined in proposed Policy 3, does not support any contribution to the economic-led component of housing growth at Service Towns and Larger Villages in close proximity to DSA. This only applies to 'Main Towns' identified as potentially suitable to deliver up to 10% of the economic-led growth requirement. We advocate that suitable sites, sustainably located in relation to settlements at Finningley and Auckley-Hayfield, and which complement the strategy for DSA, should be identified to meet the need for jobs-led growth in the overall housing requirement. It is appropriate that such sites contribute towards the Borough's identified housing needs without delivery being directly linked to jobs growth at DSA. It should also be noted that the DSA Masterplan 2018-2037 'Interim Consultation Summary Report' (August 2018) (p.41) identifies that, in terms of demand for residential development to support the airport's objectives, surrounding settlements already demonstrate high volumes of property transactions. This is a strong indicator of local demand and reflects that pressure for housing in the local area already reflects the area's significant contribution to the wider sub-region. This is best addressed through the plan-led approach.

2.51 It should also be noted that the DSA Masterplan 2018-2037 'Interim Consultation Summary Report' (August 2018) (p.41) identifies that, in terms of demand for residential development to support the airport's objectives, surrounding settlements already demonstrate high volumes of property transactions. This is a strong indicator of local demand and reflects that pressure for housing in the local area already reflects the area's significant contribution to the wider sub-region. This is best addressed through the plan-led approach.
2.52 The overall vision for DSA demonstrates the importance of the airport in boosting productivity, job creation and as a catalyst for the sub-region. The Draft Doncaster Sheffield Airport Masterplan (2018-2037) is underpinned by the potential for the creation of up to 73,000 jobs, which reflects aspirations beyond the plan period. It is broadly appropriate that proposed Policy 7 is not underpinned by these requirements, but they form an important context for DSA’s relationship to strategic priorities in the sub-region and the overall justification for the employment-led component of the Local Plan’s requirement for housing growth to support labour supply. This is in-turn important evidence to inform the distribution of growth to this part of the plan area. The significant gap between the assumptions for job growth in the DSA Masterplan and the potential for development identified in Policy 7 indicate that this element of the spatial strategy is not positively prepared. 2.53 Our soundness concerns with the proposed approach to Policy 7 are that the relationship to potential jobs growth (and existing levels of employment at DSA) is based on an extremely narrow interpretation of the Draft Masterplan’s explanation of the airport’s contribution towards economic development. Page 6 of the Draft Masterplan states that DSA currently supports around 1,000 jobs, which is the figure relied upon in Policy 7 as the baseline above which future housing growth in association with delivery of the Masterplan will be supported. 2.54 The approach to identifying the ‘baseline’ in Policy 7 also wholly fails to acknowledge significant existing planning commitments that complement opportunities for jobs growth outside of the DSA Masterplan (and Local Plan allocation) boundary. The Council’s Housing and Employment Land Availability Assessment confirms 3.6ha of deliverable supply on the site of the Former Blaxton Quarry (see Policy 4). Planning permission for the site (under 09/01292/OUTM) provides indicative totals for floorspace of 215,003 sqft (19,975sqm) B2/B8/Sui Generis and 7459sqft (693sqm) B1 Offices. This would provide for an estimate of at least 375 jobs in accordance with jobs-to-floorspace densities used in the Council’s HELAA. 2.55 This interpretation of the baseline in terms of its relationship with future potential and the economic-led component of housing growth to support necessary growth in the labour force is not justified. Draft Policy 7 relies on reference to the 1,000 existing jobs figure, plus the Council’s pro-rata assumption for provision of 2,545 jobs over the whole plan period to 2035, in order to account for initial support for up to 280 homes within the DSA Masterplan (at Hurst Lane - Site E2). 2.56 This is divorced from the ‘Core growth scenario economic benefit summary’ outlined in the Draft Masterplan, which anticipates growth to 4,495 Full-Time Equivalent jobs by 2026 (DSA Draft Masterplan, 2018, p.90). 2.57 The Council provides no clear justification for how it interprets the role of the airport in the local and sub-regional economy and as a result Policy 7 does not provide a basis to assess the overall contribution to economic development. The core scenario of the DSA Masterplan provides a wider view, and recognises that a substantial proportion of this activity will be generated locally and induced by increased passenger numbers and associated visitor spending associated with use of the airport. The Draft Masterplan notes: "Based on average inbound visitor spending and assumptions regarding the proportion of spending that could be retained within Sheffield City Region, it is estimated that the spending of inbound visitors could support a further 638 gross FTE jobs annually by 2037" (DSA Draft Masterplan 2018, p.89). 2.58 This is in addition to the substantial potential for growth in permanent, FTE, jobs associated with the construction phase. While this calculation is based on development of DSA airport itself this sector of the economy will support delivery of the Local Plan’s overall requirement for growth; equally some growth in the construction workforce may take place before aspects of the DSA Masterplan are implemented. Neither of these components of economic development appear to be recognised in the Council’s Appendix 3 which is associated with monitoring jobs growth at DSA. 2.59 National planning policy requires that Local Plans are reviewed at least every five years. The objective for a substantial opportunity for residential growth south of the Airport Approach Road should, as outlined in the Council’s Pre-Submission Local Plan (paragraph 5.30), form part of measures to ensure comprehensive delivery and masterplanning. The measures to control any potential additional growth in the plan period through Policy 7 and the accompanying Appendix 3 are not justified and would not be effective. This would generate significant uncertainty surrounding future monitoring requirements (in terms of measuring job growth) and barriers to implementing the policy as intended. 2.60 It is notable that the Council’s own 2018 Housing and Economic Land Availability Assessment (HELAA) indicates that for Site Ref 940 (‘Poplars Farm, Hurst Lane’) only 140 should be regarded as deliverable in years 0-5 of the plan period. This is significantly less than the 280 units indicated as a first phase of growth (Site E1) nearest the approach road and indicative location for the Commercial Plaza. This strongly indicates that the future requirements for comprehensive development can most effectively be addressed as part of Local Plan review, whereas both Site E2 (as identified in the Local Plan) and the proposed additional capacity at the Higgin’s Site provide essential opportunities to address the housing requirement upon adoption. Recommendation 2.61 Policy 7 should be revised to focus supporting development associated with the airport growth within the surrounding settlements to meet the objectives of Policies 3 and 6 (based on recommended amendments as made herein). Justification 2.62 The Higgin’s Site is located directly adjacent to the airport site boundary and the provision of housing in this location would support the regeneration of a previously developed site and the vitality and sustainability of the existing settlement. The site is therefore a highly sustainable location for which to accommodate new housing development to support growth in the area. The allocation of the site for housing will also support the regeneration of the site and the viability and sustainability of the village of Finningley. 2.63 As outlined above when discussing Policy 6, the Higgin’s Site is a more sustainable and desirable option than site ref: 940 for the housing required to support the substantial growth of Doncaster Sheffield Robin Hood Airport. 2.64 The additional housing will support the uplifted housing figure proposed within this representation in relation to Policy 3. If the Council is not minded to accept this figure, the inclusion of the site for development under Policy 7 (i.e. in addition to the standard Local Plan figures) is also considered to be justified on the basis of supporting sustainable economic growth associated with the Draft
Summary:

DSA Masterplan and the potential to create 73,000 jobs during the plan period is important evidence to inform the distribution of growth to this part of the plan area. Soundness issues in relation to jobs and the narrow interpretation of the draft Masterplan’s explanation of the airport’s contribution towards economic development. 1,000 jobs, which is the figure relied upon in Policy 7 as the baseline above which future housing growth in association with delivery of the Masterplan will be supported. The ‘baseline’ in Policy 7 fails to acknowledge significant existing planning commitments that complement opportunities for jobs growth outside of the DSA Masterplan (planning permissions identified see full response) interpretation of the baseline in terms of its relationship with future potential and the economic-led component of housing growth to support necessary growth in the labour force is not justified. Draft Policy 7 relies on reference to the 1,000 existing jobs figure, plus the Council’s pro-rata assumption for provision of 2,545 jobs over the whole plan period to 2035. This is divorced from the ‘Core growth scenario economic benefit summary’ outlined in the Draft Masterplan. The Council provides no clear justification for how it interprets the role of the airport in the local and sub-regional economy and as a result Policy 7 does not provide a basis to assess the overall contribution to economic development. Measures to control any potential additional growth in the plan period through Policy 7 and the accompanying Appendix 3 are not justified and would not be effective. Council’s own 2018 Housing and Economic Land Availability Assessment (HELAA) indicates that for Site Ref 940 ('Poplars Farm, Hurst Lane') only 140 should be regarded as deliverable in years 0-5 of the plan period. This is significantly less than the 280 units indicated as a first phase of growth (Site E1) Policy 7 should be revised to focus supporting development associated with the airport growth within the surrounding settlements to meet the objectives of Policies 3 and 6 Higgin’s Site 189 is located directly adjacent to the airport site boundary, supports regeneration, vitality and sustainability of existing settlement and additional housing will support the uplifted housing figure.

Response:

Unclear where 73,000 jobs has been derived from. 1,000 jobs as a baseline is an assumption pending clarification on the actual amounts of jobs which exist at the airport. The policy focuses on the importance of jobs being delivered at the airport and airport related jobs in the Borough. It is considered proportionate to only factor in jobs around the airport when setting a baseline as these are the most readily definable elements to consider. Policy 7 is not reliant on “1,000”, it is used as a general example of what the level of jobs may be for illustrative purposes. The HELAA build out rates are not limits, but assumptions about what might be deliverable per annum. The site does not form part of the trajectory and therefore no assumptions have been made about when it might come forward or what the build out rate might be. The policy also is related to permitting housing, not housing being completed and built, subject to jobs delivery. There is no need to identify additional land around the airport, given the allocation of 940, and furthermore the fact that Auckley - Hayfield Green has allocations that far supass it’s housing target. Finningley is only 5 units short of it’s target of 55 units. Given this is the smallest settlement to receive an allocated supply, further allocations on the scale proposed would not be in line with the settlement strategy or hierarchy.
2.41 Policy 7 of the Publication Local Plan supports the growth of and investment in Doncaster Sheffield Airport, which will be supported by its future expansion. These representations endorse the support for Doncaster Sheffield Airport (DSA). This strategically important location is central to the strategic priorities of the plan area and delivery of the Local Plan’s objectives. However, it is necessary to highlight a number of issues of soundness regarding the relationship between DSA and the Council’s approach to the wider spatial strategy. These concerns should be read in the context of the SPRU commentary regarding the appropriateness of the housing requirement identified in the Pre-Submission Local Plan and the resulting outcomes for scale and distribution of development (see Appendix 1). (SEE EMAIL FOR Appendix) 2.42 This Appendix highlights the need to ensure that the number of new homes proposed in Policy 3 adequately reflects the requirement to support economic growth and availability of labour to meet the future potential for growth in the number of jobs in the Borough. The draft Local Plan should therefore support the delivery of 1,073 dwellings per annum for the full plan period 2015-2035, ensuring provision for a full 15 years following adoption. 2.43 The Council must consider a more flexible approach to the scale and distribution of growth to recognise the range of potentially suitable locations to meet development need identified under the government’s standard method plus the component of the requirement necessary to support economic growth (and ensure the delivery of affordable housing). 2.44 Policy 7 is therefore supported in principle but requires modifications to other policies as proposed herein, to ensure that it is effective.

Summary:
Policy 7 is supported in principle but requires modifications to other policies to ensure that it is effective. Site is strategically important location is central to the strategic priorities of the plan but there are a number of soundness issues regarding the relationship between DSA and the Council’s approach to the wider spatial strategy. These concerns are noted in appendix SPRU commentary regarding the appropriateness of the housing requirement identified in the Pre-Submission Local Plan. Local Plan should support the delivery of 1,073 dwellings per annum for the full plan period 2015-2035 Council must consider a more flexible approach to the scale and distribution of growth to recognise the range of potentially suitable locations

Response:
The Peter Brett report sets out that 1073 dpa relates to the requirement under the previous NPPF, and that the requirement is 912 (920 dpa) - although the report also notes a figure between 585 and 912 could be appropriate. The Council has chosen to plan for 920 dpa. In meeting this, the airport is additional and treated as a separate matter, and so housing growth here would be additional. The Local Plan will deliver in excess of this.
A safeguarded route through the ACY site for a rail connection linking the East Coast Mainline with the

Area: Chapter 5: Doncaster Sheffield Airport & Business Park

Policy: Policy 7: Doncaster Sheffield Airport & Business Park

History of the Airport

3.1 The Airport site has been in use for aviation purposes since 1915 when it was founded as Finningley Airfield. It was utilised throughout both the First and Second World Wars as an airbase and training facility; and post-war as a base for numerous RAF Corps and training units. 3.2 RAF Finningley was decommissioned in 1996. It was then converted and re-opened in 2005 as Robin Hood Airport Doncaster Sheffield when it began to operate commercially. 3.3 The Airport is now named simply 'Doncaster Sheffield Airport' (DSA); it has become a major economic asset to Doncaster, the Sheffield City Region (SCR) and beyond. It is recognised by TfN as one of a network of Regional Airports which are crucial in providing the North of England with International Connectivity, which in turn is of fundamental importance to Northern Powerhouse objectives. 3.4 Located in South Yorkshire, Doncaster is an important transport hub in the UK, lying close to the boundary between Yorkshire and North Nottinghamshire and at the heart of the UK’s major motorway network. DSA is directly connected to the M18 by the Great Yorkshire Way (GYW) link road providing onward connections to the A1(M), M1, M62 and wider national motorway network. In addition to the existing housing, commercial, retail and community facilities in and around the airport, DSA has the requisite ingredients to create a highly sustainable and vibrant place centred around what is now and will continue to be, Doncaster’s and the Sheffield City Region’s largest single economic asset. The Airport Today 3.5 DSA is one of the fastest growing airports in the UK and is a major employer currently supporting over 1,000 jobs. It has witnessed a 103% growth in passenger numbers in the years 2013 - 2019, with 2019 forecast to be the busiest on record with c.1.4m passengers travelling to 50 destinations. In Summer 2019, DSA experienced a net gain of 12 destinations, more than any other UK airport. May 2019 saw the commencement of a new Transatlantic route to Sanford Florida, Yorkshire’s only long-haul service; in May 2020 this long-haul connectivity will be supplemented by an additional route to Cancun, Mexico. 3.6 The airport has also developed its air cargo capability and now has an outstanding reputation for offering flexible and efficient solutions to the cargo market. 2016/17 DSA saw 10,000 tonnes of cargo handled over the year, driven by an increase in regular ad-hoc cargo services. During 2017/18, DSA secured its first scheduled cargo flights bringing in perishables from Africa. 2018/19 was another record year with 16,500 tonnes of cargo handled. 3.7 This growth has been reflective of infrastructure investment that has been delivered in and around the airport. The recent completion of GYW phase 2 has delivered a transformative improvement in access between the airport and the wider city region, resulting in an increased catchment of 5.53 million people. 3.8 DSA is well placed to now continue its growth and capitalise upon its vast and unique potential. It has an enviable position with unconstrained aviation capacity (for both passenger and cargo), has a catchment area larger than many other UK airports and has extensive landholdings to facilitate airport growth accompanied by supporting infrastructure, complementary land uses and a truly sustainable community. It has one of the UK’s longest runways and could facilitate, if embraced and supported, an airport equivalent to London Stansted or even London Gatwick in their current single runway forms. 3.9 In short, DSA is primed for growth at a level which is simply unrivalled by other airports. 2018 Draft Airport Masterplan 3.10 To harness and guide this growth, Peel has produced a new draft DSA Masterplan (DSAM). The DSAM comes at a time when the airport is experiencing significant growth resulting from new passenger services, increased cargo and general aviation activity. DSAM and the wider Aero Centre Yorkshire (ACY) site within which it sits already brings a gross added value of #62 million per annum to the regional economy and supports almost 1,000 jobs. This in itself is a significant economic contribution. However through delivery of the DSAM this contribution is anticipated to grow exponentially. 3.11 The DSAM represents a significant investment (between #0.9 and #1.66BN construction value) which will provide crucial infrastructure and drive significant job creation in Doncaster and the Sheffield City Region as the airport grows and the ACY estate develops out. The vision is to deliver transformation of the regional airport into a major intercontinental gateway, alongside a significant mixed-use growth area. 3.12 This new DSAM takes account of significant further land assembly which has taken place since the previous DSA Masterplan. It sets out a vision to create an aerotropolis and sustainable community, on an enlarged scale which seeks to capitalise on the unique potential of DSA and fully reflects the high levels of ambition of the City Region Economic Plan. 3.13 The masterplan proposes: - A passenger operation of 4.6 million passengers by 2037 for potential for up to 7.2 million to be achieved in a high growth scenario - A cargo operation handling 70,000 tonnes of air cargo by 2037, with potential for up to 176,500 tonnes of air cargo in a high growth scenario; - Major terminal enhancements including doubling the size of the terminal with expanded check-in, security, departure and immigration areas - New retail facilities to enhance the customer experience; - 1.5 million sq ft of airside development including expanded cargo operations, general business aviation facilities, multi-purpose hangarage and a dedicated Maintenance Repair Overhaul (MRO) campus, incorporating a satellite of the University of Sheffield Advanced Manufacturing Research Centre (AMRC); - Over 3 million sq ft landside logistics and advanced manufacturing space; - Up to 3,000 new homes; New retail outlets, hotels, leisure and community facilities to be provided within a central plaza which is to be the fulcrum of the community; and - A safeguarded route through the ACY site for a rail connection linking the East Coast Mainline with the Lincoln to Doncaster line, with a rail station close to both the passenger terminal and proposed central plaza area. 3.14 This level of intervention and growth is considerably greater than has been envisaged in the previous Masterplan and is forecast to result in 10,100 direct jobs, on-site within the DSA masterplan area including the airport itself across the LP plan period and will result in the transformation of the economic landscape of Doncaster, the City Region and provide a major contribution to the Northern Powerhouse. 3.15 Whilst the DSAM is not predicated on the new rail connection and station referenced above, in the event this direct connection to the East Coast Mainline (ECML) and new station are delivered, this would place 9 million people in the area east of the Pennines and north and east of London within 90 minutes travel time of
The DSAM terminal. This enhanced accessibility would further accelerate and increase economic growth and development around the airport to levels even greater than those envisaged under the Masterplan high growth scenario. Realising the DSAM ambition 1.1 DSA and ACY is Doncaster’s and the City Region’s single biggest economic asset. To unlock the potential, realise the DSAM and capture the economic benefits and growth that will arise, there is a need for longstanding commitment from Peel coupled with an overarching local planning policy framework to create the conditions to support the vision. 1.2 Peel has invested over £300m in developing DSA, delivering infrastructure and capital projects. It remains fundamentally committed to DSA and its transformation agenda. In simple terms; continual investment in capital projects, infrastructure and cash injections is necessary to sustain the operation and generate the anticipated growth in commerce, passenger and cargo which in turn will continue to foster further increases in economic growth and jobs both within ACY/DSA and across the Region. 1.3 Peel is planning to inject a further £50m into DSA itself over the next ten years to fund future capital projects / infrastructure and airline route development incentivisation, with an expectation of the airport becoming self-sustaining within the next five years or so. This includes investment in the following; some of which have been, or will be, the subject of planning applications: - Terminal improvements and extensions (planning application approved) - New departure gate bridges (planning application approved) - Expansion of the airport apron to provide additional aircraft stands - Additional car parks (partly delivered under Permitted Development rights with planning applications for the remainder as envisaged in the masterplan to be submitted in October 2019) - Airline financial investment (incentivisation and airline specific marketing activity). 3.16 This is in addition to substantial recent investments in: - Runway resurfacing (#6m) - Cargo transit shed expansion to ensure ability to maintain rapid growth in cargo throughput (#1.6m including #1.2m grant contribution) - Complete upgrade of Hold Baggage Screening x-ray equipment in order to remain compliant with European Civil Aviation Conference (ECAC) standards (#2.2m) - Car parking expansion - premium and meet and greet infrastructure (#0.9m); and - Airline incentivisation (#1.10m). 1.4 In terms of surrounding development proposals within the wider ACY site, Peel has recently secured renewal of permission for commercial development west of the passenger terminal and main passenger car parks and is in advanced discussions with various parties for transactions which will see continuation of recent commercial development activity in these areas. 1.5 To maintain momentum and provide the opportunity for further large scale commercial development within ACY, Peel has committed to the preparation and submission of planning applications, wider master-planning and capital delivery in respect of the following: Logistics and Advanced Manufacturing 3.17 To capitalise on DSA’s connectivity and the growth of the logistics sector, Peel submitted, in late 2018, an outline planning application (note 1 - LPA Reference: 18/02759/OUTA) for the development of 325,000m2 of high quality, state of the art advanced manufacturing and logistics floorspace. The outline planning application was accompanied by a full Environmental Statement (ES). 3.18 The significant financial commitment to the logistics and advanced manufacturing application was in part precisely to demonstrate to the Council and third parties that Peel is committed to seeing delivery of the employment elements of the DSAM as early as possible. 3.19 The application is currently awaiting determination. Central Plaza 3.20 Peel is also currently finalising a hybrid planning application to realise the vision of the central plaza to deliver up to 43,000sqm (GIA) of high quality mixed use development comprising commercial, retail and leisure floorspace, hotels and community uses as well as a small amount of residential apartments. The combination of uses seeks to deliver a range of facilities and services to create a unique place in the heart of DSA to support and bring together all elements of the DSAM, by meeting the needs of a growing living and working population, together with those of the airport community. 3.21 The draft hybrid planning application, which comprises a full suite of surveys and assessments, would seek full planning permission for highway/drainage infrastructure and strategic landscaping with outline planning permission being sought for the development floorspace and controlled via a series of parameter plans relating to development cells and land use; site re-profiling; building heights; building frontages; access and movement; green infrastructure and ecology; and drainage infrastructure. 3.22 The draft hybrid planning application is to be submitted in Autumn 2019. A copy of the illustrative masterplan is contained within Appendix 1. (SEE EMAIL FOR Appendix) Concept Masterplanning 3.23 To support the DSAM, Peel has development a ‘Concept Masterplan’ (CM) which articulates the strategic place-making principles covering areas identified in the DSAM including airport operations, employment development, the new central plaza, green infrastructure, ecology areas, open spaces and new housing areas. In addition to the respective planning applications, the CM demonstrates how the various land uses will be conceptually and physically integrated and connected and create high quality mixed use place. 3.24 The current version of the CM is included with this submission (Appendix 2 as a separate document) and it is the intention that it is to be updated and resubmitted to the Council once further detailed work on the housing element has been undertaken (see below). (SEE EMAIL FOR Appendix) Housing Masterplan 3.25 Landscape Master planners and Designers Randall Thorp have been commissioned by Peel to undertake a more detailed masterplan of the main housing element of the DSAM (comprising LP draft allocations 940 E2 and E3). 3.26 Housing is often an early catalyst to sustainable mixed use development propositions of the type encouraged by NPPF, helping to build confidence and momentum in wider propositions. It is therefore integral to the overall concept and attraction of the mixed use DSAM proposition. The ability to ensure early delivery of a very small proportion of the overall planned LP housing allocation will be important to unlocking the potential of DSA and ACY. The potential major employers and occupiers which are to be attracted to the ACY site, will no doubt be keen to ensure that there is a sufficient and immediate labour supply around DSA to meet some of its workforce requirements, together with quality housing provision nearby to provide potential employees with the opportunity to live close by. This will as assist in creating a community and critical mass of a working and living population which will ensure commercial viability and attractiveness of other elements of the DSAM including the proposed central plaza. 3.27 This additional housing will undoubtedly be seen as an attractive proposition for potential companies who will be considering whether to locate to DSA against a number of competitive alternative locations. Providing employment opportunities and services alongside new housing is exactly the approach which the new NPPF is directing Local Authorities to take when setting policies for major employment and housing allocations and employment. 3.28 It is also important to note that the DSAM confirms that the airport masterplan area has capacity to deliver a significant amount of housing which is over and above that which is currently envisaged in the LP. As explained further below, Peel considers that the LP should be more flexible in respect of housing delivery, in the event of DSA delivering more jobs than anticipated and/or in the event that the Borough should require further housing delivery in the absence of a five year housing land supply. Summary 3.29 The realisation of the DSAM is not waiting upon the adoption of the LP to proceed. Since the draft DSAM was published, Peel has been advancing the delivery of substantial elements of the vision and growth of DSA itself has gone from strength to strength, with record years for passengers and cargo, addition of more new passenger routes than any other UK airport, including Yorkshire’s only long-haul route with a second already committed, together with commencement of the airport’s first scheduled freight services. 3.30 These elements are important as they demonstrate a clear financial commitment from Peel to realise the DSAM vision; to deliver economic growth; and the creation of a highly sustainable and vibrant place at DSA. Collectively, these elements also demonstrate that the DSAM is suitable and deliverable.
Summary:

The airport was formerly RAF Finningley but closed in 1996 and was re-opened in 2005 commercially as Robin Hood Airport Doncaster Sheffield (now Doncaster Sheffield Airport (DSA)). It is recognised by Transport for the North as one of a network of regional airports providing international connectivity to the North of England. It is well located regionally, and is at the heart of the major motorway network. DSA has the requisite ingredients to create a highly sustainable and vibrant place centred around what is now and will continue to be, Doncaster’s and the Sheffield City Region’s largest single economic asset. It is one of the fastest growing airports in the UK and a major employer supporting over 1,000 jobs, with a 103% rise in passenger numbers 2013 - 2019. Forecasts shows 2019 will be the busiest year on record with 1.4m passengers travelling to 50 destinations. There has been a net gain of 12 destination is summer 2019, more than any other UK airport and transatlantic flights have commenced - the only long haul service in Yorkshire (to Florida, with Cancun also planned in 2020). There is also cargo capabilities, with 16,500 tonnes handled in 2018/19. The growth is lined to infrastructure investment around the airport, including the Great Yorkshire Way which has widened the catchment area of people to 5.53m. It is well placed to continue growing and capitalise on its potential. It has an enviable position under unconstrained aviation capacity for both passenger and cargo), has a catchment area larger than many other UK airports and has extensive landholdings to facilitate airport growth accompanied by supporting infrastructure, complementary land uses and a truly sustainable community. It has one of the UK’s longest runways and could facilitate, if embraced and supported, an airport equivalent to London Stanstead or even London Gatwick in their current single runway forms. It is primed for growth unrivalled by other airports. The airport has produced an airport masterplan to harness this growth, which represents a significant investment which will provide crucial infrastructure and drive job creation. The vision is to transform DSA into a national international gateway. The masterplan envisages an aerotropolis and takes account of significant land assembly since previous masterplans. It proposes: - A passenger operation of 4.6 million passengers by 2037 with potential for up to 7.2 million to be achieved in a high growth scenario - A cargo operation handling 70,000 tonnes of air cargo by 2037, with potential for up to 176,500 tonnes of air cargo in a high growth scenario; - Major terminal enhancements including doubling the size of the terminal with expanded check-in, security, departure and immigration areas - new retail facilities to enhance the customer experience; - 1.5 million sq ft of airside development including expanded cargo operations, general business aviation facilities, multi-purpose hangarage and a dedicated Maintenance Repair Overhaul (MRO) campus, incorporating a satellite of the University of Sheffield Advanced Manufacturing Research Centre (AMRC); - Over 3 million sq ft landscape ecology and advanced manufacturing space; - Up to 3,000 new homes; New retail outlets, hotels, leisure and community facilities to be provided within a central plaza which is to be the fulcrum of the community; and - A safeguarded route through the ACY site for a rail connection linking the East Coast Mainline with the Lincoln to Doncaster line, with a rail station close to both the passenger terminal and proposed central plaza area. This is forecast to result in 10,10 direct on site within the masterplan area, including the airport across the plan period, which will transform the economic landscape of Doncaster. There are also ambitions to connect to the East Coast Mainline. The airport is the borough and city regions single biggest economic asset. There is a need for planning policy to support the vision. Peel has invested £300m developing DSA and is committed to its transformation. Peel is planning to inject a further £50m into DSA itself over the next ten years to fund future capital projects / infrastructure and airline route development incentivisation, with an expectation of the airport becoming self-sustaining within the next five years or so. This includes investment in the following, some of which have been, or will be, the subject of planning applications: - Terminal improvements and extensions (planning application approved); - New departure gate bridges (planning application approved); - Expansion of the aircraft apron to provide additional aircraft stands; - Additional car parks (partly delivered under Permitted Development rights with planning applications for the remainder as envisaged in the masterplan to be submitted in October 2019); - Airline financial investment (incentivisation and airline specific marketing activity In addition to other recent investments in: - Runway resurfacing (£6m); - Cargo transit shed expansion to ensure ability to maintain rapid growth in cargo throughput (£1.6m including £1.2m grant contribution); - Complete upgrade of Hold Baggage Screening x-ray equipment in order to remain compliant with European Civil Aviation Conference (ECAC) standards (£2.2m); - Car parking expansion - premium and meet and greet infrastructure (£0.9m); and - Airline incentivisation (£1+10m) A planning application was submitted (18/02759/OUTA) for the development of 325,000m2 of high quality, state of the art advanced manufacturing and logistics floor space, precisely to show the Council and 3rd parties it is committed to seeing the delivery of employment elements of the masterplan as soon as possible. There are also plans to submit an application for a mixed use central plaza in Autumn 2019. To support the masterplan, a concept masterplan has been developed to show how all the proposed uses will integrate and create a high quality, mixed use space. Landscape master planners have also been commissioned to undertake detailed master plan of the main housing element of the masterplan, including elements included in the Local Plan (940). Housing is an early catalyst in sustainable mixed use development propositions of the type encouraged by the NPPF, helping to build confidence and momentum. It is integral to the overall concept and attraction of the mixed use proposition. Providing a small proportion of the overall amount will be important to unlocking potential and generating labour supply and creating housing for employees. It will help create community and ensure commercial viability and attractiveness of other areas of the masterplan. It will be attractive to companies seeking to locate here and fits in with the approach in the NPPF of providing housing and employment close to each other. The airport could deliver a significant amount more than what is currently proposed and the Plan should be more flexible in relation to this if more jobs are delivered or there is an absence of a 5 year supply. Peel is advancing the airport outside of the plan and not waiting for adoption to proceed. Peel are committed to economic growth and creating a sustainable place. The airport masterplan is suitable and deliverable.

Response:

Noted. The Council is broadly supportive of the ambitions of the masterplan, and through Policy 7 a holistic approach can be taken which delivers a carefully considered mixed use site. As such, 280 houses have been allowed in lieu of future delivery of jobs to help the airport to begin to realise its ambitions.
7.1 Peel strongly supports the allocation of land at DSA for the development of a new mixed use community which includes the expansion of DSA, new homes, new employment, open space and ecological networks and new central plaza. 7.2 Notwithstanding this support, Peel proposes alterations to the wording of the policy to ensure it aligns with the ambitions and objectives of the draft DSA Masterplan and the tests of soundness in accordance with the Framework. 7.3 The proposed alterations are shown in the track changes in Appendix 4; this includes amendments to the draft policy, some of its associated explanation and Appendix 3 of the LP. Where necessary further justification for the proposed alterations is provided, as follows: - The terminology applied in some parts of the policy is inconsistent with that used in the draft DSAM and/or inconsistent with the rest of the LP; changes are proposed for consistency. - Amendments to the method of calculating housing release (within Site Allocation 940 E3) relative to the creation of jobs within or attributable to the DSAM (either delivered and/or contracted to be delivered). This is required to ensure the policy is workable and effective in practice. - Policy amendments to the 'central plaza' element to reflect the emerging proposals and the in principle acceptance for the centre to include a small element of residential apartments at upper floors to support the creation of a vibrant central place. - The draft policy stipulates a maximum level of residential development (920 dwellings) to be delivered at Site Allocation 940 E3. To ensure consistency with other policies in the LP, we propose this be amended to a 'minimum' figure. If the agreed policy proposition is that housing is released to support jobs growth, there is no sound reason why there should be a cap on housing numbers should jobs growth exceed what is forecast. The policy should be amended to confirm that the housing number stipulated for the allocation is a 'minimum' so as to allow for more housing delivery in the event more jobs are secured than are forecast in the DSAM. It is Peel's contention that this shouldn't harm housing delivery elsewhere as the DSA policy is a self-fulfilling one - namely delivering the housing necessary to support the sustainable economic growth of the airport and delivery of its vision. As explained in Section 3 of these representations, sites 940 E2 and E3 have the physical capacity to deliver up to 3,000 homes. - Deletion of the requirement to provide a Strategic Delivery Plan as the policy is unclear as to the purpose of such a document. - Amendments to other elements to the policy covering master-planning, Design Code and Green Infrastructure Requirements. - Factual changes to the policy explanation. (SEE EMAIL FOR Appendices)

Summary:
Strongly support the allocation of land at DSA for a mixed use development including airport expansion, new homes, new employment, open space and ecological networks. Propose alterations to the policy to ensure it aligns with the ambitions and objectives of the masterplan and the soundness tests. Proposed amendments are provided in track changes to the policy, including: - Amendments to some terminology for consistency; - Amendments to the mechanism for housing release relative to the creation of jobs within or attributable to the master plan (delivered / contracted to be delivered). This ensures it is workable in practice; - Policy amendments to the central plaza element to reflect emerging proposals and the in principle acceptance of a small element of residential on upper floors to support vibrancy; - That 920 additional units is a minimum figure to allow for more housing should more jobs be delivered, the policy should be amended to reflect this. There is no reason that the figure should be capped. It shouldn't harm housing delivery everywhere as DSA is self fulfilling in that housing supports economic growth at the airport. The site can deliver up to 3000 homes; - Delete the requirement to provide a Strategic Delivery Plan as it is unclear what purpose it has; - Amendments related to master-planning, design code and green infrastructure requirements. - Factual changes to the policy explanation. (Appendices provided)

Response:
Support welcome. In terms of the amendments made: - the word "masterplan", as in the document to be drawn up between the Council and the Airport operator, will be replaced by the term "blueprint", which functions in exactly the same way but avoids confusion; - there will be no amendments to the mechanism. This was agreed at full Council and is the best way of ensuring that jobs will be delivered and when so they lead to houses. Jobs delivered is the clearest way this can be evidenced. The 280 houses up front is designed to help the airport begin to realise its ambition and is appropriate amount to allow for a mixed use community to begin to develop; - NPPF para. 85f and Local Plan para. 8.2.1. (Policy 24) covers residential linked to retail - the Local Plan should be read as a whole and there is no need to repeat this here; - 'Capping' the amount of homes that can come forward has been done to ensure there is some control retained on proposals here. The scale of jobs is ambitious and 1,200 homes would be the result of 10,910 jobs delivered. 1,200 homes is the scale of housing the Council are comfortable with in this location at present. Should job delivery take off in this location, the future reviews or iterations of the local plan can consider this and how to respond to it; - A strategic delivery plan allows transport implications to be assessed, planned for and mitigated as a result of development; - Modifications have been made to labelling of sites for clarity, and some other amendments as set out in the tables of amendments.
Policy 7: JobsRelHousing

5 of the plan period. This is significantly less than the 280 units indicated as a first phase of growth (Site E1) nearest to

3.50 The overall vision for DSA demonstrates the importance of the airport in boosting productivity, job creation and as a catalyst for the sub-region. The Masterplan is underpinned by the potential for the creation of up to 73,000 jobs, which reflects aspirations beyond the plan period. Policy 7 of the Pre-Submission Local Plan is underpinned by a significantly reduced estimate of the potential for jobs growth associated with the airport. This in effect relies on the assumption of only 170 jobs per annum from 2020. This figure is used to justify the initial amount of housing development in association with the DSA Masterplan. While the figures quoted in the DSA Masterplan should not necessarily form a substitute to the Local Plan’s wider evidence for overall development needs they form an important part of the context for DSA’s relationship to strategic priorities in the sub-region and the overall justification for the employment-led component of the Local Plan’s requirement for housing growth to support labour supply. This is in-turn important evidence to inform the distribution of growth to this part of the plan area. The significant ‘gap’ between the assumptions for job growth in the DSA Masterplan and the potential for development identified in Policy 7 indicate that this element of the spatial strategy is not positively prepared.

3.51 Our soundness concerns with the proposed approach to Policy 7 are that the relationship to potential jobs growth (and existing levels of employment at DSA) is based on an extremely narrow interpretation of the Draft Masterplan’s explanation of the airport’s contribution towards economic development. Page 6 of the Draft Masterplan states that the airport currently supports around 1,000 jobs, which is the figure relied upon in Policy 7 as the baseline above which future housing growth in association with delivery of the Masterplan will be supported. 3.52 The approach to identifying the ‘baseline’ in Policy 7 also wholly fails to acknowledge significant existing planning commitments that complement opportunities for jobs growth outside of the DSA Masterplan (and Local Plan allocation) boundary. The Council’s Housing and Employment Land Availability Assessment confirms 3.6ha of deliverable supply on the site of the Former Blaxton Quarry (see Policy 4). Planning permission for the site (under 09/01292/OUTM) provides indicative totals for floorspace of 215,003 sqft (19,975sqm) B2/B8/Sui Generis and 7459sqft (693sqm) B1 Offices. This would provide for an estimate of at least 375 jobs in accordance with jobs-to-floorspace densities used in the Council’s HELAA. 3.53 This interpretation of the baseline in terms of its relationship with future potential and the economic-led component of housing growth to support necessary growth in the labour force is not justified. Draft Policy 7 relies on reference to the 1,000 existing jobs figure, plus the Council’s pro-rata assumption for provision of 2,545 jobs over the whole plan period to 2035, in order to account for initial support for up to 280 homes within the DSA Masterplan (at Hurst Lane - Site E2). 3.54 This is divorced from the ‘Core growth scenario economic benefit summary’ outlined in the Draft Masterplan, which anticipates growth to 4,495 Full-Time Equivalent jobs by 2026 (DSA Draft Masterplan, 2018, p.90). 3.55 The Council provides no clear justification for how it interprets the role of the airport in the local and sub-regional economy and as a result Policy 7 does not provide a basis to assess the overall contribution to economic development. The core scenario of the DSA Masterplan provides a wider view, and recognises that a substantial proportion of this activity will be generated locally and induced by increased passenger numbers and associated visitor spending associated with use of the airport. The Draft Masterplan notes: “Based on average inbound visitor spending and assumptions regarding the proportion of spending that could be retained within Sheffield City Region, it is estimated that the spending of inbound visitors could support a further 638 gross FTE jobs annually by 2037” (DSA Draft Masterplan 2018, p.89) 3.56 This is in addition to the substantial potential for growth in permanent, FTE, jobs associated with the construction phase. While this calculation is based on development of DSA airport itself this sector of the economy will support the Local Plan’s overall requirement for growth; equally some growth in the construction workforce may take place before aspects of the DSA Masterplan are implemented. Neither of these components of economic development appear to be recognised in the Council’s Appendix 3 associated with monitoring jobs growth at DSA. (SEE EMAIL FOR Appendices) 3.57 National planning policy requires that Local Plans are reviewed at least every five years. The objective for a substantial opportunity for residential growth south of the Airport Approach Road should, as outlined in the Council’s Pre-Submission Local Plan (paragraph 5.30), form part of measures to ensure comprehensive delivery and masterplanning. The measures to control any potential additional growth in the plan period through Policy 7 and the accompanying Appendix 3 are not justified and would not be effective. This would generate significant uncertainty surrounding future monitoring requirements (in terms of measuring job growth) and barriers to implementing the policy as intended. 3.58 It is notable that the Council’s own 2018 Housing and Economic Land Availability Assessment (HELAA) indicates that for Site Ref 940 (’Poplars Farm, Hurst Lane’) only 140 should be regarded as deliverable in years 0-5 of the plan period. This is significantly less than the 280 units indicated as a first phase of growth (Site E1) nearest the approach road and indicative location for the Commercial Plaza. This strongly indicates that the future requirements for comprehensive development can most effectively be addressed as part of Local Plan review, whereas both Site E2 (as identified in the Local Plan) and the proposed additional capacity at Mosham Road provide essential opportunities to address the housing requirement upon adoption. 3.59 DSA is a focus for airport related employment growth, suited to high growth industries and logistics. The airport and hinterland is identified as being the best location for aircraft and air service related businesses. There is therefore an opportunity to provide for this expected high growth related employment within the immediate locality. 3.60 Attracting high growth industries and logistics to the area would also compliment the skills base of the existing workforce in the locality: Census (2011) information for the South East ward of Doncaster (which includes Finningley and Blaxton), indicates that there is a higher concentration of managers, professional and technical people employed and living in the south east area of Doncaster compared with other Doncaster wards. 3.61 As set out within the letter provided at Appendix 4, the Mixed Use allocation of the Mosham Road site is supported by Peel Investments, as operators of the airport site, in order to support the vision for the airport and the provision of the proposed
railway station. Recommendation Policy 7 be amended to include reference to the Housing Allocation of Site 446. Justification 3.62 To ensure accordance with the DSA Masterplan and to reflect the previously developed nature of the site, its close proximity to airport, and importantly the proposed location of the airport railway station. It is deemed the most sustainable location for which to accommodate new housing and employment development to support growth within the area. 3.63 The allocation of the site for Housing-led redevelopment under the appropriate policies will support the comprehensive regeneration of the site and the sustainable future of the village of Auckley. The additional capacity provided by the site in respect of housing provision will support the uplifted housing figure proposed within this representation in relation to Policy 3. 3.64 If the Council is not minded to accept this figure, the inclusion of the site for development under Policy 7 (i.e. in addition to the standard Local Plan figures) is also considered to be justified on the basis of supporting sustainable economic growth associated with the DSA Masterplan. These representations highlight that substantial additional benefits that would be delivered in accordance with the priorities of the Local Plan through acknowledging support for additional development compliant with the DSA Masterplan. These include prioritising brownfield land; minimising loss of Green Belt; maximising multi-modal transport choice and minimising the number and length of journeys. 3.65 This approach will ensure appropriate support for the delivery of the railway station as a key part of the DSA Masterplan, as well as the other much wider benefits outlined within this report. These amendments will also ensure the soundness of the plan.

Summary:
Re site 446 Auckley (rejected Housing site)  Policy 7 - Airport and Business Park. 1. More homes needed to support growth of the Airport. 2. Significant gap between jobs quoted in Policy and that in the DSA Masterplan (growth scenario forecasts much higher growth - potential for 73,000 jobs) 3. Support policy in principle. 4. Needs to be amended to be more flexible to support economic growth. 5. Don't agree with HELAA that site is a 'Greenfield Urban Extension' - it is BF small medium site. 6. Relationship with spatial strategy - Significant gap between jobs growth forecast in DSA masterplan and figures in Policy 7. 7. Questions the baseline jobs figure (1000). Fails to factor in existing planning permissions which could deliver a further 375 jobs. 8. Underestimates the potential for jobs growth at DSA and contribution towards economic growth. 9. Policy should be amended to include site 446.

Response:
Support for the policy generally is welcome. Policy 7 adequately supports the growth of the airport, no further housing is required in this location for this purpose, as land has been allocated that could deliver up to 1200 homes, in addition to those which already are proposed in the area - which is above Auckley - Hayfield Green's housing target (without including the allocation of site 940). It is not clear where the potential 73,000 jobs has been derived from, do not believe there is a gap between the masterplan and the Local Plan. The Local Plan facilitates housing related to 10,910 new jobs, which is in line with the figures in the draft airport masterplan. The policy supports the economic growth of the airport and the Council is supportive of this as long as it is delivered in a considered way, as set out in Policy 7. Site 446 is greenfield, and the minerals application has a remediation condition attached to it requiring its restoration. There is no need to add site 446 in to the allocations. The airport growth and housing is sufficiently covered in Policy 7 and Auckley Hayfield Green has more than sufficient housing land allocated in addition to this.
To support the representation and Inspectors understanding of the site.

South Yorkshire Housing Association

Chapter 5: Doncaster Sheffield Airport & Business Park

Tests of Soundness: Positively prepared Effective

Consistent with national

3.46 The Pre-Submission Local Plan represents an extremely narrow interpretation of the DSA Masterplan's identified potential for job growth. A key implication of this is that the approach in the Local Plan looks to divorce DSA from its role in the wider spatial strategy. This is significant because it overlooks the existing demand for jobs (and by association the requirement for homes and labour supply) associated with role of DSA as a growth driver. This also raises issues of consistency with national policy, given the ability of DSA to support a prosperous rural economy. Specifically, the spatial strategy fails to recognise that a number of settlements in close proximity to DSA, including Auckley-Hayfield and Finningley, have significant potential to support sustainable patterns of development associated with the delivery of housing and economic growth consistent with paragraphs 78 and 83 of the NPPF2019 and achievement of the airport's objectives. 3.47 It is therefore not justified that the proposed spatial strategy, and the approach to the scale and distribution of housing outlined in proposed Policy 3, does not support any contribution to the economic-led component of housing growth at Service Towns and Larger Villages in close proximity to DSA. This only applies to 'Main Towns' identified as potentially suitable to deliver up to 10% of the economic-led growth requirement. We advocate that suitable sites, sustainably located in relation to settlements at Auckley-Hayfield and Finningley, and which complement the strategy for DSA, should be identified to meet the need for jobs-led growth in the overall housing requirement. It is appropriate that such sites contribute towards the borough’s identified housing needs without delivery being directly linked to jobs growth at DSA. 3.48 The potential for such an approach was explored in the Council's 'Settlement Background Paper - Local Plan Evidence Base' (2018), however the Council rejected the argument that Auckley - Hayfield Green could be classified as a 'smaller urban area', despite previous patterns of growth and the functional relationship between the settlements. Instead a preference was stated to assess the settlements 'as is'. This assessment is considered unsound, particularly in the context of the objectives for DSA and acknowledgement of the economic-led component of housing growth. It is appropriate to revisit these conclusions in the context of the DSA Masterplan (including the delivery of new infrastructure) and our concerns regarding the overall housing requirement outlined in the SPRU Appendix. (SEE EMAIL FOR Appendices) 3.49 It should also be noted that the DSA Masterplan 2018-2037 'Interim Consultation Summary Report' (August 2018) (p.41) identifies that, in terms of demand for residential development to support the airport's objectives, surrounding settlements already demonstrate high volumes of property transactions. This is a strong indicator of local demand and reflects that pressure for housing in the local area already reflects the area's significant contribution to the wider sub-region. This is best addressed through the plan-led approach.

Summary:
It is not justified that the proposed spatial strategy, and the approach to the scale and distribution of housing outlined in proposed Policy 3, does not support any contribution to the economic-led component of housing growth at Service Towns and Larger Villages in close proximity to DSA. This only applies to 'Main Towns' identified as potentially suitable to deliver up to 10% of the economic-led growth requirement. Advocates that suitable sites, sustainably located in relation to settlements at Auckley-Hayfield and Finningley, and which complement the strategy for DSA, should be identified to meet the need for jobs-led growth in the overall housing requirement. It is appropriate that such sites contribute towards the borough’s identified housing needs without delivery being directly linked to jobs growth at DSA.

Response:
Consultation and research on the local plan indicated the most sustainable locations for growth - the Main Urban Area and Main Towns - and this is where economic led housing growth is directed to. Service Towns and Villages receive allocations to meet local needs only. That said, Auckley has an oversupply due to two permissions which are allocated, and if the potential from the airport allocations are factored in then it will deliver a level of housing in line with what a Main Town is expected to deliver, so there are no concerns that there is an undersupply of housing in this area. The Local Plan shows how jobs led growth will be met via enough allocations to meet the housing requirement in the Borough, and in the places and on the sites deemed most suitable.
Comment:

3.37 These representations endorse the support for Doncaster Sheffield Airport (DSA) outlined in the Pre-Submission Local Plan. This strategically important location is central to the strategic priorities of the plan area and delivery of the Local Plan’s objectives. However, it is necessary to highlight a number of issues of soundness regarding the relationship between DSA and the Council’s approach to the wider spatial strategy. These concerns should be read in the context of the SPRU commentary regarding the appropriateness and the housing requirement identified in the Pre-Submission Local Plan and the resulting outcomes for scale and distribution of development (see Appendix 2). (SEE EMAIL FOR APPENDICES)

3.38 This Appendix highlights the need to ensure that the number of new homes proposed in Policy 3 adequately reflects the requirement to support economic growth and availability of labour to meet the future potential for growth in the number of jobs in the borough. The Pre-Submission Local Plan should therefore support the delivery of 1,073 dwellings per annum for the full plan period 2015-2035, ensuring provision for a full 15 years following adoption. 3.39 The Council must consider a more flexible approach to the scale and distribution of growth to recognise the range of potentially suitable locations to meet development need identified under the government’s standard method plus the component of the requirement necessary to support economic growth (and ensure the delivery of affordable housing). 3.40 Policy 7 ‘Doncaster Sheffield Airport and Business Park’ is therefore supported in principle but should be modified to ensure that it is effective, positively prepared and appropriately justified. In order to achieve this, it is necessary to adopt a more flexible approach to supporting suitable areas for residential development identified in the Draft DSA Masterplan.

Summary:

Policy 7 - Airport and Business Park. 1. More homes needed to support growth of the Airport. 2. Significant gap between jobs quoted in Policy and that in the DSA Masterplan 3. Support policy in principle. 4. Needs to be amended to be more flexible to support economic growth. 5. Don’t agree with HELAA that site is a ‘Greenfield Urban Extension’ - it is BF small medium site. 6. Relationship with spatial strategy - Significant gap between jobs growth forecast in DSA masterplan and figures in Policy 7. 7. Questions the baseline jobs figure (1000). Fails to factor in existing planning permissions which could deliver a further 375 jobs. 8. Underestimates the potential for jobs growth. 9. Policy should be amended to include site 446.

Response:

Support for the policy generally is welcome. Policy 7 adequately supports the growth of the airport, no further housing is required in this location for this purpose, as land has been allocated that could deliver up to 1200 homes, in addition to those which already are proposed in the area - which is above Auckley - Hayfield Green’s housing target (without including the allocation of site 940). It is not clear where the potential 73,000 jobs has been derived from, do not believe there is a gap between the masterplan and the Local Plan. The Local Plan facilitates housing related to 10,910 new jobs, which is in line with the figures in the draft airport masterplan. The policy supports the economic growth of the airport and the Council is supportive of this as long as it is delivered in a considered way, as set out in Policy 7. Site 446 is greenfield, and the minerals application has a remediation condition attached to it requiring its restoration. There is no need to add site 446 in to the allocations. The airport growth and housing is sufficiently covered in Policy 7 and Auckley Hayfield Green has more than sufficient housing land allocated in addition to this.
3.41 Specifically, these representations demonstrate that the Local Plan should support mixed use development on land at Mosham Road and that the site should be reassessed in the context of Auckley - Hayfield's ability to support the spatial strategy in the Local Plan. 3.42 This site represents a suitable and sustainable location to meet the growth needs of existing settlements. The site is located within the DSA Masterplan area and identified as a potential location for residential development (see fig. 5). The site is also assessed in the Council's HELAA (Ref: 446) and found to be suitable for development, subject to local policy constraints. (SEE EMAIL FOR Figure 5. DSA Masterplan Area) 3.43 The HELAA identifies the site as a 'Greenfield Urban Extension', which is not justified given the Council's assessment of capacity at around 350-400 homes. This location should be regarded as a small/medium size site that will provide sustainable links to nearby Auckley and represent an appropriate contribution to the scale and distribution of growth as part of the spatial strategy. This would ensure a positively prepared response to local demand for growth. This strategy for promotion of the site at Mosham Road seeks to avoid an ad-hoc approach to development in nearby settlements that has occurred over recent years without an up-to-date plan in place. 3.44 It is therefore requested that Site 446 be identified as an allocation in the draft Local Plan contributing towards housing requirements during the plan period. This approach is consistent with the objectives of the DSA Masterplan and would overcome soundness concerns regarding the Council's proposed approach to restrict housing growth directly related to an increase in jobs at DSA. 3.45 Delivery of this site towards the Local Plan housing requirement would also support achieving the economic growth-led component of the housing requirement given the proximity to DSA and would thus complement the potential for economic development at this location. However, for the reasons outlined in the SPRU Appendix and these representations, delivery of this site should not be tied to monitoring of job growth at the airport as currently proposed in draft Policy 7. (SEE EMAIL FOR Appendices)

Summary:
Policy 7 - Airport and Business Park. 1. More homes needed to support growth of the Airport. 2. Significant gap between jobs quoted in Policy and that in the DSA Masterplan 3. Support policy in principle. 4. Needs to be amended to be more flexible to support economic growth. 5. Don't agree with HELAA that site is a 'Greenfield Urban Extension' - it is BF small medium site. 6. Relationship with spatial strategy - Significant gap between jobs growth forecast in DSA masterplan and figures in Policy 7. 7. Questions the baseline jobs figure (1000). Fails to factor in existing planning permissions which could deliver a further 375 jobs. 8. Underestimates the potential for jobs growth. 9. Policy should be amended to include site 446.

Response:
Support for the policy generally is welcome. Policy 7 adequately supports the growth of the airport, no further housing is required in this location for this purpose, as land has been allocated that could deliver up to 1200 homes, in addition to those which already are proposed in the area - which is above Auckley - Hayfield Green's housing target (without including the allocation of site 940). Policy: Policy 7: Doncaster Sheffield Airport & Business Park

Tests of Soundness:

Comment:

Auckley Parish Council's comments are as follows: There is a need to protect the environment. Council supports proposals for any necessary highways or schools. Council trusts the basic formula for the Doncaster Airport site, to determine the number of houses over the development phase, will be adhered to.

Summary:

1. There is a need to protect the environment. 2. Council supports proposals for any necessary highways or schools. 3. Council trusts the basic formula for the Doncaster Airport site, to determine the number of houses over the development phase, will be adhered to.

Response:

Policy 7 sets out at length a number of matters that must be addressed, including environmentally. The Council is confident that the Policy is clear enough in what it is asking, and that the mechanism is robust enough to function as intended - that is tha jobs delivered can lead to additional housing in this location when robustly evidenced.
As stated in our previous response, we would like to see mention of flood risk in this policy. HMOs can lead to conflict with national flood risk policy, particular in relation to conversion of existing buildings. They often involve ground floor, self-contained rooms which are not considered appropriate in areas at high flood risk, especially where sufficient mitigation and safe refuge may not be possible. We have had experience of dealing with applications proposing ground floor sleeping in areas at high residual risk which have resulted in a lot of time being taken to reach a mutually acceptable solution, and feel such situations could be avoided if a robust policy was in place in the local plan. The council has not responded to our previous representation on this matter in the consultation summary and has not made reference to it in the latest plan version. However, given the council’s reasoning for other policies, we accept that flood risk policies within the local plan will be applied.

Response:
Agree that other policies in the Local Plan would be relevant (Policy 58: Flood Risk Management) and the approach of the whole local plan has been to avoid duplication wherever possible as some of the responses have been critical of the length of the document already, but given this is such an issue for the borough then propose the following as a Main Modification: Policy 10 - Part D The existing dwelling or building is capable of conversion without causing harm to the area or the amenity of nearby residents particularly with noise and disturbances or over-looking, and in areas of flood risk do not result in ground-floor or basement level self-contained rooms, and; Explanatory text - para 6.16 This can be best achieved through preventing the over concentration of such properties in particular areas and encouraging a more even distribution across the Borough. Proposals that lead to self-contained rooms at ground floor or basement level in areas at risk of flooding are unlikely to be supported as such accommodation must be able to provide satisfactory mitigation against residual flood risk and there are likely to be challenges around providing a safe point of refuge.
Comment:

6. The Town Council is concerned about policy 10 in relation to HMO's. (Houses in Multiple Occupation). The Town Council believes that high concentrations of HMO's can be damaging to communities. This is recognised in the Local Plan however it is believed that the figure of '20' in Policy 10 E 3 and 4 is far too low and should be much higher. Local experience in Thorne suggests that the figure of 20 is not justified.

Summary:

Policy 10 o HiMO's. The figure of '20' in part E 3&4 of the Policy is to low. It should be much higher. The figure of 20 is not justified.

Response:

Changes to the Policy have been made to Part E, to specifically address concerns raised in how the policy would be applied. A suggested additional ex plantation text is now included which will apply the policy on a community-wide basis taking into the impact on rows of houses, streets and the wider area. For the avoidance of doubt this could include consideration of multiple streets and rows of properties including corner premises and need not be limited to one road at a time.

**Comment Ref:** /Policy 11 - Site 315/0234/2/003

**Attend Examination:** Attend Hearing

**Reason:** To support the Representations Report and the Inspector's understanding of the site.

**Area:** Chapter 6: Meeting the Need for New Homes

**Policy:** Policy 11: Residential Policy Areas

**Tests of Soundness:** Justified

**Effective**

**Comment:**

Policy 11 sets out that within Residential Policy Areas, as defined on the Policies Map: 'New residential development will be supported provided: 1. the development would provide for an acceptable level of residential amenity for both new and existing residents; and 2. the development would help protect and enhance the qualities of the existing area and contribute to a safe, healthy and prosperous neighbourhood; and 3. the development would meet other development plan policies including those relating to flood risk, open space, design and sustainable construction.' We object to the retention of site ref: 315 ‘Land west of Station Road, Blaxton’ within the Countryside Policy Area.

Reccomendation The settlement boundary for Finningley should be amended to incorporate the site. Justification The Small Sites and Settlement Boundary Review which has been undertaken to assess the development limits of settlements which fall within the Countryside Policy Area, sets out four principles for creating a development limit and deciding whether something is inside or outside of a settlement as set out below: Principle 1 - A development limit should, wherever practical, follow a tightly drawn line around the urban form of a settlement, and follow a clearly defined feature. Principle 2 - The development limit will generally be contiguous within any one settlement. However, it may be appropriate to identify two or more separate areas for a settlement due to its urban form. Principle 3 - The development limit will normally include: - Currently designated UDP residential policy area and residential curtilages (with the exception of large gardens where there is the potential to significantly extend the built form and free up opportunities for inappropriate and unsustainable back land or infill development) - Land within a village envelope, as defined by the main central contiguous built form of a settlement - Employment sites which are clearly physically related to the settlement - Brownfield’ (i.e. previously developed) Local Plan allocations (both permissions as at 1st April 2018 and new allocations) on the edge of settlements and other implemented commitments (completed planning permissions for residential or employment sites) Principle 4 - The development limit will normally exclude: - Large residential curtilages - New greenfield Local Plan development allocations, including sites with planning permission as at 1st April 2018, on the edge of settlements - Unused UDP allocations on the edges of settlements which have deliverability concerns due to issues such as flood risk and High Speed 2 (HS2) Safeguarding Route Principle 1 sets out that the development limit should follow a tightly drawn line around the urban form of the settlement and will follow a clearly defined physical feature on the ground. The existing residential development within the site clearly represents urban form and forms part of the village envelope. The site has a defined hedge line on the ground which creates a defensible boundary to the west. Despite the site possessing a large residential curtilage the site possesses a clear defined edge, which does not protrude any further into the countryside than the existing built form on the site and to the south of the site, as indicated in Fig.2. It therefore, makes logical sense to draw the development limit for Finningley in line with the extent of the site. (SEE DOCUMENT FOR Fig. 2 - Aerial view of the site and relationship with existing built form) The site has been considered suitable, developable and available and is therefore considered a sustainable form of development which makes a logical sense to draw in the village envelope to include this site.

**Summary:**

Object to site 315 being located in the Countryside, the settlement boundary of Finningley should be amended to include this site. The small sites settlement boundary review sets out 4 principles for including land within the development limit. As per principle 1, the existing residential development on the site represents the urban form and is part of the village envelope. There is a defined hedge line and therefore a defensible boundary to the west. The site does include a large residential curtilage but does not protrude any further into the countryside than the existing built form on the site or to the south. It therefore makes sense to draw the development limit in line with the extent of the site. The site is suitable, developable, available and is sustainable - the village envelope should include it.

**Response:**

The site is proposed to be excluded from the development limits as per the methodology, as it is a large garden / paddock with no built form. There is already a strong defensible boundary in this location and no justification to extend the boundary to incorporate this site.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is detailed evidence which will need to be discussed orally.

Comment:
We support this policy in principle as it is important for residential development to be supported and protected in residential areas. The only concern we have is in respect of the proposed "Local Green Space" allocations. Please see our comments to Policy 28.

Summary:
Support Policy 11 in principle as it is important for residential development to be supported and protected in residential areas. The only concern we have is in respect of the proposed "Local Green Space" allocations - comments made under Policy 28.

Response:
Noted - see response to Policy 28 in respect to this matter.

Comment:
The Site is currently an allocated Employment Policy Area. The Site was previously occupied by industrial employment uses but was cleared of buildings approximately 10 years ago and has remained vacant ever since. The surrounding area is changing in nature from a mix of both industrial and residential uses to primarily residential uses, following the development of land to the north of the Site for residential, also within the Employment Policy Area within the adopted Policies Map. The Site has been marketed unsuccessfully for a considerable period since it became vacant, demonstrating there has been no viable interest or market demand for the Site for employment purposes over this time. It is therefore evident the Site is no longer appropriate or suitable for employment. Our clients are therefore supportive of the removal of the Site from the Employment Policy Area and the redesignation as a Residential Policy Area. This will allow the Site be developed for more appropriate uses, such as for new housing.

Summary:
Land at Watch House Lane, should be removed from Employment Policy Area and be designated as Residential Policy Area. The Site was previously occupied by industrial employment uses but was cleared of buildings approximately 10 years ago and has remained vacant ever since. The surrounding area is changing in nature from a mix of both industrial and residential uses to primarily residential uses, following the development of land to the north of the Site for residential, also within the Employment Policy Area within the adopted Policies Map. The Site has been marketed unsuccessfully for a considerable period since it became vacant, demonstrating there has been no viable interest or market demand for the Site for employment purposes over this time. It is therefore evident the Site is no longer appropriate or suitable for employment.

Area: Chapter 6: Meeting the Need for New Homes
Policy: Policy 11: Residential Policy Areas

Test of Soundness: Justified

Comment:
The remainder of the site is allocated within the Local Plan as a Residential Policy Area. Policy 11 states that within Residential Policy Areas, new residential development will be supported provided: 1. the development would provide for an acceptable level of residential amenity for both new and existing residents; and 2. the development would help protect and enhance the qualities of the existing area and contribute to a safe, healthy and prosperous neighbourhood; and 3. the development would meet other development plan policies including those relating to flood risk, open space, design and sustainable construction. The allocation of the site as a Residential Policy Area under Policy 11 of the Publication Local Plan is supported.

Summary: Policy 11. Supportive of allocation of sites 678/927 and contribution towards objectives of Policy.

Policy 8 is not considered to be sound as it is not justified or consistent with national policy for the following reasons: Housing Mix The HBF understands the need for a mix of house size, type, price and tenure and is generally supportive of providing a range and choice of homes to meet the needs and market demand in the local area. It is, however, important that any policy is workable and ensures that housing delivery will not be compromised or stalled due to overly prescriptive requirements or the need to provide significant amounts of additional evidence. The HBF recommends a flexible approach is taken regarding housing mix which recognises that needs and demand will vary from area to area and site to site; ensures that the scheme is viable; and provides an appropriate mix for the location. The HBF would also highlight the need for creating a housing market that will attract investors to Doncaster, and to provide an element of aspiration to ensure working people and families are retained within the area. The HBF consider that the Council need to be aware that the latest Housing Need Assessment will only ever identify current deficits and reflects a snap-shot in time. Therefore, even the latest HNA may not reflect the position at the time of an application. The HBF would like to ensure greater flexibility within this policy to acknowledge that the mix can vary both geographically and over the plan period. Affordable Housing This policy requires housing sites of 15 or more homes in the Borough’s high value housing market areas to include 23% affordable homes and for 15% of affordable in other areas. The HBF does not dispute the need for affordable housing within Doncaster and indeed supports the need to address the affordable housing requirements of the borough. The NPPF is, however, clear that the derivation of affordable housing policies must not only take account of need but also viability. Paragraph 34 of the NPPF (2019) establishes the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. The Whole Plan Viability Testing (2019) report shows the issues of viability for a number of sites. It shows that schemes in the low value areas are not viable and will not be able to support the affordable housing requirement. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.

Summary:
Policy 8 is not considered to be sound as it is not justified or consistent with national policy. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.

Response:
It is not considered that the policy is overly prescriptive in respect to housing mix and the policy text refers to the need for such to be informed by latest evidence which in itself acknowledges that this may change during the lifetime of the plan. The viability testing considers a number of different viability scenarios. This includes the ‘base’ appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost’ developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
7.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Strata Homes is concerned with some aspects of this policy, and the robustness of the whole plan viability. Strata Homes therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. Strata Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. Strata Homes is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. Strata Homes is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publicly available. Strata Homes reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30% 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. Strata Homes recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Strata Homes has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Strata Homes considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage or reflect the identified mix rather than require it. Affordable housing 7.9. Strata Homes is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study's base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. Strata Homes are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Strata Homes consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. Strata Homes is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should
be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Strata Homes supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Strata Homes object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 7.18. Strata Homes understands the need and supports the delivery of Self-Build and Custom Build housing. Strata Homes understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. Strata Homes consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. Strata Homes consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Strata Homes consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, Strata Homes consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

**Summary:**

Strata Homes is concerned with a number of approaches and criteria established within Policy 8. Housing Mix There is a lack of evidence base for this policy approach which is not based on an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. Strata Homes recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. Strata Homes considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. Affordable housing The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study's base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. Strata Homes are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Strata Homes consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. Strata Homes is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Strata Homes supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Strata Homes object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes Further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. The requirements in Policy 8 are not justified and do not provide an appropriate strategy. Policy 8, along with other policy requirements within the Plan, could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. However, Strata Homes consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.
Policy 8: Delivering the Necessary Range of Housing

Comment:
Policy 8 states that developments will be required to deliver a mix of house types, sizes and tenures. Gladman recommends that the policy takes a flexible, non-prescriptive approach to housing mix, which recognises that demand and need will vary from area to area and on a site-by-site basis. We consider that this approach would ensure that sustainable development opportunities are not prevented from coming forward over concerns regarding potential viability issues. The Council also need to be aware that the latest Housing Need Assessment (HNA) will only ever identify current deficits and reflect a snapshot in time. Therefore, even the latest HNA may not reflect the up-to-date situation at the time of an application. Gladman recommend greater flexibility within this policy to acknowledge that the mix can change from site-to-site and over any given period. The policy requires all development proposals for 15 or more dwellings in the Borough's high value market areas to provide a 23% proportion of affordable homes and, a 15% proportion of affordable homes in other areas. Gladman are fully supportive of the intention to deliver affordable housing across the Borough. The NPPF 2018 makes it clear that affordable housing policies must not only take account of need but also of viability. Paragraph 34 of the NPPF (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. Gladman note that within the Council's own Viability Report, specifically in Tables 3-14, it is demonstrated that a number of the schemes in the low value areas are not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15% required by this policy. The Council should be mindful of that it is unrealistic to negotiate every site on a policy basis if the base-line aspiration of a policy, or combination of policies, is set so high as to jeopardise future housing delivery. Therefore, case-by-case negotiations on these sites should occur as the exception, rather than the rule. Gladman also suggest that the Council take into consideration the amendments to the definition of affordable homes and their provision, as set out in the NPPF2019 Appendix 2.

Summary:
Gladman recommends Policy 8 takes a flexible, non-prescriptive approach to housing mix, which recognises that demand and need will vary from area to area and on a site-by-site basis. Such an approach would ensure that sustainable development opportunities are not prevented from coming forward over concerns regarding potential viability issues. The latest Housing Need Assessment (HNA) will only ever identify current deficits and reflect a snapshot in time - therefore greater flexibility within this policy is needed to acknowledge that the mix can change from site-to-site and over any given period. Gladman are fully supportive of the intention to deliver affordable housing across the Borough. However, it is noted that the Council's own Viability Report (Tables 3-14) demonstrate that a number of the schemes in the low value areas are not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15% required by this policy. The Council should be mindful of that it is unrealistic to negotiate every site on a case-by-case basis if the base-line aspiration of a policy, or combination of policies, is set so high as to jeopardise future housing delivery. Therefore, case-by-case negotiations on these sites should occur as the exception, rather than the rule. It is also suggested that the Council take into consideration the amendments to the definition of affordable homes and their provision, as set out in the NPPF 2019 Appendix 2.

Response:
It is not considered that the policy is overly prescriptive in respect to housing mix and the policy text refers to the need for such to be informed by latest evidence which in itself acknowledges that this may change during the lifetime of the plan. The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such policy and is not mandatory.

Response:
The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
3.21 Policy 8 sets out that the delivery of a wider range and mix of housing types, sizes and tenures will be supported through the following measures: a) New housing developments will be required to deliver a mix of house size, type, price and tenure to address as appropriate the needs and market demand identified in the latest Housing Need Assessment / Study (or other robust evidence). b) There is a clear requirement for the provision of affordable housing to meet local needs in each individual community. Housing sites of 15 or more homes (or 0.5Ha or above) will normally be expected to include 23% affordable homes in the Borough’s high value housing market areas (as defined in explanatory text below), or a lower requirement of 15% elsewhere in the Borough (including starter homes / discounted market sales housing which meet the definition in the NPPF) on-site. Proposals for affordable housing on developments of less than 15 units will be supported where these meet other development plan policies. c) Commuted sums in lieu of on-site affordable housing provision and of broadly equivalent value will only be accepted where this is robustly justified. These commuted sums will be used to target areas of need in the Borough in order to assist with rebalancing the housing market. They may also be combined with council house building programmes that would take place on land that the council owns or subsequently needs to acquire. d) In order to provide the necessary housing supply required for the changing needs of residents and to support independent living, new developments should include the provision of homes which are adaptable, accessible, and suitable for people with a wide range of needs in line with Policy 46. It must also be demonstrated how the provision of housing types suitable for older people can be increased, especially bungalows, extra care facilities and supported living accommodation. These will be supported on sites suitable for housing and which have good access to local services and facilities by means other than private car. e) Specialist student accommodation will be supported on sites with walk/cycle and/or public transport access to Doncaster College or other training facilities. Wherever possible, commuted sums relating to such accommodation will be used to target areas of need in the Borough. f) The provision of opportunities to accommodate custom build and self-build homes will be encouraged on housing allocations and elsewhere. 3.22 The supporting text for Policy 8 sets out that the required affordable housing percentages have been determined from the Doncaster Local Plan Viability Testing (2016) evidence base. 3.23 It is of note that there is no specific mention within the policy itself of the affordable housing requirement being subject to viability testing. However, Policy 67 (Development Viability (Strategic Policy)) states the following with regard to such testing: Where the applicant can demonstrate that particular circumstances justify the need for a Viability Appraisal, the Council will take a pragmatic and flexible approach to planning obligations and consider their genuine impact on viability of development proposals on an independent and case by case basis, at the applicant’s expense, and in line with the following principles: a) Development which is unable to make the full contribution at the point at which the application is submitted may be supported where: 1. a robust and fit for purpose viability assessment shows that the full contribution would make the development unviable; 2. the possibilities for reduced, deferred or phased contributions have been fully explored; and, 3. it can be demonstrated that the wider benefits of the scheme outweigh its lower level of contribution. b) Where a lower level of contribution is agreed, this may be subject to reassessment once the development commences and / or any other suitable trigger point(s) as appropriate and agreed between the Council and the applicant. 3.24 In principle, the setting out of an affordable housing requirement as in Policy 8 is supported, subject to the inclusion of a direct reference to Policy 67. Reason for Amendment 3.25 The Council should include a reference to Policy 67 to ensure clarity in the application of this policy.

Summary:
Setting our an affordable housing requirement as in Policy 8 is supported in principle, subject to the inclusion of direct reference to Policy 67 to ensure clear policy application.

Response:
Support for the principle of the policy welcomed. It is not considered that there needs to be cross-reference to Policy 67: Development Viability as the introduction to the Local plan itself at para 1.14 is explicitly clear that all the policies should be read together and that individual policies do not necessarily refer to other relevant policies.
2.30 Policy 8 sets out that the delivery of a wider range and mix of housing types, sizes and tenures will be supported through the following measures: a) New housing developments will be required to deliver a mix of house size, type, price and tenure to address as appropriate the needs and market demand identified in the latest Housing Need Assessment / Study (or other robust evidence). b) There is a clear requirement for the provision of affordable housing to meet local needs in each individual community. Housing sites of 15 or more homes (or 0.5Ha or above) will normally be expected to include 23% affordable homes in the Borough’s high value housing market areas (as defined in explanatory text below), or a lower requirement of 15% elsewhere in the Borough (including starter homes / discounted market sales housing which meet the definition in the NPPF) on-site. Proposals for affordable housing on developments of less than 15 units will be supported where these meet other development plan policies. c) Commuted sums in lieu of on-site affordable housing provision and of broadly equivalent value will only be accepted where this is robustly justified. These commuted sums will be used to target areas of need in the Borough in order to assist with rebalancing the housing market. They may also be combined with council house building programmes that would take place on land that the council owns or subsequently needs to acquire. d) In order to provide the necessary housing supply required for the changing needs of residents and to support independent living, new developments should include the provision of homes which are adaptable, accessible, and suitable for people with a wide range of needs in line with Policy 46. It must also be demonstrated how the provision of housing types suitable for older people can be increased, especially bungalows, extra care facilities and supported living accommodation. These will be supported on sites suitable for housing and which have good access to local services and facilities by means other than private car. e) Specialist student accommodation will be supported on sites with walk/cycle and/or public transport access to Doncaster College or other training facilities. Wherever possible, commuted sums relating to such accommodation will be used to target areas of need in the Borough. f) The provision of opportunities to accommodate custom build and self-build homes will be encouraged on housing allocations and elsewhere. 2.31 The supporting text for Policy 8 sets out that the required affordable housing percentages have been determined from the Doncaster Local Plan Viability Testing (2016) evidence base. 2.32 It is of note that there is no specific mention within the policy itself of the affordable housing requirement being subject to viability testing. However, Policy 67 (Development Viability (Strategic Policy)) states the following with regard to such testing: Where the applicant can demonstrate that particular circumstances justify the need for a Viability Appraisal, the Council will take a pragmatic and flexible approach to planning obligations and consider their genuine impact on viability of development proposals on an independent and case by case basis, at the applicant’s expense, and in line with the following principles: a) Development which is unable to make the full contribution at the point at which the application is submitted may be supported where: 1. a robust and fit for purpose viability assessment shows that the full contribution would make the development unviable; 2. the possibilities for reduced, deferred or phased contributions have been fully explored; and, 3. it can be demonstrated that the wider benefits of the scheme outweigh its lower level of contribution. b) Where a lower level of contribution is agreed, this may be subject to reassessment once the development commences and / or any other suitable trigger point(s) as appropriate and agreed between the Council and the applicant. 2.33 In principle, the setting out of an affordable housing requirement as in Policy 8 is supported, subject to the inclusion of a direct reference to Policy 67. Reason for Amendment 2.34 The Council should include a reference to Policy 67 to ensure clarity in the application of this policy.
| Reason: | We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination. |
| Area: | Chapter 6: Meeting the Need for New Homes |
| Policy: | Policy 8: Delivering the Necessary Range of Housing |
| Tests of Soundness: | Positively prepared | Effective | Legally Compliant |
| Comment: | Objection is made to this Policy as drafted, the requirement for 23% affordable homes in the higher value areas in the District is not justified by the evidence. It is noted in para 6.9 that the overall requirement for 209 units per annum, which is 23% of the annual housing target [believed to be the upper end of the range] does not take account of what has been committed through applications and is therefore an unreliable figure. The Plan should include a robust figure, and needs to include text that makes it clear that the affordable housing has to be viable. Viability testing on sites at this stage will be unreliable until a full suite of technical documents have assessed the site development costs and infrastructure requirements. The Plan should therefore reflect affordable housing requirements as aspirational but subject to detailed site viability. PROPOSED CHANGE 7. Provide a robust figure for affordable housing. As explained in detail above. |
| Summary: | Objects to policy - 23% affordable housing requirement is not justified by the evidence. 209 units/annum affordable does not take account of permissions so is an unreliable figure. The Plan should include a robust figure and the text make clear that affordable housing has to be viable. Testing sites at this stage will be unreliable until full technical studies have assessed development costs and infrastructure requirements. Should therefore reflect affordable housing requirements as aspirational but subject to detailed site viability. Proposed change - provide a robust figure for affordable housing. |
| Response: | The 23% affordable housing ask in the higher value areas is a viability-led target rather than being a solely needs-led requirement which reflects NPPF’s emphasis on the need for policies to be viable. Changes to national policy and guidance is clear that there is a need to frontload viability at plan-making stage and the need for viability appraisals as part of decision-taking will then become less of the norm. The Local Plan still however includes a policy (Policy 67) in respect to viability and all policies in the plan should be read as a whole. The viability testing evidence base has been prepared in line with all the relevant guidance and this includes assessing a number of allocations as well as hypothetical sites. |
Comment Ref: C/Policy 8/03431/1/006

Attend Examination: Attend Hearing

Reason: We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 6: Meeting the Need for New Homes

Policy: Policy 8: Delivering the Necessary Range of Housing

Tests of Soundness: Positively prepared

Consistent with national

Comment:
The affordable housing requirements set out in this policy are not based upon robust evidence. It is therefore not justified and unsound. The requirement of 15% affordable housing on site in areas of low value does not reflect the evidence provided in the Whole Plan Viability Study. The study states that 'viability pressure is at its highest in low value locations. Viable schemes are shown for Greenfield sites with a 15% affordable housing provision, however, this is on the basis that all affordable housing is provided as affordable home ownership tenures and S. 106 obligation costs are reduced to #3,359 per dwelling - half of the baseline testing. Brownfield variations generally return unviable outcomes even with the aforementioned adjustments. The policy is ignoring signals from the evidence which is clear that providing 15% affordable housing in low cost areas will prevent sites from being viable. The policy is unsound as it is not based upon robust evidence and because it is also not positively prepared or consistent with national policy when assessed against the NPPF (paragraph 16) which states that plans should be prepared in a way that is aspirational but deliverable.

Summary:
The affordable housing requirements set out in Policy 8 are not based upon robust evidence and is ignoring signals in the Whole Plan Viability Study which is clear that providing 15% affordable housing in low cost areas will prevent sites from being viable. Viable schemes are shown for Greenfield sites with a 15% affordable housing provision. However, this is on the basis that all affordable housing is provided as affordable home ownership tenures and S. 106 obligation costs are reduced to #3,359 per dwelling - half of the baseline testing. Brownfield variations generally return unviable outcomes even with the aforementioned adjustments.

Response:
The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
Comment: Objection is made to this Policy as drafted, the requirement for 23% affordable homes in the higher value areas in the District is not justified by the evidence. It is noted in para 6.9 that the overall requirement for 209 units per annum, which is 23% of the annual housing target [believed to be the upper end of the range] does not take account of what has been committed through applications and is therefore an unreliable figure. The Plan should include a robust figure, and needs to include text that makes it clear that the affordable housing has to be viable. Viability testing on sites at this stage will be unreliable until a full suite of technical documents have assessed the site development costs and infrastructure requirements. The Plan should therefore reflect affordable housing requirements as aspirational but subject to detailed site viability. PROPOSED CHANGE 6. Provide a robust figure for affordable housing. As explained in detail above.

Summary: Objects to 23% affordable housing requirement as this is not justified by the evidence. The reference in para 6.9 to 209 units/annum does not take account of commitments so is an unreliable figure. The Plan should include a robust figure and make clear that affordable housing has to be viable. Testing sites at this stage will be unreliable until a full suite of technical documents have assessed site development costs and infrastructure requirements. Proposed change - provide a robust figure for affordable housing.

Response: The 23% affordable housing ask in the higher value areas is a viability-led target rather than being a solely needs-led requirement which reflects NPPF’s emphasis on the need for policies to be viable. Changes to national policy and guidance is clear that there is a need to frontload viability at plan-making stage and the need for viability appraisals as part of decision-taking will then become less of the norm. The Local Plan still however includes a policy (Policy 67) in respect to viability and all policies in the plan should be read as a whole. The viability testing evidence base has been prepared in line with all the relevant guidance and this includes assessing a number of allocations as well as hypothetical sites.
2.65 Policy 8 sets out that the delivery of a wider range and mix of housing types, sizes and tenures will be supported through the following measures: a) “New housing developments will be required to deliver a mix of house size, type, price and tenure to address as appropriate the needs and market demand identified in the latest Housing Need Assessment / Study (or other robust evidence). b) There is a clear requirement for the provision of affordable housing to meet local needs in each individual community. Housing sites of 15 or more homes (or 0.5Ha or above) will normally be expected to include 23% affordable homes in the Borough’s high value housing market areas (as defined in explanatory text below), or a lower requirement of 15% elsewhere in the Borough (including starter homes / discounted market sales housing which meet the definition in the NPPF) on-site. Proposals for affordable housing on developments of less than 15 units will be supported where these meet other development plan policies. c) Commuted sums in lieu of on-site affordable housing provision and of broadly equivalent value will only be accepted where this is robustly justified. These commuted sums will be used to target areas of need in the Borough in order to assist with rebalancing the housing market. They may also be combined with council house building programmes that would take place on land that the council owns or subsequently needs to acquire. d) In order to provide the necessary housing supply required for the changing needs of residents and to support independent living, new developments should include the provision of homes which are adaptable, accessible, and suitable for people with a wide range of needs in line with Policy 46. It must also be demonstrated how the provision of housing types suitable for older people can be increased, especially bungalows, extra care facilities and supported living accommodation. These will be supported on sites suitable for housing and which have good access to local services and facilities by means other than private car. e) Specialist student accommodation will be supported on sites with walk/cycle and/or public transport access to Doncaster College or other training facilities. Wherever possible, commuted sums relating to such accommodation will be used to target areas of need in the Borough. f) The provision of opportunities to accommodate custom build and self-build homes will be encouraged on housing allocations and elsewhere.”

2.66 The supporting text for Policy 8 sets out that the required affordable housing percentages have been determined from the Doncaster Local Plan Viability Testing (2016) evidence base. 2.67 It is of note that there is no specific mention within the policy itself of the affordable housing requirement being subject to viability testing. However, Policy 67 (Development Viability (Strategic Policy)) states the following with regard to such testing: “Where the applicant can demonstrate that particular circumstances justify the need for a Viability Appraisal, the Council will take a pragmatic and flexible approach to planning obligations and consider their genuine impact on viability of development proposals on an independent and case by case basis, at the applicant’s expense, and in line with the following principles: a) Development which is unable to make the full contribution at the point at which the application is submitted may be supported where: 1. a robust and fit for purpose viability assessment shows that the full contribution would make the development unviable; 2. the possibilities for reduced, deferred or phased contributions have been fully explored; and, 3. it can be demonstrated that the wider benefits of the scheme outweigh its lower level of contribution. b) Where a lower level of contribution is agreed, this may be subject to reassessment once the development commences and / or any other suitable trigger point(s) as appropriate and agreed between the Council and the applicant.” 2.68 In principle, the setting out of an affordable housing requirement as in Policy 8 is supported, subject to the inclusion of a direct reference to Policy 67. Recommendation 2.69 Policy 8 to include direct reference to the need to consider viability, in accordance with Policy 67. Justification 2.70 The Council should include a reference to Policy 67 to ensure clarity in the application of this policy and to ensure that the plan remains viable and deliverable, as therefore sound, within the plan period.

Summary:
Policy 8. there is no mention within the policy 8 regarding affordable housing requirement being subject to viability testing. It is acknowledged that policy 67 covers viability. Policy 8 to include direct reference to the need to consider viability, in accordance with Policy 67.

Response:
Support for the principle of the policy welcomed. It is not considered that there needs to be cross-reference to Policy 67: Development Viability as the introduction to the Local plan itself at para 1.14 is explicitly clear that all the policies should be read together and that individual policies do not necessarily refer to other relevant policies.
7.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. H. Burtwistle & Son is concerned with some aspects of this policy, and the robustness of the whole plan viability. H. Burtwistle & Son therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. H. Burtwistle & Son considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. H. Burtwistle & Son is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. H. Burtwistle & Son is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publically available. H. Burtwistle & Son reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. H. Burtwistle & Son recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. H. Burtwistle & Son has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, H. Burtwistle & Son consider that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. H. Burtwistle & Son is concerned with a number of approaches and criteria established within Policy 8. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. H. Burtwistle & Son are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. H. Burtwistle & Son consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. H. Burtwistle & Son is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately
tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. H. Burtwistle & Son supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 H. Burtwistle & Son object and does not consider it appropriate to require all developments to include this provision. 7.18. H. Burtwistle & Son understands the need and supports the delivery of Self-Build and Custom Build housing. H. Burtwistle & Son understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. H. Burtwistle & Son consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. H. Burtwistle & Son consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. H. Burtwistle & Son consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, H. Burtwistle & Son consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:

Housing Mix. 1. Lack of evidence for approach taken. 2. Local Plan should not seek to control the housing mix - to prescriptive. 3. This aspect of policy should 'encourage' rather than 'require'. 4. Flexible approach should be taken - need to vary rea to area. 5. Mix in Policy has not been appropriately viability tested. Affordable Housing. 1. Little evidence to support target of 15% in low value areas. 2. Little justification of the 23% target. 3. The need for regular viability assessment could undermine deliverability. 4. Unrealistic to negotiate each site on a one by one basis - could jeopardise delivery. 5. Policy needs to reflect NPPF 2019. 6. Adaptable and Accessible Homes. 1. Re Part D 2. Support principles of policy but does not consider it appropriate to require all developments to include this provision. 3. Should be a more flexible approach, Custom and self-Build Homes 1. Further evidence needed of the level of demand. 2. Para 6.3 provides little explanation as to evidence to support the policy. 3. Should be a more flexible approach.

Response:

The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self-build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such opportunities and is not mandatory.
7.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. H. Burtwistle & Son is concerned with some aspects of this policy, and the robustness of the whole plan viability. H. Burtwistle & Son therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. H. Burtwistle & Son considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. H. Burtwistle & Son is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. H. Burtwistle & Son is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARCA) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publicly available. H. Burtwistle & Son reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30% 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. H. Burtwistle & Son recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. H. Burtwistle & Son has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, H. Burtwistle & Son consider that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. H. Burtwistle & Son is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. H. Burtwistle & Son are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. H. Burtwistle & Son consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. H. Burtwistle & Son is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately
tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 

Adaptable and Accessible Homes 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. H. Burtwistle & Son supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, H. Burtwistle & Son object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 7.18. H. Burtwistle & Son understands the need and supports the delivery of Self-Build and Custom Build housing. H. Burtwistle & Son understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. H. Burtwistle & Son consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. H. Burtwistle & Son consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. H. Burtwistle & Son consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, H. Burtwistle & Son consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it". - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:

Concerned with a number of approaches and criteria established within Policy 8. Housing Mix There is a lack of evidence base for this policy approach which is not based on an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30% 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. Recommend a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. Considers a mix is required by policy 8 but has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. Affordable housing Supportive of the need for affordable housing. But affordable housing policies must not only take account of need but also viability. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft s106 policies. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there were viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. Concerned that there is little evidence to support an affordable housing target of 15% in low value areas. H Burtwistle & Son consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. Concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. Adaptable and Accessible Homes Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes Further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. The requirements in Policy 8 are not justified and do not provide an appropriate strategy. Policy 8, along with other policy requirements within the Plan could threaten the deliverability of the Plan. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it". - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.
The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self-build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such opportunities and is not mandatory.

| Reason: |
| Area: Chapter 6: Meeting the Need for New Homes |
| Policy: Policy 8: Delivering the Necessary Range of Housing |

**Tests of Soundness:**

**Comment:**
The JRP welcomes the explanation of meeting future housing needs by taking account of the demography of Doncaster, most especially as it predicts a reduction in younger people and a 30% increase in the over 60's demographic. Clearly, regular monitoring will be required in order to satisfy the needs and demands of the population. Although DMBC has engaged with service providers, the JRP believe there is insufficient evidence stated within the Plan to ensure there is provision of services for residents of new housing developments: specifically, the availability of school places, GPs and dentistry for the expected and projected increase in population.

**Summary:**
The JRP welcomes the explanation of meeting future housing needs by taking account of the demography of Doncaster, most especially as it predicts a reduction in younger people and a 30% increase in the over 60's demographic. Clearly, regular monitoring will be required in order to satisfy the needs and demands of the population. Although DMBC has engaged with service providers, the JRP believe there is insufficient evidence stated within the Plan to ensure there is provision of services for residents of new housing developments: specifically, the availability of school places, GPs and dentistry for the expected and projected increase in population.

**Response:**
Such matters are identified through the infrastructure planning evidence base and there are numerous policies in the plan itself to ensure developments contribute towards infrastructure that is impacted on by their development e.g. Policy 8, Policy 29, Policy 66
We represent Rentplus UK Ltd, an innovative company providing affordable rent to buy housing for hard-working people aspiring to home ownership. Rentplus provides an accessible route to achieve their dream through the rent - buy - own model, renting at an affordable rent and a gifted 10% deposit upon purchase. Rentplus have been recognised by the National Housing Awards as the most innovative Home Ownership Scheme for 2019. These representations, set out an overview of the Rentplus model of affordable rent to buy, the aim of which is to help those hard-working families unable to access ownership either through shared ownership, starter homes or homes on the open market to overcome the mortgage 'gap'. This is achieved through a defined period of affordable rent, during which all Rentplus residents are able to save. It should be noted as a background to these representations that the National Planning Policy Framework incorporates a wider definition of affordable housing, now providing four categories; rent to buy is included within category d) Other affordable routes to home ownership. Each scheme delivered by Rentplus offers a unique, affordable route to home ownership through affordable rented housing, set at the lower of 80% market rate (affordable rent) or LHA, including any service charge, with a planned route to ownership at years 5, 10, 15 or 20 after first occupation. The most important difference to other affordable tenures is that families are able to save for a mortgage deposit while renting the same home at an affordable - intermediate rent, with a 10% gifted deposit to assist with the purchase. The new Housing Minister, Esther McVey highlighted the importance of Rent to Buy in her first speech to the RESI Convention (12th September 2019) (note 1 - The speech is accessible via https://www.gov.uk/government/speeches/resi-convention-2019). In talking about the Government's drive to increase home ownership she stated that it includes "Rent to Buy, so people can rent knowing that they are going to buy, knowing that they've got a bit of breathing space, maybe it’s in 5 years, maybe it’s in 10 years, but they will get to own that property - so they can plan, knowing they have the certainty of getting a deposit and getting that house." These supportive comments concisely summarise the Rentplus model described above which currently provides a home for 650 households across the UK. Her comments not only reinforce the NPPF provision for additional affordable housing routes to home ownership, but also endorses directly the work of Rentplus. Prior to Esther McVey becoming Housing Minister, Kit Malthouse (Housing Minister at the time) referred to the importance of Rent to Buy housing in a letter dated June 2019 (attached). This letter confirmed the Government's commitment to "increasing access to home ownership?We recognise that Rent to Buy can help people to achieve this." He continued, "'In the revised NPPF, we expanded the definition of affordable housing to include a greater range of affordable routes to home ownership, including Rent to Buy. There are no specific or implicit barriers in existing planning policy or guidance that would prevent local councils from accepting Rentplus properties as affordable housing. This is demonstrated by Rentplus having reached agreement on the properties it has secured to date." (SEE EMAIL FOR LETTER) A further recent development - The Affordable Housing Commission, chaired by one of the pre-eminent voices on affordable housing, Lord Best, published its interim report Defining and Measuring housing affordability - an alternative approach in June 2019 (note 2 - The report is accessible via www.affordablehousingcommission.org ). This was produced in response to the difficulties that the standard measure of affordability, comparing house prices to incomes, poses in recognising housing stress and affordability across the housing spectrum. The report proposes recalibrating the approach of measuring affordability by reference to rents or purchase costs exceeding one third of household income (for those in work) in order to better pose a pro-active and interventionist response to housing difficulties. This follows recent work which suggests that the probability of housing stress increases with housing costs exceeding a quarter of gross income on rent. The Commission also highlights the findings of numerous surveys which state that the majority of tenants and adults living with parents aspire to own their own home; of the 5.5m 'frustrated first time buyers', 1.6m are in the private rented sector. This group is one of four the report identifies as having particular needs and housing stresses, and who can't buy "mainly because of the time needed to save for large deposits". These numbers represent an increase of 0.6 million renters since 2010, many of whom are paying over 40% of household income on rent. The report recognises the well-known problem that many households in the private rented sector are likely to have multiple affordability issues, exacerbated by insecurity of tenure and poor-quality living standards. The report states that "good quality homes of the right size for the household is seen as a basic minimum"; while this is a generally accepted principle in the delivery of housing, and in particular of affordable housing across England, this can be difficult to achieve through the planning system which does not adequately reflect the variations in household needs. The decrease in the numbers of households able to access home ownership is in large part due to the time taken to save for a mortgage deposit without the help of the 'Bank of Mum and Dad'. The Affordable Housing Commission notes that "those just able to buy are likely to have to save for an unrealistic period or unlikely ever to be able to raise an adequate deposit" - for the purposes of assessing the numbers of would-be purchasers, the Commission 'cuts off' the savings period at 'just' five years. The difficulty in saving for a deposit is one of the most critical barriers to home ownership, and the focal point for Rentplus - providing a clear route and time period for working households, including those with children, to save. Using the Commission's proposed measure of affordability would better capture the needs of struggling first-time buyers, many of whom are otherwise likely to remain trapped in insecure private rented sector accommodation.

Summary:

Representation from Tetlow King Planning on behalf of Rentplus UK Ltd, an innovative company providing affordable rent to buy housing for hard-working people aspiring to home ownership. Sets out context to the Rentplus model which is to provide an accessible route to home ownership.
Response:

There is reference within point B of this policy to the NPPF definition of affordable housing, the revised definition includes “other routes to affordable home ownership such as Rent to Buy” however this tenure is not included within the policy or supporting text. There should be explicit reference to Rent to Buy and other routes to affordable home ownership within the tenure mix for affordable housing that is proposed in the plan. We would also like to see the Council update their SHMA to recognise the wider range of tenures of affordable housing and also to include “other routes to affordable home ownership” within Policy 8, with specific reference to Rent to Buy as a tenure within the tenure mix proposed for Doncaster. The Rent to Buy model allows the opportunity for the Council and RPs to diversify the local housing offer without further recourse to public subsidy. The affordable rented period provides local families with security of tenure, with certainty of management and maintenance by a local partner RP, and critically the opportunity to save towards purchase. As affordable rent to buy meets needs for affordable rent (the only difference being marked by the expectation by all parties of purchase), it comes with a significant benefit of freeing up existing affordable rented homes for others in priority need, as demonstrated by Rentplus schemes across England. Rentplus undertakes rigorous affordability testing of potential purchasers to ensure that this is a realistic expectation and can be achieved within the set timeframes of five to 20 years. This means that substantial discounts at the point of purchase are not required, as it is the inability to save for a mortgage deposit or other financial issues that prevents a significant number of households from accessing ownership, and not the ability to service a mortgage over the long term. Working with local authorities to meet local priorities is critical to the success of the Rentplus model of affordable rent to buy, as helping hard-working local families access ownership reduces the pressure on the housing waiting list, freeing up local authority and housing association time to focus on meeting priority needs for social and affordable rented homes. Rentplus can assist in meeting local need, allocating all of its residents through the Housing Allocation Scheme; by enabling real savings to be built while renting at an affordable rent the Council can help meet the needs of low and middle income households, providing greater choice and flexibility in the planning system. The Council’s work to understand the potential delivery of affordable housing is supported. Should officers wish to discuss how best to facilitate the Rentplus model, please do get in touch.

Summary:

There should be explicit reference to Rent to Buy and other routes to affordable home ownership within the tenure mix for affordable housing that is proposed in the plan. We would also like to see the Council update their SHMA to recognise the wider range of tenures of affordable housing and also to include "other routes to affordable home ownership" within Policy 8, with specific reference to Rent to Buy as a tenure within the tenure mix proposed for Doncaster.

Response:

It is not the intention to repeat national policy in the local plan. NPPF sets out the detailed definitions of affordable housing as the Representation points out. It is also noted that these definitions were significantly changed as part of the revisions to NPPF meaning inclusion in the local plan could date if such definitions are changed again by government. The latest definitions have been considered through the 2019 Housing Needs Study.
A. Housing Mix  2.70 In relation to Housing Mix, it is important that a mix expectation is not too prescriptive and that flexibility within the policy is applied to ensure that a mix policy is workable. Consideration needs to be given to the fact that need and demand will vary within the Borough and over time. Additional wording which references flexibility should be included within Part A of Policy 8. B & C Affordable Housing  2.71 Whilst the requirement for affordable housing is not in dispute it is questionable whether the affordable need will be met, when large parts of the Doncaster Main Urban Area which sees the focus of the majority of proposed development lie in the lower affordable housing requirement value area, with a proposed requirement of 15%. Even then, not all schemes tested in the Whole Plan Viability Testing Report (2019) had a viable outcome at the reduced 15% rate and some schemes required a reduction on other S106 policy contributions (Whole Plan Viability Assessment paragraph 7.5). It is recognised in the SA that "appropriate trade-offs will need to be made between affordable housing and the other infrastructure requirements to secure the delivery of new housing, based on local priorities, especially within areas of low market demand. Getting this right balance is critical in ensuring viable development."  2.72 It is considered that the Council are unlikely to meet their identified need of 209 affordable units per annum, which equates to 23% of the requirement, when the focus of development in the Local plan directs development to the lower requirement areas with a 15% requirement. In order to ensure the need for affordable homes is met, either the overall housing target should be increased (as the Framework allows) or more sites should be allocated in the higher affordable housing requirement value areas, where viability is not an issue. As drafted, the policy is unsound as it will not be effective in meeting affordable housing need. D. Adaptable and accessible dwellings.  2.73 There appears to be duplication with this part of Policy 8 and Policy 46 in relation to adaptable and accessible dwellings. Furthermore, it is not clear within the policy wording or justifying text what the expectation is in relation to increasing the provision of housing types suitable for elderly people.

Summary:
Housing mix should not be too prescriptive and allow flexibility to ensure the mix policy is workable. Needs vary across the borough and over time, this should be considered. Additional flexibility wording should be in Part A of Policy 8. B & C affordable housing: Whilst there requirement is not in dispute, it is questionable whether it will be met when large parts of the urban area lie in the lower affordable housing requirement value area, with a proposed 15% requirement. Even then, not all are viable and require a reduction in other s106 contributions. The SA recognises that appropriate trade-offs will be needed. It is considered unlikely that the council will meet the identified need of 209 affordable dpa, or 23% of the requirement, when the focus of development is in areas with a 15% requirement. To ensure affordable delivery, either the housing target should be increased or more sites should be allocated in higher value areas. The policy as drafted is unsound and won’t be effective in meeting affordable housing need. D. Adaptable and accessible dwellings: There is a duplication in Policy 8 & 46 in relation to adaptable and accessible dwellings. It is not clear within the policy wording or justifying text what the expectation is in relation to increasing the provision of housing types suitable for elderly people.

Response:
It is not considered that the policy is overly prescriptive in respect to housing mix and the policy text refers to the need for such to be informed by latest evidence which in itself acknowledges that this may change during the lifetime of the plan. Even under the previous NPPF’s requirement to consider an uplift to a housing requirement to reflect market signals this never amounted to more than around 10% at most. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council’s Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc which will also assist people in being able to afford/access housing. Part C is not considered to duplicate Policy 46 it merely signposts to the policy where such detail can be found and is considered to be helpful given the importance of planning for housing to meet specific needs.
2.25 Policy 8 sets out a number of aims and aspirations that the Council have in respect of housing developments. Our Client is one of the largest housebuilders in the country and is well placed to comment on the suitability and practicality of the policy. 2.26 Part b) of the policy provides guidance on the level of affordable housing that will be required, with developments of 15 homes or more having to provide 23% affordable housing in the Borough’s high value housing market areas or a lower requirement of 15% elsewhere in the Borough. The higher/lower value areas should be defined using a map within the policy for clarity. 2.27 The figure of 23% affordable housing in the Borough’s high value housing market areas creates issues when calculating the requirement; we propose the figure is rounded down to 20% to simplify calculations and ensure that sites are viable. 2.28 Part d) of the policy relates to provision of housing for older people. As per our previous representations, our Client seeks clarification as to whether the Council are seeking to impose this policy on all residential developments or if it is merely aspirational. 2.29 The policy states that new developments should include the provision of homes which are adaptable, accessible, and suitable for people with a wide range of needs in line with Policy 46. Part d) states that it must be demonstrated how ‘the provision of housing types suitable for older people? especially bungalows, extra care facilities and supported living accommodation’ can be increased. Policy 46 sets out the minimum space standards, building regulations requirements and states that at least 65% of all new homes on housing developments of over 0.5 hectare or 10 or more units should meet these regulations. 2.30 Policy 46 goes on to state that ‘in all cases, the above standards should be met’ and that ‘exemptions to these requirements will only be considered where the applicant can robustly demonstrate, with appropriate evidence, that adhering to the standards is not feasible due to physical constraints, or it is demonstrated that it is not viable to do so’. 2.31 The provision of bungalows, extra care facilities and supported living accommodation will significantly impact upon the viability of developments and in turn may impact upon the deliverability of sites. Our Client objects to this policy and recommends that that percentage of new homes required to meet these standards is significantly reduced. 2.32 Part f) of the policy seeks to encourage custom build and self-build homes on housing allocations. As per our previous representations our Client objects to this element of the policy as they have genuine concerns as the provision of such units on major housing schemes would simply not work in practice. Large developments can have anywhere between 1 to 3 developers on site and the potential involvement of an additional private individuals could have repercussions on a number of issues such as the timing of delivery, cashflow and equalisation, as well as potential legal agreements. In addition, the way in which Section 106 contributions and CIL are calculated would be complicated and it is unclear who’s responsibility this would be in terms of making the relevant payments. Self-build plots are usually on small plots of land that do not require any, or very limited, contributions and it is unclear if they would have to contribute to the obligations associated with the wider site. There is also likely to be uncertainty around conditions and who would be responsible for discharging them. For example, if a developer obtained outline planning permission for the whole site, would they be responsible for discharging conditions specific to the self-build plot? 2.33 In addition to the above, we would question what evidence the Council have to demonstrate that there is a demand for self-build plots within major housing developments. Without any evidence to underpin this requirement, it is our Clients opinion that the policy is unsound as it is not justified or effective and therefore fails to meet the tests of soundness at paragraph 35 of the Revised Framework.

Summary:
Policy 8 - Delivering the necessary range of housing. Part B. 1. Affordable housing high/lower value areas should be shown on a map in the policy. 2. The 23% figure should be lowered to 20% to make calculation easier and to improve viability. Part (d) 1. Will this be imposed on all residential development or is it purely aspirational? 2. The provision of bungalows, extra care facilities and supported living accommodation will significantly impact upon the viability of developments. May impact upon the deliverability of sites. Objects to this policy and recommends that that percentage of new homes required to meet these standards is significantly reduced. Part (f) Self build 1. Object to this element of the policy. 2. Such units on major housing schemes will not work in practice. 3. Involvement of private individuals would be problematic - timing of delivery, cash flow, equalization and legal agreements. 4. Would complicate Section 106 agreements. 5. Would cause problems with conditions/discharge of conditions. 6. Without clear evidence of demand this policy is not sound.

Response:
Appendix 5 sets out the map for the purposes of Policy 8 and the higher/lower value areas. It is not clear why a 23% requirement creates issues when calculating the affordable housing requirement and needs to be simplified; any percentage figure may result in uneven numbers of houses as the total number of dwellings proposed will be the main variable so setting the requirement to 20% would still lead to such results. The policy should be read alongside policy 46: Housing Standards and NPPF and PPG is clear that local plans must look to address meeting housing needs of different groups and has been considered through the viability testing. Likewise, NPPF is clear of the need to support and actively bring forward custom and self-build plots.
Comment:

2.25 Policy 8 sets out a number of aims and aspirations that the Council have in respect of housing developments. Our Client is one of the largest housebuilders in the country and is well placed to comment on the suitability and practicality of the policy. 2.26 Part b) of the policy provides guidance on the level of affordable housing that will be required, with developments of 15 homes or more having to provide 23% affordable housing in the Borough’s high value housing market areas or a lower requirement of 15% elsewhere in the Borough. The higher/lower value areas should be defined using a map within the policy for clarity. 2.27 The figure of 23% affordable housing in the Borough’s high value housing market areas creates issues when calculating the requirement; we propose the figure is rounded down to 20% to simplify calculations and ensure that sites are viable. 2.28 Part d) of the policy relates to provision of housing for older people. As per our previous representations, our Client seeks clarification as to whether the Council are seeking to impose this policy on all residential developments or if it is merely aspirational. 2.29 The policy states that new developments should include the provision of homes which are adaptable, accessible, and suitable for people with a wide range of needs in line with Policy 46. Part d) states that it must be demonstrated how ‘the provision of housing types suitable for older people? especially bungalows, extra care facilities and supported living accommodation’ can be increased. Policy 46 sets out the minimum space standards, building regulations requirements and states that at least 65% of all new homes on housing developments of over 0.5 hectare or 10 or more units should meet these regulations. 2.30 Policy 46 goes on to state that ‘in all cases, the above standards should be met’ and that ‘exemptions to these requirements will only be considered where the applicant can robustly demonstrate, with appropriate evidence, that adhering to the standards is not feasible due to physical constraints, or it is demonstrated that it is not viable to do so’. 2.31 The provision of bungalows, extra care facilities and supported living accommodation will significantly impact upon the viability of developments and in turn may impact upon the deliverability of sites. Our Client objects to this policy and recommends that that percentage of new homes required to meet these standards is significantly reduced. 2.32 Part f) of the policy seeks to encourage custom build and self-build homes on housing allocations. As per our previous representations our Client objects to this element of the policy as they have genuine concerns as the provision of such units on major housing schemes would simply not work in practice. Large developments can have anywhere between 1 to 3 developers on site and the potential involvement of an additional private individuals could have repercussions on a number of issues such as the timing of delivery, cashflow and equalisation, as well as potential legal agreements. In addition, the way in which Section 106 contributions and CIL are calculated would be complicated and it is unclear who’s responsibility this would be in terms of making the relevant payments. Self-build plots are usually on small plots of land that do not require any, or very limited, contributions and it is unclear if they would have to contribute to the obligations associated with the wider site. There is also likely to be uncertainty around conditions and who would be responsible for discharging them. For example, if a developer obtained outline planning permission for the whole site, would they be responsible for discharging conditions specific to the self-build plot? 2.33 In addition to the above, we would question what evidence the Council have to demonstrate that there is a demand for self-build plots within major housing developments. Without any evidence to underpin this requirement, it is our Clients opinion that the policy is unsound as it is not justified or effective and therefore fails to meet the tests of soundness at paragraph 35 of the Revised Framework.

Summary:

Policy 8 - Delivering the necessary range of housing. Part B. 1. Affordable housing high/lower value areas should be shown on a map in the Policy. 2. The 23% figure should be lowered to 20% to make calculation easier and to improve viability. Part (d) 1. Will this be imposed on all residential development or is it purely aspirational? 2. The provision of bungalows, extra care facilities and supported living accommodation will significantly impact upon the viability of developments. May impact upon the deliverability of sites. Objects to this policy and recommends that that percentage of new homes required to meet these standards is significantly reduced. Part (f) Self build 1. Object to this element of the policy. 2. Such units on major housing schemes will not work in practice. 3. Involvement of private individuals would be problematic - timing of delivery, cash flow, equalisation and legal agreements. 4. Would complicate S106 agreements. 5. Would cause problems with conditions/discharge of conditions. 6. Without clear evidence of demand this policy is not sound.

Response:

Appendix 5 sets out the map for the purposes of Policy 8 and the higher/lower value areas. It is not clear why a 23% requirement creates issues when calculating the affordable housing requirement and needs to be simplified; any percentage figure may result in uneven numbers of houses as the total number of dwellings proposed will be the main variable so setting the requirement to 20% would still lead to such results. The policy should be read alongside policy 46: Housing Standards and NPPF and PPG is clear that local plans must look to address meeting housing needs of different groups and has been considered through the viability testing. Likewise, NPPF is clear of the need to support and actively bring forward custom and self-build plots.
A. Housing Mix 2.30 In relation to Housing Mix, it is important that a mix expectation is not too prescriptive and that flexibility within the policy is applied to ensure that a mix policy is workable. Consideration needs to be given to the fact that need and demand will vary within the Borough and over time. Additional wording which references flexibility should be included within Part A of Policy 8. B and C. Affordable Housing 2.31 Whilst the requirement for affordable housing is not in dispute it is questionable whether the affordable need will be met, when large parts of the Doncaster Main Urban Area which sees the focus of the majority of proposed development lies in the lower affordable housing requirement value area, with a proposed requirement of 15%. Even then, not all schemes tested in the Whole Plan Viability Testing Report (2019) had a viable outcome at the reduced 15% rate and some schemes required a reduction on other s106 policy contributions (Whole Plan Viability Assessment paragraph 7.5). It is recognised in the SA that "appropriate trade-offs will need to be made between affordable housing and the other infrastructure requirements to secure the delivery of new housing, based on local priorities, especially within areas of low market demand. Getting this right balance is critical in ensuring viable development." 2.32 It is considered that the Council are unlikely to meet their identified need of 209 affordable units per annum, which equates to 23% of the requirement, when the focus of development in the Local plan directs development to the lower requirement areas with a 15% requirement. In order to ensure the need for affordable homes is met, either the overall housing target should be increased (as the Framework allows) or more sites should be allocated in the higher affordable housing requirement value areas, where viability is not an issue. As drafted, the policy is unsound as it will not be effective in meeting affordable housing need. D. Adaptable and accessible dwellings. 2.33 There appears to be duplication with this part of Policy 8 and Policy 46 in relation to adaptable and accessible dwellings. Furthermore it is not clear within the policy wording or justifying text what the expectation is in relation to increasing the provision of housing types suitable for elderly people.

Summary:
Housing mix should not be too prescriptive and allow flexibility to ensure the mix policy is workable. Needs vary across the borough and over time, this should be considered. Additional flexibility wording should be in Part A of Policy 8. B and C affordable housing: Whilst the requirement is not in dispute, it is questionable whether it will be met when large parts of the urban area lie in the lower affordable housing requirement value area, with a proposed 15% requirement. Even then, not all are viable and require a reduction in other s106 contributions. The SA recognises that appropriate trade-offs will be needed. It is considered unlikely that the council will meet the identified need of 209 affordable dpa, or 23% of the requirement, when the focus of development is in areas with a 15% requirement. To ensure affordable delivery, either the housing target should be increased or more sites should be allocated in higher value areas. The policy as drafted is unsound and won't be effective in meeting affordable housing need. D. Adaptable and accessible dwellings: There is a duplication in Policy 8 & 46 in relation to adaptable and accessible dwellings. It is not clear within the policy wording or justifying text what the expectation is in relation to increasing the provision of housing types suitable for elderly people.

Response:
It is not considered that the policy is overly prescriptive in respect to housing mix and the policy text refers to the need for such to be informed by latest evidence which in itself acknowledges that this may change during the lifetime of the plan. Even under the previous NPPF's requirement to consider an uplift to a housing requirement to reflect market signals this never amounted to more than around 10% at most. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council's Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc which will also assist people in being able to afford/access housing. Part C is not considered to duplicate Policy 46 it merely signposts to the policy where such detail can be found and is considered to be helpful given the importance of planning for housing to meet specific needs.
Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Framecourt Homes is concerned with some aspects of this policy, and the robustness of the whole plan viability. Framecourt Homes therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. Framecourt Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. Framecourt Homes is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. Framecourt Homes is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publically available yet. Framecourt Homes reserve the right to comment further when this becomes available.  7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bedroom dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. Framecourt Homes recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Framecourt Homes has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Framecourt Homes considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. Framecourt homes is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there were viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. Framecourt Homes are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Framecourt Homes consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. Framecourt Homes is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately
tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Framecourt Homes supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Framecourt Homes object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 7.18. Framecourt Homes understands the need and supports the delivery of Self-Build and Custom Build housing. Framecourt Homes understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. Framecourt Homes consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. Framecourt Homes consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Framecourt Homes consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, Framecourt Homes consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it". - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:

Consider Policy 8 to be unsound. Concerned with a number of approaches and criteria established within Policy 8. Support the principle of providing a broad mix of housing. However it should not dictate housing mix across the borough. The Local Plan should achieve the mix by identifying the level of provision and the broad distribution of new housing. There is no up to date Strategic Housing Market Assessment and the PBA work does not include housing mix. The Arc 4 work only appears to deal with affordable need and size of affordable dwellings in terms of bedrooms. There is a lack of evidence to support the approach. The Arc 4 work is not publicly available and Framecourt reserve the right to comment when it is available. The SHMA and Appendix 4 of the plan consider local housing mix, but the Local Plan should not seek to control the housing mix, since it would mean the market cannot adjust to market changes. The housing mix in Policy 8 is overly onerous and prescriptive particularly as it is seeking to control size, mix and tenure. It should encourage or reflect, rather than require. It is unclear in the viability how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30% 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. A flexible approach should be adopted with regards to mix, recognising demand varies from area to area and site to site, to ensure the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market that will attract investors and provide an element of aspiration to keep working people and families local. The evidence is time limited and only identifies current deficits. The mix has not been appropriately tested in terms of viability and Policy 8 Part A is considered unsound. Support the need for affordable housing. Framework is clear that policies must take account of need and viability. Paragraph 34 establishes the importance of viability to ensure development should not be subject to such a scale of obligations and policy burden or deliverability may be threatened. The viability report identifies 3 market value areas - low, medium and high. Tables 3 - 14 of the 2016 viability report 2016 show the issues of viability on a number of sites. In low value areas being unable to support any level of affordable housing, whilst in a number in medium areas struggle to provide 15% as required. The 2016 report concludes sites in high value areas are comfortably viable with the 25% affordable provision with other S106 policies. A reduced requirement should be adopted in medium to low value areas. The 2019 Whole Plan Viability shows a number of site typologies, including those in low value areas were unviable when tested against base assumptions. In medium and high value areas typologies were comfortably viable. However, there are some circumstances where there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. Concern that there is little evidence to support an affordable housing target of 15% in low value areas. Further evidence is required to support the target of 23% factoring in policy requirements on mix, design and density. There is limited justification for 23% affordable housing, and it is acknowledged that this takes no account of current completions or viability. Concern that policy requirements detailed could undermine the provision of affordable housing due to viability and this could result in regular viability assessments which the Council is seeking to avoid. This has an impact on the delivery of development and the housing target. The Council should ensure this is appropriately tested to ensure identified sites are deliverable. It is unrealistic to negotiate on a site by site basis because the base line policy bar is set too high and this will jeopardise housing delivery. It is not appropriate for all developments to include the provision of adaptable homes. Support the adaptation of existing stock and encouraging adaptable homes. Future evidence is required on the demand for custom and self build homes and the nature of this demand, including whether those on the list would actually consider building on a larger development. Para. 6.3 provides very little explanation or evidence. Policy 8 requirements are not justified and do not provide an appropriate strategy. Policy 8 and other requirements threaten the deliverability of the plan. In its current form it could fail to deliver sustainable development in accordance with policies in the framework and is inconsistent with national policy. To overcome the objection and address soundness issues: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it". - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.
The viability testing considers a number of different viability scenarios. This includes the base appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific low-cost developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to encourage such opportunities and is not mandatory.

### Tests of Soundness:
- Positively prepared
- Justified
- Effective
- Consistent with national
- Legally Compliant

### Summary:
Objects to policy - 23% affordable housing requirement is not justified by the evidence. 209 units/annum affordable does not take account of permissions so is an unreliable figure. The Plan should include a robust figure and the text make clear that affordable housing has to be viable. Viability testing on sites at this stage will be unreliable until a full suite of technical documents have assessed the site development costs and infrastructure requirements. The Plan should therefore reflect affordable housing requirements as aspirational but subject to detailed site viability. PROPOSED CHANGE 7. Provide a robust figure for affordable housing. As explained in detail above.

### Response:
The 23% affordable housing ask in the higher value areas is a viability-led target rather than being a solely needs-led requirement which reflects NPPF’s emphasis on the need for policies to be viable. Changes to national policy and guidance is clear that there is a need to frontload viability at plan-making stage and the need for viability appraisals as part of decision-taking will then become less of the norm. The Local Plan still however includes a policy (Policy 67) in respect to viability and all policies in the plan should be read as a whole. The viability testing evidence base has been prepared in line with all the relevant guidance and this includes assessing a number of allocations as well as hypothetical sites.
7.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Avant Homes is concerned with some aspects of this policy, and the robustness of the whole plan viability. Avant Homes therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. Avant Homes is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. Avant Homes is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publically available. Avant Homes reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. Avant Homes recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Avant Homes has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Avant Homes considers that the mix required by policy 8 has not been appropriate tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. Avant Homes is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. Avant Homes are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Avant Homes consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should
be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes. 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Avant Homes supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Avant Homes object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes. 7.18. Avant Homes understands the need and supports the delivery of Self-Build and Custom Build housing. Avant Homes understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. Avant Homes consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. The plan is therefore not sound. However, if part A has increased flexibility, revised housing targets and increased flexibility in the approach to custom and self build, alongside robust evidence supporting the requirements the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change. 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:
Concerned with some aspects of the policy and the robustness of the plan viability. Consider the policy unsound. Supportive of the principal of a broad mix of housing. The Local Plan should not dictate housing mix across the borough. The Local Plan should achieve this mix through identifying the level of provision and broad distribution of new housing. There is no up to date SHMA with the HNS being dated 2015 & 2016. The PBA report does not consider mix. The ARCA summary only deals with total affordable need and size of affordable dwellings in terms of bedrooms. The study is not publicly available and there is a lack of evidence base for this approach. Reserve the right to comment when the report is available. The Local Plan should not control housing mix as the market would be unable to adjust to changes in the market. The policy is onerous and prescriptive particularly with regards to controlling unit size, mix and tenure. The policy should be amended to encourage or reflect, rather than require. It is unclear from the viability study how mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30% 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. Recommend a flexible approach is applied regarding housing mix, recognising need and demand will vary from area to area and site to site to ensure the scheme is viable and provides for an appropriate mix for the location. There is a need to create a housing market that will attract investors and provide aspirational housing. Evidence presented is time limited and only identifies current deficits. The policy has not been appropriately tested and considers Policy 8 Part A unsound. Supportive of need for affordable housing. The framework is clear that policies must not only take account of need but also viability (para 34 NPPF). Concern that additional policy costs and sensitivities were tested against base assumptions which notably included 15% affordable housing and not 23%. Little evidence to support 15% affordable in low value areas and further viability work is required to justify 23% in combination with other policies in the plan. The justification for 23% is limited. Concerned that policy requirements in the plan could undermine the provision of affordable housing through the need for viability assessments on a regular basis. The viability assessment shows a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Support the adaptation of existing stock and encouraging adaptable, accessible homes. However, as explained in response to Policy 46 Avant Homes object and does not consider it appropriate to require all developments to include this provision. Further evidence should be provided on custom and self build homes and ensure the evidence base is robust and credible.

Response:
The viability testing considers a number of different viability scenarios. This includes the ‘base’ appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost’ developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to ‘encourage’ such opportunities and is not mandatory.
7.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Avant Homes is concerned with some aspects of this policy, and the robustness of the whole plan viability. Avant Homes therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. Avant Homes is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. Avant Homes is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publicly available. Avant Homes reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. Avant Homes recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Avant Homes has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Avant Homes considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. Avant Homes is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. Avant Homes are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Avant Homes consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should
be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptive and Accessible Homes 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Avant Homes supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Avant Homes object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 7.18. Avant Homes understands the need and supports the delivery of Self-Build and Custom Build housing. Avant Homes understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. Avant Homes consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. Avant Homes consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Avant Homes consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, Avant Homes consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:

Concerned with some aspects of the policy and the robustness of the plan viability. Consider the policy unsound. Supportive of the principal of a broad mix of housing. The Local Plan should not dictate housing mix across the borough. The Local Plan should achieve this mix through identifying the level of provision and broad distribution of new housing. There is no up to date SHMA with the HNS being dated 2015 & 2016. The PBA report does not consider mix. The ARCA summary only deals with total affordable need and size of affordable dwellings in terms of bedrooms. The study is not publicly available and there is a lack of evidence base for this approach. Reserve the right to comment when the report is available. The Local Plan should not control housing mix as the market would be unable to adjust to changes in the market. The policy is onerous and prescriptive particularly with regards to controlling unit size, mix and tenure. The policy should be amended to encourage or reflect, rather than require. It is unclear from the viability study how mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. Recommend a flexible approach is applied regarding housing mix, recognising need and demand will vary from area to area and site to site to ensure the scheme is viable and provides for an appropriate mix for the location. There is a need to create a housing market that will attract investors and provide aspirational housing. Evidence presented is time limited and only identifies current deficits. The policy has not been appropriately tested and considers Policy 8 Part A unsound. Supportive of need for affordable housing. The framework is clear that policies must not only take account of need but also viability (para 34 NPPF). Concern that additional policy costs and sensitivities were tested against base assumptions which notably included 15% affordable housing and not 23%. Little evidence to support 15% affordable in low value areas and further viability work is required to justify 23% in combination with other policies in the plan. The justification for 23% is limited. Concerned that policy requirements in the plan could undermine the provision of affordable housing through the need for viability assessments on a regular basis. The viability assessment shows a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Support the adaptation of existing stock and encouraging adaptable, accessible homes. However, as explained in response to Policy 46 Avant Homes object and does not consider it appropriate to require all developments to include this provision. Further evidence should be provided on custom and self build and the nature of demand, including whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. The plan is therefore not sound. However, if part A has increased flexibility, revised housing targets and increased flexibility in the approach to custom and self build, alongside robust supporting evidence, it can be found sound. Proposed changes: To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Response:

The viability testing considers a number of different viability scenarios. This includes the ‘base’ appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost’ developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to ‘encourage’ such opportunities and is not mandatory.
7.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Avant Homes is concerned with some aspects of this policy, and the robustness of the whole plan viability. Avant Homes therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. Avant Homes is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. Avant Homes is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publicly available. Avant Homes reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30% 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. Avant Homes recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Avant Homes has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Avant Homes considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. Avant Homes is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there were viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. Avant Homes are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Avant Homes consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should
be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Avant Homes supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Avant Homes object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 7.18. Avant Homes understands the need and supports the delivery of Self-Build and Custom Build housing. Avant Homes understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. Avant Homes consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. Avant Homes consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Avant Homes consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its current form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, Avant Homes consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:

Concerned with some aspects of the policy and the robustness of the plan viability. Consider the policy unsound. Supportive of the principal of a broad mix of housing. The Local Plan should not dictate housing mix across the borough. The Local Plan should achieve this mix through identifying the level of provision and broad distribution of new housing. There is no up to date SHMA with the HNS being dated 2015 & 2016. The PBA report does not consider mix. The ARCA summary only deals with total affordable need and size of affordable dwellings in terms of bedrooms. The study is not publicly available and there is a lack of evidence base for this approach. Reserve the right to comment when the report is available. The Local Plan should not control housing mix as the market would be unable to adjust to changes in the market. The policy is onerous and prescriptive particularly with regards to controlling unit size, mix and tenure. The policy should be amended to encourage or reflect, rather than require. It is unclear from the viability study how mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40% 3 bed dwellings, and 30% 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. Recommend a flexible approach is applied regarding housing mix, recognising need and demand will vary from area to area and site to site to ensure the scheme is viable and provides for an appropriate mix for the location. There is a need to create a housing market that will attract investors and provide aspirational housing. Evidence presented is time limited and only identifies current deficits. The policy has not been appropriately tested and considers Policy 8 Part A unsound. Supportive of need for affordable housing. The framework is clear that policies must not only take account of need but also viability (para 34 NPPF). Concern that additional policy costs and sensitivities were tested against base assumptions which notably included 15% affordable housing and not 23%. Little evidence to support 15% affordable in low value areas and further viability work is required to justify 23% in combination with other policies in the plan. The justification for 23% is limited. Concerned that policy requirements in the plan could undermine the provision of affordable housing through the need for viability assessments on a regular basis. The viability assessment shows a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Support the adaptation of existing stock and encouraging adaptable, accessible homes. However, as explained in response to Policy 46 Avant Homes object and does not consider it appropriate to require all developments to include this provision. Further evidence should be provided on custom and self build homes and the nature of demand, including whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. The plan is therefore not sound. However, if part A has increased flexibility, revised housing targets and increased flexibility in the approach to custom and self build, alongside robust supporting evidence, it can be found sound. Proposed changes: To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Response:

The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such opportunities and is not mandatory.
Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Avant Homes is concerned with some aspects of this policy, and the robustness of the whole plan viability. Avant Homes therefore consider that the Policy 8 is unsound. Test of Soundness 5.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 5.3. Avant Homes is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 5.4. Avant Homes is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 5.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publically available yet. Avant Homes reserve the right to comment further when this becomes available. 5.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 5.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 5.8. Avant Homes recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Avant Homes has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Avant Homes considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage the identified mix rather than require it. Affordable housing 5.9. Avant Homes is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 5.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 5.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 5.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 5.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there were some circumstances were there were viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 5.14. Avant Homes are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Avant Homes consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 5.15. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are
Policy 8 - Delivering the necessary range of housing. 5.16. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 5.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Avant Homes supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Avant Homes object and does not consider it appropriate to require all developments to include this provision. 5.18. Avant Homes understands the need and supports the delivery of Self-Build and Custom Build housing. Avant Homes understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 5.19. Avant Homes consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 5.20. Avant Homes consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Avant Homes consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 5.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 5.22. However, Avant Homes consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. 5.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it; - Revise the approach to affordable housing to ensure that the evidence base and viability is robust and credible; and - Include a flexible approach on custom build and self build homes and ensure that the evidence base is robust and credible.

Summary:
Policy 8 - Delivering the necessary range of housing. o SHMA and Housing needs study are out of date - evidence base needs updating. Housing Mix. 1. Lack of evidence for approach taken. 2. Local Plan should not seek to control the housing mix - to prescriptive. 3. This aspect of policy should 'encourage' rather than 'require'. 4. Flexible approach should be taken - need to vary rea to area. 5. Mix in Policy has not been appropriately viability tested. Affordable Housing. 1. Little evidence to support target of 15% in low value areas. 2. Little justification of the 23% target. 3. The need for regular viability assessment could undermine deliverability. 4. Unrealistic to negotiate each site on a one by one basis - could jeopardise delivery. 5. Policy needs to reflect NPPF 2019. Adaptable and Accessible Homes. 1. Re Part D 2. Support principles of policy but does not consider it appropriate to require all developments to include this provision. 3. Should be a more flexible approach. Custom and Self-Build Homes. 1. Further evidence needed of the level of demand. 2. Para 6.3 provides little explanation as to evidence to support the policy. 3. Should be a more flexible approach.

Response:
The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such opportunities and is not mandatory.
Policy 8: Delivering the Necessary Range of Housing

Tests of Soundness:
- Positively prepared
- Justified
- Effective
- Consistent with national

Comment:

7.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Priority Space is concerned with some aspects of this policy, and the robustness of the whole plan viability. Priority Space therefore consider that the Policy 8 is unsound. Test of Soundness 7.2. Priority Space considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. Priority Space is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. Priority Space is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARC4) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study does not publically available yet. Priority Space reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. Priority Space recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Priority Space has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Priority Space considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. Priority Space is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. Priority Space are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Priority Space consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. Priority Space is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are...
deliverable. 7.16. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Priority Space supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Priority Space object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 7.18. Priority Space understands the need and supports the delivery of Self-Build and Custom Build housing. Priority Space understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. Priority Space consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. Priority Space consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Priority Space consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, Priority Space consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:
Policy 8 - Delivering the necessary range of housing. o SHMA and Housing needs study are out of date - evidence base needs updating. Housing Mix. 1. Lack of evidence for approach taken. 2. Local Plan should not seek to control the housing mix - to prescriptive. 3. This aspect of policy should 'encourage' rather than 'require'. 4. Flexible approach should be taken - need to vary rea to area. 5. Mix in Policy has not been appropriately viability tested. Affordable Housing. 1. Little evidence to support target of 15% in low value areas. 2. Little justification of the 23% target. 3. The need for regular viability assessment could undermine deliverability. 4. Unrealistic to negotiate each site on a one by one basis - could jeopardise delivery. 5. Policy needs to reflect NPPF 2019. Adaptable and Accessible Homes. 1. Re Part D 2. Support principles of policy but does not consider it appropriate to require all developments to include this provision. 3. Should be a more flexible approach. Custom and self-Build Homes 1. Further evidence needed of the level of demand. 2. Para 6.3 provides little explanation as to evidence to support the policy. 3. Should be a more flexible approach.

Response:
The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such opportunities and is not mandatory.
Policy 8 - Delivering the Necessary Range of Housing

1. Site 446 will be able to deliver the minimum affordable housing requirement. 2. There is no specific mention within the policy itself of the affordable housing requirement being subject to viability testing. Object to the policy as currently drafted on the grounds that it is not in accordance with the Framework. 3. Reference should be made to Policy 67 (development viability).

Response:
Support for the principle of the policy welcomed. It is not considered that there needs to be cross-reference to Policy 67: Development Viability as the introduction to the Local plan itself at para 1.14 is explicitly clear that all the policies should be read together and that individual policies do not necessarily refer to other relevant policies.
Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Firsure is concerned with some aspects of this policy, and the robustness of the whole plan viability. Firsure therefore consider that the Policy 8 is unsound. Test of Soundness

7.2. Firsure considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 7.3. Firsure is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 7.4. Firsure is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 7.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. Firsure reserve the right to comment further when this becomes available. 7.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 7.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 7.8. Firsure recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Firsure has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Firsure considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 7.9. Firsure is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 7.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 7.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 7.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. 7.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study's base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 7.14. Firsure are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Firsure consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 7.15. Firsure is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. 7.16. The Council should be mindful that it is unrealistic to negotiate every site on a one
by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes 7.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Firsure supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Firsure object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 7.18. Firsure understands the need and supports the delivery of Self-Build and Custom Build housing. Firsure understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 7.19. Firsure consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 7.20. Firsure consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Firsure consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 7.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 7.22. However, Firsure consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach to self-build and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Firsure will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 7.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.

Summary:
Firsure is concerned with a number of approaches and criteria established within Policy 8. Housing Mix There is a lack of evidence base for this policy approach which is not based on an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. Firsure recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. Firsure considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. Affordable housing The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances were there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. Firsure are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Firsure consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. Firsure is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Firsure supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Firsure object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes Further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. The requirements in Policy 8 are not justified and do not provide an appropriate strategy. Policy 8, along with other policy requirements within the Plan, could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. However, Firsure consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self-build alongside robust evidence supporting the requirements the Local Plan can be found sound. Firsure will continue to work with the Council to develop appropriate modifications to the Local Plan. To overcome the objection and address soundness matters, the Council should: - Amend Policy 8 Part A so that developers are encouraged to reflect the identified mix on schemes rather than require it”. - Review the approach to affordable housing to ensure it reflects the new Framework (2019) and that the evidence base and viability approach is robust and credible. - Include a flexible approach on accessible and adaptable homes and ensure the evidence base is robust and credible. - Include a flexible approach on custom build and self-build homes and ensure the evidence base is robust and credible.
The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such opportunities and is not mandatory.
5.1. Policy 8 seeks to ensure the right range, type, size and tenure of homes are delivered within Doncaster. Metroland is concerned with some aspects of this policy, and the robustness of the whole plan viability. Metroland therefore consider that the Policy 8 is unsound. Test of Soundness 5.2. Metroland considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

5.3. Metroland is concerned with a number of approaches and criteria established within Policy 8. Housing Mix 5.4. Metroland is supportive of the principle of providing a broad mix of housing. However the Local Plan should not dictate housing mix across the borough. The Local Plan should achieve this housing mix through identifying the level of provision and the broad distribution of new housing. 5.5. Importantly there does not appear to be an up to date Strategic Housing Market Assessment with the Housing Needs Survey being dated 2015 with an update in 2016. The Economic Forecasts and Housing Needs Assessment does not consider housing mix. The Housing needs survey summary 2019 (ARCA) only appears to deal with the total affordable need and size of affordable dwellings, in terms of number of bedrooms. Therefore there is a lack of evidence base for this policy approach. It is acknowledged that Appendix 4 summarises the findings of the housing need survey 2019, however the full study is not publically available. Metroland reserve the right to comment further when this becomes available. 5.6. Although SHMA and Appendix 4 of the Plan, derived from the Housing Need Study 2019, considers the broad issues of housing mix, the Local Plan should not seek to control the housing mix, since it would mean that the market would be unable to adjust to changes in the market. Policy 8 seeks to specifically address the housing mix on sites. This aspect of the policy is onerous and prescriptive, particularly as it is seeking to control the size of units, mix and tenure. The policy should be amended to encourage or reflect, rather than require. 5.7. It is unclear from the Whole Plan Viability Study how the identified mix has been taken into account. An average size of dwelling of 92.90 has been assumed for the purposes of the testing. This appears to be based on a general assumption of 30% 2 bed dwellings 40 % 3 bed dwellings, and 30 % 4 bed dwellings. This does not align with the mix sought through the Local Plan, detailed in appendix 4 and derived from the housing needs study 2019. 5.8. Metroland recommend that a flexible approach is taken regarding housing mix, which recognises that the need and demand will vary from area to area and site to site, to ensure that the scheme is viable, and provides an appropriate mix for the location. There is a real need to create a housing market in Doncaster that will attract investors to Doncaster and provide an element of aspiration to ensure working people and families are retained within the area. The evidence presented in the plan is time limited, and only identifies current deficits. Metroland has been unable to review the full findings of the Housing Needs Study 2019, and reserves the right for further comment in this regard. However, Metroland considers that the mix required by policy 8 has not been appropriately tested in terms of viability and considers Policy 8 Part A to be unsound. The policy should be amended to encourage to reflect the identified mix rather than require it. Affordable housing 5.9. Metroland is supportive of the need for affordable housing. The Framework is however clear that affordable housing policies must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such a scale of obligations and policy burden that their ability to be delivered might be threatened. 5.10. The updated viability (2019), builds upon the earlier assessment and updates it in line with the emerging policies and the revised Framework. The assessment continues to identify three market value areas (low, medium and high) within Doncaster. 5.11. Tables 3-14 of the 2016 Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support any level of affordable housing, whilst a number of schemes in the medium value areas would also struggle to provide the 15 percent required by this policy. 5.12. The 2016 Viability report previously concluded that sites located within high value areas are comfortably viable with the Councils proposed affordable housing provision of 25%, together with draft S106 policies. However for sites within medium to low value areas it was noted that the viability pressure was greater, and a reduced requirement should be adopted. It is noted that the value areas have changed within the update. Areas previously identified as lower value areas have now been identified as medium to high in some cases. 5.13. The 2019 Whole Plan Viability Study assesses the impact of the Plan requirements. Appendices 3 to 10 of the 2019 Whole Plan Viability Study demonstrate viability issues for a number of site typologies, including all typologies in low value areas. Typologies in low value areas were unviable when tested against the base assumptions. The study concluded that in high and medium value areas site typologies were comfortably viable. However, there are some circumstances where there are viability pressures in medium value areas, significantly the additional policy costs and sensitivities were tested against the study’s base assumptions which notably included 15% affordable housing and not 23% sought by Policy 8. 5.14. Metroland are concerned that there is little evidence to support an affordable housing target of 15% in low value areas. Metroland consider that further viability evidence is required to support the target of 23% in combination with the policy requirements of the plan, including, mix, housing design standards, and density. Further there is limited justification in the Plan or associated evidence for a target of 23% affordable housing. The explanatory text states that the current need for affordable housing represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. 5.15. Metroland is concerned that with all the policy requirements the Local Plan details this could undermine the provision of affordable housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of
the housing target. Instead, the Council should ensure this policy is appropriately tested to ensure the sites identified and allocated are deliverable. 5.16. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Adaptable and Accessible Homes 5.17. Part D of the policy states that new development should aim to include the provision of homes which are adaptable, accessible and suitable for people with a wide range of needs. Metroland supports the adaptation of the existing stock and encouraging the provision of adaptable, accessible homes. However, as explained in response to Policy 46 Metroland object and does not consider it appropriate to require all developments to include this provision. Custom and Self Build Homes 5.18. Metroland understands the need and supports the delivery of Self-Build and Custom Build housing. Metroland understands the idea of increasing the self-build and custom build sector for its potential contribution to the overall housing supply. 5.19. Metroland consider that further evidence should be provided in respect of the level of demand in Doncaster for self and custom build and the nature of demand, including, whether those wanting to self-build would actually consider building within a larger housing development. As it stands paragraph 6.3 of the Plan provides very little explanation or evidence to support the policy. 5.20. Metroland consider that the requirements in Policy 8 are not justified and do not provide an appropriate strategy. Metroland consider that Policy 8 along with other policy requirements within the Plan could threaten the deliverability of the Plan. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 5.21. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 5.22. However, Metroland consider that with increased flexibility in Part A, revised affordable housing targets, and increased flexibility in the approach on custom and self build alongside robust evidence supporting the requirements the Local Plan can be found sound. Metroland will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.23. To overcome the objection and address soundness matters, the Council should: - Policy 8 Part A should be amended to so that developers are encouraged to reflect the identified mix on schemes rather than require it; - Revise the approach to affordable housing to ensure that the evidence base and viability is robust and credible; and - Include a flexible approach on custom build and self build homes and ensure that the evidence base is robust and credible.

Summary:

Policy 8 - Delivering the necessary range of housing. o SHMA and Housing needs study are out of date - evidence base needs updating. Housing Mix. 1. Lack of evidence for approach taken. 2. Local Plan should not seek to control the housing mix - to prescriptive. 3. This aspect of policy should 'encourage' rather than 'require'. 4. Flexible approach should be taken - need to vary rea to area. 5. Mix in Policy has not been appropriately viability tested. Affordable Housing. 1. Little evidence to support target of 15% in low value areas. 2. Little justification of the 23% target. 3. The need for regular viability assessment could undermine deliverability. 4. Unrealistic to negotiate each site on a one by one basis - could jeopardise delivery. 5. Policy needs to reflect NPPF 2019. Adaptable and Accessible Homes. 1. Re Part D 2. Support principles of policy but does not consider it appropriate to require all developments to include this provision. 3. Should be a more flexible approach, Custom and self-Build Homes 1. Further evidence needed of the level of demand. 2. Para 6.3 provides little explanation as to evidence to support the policy. 3. Should be a more flexible approach.

Response:

The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. NPPF is clear in the support for custom and self build housing and the Council maintains a Register of any such interest and the policy seeks to 'encourage' such opportunities and is not mandatory.
Policy Framework (NPPF). It is a key opportunity to accelerate the delivery of housing, with the sector rapidly increasing over recent years in major cities and towns across the UK. The sector is afforded specific support in the NPPF. Paragraph 61 of the NPPF notes that planning policies should encourage a variety of housing tenure types, including rental homes, where there is a need. Indeed, DC’s Housing Need Assessment acknowledges there is a growing demand for the private rented sector, however not in the sense of new purpose build private rent. It is therefore considered the DLP should afford recognition and support to the sector, albeit this is currently not included within the emerging DLP. As such, Doncaster are also unable to apply a specific affordable housing policy to the BtR sector. The NPPF sets out guidance as to how Government expects BtR to be dealt with by the planning system. Paragraph 64 specifically singles out BtR homes as a housing sector that does not necessarily need to follow the usual affordable housing policy approach, given the economics of their developments are often challenging. Authorities are required to consider whether these is a need for BtR in their area, and if so, to bring forward a local plan policy that sets out their approach to promoting and accommodating BtR schemes. Given the continuing strong performance and growth in this sector across all major cities and towns, it is evident this sector needs to be addressed within the DLP. Indeed, BtR schemes are currently being delivered in Doncaster (i.e. by Keepmoat on delivering BtR at Carr Lodge). Furthermore, our client’s interest in delivering BtR on their Site at Watch House Lane further demonstrates the market interest in this sector within Doncaster. Delivering affordable housing in BtR in the same manner as traditional market will frustrate the delivery of investment and new homes in a growing sector of the market. It is not realistic or viable to expect a single managed rental product to comply with a requirement for affordable housing that is designed to work with traditional housing market. As such, it is not appropriate to apply a blanket requirement for the provision of affordable housing. It is therefore not clear how Doncaster proposed to address affordable housing for BtR schemes that will inevitably be coming forward within the Borough. The Policy is therefore not supported by sufficient evidence base and is not consistent with national policy. The DLP should warrant BtR specific recognition, acknowledging and supporting this as a housing sector that will help provide the delivery of new homes. If Doncaster wish to implement a specific affordable housing policy for the BtR sector, further evidence will be required to support this. CONCLUSION: However, in relation to the draft policies listed below, the DLP as currently drafted is not justified and unsound. To make the plan sound, the following amendments noted above are required. Policy: Policy 8 Topic: Affordable Housing Requested Change: The DLP should warrant BtR specific recognition, whilst a specific policy approach for BtR should be provided, addressing how DC intents to address affordable housing for BtR schemes.

Summary:
The Local Plan should include a specific policy approach for Build to Rent (BtR) scheme to establish how it supports affordable housing for Build to Rent schemes. BtR is increasingly recognised as the format for housing of choice for many people and is recognised within the Government’s Housing White Paper and the NPPF, paragraph 61. Doncaster’s Housing Need Assessment acknowledges there is a growing demand for the private rented sector, however not in the sense of new purpose build private rent. BtR schemes are currently being delivered in Doncaster (i.e. by Keepmoat on delivering BtR at Carr Lodge). A site at Watch House Lane should be allocated to deliver BtR. Delivering affordable housing in BtR in the same manner as traditional market will frustrate the delivery of investment and new homes in a growing sector of the market. It is not realistic or viable to expect a single managed rental product to comply with a requirement for affordable housing that is designed to work with traditional housing market. As such, it is not appropriate to apply a blanket requirement for the provision of affordable housing. It is therefore not clear how Doncaster proposes to address affordable housing for BtR schemes that will inevitably be coming forward within the Borough. Policy 8 is therefore not supported by sufficient evidence base and is not consistent with national policy.

Response:
The site that the Representation refers to has not previously been put to the Council for consideration as an allocation in the local plan. The site is designated as Residential Policy Area which supports the principle of all forms of residential uses, including Build-to-Rent. It is not considered necessary that a separate policy is drafted to specifically relate to such a model.
NaCSBA’s mission is to substantially increase the number of people able to build or commission their own home and they believe that opportunities should arise for prospective self and custom-builders through the Local Plan process. Custom & Self-Build Current custom and self-build (CSB) policy in England has evolved over the last 5 years with the Self-build and Custom Housebuilding Bill, receiving Royal Assent on 26 March 2015. The Bill is now an Act of Parliament. This Bill seeks to establish a register of prospective custom builders who are seeking a suitable serviced plot of land and requires LPAs to keep an up to date register of people within the district that wish to build their own home. NaCSBA are pleased to note that Doncaster Council do keep a self-build register which prospective self-builders can sign up to via the council’s website. The Right to Build legislation clearly demonstrates how the government intends for LPAs to respond to the requirements set out in the NPPF when drawing up new Local Plans. LPAs should take a proactive position to providing land and should undertake rigorous and effective evidence gathering to measure custom and self-build need in their districts. And LPAs that do not do so can expect their Local Plans to be found unsound at examination. The Housing and Planning Act 2016 conferred on LPAs the responsibility to: “Give suitable development permission in respect of enough serviced plots of land to meet the demand for self-build and custom house building in the authority's area?” The Act established that evidence of such demand would be provided by registers which LPAs are required to keep in accordance with the 2015 Self-Build and Custom Housebuilding Act. Paragraph 61 of the revised National Planning Policy Framework (NPPF) sets out the requirement for Local Planning Authorities (LPA) to plan for a wide choice of high quality homes to support sustainable communities and provide greater opportunities for home ownership. It goes on to state: “The size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).” Furthermore, the NPPF makes clear how small and medium sized sites can make an important contribution to meeting the housing requirement of an area. The identification and promotion of small and medium sites as per the NPPF paragraph 61 can be promoted in order to support the needs of custom and self-builders. Recent appeal decisions such as a proposal for the erection of up to 5 self-build dwellings at The Meadows, Bromsberrow Heath, Ledbury (APP/P1615/W/18/3213122) have highlighted and confirmed the weight that should be afforded to self-build as a material consideration in determining planning applications, which in turn demonstrates the importance of CSB in housing delivery. As a consequence of the policy and guidance outlined above, it seems clear that LPAs have a duty conferred upon them to actively meet the needs of those wishing to build their own homes. CSB in the Doncaster Local Plan Whilst NaCSBA are pleased to note that the Local Plan review does contain reference to self-build, it is concerned that the provisions set out in Policy 8 and Policy 70 do not discharge the LPA’s duties towards meeting the needs of those that wish to build their own home. Policy 70 promises the delivery of 0.4ha worth of land to be made available for self-build plots. At 40 dwellings per hectare this policy will ensure the delivery of just 16 self-build units or less than one a year over the plan period. Policy 8 pays lip-service to paragraph 61 of the NPPF by stating that the LPA will ‘encourage’ the provision of opportunities to accommodate custom build and self-build homes ‘on housing allocations and elsewhere’, but it does not set out the manner in which this will be achieved. In reality, the policy does not give certainty that any additional service self-build plots will be delivered over and above the 16 units promised by Policy 70. In order to meet the requirements, set out by national policy, it is important that the Local Plan is proactive and progressive in this area. It is not considered sufficient to simply include a policy that simply states that the LPA will ‘encourage’ delivery of building plots for custom and self-build. Instead, in order for the plan to be considered to be Positively prepared and Consistent with national policy it must demonstrate specifically and in some detail how it will ensure that the needs of custom and self-builders are to be met. PROPOSED CHANGE Recommendations There are a number a different policy mechanisms that could be employed to ensure a steady and sufficient provision of CSB opportunities within the borough, which would mean that the plan could be considered to meet needs of those wishing to build their own home, including: - Setting a requirement of, for example, 5% of units on large sites to be delivered as serviced self-build plots. In the case of oversupply a clause could be included stating that plots that are not sold within a certain timeframe (6-12 moths) can be built out by the developer - Allocating further small and medium-scale sites within the Plan specifically for custom and self-build to deliver a greater number of units than 16. - Allowing custom and self-build units outside, but adjacent to, settlement boundaries where the site is sustainable and does not represent an incursion into the open countryside. Particularly where the proposal would result in the ‘rounding off’ of the developed form of the settlement and the applicant is on the self-build register. It is considered that in order for the plan to be considered Positively prepared and Consistent with national policy at examination, it will be necessary to include at least two of the above recommendations in order to demonstrate that the delivery of self-build opportunities can meet the demand of those wishing to build their own home.
Summary:

Self-build and Custom Build. The Housing and Planning Act 2016 says that LPA should give suitable development permission to meet the demand for Self-Build and Custom build. Policy 8 and Policy 70 do not discharge the LPA duties towards meeting the need. Policy 70 (Unity Regeneration project) only equates to 16 self-build plots over the plan period. Policy 8 - Delivering the necessary range of housing. Pays 'lip service' only to NPPF para. 61. Does not set out how it will be achieved. No certainty that any plots will be delivered. Needs to be specific detail in the policy. Policy 8 - Recommendations: 1. Set out a requirement for self-build plots in the policy - e.g. 5% 2. Allocate further small and medium sized sites specifically for self-build. 3. Allow some self-build units outside but adjacent to settlement boundaries (where sustainable and not an incursion into the countryside) Policy 70 - Unity Policy 70 (Unity Regeneration project) only equates to 16 self-build plots over the plan

Response:

The Self and Custom Build Register. Following the publication of the relevant legislation in 2016, Doncaster Council has been inviting interest for custom and self-build housing (both individuals and groups) and maintaining a register of any such interest. As at November 2019 there are 21 entries on the Register, all individuals. The Council also maintains and publishes the Brownfield land Register that records plots of previously developed land suitable for housing development. This is published on our website and is updated annually. Provision of land and permissions. The Carr Lodge, Woodfield site (Ref.13/00073/REM) includes a large area (1.5ha) of serviced land specifically for self-build homes alongside a supporting design code for their development. This plot of land (at average density rates) should support approximately 45 homes. Also, the large mixed use Unity site as mentioned in the representation (15/01300/OUTA) has at least 0.4 hectares of land made available for the development of self-build plots. This equates to approximately 12 homes. The demand raised by the Self Build register will be monitored and an appropriate response to that demand will be provided. No change to Policy 8 is proposed at this stage.
3.45. We generally agree with Draft Policy 8 regarding the range of housing, in respect of type, size and tenure. A key aim of DMBC is to boost the supply of new housing with the need to diversity local housing markets to offer a range of house types and sizes to deliver more mixed and inclusive communities. The housing mix will of course need to reflect the population and population projections. A diverse range of housing will be required to meet population and household growth which will need to include smaller dwellings as well as those suitable for elderly living. Yet the type of housing should also reflect the ambition for Doncaster to include larger homes for families as well as starter homes so the younger generations are able to stay within the district. 3.47. To be able to determine the exact housing mix suitable for Doncaster there must be extensive evidence produced to substantiate the ratio of housing laid out in the Local Plan. In Doncaster the main item of evidence in this instance is the Doncaster Housing Need Assessment 2015. Therefore the most recent HNA produced by DMBC was back in 2015 and therefore an updated evidence base for housing need should be produced in the interests of an up to date evidence base in accordance with paragraph 60 of the NPPF. 3.48. The draft affordable housing targets are split depending on the market area of the site, with 23% affordable homes in the Borough's high value housing market areas and 15% elsewhere. 3.49. We would point out that the final affordable housing contributions, whilst typologies should be employed at the early stage to better build in viability at an early stage, affordable housing should ultimately be able to be negotiated through viability assessments where required to account for site abnormals and market changes. 3.50. The Grange Farm Urban Extension will offer a range of house types to reflect the housing need within the district with the aim to provide different house types, number of bedrooms and tenure. Recommendation 7: DMBC should review its housing need so to provide an up to date assessment to make sure the evidence is up to date in the interests of justified and effective plan making.

Summary:
Generally agree with Policy 8 re: the range of housing in respect of type, size and tenure. Housing mix will need to reflect population and population projections. A diverse range is required including smaller dwellings and housing for older people. But it should include larger family homes and starter homes for younger generations to stay local. To understand the exact housing mix there should be extensive evidence produced to substantiate the ratio laid out in the Local Plan. The most recent HNA is 2015 and need updating in accordance with para. 60 of the NPPF. The affordable housing amounts should ultimately be able to be negotiated through viability assessments where issues can be taken into consideration. Grange Far, will provide a range of house types to reflect housing needs in the district - including types, bedrooms and tenures. Recommendation 7: DMBC should review its housing need so to provide an up to date assessment to make sure the evidence is up to date in the interests of justified and effective plan making.

Response:
Although the full version of the Assessment was not published at the time of Publication, a 2019 Housing Needs Study has now been published and the appendix in the local plan on dwelling mix and type was included (Appendix 4) and therefore up-to-date evidence being 2019. The affordable housing requirements have been tested for viability and Policy 67 deals with any resultant need for site specific appraisals albeit the government's intention is that these should not now be the norm.
Comment Ref: C/Policy 8/05289/1/006
Attend Examination: Attend Hearing
Reason: We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 6: Meeting the Need for New Homes
Policy: Policy 8: Delivering the Necessary Range of Housing

Tests of Soundness: Positively prepared

Comment:
The affordable housing requirements set out in this policy are not based upon robust evidence. It is therefore not justified and unsound. The requirement of 15% affordable housing on site in areas of low value does not reflect the evidence provided in the Whole Plan Viability Study. The study states that "Viability pressure is at its highest in low value locations. Viable schemes are shown for Greenfield sites with a 15% affordable housing provision, however, this is on the basis that all affordable housing is provided as affordable home ownership tenures and S. 106 obligation costs are reduced to #3,359 per dwelling - half of the baseline testing. Brownfield variations generally return unviable outcomes even with the aforementioned adjustments. The policy is ignoring signals from the evidence which is clear that providing 15% affordable housing in low cost areas will prevent sites from being viable. The policy is unsound as it is not based upon robust evidence and because it is also not positively prepared or consistent with national policy when assessed against the NPPF (paragraph 16) which states that plans should be prepared in a way that is aspirational but deliverable.

Summary:
The affordable housing requirements set out in Policy 8 are not based upon robust evidence and is ignoring signals in the Whole Plan Viability Study which is clear that providing 15% affordable housing in low cost areas will prevent sites from being viable. Viable schemes are shown for Greenfield sites with a 15% affordable housing provision. However, this is on the basis that all affordable housing is provided as affordable home ownership tenures and S. 106 obligation costs are reduced to #3,359 per dwelling - half of the baseline testing. Brownfield variations generally return unviable outcomes even with the aforementioned adjustments.

Response:
The viability testing considers a number of different viability scenarios. This includes the 'base? appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost? developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.

**Comment:**  
The affordable housing requirements set out in this policy are not based upon robust evidence. It is therefore not justified and unsound. The requirement of 15% affordable housing on site in areas of low value does not reflect the evidence provided in the Whole Plan Viability Study. The study states that 'Viability pressure is at its highest in low value locations. Viable schemes are shown for Greenfield sites with a 15% affordable housing provision, however, this is on the basis that all affordable housing is provided as affordable home ownership tenures and S. 106 obligation costs are reduced to #3,359 per dwelling - half of the baseline testing. Brownfield variations generally return unviable outcomes even with the aforementioned adjustments. The policy is ignoring signals from the evidence which is clear that providing 15% affordable housing in low cost areas will prevent sites from being viable. The policy is unsound as it is not based upon robust evidence and because it is also not positively prepared or consistent with national policy when assessed against the NPPF (paragraph 16) which states that plans should be prepared in a way that is aspirational but deliverable.

**Summary:**  
The affordable housing requirements set out in Policy 8 are not based upon robust evidence and is ignoring signals in the Whole Plan Viability Study which is clear that providing 15% affordable housing in low cost areas will prevent sites from being viable. Viable schemes are shown for Greenfield sites with a 15% affordable housing provision. However, this is on the basis that all affordable housing is provided as affordable home ownership tenures and S. 106 obligation costs are reduced to #3,359 per dwelling - half of the baseline testing. Brownfield variations generally return unviable outcomes even with the aforementioned adjustments.

**Response:**  
The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
Chapter 6: Meeting the Need for New Homes

Policy 8: Delivering the Necessary Range of Housing

Tests of Soundness:

Consistent with national

Comment:

Policy 8 states that the delivery of a wider range and mix of housing types, sizes and tenures will be supported through a number of measures including the requirement for inter alia A) a mix of house size, type, price and tenure to address needs and market demand as appropriate; B) affordable housing with varying levels for 'high value areas' (23%) or 15% 'elsewhere'. The ratio between affordable homes for rent and low-cost home ownership is set at 75%/25%. Paragraph 6.10. refers to the 2019 Viability Testing Update which modelled a number of actual Local Plan allocations. The conclusion of this update was that development sites in the Borough's high and medium value areas are generally viable with a 23% affordable housing requirement when considered in conjunction with other Local Plan policy requirements. Whilst the broad approach of differentiating the affordable requirement between high and low-cost areas is appreciated, the explanatory text at paragraph 6.10 accepts that this is a general approach and cannot therefore be robust for every site. It is therefore important that the Plan recognises the potential need for viability assessment on a site by site basis in line with paragraphs 57 and 122 of the NPPF. Objection is therefore made to Policy 8 B) which should be amended to read: "Policy 8: Delivering the Necessary Range of Housing (Strategic Policy) The delivery of a wider range and mix of housing types, sizes and tenures will be supported through the following measures: A) a mix of house size, type, price and tenure to address needs and market demand as appropriate; B) there is a clear requirement for the provision of affordable housing to meet local needs in each individual community. Housing sites of 15 or more homes (or 0.5 Ha or above) will, subject to viability, normally be expected to include 23% affordable homes in the Borough's high value housing market areas (as defined in explanatory text below), or a lower requirement of 15% elsewhere in the Borough (including starter homes / discounted market sales housing which meet the definition in the NPPF) on-site. Proposals for affordable housing on developments of less than 15 units will be supported where these meet other development plan policies." And the following supporting paragraphs amended to read: "6.9. Affordable homes can be social rented, affordable rented, intermediate, starter and discounted market sales homes providing homes to eligible households whose needs are not met by the market. The 2019 Housing Need Study identified that overall, 209 affordable units are required per year over and above the Council's own build programmes, which equates to 23% of the Borough's housing target. However, this assessment does not factor in what levels of affordable housing have been secured already through commitments as it is just a percentage of the annual housing target of 920 net new homes. Nor does it consider whether the target is appropriate to adopt as a policy requirement as it takes no account of viability where national policy is clear that whatever requirement set through policy must be justified in terms of whole plan viability. 6.10. The Doncaster Local Plan Viability Testing (2016) evidence base assessed a series of hypothetical housing sites across the Borough's housing market areas in line with national policy and the best practice guidance. The 2019 Viability Testing Update to this evidence also revised the typologies before modelling a number of actual Local Plan allocations. The conclusion being that development sites in the Borough's high and medium value areas are generally viable with a 23% affordable housing requirement when considered in conjunction with other Local Plan policy asks. However, sites within the Borough's low value areas come under greater viability pressure. The evidence therefore recommends that it is more appropriate to adopt a reduced affordable housing requirement of 15% in these parts of the Borough. Appendix 5 identifies the Borough's two affordable housing requirement policy areas for the purposes of this policy. Notwithstanding this, the general affordable housing requirements sought on this basis will be subject to viability on a site by site basis. As the ratio of affordable homes for rent and low-cost home ownership can also impact on the viability of a development, this will also be subject to viability testing." Reason: In order to ensure viable delivery and be compliant with national policy.

Summary:

Policy 8 - Delivering the necessary range of housing. o Sites should be subject to viability on a site by site basis, o Part 'B' of the Policy and supporting paragraphs 6.9 and 6.10 should be amended to ensure viable delivery and compliance with NPPF. Representation includes suggested rewording of Part B and paragraph 6.9.

Response:

The Government's clear that the need for viability appraisals on a site-by-site basis should become less of the norm in the future with an up-to-date local plan that has been tested at plan-making stage. Notwithstanding this, Policy 67: Development Viability does allow for such where genuinely necessary.
Policy 8: Delivering the Necessary Range of Housing  
1. There is no specific mention within the policy itself of the affordable housing requirement being subject to viability testing. Object to the policy as currently drafted on the grounds that it is not in accordance with the Framework.  
2. Reference should be made to Policy 67 (development viability) to ensure clarity in the application of this policy (8)

Response:
Support for the principle of the policy welcomed. It is not considered that there needs to be cross-reference to Policy 67: Development Viability as the introduction to the Local plan itself at para 1.14 is explicitly clear that all the policies should be read together and that individual policies do not necessarily refer to other relevant policies.
Tests of Soundness:

Comment:

We are of the view that this strategic policy as presently drafted is not considered to be sound as it is not justified or consistent with national policy for the following reasons: This policy requires housing sites of 15 or more homes in the Borough’s high value housing market areas to include 23% affordable homes and for 15% of affordable in other areas. There is no dispute about the need for affordable housing within Doncaster and the need to address the affordable housing requirements of the borough. Provisions within the Framework are, however, clear that the derivation of affordable housing policies must not only take account of need but also viability. Paragraph 34 establishes the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. The Whole Plan Viability Testing (2019) report shows the issues of viability for a number of sites. It shows that schemes in the low value areas are not viable and will not be able to support the affordable housing requirement. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.

Summary:

Policy 8 Affordable Housing.  o Affordable housing figure must not only take account of need but also viability.  o The Whole Plan Viability Testing (2019) report shows the issues of viability for a number of sites. It shows that schemes in the low value areas are not viable and will not be able to support the affordable housing requirement.  o The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis.  o This will jeopardise housing delivery.

Response:

The affordable housing ask is a viability-led target rather than being a solely needs-led requirement which reflects NPPF’s emphasis on the need for policies to be viable. Changes to national policy and guidance is clear that there is a need to frontload viability at plan-making stage and the need for viability appraisals as part of decision-taking will then become less of the norm. The Local Plan still however includes a policy (Policy 67) in respect to viability and all policies in the plan should be read as a whole. The viability testing evidence base has been prepared in line with all the relevant guidance and this includes assessing a number of allocations as well as hypothetical sites. The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
We are of the view that this strategic policy as presently drafted is not considered to be sound as it is not justified or consistent with national policy for the following reasons: Whilst there is the need for a mix of house sizes, type, price and tenure and is generally supportive of providing a range and choice of homes to meet the needs and market demand in the local area. It is, however, important that any policy is workable and ensures that housing delivery will not be compromised or stalled due to overly prescriptive requirements or the need to provide significant amounts of additional evidence. We recommend (along with others) that a flexible approach is taken regarding housing mix which recognises that needs and demand will vary from area to area and site to site; ensures that the scheme is viable; and provides an appropriate mix for the location. It is also important to highlight the need for creating a housing market that will attract investors to Doncaster, and to provide an element of aspiration to ensure working people and families are retained within the area. To this end the Council should recognise that the latest Housing Need Assessment will only ever identify current deficits and reflects a snap-shot in time. Therefore, even the latest HNA may not reflect the position at the time of an application. It is important that there is greater flexibility within this policy to acknowledge that the mix can vary both geographically and over the plan period.

Response:
It is not considered that the policy is overly prescriptive on such matters. Part A makes clear that mix/type/tenure/price should take account of the latest Needs Assessment or other robust evidence.
Comment: The majority of the "Homes and Settlement" Draft Proposal appears to concentrate on "how" the number of new homes required was determined along with "where and what quantity" DMBC propose to disperse this number throughout the Borough to meet varied demographic needs. However, Marr Parish believes that DMBC have omitted to robustly address our elderly population within this proposal. In the Local Plan Reports DMBC state: 'Like many parts of the country, Doncaster's population is aging, with the 2015 Housing Needs Assessment predicting that the number of older people is set to increase by 36% between 2015 and 2032, whilst younger age groups are predicted to slightly decrease. This brings social and economic challenges for the borough.' Currently the over 65 population accounts for 25% (75,600) of our 302,400 population but by 2032 this is expected to rise [an increase of almost 38,000] to 36% (113,148) of the 314,300. Marr Parish Meeting observes that this significant demographic group has not been properly addressed within the plan. Marr Parish Meeting cannot condone this oversight, DMBC has an opportunity to rectify this oversight by delivering much needed private residential retirement developments aimed specifically at the needs of an ageing population where housing design and the provision of on-site services and support are fully integrated. In doing so, it is our view that such developments will provide suitable choice of accommodation and allow the elderly population to plan their future needs. This would release existing housing stock across the Borough - particularly within the rural communities - enabling residential areas where property demand is high but availability is limited, to become accessible to a wide and diverse range of new residents. DMBC has based its target for new dwellings on the future needs of families and younger people. However, since the report states: ‘younger age groups are predicted to slightly decrease?’ the subsequent number of new houses apportioned to this age group appears skewed. We believe the future housing needs of the borough should be revised to better reflect the future changes in demographic age profiles. In view of the issues outlined above, Marr Parish believe that in its present format, the proposed Draft Local Plan, does not appear to be sufficiently robust and therefore is not "Fit for Purpose" as it does not meet the identified "Future Needs" of the Borough in this regard.

Summary:
Preparation of the Local Plan has omitted to robustly assess the needs of the Borough’s elderly population. The Council has an opportunity to rectify this oversight by delivering much needed private residential retirement developments aimed specifically at the needs of an ageing population where housing design and the provision of on-site services and support are fully integrated. In doing so such developments will provide suitable choice of accommodation and allow the elderly population to plan their future needs. This would release existing housing stock across the Borough - particularly within the rural communities - enabling residential areas where property demand is high but availability is limited, to become accessible to a wide and diverse range of new residents. The target for new dwellings has been based on the future needs of families and younger people. and should be revised to better reflect the future changes in demographic age profiles.

Response:
The housing target is not just based on the housing needs of younger people and families it is based on the need of the borough’s population and includes the need to ensure we are planning for the needs of an ageing population. Such matters are considered through the Housing Needs Study amongst other areas. Policies in the local plan look to secure new housing meets the needs of the borough’s population, for example the Housing Standards policy (Policy 46) and Policy 8 (Delivering the Necessary Range of Housing).
For several years, Doncaster has suffered from an oversupplied property market and a reducing volume of Homebuyers in a financial position to purchase. Marr Parish continues to recognise that if Doncaster is to flourish there could be a need for additional, sustainable housing stock but this must not be delivered "at all costs" or to the detriment of existing Rural Communities nor at the expense of Green Belt Land. However, as Doncaster has approx. 4,281 vacant houses around the Borough, Marr Parish Meeting would urge DMBC to use The National Policy Framework which places the obligation on Local Authorities with "compulsory purchase powers" to "bring back into residential use" vacant houses and disused buildings. Historically, DMBC have been reticent to pursue this obligation. Subsequently, for the new Plan to be considered "effective and sound" this must now be considered a priority within the new emerging Local Plan with a commitment from DMBC and a transparent Policy for Doncaster. We further believe that at 31% (as a minimum) of the 13,800 new homes that the "Homes and Settlements" document proposes, that this would deliver much needed Affordable/Social homes in the Borough without the need to take land out of Green Belt to build even more new homes when such properties currently exist. We urge DMBC to ascertain how much housing stock is currently vacant within the Borough before making a commitment to significant investment in developing new housing stock to meet any potential future demands. We advocate that this approach fully aligns to and delivers Affordable/ Starter homes with sustainability and in keeping with DMBC's green policies and obligations. Marr Parish note that in the draft Homes and Settlements proposal, the current total households for the Borough totals 130,165 and the draft still proposes an additional 13,800 new homes over the next 15 years. DMBC's latest proposals remain at 920 new dwellings per year, 585 to accommodate population rise within the borough and an additional 335 allocated for economic growth across the borough. DMBC project that 15,640 new dwellings will be required to meet demand over a 17 year period between 2017 - 2035. In previous consultations we raised concerns over the targeted increase and the number of projected new dwellings within the draft Local Plan. We understand the rationale and the basis on which this target has been established, however, our concerns still remain the same since this still constitutes an increase of +10% on the total available housing stock across the borough, a borough which has one of the worst performing housing markets in the UK. Marr Parish agree with DMBC's proposal to objectively evaluate and measure the number of new jobs and homes annually. We believe, plan delivery means they are co-dependent on one another and this must be implemented to ensure they achieve an equally balanced delivery for economic growth. Marr Parish Meeting welcome DMBC's aspirations to be a "greener" Doncaster and that the Draft Proposal will ensure that developers set aside 10% of land for "green spaces". We believe that this could have a positive influence on reducing obesity and improving health and wellbeing for the whole community. In every community, Parks and green spaces are important amenities, however due to restricted budgets DMBC have stated over the last few years that they have little/ no funding available to provide new or replacement play equipment. Instead play equipment has had to be sourced through grant funding applications, as is the case in point with Marr Park. We are not aware of evidence in support of DMBC's Chief Financial Officer recent statement '?. All of the unspent section 106 funding is earmarked for a range of developments including improving public open spaces which may include installing new play equipment and improving parks and woodland areas'? Contrary to this, Marr Parish has experienced a different scenario over play equipment being removed from its park but not replaced. With DMBC claiming they have no funds available to replace or install new equipment the only recourse left to us, is to instead, look to source the play equipment through grant funding application. As stated previously, Marr Parish agrees DMBC's aspirations to be a 'greener' Doncaster but based on historic evidence, we have little confidence in this ever being delivered or moving past an 'aspiration'.

Summary:
Greater consideration should be given to the use of vacant homes and use of compulsory purchase powers to secure their delivery, rather than the provision of new homes. This would aid delivery of Affordable/ Starter Homes without the need to take land out of the Green Belt. Support is given to Policy 29 requirement that 10% of land should be set-aside for green spaces as part of new development. However, based on experience that Doncaster Council has little/ no funding available to provide new or replacement play equipment, there is little confidence this policy can be delivered.

Response:
The Local Plan is just part of ensuring new homes are provided, alongside other Council Teams/ Strategies/ initiatives such as the Housing Strategy which includes looking at bringing back into effective use empty properties. Compulsory Purchase Orders also fall outside of the Local Plan remit. Policy 29 relates to open space provision in new developments and these are sites often brought forward by private landowners and developers as opposed to the Council. All relevant applications will need to comply with this policy when adopted.

The proposed Draft Plan did not provide an in-depth assessment or provide evidence to support the true need for Social housing. Social and Affordable housing were just "lumped in" within the annual projected target of 338 new homes required [which accounts for 37% of the total per annum] by the planned economic growth. It is Marr Parish Meetings view that Doncaster’s population has an increasing need for such housing which does not seem to be provided for nor is it prioritised within the Local Plan. This must be clarified, specific targets must be set to ensure that both developers and DMBC know what has to be delivered, in order to meet the future needs of the Borough. Marr Parish also note that Section 106 Agreements, which allows DMBC to get money from developers in exchange for granting planning permissions for projects, has amassed a total of £5.7 million. It is our understanding that this Section 106 money was collected for the sole purpose and its intended use was for it to be spent on the communities who would be directly affected by the new development projects in their area. This money has been collected and earmarked for affordable housing, improvements to public open spaces like play parks, as well as, the provision for new school places to address the expected uptake in population from families and residents purchasing new houses in these developments. We do not agree with the current policy, where this Section 106 money is accumulated to create a large fund, only then to be spent on a bigger project unrelated to the areas that have been impacted by new development. It is our understanding that this money was intended to be spent in areas where development has taken place and to off-set impacts of such development in those areas. It appears that this is not always the case. We further believe, at the outset of proposed development projects DMBC must have identified impacts and what these impacts would have on communities, hence, the request for contributions from developers towards addressing these, under Section 106 Agreements. We firmly believe that money collected from developers should benefit and be spent in the communities where development has taken place. Instead, it would appear that the majority of this 106 money is being 'accumulated' to provide finance for new affordable housing projects. This would suggest that DMBC is the only main beneficiary. Since, any new affordable houses will have been delivered through external finance and not from DMBC's own budget but it also means, that DMBC will boost its own income from additional rates, revenue gained from these new homes. We acknowledge that affordable housing is needed but we do not accept that it is reasonable for these to be delivered at the expense or detriment of other communities and the new Local Plan Policies should ensure that 106 money is spent in the communities impacted by the development.

Summary:
The Local Plan does not evidence the need for social housing and objects to its simple inclusion within the economic growth element of the housing requirement. S106 contribution should be directed to where the communities that would be directly affected by the new development projects in their areas and do not agree with current policy which accumulates s105 funds into a large fund to be spent on a bigger project unrelated to the areas that have been impacted by new development - it would appear that the majority of this 106 money is being 'accumulated' to provide finance for new affordable housing projects. It is acknowledged that affordable housing is needed but it is not accepted that it is reasonable for these to be delivered at the expense or detriment of other communities - and the new Local Plan Policies should ensure that 106 money is spent in the communities impacted by the development.

Response:
Policy 8 sets out the affordable housing requirement and the explanatory text provides further detail in that there is a need for 209 affordable units per annum over and above the Council's own build programme. The ratio between affordable homes for rent and low cost home-ownership is 75%/25% respectively. Section 106 contributions must be taken in accordance with the legal and policy tests. Contributions are sometimes taken in lieu of direct provision and spent in accordance with agreed protocols e.g. the borough is largely a self contained housing market area which supports affordable housing being delivered in areas that may be different to where the contribution was secured. The policy is clear that such contributions will normally be expected to be delivered on site, but if commuted sums are taken then they will be used to target areas of need to assist with rebalancing the housing market. Part of the reasoning behind such an approach is, particularly in respect to affordable housing, commuted sums may not amount to sufficient funds to deliver affordable housing without being in conjunction with other development’s commuted sums.
Chapter 7 is unsound as it does not meet the needs of the Borough to address climate change; nor take account of the evidence about climate change or of changing travel demand. 1. Local planning authorities have a duty under Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) to ensure that plans ‘contribute to the mitigation of, and adaptation to, climate change’. The duty means that local plans should be based on evidence relating to the Climate Change Act targets (including identifying baseline carbon emissions data), and monitoring of plans in annual monitoring reports should demonstrate how development is contributing to meeting those targets. There is no evidence of this approach in Chapter 7, which makes no mention of climate change. Strategically planned major change, where the location and overall form of development can have a major impact on travel, must be set within a carbon pathway to net zero 2050 with binding carbon targets for all modes.

2. During development of this version of the Local Plan climate change has developed into an existential threat and emergency. The October 2018 Special Report from the Intergovernmental Panel on Climate Change (IPCC) concluded that in order for warming to stay below 1.5°C, human-caused CO2 emissions must fall to net zero by 2050 or earlier (note 1 - October 2018, [http://www.ipcc.ch/report/sr15/]) which will require ‘rapid and far reaching transitions’ that are ‘unprecedented in scale’ and imply deep emissions reductions in all sectors. The Committee on Climate Change (CCC) published its response to the IPCC’s report (note 2 - Net Zero The UK’s contribution to stopping global warming, Committee on Climate Change, May 2019), and in June 2019 the Government accepted the Committee’s advice and amended the 2050 target under the Climate Change Act to require net-zero greenhouse gas emissions by that date. 3. Transport is the one sector that has failed to meet its carbon budgets, with the sector’s emissions at the same level in 2016 as they were in 1990 (note 3 - 2016 UK Greenhouse Gas Emissions Final figures, BEIS, 2018, Table 6). Surface transport is the largest-emitting sector in the UK, accounting for 23% of UK emissions (note 4 - Net Zero Technical Report Committee on Climate Change, May 2019, Figure 5.1) with cars accounting for the majority of them. Even with a switch to electric vehicles, the level of reduced car mileage needed to meet the UK carbon budget by 2030 is estimated to be between 20% and 60%, depending on the speed of the switch to electric vehicles and how fast the electricity powering them is decarbonised (note 5 - More than electric cars, FoE, May 2019). It is therefore imperative that traffic reduction is implemented urgently. This will require a transformational change in the way people travel. The scale of the effort required has been shown by work done by the Tyndall Centre for both the West Yorkshire Combined Authority and Sheffield City Council (note 6 - [https://www.sheffield.gov.uk/content/dam/sheffield/docs/city-council/climate-change/Sheffield_Report_V1.3.1.pdf]). 4. In order to reduce road vehicle miles for both passengers and freight, demand management of road capacity is essential, coupled with investment in high quality, affordable and accessible alternatives. Research by CPRE - Appendix A attached - (The End of the Road? Challenging the road building consensus, 2017, Sloman et al) has reinforced the futility of providing further road capacity.

It not only induces substantial increases in traffic, over and above background growth, but also leads to congestion, air pollution and increases in carbon emissions. It reinforces a highly car-dependent pattern of land development, fails to benefit the economy and leads to long lasting adverse impacts on landscape and biodiversity. Travel demand is also reducing with 16% fewer trips than in 1996, 10% fewer miles travelled than in 2002 and 22 hours less hour travelling than a decade ago (note 7 - All Change? The Future of Travel and the Implications for Policy and Planning, The First Report of the Commission on Travel Demand, 2018). Therefore development proposals should be based on the Transport Hierarchy (note 8 - See Institution of Mechanical Engineers) which prioritises walking, cycling, public transport, taxi, pool car, private car in that order. Such an approach can change transport behaviour, improve people’s health, reduce levels of physical activity and sedentary behaviour, and reduce air pollution and congestion. Policy 13 is not set within a carbon reduction pathway to 2050, nor is there any reference to the impacts of changes on its proposals. All of the proposals listed in Policy 13A should be measured of last resort and only pursued if alternatives fail to provide the outcomes required. A1, A3, A4 - We are particularly concerned about the pan northern route, part of which would cross the Peak District National Park. The proposal is against all policy, both nationally and locally, on strategic (motorway and trunk) road infrastructure in a National Park (NPPF para 172 and footnote 54; PDNPA Core Strategy 2011 Policies T1 and T2 and para 15.9). Section 62 of the Environment Act 1995 places a general duty on statutory undertakers, such as Local Councils, to have regard to the purposes of National Parks when coming to decisions or carrying out their activities relating to or affecting land within the Parks. Although the Park is outside its area, Doncaster MBC has a duty under the Environment Act, which it has yet to demonstrate that it has in its decision to promote the pan-northern route across the National Park. Within South Yorkshire the pan-northern route and its components would have severe adverse impacts on some of the most sensitive landscapes, such as the Magnesian Limestone Ridge. A2 - The A1-A19 link road would be adjacent to a railway line with a station at Adwick-le-Street. This is a prime example of where all new development could be car-free and rely on rail/bus connections. A5 - Congestion on the A3(M) motorway (capacity improvements) should be managed using demand management and smart motorway techniques. A6 - The Hatfield Link Road may be essential to link strategic development to the road network but all residential development could be car free with connectivity based on the train station at Stainforth. A7 West Moor Link (A630); A8. Improvements to M18; A9. Improved access to Doncaster-Sheffield Airport from M18; A10. M18 / A1(M) interchange improvements; A11. North Nottinghamshire to A631 are all road capacity improvements. Traffic should be demand managed, coupled with development of high quality, accessible and affordable public transport. Some of these proposals (A1, A2, A3, A4, A5, A8, A10) fall within the scope of Transport for the North (TfN)’s Strategic Transport Plan 2019 Investment Programme (note 9 - [https://transportforthenorth.com/wp-content/uploads/TfN-final-investment-programme-19-20.pdf]) to 2050. TfN is
developing a carbon reduction pathway to net zero 2050 and has committed to amend its programme to meet this target (Strategic Transport Plan 2019, page 81). As TfN is the subnational transport body for the north and its remit covers Doncaster Borough, at least some of Doncaster’s proposals will be covered by the carbon reduction pathway. However, Doncaster should have its own pathway and make its own balances to achieve binding targets. PROPOSED CHANGE Insert as text before all policies a new opening to Chapter 7 Climate change is now an existential threat and emergency. In June 2019 the Government accepted the Committee on Climate Change’s advice and amended the 2050 target under the Climate Change Act to require net-zero greenhouse gas emissions by that date. Transport is the one sector that has failed to meet its carbon budgets, with the sector’s emissions at the same level in 2016 as they were in 1990 (note 10 - 2016 UK Greenhouse Gas Emissions Final figures, BEIS, 2018, Table 6). Surface transport is the largest-emitting sector in the UK, accounting for 23% of UK emissions (note 11 - Net Zero Technical Report Committee on Climate Change, May 2019, Figure 5.1) with cars accounting for the majority of them. Even with a shift to electric vehicles, the level of reduced car mileage needed to meet the UK carbon budget by 2030 is estimated to be between 20% and 60%, depending on the speed of the switch to electric vehicles and how fast the electricity powering them is decarbonised (note 12 - More than electric cars, FoE, May 2019). It is therefore imperative that traffic reduction is implemented urgently. This will require a transformational change in the way people travel. In order to reduce road vehicle miles for both passengers and freight, demand management of road capacity is essential, coupled with investment in high quality, affordable and accessible alternatives. The futility of increasing road capacity has been shown over many years through extensive research. It not only induces substantial increases in traffic, over and above background growth, but also leads to congestion, air pollution and increases in carbon emissions. It reinforces a highly car-dependent pattern of land development, does not benefit the economy and leads to long lasting adverse impacts on landscape and biodiversity. Therefore increasing road capacity will be an option of last resort and demand for it will be managed. The Transport Hierarchy (note 13 - https://www.imeche.org/policy-and-press/reports/detail/transport-hierarchy) which promotes walking, cycling, public transport and car sharing in that order of priority, in preference to single occupancy car use, for movement of people, and encourages efficient and sustainable freight, will be adopted for all planning and travel proposals in order to encourage more journeys to be made without a car. This would enable wider public policy goals for health and wellbeing, social inclusion, job opportunities, trade, access to services and sustainable places, which transport can support, to be achieved. The approach needs to be tailored to outcomes that are practical at the local level and to reflect particular areas of challenge such as travel in rural areas. (SEE EMAIL FOR IMAGE - Taken from National Transport Strategy, 2016 Transport Scotland, page 26) FURTHER PROPOSED CHANGES SHOWN UNDER EACH POLICY. Summary: Chapter 7 is unsound as it does not meet the needs of the borough to address climate change, nor does it take account of the evidence about climate change or changing travel demand. Local Planning Authorities have a duty under Section 19 of the Planning and Compulsory Purchase Act 2004 (as amended) to ensure that plans ‘contribute to the mitigation of, and adaptation to, climate change’. There is no evidence of this with Policy 7. The duty means Local Plans should be based on evidence relating to the Climate Change Act targets (including identifying baseline carbon emissions data), and annual monitoring reports should demonstrate how development is contributing to these targets. Airport proposals can only be supported in the context of the pathway to zero net emissions by 2050. This pathway should include domestic and international aviation emissions and a commitment to amend the programme of interventions to meet those targets. During the process of the Local Plan, climate change has developed into an existential threat and emergency. The government has set a target to reach zero net emissions by 2050. The DfT have (in their progress report on “Future of UK airports 2050” - note 3 - Reducing UK Emissions: 2019 Progress Report to Parliament, Committee on Climate Change July 2019) accepted that aviation emissions should be included in the Climate Change Act Targets and net zero carbon by 2050. Although the government does not have in place a framework for aviation carbon reduction, it clearly aims to develop one. Transport is the sector that has failed to meet its carbon budgets. Traffic reduction should be implemented immediately. This will require transformational change in how people travel. To reduce road vehicle miles for passengers and freight, demand management of road capacity is essential, coupled with investment in high quality, affordable and accessible alternatives. CPRE research shows that it is futile increasing road capacity as it increases traffic, congestion, air pollution and emissions - reinforcing car dependency, and fails to benefit the economy as well as leading to landscape and biodiversity impacts. Travel demand is reducing. Proposals should be based on the transport hierarchy of walking, cycling, public transport, taxi, pool car, private car in that order. Such an approach can change transport behaviour, improve people’s health, reduce levels of physical activity and sedentary behaviour, and reduce air pollution and congestion. All proposals in 13A should be last resorts pursued if alternatives fail to provide the required outcomes. Especially concerned about the pan northern route. The proposal is against all policy, both nationally and locally, on strategic (motorway and trunk) road infrastructure in a National Park (NPFP para 172 and footnote 54; PDNPA Core Strategy 2011 Policies T1 and T2 and para 15.9). Although the park is outside of Doncaster, the Council have a duty under the Environment Act which it has yet to demonstrate that it has met its In decision to promote the pan-northern route across the National Park. A2 - The A1-A19 link road would be adjacent to a railway line with a station at Adwick-le-Street. This is a prime example of where all new development should be car-free and rely on rail/bus connections. A5 - Congestion in the A1(M) motorway (capacity improvements) should be managed using demand management and smart motorway techniques. A6 - The Hatfield Link Road may be essential to link strategic development to the road network but all residential development could be car free with connectivity based on the rail station at Stainforth. A7 West Moor Link (A630); A8. Improvements to M18; A9. Improved access to Doncaster-Sheffield Airport from M18; A10. M18 / A1(M) interchange improvements; A11. North Nottinghamshire to A631 are all road capacity improvements. Traffic should be demand managed, coupled with development of high quality and affordable public transport. Proposed changes: Insert as text before all policies a new opening to Chapter 7 Climate change is now an existential threat and emergency. In June 2019 the Government accepted the Committee on Climate Change’s advice and amended the 2050 target under the Climate Change Act to require net-zero greenhouse gas emissions by that date. Transport is the one sector that has failed to meet its carbon budgets, with the sector’s emissions at the same level in 2016 as they were in 1990 (note 10 - 2016 UK Greenhouse Gas Emissions Final figures, BEIS, 2018, Table 6). Surface transport is the largest-emitting sector in the UK, accounting for 23% of UK emissions (note 11 - Net Zero Technical Report Committee on Climate Change, May 2019, Figure 5.1) with cars accounting for the majority of them. Even with a shift to electric vehicles, the level of reduced car mileage needed to meet the UK carbon budget by 2030 is estimated to be between 20% and 60%, depending on the speed of the switch to electric vehicles and how fast the electricity powering them is decarbonised (note 12 - More than electric cars, FoE, May 2019). It is therefore imperative that traffic reduction is implemented urgently. This will require a transformational change in the way people travel. In order to reduce road vehicle miles for both passengers and freight, demand management of road capacity is essential, coupled with investment in high quality, affordable and accessible alternatives. The futility of increasing road capacity has been shown over many years through extensive research. It not only induces substantial increases in traffic, over and above background growth, but also leads to congestion, air pollution and increases in carbon emissions. It reinforces a highly car-dependent pattern of land development, does not benefit the economy and leads to long lasting adverse impacts on landscape and biodiversity. Therefore increasing road capacity will be an option of last resort and demand for it will be managed. The Transport Hierarchy (note 13 - https://www.imeche.org/policy-and-press/reports/detail/transport-hierarchy) which promotes walking, cycling, public transport and car sharing in that order of priority, in preference to single occupancy car use, for movement of people, and encourages efficient and sustainable freight, will...
be adopted for all planning and travel proposals in order to encourage more journeys to be made without a car. This would enable wider public policy goals for health and wellbeing, social inclusion, job opportunities, trade, access to services and sustainable places, which transport can support, to be achieved. The approach needs to be tailored to outcomes that are practical at the local level and to reflect particular areas of challenge such as travel in rural areas.

Response:
Climate change is a theme that runs through the whole plan and the plan is intended to be read as a whole. Policies in the chapter fully promote sustainable forms of travel such as walking and cycling. A Climate Change Topic Paper has been prepared for Submission stage.

Policy: Chapter 7: Transport, Access & Infrastructure  
Tests of Soundness: Positively prepared  

Comment: 
Plan is not sound because it appears the Council has no policy on vehicle emissions and the danger this poses to Public Health.

Summary: 
Plan not sound, has no policy on vehicle emissions and the danger they pose to public health.

Response: 
All policies in the plan need to be read as a whole as set out at para 1.14. Other policies deal with such matters, for example Policy 55: Pollution.

| Comment: | Measures to help travel needs meet Doncaster’s carbon reduction pathway to net zero 2050 will be based on reducing the need to travel and widening travel choices, as follows:  
A) Patterns of development which reduce the need to travel and implement the sustainable transport hierarchy will be supported.  
B) Development must be supported by clear commitments to walking, cycling and public transport with mode-share targets in travel plans.  
C) Development must demonstrate best practices in sustainable transport, e.g. reducing travel through use of IT, Mobility as a Service (MaaS) and public transport, and promoting car clubs, cycle hire and home working solutions.  
D) Development will provide for car parking only in defined spaces or purpose-built bays on-street and be organised to avoid negative impacts on active travel and bus operation. The majority of car parking spaces will be communal (available to all residents, visitors and car club vehicles). Near to railway stations and strategic bus routes car-free development should be possible.  
E) Electric vehicle charging points will be provided.  
F) Development must make provision for public transport services that will operate 7 days a week and in the evenings from Day 1 of occupation. Provision of such services will be certain in the long term. The street layout will give priority to public transport over other traffic. Direct services to key destinations will be provided.  |

| Response: | It is not considered that this ‘new’ policy is necessary given the response to the Representation’s general comments on the chapter as set out above. |
Comment:
The Council support Policy 13: Strategic Transport Network specifically A) 11 which states that 'Proposals will be supported which: A) Improve key routes and connections to the Strategic Road Network and effectively manage traffic and relieve congestion, in particular at the following locations: 11. North Nottinghamshire to A631 capacity improvements.' Table 7 of the supporting text elaborates: 'Capacity improvements are required to improve access from North Nottinghamshire to Doncaster via the A631 in light of recent growth. Harworth and Bircotes, in Bassetlaw, has seen significant level of committed housing and employment development over recent years' through its continued regeneration. Concern has been raised by Doncaster Council that this development has, cumulatively, negatively impacted on the capacity of the existing highway network along the A631 between Tickhill and Bawtry - particularly the A631 Stripe Road Junction. Improvement schemes are recommended in Policy 13 along the A631 corridor to reduce congestion in the area. It is understood that the evidence for the capacity issues at the above locations is via transport assessments submitted as part of the planning applications for new development in the Harworth area. The Council consider that, for clarification, reference should be made to these statements in Table 7. It is the intention that the modelling work being undertaken to inform the Bassetlaw Transport Study Part 2 - a key part of the emerging Bassetlaw Local Plan evidence base - will help to identify specific capacity issues and potential mitigation measures on the existing highway network and will provide a sound basis for further investigation through additional joint working. On that basis, the Council supports the planned intervention, identified by the Doncaster Infrastructure Strategy Annex, March 2019 that 'A joint feasibility study between Doncaster and Bassetlaw Councils and Nottinghamshire County Council will be prepared to investigate solutions (including traffic management measures) to resolve road traffic congestion at Tickhill Spital junction and elsewhere along the A631 corridor to ensure that it does not exacerbate congestion.' Bassetlaw District Council consider that the joint feasibility study should ensure both Councils fully understand the perceived highway capacity issues and the approach to any future mitigation by all relevant partners. This work will be an essential element of the ongoing, positive Duty to Cooperate work between the two Councils. As such, the Council supports the production of the Revised Statement of Common Ground (2019) which evidences the ongoing cooperation that is taking place between the two Councils through the plan-making process. The Council agrees with Paragraph 67 that 'Consultation with Bassetlaw District Council on the Draft Statement of Common Ground has highlighted that there are on-going and unresolved issues which require further dialogue. Further work and dialogue is taking place to resolve these issues as the Local Plan progresses.' Until the feasibility study is complete and agreed by all partners, both Councils are unable to agree a highways mitigation solution. The perceived impacts of traffic movements upon air quality, noise and heritage in Bawtry and Tickhill will also remain unknown. On that basis, Bassetlaw District Council reserves the right, through the plan-making process to continue to discuss with Doncaster Council the following matters identified by the Revised Statement of Common Ground, and where necessary provide additional evidence in relation to: - Local Highway Network: Paragraph 67, Agreement 8 - Air Quality and Noise: Paragraph 73, Agreement 10 - Built and Historic Environment: Paragraph 81, Agreement 16

Summary:
The Council Support Policy 13, specifically A) 11. Table 7 acknowledges the improvements required to improve access from North Nottinghamshire to Doncaster in light of recent growth. Concern was raised by DMBC that development in Harworth and Bircotes (Bassetlaw) has cumulatively negatively impacted on the capacity of the 1631 between Bawtry and Tickhill - especially the Stripe Road junction. Policy 13 recommends improvements to reduce congestion. It is understood evidence on capacity issues via transport assessments have been submitted as part of planning applications for development in Harworth. For clarification, reference to these should be made in Table 7. On that basis, the Council supports the planned intervention identified in the Infrastructure Strategy Annex (March 2019) that: ‘A joint feasibility study between Doncaster and Bassetlaw Councils and Nottinghamshire County Council will be prepared to investigate solutions (including traffic management measures) to resolve road traffic congestion at Tickhill Spital junction and elsewhere along the A631 corridor to ensure that it does not exacerbate congestion.’ This means both Council’s will fully understand the highways capacity issues and approach to mitigation my all relevant partners. This will be an essential element of ongoing Duty to Cooperate work between the two Councils. As such, the Council supports the production of the revised Statement of Common Ground 2019, which shows ongoing cooperation between the two councils. The Council agrees with para. 67 that 'Consultation with Bassetlaw District Council on the Draft Statement of Common Ground has highlighted that there are on-going and unresolved issues which require further dialogue. Further work and dialogue is taking place to resolve these issues as the Local Plan progresses. Until the feasibility study is complete and agreed by partners, both Council’s cannot agree mitigations. The impacts of traffic movements on Bawtry and Tickhill remain unknown. Therefore, Bassetlaw reserves the right to continue to discuss with Doncaster Council the following matters: - Local Highway Network: Paragraph 67, Agreement 8 - Air Quality and Noise: Paragraph 73, Agreement 10 - Built and Historic Environment: Paragraph 81, Agreement 16

Response:
Support for the policy is welcomed. Doncaster Council will continue to work with Bassetlaw DC on these matters including seeking solutions to the impact of traffic on Doncaster’s local highway network, through securing money from appropriate funding streams. The Statement of Common Ground is being updated as and when appropriate to reflect negotiations and discussions.
Add new introductory text: Investment in transport infrastructure will all be assessed within the carbon reduction pathway to 2050 for the Borough and the programme will be amended to achieve carbon emissions targets for transport. Best use will be made of all transport infrastructure. Public transport by road or rail will be prioritized over road transport. Wherever possible freight should be conveyed by rail or water. Road capacity will be demand managed and any increase will be a measure of last resort, once all reasonable alternatives have been implemented and failed to achieve the desired outcomes. Proposals will be supported which:

- Amend policy as follows: A) Delete all listed, except the Hatfield Link Road (?), and move A to the bottom of the policy. B) 1.Delete and replace with ‘a new railway station at DSA on the Lincoln line.’ D) 5. Delete ‘aviation and’

**Response:**

The policy as drafted is considered ‘sound’ - see response to the comments above.
Comment Ref:  C/Policy 13/0198/2/002
Attend Examination:  Written Representation
Reason:
Area:  Chapter 7: Transport, Access & Infrastructure
Policy:  Policy 13: Strategic Transport Network

Tests of Soundness:

Comment:
Network Rail is supportive of the policies identified above: Policy 13 - is positively prepared in relation to the strategic rail network.

Summary:
Network Rail is supportive of the Policy 13 - it is positively prepared in relation to the strategic rail network.

Response:
Support noted.
The use of waterways for the transportation of waterborne freight, especially bulk materials and abnormal loads, is a form of sustainable transport which can help in reducing greenhouse gas emissions and can reduce congestion on the local highway network. Efforts to mitigate against the adverse impacts of traffic are promoted by paragraph 102 of the National Planning Policy Framework and in, in the case of larger loads, in the governments water preferred policy for the movement of abnormal loads. Correspondence from the Department for Transport to PINS highlights the policy position 3 for the movement of abnormal indivisible loads by water, and the advisory role of Highways England. https://infrastructure.planninginspectorate.gov.uk/wp-content/uploads/2018/02/wpp_letter.pdf The Trust has identified the Sheffield & South Yorkshire Navigation (including the River Don and New Junction Canal) as being a ‘priority freight route’, which is a waterway where discussions with port operators suggest there is significant potential for them to accommodate inland traffic. In this case, the waterway provides a direct inland route from the Humber ports. We welcome the reference within part D) 3 to navigation and wharf facilities along key waterways; and the opportunities this could provide for alternatives to road transport. Substantial new development is likely to occur during the plan period, including Doncaster Waterfront (phases I and II); Minster Canalside; Marshgate (Policy 69); and the Unity scheme at Stainforth. The extent of new development in these areas will require the removal and importation of a significant amount of rubble and building materials respectively. We are concerned that the existing policy wording, or supporting text, does not promote the use of alternative transport methods for temporary freight movements associated with construction; which could have significant adverse impacts upon traffic congestion and pollution; and could have adverse impacts upon the effectiveness of the Local Plan to address issues of congestion and pollution during the Plan Period. PROPOSED CHANGE We would support additional text within the policy text, which would make it clearer to decision makers that consideration for alternative transport, such as by rail or water, should be considered for development sites where this is feasible and practical. Suggested wording is provided below: "Where feasible and practical, large development sites should explore the potential for the use of alternatives to road transport for the supply of construction materials and aggregates to and from the site"
Comment:

Albeit after the previous consultation deadline, Highways England previously responded to the Autumn 2018 Consultation on the Draft Local Plan. In this review of the Publication Version it is noted that it is very similar to the Pre-Publication Draft Local Plan, with some small updates such as changes to the naming and quantum of development at some sites. Therefore, many of the comments provided in Highways England’s Email dated 15th August 2019 are still applicable regarding the need to understand the cumulative impact of the Local Plan allocations upon the Strategic Road Network [SRN], namely the A1(M) and the M18. Following recent meetings between Doncaster Council and Highways England, the need for Highways England to understand the SRN impact of the Local Plan in advance of the Examination in Public [EiP] has been discussed. Highways England has advised that its requirements are as summarised below: 1) High level mitigation needs to be determined at appropriate locations on the SRN, which Highways England would wish to see included in the Doncaster Infrastructure Strategy; and 2) Approximate costs will also be required in order to demonstrate deliverability. These requirements remain following the review of the Publication Version of the Plan. However, further detailed comments on the Publication Version are set out below.

Summary:

Acknowledge the fact Highways England responded late to the 2018 consultation, however comment was made. The publication version is noted as being very similar to the draft, therefore comments made in August 2019 on the 2018 draft are still applicable re: the need to understand the cumulative impact of the Local Plan allocations upon the Strategic Road Network [SRN], namely the A1(M) and the M18. Recent meetings have taken place between Highways England and DMBC to understand the SRN impact on the Local Plan in advance of the EiP. Highways England has advised its requirements are: 1) High level mitigation needs to be determined at appropriate locations on the SRN, which Highways England would wish to see included in the Doncaster Infrastructure Strategy; and 2) Approximate costs will also be required in order to demonstrate deliverability. These requirements remain.

Response:

Comments noted
The general principles set out in the Local Plan Publication Version document are generally supported by Highways England (where they are relevant to the SRN). However, the impact of the Local Plan upon the A1(M) and the M18 is yet to be fully assessed. Highways England is keen to continue working with Doncaster Council to determine high level mitigation requirements and the associated approximate costs where they are necessary. In line with DfT Circular 02/2013 it is necessary for the Local Plan to identify the need for mitigation for both individual sites and cumulatively as part of the Local Plan. Once the Local Plan is adopted, the Circular only allows for the consideration of the details of the mitigation at the planning application stage. The principle of the development and the principle of mitigation should be established through the Local Plan. The larger site allocations or those located close to the SRN may impact on the SRN individually. The individual impacts of these will need to be assessed and potentially mitigated through the planning application process. However, the cumulative impact assessment needs to be undertaken of all the proposed Local Plan allocations, in order to identify that the Local Plan development impact can be accommodated on the SRN, either without mitigation or with mitigation of a scale that can be delivered through the Local Plan. Appropriate assumptions will need to be made within this cumulative assessment regarding the housing levels and mix in employment uses that is likely to come forward on each site.

Should the outcome of the cumulative impact assessment show that SRN locations require mitigation, it will need to be demonstrated that there are potential transport solutions which can be funded through the Local Plan. This may include developer contributions to facilitate the delivery of the necessary mitigation. Furthermore, once possible transport mitigation solutions have been identified, any infrastructure required at the SRN (in order to deliver the Local Plan) needs to be included within the Doncaster Infrastructure Delivery Plan (IDP) document. The policies in the Publication Version of the Plan are generally considered acceptable or are not relevant to Highways England. However, it is noted that the revised Policy 66 now that the Regs have been updated to remove the restriction on pooling.

Policy 66 no longer seems to allow for pooled contributions to be collected from multiple developers towards highway mitigation schemes, in order to cater for the cumulative impact of developments, despite this being proposed in earlier versions of the Local Plan. Should the cumulative impact assessments reveal that mitigation is required at the SRN, then mechanisms will need to be put in to place in order to allow for contributions to the required schemes to be made by multiple developers. Further discussions need to be held between Highways England and Doncaster Council in relation to this matter. Additionally, it is noted that Table 7 sets out details of planned A1(M) capacity improvements. However, for the avoidance of doubt it should be stressed that these improvements are subject to Route Investment Strategy (RIS) 2 funding which is expected to be confirmed in Autumn 2019.

General principles set out in the publication version are generally supported by Highways England, however the impact on the A1(M) and the M18 has yet to be assessed. Highways England is keen to continue working with DMBC to establish high level mitigation requirements and associated approximate costs where necessary. As per DfT Circular 02/2013, the Local Plan must identify mitigation for individual sites and cumulatively as part of the Local Plan. The principle of development and mitigation should be established through the Local Plan. Larger sites or those near to the SRN may impact on the SRN individually. These will need to be assessed and potentially mitigated through the planning application process. The cumulative impact assessment needs to be undertaken on all proposed sites to identify that the impact can be accommodated in the SRN either with or without mitigation of a scale that is deliverable through the Local Plan. Appropriate assumptions about housing levels and employment uses need to be made on each site. If mitigation is required it needs to be shown it can be funded through the Local Plan, including by developer contributions. Once possible mitigation solutions are identified, they need to be included in the Infrastructure Delivery Plan. The policies are generally acceptable or not relevant to Highways England. However, it is noted that the revised policy no longer allows for pooled contributions to be collected from multiple developers towards highway mitigation schemes to cater for cumulative impacts, despite this previously being included. Should cumulative impact assessments reveal that mitigation is required, then mechanisms need to be put in place in order to allow for contributions to schemes to be made by multiple developers. Further discussions between DMBC and Highways England are required. Table 7 sets out details of A1(M) capacity improvements, however it should be stressed this is subject to the Route Investment Strategy (RIS) 2 funding (expected to be confirmed Autumn 2019).

The IDP has been updated to include the outcome of the modelling and what the implications are in respect to local plan sites and associated improvements. Pooled contributions was removed due to the CIL Regulations but propose to reinstate as a Main Modification to policy 66 now that the Regs have been updated to remove the restriction on pooling.
Under point A) 4, it is stated that A1(M) motorway capacity improvements are supported. It is assumed that the current RIS2 plans for the A1 Redhouse to Darrington Improvements and the Doncaster Bypass fall under this heading. Further details are provided in Table 7 under Policy 13 regarding these planned schemes. However, funding for these improvements is yet to be confirmed. The schemes to be taken forward as part of RIS2 are due to be announced in Autumn 2019. **PROPOSED CHANGE** It is appreciated that the schemes are not specifically identified within the Plan as the Redhouse to Darrington Improvements or the Doncaster Bypass, however, for the avoidance of doubt, it is advised that Table 7 should identify that the SRN capacity improvements are subject to the RIS2 funding.

**Summary:**
Funding for A1(M) capacity improvements are supported - it is assumed that RIS2 plans for the A1 Redhouse to Darrington and the Doncaster bypass fall under this heading. However, funding is not yet confirmed, and schemes to be take forward are due to be accounted in Autumn 2019. Proposed change: for the avoidance of doubt, table 7 should specify that the SRN capacity improvements are subject to RIS2 funding.

**Response:**
Agree with Representation and therefore propose to include following as additional wording Table 7 as a minor modification as follows - "Capacity improvements to the Strategic Road Network are subject to Highways England funding"
**Comment:**

This chapter shows a good analysis of existing and future transport needs. The challenge will be to meet targets to reduce pollution created by movement of goods and people, while at the same time enhancing employment opportunities across the Borough. The JRP welcomes the inclusion of a by-pass for the A635 for Hickleton and Marr to alleviate congestion, improve air quality and reduce accidents (the most recent being 2 fatalities in September 2019). The challenge will be to determine and find the most suitable route for the by-pass which will serve the needs of road users whilst preserving the villages and the historic environment, particularly the Grade 1 heritage asset, Brodsworth Hall. The need for the A1/A19 link road, whose development is stated as being towards the end of the Plan, will increase employment opportunities in the north of the Borough, as indeed will the upgrading of the A1 by Highways England. However, all these developments should not be targeted to open up further employment sites for warehousing along the strategic road network in the west of Doncaster where it would encroach, not only on Green Belt, but also on prime agricultural land.

**Summary:**

The JRP welcomes the inclusion of a by-pass for the A635 for Hickleton and Marr to alleviate congestion, improve air quality and reduce accidents. The challenge will be to determine and find the most suitable route for the by-pass which will serve the needs of road users whilst preserving the villages and the historic environment, particularly the Grade 1 heritage asset, Brodsworth Hall. The need for the A1/A19 link road, whose development is stated as being towards the end of the Plan, will increase employment opportunities in the north of the Borough, as indeed will the upgrading of the A1 by Highways England. All these proposals should not be targeted to open up further employment sites for warehousing along the strategic road network in the west of Doncaster where it would encroach, not only on Green Belt, but also on prime agricultural land.

**Response:**

Comments are noted - these are matters of the spatial strategy. The local plan generally supports employment warehousing along the M18 corridor and Airport as opposed to the A1(M). The Carcroft Common site is not Green Belt however and is supported as an allocation (re-allocation).
8.1 Peel has a number of comments on the LP’s other strategic and non-strategic policies as currently drafted. These are summarised below:

8.2 Peel welcome the draft policy’s commitment that proposals will be supported which improve rail transport, including a new electrified mainline rail connection and railway station at DSA/ACY, which will connect to both the East Coast Mainline and the Doncaster to Lincoln line. 8.3 The policy needs to be accompanied by explanatory text which sets out that should these rail proposals come forward within the Plan Period, there will be a need to review the relevant policies of the LP as the rail connectivity will significantly increase and change the nature of development opportunities and needs (particularly at DSA/ACY) which is currently unaccounted for in the Local Plan. 8.4 The draft policy also refers to improved access to DSA from the M18. The policy is unclear as to what are the specific proposals to improve access to DSA from the M18 given the previous completion of Great Yorkshire Way. Peel seeks further clarification on this matter.

Summary:
Welcome the commitment that proposals will be supported which improve rail transport, including electrified mainline rail connection and airport rail station. The policy needs to be accompanied by explanatory text which sets out that if these come forward in the plan period, there will be a need to review the relevant Local Plan policies as rail connectivity will significantly increase and change the nature of development opportunities here, which the Plan currently does not account for. The draft policy also refers to improved access to DSA from the M18, it is unclear what specific proposals this refers to given the Great Yorkshire Way has been completed. Clarification is sought.

Response:
There is now a statutory requirement to review local plans at least every 5 years. In respect to M18 access improvements, this is a general reference to the potential need for improvements rather than a specific ‘new’ scheme, for example it could be in respect to signal improvements.
Comment:
The Local Plan does detail road infrastructure improvements from the M18 J4 to A630. This is welcome but long overdue. Many more road network improvements are necessary within the Edenthorpe/Kirk Sandall/Barnby Dun area to increase capacity and ease congestion before increasing housing quantity. An opportunity was missed with the replacement bridge at Armthorpe Lane, Barnby Dun by not also introducing road improvements to ease congestion. Road using residents of the area have endured 9 months of diversions for something that stands to only benefit business that will utilise larger freight trains. Other congestion 'hot-spots' in the area include the 4 way traffic light junction at Brecks Lane/Doncaster Road and the roundabout junction at Armthorpe Lane/A18. Whilst assessments from traffic surveys have been used, some are outdated and residents (who have signed the attached petition) agree that more road improvements are required imminently, definitely before the erection of more housing. (SEE SEPARATE REP FOR Petition) Closer to Site 147; the entry to Station Road from Pine Hall Road and Top Road from Hatfield Lane required improvements during Barnby Dun’s last housing expansion (Meadow Field Road). The Pine Hall Road/Station Road junction in particular is currently not fit for purpose with the volume of vehicles. Page 268 of the Local Plan does state that road improvements are required, but these must be completed before the housing development. Otherwise the improvement requirement risks being dis-regarded as with Meadow Field Road post completion of the development. Road improvements are necessary now, before the proposed additional 6500+ homes within the Edenthorpe/Kirk Sandall/Barnby Dun/Hatfield/Thorne area. Considering the vast increase of vehicles road improvements need to be significant. Recently there have been major road incidents at both the Pine Hall Road/Station road and Brecks Lane/Doncaster Road junctions. Risk of collision will increase with volume at these poor junctions so as it’s important that road infrastructure enhancements are made before a potential 13000 additional vehicles. Consideration should be to be given to speed restriction in the area especially along Hatfield Lane and speed ramps should be considered in some locations.

Summary:
Improvements to Westmoor link are long overdue and many more improvements to the network are needed around the area before housing is supported. Road improvements are necessary now, before the proposed additional 6500+ homes within the Edenthorpe/Kirk Sandall/Barnby Dun/Hatfield/Thorne area. Considering the vast increase of vehicles road improvements need to be significant. Recently there have been major road incidents at both the Pine Hall Road/Station road and Brecks Lane/Doncaster Road junctions. Risk of collision will increase with volume at these poor junctions so as it’s important that road infrastructure enhancements are made before a potential 13000 additional vehicles. Consideration should be to be given to speed restriction in the area especially along Hatfield Lane and speed ramps should be considered in some locations.

Response:
Comments are noted, the majority of the sites the Representation refers to are extant planning permissions where such matters will have been considered and addressed through the Development Management process. AECOM has undertaken assessment of the borough’s local highway network.
Tests of Soundness:

Comment:
UKOOG Response: UKOOG recognise the importance of minimising traffic movement where it is feasible to do so, and the onshore industry aims to maximise the reuse and recycling of materials and waste products from its operations, but any transport policy must align with the principal that minerals, including oil and gas, can only be worked where they are found. We are supportive of the policy requirement that, 'the network capacity will need to be established through the submission of a Transport Assessment', which in our view is aligned with Planning Practice Guidance and the NPPF.

Summary:
Policy 13. Recognises the importance of minimising traffic movement where it is feasible to do so. Supports of policy requirement for transport assessments.

Response:
Comment Noted.
The principle of the policy to minimise traffic movement where it is feasible to do so is supported. The onshore minerals industry aims to maximise the reuse and recycling of materials and waste products from its operations, but any transport policy must align with the principal that minerals, including oil and gas, can only be worked where they occur. IGas is supportive of the policy requirement that, 'the network capacity will need to be established through the submission of a Transport Assessment', which is in alignment with national planning policy.

Policy: Policy 13: Strategic Transport Network

Tests of Soundness: Positively prepared Effective
Justified Consistent with national

Comment:
3.73 Policy 13 supports the improvements to rail transport including a new electrified main line rail connection and new railway station at Doncaster Sheffield Airport, connecting the airport onto the East Coast Mainline. 3.74 The inclusion of a policy advocating a new station at Doncaster Sheffield Airport is strongly supported. Such infrastructure provision will not only support the sustainable development of the DSA area but also the enhanced sustainability of the existing settlements within the locality. 3.75 The allocation of Site 446 for Housing development will help to deliver this significant piece of infrastructure to support the continued growth of the DSA Masterplan.

Summary:
Policy 13 - Strategic transport Network. 1. Strongly support new rail station at the airport. 2. Site 446 will help facilitate delivery of rail station.

Response:
Comments and support for rail improvements and DSA station welcomed and noted - housing site 446 is not proposed as a housing allocation in the plan - see site selection methodology

**Comment:**

HLM/HBD support Policy 13 and the identified improvements to the strategic transport network. In particular, HLM/HBD support the proposed North Doncaster A1-A19 link, which will be important in realising the potential of employment and regeneration opportunities in the north.

**Summary:**

Support Policy 13 and the identified SRM improvements - in particular the A1 - A19 link, which is important for realising the potential of employment and regeneration opportunities in the north.

**Response:**

Support welcome
Test of Soundness:

Comment:
Marr Parish are in principle supportive of DMBC’s strategies provided existing redundant and brownfield sites are prioritised over Greenbelt locations and we do not believe, job creation can be considered ‘very special circumstances’. We also agree with DMBC’s assessment of the A1(M), that no development should occur along this route until after the A1(M) has been upgraded, since it will restrict options for it to be widened and lead to further congestion. Marr Parish reiterates its very strong opinion, that widening of the A1(M) should be to the east, since rural, Greenbelt Conservation villages are located too closely to the west. In keeping with its economic growth proposals, as well as, being one of the 7 Economic Target Areas in the Sheffield City Region - Marr Parish fully support development of brownfield land along the M18

Summary:
In identifying land allocations, redundant and brownfield sites should be prioritised over Green Belt locations - job creation can be considered 'very special circumstances' to release Green Belt. Agree with the assessment that no development should occur along the A1(M) until it has been upgraded, since it will restrict options for it to be widened and lead to further congestion. Widening of the A1(M) should be to the east, since rural, Greenbelt Conservation villages are located too closely to the west. In keeping with its economic growth proposals, as well as being one of the 7 Economic target areas in the Sheffield City Region - Marr Parish fully supports development of brownfield land along the M18

Response:
Brownfield and non-Green Belt sites have been allocated where they are available and deliverable/developable. None of the employment allocation is on Green Belt land. The need for improvements to capacity along the A1(M) are identified via the plan (Policy 13). Note support to develop brownfield sites along the M18 corridor although it should be noted that the employment allocations are all on greenfield sites due to the lack of availability of brownfield options.
Marr Parish Meeting understands how vital Transport Links are & how they can contribute to the prosperity of the Town, combined with the need to have an Infrastructure that supports growth and this is considered in our views and concerns. 1) Marr Parish note the feedback from the previous consultation, in that 77% of the responses "supported the expansion of the A1/A1 (M) to a) improve connectivity and b) relieve congestion. However...many people are of the opinion that the impact on the Green Belt should be kept to a minimum and that improvements should not necessarily be a precursor to further development in the A1 corridor". Marr Parish unanimously agree with this view and support DMBC in their assessment that development along the A1(M) corridor is inappropriate, "there are congestion problems along the A1(M) which currently limit the delivery of new large scale strategic employment sites? a decision supported by Highways England on the grounds of ‘capacity and safety concerns’. 2) Marr Parish support the proposed widening of the existing A1/A1 (M) but is completely opposed to the creation of a new build A1/A1 (M). However, where the A1/A1 (M) currently runs (from the northern boundary of the Borough to Marr) there is only a narrow band of Green Belt Land separating a number of rural villages and farms from this road. We acknowledge that some Green Belt land will potentially need to be utilised to enable road widening but this must be kept to a minimum. Marr Parish would not support the expansion of the A1/A1 (M) to the west or the creation of a “new” A1/A1 (M) on Green Belt land which as a result would create Green Belt land isolated within an old and new A1/A1 (M). 3) Marr Parish still firmly believe there is no requirement or public demand for a link road between the A19 and A1 (M) and therefore does not support it. We also noted from previous consultation feedback that this proposed initiative had by far the lowest support ‘and attracted a number of negative comments’. Highways England Route Strategy 2015 states: ‘.one of the priority issues is the capacity and safety concerns on the A1 between junctions 34 (Blyth) and Holmfirth Interchange (M62).’ And they further state: ‘if there is a lack of capacity to support growth?’ We support DMBC in their interpretation of Highways England when they state ‘it is unlikely that extra traffic on the A1 (M) will be supported by Highways England?’ The proposed A19 link road to the A1 (M) will mean generating extra traffic onto this already congested stretch of the A1 (M). In light of overwhelming evidence against this proposal Marr Parish cannot accept that this link road remains in the Local Plan and we reaffirm our objection to this link road on these grounds. There is more than sufficient access to the east of the Borough and beyond via the A1 to the M62 or M18 or via the existing A19 and as such we believe this scheme should not be included within the Local Plan Draft. 4) Marr Parish agrees with DMBC’s appraisal of the M18 that it has capacity for further growth. Along with 77% of respondents on previous consultation feedback, we also support development along this transport corridor and acknowledge that it is ‘of strategic importance for freight and logistics as it is a vital link to a number of strategic road network sections in SY as well as to the Humber ports’.7 there are significant levels of growth which are focused along the M18 corridor and that it will need to be adapt to additional traffic flows created by corridor developments and increases in tonnage through the Humber ports. Development here has the ability to grow in line with demand and we note ‘Together with demand information which shows that large end users wish to be located along the M18 and congestion & access issues along the A1 (M), there is currently no exceptional circumstance justification for Greenbelt land to be allocated for employment use, and no Greenbelt sites will be proposed for allocation.’. As previously stated, we recognise the strategic importance of employment development along the M18 and the opportunity to deliver Lorry Parks on Brownfield and that in doing so, it will not consume any Greenbelt land, a policy which we fully support and endorse. 5) We support the dualling of the A630 Westmoor Link Road to improve access to Wheatley Hall Road / Kirk Sandall and potentially release the vast acreage of land and large number of underdeveloped brownfield sites in this location for development. 6) We support the Hatfield Link road scheme to connect Hatfield/Stainforth to Junction 5 of the M18/Junction 1 of the M180 and unlocking 200ha of development land. 7) We remain encouraged by previous consultation feedback, in that ‘Clearly the A635 Bypass is the favoured scheme and has received a significant number of comments in support’. Supported by 66% of respondents, it received by far the strongest support for road schemes and similar to that of the A1 (M). With strong declared support and endorsement from Doncaster’s electorate, Marr Parish believes this Bypass should be included within the Full Local Plan Draft Proposal. As Doncaster grows, there will be an increasing imperative to address the congested trunk roads in the West of the Borough. We firmly believe the much needed A635 by-pass must be a priority for delivery within the Local Plan. Previously, we believed The Local Plan demonstrated a preference for concentrating the majority of its trunk road development proposals towards the east. We consider this may now be corrected with the inclusion of this by-pass within the Local Plan. It is critical to improving accessibility and connectivity to neighbouring towns and boroughs in the Sheffield City Regional Council, as well as Wakefield, which are all only accessible via the west. We still maintain that improved transport links to these boroughs and towns will lead to greater development opportunities. Within their Local Plan reports, DMBC further acknowledge that Sheffield City Region has cited the A635 as one of the ‘top 20 highways forecast to experience delays and could limit economic growth’. With such a poor endorsement, it is imperative that a rapid solution be implemented to address these issues. Doncaster cannot afford to lose the potential for economic growth if it is to meet its ambitious growth targets, as detailed within the draft Local Plan. Currently all trunk roads to the west side of the Borough are congested and are in use 24/7 along the A635 and the A638. The latest figures for the A635 show 15% of vehicles thundering through Marr and Hickleton are HGVs. Marr parish would like to see the upgrading of these trunk roads in the Finalised Local Plan Proposal to reduce traffic congestion, pollution and round-the-clock noise pollution in Hickleton, Marr and Hampole, and to improve access to Barnsley and Wakefield respectively. The Local Plan suggests a route for the by-pass, however, this has yet to be determined with external consultants presently carrying out an outline business case for a by-pass, including several route recommendations. This view is mirrored by 73% of the respondents who agreed
with the statement ‘Greater emphasis should be given to managing traffic movements to reduce accidents and improve air quality’. DMBC proposes to develop thousands of homes near to and around the A635 e.g. at Brodsworth, Woodlands and Mexborough, added to this the thousands of homes projected to be built by Barnsley MBC within the vicinity of the A635, the resultant increase in vehicles along these routes will have a further detrimental and devastating impact on the safety of our roads, the environment and communities. Within these, our village and residents continue to have very real, credible and valid concerns about the resulting impact that this pollution is having on their own health, their children’s and that of their elderly neighbours. DMBC stated over the last 2 years that the A635 exceeded DMBC’s own safety volume criteria, traffic volume has increased and resulting congestion is exacerbating already dangerous high levels of Air Pollution. Fumes from road vehicles have created poor Air Quality through both Marr and Hickleton, with NOx levels consistently above and in excess of 150% of the maximum permitted levels set by DEFRA. Air Quality levels at Hickleton are the second highest recorded in Doncaster. The volume of commuters travelling to and from Doncaster to Barnsley, means that congestion directly impacts other road transport routes which link into the A635 e.g. Scawby, Barnburgh & Harlington, High Melton, Pickburn and Brodsworth. This cannot be allowed to continue. Doncaster’s ambitious growth plans, together with Barnsley’s development proposals and a congested A1, will only serve to exacerbate this situation. DMBC must prioritise and invest in the existing road/transport infrastructure before it proposes to invest in new link roads, if it is to meet its expected housing growth needs. As a result, the A635 bypass is now a “need to have” in the full Local Plan Draft Proposal. We support DMBC’s new Policies on Air Pollution, Noise Pollution, inclusive communities and road congestion and advocate that they are given equal weight in consideration of planning applications as previously these issues have been given very little regard. 8) We strongly oppose the current High Speed Phase 2b proposed rail route through Doncaster and South Yorkshire as well as a proposed rail junction at Clayton or a Dearne Valley Parkway Station. 9) We agree that rail links to the Airport would help to take traffic off the roads and aid congestion.

Summary:
Support is given to view that any development along the A1M corridor is inappropriate prior to its upgrading - but also that any improvements should not necessarily be a precursor to further development in the corridor. Would not support the expansion of the A1/A1 (M) to the west or the creation of a “new” A1/A1 (M) on Green Belt land which would create Green Belt land isolated within an old and new A1/A1(M). There is no requirement or public demand for a link road between the A19 and A1 (M) - it should not be included in the Local Plan. Support given to further growth along the M18 corridor. Support the dualing of the A630 West Moor Link Road to improve access to Wheatley Hall Road / Kirk Sandall and potentially release the vast acreage of land and large number of underdeveloped brown field sites in this location for development. Support the Hatfield Link road scheme to connect Hatfield/Stainforth to Junction 5 of the M18/Junction 1 of the M180 and unlocking 200ha of development land. Support the continued inclusion of the Hickleton /Marr bypasses. Strongly oppose the current High Speed Phase 2b proposed rail route through Doncaster and South Yorkshire as well as a proposed rail junction at Clayton or a Dearne Valley Parkway Station. Agree that rail links to the Airport would help to take traffic off the roads and aid congestion.

Response:
Comments are noted - these are matters for the spatial strategy. The local plan generally supports employment warehousing along the M18 corridor and Airport as opposed to the A1(M). The Carcroft Common site is not Green Belt however and is supported as an allocation (re- allocation). The A1-A19 link road is a priority and required to improve accessibility and regeneration for the north of the borough. There are currently no proposals to duel Westmoor Link (this was previously proposed however). HS2 route is safeguarded in the local plan under Direction of the Secretary of State and the Council has no choice but to show the route on he Local Plan policies map.

Comment: As highlighted in our response to the Draft Plan, we welcome reference within part A)3 to the wording that new development should provide linkages to the wider walking and cycling network. Our towpath network provides a publicly accessible route for pedestrians and cyclists through the borough, and we would encourage its use by new residents. With regards to part A)5, we welcome the re-worded policy, which now refers to them mitigate the impact of development on the wider transport network, as opposed to the existing highways and transport infrastructure as previously worded. We welcome this amendment, as we believe it will allow the Local Plan to allow decision makers to fully assess the impact of the additional use brought by development on the pedestrian and cycling network in the borough; which would help the Local Plan meet key objectives in promoting and maintain the use of sustainable transport.

Reason: 
Area:  Chapter 7: Transport, Access & Infrastructure
Policy:  Policy 14: Promoting Sustainable Transport in New Developments

Tests of Soundness:

Comment:
2.34 At the previous stage of representations, we commented on part b) of the policy which related to planning obligations being sought as part of development proposals for future transport projects. We objected to that requirement on the grounds that it would fail the tests for when an obligation can be sought and was unreasonable. We welcome the fact that requirement has now been omitted. 2.35 Part b) of the policy now states that 'proposals that require new projects will be required to make a proportionate financial contribution'. In principle, we accept this approach however we believe further detail should be provided as to how this will be calculated and we reserve our position to comment further should more detailed information be provided.

Summary:
Policy 14 - Promoting sustainable transport within new developments Part b) States that 'proposals that require new projects will be required to make a proportionate financial contribution'. In principle supports this approach. Further detail should be provided as to how this will be calculated.

Response:
Welcome support to revised wording - further detail is being provided through the AECOM local transport modelling work.
Comment:

Comment:
6.1. Avant Homes are concerned with aspects of Policy 14, Avant Homes consider that Policy 14 is unsound. Test of Soundness  6.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about?  X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.3. Avant Homes is supportive of the principles of Policy 14, However Avant Homes are concerned with aspects of the policy.  6.4. Avant Homes are concerned with part A-4 which seeks to ensure that appropriate levels of parking provision are made in accordance with the standards contained within Appendix 6.  6.5. Appendix 6 notes, that for residential development, parking provision will be considered on a case by case basis. Avant Homes considers that Policy 14 part A 4 should be revised to ensure that the policy is flexible in relation to residential development, and ensure that the policy is consistent with the text within Appendix 6.  6.6. Further, Avant Homes are concerned with Part B of the policy which requires post development monitoring of traffic and mitigation measures in the event that traffic levels agreed through the original permission are later exceeded. Avant Homes consider that this is onerous and increases uncertainty for developers in relation to the cost of the development. It is unclear how this requirement will be enforced.  6.7. Avant Homes consider that with increased flexibility in part A 4 in line with the text within Appendix 6, and removal of the requirement for post development monitoring and mitigation under part B the Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.11. To overcome the objection and address soundness matters, the Council should: - Provide greater flexibility residential development in Policy 14 Part A 4 and improve consistency with Appendix 6. - Remove the part B requirement for post development monitoring of traffic and mitigation.

Summary:
Policy 14 -promoting sustainable Transport in New Development  1. Support policy in principle.  2. Concerned with part A4 - parking provision  3. Policy should be more flexible and consistent with Appendix 6.  4. Part B - Monitoring of traffic post development. This is onerous. Not clear how it will be enforced.  5. Part B should be removed.

Response:
Car parking standards are based on the Council's evidence and considered appropriate. Monitoring is a fundamental aspect of the planning process and is set out from the beginning of the application process so has certainty.
6.1. Metroland are concerned with aspects of Policy 14. Metroland consider that Policy 14 is unsound. Test of Soundness 6.2. Metroland considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.3. Metroland is supportive of the principles of Policy 14. However Metroland are concerned with aspects of the policy. 6.4. Metroland are concerned with part A 4 which seeks to ensure that appropriate levels of parking provision are made in accordance with the standards contained within Appendix 6. 6.5. Appendix 6 notes, that for residential development, parking provision will be considered on a case by case basis. Metroland considers that Policy 14 part A 4 should be revised to ensure that the policy is flexible in relation to residential development, and ensure that the policy is consistent with the text within Appendix 6. 6.6. Further, Metroland are concerned with Part B of the policy which requires post development monitoring of traffic and mitigation measures in the event that traffic levels agreed through the original permission are later exceeded. 6.7. Metroland consider that this is onerous and increases uncertainty for developers in relation to the cost of the development. It is unclear how this requirement will be enforced. 6.8. Policy 14, in its current form, is not justified and does not provide an appropriate strategy and is not consistent with national policy. 6.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 6.10. However, we consider that with increased flexibility in part A 4 in line with the text within Appendix 6, and removal of the requirement for post development monitoring and mitigation under part B the Plan can be found sound. Metroland will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.11. To overcome the objection and address soundness matters, the Council should: - Provide greater flexibility residential development in Policy 14 Part A 4 and improve consistency with Appendix 6. - Remove the part B requirement for post development monitoring of traffic and mitigation.

Summary:
Policy 14 -promoting sustainable Transport in New Development 1. Support policy in principle. 2. Concerned with part A4 - parking provision 3. Policy should be more flexible and consistent with Appendix 6. 4. Part B - Monitoring of traffic post development. This is onerous. Not clear how it will be enforced. 5. Part B should be removed.

Response:
Car parking standards are based on the Council's evidence and considered appropriate. Monitoring is a fundamental aspect of the planning process and is set out from the beginning of the application process so has certainty.

Comment:

Draft Policy 14 seeks to implement the car parking standards referenced within Appendix 6 of the DLP. Whilst the supporting text to the residential development car parking standards acknowledge that residential developments within the town centre will be assessed on an individual basis, it applies a blanket minimum standard for all other areas. This fails to recognise that some sites outside of the town centre may also be within highly accessible locations, where a lower provision of car parking would be appropriate. Furthermore, setting a minimum standard for a higher level of car parking than is necessary would be contradictory to DC’s commitments to pollution and addressing air quality as emphasised elsewhere within the DLP. The Policy is therefore not justified and should be amended to confirm that all schemes, including those outside of the town centre, will be considered on a site by site basis, acknowledging that the minimum car parking standards may not be appropriate or necessary in some areas. CONCLUSION: However, in relation to the draft policies listed below, the DLP as currently drafted is not justified and unsound. To make the plan sound, the following amendments noted above are required. Policy: Policy 14 Topic: Car Parking

Requested Change: Policy should be amended to confirm that all schemes, including those outside of the town centre, will be considered on a site by site basis, acknowledging that the minimum car parking standards may not be appropriate or necessary in some areas.

Summary:

Policy 14 should be amended to confirm that all schemes, including those outside of the town centre, will be considered on a site by site basis, acknowledging that the minimum car parking standards may not be appropriate or necessary in some areas. This fails to recognise that some sites outside of the town centre may also be within highly accessible locations, where a lower provision of car parking would be appropriate. Furthermore, setting a minimum standard for a higher level of car parking than is necessary would be contradictory to DC’s commitments to pollution and addressing air quality as emphasised elsewhere within the DLP.

Response:

The Car Parking standards have been developed in line with overarching objectives of the SCR Transport Strategy and aligned to those developed but other South Yorkshire Authorities. Appendix 6 is clear that there is a need to reflect local circumstances, context and requirements of individual developments when assessing applications (see para 2 of Appendix 6).
3.51. We agree with draft policy 14. Our reasoning is set out below: 3.52. In continuation to the NPF (para 8), there is great importance on sustainable development and one key way in which new developments can achieve a sustainable development is through the efficient movement of people and goods and to maximise the use of sustainable forms of transport. The requirement for new residential developments to be linked to the local centres to reduce journey times supports is in line strategic policies 2 and 3. 3.53. It is worth noting that the land at Grange Farm is already well serviced by public transport and also well connected in terms of walking and cycling. The site will offer improvements to existing road junctions and investment to improve existing and create new, safe pedestrian and cycle links. Recommendation 8: Ensure that sustainable transport is incorporated into the design of developments in the interests of effective and positive planning.
Tests of Soundness:

Comment:
We believe there needs to be a change in Planning Policy. It is essential that DMBC carry out full due diligence at proposed Development sites. They must instigate and invest in Traffic surveys in order to assess the individual and cumulative effects of any proposed development. We believe it reasonable to expect prior independent surveys be carried out by DMBC and not by any proposed developers before any proposed sites can even be considered as potentially appropriate or suitable for development. It is vital that cumulative impacts from proposed developments are measured at the outset to establish what the compounding impact will have on neighbouring villages & communities and on already congested trunk /local transport routes. This must be done ahead of sites being designated as appropriate or they cannot to be considered truly sustainable. It is our very strong view that DMBC must not allow individual site assessment to be undertaken and/or funded by developers, since all reports will be presumed as biased and prejudicial in their favour. Current Planning Policy dictates that individual developers finance impact assessment reports only specifically relating to their own proposed development plans. The Planning Committee can then only base their decision on an individual ‘case by case’ basis. With many sites being proposed for development within the local plan, we have both a duty and an opportunity to address accumulative effects, thus preventing us from creating new problems or adding to problematic road congestion or increasing particulates leading to poor or worsening Air Quality. Awareness of the cumulative impacts means that we can stop these types of issues happening before they arise. This would be in keeping with DMBC’s Carbon Emissions and Green Policies. When DMBC have completed the Local Plan, a list of all potential development sites will be created. It is our very firm view that such development sites are all independently assessed by DMBC but pre-funded by the developer. This would provide not only an independent assessment of each site but would highlight any accumulative effect of delivering multiple developments within areas. Developers must then work together to fund any remedial, preventative or mitigation measures resulting from their multiple developments. We believe this proposal is a reasonable and rational solution. If implemented, it gives the opportunity to address or prevent cumulative negative impacts created by DMBC’s extensive development plans within communities. We recommend this policy is reviewed and considered for implementation.

Summary:
Traffic surveys of all proposed development sites should be required to assess the individual and cumulative effects of any proposed development - should be undertaken independently by the Council and not by proposed developers but could be pre-financed by developers.

Response:
The local plan has undertaken modelling of all local plan development sites (both individually and cumulatively) on both the strategic road network and local highways network - see supporting evidence base such as AECOM report.

**Comment:**

B) Add new 6. 'Cycle routes will be shorter than routes for cars wherever practicable.' Add new 7 'Road space will be reallocated to cycling if segregated routes cannot be provided' C3. Add, in new development for employment provide changing and showering facilities;

**Response:**

The suggested changes to part B of the policy may be preferable but not considered as being something that can be achievable in all instances so difficult to include in policy. The suggested addition to C3 is more achievable and is proposed to be included as a Main Modification to the plan.

Add 'provide alternative direct routes to local facilities and the town centre'

Summary:
Add 'provide alternative direct routes to local facilities and the town centre'

Response:
The Representation is not clear why this is considered necessary and in our view is already covered by the policy.
We support the Borough's prioritisation of walking. Policy 20 (D) notes that "routes should link into the surrounding public rights of way network or adopted highway network to maintain and improve connectivity and ease of movement." Cadeby PM notes that there is no direct walking access to the village other than on a road. The current public footpath to Sprotbrough stops short of the east end of Cadeby village - in due course consideration should be given to linking this public footpath to the pedestrian pavement which terminates at the eastern end of the village (north side), thereby allowing walkers to complete a circuit from Sprotbrough Falls via Cadeby and the Don Gorge.

Support is given to the Borough's prioritisation of walking. Policy 20 (D) notes that "routes should link into the surrounding public rights of way network or adopted highway network to maintain and improve connectivity and ease of movement." Cadeby Parish Meeting notes that there is no direct walking access to the village other than on a road. The current public footpath to Sprotbrough stops short of the east end of Cadeby village - in due course consideration should be given to linking this public footpath to the pedestrian pavement which terminates at the eastern end of the village (north side), thereby allowing walkers to complete a circuit from Sprotbrough Falls via Cadeby and the Don Gorge.

Response:
Comments are noted, however this is not a local plan issue
8.1. Strata Homes is concerned with aspects of Policy 19. Test of Soundness 8.2. Strata Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy  Justification 8.3. Strata Homes is concerned with part D of the policy which states that "unrecorded routes or desire lines that cross development sites" will be treated in the same way as definitive public rights of way. 8.4. Strata Homes considers that such an approach on non-definitive footpaths is onerous and restrictive and could hinder the delivery of schemes. The effect of such a restrictive approach coupled with requirements for on-site open space, national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 8.5. Strata Homes consider that the Policy as it stands is not justified and does not provide an appropriate strategy. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 8.6. Strata Homes consider that the policy with increased flexibility or removal of part D of Policy 19 it can be made sound. Strata Homes will continue to work with the Council to develop appropriate wording. Proposed Change 8.7. To overcome the objection and address soundness matters, the Council should: - Incorporate flexibility or remove part D of the policy.

Summary:
Strata Homes is concerned with part D of the policy which states that "unrecorded routes or desire lines that cross development sites" will be treated in the same way as definitive public rights of way. Such an approach on non-definitive footpaths is onerous and restrictive and could hinder the delivery of schemes. The effect of such a restrictive approach coupled with requirements for on-site open space, national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. Strata Homes consider that the policy with increased flexibility or removal of part D of Policy 19 it can be made sound. Strata Homes will continue to work with the Council to develop appropriate wording.

Response:
Re Policy 19 Part D. It is not considered unreasonable that a developer should ‘consider’ un-recorded public footpaths on a site. If this part of the Policy was not in place it would be highly likely that any un-recorded footpaths would be given no consideration and would be lost by default.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

The requirement for developers to consider any unrecorded public paths that cross development sites and to treat them in the same way as definitive public rights of way is not sound. It is not justified as no evidence is provided to support this requirement nor is it consistent with national policy. The NPPF, paragraph 98, mentions the need to protect and enhance public rights of way it does not, however, provide the same protection to unrecorded public paths. This policy therefore places an overly onerous and restrictive requirement on development proposals which could affect the delivery on development proposals and therefore the plan when combined with other policy requirements. It is respectfully requested that part D of this policy is removed.

Re Policy 19 Part D. It is not considered unreasonable that a developer should 'consider' un-recorded public footpaths on a site. If this part of the Policy was not in place it would be highly likely that any un-recorded footpaths would be given no consideration and would be lost by default.

Comment:

2.36 Our Client always strives to provide high quality pedestrian routes within their developments and they welcome a policy which seeks to protect public rights of way where possible. However, part d) of the policy states ‘developers will be expected to consider any unrecorded public paths that cross development sites and treat them in the same way as a definitive public rights of way’. This is wholly unacceptable, unsound and should be deleted from the policy. Unrecorded paths that run through sites have no legal protection and to state that they should be retained and treated in the same manner as a public right of way, which does have legal protection, is completely unreasonable. 2.37 This approach is not advocated within the Revised Framework and as such this proposal is not in accordance with national guidance and should be deleted.

Summary:

Policy 19 - Development affecting public rights of way Part (d) - re unrecorded public rights of way. 1. This is totally unacceptable. Unrecorded sites have no legal protection. 2. This is not in compliance with the NPPF.

Response:

Re Policy 19 Part D. It is not considered unreasonable that a developer should ‘consider’ un-recorded public footpaths on a site. If this part of the Policy was not in place it would be highly likely that any un-recorded footpaths would be given no consideration and would be lost by default.

Framecourt Homes welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public.

Framecourt Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? 

- Positively Prepared
- Effective
- Justified
- Consistency with National Policy

Framecourt Homes is concerned with part D of the policy which states that "unrecorded routes or desire lines that cross development sites" will be treated in the same way as definitive public rights of way. Framecourt Homes considers that such an approach on non-definitive footpaths is onerous and restrictive and could hinder the delivery of schemes. The effect of such a restrictive approach coupled with requirements for on-site open space, national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement.

Framecourt Homes consider that the Policy as it stands is not justified and does not provide an appropriate strategy. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound.

To overcome the objection and address soundness matters, the Council should:
- Incorporate flexibility or remove part D of the policy.

Concerned with 19 (D) which states desire lines will be treated in the same way as PROWs. This is onerous and restrictive and could hinder delivery of schemes. Coupled with other on site requirements it could impact on delivery and the numbers of houses deliverable. The policy is not justified or an appropriate strategy. It is unsound. To address this, Policy 19 should incorporate flexibility or part D should be removed.

Re Policy 19 Part D. It is not considered unreasonable that a developer should ‘consider’ un-recorded public footpaths on a site. If this part of the Policy was not in place it would be highly likely that any un-recorded footpaths would be given no consideration and would be lost by default.

7.2. Metroland considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

7.3. Metroland is concerned with part D of the policy which states that "unrecorded routes or desire lines that cross development sites" will be treated in the same way as definitive public rights of way.

7.4. Metroland considers that such an approach on non-definitive footpaths is onerous and restrictive and could hinder the delivery of schemes. The effect of such a restrictive approach coupled with requirements for on-site open space, national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement.

7.5. Metroland consider that the Policy as it stands is not justified and does not provide an appropriate strategy. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound.

7.6. Metroland consider that the policy with increased flexibility or removal of part D of Policy 19 it can be made sound. Metroland will continue to work with the Council to develop appropriate wording.

Proposed Change

7.7. To overcome the objection and address soundness matters, the Council should: - Incorporate flexibility or remove part D of the policy.

Summary:

1. Concerned with Part D
2. Approach to none definitive footpaths is onerous and restrictive and could hinder delivery.
3. Should incorporate some flexibility.

Response:

Re Policy 19 Part D. It is not considered unreasonable that a developer should 'consider' un-recorded public footpaths on a site. If this part of the Policy was not in place it would be highly likely that any un-recorded footpaths would be given no consideration and would be lost by default.
Reason: We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Tests of Soundness:

Comment:

The requirement for developers to consider any unrecorded public paths that cross development sites and to treat them in the same way as definitive public rights of way is not sound. It is not justified as no evidence is provided to support this requirement nor is it consistent with national policy. The NPPF, paragraph 98, mentions the need to protect and enhance public rights of way it does not, however, provide the same protection to unrecorded public paths. This policy therefore places an overly onerous and restrictive requirement on development proposals which could affect the delivery on development proposals and therefore the plan when combined with other policy requirements. It is respectfully requested that part D of this policy is removed.

Summary:

Policy 19 Part D’s requirement for developers to consider any unrecorded public paths that cross development sites and to treat them in the same way as definitive public rights of way is not sound. It is not justified as no evidence is provided to support this requirement nor is it consistent with national policy. The NPPF, paragraph 98, mentions the need to protect and enhance public rights of way it does not, however, provide the same protection to unrecorded public paths. This policy therefore places an overly onerous and restrictive requirement on development proposals which could affect the delivery on development proposals and therefore the plan when combined with other policy requirements.

Tests of Soundness:

**Comment:**
Policy 19 is concerned with development which affects public rights of way and at B) indicates that where development leads to the diversion of an existing right of way, a suitable alternative must be established, following the principles outlined in Policies 20 and 21. However, rather than setting out principles, Policy 20 is more prescriptive, expecting proposals to meet access, design and layout considerations in respect of public rights of way and highways network. The two policies are therefore inconsistent. Objection is made to Policy 20 which should be redrafted as set out below: "Proposals will be expected to apply the following principles in relation to access, design and layout considerations in respect of public rights of way and highways network whilst balancing this with the need to maximise the effective use of land. Reason: In order to avoid prescription whilst balancing the need to protect public rights of way against the need to maximise the effective use of land.

**Summary:**
- The 2 policies are inconsistent.
- Policy 19 Part B - Development which affects a PROW - re an alternative must be established following the principles outlined in Policies 20 and 21.
- Policy 20 is more prescriptive expecting proposals to meet access, design and layout considerations in respect of PROW and Highways Network.
- Policy 20 should be re-drafted to avoid prescription whilst balancing the need to protect PROW with the needs to maximise land use. Policy 20 - Access, Design and Layout of Public Rights of Way. Should be re-worded. Representation includes a suggested re-wording for the Policy.

**Response:**
Re Policy 19 Part D. It is not considered unreasonable that a developer should 'consider' un-recorded public footpaths on a site. If this part of the Policy was not in place it would be highly likely that any un-recorded footpaths would be given no consideration and would be lost by default.
9.1. Strata Homes is concerned with aspects of Policy 20 and therefore consider that the Policy 20 is unsound. Test of Soundness

9.2. Strata Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X Positively Prepared X Effective X Justified X Consistency with National Policy Justification

9.3. Strata Homes is concerned with parts B and C of the policy which specifies the routes and dimensions of public rights of way. 9.4. Strata Homes considers that such an approach is onerous and restrictive and could hinder the delivery of schemes. The requirements for public rights of way to avoid estate roads and where the path is enclosed to be of 3 to 5 metres is over engineered and beyond what is required. 9.5. The effect of such a restrictive approach coupled with requirements for on-site open space, national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 9.6. Strata Homes consider that the policy in its present form is not justified and consider that the Plan is unsound. 9.7. Strata Homes consider that the Plan with greater flexibility or the removal of the restrictive elements of Policy 20 the Plan can be made sound. Strata Homes will continue to work with the Council to develop appropriate wording. Proposed Change 9.8. To overcome the objection and address soundness matters, the Council should: - Incorporate flexibility or remove the restrictive elements in parts B and C of the policy.

Summary:

Strata Homes is concerned with parts B and C of the policy which specifies the routes and dimensions of public rights of way. Such an approach is onerous and restrictive and could hinder the delivery of schemes. The requirements for public rights of way to avoid estate roads and where the path is enclosed to be of 3 to 5 metres is over engineered and beyond what is required. Tests of Soundness:

Justified

Comment:

It is considered that this policy is not justified. Parts B and C of the policy specify the routes and dimensions of public rights of way. This policy is onerous and restrictive and could hinder the delivery of schemes. The requirements for public rights of way to avoid estate roads and where the path is enclosed to be a minimum width of 3 to 5 metres is over-engineered and beyond what is necessary. No evidence is provided to support this policy or the requirements set out within it. It is requested that parts B and C of the policy are removed or sufficient flexibility incorporated into the policy wording.

Summary:

Parts B and C of Policy 20 specify the routes and dimensions of public rights of way. This policy is onerous and restrictive and could hinder the delivery of schemes. The requirements for public rights of way to avoid estate roads and where the path is enclosed to be a minimum width of 3 to 5 metres is over-engineered and beyond what is necessary. Metroland is concerned with parts B and C of the policy which specifies the routes and dimensions of public rights of way. 8.4. Metroland considers that such an approach is onerous and restrictive and could hinder the delivery of schemes. The requirements for public rights of way to avoid estate roads and where the path is enclosed to be of 3 to 5 metres is over engineered and beyond what is required. 8.5. The effect of such a restrictive approach coupled with requirements for on-site open space, national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 8.6. Metroland consider that the policy in its present form is not justified and consider that the Plan is unsound. 8.7. Metroland consider that the Plan with greater flexibility or the removal of the restrictive elements of Policy 20 the Plan can be made sound. Metroland will continue to work with the Council to develop appropriate wording. Proposed Change 8.8. To overcome the objection and address soundness matters, the Council should: – Incorporate flexibility or remove the restrictive elements in parts B and C of the policy

Summary:
Policy 20 - Access, design and layout of Public Rights of way. 1. Parts B&C restrictive and could hinder development. 2. Incorporate some flexibility or remove restrictive elements.

Response:
Doncaster council is committed to creating and providing a high quality access infrastructure for all users e.g. the Rights of Way Improvement Plan 2017-2027. It is not considered that the requirements detailed in Policy 20 do anything other than provide a framework to ensure provision of a quality network.

Response:
Doncaster council is committed to creating and providing a high quality access infrastructure for all users. Please see the Rights of Way Improvement Plan 2017-2027 (available on the DMBC website). It is not considered that the considerations detailed in Policy 20 do anything other than provide a framework to ensure provision of a quality network.
Policy 19 is concerned with development which affects public rights of way and at B) indicates that where development leads to the diversion of an existing right of way, a suitable alternative must be established, following the principles outlined in Policies 20 and 21. However, rather than setting out principles, Policy 20 is more prescriptive, expecting proposals to meet access, design and layout considerations in respect of public rights of way and highways network. The two policies are therefore inconsistent. Objection is made to Policy 20 which should be redrafted as set out below: "Proposals will be expected to apply the following principles in relation to access, design and layout considerations in respect of public rights of way and highways network whilst balancing the need to protect public rights of way against the need to maximise the effective use of land. Reason: In order to avoid prescription whilst balancing the need to protect public rights of way against the need to maximise the effective use of land.

Response:

Doncaster council is committed to creating and providing a high quality access infrastructure for all users. Please see the Rights of Way Improvement Plan 2017-2027 (available on the DMBC website). In F) after 'visual' add 'and landscape'

Summary:

In F) after 'visual' add 'and landscape'

Response:

The proposed additional word ('landscape') would not add anything to the Policy.
This policy requires all new housing and commercial developments to provide a connection to the Superfast Broadband network, unless it can be expressly demonstrated that this is not possible. Paragraph 112 of the Framework (2019) states that local planning authorities should seek support for the expansion of electronic communications networks, but it does not in any way preclude development that cannot be connected to such networks. Whilst Gladman recognise the important role that digital infrastructure plays, we would remind the Council that provision of access to such infrastructure is not within the direct control of developers. It must be recognised in the policy or indeed any supporting text, that ultimately, it is service providers who can provide and authorise access to such infrastructure.
Guidelines when working near NGETT assets:

- A sense of place

National Grid Assets Please find attached in:
Appendix 2 provides maps of the sites referenced above in relation to Utilities Infrastructure

Further Advice National Grid is happy to provide advice and guidance to the Council concerning our networks. If we can be of any assistance to you in providing informal comments in confidence during your policy development, please do not hesitate to contact us. In addition, the following publications are available from the National Grid website or by contacting us at the address overleaf:  

Appendices - National Grid Assets Please find attached in:  
Appendix 1 provides a map of the National Grid network across the UK. Appendix 2 provides maps of the sites referenced above in relation to the affected National Grid Transmission assets outlined above. (SEE EMAIL FOR Appendices)

Summary:

National Grid seeks to encourage high quality and well-planned development in the vicinity of its high voltage overhead lines. Land beneath and adjacent to the overhead line route should be used to make a positive contribution to the development of the site and can for example be used for nature conservation, open space, landscaping areas or used as a parking court. National Grid, in association with David Lock Associates has produced ‘A Sense of Place’ guidelines, which provide detail on how to develop near overhead lines and offers practical solutions which can assist in avoiding the unnecessary sterilisation of land in the vicinity of high voltage overhead lines. Potential developers of these sites should be aware that it is National Grid policy to retain our existing overhead lines in-situ. The relocation of existing high voltage overhead lines will only be considered for projects of national importance which has been identified as such by central government. National Grid requests that any High-Pressure Gas Pipelines are taken into account when site options are developed in more detail. These pipelines form an essential part of the national gas transmission system and National Grid’s approach is always to seek to leave our existing transmission pipelines in situ. Please refer to the Health and Safety Executive (HSE) in the first instance. National Grid have land rights for each asset which prevents the erection of permanent/ temporary buildings, or structures, changes to existing ground levels, storage of materials etc. Additionally, written permission will be required before any works commence within the National Grid easement strip, and a deed of consent is required for any crossing of the easement. In the first instance please consider checking with the Land Registry for the development area. If you require any further information in relation to the above and/or if you would like to check if National Grid’s transmission networks may be affected by your works, please contact National Grid’s Plant Protection team via plantprotection@nationalgrid.com or visit the website: https://www.linesearchbeforeudig.co.uk/

Because evidence has not yet been provided in support of the draft policy and any that may be provided prior to exam will need to be tested.

Area: Chapter 8: Retail & Town Centres
Policy: Policy 25: Food & Drink Uses

Tests of Soundness: Positively prepared Justified
Effective Consistent with national

Comment:

POSITIVELY PREPARED The draft policy in effect assesses the requirement for hot food takeaways within 400 metres of a school, sixth form college, community centre or playground to be zero. However, it does this without reference to how many may already be present, the effect either of those or of any reduction. Specifically, in the latter regard, no evidence of a distance (if any) at which an effect may occur is provided. Furthermore, no assessment has been made of the number of hot food takeaways that might be refused as a result of this or what the social, economic (particularly retail and footfall) or environmental impacts of that might be. Consequently, it is not possible to balance these impacts and the development requirement has not been objectively assessed. The policy is negative in its assumptions, using the concept of 'unhealthy food', which is at best unhelpful in isolation from an understanding of the person eating the food, their health and lifestyle, and at worst is simply subjective. Furthermore, it assumes all hot food takeaways offer little choice and serve the same type and standard of food. JUSTIFIED Food of high energy density or poor nutritional value is sold from and at a range of premises within a variety of other classes, including many in Classes A3 and A1, such as restaurants, cafes, coffee or sandwich shops, bakeries or, simply, supermarkets, so that focussing on Class A5 uses is both unhelpful and unfair. There is no evidence for a causal link between the incidence of obesity and proximity of hot food takeaways to school, sixth form college, community centre or playground and only limited evidence of any correlation at all, so it is unclear how refusing planning permission for hot food takeaways within 400 metres of such locations could ever be justified. EFFECTIVE Some hot food takeaways, together with restaurants, pubs and shops are clearly a source of cheap, energy dense and nutrient poor foods, however, not all hot food takeaways, restaurants, pubs and shops are, and the planning system is ineffective in distinguishing between those that are and those that are not. We suggest that it is better to rely on objective evidence in a retail study to set proportions of hot food takeaways (and other main town centre uses) in order to ensure a healthy retail balance (and therefore footfall, which implies active travel), but also any concomitant public health benefits. Such an approach could be extended beyond centres. On a practical point, there is a significant difficulty in using distance radii in that it takes no account of real barriers, physical or perceptual, so that premises on the other side of a line feature such as a canal or busy road could be affected despite in reality being more than a 400-metre walk away. It is far better to use real walk isochrones. CONSISTENT WITH NATIONAL POLICY We consider no regard has been had to national policy and advice in preparing Policy 25 (C and last paragraph) because no NPPF policies refer to dietary issues. The NPPF recognises the role planning takes in better enabling people to live healthier lifestyles. However, it seeks to do this by creating, not restricting choice, by increasing access to recreation and health services, and by ensuring developments are walkable to local facilities and to public transport to other facilities. Since July 2017, PPG part 53 paragraph 6 has suggested local planning authorities might consider policies, which limit the proliferation of certain use classes in identified areas. It focuses on proliferation, does not specify which use classes and is clearly intended to be area-based. Whilst it suggests that regard could be had to proximity to schools, it omits of what. Similarly, it refers only to overconcentration and clustering of "certain use classes" and high levels of obesity "in specific locations". It leaves planners to evidence any such policy. Where no evidence that the proximity of hot food takeaways is having an adverse effect over and above proximity to any other use where food can be purchased, then a policy that controls this is not consistent. PROPOSED CHANGE Detail and justify what is meant by "clustering or proliferation" within the policy, specifically setting out why the national average is relevant or significant in terms of outcomes, and delete the last paragraph of the policy.

Summary:

Policy 25 in effect assesses the requirement for hot food takeaways within 400m to be zero. Although does this without reference to how many are already present. No assessment has been made to how many would be refused and the resultant impact. The policy is also negative in its assumptions using 'unhealthy food' as an unhelpful isolation of the people. There is no evidence to link between the incidence of obesity and proximity of hot food takeaway so unclear of justification. Takes no account of real barriers canal, roads within radius. No regard for national policy and advice in Policy 25 (c and last paragraph) as no policies refer to dietary issues.

Response:

Doncaster's Local Plan aims to have a healthier thread throughout the whole Local Plan and this is just one policy which can contribute to reducing obesity levels and supporting people in making healthy choices in Doncaster. Doncaster's Planning team have taken the opportunity to work alongside Doncaster's Public Health colleagues who have been involved in the development of the Local Plan. New opportunities to improve the health and well-being and health inequalities of our residents has resulted in the inclusion of a new aim, chapter and policies with a specific policy and evidence review on Hot Food Takeaways. Specific evidence has been published https://www.doncaster.gov.uk/services/planning/retail-and-leisure-study

https://www.doncaster.gov.uk/services/planning/retail-and-leisure-study
1 Introduction 1.1 Planware Ltd have considered Policy 25 - Food and Drink Uses with regard to the principles set out within the Framework. We fully support the policy’s aim of promoting healthier living and tackling obesity. However, the proposed policy approach is unsound and fails to provide an evidence-based way of achieving the policy’s objective. It has also been found unsound by several planning inspectors. It is too restrictive and prevents local planning authorities from pursuing more positive policy approaches. The London Borough of Waltham Forest has had such policy in place for over a decade and its application has proven ineffective in tackling obesity. 1.2 Within these broad points we have the following policy objections to Policy 25: A. The 400m exclusion zone is inconsistent with national planning policy. B. The policy is inconsistent, discriminatory and disproportionate. C. The 400m exclusion zone is not justified by any evidence. D. Examination of other plans have found similar policy approaches to be unsound. E. There needs to be some exploration into policies that are more positive, have a reputable evidence base and that comply with the Framework. F. Point C restricting over-concentration also fails to comply with the Framework. 1.3 In summary, McDonald’s consider there is no sound justification for a policy such as Policy 25, which imposes a blanket ban on restaurants that include an element of AS use within 400-metres from a secondary school, sixth form college, community centre or playground unless the opening hours are restricted until after 1700 on weekdays. The draft policy also includes an over-concentration restriction. Policy 25 should therefore be deleted from the policy if these two detrimental restrictions remain. 1.4 However, as stated in the opening paragraph, Planware Ltd supports the aim of promoting healthier living and tackling obesity. We acknowledge that planning can have a role in furthering these objectives. We would therefore welcome and support any studies between obesity and their relationship with development proposals, including examination of how new development can best support healthier lifestyles and tackling the obesity crisis. When a cogent evidence base has been assembled, this can then inform any appropriate policy response. This has still not emerged. 1.5 Given the lack of any clear agreement between experts on the indices of obesity or poor health, this evidence is a necessary part of this objection by way of background. This will all be highlighted in the below text. 2 Contribution of McDonald’s UK to the United Kingdom 2.1 This section of the objection sets out some background context relating to McDonald’s own business, its contribution to United Kingdom, and information on the nutritional value and healthy options of the food that it offers in its restaurants. This evidence is relevant to understanding the unjustified impacts of the 400m blanket ban and over-concentration (Point C) restriction proposed under Policy 25. Economic and Environmental Benefits 2.2 The first store in the United Kingdom was first opened in 1974 in Woolwich, London. The store is still opened and was interestingly the 3,000th store across the world. 2.3 With over 36,000 McDonald’s worldwide, it operates in over 100 countries and territories. Approximately 120,000 people are employed by McDonald’s UK, compared to just over 1 million employees worldwide. 2.4 McDonald’s business and its franchisees have become important members of communities in the United Kingdom: investing in skills and developing their employees, supporting local causes and getting kids into football. 2.5 Nationally, the company operates from over 1,300 restaurants in the UK. Over 80% of restaurants are operated as local businesses by franchisees, that’s around 1,100 franchised restaurants. 2.6 McDonald’s is one of few global businesses that continues to anchor itself in high streets and town centres across the United Kingdom. Not just serving the general public but creating jobs and seeking to improve the communities around them. 2.7 All of McDonald’s restaurants conduct litter picks covering an area of at least 100 metres around the site, at least three times a day, picking up all litter, not just McDonald’s packaging. 2.8 McDonald’s is a founding member of the anti-littering campaign, Love Where You Live. As part of this, our restaurants regularly organise local community litter picks. The campaign has grown and in 2017, 430 events took place across the UK with around 10,000 volunteers involved. Since the campaign started, 2,600 events have taken place with around 80,000 volunteers involved. 2.9 McDonald’s restaurants are operated sustainably. For example, their non-franchised restaurants use 100% renewable energy, combining wind and solar and use 100% LED lighting which means we use 50% less energy than fluorescent lighting. All used cooking oil is converted into biodiesel for use by McDonald’s delivery lorries. Their entire fleet of lorries runs on biodiesel, 40% of which comes from McDonald’s own business, its contribution to United Kingdom, and information on the nutritional value and healthy options of the food that it offers in its restaurants. This creates over 7,500 tonnes fewer CO2 emissions than ultra-sulphur diesel. 2.10 All new McDonald’s restaurants in the United Kingdom are fully accessible and they are working toward delivering this same standard for all existing restaurants. 2.11 Many of McDonald’s restaurants toilets are open to all members of the public. They are one of few night time premises that offer this service and, given the fact they are located in some of the busiest parts of the country, McDonald’s are helping to keep the United Kingdom clean. Nutritional Value of Food and Healthy Options 2.13 McDonald’s offers a wide range of different food at its restaurants. 2.14 Nutritional information is easy to access and made available online, and at the point of sale on advertising boards, as well as in tray inserts. Information is given on calorie content and key nutritional aspects such as salt, fat and sugar content. This enables an individual is able to identify and purchase food items and combinations that fit in with their individualised calorie or nutritional requirements. 2.15 The menu offer includes a range of lower calorie options, some of which are set out in the table below. 2.16 The restaurants now suggest meal bundles to assist customers in making informed, healthier choices. McDonald’s have suggested “favourites” meal bundles, across the breakfast and main menu that enable the choice of low-calorie options to be made even more easily. These 3-piece meal combinations will all be under 400kcal on the breakfast menu, and all under 600kcal on the main menu (with many options under 400kcal on the main menu also), and all individual items on these menu bundles with be either green (low) or amber (medium) on the Food Standards Agency traffic light system for food labelling. 2.17 Examples of low calorie (less than 400kcal) breakfast options (where no single item is red for FSA) include any combination of the following: - Egg & Cheese McMuffin / Egg & cheese snack wrap / bagel with Philadelphia / porridge; with fruit bag; and a medium black coffee, or espresso or regular tea or water. 2.18
Examples of low calorie (less than 600kcal) main menu options (where no single item is red for FSA) are included in the table below. Some 90% of our standard menu is under 500 calories. Main: - The Garlic Mayo Chicken One - grilled wrap Side Options: - Fruit Bag - Pineapple Stick - Carrot Sticks - Side Salad with Fajita Dressing Options: - Diet Drink - Water - Medium Black Coffee - Regular Tea Total Calories *varies depending on side & drink choice: - Between 379-390kcal Main: - The Sweet Chilli Chicken One - grilled wrap Side Options: - Fruit Bag - Pineapple Stick - Carrot Sticks - Side Salad with Fajita Dressing Options: - Diet Drink - Water - Regular Tea - Medium Black Coffee Total Calories *varies depending on side & drink choice: - Between 338-348kcal Main: - Grilled Chicken & Salad with Fajita Dressing Side Options: - Fruit Bag - Pineapple Stick - Carrot Sticks Drinks Options: - Diet Drink - Water - Regular Tea - Medium Black Coffee Total Calories *varies depending on side & drink choice: - 238-247kcal 2.19 Those specifically wanting a meal low in either fat, salt, or sugar, can tailor their choices accordingly. Any combination of menu items offered at McDonald’s can be eaten as part of a calorie controlled nutritionally balanced diet. Customers alternatively eat anything from the menu allowing for this within their overall daily, or weekly nutritional requirements. Quality of Ingredients and Cooking Methods 2.20 McDonald’s are always transparent about both their ingredients and their processes in an attempt to achieve maximum quality. McDonald’s chicken nuggets are made from 100% chicken breast meat, their burgers are made from whole cuts of British and Irish beef. Coffee is fair trade and milk is organic. McDonald’s want their customers to be assured about what they are consuming. The 'Good to Know' section on the McDonald’s website - https://www.mcdonalds.com/gb/en-gb/good-to-know/about-our-food.html - provides a range of information about the processes and the origin of their produce. Menu Improvement and Reformulation 2.21 McDonald’s is actively and continuously engaged in menu reformulation to give customers a range of healthier options. Louise Hickmott, Head of Nutrition, at McDonald’s UK, has provided a letter giving examples of the steps that have been taken in recent years. The information is summarised below. 2.22 In recent years McDonald’s has made great efforts to reduce fat, salt and sugar content across their menu. - 89% of their core food and drink menu now contains less than 500 kcal. - Supersize options were removed from their menu in 2004. - 72% of the Happy Meal menus are classified as not high in fat, salt or sugar according to the Government’s nutrient profile model. - Since October 2015, 50% of the options on the drinks fountain have been no added sugar (Diet Coke, Coke Zero and Sprite Z). - Recent years have seen the introduction of new items, offering more choice that has included porridge, salads, grilled chicken wraps, carrot sticks, fruit bags including apple and grape, pineapple sticks, and melon chunks, as well as orange juice, mineral water and organic semi-skimmed milk; - Customers can swap fries for fruit bags, carrot sticks or salad on the main menu, or the hashbrown for a fruit bag or carrot sticks on the breakfast menu, at no additional cost; - In 2014, McDonald’s introduced “Free Fruit Fridays” resulting in 3.7 million portions of fruit being handed out. Since then, discounted fruit is now available with every Happy Meal. Fat 2.23 A recent meta-analysis and systematic review of 72 studies (45 cohort studies and 27 controlled trials) demonstrated that with the exception of Trans Fatty Acids (TFA), which are associated with increased coronary disease risk, there was no evidence to suggest that saturated fat increases the risk of coronary disease, or that polyunsaturated fats have a cardio-protective effect, which is in contrast to current dietary recommendations (Chowdrey et al, 2014). 2.24 However, UK guidelines currently remain unchanged; men should consume no more than 30g of saturated fat per day, and women no more than 20g per day (NHS Choices, 2013). It should be remembered that all fats are calorie dense (9kcal/g) and that eating too much saturated fat will increase the likelihood of weight gain and therefore obesity, indirectly increasing the risk of coronary heart disease, among other co-morbidities. 2.25 What have McDonald’s done? - Reduced the saturated fat content of the cooking oil by 83%; - Signed up to the Trans Fats pledge as part of the Government’s “Responsibility Deal”; - The cooking oil has been formulated to form a blend of rapeseed and sunflower oils to reduce levels of TFA to the lowest possible level; - They have completely removed hydrogenated fats from the vegetable oils; - Reduced the total fat in the milkshakes by 32% per serving since 2010; - Organic semi-skimmed milk is used in tea/coffee beverages and in Happy Meal milk bottles, with lower saturated fat levels compared with full fat varieties. Sugar 2.26 Dietary carbohydrates include sugars, starches and fibre, and each has approximately 4kcals/g. 2.27 The Scientific Advisory Commission on Nutrition (SACN) currently recommends that approximately 50% of total dietary energy intake should be from carbohydrates (SACN Report, 2015). In 2015 SACN recommended that the dietary reference value for fibre intake in adults be increased to 30g/day (proportionally lower in children) and that the average intake of “free sugars” (what used to be referred to as non-milk extrinsic sugars) should not exceed 5% of total dietary energy, which was in keeping with the World Health Organisation (WHO) recommendations. 2.28 Current average intake of free sugars far exceeds current recommendations, and excess intake is associated with dental issues and excess calorie intake which can lead to weight gain and obesity. 2.29 Over the last 10 years McDonald’s reformulation work has resulted in 787 tonnes less sugar across their menu in 2017 versus 2007. What have McDonald’s done? - Reducing the sugar in our promotional buns, this removed 0.6 tonnes of sugar - Our Sweet Chilli Sauce has been reformulated to reduce sugar by 14% this equates to 155 tonnes of sugar removed - Our Festive Dip has removed 4 tonnes of sugar - Our famous McChicken Sandwich Sauce has reduced in sugar 45% - Our Tomato Ketchup has reduced in sugar by 20% which equates to 544 tonnes of sugar removed from the system - Our Chucky Salsa has reduced in sugar by 28% - Since 2016 we have reduced the sugar content of Fanta by 54% - The Toffee Syrup in our Toffee Latte has been reformulated to remove 20% of the sugar - We have reformulated our Frozen Strawberry Lemonade this has led to 8% sugar reduction per drink Salt 2.30 A number of health-related conditions are caused by, or exacerbated by, a high salt diet. The strongest evidence links high salt intake to hypertension, stroke and heart disease, although it is also linked with kidney disease, obesity and stomach cancer (Action on Salt website). 2.31 Salt is often added to food for either taste or as a preservative, and in small quantities it can be useful. Adults in the UK are advised not to exceed 6g of salt per day, but the average intake at a population level is consistently higher than this. 2.32 Salt does not directly lead to obesity; however, it does lead to increased thirst, and not everyone drinks water or calorie-free “diet” beverages. If our thirst increases and leads to increased consumption of calories from extra fluid intake, then this may lead to increased weight and obesity. 31% of fluid drunk by 4-18-year-old children is sugary soft drinks (He FJ et al, 2008), which has been shown to be related to childhood obesity (Ludwig DS et al, 2001). 2.33 What have McDonald’s done? - The salt content across the UK menu has been reduced by nearly 35% since 2005; - Customers can ask for their food to be “salt-free”; - The salt content by calories has been reduced by 17% since 2005 for McDonald’s and the Happy Meal menu contains 19% less salt than in 2006 - Chicken McNuggets contain 52% less salt than in 2003. 2.34 The process continues. McDonald’s have recently made the following changes to their menu - Making water the default drink in the Happy Meals; - Making it easier for people to understand the existence of a wide range of under 400 and 600 calorie meal options that are available. Third Party Opinions of McDonald’s 2.35 McDonald’s regularly receive supportive comments from independent third parties. 2.36 Professor Chris Elliott, of the Department for Environment, Food & Rural Affairs’ independent Elliott Review into the integrity and assurance of food supply networks: interim report, December 2013: “Each supply chain is unique, showing that there is no single approach to assuring supply chain integrity. The review has seen many examples of good industry practice that give cause for optimism. There is not space within this final report to reference all the good industry practices but those that have stood out include McDonald’s and Morrisons.” 2.37 Jamie Oliver, the TV chef, food writer and campaigner speaking in January 2016 at the Andre Simon Food & Drink Book Awards to the Press Association: “Everyone always liked to poke at McDonald’s. McDonald’s has been doing more than most and smallest sized businesses for the last 10 years. Fact. But no one wants to talk about it. And I don’t work for them. I’m just saying they’ve been doing it - 100% organic milk, free range eggs, looking at their British and Irish beef.” 2.38 Raymond Blanc, the TV chef and food writer, speaking in 2014, after having presented McDonald’s UK with the Sustainable Restaurant Association’s Sustainability Hero award: “I was amazed. All their eggs are free-range; all their pork is free-range; all their beef is free-range. [They show that] the fast-food business could change for the better. They’re supporting thousands of British farms and saving energy and waste
by doing so. "I was as excited as if you had told me there were 20 new three-star Michelin restaurants in London or Manchester." 2.39 Marco Pierre White, TV chef and food writer, speaking in 2007: "McDonald's offers better food than most restaurants and the general criticism of the company is very unfair. "Their eggs are free range and the beef is from Ireland, but you never hear about that. You have to look at whether restaurants offer value for money, and they offer excellent value." These comments below represent independent opinions: Supporting Active and Healthy Lifestyles among Employees and Local Communities 2.40 McDonald’s is focused on its people and is proud to have been recognised for being a great employer. 2.41 The judges specifically recognised our approach to Guaranteed Hours contracts. - The Times Top 100 Graduate Employers - the Times Top 100 Graduate Employers is the definitive annual guide to Britain’s most-sought-after employers of graduates. - Investors in People - Investors in People accreditation means we join a community of over 15,000 organisations across 75 countries worldwide and it is recognised as the sign of a great employer. - School leavers Top 100 Employers - McDonald's UK has been certified as one of Britain's most popular employers for school leavers in 2017, for the third consecutive year. An award voted for by 15-18 year olds in the UK. 2.41 In April 2017, McDonald's began to offer employees the choice between flexible or fixed contracts with minimum guaranteed hours. This followed trials in 23 restaurants across the country in a combination of company owned and franchised restaurants. All of McDonald's employees have been offered this choice and around 80% have selected to stay on flexible contracts. 2.42 Over the past 15 years, McDonald’s has been proud partners with the four UK football associations: The English Football Association; The Scottish Football Association; The Football Association of Wales; and The Irish Football Association. 2.43 This partnership has seen McDonald's support over one million players and volunteers. In London since 2014, more than 1,000 people have attended our Community Football Days and we have distributed 3,328 kits to accredited teams in the Capital. Of the 171 McDonald's restaurants within the M25, approximately 88 are twinned and actively supporting a local football club. This serves as an example of the company’s willingness to confront the obesity crisis with a multitude of different approaches. 2.44 We do this work because increasing standards will ultimately create a better experience for young footballers, leading to increased participation and retention of children and young people in sport. 2.45 McDonald's Community Football programme helps to increase participation at all levels. They remain absolutely committed to it and are in the final stages of planning their programme for future years. Marketing 2.45 As a business McDonald’s are committed to ensuring marketing will continue to be responsible and will be used as a positive influence to help our customers make more informed choices. 2.47 McDonald’s recognise that marketing has a part to play in influencing customers’ choices. They comply, and go beyond, the UK’s stringent regulations on marketing to children and use their own marketing to help families understand more about the range of food options the company offer. 2.48 McDonald’s never market products classified as high in fat, salt or sugar to children in any media channel, at any time of the day. They are committed to ensuring that their marketing is always responsible as well as informative, and that it reinforces positive food messages. 2.49 In addition, we go beyond the regulations in a lot of cases. For example, when advertising a Happy Meal, we only ever do so with items such as carrot sticks, a fruit bar, milk or water to ensure we are not marketing HFSS food to children. We have done this voluntarily since 2007. Summary 2.50 In the light of the above it is clear that McDonald’s restaurants offer the district considerable and substantial economic benefits, are supportive of active and healthy lifestyles, and enable customers to make informed, healthy choices from the wide-ranging menu options available. It is important that this is acknowledged, given the assumption in the draft Policy 25 that all A5 uses should be restricted within 400m of locations of secondary schools, sixth form colleges, community centres or playgrounds, and areas that are deemed over-concentrated. This based on the assumption that it is having major health impacts on children and people living in areas clustered with a high number of A5 uses. Given the policy aim - which McDonald’s supports - of promoting healthier lifestyles and tackling obesity, adequate parameters/thresholds need to be contained within such a policy. 2.51 We turn now to the main points of the objection. 3 The 400m Exclusion Zone is Inconsistent with National Policy Introduction 3.1 This section of the objection considers the proposed policy against national policy. The lack of evidence to support the policy is considered in the next section. 3.2 National policy contains no support for a policy approach containing a blanket ban or exclusion zone for A5 (or indeed any other) uses. Such an approach conflicts sharply with central planks of Government policy such as the need to plan positively to support economic development, and in particular the sequential approach that seeks to steer town centre uses - which include A5 uses - to town centres. Practical Impacts 3.4 The practical impact on an 400m exclusion zone of around secondary schools, sixth form colleges, communities or playgrounds unless the opening hours are restricted until 17:00 on weekdays is unsound. Although draft Policy 25 does allow A5 use within 400m of the listed educational facilities, it is felt that this in turn will create inactive daytime shopping frontages. 3.5 Retailers such as McDonald’s operate throughout the day, serving the wider community with Breakfast and Lunch. Such restrictions would apply be overly restrictive to such a business model. Whilst this wouldn’t affect a smaller takeaway which traditionally opens in the evening, this would have a detrimental impact on businesses such as McDonald’s. 3.6 McDonald’s employ large numbers of staff. Such a restriction would limit the number of staff that could be employed and the hours offered. 3.7 Consideration should be given to school restrictions on letting students leave at lunchtimes. This is a key consideration as a restriction would be unsound given students are not allowed out at lunchtimes. 3.8 To restrict the proximity of sixth form colleges is unjustified. Students attending such facilities are 17-18 years old and are considered young adults and old enough to make their own choices. In addition, students will be old enough to drive and such a restriction would have little to no impact, making its inclusion unsound and overly restrictive on land uses. 3.9 The Framework does not support the use of planning to limit people’s dietary choices. In addition to this, other A class uses can provide unhealthy products, therefore, there is limited justification for the policy to focus exclusively upon hot food takeaways (A5). 3.10 The local policy team do not appear to have fully assessed the potential impact of the policy. 2. It is suggested the policy is an unnecessary blanket ban against A5 uses located in areas where reasons for them to locate. This goes against national planning policy in that it contradicts paragraph 80 of the framework. Conflict with National Policy 3.11 Restricting both the concentration and the location of new A5 proposals (and the like) within London is not a positive approach to planning. The Framework “foreword” states that sustainable development is about positive growth, making economic; environmental; and social progress, for this and future generations. 3.12 The suggested restrictions within draft Policy 25, takes an ambiguous view of A5 uses in relation to the proximity of secondary schools, sixth form colleges, community centres or playgrounds. The policy would apply an over-generic approach to restrict development with little sound planning reasoning or planning justification. This is contrary to paragraph 11 of the Framework that advises authorities to positively seek opportunities to meet development needs of their area. 3.13 No map is provided to indicate the land use impacts and restrictions such an exclusion zone would have. By introducing such an opening time restriction would make any sites unsuitable and as such would push businesses such as McDonald's outside of these exclusion zones. Without a map it is impossible to assess the impacts of the proposed policy. 3.14 Thus, is consistent with paragraph 80-81 of the Framework. 3.15 Para 80 states: “Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future.” Para 81 states: Planning policies should: “a) set out a clear economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to Local
Industrial Strategies and other local policies for economic development and regeneration; b) set criteria, or identify strategic sites, for local and inward investment to match the strategy and to meet anticipated needs over the plan period; c) seek to address potential barriers to investment, such as inadequate infrastructure, services or housing, or a poor environment; and d) be flexible enough to accommodate needs not anticipated in the plan, allow for new and flexible working practices (such as live-work accommodation), and to enable a rapid response to changes in economic circumstances. 3.16 As explained later in this objection, there is a lack of evidence to demonstrate the link between fast food, school proximity and obesity. The need for evidence is emphasised in paragraph 3.1 of the Framework that states that each local plan should be based on adequate, up-to-date and relevant evidence. Neither the policy nor the supporting text addreses this point. Policy needs to be based on evidence. 3.17 The policy is likely to be very damaging to the district's economy due to the fact that it is restricting hot food takeaways to such an extreme level without any regard to the local area or the economy. 3.18 There is also conflict with the sequential test requirements, which has its own locational requirements. Paragraph 86 of the Framework is clear in its expectation that an up to date local plan will adopt the sequential approach, and that local authorities should "require" applications for main town centre uses to locate in town centres. The sequential approach would be seriously undermined by the approach proposed in the Calderdale Local Plan. 3.19 The Framework cannot be interpreted to provide generic restrictions on a particular use class. There is no basis for such a blanket approach in the Framework or Planning Practice Guidance. In fact, the Planning Practice Guidance emphasises that planning authorities should look at the specifics of a particular proposal and seek to promote opportunity rather than impose blanket restrictions on particular kinds of development. In the section on "Health and Wellbeing": 3.20 Paragraph: 002 (Reference ID: 53-002-20140306) states that in making plans local planning authorities should ensure that: "opportunities for healthy lifestyles have been considered (eg. planning for an environment that supports people of all ages in making healthy choices, helps to promote active travel and physical activity, and promotes access to healthier food, high quality open spaces, green infrastructure and opportunities for play, sport and recreation)." 3.21 Paragraph: 006 (Reference ID: 53-006-20170728) says that a range of criteria should be taken into account, including not just proximity to schools but also wider impacts. It does not support a blanket exclusion zone. Importantly, the criteria listed are introduced by the earlier text which states: "Local planning authorities can have a role in enabling a healthier environment by supporting opportunities for communities to access a wide range of healthier food production and consumption choices." 3.22 Paragraph: 004 (Reference ID: 53-004-20140306) advises that a Health Impact Assessment should be considered in planning decision making, and that the scope for planning conditions and a section 106 obligation to address issues should also be taken into account. 3.23 The above guidance serves to emphasise why it is important to consider particular proposals as a whole, rather than adopting a blunt approach that treats all proposals that include an A5 use as being the same. 3.24 The Policy is inconsistent, discriminatory and disproportionate; therefore, Point C and the 400-metre exclusion zone should be deleted from draft Policy 25. 3.25 The policy aims to address obesity and unhealthy eating but instead simply restricts new development that comprises an element of A5 use. Yet A1 retail outlets and A3 food and drink uses can also sell food that is high in calories, fat, salt and sugar, and low in fibre, fruit and vegetables, and hot food from an A3 unit can be delivered to a wide range of locations, including schools. This means that the policy takes an inconsistent approach towards new development that sells food and discriminates against operations with an A5 use. It also means that the policy has a disproportionate effect on operations with an A5 use. 3.26 The test of soundness requires that the policy approach is "justified", which in turn means that it should be the most appropriate strategy when considered against the reasonable alternatives and based on proportionate evidence (paragraph 35 of the Framework). 3.27 Given the objectives of the policy, it ought to apply equally to all relevant food retailers. 3.28 The table below shows the kind of high calorie, low nutritional value food that can be purchased from a typical A1 high street retailer at relatively low cost. It is contrasted with the kind of purchase that could be made at a McDonald's. The evidence provided at Appendix 1 confirms that 70% of purchases by students in the school fringe are purchased in non-A5 shop. (note 1 The School Fringe: What Pupils Buy and Eat From Shops Surrounding Secondary Schools, July 2008, Sarah Sinclair and Professor J T Winkler, Nutrition Policy Unit of London Metropolitan University.) Company: McDonalds Snack or meal: Apple and Grape fruit bag Salt (g): 0.0 Fat (g): 0.1 Calories (kcal): 46 Price (#): 49p Company: McDonalds Snack or meal: Garlic Mayo chicken wrap Salt (g): 1.3 Fat (g): 11.0 Calories (kcal): 345 Price (#): 2.99 Company: Greggs Snack or meal: Sausage Roll Salt (g): 1.6 Fat (g): 22.0 Calories (kcal): 317 Price (#): 90p Company: Greggs Snack or meal: Cheese and Onion bake Salt (g): 1.6 Fat (g): 30.0 Calories (kcal): 436 Price (#): 1.35 Company: Costa Coffee Snack or meal: Nutty flapjack Salt (g): 0.1 Fat (g): 23.2 Calories (kcal): 425 Price (#): 1.70 Company: Costa Coffee Snack or meal: Ham and Cheese panini Salt (g): 2.5 Fat (g): 13.5 Calories (kcal): 427 Price (#): 3.95 3.29 If the policy is to be based on Use Classes, then the proposed policy should place restrictions on other use classes in addition to class A5. In fact, by restricting A5 uses only, the policy would encourage food purchases at other locations. 3.30 Finally, it is important that for the majority of days in the year (weekends and school holidays combined) schools are not open at all. Research by Professor Peter Dolton of Royal Holloway College states that "At least 50% of the days in a year kids don't go to school if we count weekends and holidays and absence. They are only there for 6 hours and all but 1 are lessons. So only around 2-3% of the time can [children] get fast food at school." (note 2 Peter Dolton, Royal Holloway College, University of London & Centre for Economic Performance, London School of Economics, Childhood Obesity in the UK: Is Fast Food a Factor? http://www.made.org.uk/images/uploads/2_Prot_P_Dolton_presentation.ppt) 3.31 For the minority of the year when schools are open, it is important to recognise that many schools have rules preventing children from leaving the school grounds during the school day, and in any event proximity to schools has no conceivable relevance outside of the particular times when children are travelling to or from school in circumstances where their route takes them past the development proposal. 3.32 The policy's blanket approach fails to acknowledge that the opportunity for children to access A5 development as part of a school day is extremely limited. The complete ban is wholly disproportionate to the circumstances when the concern underlying the policy might arise. Only limited purchases of food are made at A5 uses on journeys to and from school. Further details are set out in Appendix 2. 4 The Policy is Not Justified because of a Lack of an Evidence Base 4.1 The test of soundness requires policy to be evidence based. There is no evidence of any causal link between provision of or access to food within 400m of schools and increases in obesity or poor health outcomes. In fact, the studies that have considered whether such a causal connection exists have found none. 4.2 Public Health England (PHE), which is part of the Department of Health and Social Care, expressly accept that the argument for the value of restricting the growth in fast food outlets is only "theoretical" based on the "unavoidable lack of evidence that can demonstrate a causal link between actions and outcomes." (note 3 Public Health England & LGA, Healthy people, healthy places briefing: Obesity and the environment: regulating the growth of fast food outlets, page 5, November 2013) 4.3 A systematic review of the existing evidence base by Oxford University (December 2013), funded by the NHS and the British Heart Foundation 'did not find strong evidence at this time to justify policies related to regulating the food environments around schools.' It instead highlighted the need to 'develop a higher quality evidence base'. (note 4 J Williams, P Scarborough, A Matthews, G Cowburn, C Foster, N Roberts and M Rayner, Nuffield Unit of Population Health, University of Oxford, page 13, 11th December 2013. A systematic review of the influence of the retail food environment around schools on obesity-related outcomes.) 4.4 The range of US and UK studies used to support many beliefs about obesity, including the belief that the availability of fast food outlets increased obesity, was comprehensively reviewed in papers co-written by 19 leading scientists in the field of nutrition, public health, obesity and medicine. Their paper "Weighing the Evidence of Common Beliefs in Obesity Research" (published in the Critical Review of Food, Science and Nutrition (Crit Rev Food Sci Nutr. 2015 December 6; 55(14) 2014-2053) found that the current scientific evidence did not support the contention that the lack of fresh food outlets or the increased number of takeaway outlets caused increased obesity (see pp16-17 of the report). 4.5 The draft policy refers to the views of "a wide range of
health experts” but there appears to have been no critical assessment of what these views are based on and whether the underlying evidence supports those views or the proposed policy approach. It does not. 4.6 In this context, it is important to consider the evidence from Waltham Forest which introduced a school proximity policy in 2008 - about a decade ago. Over that period, the Public Health England data for the Borough shows that there has been no discernible impact on childhood obesity rates - with these actually worsening in recent years. The borough’s Health Profile for 2017 records childhood obesity (year 6) at 26.1% up from 20.3% in 2012, the year London hosted the Olympic Games. 4.7 While it is accepted that the causes of obesity are complex, it is clear that the exclusion zone policy had no discernible effect in Waltham Forest. It is clear that more research and investigation is needed before such a policy approach can be justified by evidence. 5 Similar Policies Have Been Found Unsound When Promoted in Other Plans 5.1 The lack of evidence between proximity of takeaways to schools and its impact on obesity has been confirmed in a number of planning decisions. 5.2 In South Ribble the Planning Inspectorate raised concerns about a similar 400m school proximity restriction on fast food, stating ‘the evidence base does not adequately justify the need for such a policy’, and due to the lack of information, it is impossible to ‘assess their likely impact on the town, district or local centres’. (note 5 Letter to South Ribble Borough Council, 29th April 2013, from Susan Heywood, Senior Housing & Planning Inspector, The Planning Inspectorate.) 5.3 Similarly, research by Brighton & Hove concluded that ‘the greatest influence over whether students choose to access unhealthy food is the policy of the individual schools regarding allowing students to leave school premises during the day’. (note 6 Brighton & Hove City Council & NHS Sussex, Hot-food takeaways near schools; An impact study on takeaways near secondary schools in Brighton and Hove, page 30, September 2011) 5.4 The recent Inspectors response to the London Borough of Croydon (January 2018) regarding a similar prohibition on A5 uses, (where a similar campaign to persuade takeaway proprietors to adopt healthy food options existed) confirmed that the councils own ‘healthy’ plans would be stymied by the proposed policy, as would purveyors of less healthy food. The policy failed to distinguish between healthy and unhealthy takeaway food, and “confounds its own efforts to improve healthiness of the food provided by takeaway outlets” and failed to “address the demand for the provision of convenience food”. The Inspector concluded that because the reasons for the policy do not withstand scrutiny, they must be regarded as unsound. 5.5 The inspector at Nottingham City Council stated "There is insufficient evidence to support the link between childhood obesity and the concentration or siting of A3, A4 and A5 uses within 400m of a secondary school to justify the criterion of policy LS1 that proposals for A3, A4 and A5 uses will not be supported outside established centres if they are located within 400m of a secondary school unless it can be clearly demonstrated that the proposal will not have a negative impact on health and well-being the criterion and justification should therefore be deleted/amended". 5.6 The inspector at Rotherham stated “Policy SP25 sets out various criteria against which proposals for hot food takeaways will be assessed. One of the criteria is designed to prevent hot food takeaways within 800 metres of a primary school, secondary school or college when the proposed site is outside a defined town, district or local centres. Having carefully considered the material before me and the discussion at the Hearing I do not consider there is sufficient local evidence to demonstrate a causal link between the proximity of hot food takeaways to schools and colleges and levels of childhood obesity. Although I accept that levels of childhood obesity need to be tackled by both local and national initiatives I do not consider there are sufficient grounds at the present time to include this particular aspect of land use policy in the RSPS". 5.7 In Guildford, the inspector stated “Finally, the submitted Plan contains a requirement common to Policy E7 Guildford town centre, E8 District Centres and E9 Local Centres and isolated retail units that resists proposals for new hot food takeaways within 500 metres of schools. However, the evidence indicates that childhood obesity in Guildford is lower than the average for England. Childhood obesity may be a product of a number of factors, not necessarily attributable to takeaway food; takeaways often sell salads as well as nutritious foods; not all kinds of takeaway food are bought by children; children have traditionally resorted to shops selling sweets and fizzy drinks, which would be untouched by the policy; and the policy would have no bearing on the many existing takeaways. In this context there is no evidence that the requirement would be effective in safeguarding improving childhood health. It would be an inappropriate interference in the market without any supporting evidence and would therefore be unsound”. 5.5 The proposed 400m exclusion zone clause in draft Policy 25 with its blanket prohibition of A5 uses, unless they do close up until after 17:00 on weekdays is simply unsound and is inconsistent with the Framework. 6 Alternative Approaches 6.1 Planware LTD considers there is no sound justification to refuse hot food takeaways within 400m of the educational facilities listed in the above text. The over-concentration (Point C) is also not in accordance with the Framework. Therefore, these two restrictions should be deleted from the policy. 6.2 Planware LTD would welcome and support proposals for a wider study of the causes of obesity and their relationship with development proposals, including examination of how new development can best support healthy lifestyles and the tackling of obesity. 6.3 When a cogent evidence base has been assembled, this can then inform an appropriate policy response. That time has not yet been reached. 7 Conclusion 7.1 McDonald’s supports the policy objective of promoting healthier lifestyles and tackling obesity. It does not consider that the proposed Policy 25 is a sound way of achieving those objectives. The underlying assumption in the policy is that all A5 uses (and any restaurants with an element of A5 use) are inherently harmful to health. In fact, this is not supported by evidence. McDonald’s own business is an example of a restaurant operation which includes A5 use but which offers healthy meal options, transparent nutritional information to allow healthy choices, and quality food and food preparation. The business itself supports healthy lifestyle styles through the support given to its staff and support given to football in the communities which the restaurants serve. 7.2 In addition, the policy fails to acknowledge the wider benefits that restaurants can have, including benefits relevant to community health and wellbeing. McDonald’s own business is an example of a restaurant operation that supports sustainable development through the use of renewable energy, the promotion of recycling, the use of energy and water saving devices. The economic benefits of its restaurants in supporting town centres and providing employment opportunities in training, are substantial, and important given that improved economic circumstances can support improved health. 7.3 The policy fails to acknowledge that food choices which are high in calories and low in nutritional value are made at premises trading with A1 and A3 consents and can be delivered from the latter. The policy makes no attempt to control these uses. 7.4 For the reasons given in this objection the proposed policy is very clearly inconsistent with the aspect of land use policy on positive planning, on supporting economic development and the needs of businesses, on supporting town centres, and on the sequential approach. There is no justification in national policy for a blanket exclusion zone based applied to A5 uses. The effect of the policy had it existed in the past would have been to exclude restaurants such as McDonald’s from major commercial and tourist areas. 7.5 For the reasons given in this objection the proposed policy lacks a credible evidence base, and similar policies have been found to be unsound by inspectors who have examined other plans. In the one London Borough that has had such a policy for about a decade (LB Waltham Forest), it has had no discernible effect on obesity levels, which have in fact increased. 1 Appendix 1 - Food in the School Fringe Tends to be Purchased in Non-A5 Properties 1. Research by Professor Jack Winkler (London Metropolitan University) into the ‘school fringe’ - found just 3/10 purchases by students in a 400m school fringe were made in A5 properties. (note 7 The School Fringe: What Pupils Buy and Eat From Shops Surrounding Secondary Schools, July 2008, Sarah Sinclair and Professor J T Winkler, Nutrition Policy Unit of London Metropolitan University) 2. 70% of purchases in the school fringe were made in non-fast food outlets, and the same research concluded ‘the most popular shop near Urban was the supermarket, with more visits than all takeaways put together’. 3. Professor Winkler’s findings are not an isolated case. A report by Public Health England and the LGA states that fast food school proximity restrictions do ‘not address sweets and other high-calorie food that children can buy in shops near schools.’ (note 8 Public Health England & LGA, Healthy people, healthy places briefing: Obesity and the environment: regulating the growth of fast food outlets, page 5, November 2013) 4. Research by Brighton and Hove found that ‘Newsagents were the most popular premises [in the school fringe], with more pupils visiting newsagents than any A5 premises’. (note 9 Brighton & Hove City
Council & NHS Sussex, Hot-food takeaways near schools; An impact study on takeaways near secondary schools in Brighton and Hove, page 28, September 2011) 5. Likewise, research for the Food Standards Agency on purchasing habits in Scotland found that 'Supermarkets were the place that children reported they most frequently bought food or drinks from at lunchtime'. (note 10 Jennie Macdiarmid et al. Food Standards Agency. Survey of Diet Among Children in Scotland (2010) - http://www.esds.ac.uk/doc/7200/mrdoc/pdf/7200_final_report_part_2.pdf) 6. Indeed, there are several more researchers who have found no evidence to support the hypothesis that less exposure to fast food, or better access to supermarkets are related to higher diet quality or lower BMI in children. (note 11 Forsyth, A., et al., Do adolescents who live or go to school near fast-food restaurants eat more frequently from fast-food restaurants? Health and Place., 2012. 18(6): p. 1261-9. note 12 An, R. and R. Sturm, School and residential neighborhood food environment and diet among California youth. American Journal of Preventative Medicine, 2012. 42(2): p. 129-35. note 13 Timperio, A.F., et al., Children's takeaway and fast-food intakes: associations with the neighbourhood food environment. Public Health Nutrition,, 2009. 12(10): p. 1960-4.) 2 Appendix 2 - Only a limited number of journeys to and from school involve a purchase at a food outlet. 1. This has been confirmed in research by the Children’s Food Trust, which found that only 8% of all journeys to and from school included a purchasing visit to a food outlet. (note 14 Children’s Food Trust - November 2011, page 1 http://www.childrensfoodtrust.org.uk/assets/research-reports/journey_to_school_final_findings.pdf) Table 3. Total number of journeys including a food outlet visit Number of journeys to school: 86 Journeys including a visit to a food outlet: 11 Journeys including a purchase from a food outlet: 8 Number of journeys from school: 87 Journeys including a visit to a food outlet: 6 Journeys including a purchase from a food outlet: 6 Total number of journeys: 173 Journeys including a visit to a food outlet: 17 Journeys including a purchase from a food outlet: 14 Percentage (%) of all journeys: Journeys including a visit to a food outlet: 10 Journeys including a purchase from a food outlet: 8 2. Of the food purchases made on school journeys, confectionary was the most popular item sold - which McDonald's does not offer on its menu. 3. Likewise, research by Ashelsha Datar concluded that children ‘may not purchase significant amounts of junk food in school’ - partly due to 'fewer discretionary resources to purchase them’. (note 15 Ashelsha Datar & Nancy Nicosia, Junk Food in Schools and Childhood Obesity, page 12, May 2013) 4. Indeed, even where purchases were made, 'children may not change their overall consumption of junk food because junk food purchased in school simply substitutes for junk food brought from home.’ 5. Similarly, research by Fleischhacker highlighted the need for future school-based studies to ‘gather information on whether or not the students attending the studied schools actually eat at the restaurants near their schools.’ (note 16 S Fleischhacker et al. A systematic review of fast food access studies, page 9, 17th December 2009) 6. This was also highlighted in the systematic review by Oxford University, which states ‘future work should also incorporate a child’s usual mode of travel to and from school into decisions about appropriate buffer distances.’ The review added that age should also be taken into consideration, as this can impact on travel time and the availability of pocket change. (note 17 J Williams, P Scarborough, A Matthews, G Cowburn, C Foster, N Roberts and M Rayner, Nuffield Department of Population Health, University of Oxford, page 13-14, 11th December 2013. A systematic review of the influence of the retail food environment around schools on obesity-related outcomes.)

Summary:

Fully support Policy’s 25 aim of promoting healthier living and tackling obesity. However the policy approach is unsound and fails to provide an evidence-based way of achieving the policy’s objective. The underlying assumption in the policy is that all A5 uses (and any restaurants with an element of A5 use) are inherently harmful to health. In addition, the policy fails to acknowledge the wider benefits that restaurants can have, including benefits relevant to community health and wellbeing. The policy fails to acknowledge that food choices high in calories and low in nutritional value are made at premises trading with A1 and A3 consents and the policy makes no attempt to control these uses.

Response:

Doncaster’s Local Plan aims to have a healthier thread throughout the whole Local Plan and this is just one policy which can contribute to reducing obesity levels and supporting people in making healthy choices in Doncaster. Doncaster’s Planning team have taken the opportunity to work alongside Doncaster’s Public Health colleagues who have been involved in the development of the Local Plan. New opportunities to improve the health and well-being and health inequalities of our residents has resulted in the inclusion of a new aim, chapter and policies with a specific policy and evidence review on Hot Food Takeaways. Specific evidence has been published https://www.doncaster.gov.uk/services/planning/retail-and-leisure-study

Tests of Soundness:  

Comment:  
Again, no response has been made by the council to our previous concerns. However, given the council's reasoning for other policies, we accept that flood risk policies within the local plan will be applied.

Summary:  
Policy 26 - Development in the Countryside - no response to previous comments but accept wider local plan flood risk policies will be applied

Response:  
Note the concerns made previously that conversions of existing buildings/replacement dwellings in flood risk areas can be problematic and the issue of 'creating betterment'. Agree that other policies in the Local Plan would be relevant (Policy 58: Flood Risk Management) and the approach of the whole local plan has been to avoid duplication wherever possible as some of the responses have been critical of the length of the document already.
Comment:

It would be useful to remind those proposing schemes which would involve the re-use or conversion of a historic rural building that proposals would also need to accord with the relevant Policies for the historic environment. PROPOSED CHANGE Insert the following after Paragraph 9.7:-

"Proposals which would involve the conversion or re-use of a historic building, would also need to satisfy the relevant Policies in Chapter 12"

Summary:

explanatory text para 9.7 - useful to remind applicants for re-use or conversion of a historic rural building that proposals would also need to accord with the relevant policies for the historic environment

Response:

Noted, all policies in the Local Plan where relevant will need to be applied, which includes Chapter 11 policies on the historic environment, but for avoidance of doubt proposed change accepted as per the wording provided. Proposals which would involve the conversion or re-use of a historic building, would also need to satisfy the relevant policies in Chapter 11: The Historic Environment.
Chapter 9: Countryside

Unsound because the Plan is not positively prepared, ie to achieve any positive outcomes for the countryside. The majority of land by area in Doncaster Borough remains rural. Para 2.6 of the Plan notes "Much of the Borough is rural in nature and includes areas of attractive landscape and features, such as limestone gorges, woodlands, country parks and lowland moorland. Over two-thirds of the Borough is in agricultural use, mainly in the eastern parts. Green Belt covers the western half of the Borough." Chapter 9 does not offer a spatial strategy for Doncaster’s countryside, and occupies just 4 of the 386 pages of the Plan. It is wholly unfit for purpose. Chapter 9 restricts itself to defining ‘Countryside’ as a policy designation, distinct from ‘Green Belt’ or from other levels of the settlement hierarchy. Whilst it is necessary and welcome to have a policy (Policy 26) outlining the development management framework for development in non-Green Belt countryside, that policy does not, in itself, warrant a chapter of the Plan. What is missing here is any articulation of the range of types, characteristics and needs of the Borough’s small villages, farming communities and the landscapes they sit within. Many of these are isolated by lack of amenities, lack of public transport and dependence on private cars for transport, but are nevertheless an intrinsic part of the Borough’s character and of its future. By and large, it is immaterial to those communities and landscapes whether they fall within ‘Green Belt’ or ‘Countryside’ for policy purposes, except for the fact that within the Green Belt it is easier to protect against inappropriate development. Within neither policy designation is there any vision or policy for how they are to evolve. How will they be made fit for the low-carbon, low-car future that must inevitably happen if the UK’s legally-binding carbon targets are to be met? Or will these rural areas be excluded from that future through lack of planning? PROPOSED CHANGE We recommend: The Plan should be comprehensively restructured, so that the Borough’s rural areas are not crudely cut off from settlements and then further sub-divided into ‘Green Belt’ and ‘Countryside’. Instead, we recommend a sub-area structure for the Plan, whereby settlements and their surrounding countryside can be understood and planned for in synergy with each other. For example, we list below suggested sub-areas with identifiable characteristics (note that some of these (asterisked*) are currently defined within Doncaster Main Urban Area). This list is illustrative, not definitive, but is provided here to show that when groups of settlements are considered as sub-areas that also contain rural areas, landscapes and green infrastructure, it will be possible to plan for them in more interconnected ways. It is evident, for example, that some of these areas are affected differently by transport connectivity, flood risk and landscape character, and have different development needs and challenges. Brodsworth-Hickleton-Marr-Barnburgh-Harlington-High Melton Mexborough-Conisbrough-Denaby-Edlington-Wadsworth-Tickhill-Bawtry Rossington Hayfield-Finneying-Blaxton-Auckley-Branton-Branton-Cantley* Armithorpe-Edenthorpe*-Kirk Sandall*-Barnby Dun Dunsville-Dunscroft-Hatfield-Stainforth-Hatfield Woodhouse Thorne-Moorends Kirk Bramwith-Braithwaite-Fishlake-Sykehouse-Moss-Fenwick Askern-Campsall-Norton Carcroft-Skeellow-Adwick-Bentley* Scawthorpe*-Scawby*-Cusworth-Sprotbrough The Bradford Core Strategy Partial Review (Preferred Options) has an excellent sub-area approach which we suggest Doncaster looks to for good practice.
Response:
All policies in the Local Plan need to be read together (para 1.14 of the Plan’s introduction highlights this). The introduction to Chapter 9 is clear that the Plan’s strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough’s smaller settlements, and subject to policy criteria in Part 5 A-E, in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Further detail is given in the Settlement Strategy Background Paper.

| Policy: | Policy 26: Development in the Countryside |
| Tests of Soundness: | |
| Comment: | Policy 26 sets out a list of development types that are considered appropriate in the ‘Countryside’. Gladman have raised concerns regarding the use of development limits in response to Policy 2 and, further consider that this policy, in restricting development in the Countryside to a prescriptive list of development uses, could serve to restrict sustainable development opportunities from coming forward. We suggest that, in the event that the Council cannot demonstrate a deliverable 5-year housing land supply, or should evidence be available to suggest that any of the allocated sites are struggling to deliver at the rate within the anticipated timeframe, then it would be wholly appropriate for sustainable development opportunities on the edge of settlements, in the area defined as ‘Countryside’ to come forward without delay. We therefore consider that it is necessary that a further degree of flexibility be established in the policy. |
| Summary: | Policy 26 sets out a list of development types that are considered appropriate in the ‘Countryside’. Gladman have raised concerns regarding the use of development limits in response to Policy 2 and, further consider that this policy, in restricting development in the Countryside to a prescriptive list of development uses, could serve to restrict sustainable development opportunities from coming forward. We therefore consider that it is necessary that a further degree of flexibility be established in the policy. |
| Response: | Policy 26 should be read in conjunction with Policy 2. Policy 2 adopts a positive and flexible approach which (in Part 5) would allow for development on the edge of settlements in levels 1-3 of the Settlement Hierarchy where (part 5e) a five year borough-wide supply of housing land cannot be demonstrated. |
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 9: Countryside

Policy: Policy 26: Development in the Countryside

Tests of Soundness: Positively prepared

Comment:
This policy is overly restrictive and not in accordance with the NPPF. It is not positively prepared as it places restrictions on residential development outside of development limits defined in policy 2 is not consistent with national policy. This is discussed further above under policy 2.

Summary:
Policy 26 is overly restrictive and not in accordance with the NPPF. It is not positively prepared as it places restrictions on residential development outside of development limits defined in policy 2 is not consistent with national policy. This is discussed further under policy 2.

Response:
All policies in the Local Plan need to be read together (para 1.14 of the Plan’s introduction highlights this). The introduction to Chapter 9 is clear that the Plan’s strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough’s smaller settlements, and subject to policy criteria in Part S A-E, in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Further detail is given in the Settlement Strategy Background Paper.
8.1 Peel has a number of comments on the LP’s other strategic and non-strategic policies as currently drafted. These are summarised below:

8.5 The draft Policy text (and Policies Map) needs to make clear that the allocated DSA sites have been removed from the Countryside. Peel requests that all of the Airport Masterplan’s demise is removed from the countryside. This includes non-development areas such as the proposed rail corridor (note 5 - To facilitate a potential rail station and associated connection of the East Coast Mainline (ECML) and Doncaster - Lincoln Line), Hurst Wood and Marr Flatts Plantation which are physically divorced from the wider open countryside. 8.6 As described in more detail in Section 9 of these representations, Peel requests that land at Gatehouse Lane is removed from the countryside.

Summary:
It should be made clear in the policy text and proposals map that DSA sites have been removed from the countryside. Peel requests that all of the Airport Masterplans demise is removed from the countryside, including the proposed rail corridor, Hurst Wood and Marr Flatts Plantation, as well as Gatehouse Lane Site 1010.

Response:
The Council, and local planning policy, broadly supports the published Growth Plan and is generally supportive of the aspirations included within it. Policy 7 ensures the Council has sufficient overall policy input to ensure that the Airport delivers sustainable and carefully planned growth. The Local Plan allocates land for residential and employment uses and designates the Airport Operational Area. However, it is not the role of the Local Plan to duplicate the draft Masterplan.
Comment:

We support Policy 26 in principle, however, it is proposed that criteria A of Part 1 is deleted as this criterion is not in conformity with the 2018 NPPF. The NPPF, states that "Planning policies and decisions should avoid the development of isolated homes in the countryside unless one or more of the following circumstances apply? C) the development would re-use redundant or disused buildings and enhance its immediate setting". With regard to Green Belt, it goes on to say that "A local planning authority should regard the construction of new buildings as inappropriate in the Green Belt. Exceptions to this are: c) the extension or alteration of a building provided that it does not result in disproportionate additions over and above the size of the original building". It is therefore considered that criteria A of Part 1 of Policy 26 should be deleted to ensure the emerging Local Plan is in conformity with the revised NPPF when considering proposals that involve the conversion of buildings in the countryside.

Summary:

Support Policy 26 in principle. However, criteria A of Part 1 should be deleted as this is not in conformity with the 2018 NPPF. It is therefore considered that criteria A of Part 1 of Policy 26 should be deleted to ensure the emerging Local Plan is in conformity with the revised NPPF when considering proposals that involve the conversion of buildings in the countryside.

Response:

Policy 26 is in conformity with the NPPF. Policy is included to avoid development by re-use/conversion where it would be excessive effectively amounting to a completely new building. Supporting text in para 9.10 includes a guide to what is likely to considered acceptable in terms of volume increase of an original building. As such the policy is the local interpretation of national policy.
We support Policy 26 in principle, however, it is proposed that criteria A of Part 1 is deleted as this criterion is not in conformity with the 2018 NPPF. Response:
Policy 26 is in conformity with the NPPF. Policy is included to avoid development by re-use/conversion where it would be excessive effectively amounting to a completely new building. Supporting text in para 9.10 includes a guide to what is likely to considered acceptable in terms of volume increase of an original building. As such the policy is the local interpretation of national policy.
Policy 26 (Development in the Countryside) seeks to restrict new dwellings in the countryside beyond what paragraph 79 of the NPPF envisages. The policy seeks to apply the restrictions in paragraph 79 which should only apply to isolated dwellings to any proposal for housing in the countryside. This approach directly contradicts national planning policy in the NPPF and Planning Practice Guidance. The NPPF approach towards the role of rural housing was previously set out in paragraphs 54 and 55 of the 2012 NPPF. This is now set out in paragraphs 77, 78 and 79 of the 2019 NPPF, however the overall approach towards rural housing has not been amended, therefore previous appeal and case law interpretations of paragraph 55 of the 2012 NPPF remain valid and relevant to the determination of conformity with national planning policy. Paragraph 78 of the 2019 NPPF states: "To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby." In some respects this approach is more explicit than the former NPPF that villages, even small villages should be given an opportunity to grow and thrive. The Doncaster Local Plan seeks to resist residential development in the countryside generally. It goes well beyond resisting isolated dwellings in the countryside. Sites in settlements and groupings of development that may not be identified as a defined village can in no way can be considered to be isolated in our view. The Framework does not define "isolated", therefore Inspectors tend to rely on the everyday definition of the word as meaning lonely or remote or as the Courts have concluded "far away from people or places". The countryside is proposed to wash over settlements that are not identified as a defined village and groupings of development that are not visually or physically isolated, and are not functionally isolated relative to services and facilities. The High Court judgment in Braintree District Council v Secretary of State for Communities and Local Government & Ors [2017] handed down on 15th November 2017 regarding paragraph 55 of the 2012 NPPF and new isolated homes in the countryside. The High Court judgment considers that "isolated" should be given its ordinary objective meaning of "far away from other places, buildings or people; remote". Consequently any proposed new residential property within or on the edge of a settlement including settlements that are not identified as a defined village and groupings of development cannot be considered isolated in terms of paragraph 55 of the previous 2012 NPPF, new paragraph 79 of the 2019 NPPF. This judgement has been confirmed as being perfectly valid in the Court of Appeal. At this time the obiter of Lord Justice Lindblom in the Court of Appeal In Braintree District Council v Secretary of State for Communities & Local Government [2018] is highly relevant. In paragraph 32 of his judgement he states: "What constitutes a settlement for these purposes is also left undefined in the NPPF. The NPPF contains no definitions of a "community", a "settlement", or a "village". There is no specified minimum number of dwellings, or population. It is not said that a settlement or development boundary must have been fixed in an adopted or emerging local plan, or that only the land and buildings within that settlement or development boundary will constitute the settlement. In my view a settlement would not necessarily exclude a hamlet or a cluster of dwellings, without, for example, a shop or post office of its own, or a school or community hall or a public house nearby, or public transport within easy reach. Whether, in a particular case, a group of dwellings constitutes a settlement, or a "village", for the purposes of the policy will again be a matter of fact and planning judgment for the decision-maker. In the second sentence of paragraph 55 the policy acknowledges that development in one village may "support services" in another. It does not stipulate that, to be a "village", a settlement must have any "services" of its own, let alone "services" of any specified kind." The obiter of Lord Justice Lindblom is clear that in his view the NPPF does not require a grouping of development to be either within a defined settlement boundary or be designated as such in a development plan to fall to be considered to be a 'settlement'. In addition he is also clear that a grouping of development does not need to be any minimum size or have any services and facilities to be deemed to be a 'settlement' in planning terms. The obiter of Lord Justice Lindblom in paragraphs 30 and 31 of the Court of Appeal judgement also referred to "isolated" as meaning "?standing apart or alone, detached or separate from other things or persons; unconnected with anything else; solitary?" He then went on to clearly state: "In my view, in its particular context in paragraph 55 of the NPPF, the word "isolated" in the phrase "isolated homes in the countryside" simply connotes a dwelling that is physically separate or remote from a settlement. Whether a proposed new dwelling is, or is not, "isolated" in this sense will be a matter of fact and planning judgment for the decision-maker in the particular circumstances of the case in hand." The restrictive approach of Policies 2 and 26 is in our view clearly inconsistent with National Planning Policy in paragraphs 78 and 79 of the NPPF; the advice in Planning Practice Guidance; and case law established in both of the Braintree cases. Again the obiter of Lord Justice Lindblom in the Court of Appeal in Braintree District Council v Secretary of State for Communities & Local Government [2018] is highly relevant. In paragraph 29 of his judgement he states: "?the policy explicitly concerns the location of new housing development. The first sentence of paragraph 55 tells authorities where housing should be "located". The location is "where it will enhance or maintain the vitality of rural communities". The concept of the "vitality" of such a community is wide, and undefined. The example given in the second sentence of paragraph 55 - "development in one village" that "may support services in a village nearby" - does not limit the notion of "vitality" to a consideration of "services" alone. But it does show that the policy sees a possible benefit of developing housing in a rural settlement with no, or relatively few, services of its own. The third sentence of the paragraph enjoins authorities to avoid "new isolated homes in the countryside". This is a distinction between places. The contrast is explicitly and simply a geographical one. Taken in the context of the preceding two sentences, it simply differentiates between the development of housing within a settlement - or "village" - and new dwellings that would be "isolated" in the sense of being separate or remote from a settlement. Under the
The introduction to Chapter 9 is clear that the Plan's strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough's smaller settlements, and subject to policy criteria in Part 5 A-E, in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Without such a policy approach there would be significant pressure for proposals for development on the edge of, or near to, settlements throughout the borough - which would be clearly unsustainable. This would be contrary to NPPF policy in para 170b that planning decisions should recognise the 'intrinsic character and beauty of the countryside?. To allow such development would lead to an un-planned gradual erosion of the character of the countryside and setting of settlements.
Policy 26 (Development in the Countryside) seeks to unduly restrict the size of replacement dwellings and extensions to dwellings in the countryside without explaining why a 40% increase threshold is appropriate. In relation to extensions to dwellings Parliament has not seen fit to consider it necessary to apply different permitted development rights to dwellings in the countryside to those in settlements. As such a dwelling in the countryside benefits from the standard generous permitted development rights. Dwellings in the countryside tend to be sited within larger plots than many urban dwellings. Cumulatively such permitted development rights potentially allow for a dwelling to be extended by more than 40%, for example a single storey dwelling could have an extension with a width no greater than half the width of the original dwelling house. This would be a 50% increase in itself in a single extension which then combined with the type of rear extension allowable could easily result in a cumulative scale of extension in some cases around a 100% increase. Consequently the Policy is seeking to impose an unduly restrictive approach on the scale of extensions where planning permission is required. In cases where planning permission is required therefore the Council is seeking to be restrictive than that which is likely to be permissible under permitted development rights. There is no evidence or rationale set out to explain why a 40% increase threshold is necessary in Doncaster. It is also an inflexible criteria which does not cater for the varied planning circumstances found in Doncaster. It is also inconsistent with the latter policy criteria on replacement dwellings where the 40% increase threshold only applies where it would have a significant impact on the character of the countryside. It is unclear why a more restrictive approach towards extending existing dwellings is justified compared to replacement dwellings. This could result in an unintended consequence of parties considering that it may be easier to seek a replacement dwelling rather than extending an existing dwelling. Making effective benefit use of existing dwelling stock, including through renovation and extension is an important contributor to sustainable development. The Local Plan includes no percentage increase threshold on extensions to dwellings in settlements, there is no rationale put forward as to why a different approach in the countryside is necessary or appropriate. The 40% threshold also applies to increases in size of outbuildings, for example this would prevent a household going from a single garage to a double garage which would be an unreasonable restriction in circumstances where planning permission is required. This could result in the unintended consequence of householders pursuing poor designs to stay within permitted development rights rather than have to apply for planning permission. For example looking at using a flat roof extension to a garage rather than using a well-designed pitched roof. In relation to replacement dwellings again the Policy refers to a 40% increase threshold where it would have a significant impact on the character of the countryside. As such there is no threshold for circumstances where a replacement dwelling would not have a significant impact on the character of the countryside. However paragraph 9.11 implies that the 40% threshold criteria applies in all cases. As such there is fundamental inconsistency in the Policy and its supporting text. Again there is no evidence or rationale set out to explain why a 40% increase threshold is necessary in Doncaster. It is also an inflexible criteria which does not cater for the varied planning circumstances found in Doncaster.

PROPOSED CHANGE Amend Policy 26 as follows: Part 2: Replacement of a Dwelling and Extensions to Existing Dwellings Proposals for the replacement of a dwelling in the Countryside will be supported provided that: A) the original building is permanent and is not the result of a temporary permission; B) the original building has not become derelict or previous residential use abandoned; C) replacement dwellings are positioned on a comparable footprint, and in close proximity, to the original building unless it can be demonstrated that the re-positioning would be significantly more beneficial (to, for example, the character and appearance of the site and locality). (LAST SENTENCE OF PART C TO DELETE - SHOWN AS STRIKETHROUGH ON REP BUT THIS CANNOT BE SHOWN) D) the proposal does not adversely affect neighbouring residential amenity; and E) it would not undermine the retention of any occupancy condition. Proposals to extend existing dwellings in the Countryside, or any other building within its curtilage, will be supported provided that Criteria A, B, D & E above are satisfied; and that: SENTENCE F TO DELETE - SHOWN AS STRIKETHROUGH ON REP BUT THIS CANNOT BE SHOWN G) would not have a visual impact prejudicial to the character of the building or the amenity of the countryside. Amend the supporting text to Policy 26 as follows: 9.8. Proposals to replace or extend dwellings in the Countryside will be subject to Part 2 of the Policy to assess the proposal 9.9 / 9.10 / 9.11 TO DELETE - SHOWN AS STRIKETHROUGH ON REP BUT THIS CANNOT BE SHOWN

Summary:

Policy 26 (Development in the Countryside) seeks to unduly restrict the size of replacement dwellings and extensions to dwellings in the countryside without explaining why a 40% increase threshold is appropriate. Permitted development rights to dwellings in the countryside have not been distinguished differently to those in settlements. Therefore a dwelling in the countryside benefits from the standard generous PD rights. As a consequence to Policy 26, where planning permission is required for development the council is seeking to be restrictive than that where planning permission is not normally required under PD. There is no evidence or rationale set out to explain why a 40% increase threshold is necessary in Doncaster. It is also an inflexible criteria which does not cater for the varied planning circumstances. It could result in an unintended consequence of parties considering that it may be easier to seek a replacement dwelling rather than extending an existing dwelling. The threshold also applies to increases in size of outbuildings, which would be unreasonable and could result as an unintended consequence of poor design to stay within PD rights.
Policy 26 is in conformity with the NPPF. Policy is included to avoid development by re-use/conversion where it would be excessive effectively amounting to a completely new building. Supporting text in para 9.10 includes a guide to what is likely to considered acceptable in terms of volume increase of an original building. As such the policy is the local interpretation of national policy.

Comment Ref: C/Policy 26/05014/1/005

Comment: Part 4: New Non-Residential Development in the Countryside UKOOG Response: The policy states: ‘Proposals for non-residential developments will be supported in the countryside provided that; A) The rural location of the enterprise is justifiable to support a prosperous rural economy in accordance with national policy in the NPPF; B) The location of the enterprise would not have a significant adverse effect on neighbouring uses or on highway safety; C) The development is of a size (including floor space) and scale commensurate with an existing use, or that reasonably required for a new use and with the rural character of the location; and D) The scale and design of the proposal would not have a significant adverse impact on the landscape; E) Proposals for the provision or expansion of the existing uses can demonstrate that the need for such development are not met by existing facilities in existing settlements’. This policy must reflect that minerals, including oil and gas, can only be worked where they are found, as clearly stated in the WMS 2018, and temporary in nature. It is our view, that the policy as currently drafted does not take account of the temporary nature, or that impacts can be avoided through good design or through mitigation to acceptable levels on a case by case basis, with sites being restored to their former, or an agreed improved, condition once the site is decommissioned.

Summary: Policy 26 part 4. As stated in the WMS 2018, this policy must reflect that minerals including oil and gas, can only be worked where they are found (the working of which is temporary). National policy (para 146) also identifies mineral extraction is not inappropriate in the greenbelt and para 203 reiterates minerals can only be worked where they are found.

Response: Comment noted. The local plan should be read as a whole. See minerals policies and paragraph 14.33, which cover temporary nature of mineral workings.
Whilst it is appreciated that this policy primarily relates to residential development, it does provide for new non-residential development in the countryside. Part 4 of the Policy should recognise that there are other types of development that could be acceptable, or could be made acceptable in countryside areas. The Plan should recognise that minerals can only be worked where they occur and are of a temporary nature. For the purposes of onshore oil and gas, this is clearly set out in the Written Ministerial Statement (WMS) of May 2018. Whilst supporting non-residential development outside development limits and within countryside areas, the policy does not take account of the temporary nature of mineral developments. Similarly it does not recognise that potential impacts can be avoided or mitigated for through good design to acceptable levels on a case by case basis. All mineral operations are temporary, but onshore oil and gas exploration and appraisal sites may be over a relatively very short time period with land being restored to its former use, or an agreed improved, condition once a site is decommissioned. In this respect, there should be stronger support for temporary developments in the countryside.

Summary:
Policy 26. Part 4 should recognise that other types of development are acceptable in the countryside as set out in ministerial statement May 2018. Should be stronger support for temporary development in the countryside

Response:
Comment noted. The local plan should be read as a whole. See paragraph 14.33 in the minerals chapter, which covers temporary nature of mineral workings.
Reason: To fully represent our clients land interest and respond to matters that may be raised at the hearing sessions.

Area: Chapter 9: Countryside
Policy: Policy 26: Development in the Countryside

Tests of Soundness: Positively prepared, Effective, Legally Compliant, Justified, Consistent with national

Comment:
Policy 26 (Development in the Countryside) is not sound as it has not been positively prepared and is not consistent with the NPPF. Paragraph 9.2 which supports Policy 26 confirms the approach within the emerging Local Plan is to categorise all land out with settlement boundaries as either Countryside or Green Belt however, Policy 26 sets more restrictive criteria for development within the Countryside. Whilst there is clearly a tension which needs to be addressed between Policy 2 and Policy 26 (as is outlined under our response to Policy 2 above) it is clear that this is a policy strategy of constraining development rather than directing sustainable development to meet need. The Countryside designation is misleading and implies a strong degree of protection, akin to that of the Green Belt which is not required. Whilst the NPPF identifies the need to recognise the intrinsic character and beauty of the countryside as part of the pursuit of sustainable development, it does not direct that all countryside should be protected for its own sake. The recent strong delivery in Doncaster shows market demand and demonstrates an imperative need for flexibility which Policy 26 (and by virtue of this, Policy 2) currently does not afford. We trust these comments will be taken into account in the review of the Local Plan prior to submission.

Summary:
Objects to Policy 26 (Development in the Countryside) as not sound as it has not been positively prepared and is not consistent with the NPPF. Para 9.2 confirms the approach is to categorise all land out with settlement boundaries as either Countryside or Green Belt however, Policy 26 sets more restrictive criteria for development within the Countryside. This is a policy strategy of constraining development rather than directing sustainable development to meet need. The Countryside designation is misleading and implies a strong degree of protection, akin to that of the Green Belt which is not required. NPPF identifies the need to recognise the intrinsic character and beauty of the countryside as part of the pursuit of sustainable development, it does not direct that all countryside should be protected for its own sake. The recent strong delivery in Doncaster shows market demand and demonstrates an imperative need for flexibility which Policy 26 (and by virtue of this, Policy 2) currently does not afford.

Response:
All policies in the Local Plan need to be read together (para 1.14 of the Plan’s introduction highlights this). The introduction to Chapter 9 is clear that the Plan’s strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough’s smaller settlements, and subject to policy criteria in Part 5 A-E, in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Further detail is given in the Settlement Strategy Background Paper.
**Reason:** We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

**Area:** Chapter 9: Countryside

**Policy:** Policy 26: Development in the Countryside

Area: Chapter 9: Countryside

Policy: Policy 26: Development in the Countryside

Tests of Soundness: Positively prepared

Consistent with national

Comment:

This policy is overly restrictive and not in accordance with the NPPF. It is not positively prepared as it places restrictions on residential development outside of development limits defined in policy 2 is not consistent with national policy. This is discussed further above under policy 2.

Summary:

Policy 26 is overly restrictive and not in accordance with the NPPF. It is not positively prepared as it places restrictions on residential development outside of development limits defined in policy 2 is not consistent with national policy. This is discussed further under policy 2.

Response:

All policies in the Local Plan need to be read together (para 1.14 of the Plan’s introduction highlights this). The introduction to Chapter 9 is clear that the Plan’s strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough’s smaller settlements, and subject to policy criteria in Part S A-E, in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Further detail is given in the Settlement Strategy Background Paper.
Policy 26 (Development in the Countryside) is not sound as it has not been positively prepared and is not consistent with the NPPF. Paragraph 9.2 which supports Policy 26 confirms the approach within the emerging Local Plan is to categorise all land out with settlement boundaries as either Countryside or Green Belt however, Policy 26 sets more restrictive criteria for development within the Countryside. Whilst there is clearly a tension which needs to be addressed between Policy 2 and Policy 26 (as is outlined under our response to Policy 2 above) it is clear that this is a policy strategy of constraining development rather than directing sustainable development to meet need. The Countryside designation is misleading and implies a strong degree of protection, akin to that of the Green Belt which is not required. Whilst the NPPF identifies the need to recognise the intrinsic character and beauty of the countryside as part of the pursuit of sustainable development, it does not direct that all countryside should be protected for its own sake. The recent strong delivery in Doncaster shows market demand and demonstrates an imperative need for flexibility which Policy 26 (and by virtue of this, Policy 2) currently does not afford.

Summary:
Policy 26 - Development in the Countryside. 1. This Policy is aimed at constraining development rather than direct sustainable development to meet need. 2. There is a need for flexiblity which this Policy does not afford.

Response:
All policies in the Local Plan need to be read together (para 1.14 of the Plan’s introduction highlights this). The introduction to Chapter 9 is clear that the Plan’s strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough’s smaller settlements, and subject to policy criteria in Part 5 A-E, in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive and flexible towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Further detail is given in the Settlement Strategy Background Paper.
6.1 This section reviews other draft policies in the emerging Local Plan which are relevant to major housing development. 6.2 Draft Policy 2 sets out that residential development will be supported in the Countryside if adjacent to a Development Limit of a settlement in Levels 1-3 and will meet a number of criteria. As drafted, Don Parkinson considers that the policy is unsound and not positively prepared or justified. It is considered that the Council should consider unallocated sites which may come forward during the plan period which are considered to be sustainable development. Part 5e is considered to be unduly onerous and is totally unjustified. As drafted it restricts any unallocated development which is found to be sustainable, the NPPF is clear that five year supply and proposed allocations should identify a minimum of housing. 6.3 Furthermore, it is considered that the Development Limits of Thorne should be amended to include the subject site (Sites 002,003, 004 and 005). 6.4 Draft Policy 26 sets out that planning permission for new dwellings within the Countryside will be granted for dwellings to meet the essential needs of agriculture, forestry, or other enterprise which justifies a rural location (which also meets a range of criteria). The policy does not take into account that some areas of Countryside identified on the policies map is located adjacent to Main Towns which are more urban in character than rural. The policy should be amended to support the delivery of unallocated housing sites which may come forward within such areas. 6.5 Don Parkinson considers that draft Policy 2 and 26 as drafted is unsound and not effective or justified. The Council should seek to amend the policies as discussed above.

Summary:
Policy 2: This Policy is unsound and not positively prepared or justified. The Council should consider unallocated sites which may come forward during the plan period which are considered to be sustainable development. Part 5e is unduly onerous and is totally unjustified. It currently restricts any unallocated development that is sustainable. The NPPF is clear that a five year supply and proposed allocations should identify a minimum of housing. The development limits of Thorne should be amended to include the subject site (Sites 002,003, 004 and 005). Policy 26: is unsound and not effective or justified. This policy does not take into account that some areas of Countryside identified on the policies map are located adjacent to Main Towns which are more urban in character than rural. The policy should be amended to support the delivery of unallocated housing sites which may come forward within such areas.

Response:
The introduction to Chapter 9 is clear that the Plan’s strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough’s smaller settlements, and subject to policy criteria in Part 5 A-E, in the Countryside if adjacent to a Development Limit of a settlement in Levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Part 5E of Policy 2 allows for planned flexibility in those circumstances where there is a lack of a 5 year housing land supply - this maintains the primacy of the Development Plan but allows development adjacent to settlements in tiers 1-3 of the settlement hierarchy in the circumstances set out. Without such a policy approach there would be significant pressure for proposals for development on the edge of, or near to, settlements throughout the borough - which would be clearly unsustainable. This would be contrary to NPPF policy in para 170b that planning decisions should recognise the ‘intrinsic character and beauty of the countryside’. To allow such development would lead to an un-planned gradual erosion of the character of the countryside and setting of settlements.
6.1 This section reviews other draft policies in the emerging Local Plan which are relevant to major housing development. 6.2 Draft Policy 2 sets out that residential development will be supported in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 and will meet a number of criteria. The policy should be amended to support the delivery of unallocated housing sites which may come forward within such areas.

Response:

The introduction to Chapter 9 is clear that the Plan’s strategic approach to Countryside is set out in Policy 2. Policy 2 adopts a settlement hierarchy to direct development to the more sustainable settlements. Some development is supported in the Borough’s smaller settlements, and subject to policy criteria in Part 5 A-E, in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 of the hierarchy, and in exceptional circumstances (as defined) in the Countryside adjacent to Defined Villages. This adopts an approach which is consistent with NPPF policy and which is positive towards supporting rural housing which together with Policy 26 adopts a sound measured approach to considering development proposals in the Countryside. Part 5E of Policy 2 allows for planned flexibility in those circumstances where there is a lack of a 5 year housing land supply - this maintains the primacy of the Development Plan but allows development adjacent to settlements in tiers 1-3 of the settlement hierarchy in the circumstances set out. Without such a policy approach there would be significant pressure for proposals for development on the edge of, or near to, settlements throughout the borough - which would be clearly unsustainable. This would be contrary to NPPF policy in para 170b that planning decisions should recognise the 'intrinsic character and beauty of the countryside’. To allow such development would lead to an un-planned gradual erosion of the character of the countryside and setting of settlements.

Page 696
Comment:
We previously highlighted that the integrity of the riparian (bank-side) habitat is a key component of the whole river system and should be maintained as a general principle, and also suggested that a 10m buffer should be maintained from the water’s edge for all main rivers and streams to allow space for wildlife in an undisturbed area. There is no response in the consultation summary on this matter, however, we note that Policy 31, point A) 3 refers to provision of appropriate buffers around wildlife features. Any proposals adjacent to a main river may be subject to Environmental Permitting requirements therefore, developers will also need to comply with our requirements where permits are granted.

Summary:
Policy 27 - Green Infrastructure - previously suggested a 10m buffer to riverbanks should be maintained to support habitats and public access. No response to this provided but note Policy 31 A3 refers to provision of appropriate buffers around wildlife features

Response:
Agree that other policies in the Local Plan would be relevant (Policy 31: Valuing Biodiversity & Geodiversity) and the approach of the whole local plan has been to avoid duplication wherever possible as some of the responses have been critical of the length of the document already.
Many parts of the Green Infrastructure network either contribute to the setting and appreciation of the Borough's heritage assets or are heritage assets in their own right (such as the Historic Parks and Gardens). We support this Policy which will help to ensure the continued protection and enhancement of this network.

**Summary:**
'Sound'. Many parts of the Green Infrastructure network either contribute to the setting and appreciation of the Borough's heritage assets or are heritage assets in their own right (such as the Historic Parks and Gardens). We support this Policy which will help to ensure the continued protection and enhancement of this network.

**Response:**
Support welcomed

Comment:

GI A) 4 asks development to consider tranquillity. This does not go far enough in interpreting NPPF 180a which requires 'development to mitigate and reduce to a minimum potential adverse impacts resulting from noise from new development - and avoid noise giving rise to significant adverse impacts on health and the quality of life, and wildlife'. PROPOSED CHANGE The language of this policy needs amending to strengthen protection relating to tranquillity.

Summary:

GI A) 4 asks development to consider tranquillity. This does not go far enough in interpreting NPPF 180a which requires 'development to mitigate and reduce to a minimum potential adverse impacts resulting from noise from new development - and avoid noise giving rise to significant adverse impacts on health and the quality of life, and wildlife'. Proposed change: The language of this policy needs amending to strengthen protection relating to tranquillity.

Response:

Comment Noted. No proposed change. With regard to policy 27 A.4. It is for the developer to (through a GI masterplan) to consider tranquillity. There is no additional government guidance for strengthening protection relating to tranquillity.
3.26 Policy 27 sets out that the Council will protect, maintain and enhance (and where possible, extend or create) Doncaster’s green infrastructure (GI), which includes features such as open spaces and biodiversity, through several principles. The principles include, but are not limited to, the following: A) Proposals will be supported which contribute toward green infrastructure and have regard to the latest GI audits and strategies. The green infrastructure should principally benefit the development and also connect to the wider network. Major development proposals of 30 family dwellings or more will be required to provide a GI masterplan demonstrating how the development: 1. contributes toward delivering identified opportunities, priorities and address deficiencies; 2. creates or enhances green corridors, including rights of way; 3. provides specific and dedicated spaces for wildlife to encourage a more robust and connected network of habitats; 4. considers tranquillity and provide for generous biodiversity rich open spaces; 5. provides well designed and accessible, sport, recreation and children’s play space and food growing opportunities; 6. avoids loss or damage or deterioration to green infrastructure assets; 7. defines and softens the edges of settlements to provide a high quality transition between urban and rural areas particularly at urban greenfield extensions; 8. meets the Council’s requirements in terms of type, detailed siting, size, shape and design; 9. helps people and wildlife adapt to the impacts of climate change by including naturalised forms of flood storage and / or incorporating additional tree planting within developments, and; 10. provides for long term protection and climate change resilience through smart developments, management and maintenance. 3.27 We object to the current wording of Policy 27 due to the lack of clarity as to the measures that are required and the viability of providing these measures. Recommendation 3.28 The Council should seek to quantify Policy 27 by setting out the specific nature of matters required to satisfy the policy, in order to ensure that the policy is effective and therefore sound. If it is not possible to do so, the policy should be deleted. Justification 3.29 Policy 27 is inadequately clear in respect of measures needed to ensure compliance.

Response:

Comment Noted. Proposed to delete wording ‘30 houses’ and replace with 1 hectare, to cover all types of development. The specific nature of requirements to be satisfied are clearly identified in the bullet points of the policy. Given each development proposal is different, the starting point for the specific GI requirements can be identified through pre-application talks. Green infrastructure should be considered at the outset and addressed as an integral part of any new development. The supporting text clarifies what is needed. Applicants should be providing development proposals that deliver good quality, sustainable schemes and green infrastructure is an essential part of this. NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places. Paragraph 150 identifies that development in vulnerable areas can be managed through suitable adaptation measures, including through the planning of green infrastructure. Paragraph 181 identifies the importance of GI in Air Quality Management Areas and Clean Air Zones.
Comment:
We strongly welcome the content of part B of this policy, which relates to proposals adjacent or near to waterways. The general principles identified could significantly assist in promoting future use of the waterway corridors for public use, including walking and cycling (which would promote healthy lifestyles) and could also help promote waterside based regeneration activities. The wording provides clarity as to how development next to waterways should be designed to maximise the benefits of their location. We welcome amendments to the wording in part B, which makes it more explicit that the aims of this policy should apply to all proposals adjacent or near to waterways, which should maximise the opportunities for the borough to promote the use of its waterside space.

Summary:
We strongly welcome the content of part B of this policy, which relates to proposals adjacent or near to waterways. The general principles identified could significantly assist in promoting future use of the waterway corridors for public use, including walking and cycling (which would promote healthy lifestyles) and could also help promote waterside based regeneration activities. The wording provides clarity as to how development next to waterways should be designed to maximise the benefits of their location. We welcome amendments to the wording in part B, which makes it more explicit that the aims of this policy should apply to all proposals adjacent or near to waterways, which should maximise the opportunities for the borough to promote the use of its waterside space.

Response:
Support noted.
2.35 Policy 27 sets out that the Council will protect, maintain and enhance (and where possible, extend or create) Doncaster’s green infrastructure (GI), which includes features such as open spaces and biodiversity, through several principles. The principles include, but are not limited to, the following: a) Proposals will be supported which contribute toward green infrastructure and have regard to the latest GI audits and strategies. The green infrastructure should principally benefit the development and also connect to the wide network. Major development proposals of 30 family dwellings or more will be required to provide a GI masterplan demonstrating how the development: 1. contributes toward delivering identified opportunities, priorities and address deficiencies; 2. creates or enhances green corridors, including rights of way; 3. provides specific and dedicated spaces for wildlife to encourage a more robust and connected network of habitats; 4. considers tranquillity and provide for generous biodiversity rich open spaces; 5. provides well designed and accessible, sport, recreation and children’s play space and food growing opportunities; 6. avoids loss or damage or deterioration to green infrastructure assets; 7. defines and softens the edges of settlements to provide a high quality transition between urban and rural areas particularly at urban greenfield extensions; 8. meets the Council's requirements in terms of type, detailed siting, size, shape and design; 9. helps people and wildlife adapt to the impacts of climate change by including naturalised forms of flood storage and / or incorporating additional tree planting within developments, and; 10. provides for long term protection and climate change resilience through smart developments, management and maintenance. 2.36 We object to the current wording of Policy 27 due to the lack of clarity as to the measures that are required and the viability of providing these measures. Recommendation 2.37 The Council should seek to quantify Policy 27 by setting out the specific nature of matters required to satisfy the policy, in order to ensure that the policy is effective and therefore sound. If it is not possible to do so, the policy should be deleted. Justification 2.38 Policy 27 is inadequately clear in respect of measures needed to ensure compliance.

**Response:**

Comment Noted. Proposed to delete wording '30 houses' and replace with 1 hectare, to cover all types of development. The specific nature of requirements to be satisfied are clearly identified in the bullet points of the policy. Given each development proposal is different, the starting point for the specific GI requirements can be identified through pre-application talks. Green infrastructure should be considered at the outset and addressed as an integral part of any new development. The supporting text clarifies what is needed. Applicants should be providing development proposals that deliver good quality, sustainable schemes and green infrastructure is an essential part of this. NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places. Paragraph 150 identifies that development in vulnerable areas can be managed through suitable adaptation measures, including through the planning of green infrastructure. Paragraph 181 identifies the importance of GI in Air Quality Management Areas and Clean Air Zones.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 10: Green Infrastructure
Policy: Policy 27: Green Infrastructure

Tests of Soundness:
Justified

Comment:
This policy places overly restrictive requirements on developers which could affect the deliverability of sites across the Borough. The requirement of a green infrastructure masterplan for all residential development proposals comprising more than 30 homes is unnecessarily onerous. Flexibility should be added to the policy to ensure that a green infrastructure masterplan is only required where it is clearly and demonstrably necessary. As it stands, the policy is not justified and does not provide an appropriate strategy.

Summary:

### Response:
Comment noted. Proposed to delete wording '30 houses' and replace with 1 hectare, to cover all types of development. NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places. Paragraph 150 identifies that development in vulnerable areas can be managed through suitable adaptation measures, including through the planning of green infrastructure. Paragraph 181 identifies the importance of GI in Air Quality Management Areas and Clean Air Zones. the provision of a green infrastructure masterplan is best placed to provide this information.
2.38 The policy requires development proposals to provide a green infrastructure masterplan, in order to demonstrate how proposals will retain and/or enhance, as well as create new green infrastructure. As highlighted through the previous consultation window, our Client agrees that a policy should be included within the plan regarding green infrastructure, however they object to the contents of the policy as currently worded. 2.39 The requirement for a specific document should be dealt with via the Council’s local validation checklist, rather than within a planning policy. As such, the requirement for the green infrastructure plan should be removed from the policy. 2.40 In addition to the above, our Client questions the need to a green infrastructure plan and what ultimately it will achieve. Most developments will include a landscape masterplan and a biodiversity management plan and it is contended that such documents will provide the Council with sufficient comfort that green infrastructure will be addressed through proposed developments. To request that this information is then drawn together into another separate document is unnecessary and overly onerous. The policy is not justified, effective or in accordance with national planning guidance and as such is unsound, failing to meet the tests of paragraph 35 of the Framework.

Summary:
Policy 27 - Green and Blue Infrastructure 1. Supports objectives of policy. 2. Objects to having to provide a separate Green Infrastructure document. 3. Should be covered by Local Validation checklist 4. Requirement for a Green infrastructure plan should be removed from the Policy. 5. Questions the need for a green infrastructure plan and what ultimately it will achieve. 6. Most developments will include a landscape masterplan and a biodiversity management plan therefore a separate document is not needed. 7. Provision is not in conformity with NPPF.

Response:
Comment noted. Proposed to delete wording '30 houses' and replace with 1 hectare, to cover all types of development. NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places. Paragraph 181 identifies the importance of GI in Air Quality Management Areas and Clean Air Zones. the provision of a green infrastructure masterplan is best placed to provide this information.
A number of Doncaster’s green infrastructure assets are identified on the Policies Map linked to specific policies such as open space, local wildlife and geological sites, woodlands, tree and hedgerows. A hierarchy of Green Infrastructure corridors, identifying key nodes, assets and project areas, has been developed in conjunction with Natural England. These connect or are capable of connecting green spaces to improve green infrastructure and wildlife connectivity. Comments: The Site is directly adjacent to an LNR/SSSI and is on and/or adjacent to the Sandal Beat/ Loversall Green and Bawtry Forest Infrastructure Corridors. This has been totally ignored in the assessment in considering whether or not this Site is suitable for development. The Site should be identified on the Policies Map as a green infrastructure asset.

Response:
Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal.
The impacts of climate change are far reaching, with one of the simplest solutions being the incorporation of additional tree planting within new developments to alleviate temperature fluctuations and improve flood storage capacity. The additional tree planting will contribute toward achieving a low carbon borough by aspiring toward a tree canopy cover of 20% from 12.2% in 2018. Comments: In the context of the Local Plan's policies on Green Infrastructure, it makes no logical sense to destroy the Site which has a large number of mature trees and younger trees on it and expect that this can be compensated for by "additional tree planting within new developments". Contrary to the comment in 10.12 that this is "the simplest solution" to the impact of climate change, the simplest solution is clearly not to develop greenfield sites (such as the Site) which support a population of existing trees and other diverse flora and fauna but to develop brownfield or other sites not supporting such habitats. Further, non-development of the site will assist in DMBC's aspiration to be a low carbon borough and help in achieving the 20% tree canopy target. Destruction of the Site will be detrimental and counter-productive to achievement of this aim.

Summary:
Site Ref 350/407 - Rosehill - In the context of the Local Plan's policies on Green Infrastructure, it makes no logical sense to destroy the Site which has a large number of mature trees and younger trees on it and expect that this can be compensated for by "additional tree planting within new developments". Contrary to the comment in 10.12 that this is "the simplest solution" to the impact of climate change, the simplest solution is clearly not to develop greenfield sites (such as the Site) which support a population of existing trees and other diverse flora and fauna but to develop brownfield or other sites not supporting such habitats. Further, non-development of the site will assist in DMBC's aspiration to be a low carbon borough and help in achieving the 20% tree canopy target. Destruction of the Site will be detrimental and counter-productive to achievement of this aim.

Response:
Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI).
National planning policy requires new development to protect, restore, maintain, create, enhance and extend green infrastructure and improve connectivity within the network. Development is also required to be sustainable and compensate for damage to the environment whilst expecting the natural environment to function as an integrated network of habitats. Comments: The proposed development of Site 350/407 Rosehill/ The Avenue, Cantley ("the Site") is not in accordance with National Planning Policy. The Site is adjacent to an LNR/SSSI and is on and/or adjacent to the Sandal Beat/ Loversall Green and Bawtry Forest Infrastructure Corridors. Development of this Site will destroy rather than "protect, restore, maintain, create, enhance and extend" the green infrastructure network and will have an adverse impact on connectivity within the network. Further, development on this Site will clearly not be sustainable as the destruction of the diverse and mature natural environment on this Site cannot be compensated for by creation of open spaces elsewhere, or within the proposed development of the Site. The damage to the environment caused by development of this Site is severe and irreparable, especially given the site's location. Generally, the Local Plan is proposing development on a number of sites which will cause irreparable damage to the natural environment and is not sustainable.

**Summary:**

The proposed development of site Ref 350/407 - Rosehill is not in accordance with National Planning Policy. The Site is adjacent to an LNR/SSSI and is on and/or adjacent to the Sandal Beat/ Loversall Green and Bawtry Forest Infrastructure Corridors. Development of this Site will destroy rather than "protect, restore, maintain, create, enhance and extend" the green infrastructure network and will have an adverse impact on connectivity within the network. Further, development on this Site will clearly not be sustainable as the destruction of the diverse and mature natural environment on this Site cannot be compensated for by creation of open spaces elsewhere, or within the proposed development of the Site. The damage to the environment caused by development of this Site is severe and irreparable, especially given the site's location. Generally, the Local Plan is proposing development on a number of sites which will cause irreparable damage to the natural environment and is not sustainable.

**Response:**

Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal.

Comment:

The Council will protect, maintain, enhance and, where possible, extend or create Doncaster’s green infrastructure (GI), including landscapes, ecological networks, natural environment, open spaces, public rights of way, geodiversity, biodiversity, navigable river and waterway assets, through the following principles: Comments: Contrary to Policy 27, development of the Site will not:

- Create, contribute towards or enhance green corridors, including rights of way;
- Provide specific and dedicated spaces for wildlife to encourage a more robust and connected network of habitats; considers tranquillity and provide for generous biodiversity rich open spaces; or
- Avoid loss or damage or deterioration to green infrastructure assets. See further details below.

Summary:

Allocation Ref 350/407 - Rosehill - contradicts with this policy

Response:

Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal.
### Comment:

9.1. Avant Homes is concerned with some aspects of Part A of Policy 27, that require a green infrastructure masterplan on schemes that provide 30 family dwellings or more. Avant Homes consider that this is unnecessarily onerous for schemes at this scale and consider that the Policy 27 is unsound.

9.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

9.3. Avant Homes is concerned with part A of the policy which requires a green infrastructure masterplan for schemes of over 30 family dwellings. Whilst Avant Homes understands the aims and objectives of the policy, Avant Homes consider that the requirement for a Green Infrastructure Masterplan on schemes of this scale is unnecessarily onerous. The requirement to provide a masterplan will add to cost and impact on timescales for delivery, potentially adding up to a year to the planning process.

9.4. Flexibility therefore needs to be incorporated into Policy 27 so that the policy encourages rather than requires the provision of a masterplan for schemes over 30 family dwellings or the threshold should be significantly increased.

9.5. The requirement is not justified, it is unnecessarily onerous and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy.

9.6. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound.

9.7. However, we consider that with increased flexibility in Part A of the Policy the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan.

9.8. To overcome the objection and address soundness matters, the Council should:
- Amend Policy 27 to include flexibility and "encourage" rather than "require" a green infrastructure masterplan or review the threshold that the policy applies.

### Summary:

Policy 27 - Green Infrastructure. 1. Part A is unnecessarily onerous. 2. Should be amended to 'encourage' rather than 'require' a green Infrastructure Masterplan. 3. Or.. Review the threshold for the policy to apply.

### Response:

Comment noted. Proposed to delete wording '30 houses' and replace with 1 hectare, to cover all types of development. NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places. Paragraph 150 identifies that development in vulnerable areas can be managed through suitable adaptation measures, including through the planning of green infrastructure. Paragraph 181 identifies the importance of GI in Air Quality Management Areas and Clean Air Zones. The provision of a green infrastructure masterplan is best placed to provide this information.

Paragraph 181 identifies the importance of GI in Air Quality Management Areas and Clean Air Zones.
Many of the Borough's Conservation Areas Appraisals identify open spaces which are considered to make an important contribution to their character. The loss of these areas, therefore, would result in harm to their historic character. This aspect ought to be reflected in the Policy.

**PROPOSED CHANGE** Policy 28, Criterion B insert an additional Criterion: "The space does not contribute to the character of a Conservation Area or the setting of a designated heritage asset"

**Response:**
Noted and agree, additional criteria proposed (Main Modification) as per the suggested wording provided and as follows: Policy 28 - Protecting Open Space & Non Designated Open Space - Criteria B - new part 6. The space does not contribute to the character of a Conservation Area or the setting of a designated heritage asset.
We have concerns in respect of a proposed Local Green Spaces as defined on the Proposals Map (Criteria D of Policy 28). We do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) as a Local Green Space. This site is solely owned by our client and is private land not subject to a public right of way. It is acknowledged that as part of the emerging Local Plan, the Council invited representations for the allocation of sites for a range of uses. Alongside uses such as housing and employment, the Council also received requests to allocate some sites as 'Local Green Spaces', as per the NPPF. We would like to take this opportunity to comment and refute the proposed allocation of our client's land at Warmsworth as a Local Green Space. Local Green Space is a specific kind of allocation which seeks to preserve areas of Green Space that local communities believe to be significant and if allocated, the land would be protected from future development, similar to that of Green Belt. This response is in respect of land identified as "West Farm Fields between High Road and Low Road West, Warmsworth" (HELAA Site 162) where the Council has assessed the land as being potentially suitable for such an allocation. (SEE EMAIL FOR Figure 11 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth). It can be confirmed that our client is the landowner of this site and it is our understanding that this site was submitted as a potential Local Green Space by the Parish Council. The reasons for the potential allocation is: The proposed green space is an irregular area consisting of several fields between Warmsworth House to the east and bounded by the High Road and Low Road West. Warmsworth House (grade 2 listed) and its converted barns and West Farm and its outbuildings (including a grade 2 listed barn) dominate the western half of the conservation area. From the High Road there are views across the fields to the Warmsworth House group and to the West Farm group which are enhanced by its elevated position. The fields to the west of the conservation area and the buildings of West Farm serve as an important reminder of the rural past of the area thus contributing to the setting of these farm buildings. These provide a visual break between the conservation area and the modern developments to the north and west and an attractive entrance point to the conservation area. Further adding to the historic character of the conservation area are the limestone walls with half round copings that bound the fields. The fields therefore are an important component of the historic character of the conservation area. Development of the fields would compromise this character over the western half of the conservation area and might be considered substantial harm in the language of the NPPF. As explained above the fields adjacent to the farm contribute to the character of the conservation area by providing a clear distinction between the historic character of the conservation area and more modern suburban developments. They allow the farm buildings to be seen in an agricultural context i.e. open fields with stone boundaries adjacent to the farm and also contribute in a similar way to the setting of Warmsworth House and the adjacent converted barn buildings. One caveat to this is that the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found. As well as the listed barn these limestone/clay pantile buildings contribute to the character of the conservation area. I would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings. What the above justification fails to confirm is that the western half of the site is already identified open space in the Doncaster UDP with the rest of the site located within a Residential Policy Area which supports future residential development. Please see an extract below for reference (Figure 12). (SEE EMAIL FOR Figure 12 - Extract from the UPD) We do not dispute this current policy position, however, we strongly contest that the eastern half of the site should be allocated as a Local Green Space. Some of the justification for the proposed allocation of the site as a Local Green Space is due to the site being within the Conservation Area and adjacent to Grade II Listed buildings. Whilst works affecting Listed Buildings or structures and Conservation Areas are subject to additional planning controls under the Planning (Listed Buildings and Conservation Areas) Act 1990, it does not create a blanket ban on development in such areas. Sympathetic development within a Conservation Area can often be an enhancement to an area. Again, with Listed Buildings, well-placed and designed development can act as enhancement. It is therefore considered that this is not strong enough justification to preclude development on this land and for allocating it as a Local Green Space. Another reason for the proposed allocation is its historic past. Whilst there is a rural past, this is not considered significant enough to preclude development in what is currently identified as a residential policy area. It is considered that development could occur whilst still protecting the limestone walls that bound the fields. Also, with the western parcel being retained as open space, this would still provide a visual break in the Conservation Area whilst enabling the eastern half of the site to be used in an effective an efficient manner. Furthermore the trees to the north of the site would remain along the highways verge providing a green strip along High Road. Additionally, this land is in private ownership and is not therefore open to the public. The site is not subject to any Public Rights of Way (see Figure 13 below for reference). (SEE EMAIL FOR Figure 13 Extract from the Doncaster Council’s online Public Right of Way Walking Map) As set out in the justification for the proposal allocation, the Council states that it would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings: “the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found”. In this instance, the flexibility of the surrounding area will need to be maintained in order to develop a proposal which sits sensitively amid the Conservation Area and adjacent listed buildings and therefore allocating the land as a Local Green Space would hinder the future uses of the land and buildings which, could have a significant impact on the actual heritage assets in the area. Proposals could be prepared to be of appropriate scale and massing, and to not pose an adverse impact on the Conservation Area. It is considered that there are no
overriding heritage constraints, which should prohibit development on this site. As such, we strongly contest the allocation of the Local Green Space for the above reasons and therefore request that the land remains as it is currently identified in the UDP Proposals Map or identified as a housing site for a sensitively designed scheme. We therefore request that "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) is deleted as a Local Green Space in the emerging Local Plan and either retains its current designations as part open space and part residential area or is wholly identified as a housing allocation.

Response:
Local Green Space can be on private land, although we would not accept certain arguments on private land unless there is sufficient evidence (e.g. saying the site is of recreational value). However, in the case of historical significance, lack of public access / private ownership / no Public Rights of Way is not necessarily a barrier to allocating a site as Local Green Space. Land does not have to be submitted by the landowner to be considered for this use. It is acknowledged that half the site is already open space as per the UDP, however the Local Plan is replacing this document and thus reconsidering the approach. As noted, the Local Green Space justification for this site does not rule out the margins of the fields being used as enabling development, but for the reasons stated in the Local Green Space document, it is deemed suitable to allocate this site for this reason. If an application were to come forward for such development, it would need to demonstrate "very special circumstances" in line with Green Belt policy, however being as it has already been noted by the Conservation Officer that this would be acceptable in principle, we are confident an appropriate application and justification for this marginal development could be made. This would thus not prevent the allocation of this land as Local Green Space. Arguments related to the ability of development to positively impact on a conservation area are general points and not site specific? the fact development could occur here does not necessarily outweigh the reasons for allocating the site as Local Green Space. Furthermore, the features that could be preserved by developing the site would unquestionably be better preserved by not developing it.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is detailed evidence which will need to be discussed orally.

Policy: Policy 28: Protecting Open Space & Non Designated Open Space

Tests of Soundness: Positively prepared Justified
Effective Consistent with national

Comment:

We have concerns in respect of a proposed Local Green Spaces as defined on the Proposals Map (Criteria D of Policy 28). We do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) as a Local Green Space. This site is solely owned by our client and is private land not subject to a public right of way. It is acknowledged that as part of the emerging Local Plan, the Council invited representations for the allocation of sites for a range of uses. Alongside uses such as housing and employment, the Council also received requests to allocate some sites as 'Local Green Spaces', as per the NPPF. We would like to take this opportunity to comment and refute the proposed allocation of our client's land at Warmsworth as a Local Green Space. Local Green Space is a specific kind of allocation which seeks to preserve areas of Green Space that local communities believe to be significant and if allocated, the land would be protected from future development, similar to that of Green Belt. This response is in respect of land identified as "West Farm Fields between High Road and Low Road West, Warmsworth" (HELAA Site 162) where the Council has assessed the land as being potentially suitable for such an allocation. (SEE EMAIL FOR Figure 11 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth). It can be confirmed that our client is the landowner of this site and it is our understanding that this site was submitted as a potential Local Green Space by the Parish Council. The reasons for the potential allocation is: The proposed green space is an irregular area consisting of several fields between Warmsworth House to the east and bounded by the High Road and Low Road West. Warmsworth House (grade 2 listed) and its converted barns and West Farm and its outbuildings (including a grade 2 listed barn) dominate the western half of the conservation area. From the High Road there are views across the fields to the Warmsworth House group and to the West Farm group which are enhanced by its elevated position. The fields to the west of the conservation area and the buildings of West Farm serve as an important reminder of the rural past of the area thus contributing to the setting of these farm buildings. These provide a visual break between the conservation area and the modern developments to the north and west and an attractive entrance point to the conservation area. Further adding to the historic character of the conservation area are the limestone walls with half round copings that bound the fields. The fields therefore are an important component of the historic character of the conservation area. Development of the fields would compromise this character over the western half of the conservation area and might be considered substantial harm in the language of the NPPF. As explained above the fields adjacent to the farm contribute to the character of the conservation area by providing a clear distinction between the historic character of the conservation area and more modern suburban developments. They allow the farm buildings to be seen in an agricultural context i.e. open fields with stone boundaries adjacent to the farm and also contribute in a similar way to the setting of Warmsworth House and the adjacent converted barn buildings. One caveat to this is that the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found. As well as the listed barn these limestone/clay pantile buildings contribute to the character of the conservation area. I would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings. What the above justification fails to confirm is that the western half of the site is already identified open space in the Doncaster UDP with the rest of the site located within a Residential Policy Area which supports future residential development. Please see an extract below for reference (Figure 12). (SEE EMAIL FOR Figure 12 - Extract from the UPD) We do not dispute this current policy position, however, we strongly contest that the eastern half of the site should be allocated as a Local Green Space. Some of the justification for the proposed allocation of the site as a Local Green Space is due to the site being within the Conservation Area and adjacent to Grade II Listed buildings. Whilst works affecting Listed Buildings or structures and Conservation Areas are subject to additional planning controls under the Planning (Listed Buildings and Conservation Areas) Act 1990, it does not create a blanket ban on development in such areas. Sympathetic development within a Conservation Area can often be an enhancement to an area. Again, with Listed Buildings, well-placed and designed development can act as enhancement. It is therefore considered that this is not strong enough justification to preclude development on this land and for allocating it as a Local Green Space. Another reason for the proposed allocation is its historic past. Whilst there is a rural past, this is not considered significant enough to preclude development in what is currently identified as a residential policy area. It is considered that development could occur whilst still protecting the limestone walls that bound the fields. Also, with the western parcel being retained as open space, this would still provide a visual break in the Conservation Area whilst enabling the eastern half of the site to be used in an effective an efficient manner. Furthermore the trees to the north of the site would remain along the highways verge providing a green strip along High Road. Additionally, this land is in private ownership and is not therefore open to the public. The site is not subject to any Public Rights of Way (see Figure 13 below for reference). (SEE EMAIL FOR Figure 13 Extract from the Doncaster Council’s online Public Right of Way Walking Map) As set out in the justification for the proposal allocation, the Council states that it would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings: “the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found”. In this instance, the flexibility of the surrounding area will need to be maintained in order to develop a proposal which sits sensitively amid the Conservation Area and adjacent listed buildings and therefore allocating the land as a Local Green Space would hinder the future uses of the land and buildings which, could have a significant impact on the actual heritage assets in the area. Proposals could be prepared to be of appropriate scale and massing, and to not pose an adverse impact on the Conservation Area. It is considered that there are no
overriding heritage constraints, which should prohibit development on this site. As such, we strongly contest the allocation of the Local Green Space for the above reasons and therefore request that the land remains as it is currently identified in the UDP Proposals Map or identified as a housing site for a sensitively designed scheme. We therefore request that "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) is deleted as a Local Green Space in the emerging Local Plan and either retains its current designations as part open space and part residential area or is wholly identified as a housing allocation.

Summary:

Do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 215 referred to as 162 in representation) as a Local Green Space (Criteria D of Policy 28). We do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) as a Local Green Space. This site is solely owned by our client and is private land not subject to a public right of way. It is acknowledged that as part of the emerging Local Plan, the Council invited representations for the allocation of sites for a range of uses. Alongside uses such as housing and employment, the Council also received requests to allocate some sites as 'Local Green Spaces', as per the NPPF. We would like to take this opportunity to comment and refute the proposed allocation of our client's land at Warmsworth as a Local Green Space. Local Green Space is a specific kind of allocation which seeks to preserve areas of Green Space that local communities believe to be significant and if allocated, the land would be protected from future development, similar to that of Green Belt. This response is in respect of land identified as "West Farm Fields between High Road and Low Road West, Warmsworth" (HELAA Site 162) where the Council has assessed the land as being potentially suitable for such an allocation. (SEE EMAIL FOR Figure 11 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth) It can be confirmed that our client is the landowner of this site and it is our understanding that this site was submitted as a potential Local Green Space by the Parish Council. The reasons for the potential allocation is: The proposed green space is an irregular area consisting of several fields between Warmsworth House to the east and bounded by the High Road and Low Road West. Warmsworth House (grade 2 listed) and its converted barns and West Farm and its outbuildings (including a grade 2 listed barn) dominate the western half of the conservation area. From the High Road there are views across the fields to the Warmsworth House group and to the West Farm group which are enhanced by its elevated position. The fields to the west of the conservation area and the buildings of West Farm serve as an important reminder of the rural past of the area thus contributing to the setting of these farm buildings. These provide a visual break between the conservation area and the modern developments to the north and west and an attractive entrance point to the conservation area. Further adding to the historic character of the conservation area are the limestone walls with half round copings that bound the fields. The fields therefore are an important component of the historic character of the conservation area. Development of the fields would compromise this character over the western half of the conservation area and might be considered substantial harm in the language of the NPPF. As explained above the fields adjacent to the farm contribute to the character of the conservation area by providing a clear distinction between the historic character of the conservation area and more modern suburban developments. They allow the farm buildings to be seen in an agricultural context i.e. open fields with stone boundaries adjacent to the farm and also contribute in a similar way to the setting of Warmsworth House and the adjacent converted barn buildings. One caveat to this is that the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found. As well as the listed barn these limestone/clay pantile buildings contribute to the character of the conservation area. I would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings. What the above justification fails to confirm is that the western half of the site is already identified open space in the Doncaster UDP with the rest of the site located within a Residential Policy Area which supports future residential development. Please see an extract below for reference (Figure 12). (SEE EMAIL FOR Figure 12 - Extract from the UDP) We do not dispute this current policy position, however, we strongly contest that the eastern half of the site should be allocated as a Local Green Space. Some of the justification for the proposed allocation of the site as a Local Green Space is due to the site being within the Conservation Area and adjacent to Grade II Listed buildings. Whilst works affecting Listed Buildings or structures and Conservation Areas are subject to additional planning controls under the Planning (Listed Buildings and Conservation Areas) Act 1990, it does not create a blanket ban on development in such areas. Sympathetic development within a Conservation Area can often be an enhancement to an area. Again, with Listed Buildings, well-placed and designed development can act as enhancement. It is therefore considered that this is not strong enough justification to preclude development on this land and for allocating it as a Local Green Space. Another reason for the proposed allocation is its historic past. Whilst there is a rural past, this is not considered significant enough to preclude development in what is currently identified as a residential policy area. It is considered that development could occur whilst still protecting the limestone walls that bound the fields. Also, with the western parcel being retained as open space, this would still provide a visual break in the Conservation Area whilst enabling the eastern half of the site to be used in an effective an efficient manner. Furthermore the trees to the north of the site would remain along the highways verge providing a green strip along High Road. Additionally, this land is in private ownership and is not therefore open to the public. The site is not subject to any Public Rights of Way (see Figure 13 below for reference). (SEE EMAIL FOR Figure 13 Extract from the Doncaster Council's online Public Right of Way Walking Map). As set out in the justification for the proposal allocation, the Council states that it would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings: "the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found". In this instance, the flexibility of the surrounding area will need to be maintained in order to develop a proposal which sits sensitively amid the Conservation Area and adjacent listed buildings and therefore allocating the land as a Local Green Space would hinder the future uses of the land and buildings which, could have a significant impact on the actual heritage assets in the area. Proposals could be prepared to be of appropriate scale and massing, and to not pose an adverse impact on the Conservation Area. It is considered that there are no overriding heritage constraints, which should prohibit development on this site. As such, we strongly contest the allocation of the Local Green Space for the above reasons and therefore request that the land remains as it is currently identified in the UDP Proposals Map or identified as a housing site for a sensitively designed scheme. We therefore request that "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) is deleted as a Local Green Space in the emerging Local Plan and either retains its current designations as part open space and part residential area or is wholly identified as a housing allocation.
Response:

Local Green Space can be on private land, although we would not accept certain arguments on private land unless there is sufficient evidence (e.g. saying the site is of recreational value). However, in the case of historical significance, lack of public access / private ownership / no Public Rights of Way is not necessarily a barrier to allocating a site as Local Green Space. Land does not have to be submitted by the landowner to be considered for this use. It is acknowledged that half the site is already open space as per the UDP, however the Local Plan is replacing this document and thus reconsidering the approach. As noted, the Local Green Space justification for this site does not rule out the margins of the fields being used as enabling development, but for the reasons stated in the Local Green Space document, it is deemed suitable to allocate this site for this reason. If an application were to come forward for such development, it would need to demonstrate "very special circumstances" in line with Green Belt policy, however as it has already been noted by the Conservation Officer that this would be acceptable in principle, we are confident an appropriate application and justification for this marginal development could be made. This would thus not prevent the allocation of this land as Local Green Space. Arguments related to the ability of development to positively impact on a conservation area are general points and not site specific - the fact development could occur here does not necessarily outweigh the reasons for allocating the site as Local Green Space. Furthermore, the features that could be preserved by developing the site would unquestionably be better preserved by not developing it.
We have concerns in respect of a proposed Local Green Spaces as defined on the Proposals Map (Criteria D of Policy 28). We do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) as a Local Green Space. This site is solely owned by our client and is private land not subject to a public right of way. It is acknowledged that as part of the emerging Local Plan, the Council invited representations for the allocation of sites for a range of uses. Alongside uses such as housing and employment, the Council also received requests to allocate some sites as 'Local Green Spaces', as per the NPPF. We would like to take this opportunity to comment and refute the proposed allocation of our client's land at Warmsworth as a Local Green Space. Local Green Space is a specific kind of allocation which seeks to preserve areas of Green Space that local communities believe to be significant and if allocated, the land would be protected from future development, similar to that of Green Belt. This response is in respect of land identified as "West Farm Fields between High Road and Low Road West, Warmsworth" (HELAA Site 162) where the Council has assessed the land as being potentially suitable for such an allocation. (see email for Figure 11 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth) It can be confirmed that our client is the landowner of this site and it is our understanding that this site was submitted as a potential Local Green Space by the Parish Council. The reasons for the potential allocation is: The proposed green space is an irregular area consisting of several fields between Warmsworth House to the east and bounded by the High Road and Low Road West. Warmsworth House (grade 2 listed) and its converted barns and West Farm and its outbuildings (including a grade 2 listed barn) dominate the western half of the conservation area. From the High Road there are views across the fields to the Warmsworth House group and to the West Farm group which are enhanced by its elevated position. The fields to the west of the conservation area and the buildings of West Farm serve as an important reminder of the rural past of the area thus contributing to the setting of these farm buildings. These provide a visual break between the conservation area and the modern developments to the north and west and an attractive entrance point to the conservation area. Further adding to the historic character of the conservation area are the limestone walls with half round copings that bound the fields. The fields therefore are an important component of the historic character of the conservation area. Development of the fields would compromise this character over the western half of the conservation area and might be considered substantial harm in the language of the NPPF. As explained above the fields adjacent to the farm contribute to the character of the conservation area by providing a clear distinction between the historic character of the conservation area and more modern suburban developments. They allow the farm buildings to be seen in an agricultural context i.e. open fields with stone boundaries adjacent to the farm and also contribute in a similar way to the setting of Warmsworth House and the adjacent converted barn buildings. One caveat to this is that the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found. As well as the barn these limestone/clay pantile buildings contribute to the character of the conservation area. I would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings. What the above justification fails to confirm is that the western half of the site is already identified open space in the Doncaster UDP with the rest of the site located within a Residential Policy Area which supports future residential development. Please see an extract below for reference (Figure 12). (see email for Figure 12 - Extract from the UDP) We do not dispute this current policy position, however, we strongly contest that the eastern half of the site should be allocated as a Local Green Space. Some of the justification for the proposed allocation of the site as a Local Green Space is due to the site being within the Conservation Area and adjacent to Grade II Listed buildings. Whilst works affecting Listed Buildings or structures and Conservation Areas are subject to additional planning controls under the Planning (Listed Buildings and Conservation Areas) Act 1990, it does not create a blanket ban on development in such areas. Sympathetic development within a Conservation Area can often be an enhancement to an area. Again, with Listed Buildings, well-placed and designed development can act as enhancement. It is therefore considered that this is not strong enough justification to preclude development on this land and for allocating it as a Local Green Space. Another reason for the proposed allocation is its historic past. Whilst there is a rural past, this is not considered significant enough to preclude development in what is currently identified as a residential policy area. It is considered that development could occur whilst still protecting the limestone walls that bound the fields. Also, with the western parcel being retained as open space, this would still provide a visual break in the Conservation Area whilst enabling the eastern half of the site to be used in an effective an efficient manner. Furthermore the trees to the north of the site would remain along the highways verge providing a green strip along High Road. Additionally, this land is in private ownership and is not therefore open to the public. The site is not subject to any Public Rights of Way (see Figure 13 below for reference). (see email for Figure 13 Extract from the Doncaster Council's online Public Right of Way Walking Map) As set out in the justification for the proposal allocation, the Council states that it would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings: "the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found". In this instance, the flexibility of the surrounding area will need to be maintained in order to develop a proposal which sits sensitively amid the Conservation Area and adjacent listed buildings and therefore allocating the land as a Local Green Space would hinder the future uses of the land and buildings which, could have a significant impact on the actual heritage assets in the area. Proposals could be prepared to be of appropriate scale and massing, and to not pose an adverse impact on the Conservation Area. It is considered that there are no
overriding heritage constraints, which should prohibit development on this site. As such, we strongly contest the allocation of the Local Green Space for the above reasons and therefore request that the land remains as it is currently identified in the UDP Proposals Map or identified as a housing site for a sensitively designed scheme. We therefore request that "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) is deleted as a Local Green Space in the emerging Local Plan and either retains its current designations as part open space and part residential area or is wholly identified as a housing allocation.

Summary:
Do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 215 referred to as 162 in representation) as a Local Green Space (Criteria D of Policy 28). We do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) as a Local Green Space. This site is solely owned by our client and is private land not subject to a public right of way. It is acknowledged that as part of the emerging Local Plan, the Council invited representations for the allocation of sites for a range of uses. Alongside uses such as housing and employment, the Council also received requests to allocate some sites as 'Local Green Spaces', as per the NPPF. We would like to take this opportunity to comment and refute the proposed allocation of our client's land at Warmsworth as a Local Green Space. Local Green Space is a specific kind of allocation which seeks to preserve areas of Green Space that local communities believe to be significant and if allocated, the land would be protected from future development, similar to that of Green Belt. This response is in respect of land identified as "West Farm Fields between High Road and Low Road West, Warmsworth" (HELAA Site 162) where the Council has assessed the land as being potentially suitable for such an allocation. (SEE EMAIL FOR Figure 11 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth) It can be confirmed that our client is the landowner of this site and it is our understanding that this site was submitted as a potential Local Green Space by the Parish Council. The reasons for the potential allocation is: The proposed green space is an irregular area consisting of several fields between Warmsworth House to the east and bounded by the High Road and Low Road West. Warmsworth House (grade 2 listed) and its converted barns and West Farm and its outbuildings (including a grade 2 listed barn) dominate the western half of the conservation area. From the High Road there are views across the fields to the Warmsworth House group and to the West Farm group which are enhanced by its elevated position. The fields to the west of the conservation area and the buildings of West Farm serve as an important reminder of the rural past of the area thus contributing to the setting of these farm buildings. These provide a visual break between the conservation area and the modern developments to the north and west and an attractive entrance point to the conservation area. Further adding to the historic character of the conservation area are the limestone walls with half round copings that bound the fields. The fields therefore are an important component of the historic character of the conservation area. Development of the fields would compromise this character over the western half of the conservation area and might be considered substantial harm in the language of the NPPF. As explained above the fields adjacent to the farm contribute to the character of the conservation area by providing a clear distinction between the historic character of the conservation area and more modern suburban developments. They allow the farm buildings to be seen in an agricultural context i.e. open fields with stone boundaries adjacent to the farm and also contribute in a similar way to the setting of Warmsworth House and the adjacent converted barn buildings. One caveat to this is that the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found. As well as the listed barn these limestone/clay pantile buildings contribute to the character of the conservation area. I would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings. What the above justification fails to confirm is that the western half of the site is already identified open space in the Doncaster UDP with the rest of the site located within a Residential Policy Area which supports future residential development. Please see an extract below for reference (Figure 12). (SEE EMAIL FOR Figure 12 - Extract from the UPD) We do not dispute this current policy position, however, we strongly contest that the eastern half of the site should be allocated as a Local Green Space. Some of the justification for the proposed allocation of the site as a Local Green Space is due to the site being within the Conservation Area and adjacent to Grade II Listed buildings. Whilst works affecting Listed Buildings or structures and Conservation Areas are subject to additional planning controls under the Planning (Listed Buildings and Conservation Areas) Act 1990, it does not create a blanket ban on development in such areas. Sympathetic development within a Conservation Area can often be an enhancement to an area. Again, with Listed Buildings, well-placed and designed development can act as enhancement. It is therefore considered that this is not strong enough justification to preclude development on this land and for allocating it as a Local Green Space. Another reason for the proposed allocation is its historic past. Whilst there is a rural past, this is not considered significant enough to preclude development in what is currently identified as a residential policy area. It is considered that development could occur whilst still protecting the limestone walls that bound the fields. Also, with the western parcel being retained as open space, this would still provide a visual break in the Conservation Area whilst enabling the eastern half of the site to be used in an effective an efficient manner. Furthermore the trees to the north of the site would remain along the highways verge providing a green strip along High Road. Additionally, this land is in private ownership and is not therefore open to the public. The site is not subject to any Public Rights of Way (see Figure 13 below for reference). (SEE EMAIL FOR Figure 13 Extract from the Doncaster Council's online Public Right of Way Walking Map) As set out in the justification for the proposal allocation, the Council states that it would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of the buildings: "the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found". In this instance, the flexibility of the surrounding area will need to be maintained in order to develop a proposal which sits sensitively amid the Conservation Area and adjacent listed buildings and therefore allocating the land as a Local Green Space would hinder the future uses of the land and buildings which, could have a significant impact on the actual heritage assets in the area. Proposals could be prepared to be of appropriate scale and massing, and to not pose an adverse impact on the Conservation Area. It is considered that there are no overriding heritage constraints, which should prohibit development on this site. As such, we strongly contest the allocation of the Local Green Space for the above reasons and therefore request that the land remains as it is currently identified in the UDP Proposals Map or identified as a housing site for a sensitively designed scheme. We therefore request that "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) is deleted as a Local Green Space in the emerging Local Plan and either retains its current designations as part open space and part residential area or is wholly identified as a housing allocation.
Local Green Space can be on private land, although we would not accept certain arguments on private land unless there is sufficient evidence (e.g. saying the site is of recreational value). However, in the case of historical significance, lack of public access / private ownership / no Public Rights of Way is not necessarily a barrier to allocating a site as Local Green Space. Land does not have to be submitted by the landowner to be considered for this use. It is acknowledged that half the site is already open space as per the UDP, however the Local Plan is replacing this document and thus reconsidering the approach. As noted, the Local Green Space justification for this site does not rule out the margins of the fields being used as enabling development, but for the reasons stated in the Local Green Space document, it is deemed suitable to allocate this site for this reason. If an application were to come forward for such development, it would need to demonstrate "very special circumstances" in line with Green Belt policy, however as it has already been noted by the Conservation Officer that this would be acceptable in principle, we are confident an appropriate application and justification for this marginal development could be made. This would thus not prevent the allocation of this land as Local Green Space. Arguments related to the ability of development to positively impact on a conservation area are general points and not site specific - the fact development could occur here does not necessarily outweigh the reasons for allocating the site as Local Green Space. Furthermore, the features that could be preserved by developing the site would unquestionably be better preserved by not developing it.
We do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) as a Local Green Space. This site is solely owned by our client and is private land not subject to a public right of way. It is acknowledged that as part of the emerging Local Plan, the Council invited representations for the allocation of sites for a range of uses. Alongside uses such as housing and employment, the Council also received requests to allocate some sites as 'Local Green Spaces', as per the NPPF. We would like to take this opportunity to comment and refute the proposed allocation of our client's land at Warmsworth as a Local Green Space. Local Green Space is a specific kind of allocation which seeks to preserve areas of Green Space that local communities believe to be significant and if allocated, the land would be protected from future development, similar to that of Green Belt. This response is in respect of land identified as "West Farm Fields between High Road and Low Road West, Warmsworth" (HELAA Site 162) where the Council has assessed the land as being potentially suitable for such an allocation. (SEE EMAIL FOR Figure 11 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth) It can be confirmed that our client is the landowner of this site and it is our understanding that this site was submitted as a potential Local Green Space by the Parish Council. The reasons for the potential allocation is: The proposed green space is an irregular area consisting of several fields between Warmsworth House to the east and bounded by the High Road and Low Road West. Warmsworth House (grade 2 listed) and its converted barns and West Farm and its outbuildings (including a grade 2 listed barn) dominate the western half of the conservation area. From the High Road there are views across the fields to the Warmsworth House group and to the West Farm group which are enhanced by its elevated position. The fields to the west of the conservation area and the buildings of West Farm serve as an important reminder of the rural past of the area thus contributing to the setting of these farm buildings. These provide a visual break between the conservation area and the modern developments to the north and west and an attractive entrance point to the conservation area. Further adding to the historic character of the conservation area are the limestone walls with half round copings that bound the fields. The fields therefore are an important component of the historic character of the conservation area. Development of the fields would compromise this character over the western half of the conservation area and might be considered substantial harm in the language of the NPPF. As explained above the fields adjacent to the farm contribute to the character of the conservation area by providing a clear distinction between the historic character of the conservation area and more modern suburban developments. They allow the farm buildings to be seen in an agricultural context i.e. open fields with stone boundaries adjacent to the farm and also contribute in a similar way to the setting of Warmsworth House and the adjacent converted barn buildings. One caveat to this is that the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found. As well as the listed barn these limestone/clay pantile buildings contribute to the character of the conservation area. I would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings. What the above justification fails to confirm is that the western half of the site is already identified open space in the Doncaster UDP with the rest of the site located within a Residential Policy Area which supports future residential development. Please see an extract below for reference (Figure 12). (SEE EMAIL FOR Figure 12 - Extract from the UPD) We do not dispute this current policy position, however, we strongly contest that the eastern half of the site should be allocated as a Local Green Space. Some of the justification for the proposed allocation of the site as a Local Green Space is due to the site being within the Conservation Area and adjacent to Grade II Listed buildings. Whilst works affecting Listed Buildings or structures and Conservation Areas are subject to additional planning controls under the Planning (Listed Buildings and Conservation Areas) Act 1990, it does not create a blanket ban on development in such areas. Sympathetic development within a Conservation Area can often be an enhancement to an area. Again, with Listed Buildings, well-placed and designed development can act as enhancement. It is therefore considered that this is not strong enough justification to preclude development on this land and for allocating it as a Local Green Space. Another reason for the proposed allocation is its historic past. Whilst there is a rural past, this is not considered significant enough to preclude development in what is currently identified as a residential policy area. It is considered that development could occur whilst still protecting the limestone walls that bound the fields. Also, with the western parcel being retained as open space, this would still provide a visual break in the Conservation Area whilst enabling the eastern half of the site to be used in an effective an efficient manner. Furthermore the trees to the north of the site would remain along the highways verge providing a green strip along High Road. Additionally, this land is in private ownership and is not therefore open to the public. The site is not subject to any Public Rights of Way (see Figure 13 below for reference). (SEE EMAIL FOR Figure 13 Extract from the Doncaster Council’s online Public Right of Way Walking Map) As set out in the justification for the proposal allocation, the Council states that it would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings: "the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found". In this instance, the flexibility of the surrounding area will need to be maintained in order to develop a proposal which sits sensitively amid the Conservation Area and adjacent listed buildings and therefore allocating the land as a Local Green Space would hinder the future uses of the land and buildings which, could have a significant impact on the actual heritage assets in the area. Proposals could be prepared to be of appropriate scale and massing, and to not pose an adverse impact on the Conservation Area. It is considered that there are no
overriding heritage constraints, which should prohibit development on this site. As such, we strongly contest the allocation of the Local Green Space for the above reasons and therefore request that the land remains as it is currently identified in the UDP Proposals Map or identified as a housing site for a sensitively designed scheme. We therefore request that "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) is deleted as a Local Green Space in the emerging Local Plan and either retains its current designations as part open space and part residential area or is wholly identified as a housing allocation.

Summary:

Do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 215 referred to as 162 in representation) as a Local Green Space (Criteria D of Policy 28). We do not support the allocation of site "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) as a Local Green Space. This site is solely owned by our client and is private land not subject to a public right of way. It is acknowledged that as part of the emerging Local Plan, the Council invited representations for the allocation of sites for a range of uses. Alongside uses such as housing and employment, the Council also received requests to allocate some sites as 'Local Green Spaces', as per the NPPF. We would like to take this opportunity to comment and refute the proposed allocation of our client's land at Warmsworth as a Local Green Space. Local Green Space is a specific kind of allocation which seeks to preserve areas of Green Space that local communities believe to be significant and if allocated, the land would be protected from future development, similar to that of Green Belt. This response is in respect of land identified as "West Farm Fields between High Road and Low Road West, Warmsworth" (HELAA Site 162) where the Council has assessed the land as being potentially suitable for such an allocation. (SEE EMAIL FOR Figure 11 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth) It can be confirmed that our client is the landowner of this site and it is our understanding that this site was submitted as a potential Local Green Space by the Parish Council. The reasons for the potential allocation is: The proposed green space is an irregular area consisting of several fields between Warmsworth House to the east and bounded by the High Road and Low Road West. Warmsworth House (grade 2 listed) and its converted barns and West Farm and its outbuildings (including a grade 2 listed barn) dominate the western half of the conservation area. From the High Road there are views across the fields to the Warmsworth House group and to the West Farm group which are enhanced by its elevated position. The fields to the west of the conservation area and the buildings of West Farm serve as an important reminder of the rural past of the area thus contributing to the setting of these farm buildings. These provide a visual break between the conservation area and the modern developments to the north and west and an attractive entrance point to the conservation area. Further adding to the historic character of the conservation area are the limestone walls with half round copings that bound the fields. The fields therefore are an important component of the historic character of the conservation area. Development of the fields would compromise this character over the western half of the conservation area and might be considered substantial harm in the language of the NPPF. As explained above the fields adjacent to the farm contribute to the character of the conservation area by providing a clear distinction between the historic character of the conservation area and more modern suburban developments. They allow the farm buildings to be seen in an agricultural context i.e. open fields with stone boundaries adjacent to the farm and also contribute in a similar way to the setting of Warmsworth House and the adjacent converted barn buildings. One caveat to this is that the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found. As well as the listed barn these limestone/clay pantile buildings contribute to the character of the conservation area. I would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings. What the above justification fails to confirm is that the western half of the site is already identified open space in the Doncaster UDP with the rest of the site located within a Residential Policy Area which supports future residential development. Please see an extract below for reference (Figure 12). (SEE EMAIL FOR Figure 12 - Extract from the UPD) We do not dispute this current policy position, however, we strongly contest that the eastern half of the site should be allocated as a Local Green Space. Some of the justification for the proposed allocation of the site as a Local Green Space is due to the site being within the Conservation Area and adjacent to Grade II Listed buildings. Whilst works affecting Listed Buildings or structures and Conservation Areas are subject to additional planning controls under the Planning (Listed Buildings and Conservation Areas) Act 1990, it does not create a blanket ban on development in such areas. Sympathetic development within a Conservation Area can often be an enhancement to an area. Again, with Listed Buildings, well-placed and designed development can act as enhancement. It is therefore considered that this is not strong enough justification to preclude development on this land and for allocating it as a Local Green Space. Another reason for the proposed allocation is its historic past. Whilst there is a rural past, this is not considered significant enough to preclude development in what is currently identified as a residential policy area. It is considered that development could occur whilst still protecting the limestone walls that bound the fields. Also, with the western parcel being retained as open space, this would still provide a visual break in the Conservation Area whilst enabling the eastern half of the site to be used in an effective an efficient manner. Furthermore the trees to the north of the site would remain along the highways verge providing a green strip along High Road. Additionally, this land is in private ownership and is not therefore open to the public. The site is not subject to any Public Rights of Way (see Figure 13 below for reference). (SEE EMAIL FOR Figure 13 Extract from the Doncaster Council's online Public Right of Way Walking Map) As set out in the justification for the proposal allocation, the Council states that it would not wish to rule out some enabling development on the margins of the fields adjacent to the farm buildings if it led to the long term conservation of these buildings: "the West Farm buildings are clearly no longer suitable for modern agricultural practices and to conserve the buildings (and the character of the conservation area) new uses will need to be found". In this instance, the flexibility of the surrounding area will need to be maintained in order to develop a proposal which sits sensitively amid the Conservation Area and adjacent listed buildings and therefore allocating the land as a Local Green Space would hinder the future uses of the land and buildings which, could have a significant impact on the actual heritage assets in the area. Proposals could be prepared to be of appropriate scale and massing, and to not pose an adverse impact on the Conservation Area. It is considered that there are no overriding heritage constraints, which should prohibit development on this site. As such, we strongly contest the allocation of the Local Green Space for the above reasons and therefore request that the land remains as it is currently identified in the UDP Proposals Map or identified as a housing site for a sensitively designed scheme. We therefore request that "West Farm Fields between High Road and Low Road West, Warmsworth" (Site 162) is deleted as a Local Green Space in the emerging Local Plan and either retains its current designations as part open space and part residential area or is wholly identified as a housing allocation.

Page 724
Local Green Space can be on private land, although we would not accept certain arguments on private land unless there is sufficient evidence (e.g. saying the site is of recreational value). However, in the case of historical significance, lack of public access / private ownership / no Public Rights of Way is not necessarily a barrier to allocating a site as Local Green Space. Land does not have to be submitted by the landowner to be considered for this use. It is acknowledged that half the site is already open space as per the UDP, however the Local Plan is replacing this document and thus reconsidering the approach. As noted, the Local Green Space justification for this site does not rule out the margins of the fields being used as enabling development, but for the reasons stated in the Local Green Space document, it is deemed suitable to allocate this site for this reason. If an application were to come forward for such development, it would need to demonstrate "very special circumstances" in line with Green Belt policy, however being as it has already been noted by the Conservation Officer that this would be acceptable in principle, we are confident an appropriate application and justification for this marginal development could be made. This would thus not prevent the allocation of this land as Local Green Space. Arguments related to the ability of development to positively impact on a conservation area are general points and not site specific - the fact development could occur here does not necessarily outweigh the reasons for allocating the site as Local Green Space. Furthermore, the features that could be preserved by developing the site would unquestionably be better preserved by not developing it.

Summary:

Response:

Comment noted. Policy 28 is not negatively worded. In line with paragraphs, 96 and 97 of the NPPF the policy protects open spaces and provides clarity on acceptable types of development in open space areas.
Tests of Soundness:

Comment:

2.41 Our Client would question the Council's negatively worded approach to the development of non-designated open space in part b) of the policy. This issue was raised at the previous consultation stage but our comments still stand: Effectively any parcel of land which is not protected in the Local Plan as open space would therefore be classed as non-designated open space. Clearly this is not the intention of the Revised Framework, to sterilise all open space, and as such we object to this element of the policy.

Summary:

Policy 28 Part (b) Negatively worded approach to the development of non-designated open space. Effectively any parcel of land which is not protected in the Local Plan as open space would therefore be classed as non-designated open space. Clearly this is not the intention of the Revised Framework, to sterilise all open space, and as such we object to this element of the policy.

Response:

Comment noted. Policy 28 is not negatively worded. In line with paragraphs, 96 and 97 of the NPPF the policy protects open spaces and provides clarity on what is acceptable in these areas.

Comment:
Open space is an important part of green infrastructure provision. Identifying and protecting accessible open spaces will contribute toward creating an environment where access to activities is made easier and public health improved. Our urban open spaces are important resources offering a range of uses, with a value to local communities over and above their existing or primary use. As well as recreation and community resource open spaces can act as buffers between the urban edge and the countryside and screening between incompatible uses and of unattractive development. Comments: The Site is currently a site of local community value as it is publicly accessible and is widely used by horse riders, joggers, bird watchers, walkers and residents for recreation. The Local Plan recognises that open space such as the Site is an important part of green infrastructure provision and given that the Site fulfils all the criteria of an Open space (e.g. a space of significant value to the local community, a buffer between the urban edge and the countryside - in this case, a LNR/SSSI, etc), it should have been designated as such in the Local Plan instead of being earmarked for development.

Comment:
The recreational quality of open space can be eroded by insensitive development or incremental loss of a site ?.. Ultimately the development has to result in an overall improvement to the site, be sensitive to the local situation, result in no significant loss of open space and provide significant benefits to the users. Comments: Development of the Site is clearly insensitive and will result in the total loss of an open space site contrary to paragraph 10.15 of the Local Plan. The recreational quality of the Site will be completely destroyed and lost by its development. Further, development will NOT result in any overall improvement to the Site or the local community, completely ignores the local community’s wishes and objections, and will result in significant loss of open space and provide no benefits whatsoever to the local community. As noted earlier and in previous objections, development of the Site will bring significant and irreparable loss of amenity to the existing local community by destroying a local Open Space. In addition, in this regard: - The existing road system will be unable to cope adequately with the thousands of extra vehicle movements; - The increase in population density due to development on the Site will destroy the quiet and tranquil nature of the surrounding neighbourhood; and - The open aspect of the neighbourhood will be destroyed by the development, changing its character forever.

Summary:
Site Ref 350/407 - Rosehill - Development of the Site is clearly insensitive and will result in the total loss of an open space site contrary to paragraph 10.15 of the Local Plan. Comment:

In line with national planning policy there are a number of areas identified as 'local green space', identified by local communities as being important to them for a number of locally significant reasons including, proximity to the community, beauty, richness of wildlife, recreational value or adding to the local character of the area. These areas are also identified on the Policies Map. Comments: As noted earlier, the Site should have been identified as a local green space in line with national planning policy. The local community has identified - and uses - the Site as such but these objections have been ignored despite the Site being demonstrably important to them for the reasons set out in paragraph 10.17 of the Local Plan.

Summary:

Comment:

National Planning Policy states that 'existing open space, sports and recreational buildings and land, including playing fields, should not be built on, without prior consideration. Development proposals resulting in the permanent loss of the open space will be therefore be required to: - demonstrate the land provides no benefit to the community and the local community supports alternative proposals; - demonstrate through an independent assessment that the land or buildings are surplus to requirement; - ensure the need for and benefits of the development outweighs the loss; and - provide compensation for loss of facilities. Comment: Development of the Site will clearly result in the permanent loss of the open space and clearly breaches the criteria set out in paragraph 10.18 as follows: The land provides significant benefit to the community as noted earlier. The local community does not support the development and supports alternative proposals (i.e. designate as an Open Space and retain as a diverse and rich ecological environment). There are a large number of houses being built in Doncaster and a large number already built for sale. The development of a greenfield and ecological rich and diverse site should not be contemplated under the circumstances. There are no benefits of the development. The loss caused by the development of the Site will be considerable, far-reaching and detrimental to the local community both in terms of the loss of the Site and the loss of amenity caused by such a significant development and given the existing infrastructure of the adjacent development. There is no means by which adequate compensation can be provided for the irreparable loss of a significant open space used by the local community and which is a diverse and rich ecological environment.

Summary:

Site Ref 350/407 - Rosehill - Development of the Site will clearly result in the permanent loss of the open space and clearly breaches the criteria set out in paragraph 10.18 as follows. The land provides significant benefit to the community as noted earlier. The local community does not support the development and supports alternative proposals (i.e. designate as an Open Space and retain as a diverse and rich ecological environment). There are a large number of houses being built in Doncaster and a large number already built for sale. The development of a greenfield and ecological rich and diverse site should not be contemplated under the circumstances. There are no benefits of the development. The loss caused by the development of the Site will be considerable, far-reaching and detrimental to the local community both in terms of the loss of the Site and the loss of amenity caused by such a significant development and given the existing infrastructure of the adjacent development. There is no means by which adequate compensation can be provided for the irreparable loss of a significant open space used by the local community and which is a diverse and rich ecological environment.

Response:

Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal. The Local Plan has to balance the needs of development and protection of natural assets.
The Council will resist any development proposals resulting in the permanent loss of open space, especially in deficient areas. However, we also acknowledge that not all open space is of value to the local community - in such cases community consultation will be carried out and an assessment will be required to identify whether the site is suitable for a different type of open space use in the first instance or a beneficial local community use in the second instance. Permanent loss of open space will require careful consideration as this can result in increased pressure on remaining facilities. Development of the Site is contrary to this paragraph which claims that the Council will resist development proposals which result in the permanent loss of open space - which this demonstrably will. Comment: No consultation has been carried out with the community, or assessment performed, to identify whether the Site "is suitable for a different type of open space use in the first instance or a beneficial local community use in the second instance."

Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal.

Comment:
The Council will protect open spaces which provide important opportunities for formal and informal recreation as well as those which provide a social, cultural and ecological role. B) Within non-designated open space, development proposals will only be supported where: 1. casual playing space is unaffected; 2. buffers between incompatible uses are unaffected; 3. visual amenity is retained and enhanced; 4. nature conservation improvements are the key driver; and 5. green infrastructure connections are retained. C) Development proposals on ‘Local Green Space’, defined on the Policies Map, will be considered in accordance with national and local policy and guidance. D) Proposals involving the loss of open space policy areas, recreational buildings and non-designated open space, such as playing fields, will only be supported: 1. in accordance with national policy, and 2. where community support can be demonstrated through public consultation. Comments: Development of the Site is contrary to Policy 28 for the following reasons: The Site is an open space which provides informal recreation and fulfils a social and ecological role to the local community and the borough as a whole (due to its location next to an LNR/SSSI). Development of the Site does not protect it in any way. The Site should have been designated an Open Space. In any event, as a non-designated open space, clearly development of the Site will result in all five criteria for development in such areas being breached, and therefore under Policy 28, the development proposal cannot be supported. In particular, it is evident that contrary to Policy 28, development of the Site:

- Will completely destroy the present space of the Site which is used for recreational purposes by a wide variety of users;
- Will adversely impact buffers between the LNR/SSSI and other adjoining areas;
- Will not retain or enhance visual amenity;
- Does not have nature conservation improvements as a key driver; and
- Will not ensure green infrastructure connections are retained. The Site should have been designated a Local Green Space. No explanation has been provided by DMBC as to why this is not the case. Were the Site designated a Local Green Space, the Site would not be developed. The proposal to development the Site will result in the loss of open space. There has been vociferous and vigorous objections to the development of the Site by the local community and development of the site has no community support whatsoever. Development of the Site is therefore: - Not a proposal in accordance with national policy; and - Is not a proposal where there is any community support whatsoever and for which no support through public consultation has been, or will be able to be, demonstrated.

Summary:
Site Ref 350/407 - Rosehill - Development of the Site is contrary to Policy 28. The Site is an open space which provides informal recreation and fulfils a social and ecological role to the local community and the borough as a whole (due to its location next to an LNR/SSSI). Development of the Site does not protect it in any way. The Site should have been designated an Open Space. In any event, as a non-designated open space, clearly development of the Site will result in all five criteria for development in such areas being breached, and therefore under Policy 28, the development proposal cannot be supported. The Site should have been designated a Local Green Space. No explanation has been provided by DMBC as to why this is not the case. Were the Site designated a Local Green Space, the Site would not be developed. The proposal to development the Site will result in the loss of open space. There has been vociferous and vigorous objections to the development of the Site by the local community and development of the site has no community support whatsoever.

Response:
Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal.
### Summary

Objection is made to this Policy and the allocation of the land at rear of Manor Farm Braithwell as open space. The land in question does not have any value for formal or informal recreation and it is not necessary for the land to be designated as open space. The land is currently part of a working farm and the designation will impede the economic use of the land as part of the land holding and inhibit its agricultural potential. The land remains allocated for housing in the UDP document as part of a larger site in Braithwell. There is no reason to delete the site from the development boundary and include it as an open space designation. The land is suitable for a small scale residential development that pays detailed attention to the Conservation Area context and which would provide for quality new homes in the settlement. Braithwell is a village which will support residential development within the development limit as recognised in the settlement hierarchy. Objection is made to the background documents that assess Local Green Space. The land is noted in the Community Profiles as being of local community value. As Site 1015 it is also noted in the Audit document which sets out that the site is valuable because it will restrict development in this part of the Conservation Area. Local greenspace should not be used as a backdoor way to prevent development taking place. The planning controls already in place over the land, which lies within the Conservation Area already protect the trees on the land, the setting of the nearby Listed buildings are also protected. There is no requirement for a further layer of planning control to protect the land and this is seen as a misuse of the allocation of open space. The plan as drafted is imprecise about the distinction between land allocated for open space purposes and land designated as local green space. There is no way from telling from the plan the purposes of the designation on the proposals map, which simply states open space. PROPOSED CHANGE: The plan should be modified to - Remove the open space designation from the proposals map.

### Response

Agree that the map needs amending to differentiate between Local Green Space and Public Open Space. The Local Green Space methodology document makes no case for this site to be allocated due to its recreational value, and if it did so then the case would likely be refused as the site is privately owned and not publicly accessible? However it does make the case that the site has historical merit and therefore in such cases, public access is not necessary to allocate a site Local Green Space for this purpose. Unclear as why this allocation would impede the agricultural ability of the farm when it would help preserve the use? However the housing would be detrimental to the agricultural ability of the farm. The development limit is proposed to drawn to exclude this field and Braithwell has not been assessed as a sustainable settlement for growth, nor is it earmarked to receive any allocations. Housing would not be supported on this site. The designation is not being used as a backdoor way to prevent development, rather it is preserving the site for it's historical value, as set out in the NPPF.

Comment:

Objection is made to the Proposals Map as submitted. The Plan proposes the allocation of the land at the rear of Manor Farm to be allocated as public open space and to take it out of residential policy area as shown in the current UDP. PROPOSED CHANGE: The plan should be modified to - Amend the development boundary of Braithwell to include the site within it. - Remove the open space designation from the proposals map - Amend the green belt boundary to omit Manor Farm from the green belt

Summary:

Objection is made to the Policies Map which proposes the allocation of land to the rear of Manor Farm, Braithwell, as public open space and to take it out of residential policy area as shown in the current UDP. The plan should be modified to - Amend the development boundary of Braithwell to include the site within it. - Remove the open space designation from the Policies Map - Amend the Green Belt boundary to omit Manor Farm from the Green Belt.

Response:

It is not proposed to make the changes as requested by the Representation so therefore there is no need to amend the Policies Map (notwithstanding the need to clarify the difference between open spaces and sites of local green space value) - see response to Policy 28 Representation/objection.
It may be necessary to attend the relevant hearing session in order to answer any questions the Inspector may have regarding the previous, current and future use of this site within the plan period.

Policy: Policy 28: Protecting Open Space & Non Designated Open Space

Introduction: Peacock and Smith have been instructed to prepare this representation on behalf of Barnby Dun with Kirk Sandall Parish Council. This representation concerns a specific site off Sutton Road which is currently allocated as open space in the adopted UDP and continues to be allocated for Open Space, Sport and Recreation in the submission draft Local Plan despite the site not being used for this purpose since 2007. On this basis we consider that the submission draft Local Plan is unsound as it is not justified, effective or consistent with National Policy. This is explained in further detail under the subheadings below. A site location plan is submitted along site this representation at Appendix 1. (SEE EMAIL FOR Appendices) History and Context: The site, owned by Barnby Dun with Kirk Sandall Parish Council, was previously used as a playground up to the year 2007 and is currently allocated as open space on the UDP proposals map. During the Parish Council meeting on 15 August 2007 the decision was made to close the park. In September 2007 the Parish Council served an ‘indefinite closure’ notice on local residents, notifying them that the Sutton Road Park would be closed indefinitely. A copy of this notice is attached at Appendix 2. The notice was displayed at the entrance to the site and distributed to local residents. The Parish Council have not received any adverse feedback regarding the closure of the park. In September 2007 the existing gates to the park were chained shut and have remained so ever since. The main reason for closing the park was due to surface water flooding. The park is located entirely within flood zone 1. However, a layer of clay which is approximately 3 metres deep across the surface of the park results in poor drainage and causes surface water flooding. This caused a health and safety hazard to those using the park, especially children. Each time the park flooded it cost the Parish Council #900 or more, to reset the safety matting around the play equipment which was dislodged due to the surface water flooding. Even small amounts of rain caused the matting to float due to the poor site drainage. Originally it was the Parish Council’s intention to obtain grant funding to resolve the drainage issue and to replace the play equipment on the site. The Parish Council submitted a WREN funding bid in 2007 which was unsuccessful. The Parish Council has been unable to secure funding to resolve the drainage issues at the site to enable the park to be reopened. The secondary issue for closing the playground was due to anti-social behaviour which took place in the park when it was open and the difficulty experience by the Parish Council managing the site. Since it was closed the site has not been accessible to members of the public. However, a further amenity related issue has arisen; neighbouring houses have thrown rubbish over fences which has resulted in a fly tipping issue on the site. The Parish Council first explored the use of the site for housing in 2009 when they engaged with [Case Officer] at DMBC. More recently the Parish Council has further progressed this opportunity and appointed an architect to consider different residential options on the site. This use would generate enough monies to address the drainage issues on the site and allow for redevelopment. Despite not being used as a playground since September 2007 the site remains allocated as open space in the submission draft Local Plan, as shown in the extract pasted below. (SEE EMAIL FOR Figure. 1. Extract from submission draft plan proposals map) Soundness of the submission draft Local Plan in the context of site of Sutton Road: Lack of justification: There is no justification provided by the Council within the submission draft Local Plan or the evidence base to explain why the site has been retained as an allocation for open space when it has not functioned as such for 12 years. The site is identified as ‘informal’ open space (ref: 795) on the Community Profile Area Green Spaces map for Kirk Sandall. The Council’s report ‘Local Green Space Methodology and Sites’ (2019) considers the sites put forward for open space allocation as part of the call for sites process. However the assessment does not go as far as to re-assess existing allocations from the UDP. As such, the Council have not considered that the site no longer contributes to open space in an informal manner or otherwise. On this basis the retention of the site as an open space allocation is considered unjustified. Ineffectiveness: Open space Policies 27 and 28 are of relevance to sites allocated for open space within the submission draft plan. Policy 27: Green Infrastructure states that the Council will protect, maintain, enhance green infrastructure. The policy goes onto list a number of criteria which will contribute to achieving this. As the site has been closed for 12 years there is no public benefit in terms of play space. As explained above, there is no possibility of the site being reopened as a playground due to the lack of funding available to the Parish Council to rectify the drainage issues. There is also a residential amenity issue which has arisen from fly tipping by neighbouring properties on the vacant site. Fly tipping is causing the site to become unsightly and also has a detrimental impact on local wildlife. Policy 28: Protecting Open Space and Non Designated Open Space states that the Council will protect open spaces which provide important opportunities for formal and informal recreation as well as those which provide a social, cultural and ecological role. The policy also sets out a series of principles whereby development on open spaces will only be acceptable. The issue in relation to this site is that it has not been used for open space in 12 years therefore these criteria are not appropriate for assessing the site. Policy 28 goes onto state that "Proposals involving the loss of open space policy areas, recreational buildings and non designated open space, such as playing fields, will only be supported: 1. in accordance with national policy, and 2. where community support can be demonstrated through public consultation." It is considered that in relation to the site, the intentions of policies 27 and 28 are ineffective due to the fact that the site has been closed to the public for 12 years and there is no prospect of it reopening as a playground or area open space. No public opposition to the playground closing has been received by the Parish Council. Lack of consistency with National Policy: With regards National Policy, paragraph 97 of the NPPF states that "Existing open space, sports and recreational buildings and land, including playing fields, should not be built on unless: a) an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or b) the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or c) the development is for alternative sports and recreational provision, the benefits of which clearly
outweigh the loss of the current or former use.

In this instance it has been clearly demonstrated that the site has remained closed and inaccessible to the public for 12 years since 2007. The information presented within this representation clearly shows that the open space, is surplus to requirements and has been for a significant amount of time. It is therefore considered that criteria a) of paragraph 97 of the NPPF has been satisfied. This in turn means that the continued allocation of this site within the submission draft Local Plan is not consistent with National planning Policy. Suitability of the site for future residential development within the Plan Period It is the Parish Council's intention to apply for planning permission for the residential development of this site and work has already commenced by the appointed architect who is currently considering different options for a proposed site layout. The site lies entirely within flood zone 1, however, as explained above the site is subject to surface water flooding. Residential development of the site would enable suitable drainage measures to be implemented to resolve this issue. The site is not within a conservation area, there are no listed buildings on site or scheduled monuments and there are no other known constraints which would prevent residential development from coming forward. Draft Policy SP2 sets out the settlement hierarchy for the district. Kirk Sandall is identified as being within the Main Urban Area of Doncaster. Draft Policy SP2 states that "Doncaster Main Urban Area provides services for the whole Borough and beyond. To strengthen this and to meet its growth objectives and regeneration needs, Doncaster Main Urban Area will be the main focus for development in the Borough, including housing." Located within the Main Urban Area, the site has excellent access to services and amenities within Kirk Sandall and Doncaster centre. The site has good access to public transport and is located approximately 0.5 miles from Kirk Sandall train station. There are bus stops located in close proximity to the site on Brecks Lane (approximately 53 meters from the site.) A local Co-op supermarket is also located within walking distance on Brecks Lane. Kirk Sandall junior school is approximately 11 minutes' walk from the site and a public playground and area of green open space is located approximately 10 minutes' walk away on Dentons Green Lane. Development of this site for housing would enable resolution of the existing drainage issues and presents an opportunity for infill development in a highly sustainable location. It would also resolve the current fly tipping issue on site and improve residential amenity for the neighbouring residents. Conclusions/Summary Despite not being used as a playground since September 2007 the site remains allocated as open space in the submission draft Local Plan. There is no justification provided by the Council within the submission draft Local Plan or the evidence base to explain why the site has been retained as an allocation for open space when it has not functioned as such for 12 years. Open space Policies 27 and 28 do not function as intended in relation to this specific site due to the fact it has not been in use since well before the start of the plan period. This site has not contributed to informal recreation in the district for a long time and reopening the park will not be possible due to the existing safety hazard and work required to address the surface water drainage issue. The site does not provide any social or cultural benefits to the community. Furthermore, it is considered that the continued allocation of this site for open space is not in accordance with National policy. Criteria a) of paragraph 97 of the NPPF has been satisfied. The site has not been used as open space for 12 years for health and safety reasons which clearly demonstrates the site is surplus to requirements. This is reinforced by the fact that the parish Council received no objections or negative feedback in response to the closure of the site in 2007. As the site has not been used as open space in 12 years, it is therefore considered unsound and wholly inappropriate for this site to be allocated as open space in the new Local Plan. As explained above, the site is in a sustainable location and presents an opportunity for small scale residential development. It is the Parish Council's intention to progress a planning application as soon as possible. We therefore request that open space allocation is removed and is either allocated for residential development or alternatively becomes 'white land' with no allocation. PROPOSED CHANGE Following on from the answer to question 6 above, we consider that the site off Sutton Road should be allocated as a small-scale housing site. The site is within the main urban area, in a residential neighbourhood with excellent access to services and amenities. The site represents a sustainable location for the delivery of housing.

Development of the site for housing would enable the existing drainage issue and fly tipping issue to be addressed which would improve residential amenity for the neighbouring properties. As explained under question 6 the site has not been used as open space since September 2007 and therefore it should not be allocated as open space in the new Local Plan. In this respect the submission draft Local Plan is unsound. If the Council is unwilling to allocate the site for housing at this stage, in order to make the plan sound, the open space allocation should be removed and the site should become white land to allow the Parish Council to submit a future planning application.

Summary:

Site at Sutton Road Barnby Dun - currently proposed for continued allocation as Open space. Objects to site be classified as Open space. Want site to be removed as an 'open space' allocation and re-allocated for residential use or alternatively 'white land'. Reasons: Not used as open space since 2007 when the playground/park was closed by the Parish Council. Site chained shut since. There is no prospect of the site re-opening as a playground or open space. There are no local objections to the site being closed. Site was closed because: 1. Flood risk - surface water flooding. Too costly to repair after each flooding. 2. PC has been unable to secure funding to permanently remediate the problem. 3. Anti-social behaviour. 4. Site is currently has a fly-tipping issue. Local Plan 1. Polices 27 & 28 are ineffective. There is no justification for the retention of the site. 2. LP is not consistent with the NPPF (para 97) 3. Site can be classified as 'surplus to requirements'. Residential use: 1. Site is suitable for residential use. 2. Residential use would generate money to remediate the flooding problem on the site.

Response:

Although this request has come forward late in the process, it is not felt that allocating this site for a purpose other than open space is justified in the Local Plan. There is a lack of evidence as to why the loss of the open space is justified or surplus to requirements, the Main Urban Area can provide ample land for housing, and the Kirk Sandall community profile area is deficient in open space suitable for children's play. That said, this could be pursued through the planning process should the applicants wish to continue promoting this site for an alternate use, and existing and emerging policy provides the means by which open space loss can be justified, should the relevant justification be provided.
Policy 29 is not considered to be sound as it is not justified or consistent with national policy for the following reasons: This policy looks for residential developments to provide open space to address local green space needs and deficiencies. Overall, the HBF is supportive of the drive towards incorporating additional green space within new communities. However, developers should only be expected to provide for those facilities which are made necessary by the development proposed and not simply in order to make up for existing deficiencies in provision or provide benefits for the community at large. It should also be acknowledged that this may have a knock-on effect on housing density and the need for additional land to be allocated for new development.

Summary:
Policy 29 is not considered to be sound as it is not justified or consistent with national policy. Overall, the HBF is supportive of the drive towards incorporating additional green space within new communities. However, developers should only be expected to provide for those facilities which are made necessary by the development proposed and not simply in order to make up for existing deficiencies in provision or provide benefits for the community at large. It should also be acknowledged that this may have a knock-on effect on housing density and the need for additional land to be allocated for new development.

Response:
Comment noted. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space? and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states 'Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF. Green space provision also contributes to green infrastructure requirements in line with NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places.
Strata Homes welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. Strata Homes still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that “the Council will take a pragmatic and flexible approach to planning obligations”. 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Summary:
Strata Homes welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. Strata Homes still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that “the Council will take a pragmatic and flexible approach to planning obligations”. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing.
The Local Plan should be read as a whole. Policy 29 is specific to open space and complements policy 66. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states ‘Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF.

In terms of Local Plan policy 67 (development viability), we should not be predetermining viability issues at the outset of an application and pass these on to other policies in the Local Plan given that the NPPF policy (as quoted above) requires authorities to consider a very wide variety of developer requirements and contributions to make a development acceptable in planning terms.

Comment Ref: C/Policy 29/02989/1/012

Attend Examination: Not Stated

Reason:

Area: Chapter 10: Green Infrastructure

Policy: Policy 29: Open Space Provision in New Developments

Tests of Soundness:

Comment:

Policy 29 seeks to address local green space needs and deficiencies. In general, Gladman are supportive of the Council's aspiration to incorporate high quality green spaces within new communities. We are however concerned that the Policy, as currently drafted, expects that developers should address and 'make-up' for existing deficiencies in the provision of open green space. Gladman consider that it is appropriate for developers to provide only the facilities which become necessary directly as a result of the proposed development.

Summary:

Concerned expressed that Policy 29, as currently drafted, expects that developers should address and 'make-up' for existing deficiencies in the provision of open green space. Gladman consider that it is appropriate for developers to provide only the facilities which become necessary directly as a result of the proposed development.

Response:

The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states 'Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF.
3.30 Policy 29 states the following with regard to open space provision: To address local green (open) space needs and deficiencies, development proposals: a) of 20 family dwellings or more will be supported which contribute 10% or 15% of the site as on-site open space to benefit the development itself - the nature and type of which will be determined by having regard to the Council's Green Space Audit and Playing Pitch Strategy. b) of 20 family dwellings or more, adjacent or close to a large open space (such as a public park or recreation area) alternatively may be asked to provide a commuted sum of 10% or 15% of the residential land value of the development site. c) of between 10 and 20 family dwellings will be supported which provide for a commuted sum of 10% or 15% of the residential land value of the development site to improve existing open spaces within the vicinity of the development. d) for retirement living schemes and / or aftercare facilities will be required to provide good quality on-site amenity spaces equating to 16sqm of open space per person. e) providing on-site open space will be required to provide for sustainable open space management and maintenance to be determined in discussion with the planning authority. 3.31 It is of note that Policy 29 reiterates extant UDP Policy RL4, which requires 10 - 15% on-site provision or a commuted sum in lieu of provision on-site dependent on-site specific circumstances (the number of dwellings proposed for example). The draft policy does not appear to be based on, or justified by, an up to date evidence base. 3.32 It is of note that the Council's Green Space Audit, which is referenced in Policy 29 and comprises part of the evidence base for the publication version of the Plan, is dated July 2013. This evidence is considered to be out of date. 3.33 It is also of note that the word "close" [to a large open space ?] in part 29(b) of the policy is not defined within the policy to enable those reading the policy to understand when the clause might be triggered. 3.34 It is also proposed to calculate the commuted sums based on residential land value, a figure which is unlikely to be agreed at the planning stage and will create an unacceptable circularity issue to the policy. In light of these points, we object to the current wording of Policy 29. 3.35 The general objective of Policy 29 is understood. However, the policy should be clear so that future developers understand what the open space requirements are. Recommendations 3.36 The Council's Green Space Audit should be updated and then periodically reviewed so that the information being relied upon is kept up to date. The threshold requirements should be set with reference to this evidence. 3.37 The word "close" [to a large open space ?] should be specifically defined within the policy itself or within a glossary to provide clarity for future applications. 3.38 All reference to calculating off-site contributions based on "residential land value" should be deleted from Policy 29. 3.39 The Council should base their commuted sum value for off-site open space provision on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the costs will be. Justification 3.40 Policy 29 is inadequately clear, with references to an evidence base document that is out of date. It also seeks to calculate a commuted sum based on information that will not be agreed / disclosed at the planning application stage. 3.41 Further to the above, the supporting text for Policy 29 states that: "On larger applications the amount of open space to be provided should be broken down in to a minimum of 32% on-site open space suitable for children's play with the remainder taking the form of recreational sports fields, woodlands, nature conservation areas, allotments, or green infrastructure corridors, depending on the type of identified need in the area. Alternatively very large developments could consider open space provision such as a public park with integrated children’s play.” 3.42 We object to this policy as currently worded and it is of note that the “minimum 32%” requirement for larger applications is not referenced specifically in the policy itself. Recommendation 3.43 It is considered that, only if justified, the reference to a percentage split of typologies should be included within the policy itself, with the threshold pursuant 'larger applications' also defined. Justification 3.44 The supporting text as currently worded is inadequately clear, and no justification is provided for the "minimum 32%" requirement. The policy is therefore unsound.

Summary:

Object to Policy 29. This policy reiterates extant UDP Policy RL4, and is not based on or justified by up to date evidence. The Green Space Audit (2013) is considered out of date. The word “close” to a large open space is not defined and does not enable those reading to understand when the clause will be triggered. It also proposed to calculate the commuted sum based on residential land value, which is unlikely to be agreed at planning stage and create an unacceptable circularity issue in the policy. The general objective is understood, but the policy should be clear. The Green Space Audit should be updated and periodically reviewed so the information is up to date. Threshold requirements should be set within it. The word "close" should be specifically defined. All reference to calculating off site contributions based on residential land value should be deleted. The commuted sum value for off-site open space provision on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the cost. Policy 29 is inadequately clear, based on out of date evidence, and based on information which will not be agreed / disclosed at application stage. Object to reference in the subtext to 32% being on site open space for children’s play as it is not referenced specifically in the policy itself. Only if justified should reference to a % split be included, and the threshold for "larger applications' needs to be defined. This is unclear and therefore unsound.
Response:

We acknowledge the date of the Green space audit and we are currently working on a review. The timescale of which will be determined in line with the Local Plan. The open spaces shown on the policies map are part of the first stage review. In terms of using the word 'close' in policy 29.B, the 2013 green space audit shows Fields in Trust walking distances and buffers, these will be used to determine closeness of a proposed development site to an open space. These distances will not change in a reviewed greenspace audit. The calculation of commuted sums is currently based on the residential land value of the site and has been used since the adoption of the 1998 UDP. It will not therefore provide an 'unacceptable circularity issue'. Securing the commuted sums is provided through S106 agreements, once a value has been determined. Policy text 10.22? The respondent has misunderstood the use of the '32%' in the supporting text. Fields in Trust identify the need and importance of children's play space and formal sports provision. This is to clarify how the developer should parcel up the open space to meet with Fields in Trust guidelines. Where a developer is required to provide a large open space bigger than a football field, this should include a children’s play area in the first instance (approximately 1/3 of the site (roughly 32%)). The remainder of the open space can be a recreational sports field, a woodland or nature conservation area, an allotment or green infrastructure corridor, depending on the type of identified need in the area. This is to ensure the 'Fields in Trust' guidelines are taken in to account.
Policy 29 states the following with regard to open space provision: To address local green (open) space needs and deficiencies, development proposals: a) of 20 family dwellings or more will be supported which contribute 10% or 15% of the site as on-site open space to benefit the development itself - the nature and type of which will be determined by having regard to the Council’s Green Space Audit and Playing Pitch Strategy. b) of 20 family dwellings or more, adjacent or close to a large open space (such as a public park or recreation area) alternatively may be asked to provide a commuted sum of 10% or 15% of the residential land value of the development site. c) of between 10 and 20 family dwellings will be supported which provide for a commuted sum of 10% or 15% of the residential land value of the development site to improve existing open spaces within the vicinity of the development. d) for retirement living schemes and / or aftercare facilities will be required to provide good quality on-site amenity spaces equating to 16sqm of open space per person. e) providing on-site open space will be required to provide for sustainable open space management and maintenance to be determined in discussion with the planning authority. 2.40 It is of note that Policy 29 reiterates extant UDP Policy RL4, which requires 10 - 15% on-site provision or a commuted sum in lieu of provision on-site dependent on-site specific circumstances (the number of dwellings proposed for example). The draft policy does not appear to be based on, or justified by, an up to date evidence base. 2.41 It is of note that the Council’s Green Space Audit, which is referenced in Policy 29 and comprises part of the evidence base for the publication version of the Plan, is dated July 2013. This evidence is considered to be out of date. 2.42 It is also of note that the word "close" [to a large open space ?] in part 29(b) of the policy is not defined within the policy to enable those reading the policy to understand when the clause might be triggered. 2.43 It is also proposed to calculate the commuted sums based on residential land value, a figure which is unlikely to be agreed at the planning stage and will create an unacceptable circularity issue to the policy. In light of these points, we object to the current wording of Policy 29. 2.44 The general objective of Policy 29 is understood. However, the policy should be clear so that future developers understand what the open space requirements are. Recommendations 2.45 The Council’s Green Space Audit should be updated and then periodically reviewed so that the information being relied upon is kept up to date. The threshold requirements should be set with reference to this evidence. 2.46 The word "close" [to a large open space ?] should be specifically defined within the policy itself or within a glossary to provide clarity for future applications. 2.47 All reference to calculating off-site contributions based on "residential land value" should be deleted from Policy 29. 2.48 The Council should base their commuted sum value for off-site open space provision on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the costs will be. Justification 2.49 Policy 29 is inadequately clear, with references to an evidence base document that is out of date. It also seeks to calculate a commuted sum based on information that will not be agreed / disclosed at the planning application stage.

Summary:
Policy 29 - summary of policy text Policy 29 reiterates extant UDP Policy RL4, which requires 10 - 15% on-site provision or a commuted sum in lieu of provision on-site dependent on-site specific circumstances (the number of dwellings proposed for example). The draft policy does not appear to be based on, or justified by, an up to date evidence base. It is considered that the Council’s Green Space Audit, which is referenced in Policy 29 as part of the evidence base is out of date. The Green Space Audit should be updated and periodically reviewed so that the information being relied upon is kept up to date. The threshold requirements should be set with reference to this evidence. The word "close" [to a large open space ?] in part 29(b) of the policy is not defined to enable those reading the policy to understand when the clause might be triggered. ‘Close’ should be defined with the policy or within the glossary. It is proposed to calculate the commuted sums based on residential land value, a figure which is unlikely to be agreed at the planning stage and will create an unacceptable circularity issue to the policy. All reference to calculating off-site contributions based on “residential land value” should be deleted from Policy 29. The commuted sum value for off-site open space provision should be based on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the costs will be. The general objective of Policy 29 is understood but we object to the current wording of Policy 29. It should be clear so that future developers understand what the open space requirements are.

Response:
We acknowledge the date of the Green space audit and we are currently working on a review. The timescale of which will be determined in line with the Local Plan. The open spaces shown on the policies map are part of the first stage review. In terms of using the word ‘close’ in policy 29.8, the 2013 green space audit shows Fields in Trust walking distances and buffers, these will be used to determine closeness of a proposed development site to an open space. These distances will not change in a reviewed greenspace audit. The calculation of commuted sums is currently based on the residential land value of the site and has been used since the adoption of the 1998 UDP. It will not therefore provide an ‘unacceptable circularity issue’. Securing the commuted sums is provided through S106 agreements, once a land value has been determined.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Tests of Soundness:

Policy 29: Open Space Provision in New Developments states that development proposals for 20 family dwellings or more will be supported where they provide between 10-15% of the site area to be provided as on-site open space and where such development is adjacent or close to a large open space may be asked to provide a commuted sum of 10% or 15% of the residential land value of the development site. Persimmon Homes agrees that public open space is required to form sustainable communities. However, there needs to be a clear and transparent method, provided by the Council, for calculating the percentage of public open space required on site. The Council’s proposals for a commuted sum as an alternative to on-site open space, which suggests a sum of 10-15% of the residential land value, is overly excessive and will threaten the deliverability of sites. Any commuted sum should be reasonably related in scale and in kind to the development and should be derived through consideration of specific deficiencies in local open space provision. This policy is not consistent with the NPPF or the legal tests for planning obligations, which are set out in the CIL Regulations and at paragraph 56 of the Framework. To address our objection, the policy should be revised to provide a clear and transparent method for calculating the quantum of on-site open space required, and the commuted sum payable for off-site provision should be reduced to ensure that it is consistent with national policy.

Response:

Comment noted, we also acknowledge that open space is required for sustainable communities. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind. Therefore meeting with paragraph 56 of the NPPF. Green space provision also contributes to green infrastructure requirements in line with NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places.
2.71 Policy 29 states the following with regard to open space provision: "To address local green (open) space needs and deficiencies, development proposals: a) of 20 family dwellings or more will be supported which contribute 10% or 15% of the site as on-site open space to benefit the development itself - the nature and type of which will be determined by having regard to the Council’s Green Space Audit and Playing Pitch Strategy. b) of 20 family dwellings or more, adjacent or close to a large open space (such as a public park or recreation area) alternatively may be asked to provide a commuted sum of 10% or 15% of the residential land value of the development site. c) of between 10 and 20 family dwellings will be supported which provide for a commuted sum of 10% or 15% of the residential land value of the development site to improve existing open spaces within the vicinity of the development. d) for retirement living schemes and / or aftercare facilities will be required to provide good quality on-site amenity spaces equating to 16sqm of open space per person. e) providing on-site open space will be required to provide for sustainable open space management and maintenance to be determined in discussion with the planning authority." 2.72 Policy 29 reiterates extant UDP Policy RL4, which requires 10 - 15% on-site provision or a commuted sum in lieu of provision on-site dependent on-site specific circumstances (the number of dwellings proposed for example). The draft Policy does not appear to be based on, or justified by, an up to date evidence base. 2.73 The Council's Green Space Audit, which is referenced in Policy 29 and comprises part of the evidence base for the publication version of the Plan, is dated July 2013. This evidence is considered to be out of date. 2.74 It is also of note that the word "close" [to a large open space ?] in part 29(b) of the policy is not defined within the policy, to enable those reading the policy to understand when the clause might be triggered. 2.75 The policy proposes the calculation of a commuted sum, in lieu of on-site POS provision, based on residential land value. This figure would not ordinarily be agreed or disclosed at the planning stage and will create an unacceptable circularity issue to the policy. In light of these points, we object to the current wording of Policy 29. 2.76 The general objective of Policy 29 is understood. However, the policy should be clear so that future developers understand what the open space requirements are. Recommendations 2.77 The Council’s Green Space Audit should be updated and then periodically reviewed so that the information being relied upon is kept up to date. The threshold requirements should be set with reference to this evidence. 2.78 The word "close" [to a large open space ?] should be specifically defined within the policy itself or within a glossary to provide clarity for future applications. 2.79 All reference to calculating off-site contributions based on "residential land value" should be deleted from Policy 29. 2.80 The Council should base their commuted sum value for off-site open space provision on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the costs will be. Justification 2.81 Policy 29 is inadequately clear, with references to an evidence base document that is out of date. It also seeks to calculate a commuted sum based on information that will not be agreed / disclosed at the planning application stage.

Summary:
Policy 29. The Council's Green Space Audit should be updated and then periodically reviewed so that the information being relied upon is kept up to date. The threshold requirements should be set with reference to this evidence. The word "close" [to a large open space ?] should be specifically defined within the policy itself or within a glossary to provide clarity for future applications. All reference to calculating off-site contributions based on "residential land value" should be deleted from Policy 29. The Council should base their commuted sum value for off-site open space provision on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the costs will be. Policy 29 is inadequately clear, with references to an evidence base document that is out of date. It also seeks to calculate a commuted sum based on information that will not be agreed / disclosed at the planning application stage.

Response:
We acknowledge the date of the Green space audit and we are currently working on a review. The timescale of which will be determined in line with the Local Plan. The open spaces shown on the policies map are part of the first stage review. In terms of using the word 'close' in policy 29.B, the 2013 green space audit shows Fields in Trust walking distances and buffers, these will be used to determine closeness of a proposed development site to an open space. These distances will not change in a reviewed greenspace audit. The calculation of commuted sums is currently based on the residential land value of the site and has been used since the adoption of the 1998 UDP. It will not therefore provide an 'unacceptable circularity issue'. Securing the commuted sums is provided through S106 agreements, once a value has been determined.
Amend Policy 29 Parts A and B, and the associated explanatory text, specifically
To overcome the
commuted sums
Attend Hearing
Open space Provision. 1. Level of Green space requirement could impact on deliverability. 2. Part B
Chapter 10: Green Infrastructure
Consistency with National Policy  Justification  10.3. H. Burtwistle & Son welcome the revision to the requirement in Part A of the policy which previously required $56$ per dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. H. Burtwistle & Son still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 10.4. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations ( paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. H. Burtwistle
& Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

10.1. H. Burtwistle & Son is concerned that the level of new greenspace sought on sites will hinder the ability to deliver new housing efficiently and effectively, therefore consider that the Policy 29 is unsound. Test of Soundness 10.2. H. Burtwistle & Son considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy  Justification 10.3. H. Burtwistle & Son welcome the revision to the requirement in Part A of the policy which previously required $56$ per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. H. Burtwistle & Son still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 10.4. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations ( paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. H. Burtwistle
& Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Summary:
Policy 29 - Open space Provision. 1. Level of Green space requirement could impact on deliverability. 2. Part B - commuted sums -this is excessive, could undermine deliverability. 3. Policy not consistent with Policies 66 & 67 re open space requirements. 4. Flexibility need to accord with policies 66 & 67. 5. Amend Parts A & B (and para 10.22 & 10.25) to 'encourage' rather than 'require'.

Response:
Comment noted. The Local Plan should be read as a whole. Policy 29 is specific to open space and complements policy 66. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adopted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities’ health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states ‘Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF. In terms of Local Plan policy 67 (development viability), we should not be predetermining viability issues at the outset of an application and pass these on to other policies in the Local Plan. Given that the NPPF policy (as quoted above) requires authorities to consider a very wide variety of developer requirements and contributions to make a development acceptable in planning terms.
10.1. H. Burtwistle & Son is concerned that the level of new greenspace sought on sites will hinder the ability to deliver new housing efficiently and effectively, therefore consider that the Policy 29 is unsound. Test of Soundness 10.2. H. Burtwistle & Son considers that the Doncaster Local Plan - Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Pragmatic and Flexible X - Consistent with National Policy X - Justification

10.3. H. Burtwistle & Son welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. H. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its current form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Summary:

Welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. Still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing.
Response:
The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states 'Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF. In terms of Local Plan policy 67 (development viability), we should not be predetermining viability issues at the outset of an application and pass these on to other policies in the Local Plan given that the NPPF policy (as quoted above) requires authorities to consider a very wide variety of developer requirements and contributions to make a development acceptable in planning terms.

Test of Soundness:

Previous comments remain relevant. Justification is required for 20+ family dwellings threshold and the threshold for commuted sum. Concerns remain about addressing open space deficiencies - developers should not be expected to deliver open space to make good existing open space deficiencies, but should provide a quantum of open space sufficient to meet the need generated by the proposed development. To do otherwise would fail the planning obligation test set out in Regulation 122(2) of the Community Infrastructure Levy Regulations 2010 'fairly and reasonably related in scale and kind to the development.' Further detail is required on the extent of development contributions, where they are required.

Summary:

Response:
The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Policy: Policy 29: Green Infrastructure

Tests of Soundness:

Comment: 2.74 Although the wording of this policy has changed slightly in relation to the requirements set as a percentage of the site rather than a quantum our previous comments remain relevant. Justification is required regarding the '20 family dwellings or more' threshold at which to provide a commuted sum of 10 - 15% of the residential land value. 2.75 Our concerns remain regarding the reference in the policy to addressing open space deficiencies. Developers should not be expected to deliver open space to make good existing open space deficiencies, but should provide a quantum of open space sufficient to meet the need generated by the proposed development. To do otherwise would fail the planning obligation test set out in Regulation 122(2) of the Community Infrastructure Levy Regulations 2010 'fairly and reasonably related in scale and kind to the development.' Further detail is required on the extent of development contributions, where they are required.

Comment:
Whilst we agree that new development needs to provide open space within a proposal, we do question where the requirement to provide 56sqm of open space per family dwelling on a scheme over 20 units has derived? Development sites need to be used effectively and efficiently, and whilst we do not object to the inclusion of open space within a proposal, further detail would be welcomed on this matter; particularly when considering maintenance of such land. We therefore request justification with regard to the requirement for 56sqm of open space per family dwelling on a scheme over 20 units.

Comment:

2.34 Although the wording of this policy has changed slightly in relation to the requirements set as a percentage of the site rather than a quantum our previous comments remain relevant. Justification is required regarding the '20 family dwellings or more' threshold at which to provide 10-15\% of the site as open space, and the 10 - 12 family dwelling threshold at which to provide a commuted sum of 10 - 15\% of the residential land value. 2.35 Our concerns remain regarding the reference in the policy to addressing open space deficiencies. Developers should not be expected to deliver open space to make good existing open space deficiencies, but should provide a quantum of open space sufficient to meet the need generated by the proposed development. To do otherwise would fail the planning obligation test set out in Regulation 122(2) of the Community Infrastructure Levy Regulations 2010 'fairly and reasonably related in scale and kind to the development.' Further detail is required on the extent of development contributions, where they are required.

Summary:

Previous comments remain relevant. Justification is required for 20+ family dwellings threshold and the threshold for commuted sum. Concerns remain about addressing open space deficiencies - developers should not be expected to deliver open space to make good existing deficiencies, but should provide an amount sufficient to meet need generated by the proposed development. To do otherwise would fail the planning obligations test and CIL requirements. Further detail is needed.

Response:

The provision of a 10 to 15\% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15\% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural wellbeing. Paragraph 92a says we must plan positively for the provision of ? open space? and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states 'Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF.
Concerned that the level of greenspace sought will hinder the ability to deliver new housing effectively and efficiently - therefore Policy 29 is unsound. Welcome the revision to Part A which removes the 56sqm per dwelling requirement. With the new policy requirement, and coupled with other policy requirements such as space standards etc., there could be implications for housing scheme delivery and the ability to achieve the housing requirement. The requirement in part B for a commuted sum is excessive. This should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that “the Council will take a pragmatic and flexible approach to planning obligations”. 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.
In terms of Local Plan policy 67 (development viability), we should not be predetermining viability issues at the outset of an application and pass these on to other policies in the Local Plan given that the NPPF policy (as quoted above) requires authorities to consider a very wide variety of developer requirements and contributions to make a development acceptable in planning terms.
Avant Homes is concerned that the level of new greenspace sought on sites will hinder the ability to deliver new housing efficiently and effectively, therefore consider that the Policy 29 is unsound. Test of Soundness 10.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 10.3. Avant Homes welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. Avant Homes still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 10.4. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Summary:
Welcome the revisions to the requirement of Part A which previously required 56sqm of open space per dwelling. Consider that with other policy standard requirements, 10 - 15% could still have implications for housing schemes and delivery. The 10 - 15% commuted sum when adjacent to large open spaces (Part B) is excessive. The level of commuted sum is not consistent with para. 34 of the NPPF or tests for planning obligations (para. 56), which seek to ensure that obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale to the kind of development. Policy 29 states that schemes will only be supported when the required open space is provided, but this is inconsistent with policies 66 and 67 which state the council will take a pragmatic approach to obligations. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. It is not justified and consistent with national policy and could fail to deliver sustainable development in accordance with the framework. The plan is not currently sound. Proposed change: Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Response:
Comment noted. The Local Plan should be read as a whole. Policy 29 is specific to open space and complements policy 66. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. Policy 29: Open Space Provision in New Developments

Tests of Soundness:
- Positively prepared
- Justified
- Consistent with national

Comment:
10.1. Priority Space is concerned that the level of new greenspace sought on sites will hinder the ability to deliver new housing efficiently and effectively, therefore consider that the Policy 29 is unsound. Test of Soundness 10.2. Priority Space considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistent with National Policy Justification 10.3. Priority Space welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. Priority Space still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 10.4. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that “the Council will take a pragmatic and flexible approach to planning obligations”. 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Summary:
Policy 29 - Open space Provision. 1. Level of Green space requirement could impact on deliverability. 2. Part B - commuted sums -this is excessive, could undermine deliverability. 3. Policy not consistent with Policies 66 & 67 re open space requirements. 4. Flexibility need to accord with policies 66 & 67. 5. Amend Parts A & B (and para 10.22 & 10.25) to 'encourage' rather than 'require'.

Response:
Comment noted. The Local Plan should be read as a whole. Policy 29 is specific to open space and complements policy 66. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The figures of 10 and 15% are adapted from the fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of ? open space? and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states 'Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF. In terms of Local Plan policy 67 (development viability), we should not be predetermining viability issues at the outset of an application and pass these on to other policies in the Local Plan given that the NPPF policy (as quoted above) requires authorities to consider a very wide variety of developer requirements and contributions to make a development acceptable in planning terms.
10.1. Firsure is concerned that the level of new greenspace sought on sites will hinder the ability to deliver new housing efficiently and effectively, therefore consider that the Policy 29 is unsound. Test of Soundness 10.2. Firsure considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistent with National Policy Justification 10.3. Firsure welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. Firsure still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. 10.4. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. Firsure will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Summary:
Concerned that the level of new greenspace sought on sites will hinder the ability to deliver new housing efficiently and effectively ? therefore Policy 29 is unsound. Welcome the revision to the requirement in Part A of the policy which previously required 56sqm of open space per family dwelling. The requirement has been slightly reduced and now seeks between 10 and 15% of the site to be open space on schemes over 20 dwellings. The explanatory text indicates that 15% is required where there is an existing deficiency in open space. Still consider that coupled with national space standards, requirements on mix and other policy standards, there could be implications for potential housing schemes and their delivery and the ability to achieve the housing requirement. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework. Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing.
Comment noted. The Local Plan should be read as a whole. Policy 29 is specific to open space and complements policy 66. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities’ health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states ‘Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF. In terms of Local Plan policy 67 (development viability), we should not be predetermining viability issues at the outset of an application and pass these on to other policies in the Local Plan given that the NPPF policy (as quoted above) requires authorities to consider a very wide variety of developer requirements and contributions to make a development acceptable in planning terms.
10.4. Part B of the policy requires that where sites are adjacent or close to a large open spaces as an alternative to on site open space, a commuted sum of 10 - 15% of the residential land value of the site should be provided. This is excessive, the commuted sum should be derived through consideration of specific local deficiencies in open space provision. The level of commuted sum could undermine the deliverability of the Plan and is not consistent with the principles of the Framework (paragraph 34). Nor is it consistent with the tests for planning obligations (paragraph 56 of the Framework), which seek to ensure that planning obligations are necessary to make the development acceptable, directly related to the development and fairly and reasonably related in scale and kind to the development. 10.5. Policy 29 states that greenspace is required on site and that schemes will only be supported where the required open space is provided. However, this is inconsistent with Policy 66 and 67 which states that contributions will be sought and that viability assessments will be considered on a site specific approach stating that "the Council will take a pragmatic and flexible approach to planning obligations". 10.6. Flexibility therefore needs to be incorporated into Policy 29, in particular part A and B which reflects Policy 66 and 67. The Local Plan at present is internally inconsistent and could undermine the delivery of housing. 10.7. The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. 10.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 10.9. However, we consider that with increased flexibility in line with policy 66 and 67 the Local Plan can be found sound. Metroland will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 10.10. To overcome the objection and address soundness matters, the Council should: - Amend Policy 29 Parts A and B, and the associated explanatory text, specifically paragraphs 10.22 and 10.25, to include flexibility and encourage rather than require; and - Reduce the level of commuted sum required so that it is consistent with the requirements of the Framework.

Summary:

Policy 29 - Open space Provision. 1. Level of Green space requirement could impact on deliverability. 2. Part B - commuted sums -this is excessive, could undermine deliverability. 3. Policy not consistent with Policies 66 & 67 re open space requirements. 4. Flexibility need to accord with policies 66 & 67. 5. Amend Parts A & B (and para 10.22 & 10.25) to 'encourage' rather than 'require'.

Response:

Comment noted. The Local Plan should be read as a whole. Policy 29 is specific to open space and complements policy 66. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and support communities' health, social and cultural well-being. Paragraph 96 states ‘Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF. In terms of Local Plan policy 67 (development viability), we should not be predetermining viability issues at the outset of an application and pass these on to other policies in the Local Plan given that the NPPF policy (as quoted above) requires authorities to consider a very wide variety of developer requirements and contributions to make a development acceptable in planning terms.
Policy 29: Open Space Provision in New Developments states that development proposals for 20 family dwellings or more will be supported where they provide between 10-15% of the site area to be provided as on-site open space and where such development is adjacent or close to a large open space may be asked to provide a commuted sum of 10% or 15% of the residential land value of the development site. Persimmon Homes agrees that public open space is required to form sustainable communities. However, there needs to be a clear and transparent method, provided by the Council, for calculating the percentage of public open space required on site. The Council's proposals for a commuted sum as an alternative to on-site open space, which suggests a sum of 10-15% of the residential land value, is overly excessive and will threaten the deliverability of sites. Any commuted sum should be reasonably related in scale and in kind to the development and should be derived through consideration of specific deficiencies in local open space provision. This policy is not consistent with the NPPF or the legal tests for planning obligations, which are set out in the CIL Regulations and at paragraph 56 of the Framework. To address our objection, the policy should be revised to provide a clear and transparent method for calculating the quantum of on-site open space required, and the commuted sum payable for off-site provision should be reduced to ensure that it is consistent with national policy.

Policy 29 should include a clear and transparent method for calculating the percentage of public open space required on site. The proposals for a commuted sum as an alternative to on-site open space, which suggests a sum of 10-15% of the residential land value, is overly excessive and will threaten the deliverability of sites. Any commuted sum should be reasonably related in scale and in kind to the development and should be derived through consideration of specific deficiencies in local open space provision. This policy is not consistent with the NPPF or the legal tests for planning obligations, which are set out in the CIL Regulations and at paragraph 56 of the Framework. To address our objection, the policy should be revised to provide a clear and transparent method for calculating the quantum of on-site open space required, and the commuted sum payable for off-site provision should be reduced to ensure that it is consistent with national policy.

Summary:

Policy 29 should include a clear and transparent method for calculating the percentage of public open space required on site. The proposals for a commuted sum as an alternative to on-site open space, which suggests a sum of 10-15% of the residential land value, is overly excessive and will threaten the deliverability of sites. Any commuted sum should be reasonably related in scale and in kind to the development and should be derived through consideration of specific deficiencies in local open space provision. This policy is not consistent with the NPPF or the legal tests for planning obligations, which are set out in the CIL Regulations and at paragraph 56 of the Framework. To address our objection, the policy should be revised to provide a clear and transparent method for calculating the quantum of on-site open space required, and the commuted sum payable for off-site provision should be reduced to ensure that it is consistent with national policy.

Response:

Comment noted, we also acknowledge that open space is required for sustainable communities. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states 'Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind. Therefore meeting with paragraph 56 of the NPPF. Green space provision also contributes to green infrastructure requirements in line with NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places.
Policy 29: Open Space Provisions in New Developments states that development proposals for 20 family dwellings or more will be supported where they provide between 10-15% of the site area to be provided as on-site open space and where such development is adjacent or close to a large open space may be asked to provide a commuted sum of 10% or 15% of the residential land value of the development site. Persimmon Homes agrees that public open space is required to form sustainable communities. However, there needs to be a clear and transparent method, provided by the Council, for calculating the percentage of public open space required on site. The Council’s proposals for a commuted sum as an alternative to on-site open space, which suggests a sum of 10-15% of the residential land value, is overly excessive and will threaten the deliverability of sites. Any commuted sum should be reasonably related in scale and in kind to the development and should be derived through consideration of specific deficiencies in local open space provision. This policy is not consistent with the NPPF or the legal tests for planning obligations, which are set out in the CIL Regulations and at paragraph 56 of the Framework. To address our objection, the policy should be revised to provide a clear and transparent method for calculating the quantum of on-site open space required, and the commuted sum payable for off-site provision should be reduced to ensure that it is consistent with national policy.

**Summary:**
Policy 29 should include a clear and transparent method for calculating the percentage of public open space required on site. The proposals for a commuted sum as an alternative to on-site open space, which suggests a sum of 10-15% of the residential land value, is overly excessive and will threaten the deliverability of sites. Any commuted sum should be reasonably related in scale and in kind to the development and should be derived through consideration of specific deficiencies in local open space provision. This policy is not consistent with the NPPF or the legal tests for planning obligations, which are set out in the CIL Regulations and at paragraph 56 of the Framework.

**Response:**
Comment noted, we also acknowledge that open space is required for sustainable communities. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities' health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states 'Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind. Therefore meeting with paragraph 56 of the NPPF. Green space provision also contributes to green infrastructure requirements in line with NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure. Paragraph 91 (c) identifies the role of green infrastructure in the achieving healthy and inclusive safe places.
Policy 29 sets out the requirements for the provision of open space in connection with large residential developments. This is to be provided on-site. However, there are instances where it is more effective for the provision of open space and recreational facilities to be provided off-site such as the diversion of funds towards the improvement of an existing local facility which will bring greater benefit to the local community. In such instances, a facility for developer contributions towards off-site provision or the improvement of existing off-site provision should be available.

Objection is made to the drafting of Policy 29 - Open Space Provision in New Developments to incorporate alternative provision or enhancement through the payment of developer contributions. As such the following amendments to Policy 29 are sought: "To address local green (open) space needs and deficiencies, development proposals: A) of 20 family dwellings or more will be supported which contribute 10% or 15% of the site as on-site open space to benefit the development itself - the nature and type of which will be determined by having regard to the Council’s Green Space Audit and Playing Pitch Strategy OR where the enhancement of local facilities will provide a greater benefit to the local community, a proportionate developer contribution towards this. Reason: in order to contribute to place-making and enhanced benefit of the local community.

Policy 29 - Open space Provision in New Development. Suggest that the policy is amended to allow for potential contributions towards 'off site' enhancement of local facilities to provide a greater benefit to the local community. The representation includes a suggested re-wording of the Policy

Response:
Comment noted no change proposed. Policy 29 part B covers the enhancement of local facilities adjacent to or close to a development proposal, where this will provide a greater benefit to the local community
2.50 Policy 29 states the following with regard to open space provision: To address local green (open) space needs and deficiencies, development proposals: a) of 20 family dwellings or more will be supported which contribute 10% or 15% of the site as on-site open space to benefit the development itself - the nature and type of which will be determined by having regard to the Council’s Green Space Audit and Playing Pitch Strategy. b) of 20 family dwellings or more, adjacent or close to a large open space (such as a public park or recreation area) alternatively may be asked to provide a commuted sum of 10% or 15% of the residential land value of the development site. c) of between 10 and 20 family dwellings will be supported which provide for a commuted sum of 10% or 15% of the residential land value of the development site to improve existing open spaces within the vicinity of the development. d) for retirement living schemes and / or aftercare facilities will be required to provide good quality on-site amenity spaces equating to 16sqm of open space per person. e) providing on-site open space will be required to provide for sustainable open space management and maintenance to be determined in discussion with the planning authority. 2.51 It is of note that Policy 29 reiterates extant UDP Policy RL4, which requires 10 - 15% on-site provision or a commuted sum in lieu of provision on-site dependent on site specific circumstances (the number of dwellings proposed for example). The draft policy does not appear to be based on, or justified by, an up to date evidence base. 2.52 It is of note that the ‘close’ [to a large open space ?] in part 29(b) of the policy is not defined within the policy to enable understanding when the clause might be triggered. 2.54 It is also proposed to calculate the commuted sums based on residential land value, a figure which is unlikely to be agreed at the planning stage and will create an unacceptable circularity issue to the policy. In light of these points, we object to the current wording of Policy 29. Recommendation 2.55 The Council’s Green Space Audit should be updated and then periodically reviewed so that the information being relied upon is kept up to date. The threshold requirements should be set with reference to this evidence. 2.56 The word “close” [to a large open space?] should be specifically defined within the policy itself or within a glossary to provide clarity for future applications. 2.57 All reference to calculating off-site contributions based on “residential land value” should be deleted from Policy 29. 2.58 The Council should base their commuted sum value for off-site open space provision on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the costs will be. Justification 2.59 The general objective of Policy 29 is understood. However, the policy should be clear so that future developers understand what the open space requirements are. 2.60 Currently, Policy 29 is inadequately clear with references to an evidence base document that is out of date. It also seeks to calculate a commuted sum based on information that will not be agreed / disclosed at the planning application stage.

Summary:
Policy 29: Open Space Provision in New Developments 1. Green space audit which is evidence for this Policy is considered out of date (2013). 2. The word “close” [to a large open space?] in part 29(b) of the policy is not defined within the policy to enable understanding when the clause might be triggered. 3. The Council should base their commuted sum value for off-site open space provision on a justified calculation, which is secured through a CIL and / or S106 agreement (as appropriate) so that future developers understand what the costs will be. 4. Policy seeks to calculate a commuted sum based on information that will not be agreed / disclosed at the planning application stage. The general objective of Policy 29 is understood. However, the policy should be clear so that future developers understand what the open space requirements are.

Response:
We acknowledge the date of the Green space audit and we are currently working on a review. The timescale of which will be determined in line with the Local Plan. The open spaces shown on the policies map are part of the first stage review. In terms of using the word ‘close’ in policy 29.B, the 2013 green space audit shows Fields in Trust walking distances and buffers, these will be used to determine closeness of a proposed development site to an open space. These distances will not change in a reviewed greenspace audit. The calculation of commuted sums is currently based on the residential land value of the site and has been used since the adoption of the 1998 UDP. It will not therefore provide an ‘unacceptable circularity issue’. Securing the commuted sums is provided through S106 agreements, once a land value has been determined.
Tests of Soundness:

Comment:

We consider this policy not to be sound as it is not justified or consistent with national policy. This policy looks for residential developments to provide open space to address local green space needs and deficiencies. Overall, there is support for the drive towards incorporating additional green space within new communities on health and well-being grounds. However, developers should only be expected to provide for those facilities which are made necessary by the development proposed and not simply in order to make up for existing deficiencies in provision or provide benefits for the community at large. It should also be acknowledged that this may have a knock-on effect on housing density and the need for additional land to be allocated for new development.

Summary:

Policy 29 Green space provision. o Supports incorporating additional green space within new communities. o Developers should only be expected to provide for those facilities which are made necessary by the development proposed and not simply in order to make up for existing deficiencies in provision or provide benefits for the community at large. o May also impact on housing density.

Response:

Comment noted. The provision of a 10 to 15% commuted sum is reasonably related in scale and in kind to the development and is derived through consideration of spatially specific local open space provision. The green space audit (and subsequent updates) identifies open space provision by community. The figures of 10 and 15% are adapted from the Fields in Trust guidelines for open space requirements (see Fields in Trust 2.4Ha standard). NPPF paragraphs 8b and c identifies the social and environmental objectives of the NPPF. Including the need to provide open spaces that reflect current and future needs and support communities’ health, social and cultural well-being. Paragraph 92a says we must plan positively for the provision of open space and other local services to enhance the sustainability of communities and residential environments. Paragraph 96 states ‘Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities. The policy is required to make developments acceptable in planning terms as noted above. The green space audit (and subsequent updates) ensure that obligations are directly related to the development and reasonably related in scale and kind, therefore meeting with paragraph 56 of the NPPF. Green space provision also contributes to green infrastructure requirements in line with NPPF paragraph 20 (d) identifies strategic policies should make sufficient provision for green infrastructure.
Key sites and/or habitats should not be seen in isolation from the networks that link them. Giving sites and networks two separate policies fails to make explicit the absolute link that must be made between them. Making our proposed changes to Policies 30 and 31 would encompass that holistic approach, meet the Lawton Review’s principles (quoted in para 5.27) of ‘bigger, better, more and joined’ habitats and of the Government’s 2018 25-year Environment Plan’s proposals for Nature Recovery Network, and the NPPF paras 170(d) and 174, which consistently puts habitats and networks together. Policy 31 is weak and does not comply with NPPF paras 175-176. PROPOSED CHANGE Policy 30 Ecological Networks should be part of Policy 31 Valuing Biodiversity and Geodiversity, creating one coherent policy. Delete Policy 30 and revise Policy 31 as follows.

Proposed change: Policy 30 should be part of Policy 31, creating a coherent, holistic policy. Giving sites and networks two separate policies fails to make explicit the absolute link that must be made between them.

Response:
Noted however it is not considered necessary to combine the policies. An additional sentence has been added to bullet point C to reiterate the importance of the ecological network with respect to SSSI’s. Some of the proposed changes duplicate the NPPF policy and advice is that Local Plans should not simply repeat the guidance in the NPPF.
We are encouraged to see the consideration and work towards Nature Recovery Networks and identification of biodiversity opportunity areas across Doncaster.

**Summary:**

We are encouraged to see the consideration and work towards Nature Recovery Networks and identification of biodiversity opportunity areas across Doncaster.

**Response:**

Support welcomed
3.45 Policy 30 states that: Proposals will only be supported which deliver a net gain for biodiversity and protect, create, maintain and enhance the Borough’s ecological networks by: a) being of an appropriate size, scale and type in relation to their location within and impact on the ecological network; b) maintaining, strengthening and bridging gaps in existing habitats networks; c) planting native species and creating new, or restoring existing, national and local priority habitats and / or species; and d) working with strategic partnerships to deliver conservation projects at a landscape scale where appropriate. 3.46 It is of note that there is no reference within the policy or the supporting text to possible mitigation measures or biodiversity offsetting calculations should a development proposal creates a biodiversity loss. In light of this, we object to the current wording of Policy 30. Recommendations 3.47 Policy 30 should refer to supplementary guidance (to be prepared) regarding possible mitigation measures and biodiversity offsetting calculations, so that the policy requirement is fully understood with reference to guidance in the Framework. Justification 3.48 Policy 30 is inadequately clear or effective as currently drafted.

Summary:
Object to Policy 30 - there is no reference within the policy or the supporting text to possible mitigation measures or biodiversity offsetting calculations should a development proposal creates a biodiversity loss. Policy 30 should refer to supplementary guidance (to be prepared) regarding possible mitigation measures and biodiversity offsetting calculations, so that the policy requirement is fully understood with reference to guidance in the Framework. As drafted it is inadequately clear.

Response:
Policy 31 provides more information about requirements for net gain, biodiversity offsetting calculations and the use of the mitigation hierarchy. All policies must be read in conjunction with one another. The impacts of an application on the ecological network would be considered in light of any proposed mitigation as they would be considered against all policies. It is intended to prepare further information supplementary to the Local Plan about the Council’s requirements for delivering net gain.
Policy 30 states that: Proposals will only be supported which deliver a net gain for biodiversity and protect, create, maintain and enhance the Borough's ecological networks by: a) being of an appropriate size, scale and type in relation to their location within and impact on the ecological network; b) maintaining, strengthening and bridging gaps in existing habitats networks; c) planting native species and creating new, or restoring existing, national and local priority habitats and / or species; and d) working with strategic partnerships to deliver conservation projects at a landscape scale where appropriate. 2.51 It is of note that there is no reference within the policy or the supporting text to possible mitigation measures or biodiversity offsetting calculations should a development proposal creates a biodiversity loss. In light of this, we object to the current wording of Policy 30. Recommendations 2.52 Policy 30 should refer to supplementary guidance (to be prepared) regarding possible mitigation measures and biodiversity offsetting calculations, so that the policy requirement is fully understood with reference to guidance in the Framework. Justification 2.53 Policy 30 is inadequately clear or effective as currently drafted.

Summary:
Policy 30 - summary of text There is no reference within the policy or supporting text to possible mitigation measures or biodiversity offsetting calculations should a development proposal create a biodiversity loss. We therefore we object to the current wording of Policy 30. Policy 30 should refer to supplementary guidance regarding possible mitigation measures and biodiversity offsetting calculations, so that the policy requirement is fully understood with reference to guidance in the Framework.

Response:
Policy 31 provides more information about requirements for net gain, biodiversity offsetting calculations and the use of the mitigation hierarchy. All policies must be read in conjunction with one another. The impacts of an application on the ecological network would be considered in light of any proposed mitigation as they would be considered against all policies. It is intended to prepare further information supplementary to the Local Plan about the Council's requirements for delivering net gain.

<td>Summary:</td>
<td>object to the current wording of Policy 30. No reference within the policy or the supporting text to possible mitigation measures or biodiversity offsetting calculations, should a development proposal creates a biodiversity loss. Policy 30 should refer to supplementary guidance (to be prepared) regarding possible mitigation measures and biodiversity offsetting calculations, so that the policy requirement is fully understood with reference to guidance in the Framework. Policy 30 is unclear and not effective as currently drafted and should be amended as suggested to ensure it does not undermine the delivery of the Local Plan.</td>
</tr>
<tr>
<td>Response:</td>
<td>Policy 31 provides more information about requirements for net gain, biodiversity offsetting calculations and the use of the mitigation hierarchy. All policies must be read in conjunction with one another. The impacts of an application on the ecological network would be considered in light of any proposed mitigation as they would be considered against all policies. It is intended to prepare further information supplementary to the Local Plan about the Council's requirements for delivering net gain.</td>
</tr>
</tbody>
</table>
Comment:  
It is recommended that more detail is provided on the application of net gain and how it will achieve a measurable net gain. The policy could do with some rewording to make it clear on what is expected for different development types. If the LPA propose to take a biodiversity net gain approach for all major development and proposals that are likely to result in a biodiversity effect, it needs to be clear on what criteria will be used to judge the need for measurable net gain, i.e. how will likely biodiversity effects be determined and if a developer mitigates effects through design of the proposal how will this be taken into account. Further detail in the supporting text relating to the mitigation hierarchy would be beneficial to ensure clarity that biodiversity net gain complements the hierarchy and all developments should seek to avoid impacts before considering mitigation and finally compensation. As outlined in Planning Practice biodiversity net gain does not override the protection for designated sites, protected or priority species and irreplaceable or priority habitats set out in the NPPF. The policy will need to ensure that habitat improvement will be a genuine additional benefit, and go further than measures already required to implement a compensation strategy. In summary, this plan could do with further detail on what actually underpins the policies in terms of evidence that is needed and be clearer as to what is required to achieve a 'measurable' net gain compared to general enhancement opportunities which will not be required to use the metric or provide ecological assessment.

Summary:  
It is recommended that more detail is provided on the application of net gain and how it will achieve a measurable net gain. Policy 30 could do with some rewording to make it clear on what is expected for different development types. If the LPA propose to take a biodiversity net gain approach for all major development and proposals that are likely to result in a biodiversity effect, it needs to be clear on what criteria will be used to judge the need for measurable net gain, i.e. how will likely biodiversity effects be determined and if a developer mitigates effects through design of the proposal how will this be taken into account. Response:  
Noted. Additional text has been added to the supporting text of the policy and it is intended to prepare further information supplementary to the Local Plan about the Council’s requirements for delivering net gain.
8.1 Peel has a number of comments on the LP’s other strategic and non-strategic policies as currently drafted. These are summarised below:

8.7 A policy amendment is suggested below to ensure consistency with the NPPF: "Proposals should deliver a net gain for biodiversity wherever possible and protect, create, maintain and enhance the borough’s ecological networks by: A) being of an appropriate size, scale, and type in relation to their location within and impact on the ecological network; B) maintaining, strengthening and bridging gaps in existing habitat networks; C) planting native species and creating new, or restoring existing, national and local priority habitats and/or species; and D) working with strategic partnerships to deliver conservation projects at a landscape scale where appropriate."

Response:
Disagree with proposed change. Net gain is a requirement of the NPPF not just in cases 'where possible'.
Comment Ref: C/Policy 30/05014/1/006
Attend Examination: Not Stated

Reason:
Area: Chapter 10: Green Infrastructure
Policy: Policy 30: Ecoloigcal Networks

Tests of Soundness:

Comment:
UKOOG Response: The policy states; ‘Proposals will only be supported which deliver a net gain for biodiversity and protect, create, maintain and enhance the Borough’s ecological networks by: A) being of an appropriate size, scale and type in relation to their location within and impact on the ecological network; B) maintaining, strengthening and bridging gaps in existing habitat networks; C) planting native species and creating new, or restoring existing, national and local priority habitats and/or species; and D) working with strategic partnerships to deliver conservation projects at a landscape scale where appropriate’. Onshore oil and gas sites are temporary in nature and do provide a good opportunity, post decommissioning, to be restored to an enhanced environmental condition that maximises habitat creation and an overall net gain in biodiversity, which should be considered at application stage. For exploration and appraisal developments, which may be in place for less than 2 years, long term biodiversity net gain, may not be achievable.

Summary:
Policy 30. Comment? Onshore oil and gas sites are temporary in nature and provide a good opportunity, post decommissioning, to be restored to an enhanced environmental condition that maximises habitat creation and an overall net gain in biodiversity. Long term biodiversity net gain may not be achievable at exploration and appraisal stages

Response:
Comment noted. See minerals policy and paragraph 14.33 which covers temporary nature of mineral workings. Applications will be dealt with on a case by case basis, using relevant policies in the Local Plan and national policy / guidance, whilst taking account of which stage the development proposal is at.
Comment Ref: /Para 10.36/05059/1/012

Attend Examination: Attend Hearing

Reason: I would be willing to appear at the Examination if that would assist the Independent Planning Inspector. Please also do let me know if you have any queries.

Area: Chapter 10: Green Infrastructure

Policy: Policy 30: Ecological Networks

Tests of Soundness: Justified Consistent with national

Comment:
The emphasis of nature conservation is shifting from protecting wildlife solely within discrete sites to establishing a network of core areas of habitat that are robustly linked together through habitat corridors resilient to environmental change and human pressure. An independent review of England’s wildlife sites and ecological network made five key recommendations: to improve management of existing wildlife sites; to increase the size of existing wildlife sites; to improve the connections between sites; to create new sites; and to reduce the pressure on wildlife by improving the wider environment. Comment: As noted earlier, this site is adjacent to/ is part of the habitat corridors noted in Figure 8 of the Local Plan and therefore should not be developed. The Local Plan breaches this paragraph as the Site could and should be used to fulfil all 5 criteria set out in the independent review given its location directly next to a LNR/SSSI and on a wildlife corridor.

Summary:
Site Ref 350/407 - Rosehill - This site is adjacent to/ is part of the habitat corridors noted in Figure 8 of the Local Plan and therefore should not be developed. The Local Plan breaches this paragraph as the Site could and should be used to fulfil all 5 criteria set out in the independent review given its location directly next to a LNR/SSSI and on a wildlife corridor.

Response:
Comment noted. The site (350/407) is identified as a housing sites not green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal. Comments refer to a site proposed for development rather than the specifics of the policy.
IGas supports the intentions of the respective policies. Oil and gas development for the extraction of shale gas using hydraulic fracturing is prohibited from Sites of Special Scientific Interest (SSSI), Areas of Outstanding Natural Beauty (AONB) and National Parks; other onshore oil and gas development proposals should be considered on a case by case basis, which aligns with the NPPF, Planning Practice Guidance and the WMS 2018. It is important to recognise that mineral operations including onshore oil and gas sites are temporary in nature and provide a clear opportunity, post decommissioning, for sites to be restored to an enhanced environmental condition, for example; a site can be redeveloped to maximise habitat potential and improve biodiversity, which should be considered when assessing a planning application. It should also be recognised that onshore oil and gas developments for exploration and appraisal developments are very short in duration and small in footprint compared to aggregate mineral extraction operations which often occur over extended time periods and over much bigger areas. If onshore oil and gas operations extend into production, the land use footprint is still very small. Consequently, net gain may not be necessary or appropriate in all cases and particularly at the exploration and appraisal stages. This can be assessed on a case by case basis.

Summary:
Policy 30 and 31. Supports intentions of policies. But, should recognise the temporary nature of minerals and sites can be redeveloped to maximise habitats and biodiversity. Net gain may not be necessary or appropriate at hydrocarbon exploration and appraisal phases.

Response:
Comment noted. The local plan should be read as a whole. See paragraph 14.33, which covers temporary nature of mineral workings.
2.61 Policy 30 states that: Proposals will only be supported which deliver a net gain for biodiversity and protect, create, maintain and enhance the Borough’s ecological networks by: a) being of an appropriate size, scale and type in relation to their location within and impact on the ecological network; b) maintaining, strengthening and bridging gaps in existing habitats networks; c) planting native species and creating new, or restoring existing, national and local priority habitats and / or species; and d) working with strategic partnerships to deliver conservation projects at a landscape scale where appropriate. 2.62 It is of note that there is no reference within the policy or the supporting text to possible mitigation measures or biodiversity offsetting calculations should a development proposal creates a biodiversity loss. In light of this, we object to the current wording of Policy 30. Recommendations 2.63 Policy 30 should refer to supplementary guidance (to be prepared) regarding possible mitigation measures and biodiversity offsetting calculations, so that the policy requirement is fully understood with reference to guidance in the Framework. Justification 2.64 Policy 30 is inadequately clear or effective as currently drafted and could undermine the delivery of the Plan if the required contribution is not adequately considered within the Local Plan viability evidence.

Summary:
Policy 30: Ecological Networks  1. Is inadequately clear or effective as currently drafted and could undermine the delivery of the Plan if the required contribution is not adequately considered within the Local Plan viability evidence.  2. Should refer to supplementary guidance (to be prepared) regarding possible mitigation measures and biodiversity offsetting calculations, so that the policy requirement is fully understood with reference to guidance in the Framework.

Response:
Policy 31 provides more information about requirements for net gain, biodiversity offsetting calculations and the use of the mitigation hierarchy. All policies must be read in conjunction with one another. The impacts of an application on the ecological network would be considered in light of any proposed mitigation as they would be considered against all policies. It is intended to prepare further information supplementary to the Local Plan about the Council’s requirements for delivering net gain.
Areas of high biodiversity and geodiversity value must be protected and enhanced. Enhancement measures will include increasing the total area of valuable habitat in the Borough, and linking up existing areas of high value habitat such as ‘ecological stepping stone sites’, ‘wildlife corridors’ and ‘Nature Improvements Areas’ to create coherent and continuous ecological networks. Ecological networks and connectivity are vitally important in sustaining sites and addressing the impacts of climate change. The overall aim is to work in partnership to deliver conservation gain at a landscape scale. Proposals will only be supported which deliver a net gain for biodiversity and protect, create, maintain and enhance the Borough’s ecological networks and sites through the following principles: A) 1,2,4,5,6, unchanged A) 3. They protect restore and enhance and provide appropriate buffers around wildlife and geological features, and aim to link these to, and enhance, the wider ecological networks. Existing habitat networks will be maintained and strengthened, and gaps will be bridged to create a coherent network A) 7. When creating new, or restoring existing, national and local priority habitats and networks all planting will be of native species; B. Development proposals which may adversely affect the integrity of a site with one or more of the following international designations: i. Special Protection Areas (SPAs) ii. Special Areas of Conservation (SACs) iii. Ramsar site iv. Any potential Special Protection Areas (SPAs), Special Areas of Conservation (SACs) or proposed Ramsar site v. Sites identified, or required, as compensatory measures for adverse effects on European sites, candidate Special Protection Areas, possible Special Areas of Conservation, and listed or proposed Ramsar sites will not be permitted unless it has been demonstrated that there are no alternative solutions, there are imperative reasons of overriding public interest and that compensatory measures provide net gain to the habitats and species. The overall coherence of the network of the designations must be shown to be protected. C. In order to ensure development does not negatively impact on nightjar populations, proposals located within 3km of Thorne and Hatfield Moors Special Protection Area, that impact habitats that nightjars may use for feeding on, will only be supported where they deliver a net gain in nightjar foraging habitat. D. Development proposals which are likely to have an adverse impact on a Site of Special Scientific Interest (SSSI) will not normally be permitted. Where an adverse effect on the site’s notified special interest features is likely, an exception should only be made where the benefits of the development, at this site, clearly outweigh both the impacts that it is likely to have on the features of the site that make it of special scientific interest and any broader impacts on the national network of Sites of Special Scientific Interest. E. Development proposals which are likely to have a significant adverse impact on a site with one or more of the following local or regional designations, habitats or species will not be permitted except where the reasons for or benefits of the proposed development outweigh the impact of the development: i. Local Nature Reserves ii. Sites of Biological Importance (SBI) or Local Wildlife Sites iii. Regionally Important Geological and Geomorphological Sites (RIGGS) iv. Designated and/or important wildlife corridors and stepping stones v. Nature Improvement Area vi. Habitats and species within the Doncaster Biodiversity Action Plan vii. National priority species and habitats (commonly known as ‘UK BAP priority habitats and species’) published for England under the requirements of Section 41 of the Natural Environment and Rural Communities Act 2006. F. All development (including conversions and that on brownfield and greenfield sites) must aim to positively contribute to the conservation and enhancement of biodiversity and geodiversity and should not negatively affect these interests. When appropriate, conditions will be put in place to make sure appropriate monitoring is undertaken and make sure mitigation, compensation and offsetting is effective. G. Development proposals that are likely to have a significant impact on a non-designated asset or a site valued by the local community identified in a Neighbourhood Plan or the Site Allocations and Development Policies documents will only be permitted where suitable mitigation and / or compensation is provided to address the adverse impacts of the proposed development, or where any residual harm following mitigation/compensation along with other harm, is clearly outweighed by the benefit of the development. Summary: Areas of high biodiversity and geodiversity value must be protected and enhanced. Enhancement measures will include increasing the total area of valuable habitat in the Borough, and linking up existing areas of high value habitat such as ‘ecological stepping stone sites’, ‘wildlife corridors’ and ‘Nature Improvements Areas’ to create coherent and continuous ecological networks. Development proposals that are likely to have a significant impact on a non-designated asset or a site valued by the local community identified in a Neighbourhood Plan or the Site Allocations and Development Policies documents will only be permitted where suitable mitigation and / or compensation is provided to address the adverse impacts of the proposed development, or where any residual harm following mitigation/compensation along with other harm, is clearly outweighed by the benefit of the development.

Response:

Noted however it is not considered necessary to combine the policies. An additional sentence has been added to bullet point C to reiterate the importance of the ecological network with respect to SSSI’s. Some of the proposed changes duplicate the NPPF policy and advice is that Local Plans should not simply repeat the guidance in the NPPF.
Comment: Key sites and/or habitats should not be seen in isolation from the networks that link them. Giving sites and networks two separate policies fails to make explicit the absolute link that must be made between them. Making our proposed changes to Policies 30 and 31 would encompass that holistic approach, meet the Lawton Review’s principles (quoted in para 5.27) of ‘bigger, better, more and joined’ habitats and of the Government’s 2018 25-year Environment Plan’s proposals for Nature Recovery Network, and the NPPF paras 170(d) and 174, which consistently puts habitats and networks together. Policy 31 is weak and does not comply with NPPF paras 175-176. PROPOSED CHANGE Policy 30 Ecological Networks should be part of Policy 31 Valuing Biodiversity and Geodiversity, creating one coherent policy. Delete Policy 30 and revise Policy 31 as follows.

Summary: DELETE - REPEAT

Response: Noted however it is not considered necessary to combine the policies. An additional sentence has been added to bullet point C to reiterate the importance of the ecological network with respect to SSSI’s. Some of the proposed changes duplicate the NPPF policy and advice is that Local Plans should not simply repeat the guidance in the NPPF.
A2 We are encouraged to see the inclusion of 10% net gain for both designated and non-designated sites and the associated explanation in 10.40. We are also encouraged by the statement within 10.40 that 'surveys will be requested in line with British Standard' and are encouraged to see the request for buffers around local sites. However, we feel this is contradictory to Policy 7 which cannot achieve these basic targets under current circumstances.

Response:
Comment noted. See response to policy 7. The Local Plan is required to balance economic, environmental and social aspects of the NPPF.
Comment:
This comment is about bringing geoconservation into focus alongside bioconservation, and not a serious suggestion that the document is fundamentally unsound. SAGT made response to the Draft Local Plan in October 2018, specifically regarding Policies 31, 63 and 64. We note in the Local Plan Publication version published in August 2019 that the following underlined suggestion relating to Policy 31, section A, sub paragraphs A-1 and A-2 has not been included. (underline cannot be shown so shown as CAPITAL instead) ‘the mitigation hierarchy appears to apply just to biodiversity sites and we suggest that geological sites be specifically included. IN SITUATIONS WHERE PROPOSALS MAY CAUSE HARM TO A GEOLOGICAL SITE (WHICH OFTEN MEANS DESTRUCTION OF THE SITE), MIGHT IT BE POSSIBLE TO STIPULATE THAT SUCH A PROPOSAL WILL ONLY BE SUPPORTED IF A SCHEME TO RECORD SCIENTIFIC INFORMATION FROM THE SITE PRIOR TO ITS PERMANENT LOSS IS INCLUDED.’ However, we were pleased to note that the A-6 sub paragraph has been added: 'Where the permanent loss of a bioconservation or geoconservation site occurs, a proposal will be supported only if provision is made for the site to be recorded by a suitably qualified expert'. Our reasons for suggesting the above and wish for both to be included are based on our experience that it is particularly beneficial for sites that have been inaccessible for a long time, either because they are located on private land or they have become enveloped by creeping soil and dense vegetation. With very little effort on the part of a developer, geological outcrops can be quickly exposed and cleaned with an excavator, allowing geoscientists an opportunity to make a site visit and take photographs, measurements and samples.

Summary:
Policy 31 A-1 and A-2. Not added previous suggestion, which states? "In situations where proposals may cause harm to a geological site (which often means destruction of the site), might it be possible to stipulate that such a proposal will only be supported if a scheme to record scientific information from the site prior to its permanent loss is included." Pleased to see suggested amendment (at previous consultation stage) added to Policy 31 section A6

Response:
Comments noted. Policy 31 A6 covers the recording of a geological site at risk by permanent loss

### Comment:

It is recommended that more detail is provided on the application of net gain and how it will achieve a measurable net gain. The policy could do with some rewording to make it clear on what is expected for different development types. If the LPA propose to take a biodiversity net gain approach for all major development and proposals that are likely to result in a biodiversity effect, it needs to be clear on what criteria will be used to judge the need for measurable net gain, i.e. how will likely biodiversity effects be determined and if a developer mitigates effects through design of the proposal how will this be taken into account. Further detail in the supporting text relating to the mitigation hierarchy would be beneficial to ensure clarity that biodiversity net gain complements the hierarchy and all developments should seek to avoid impacts before considering mitigation and finally compensation. As outlined in Planning Practice biodiversity net gain does not override the protection for designated sites, protected or priority species and irreplaceable or priority habitats set out in the NPPF. The policy will need to ensure that habitat improvement will be a genuine additional benefit, and go further than measures already required to implement a compensation strategy.

In summary, this plan could do with further detail on what actually underpins the policies in terms of evidence that is needed and be clearer as to what is required to achieve a ‘measurable’ net gain compared to general enhancement opportunities which will not be required to use the metric or provide ecological assessment.

### Summary:

It is recommended that more detail is provided on the application of net gain and how it will achieve a measurable net gain. Policy 31 could do with some rewording to make it clear on what is expected for different development types. Comment:

8.1 Peel has a number of comments on the LP’s other strategic and non-strategic policies as currently drafted. These are summarised below: 8.8 The draft policy states that proposals which may harm designated or non-designated sites or features of biodiversity interest will only be supported if (amongst other things) the proposals will deliver a 10% net gain for biodiversity. 8.9 The current NPPF requires local planning authorities to ‘pursue opportunities’ for securing measurable net gains for biodiversity. While the Spring Statement announced that the Government will be mandating net gains in the Environment Bill, detailed legislation will be required deliver 10% net gains in biodiversity. This legislation has still be developed and enacted - through the Environment Bill - and the Government has set a transition period of two years relating to biodiversity net gain requirements. This uncertainty needs to be recognised in policy and its explanation. 8.10 To be consistent with the NPPF, a policy amendment is required to provide flexibility in circumstances where a minimum 10% net gain in biodiversity cannot be achieved, or where addressing other ecological considerations (such as enhancing ecological connectivity by extending/improving movement corridors) means it is preferable not to achieve such a net gain.

Summary:

The current NPPF requires LPAs to ‘pursue opportunities’ for securing measurable net gains for biodiversity. The Spring Statement announced that the government will be mandating net gains in the Environment Bill, but detailed legislation will be required for 10% net gain. This has not been developed or enacted and the government has set a transition period of two years relating to biodiversity net gain requirements. This uncertainty should be recognised in policy and explanation. To be consistent with the NPPF, a policy amendment is required to provide flexibility in circumstances where a minimum 10% net gain in biodiversity cannot be achieved, or where addressing other ecological considerations means it is preferable not to achieve such gain.

Response:

Comments noted. The policy was drafted at a time when the direction of the government with respect to net gain the use of biodiversity metrics was clear. As it stands currently the NPPF requires development to deliver a net gain in biodiversity. The policy provides clarity for developers by specifying the use of the latest Defra Metric and for developments to deliver 10% net gain in biodiversity in order to satisfy the requirement in the NPPF for net gain. It is intended to prepare further information supplementary to the Local Plan about the Council’s requirements for delivering net gain.
Comment Ref: C/Policy 31/04371/1/002
Name: Mineral Products Association
Organisation: Mineral Products Association

Representing:

| Test of Soundness: | Unsound - not stated |

Comment:
This policy as drafted fails to properly reflect NPPF (para 171) in that it does not properly distinguish between the hierarchy of international, national and locally designated sites in terms of development management. Policy needs redrafting to make it sound.

Summary:
Policy 31. Does not properly distinguish between the hierarchy of international, national and locally designated sites in terms of development and needs redrafting.

Response:
Comment noted. Disagree with the comment, policy 31 as drafted distinguishes between the different levels of protected site and applies appropriate DM criteria for each level.
UKOOG Response: Under the UK regulation oil and gas developments for the extraction of shale gas with the use of hydraulic fracturing is prohibited from Sites of Special Scientific Interest (SSSI), Areas of Outstanding Natural Beauty (AONB) and National Parks, other onshore oil and gas development proposals should be considered on a case by case basis, which aligns with the NPPF, Planning Practice Guidance and the WMS 2018.

Summary:
Policy 31. Comment? Hydraulic fracturing is prohibited from SSSI, AONB and national parks

Response:
Comment noted. Proposals will be considered on a case by case basis. The council's shale gas and hydraulic fracturing web page also shows information on the 2015 Infrastructure Act which includes listing the safeguards associated with the act.
I would be willing to appear at the Examination if that would assist the Independent Planning Inspector. Please also do let me know if you have any queries.

National planning policies and legislation protect international sites, such as Thorne and Hatfield Moors Special Area of Conservation and Special Protection Area, and Doncaster’s 15 Sites of Special Scientific Interest. Comment: Being directly adjacent to one of the SSSIs, the Site should be designated part of the LNR/SSSI to help protect and develop the ecological environment within Doncaster.

Response:

Noted. Comments refer to a site proposed for development rather than the specifics of the policy.
Tests of Soundness:

Comment:
IGas supports the intentions of the respective policies. Oil and gas development for the extraction of shale gas using hydraulic fracturing is prohibited from Sites of Special Scientific Interest (SSSI), Areas of Outstanding Natural Beauty (AONB) and National Parks; other onshore oil and gas development proposals should be considered on a case by case basis, which aligns with the NPPF, Planning Practice Guidance and the WMS 2018. It is important to recognise that mineral operations including onshore oil and gas sites are temporary in nature and provide a clear opportunity, post decommissioning, for sites to be restored to an enhanced environmental condition, for example; a site can be redeveloped to maximise habitat potential and improve biodiversity, which should be considered when assessing a planning application. It should also be recognised that onshore oil and gas developments for exploration and appraisal developments are very short in duration and small in footprint compared to aggregate mineral extraction operations which often occur over extended time periods and over much bigger areas. If onshore oil and gas operations extend into production, the land use footprint is still very small. Consequently, net gain may not be necessary or appropriate in all cases and particularly at the exploration and appraisal stages. This can be assessed on a case by case basis.

Summary:
Policy 30 and 31. Supports intentions of policies. But, should recognise the temporary nature of minerals and sites can be redeveloped to maximise habitats and biodiversity. Net gain may not be necessary or appropriate at hydrocarbon exploration and appraisal phases.

Response:
Comment noted. The local plan should be read as a whole. See Local Plan paragraph 14.33, which covers temporary nature of mineral workings.
Comment:

4.1 This section of the report provides comments on a limited number of wider thematic policies detailed within the Doncaster Local Plan 2015-2035: Publication Version (June 2019). Green Infrastructure 4.2 Policy 31 deals with the protection of designated sites and species. As drafted this policy is not considered to accord with national planning policy and other relevant environmental legislation. 4.3 In particular, the DEFRA biodiversity metric and associated requirement for a minimum net gain in biodiversity referred to in part A point 2 of this policy has not yet been incorporated into draft legislation, and it cannot be assumed that this will become law. Furthermore, relevant legislation could be subject to further changes. It is therefore necessary to ensure that the wording of policy 31 reflects whatever legal standard is ultimately adopted. 4.4 A number of amendments to Part A of this policy are therefore proposed in order to make the policy sound as set out below. A) Proposals which may harm designated Local Wildlife Sites, Local Geological Sites, Priority Habitats, Priority Species, protected species (as defined)* will only be supported where: 1. the mitigation hierarchy is applied so that firstly harm is avoided wherever possible, then appropriate mitigation is provided to lessen the impact of any unavoidable harm, and as a last resort compensation is delivered to offset any residual damage to biodiversity; 2. unless otherwise agreed, a biodiversity net gain calculation demonstrates that a proposal will deliver a net gain for biodiversity consistent with relevant legislative requirements; 3. where necessary they protect, restore, enhance and provide appropriate buffers around wildlife and geological features and aim to link these to the wider ecological network; 4. where necessary they produce and deliver appropriate long term management plans for local wildlife and geological sites as well as newly created or restored habitats; 5. they can demonstrate that the need for a proposal outweighs the value of any features to be lost; and 6. if the permanent loss of a geological site is unavoidable, then provision will be made for the site to first be recorded by a suitably qualified expert. * Protected species are defined at those listed under Schedule 5 and 8 of the Wildlife and Countryside Act 1981 and Schedule 2, 3 and 4 of the Conservation of Habitats And Species Regulations 2017. 4.5 As drafted, Part B of the policy does not correctly reflect the Habitats Regulations and should be amended to read as follows: B) Proposals which may impact Special Areas of Conservation, Special Protection Areas or RAMSAR Sites will only be supported where it can be demonstrated that there will be no likely significant effects or no adverse effects on the integrity of European sites. Where the integrity of a site is affected development will not be permitted unless there are alternative solutions and “imperative reasons of overriding public interest” (IROPI) and compensation measures are secured as defined under the Habitats Directives. 4.6 Part D of Policy 31 effectively duplicates the requirement to assess impacts on functionally linked land under the Habitats Regulations. As such this part of the policy is unnecessary and should be deleted. 4.7 Should this part of the policy be retained, as drafted it does not accurately reflect the Habitats Regulations and could be read as protecting all habitats (including hedgerows, scrub, grassland, ditches and ponds) irrespective of whether nightjar are present on sites within 3km of the special Protection Area (SPA). The policy and supporting text needs to make clear that such habitats are only protected if they are actually used by nightjar in order to be consistent with the Habitats Regulations. If this part of the policy is not deleted as suggested, the following amendments to the text are required: In order to ensure development does not negatively impact on nightjar populations, proposals located within 3km of Thorne and Hatfield Moors Special Protection Area that adversely impact habitats that nightjars use for feeding on, will only be supported where they deliver a net impact in nightjar foraging habitat. 4.8 Whilst minor, the above amendments are recommended in order to ensure that the policy is positively prepared, effective, justified and consistent with national planning policy and other relevant habitats legislation, and can therefore be considered sound.

Summary:

Comments on other policies within the Local Plan  Policy 31 - Green Infrastructure The policy does not accord with national policy or other relevant environmental legislation. The DEFRA biodiversity metric and associated requirement for a minimum net gain in biodiversity referred to in Part A point 2 has not yet been incorporated into draft legislation. Cannot assume that this will become law. Further legislation could be subject to further changes. Policy 31 should reflect whatever legal standard is ultimately adopted. The following amendments are proposed to Policy 31: 1. the mitigation hierarchy is applied so that firstly harm is avoided wherever possible, then appropriate mitigation is provided to lessen the impact of any unavoidable harm, and as a last resort compensation is delivered to offset any residual damage to biodiversity; 2. unless otherwise agreed, a biodiversity net gain calculation demonstrates that a proposal will deliver a net gain for biodiversity consistent with relevant legislative requirements; 3. where necessary they protect, restore, enhance and provide appropriate buffers around wildlife and geological features and aim to link these to the wider ecological network; 4. where necessary they produce and deliver appropriate long term management plans for local wildlife and geological sites as well as newly created or restored habitats; 5. they can demonstrate that the need for a proposal outweighs the value of any features to be lost; and 6. if the permanent loss of a geological site is unavoidable, then provision will be made for the site to first be recorded by a suitably qualified expert. * Protected species are defined at those listed under Schedule 5 and 8 of the Wildlife and Countryside Act 1981 and Schedule 2, 3 and 4 of the Conservation of Habitats And Species Regulations 2017. Part B of the policy does not correctly reflect the Habitats Regulations and should be amended as follows: B) Proposals which may impact Special Areas of Conservation, Special Protection Areas or RAMSAR Sites will only be supported where it can be demonstrated that there will be no likely significant effects or no
adverse effects on the integrity of European sites. Where the integrity of a site is affected development will not be permitted unless there are no alternative solutions and "imperative reasons of overriding public interest" (IROPI) and compensation measures are secured as defined under the Habitats Directives. Part D of the policy duplicates the requirement to assess impacts on functionally linked land under the Habitats Regulations. Part D is unnecessary and should be deleted. 4.7 Should this part of the policy be retained, as drafted it does not accurately reflect the Habitats Regulations and could be read as protecting all habitats (including hedgerows, scrub, grassland, ditches and ponds) irrespective of whether nightjar are present on sites within 3km of the Special Protection Area (SPA). The policy and supporting text needs to make clear that such habitats are only protected if they are actually used by nightjar in order to be consistent with the Habitats Regulations. If this part of the policy is not deleted as suggested, the following amendments to the text are required: In order to ensure development does not negatively impact on nightjar populations, proposals located within 3km of Thorne and Hatfield Moors Special Protection Area that adversely impact habitats that nightjars use for feeding on, will only be supported where they deliver a net gain in nightjar foraging habitat. 4.8 Whilst minor, the above amendments are recommended in order to ensure that the policy is positively prepared, effective, justified and consistent with national planning policy and other relevant habitats legislation, and can therefore be considered sound.

Response:

Comments noted. The policy was drafted at a time when the direction of the government with respect to net gain the use of biodiversity metrics was clear. As it stands currently the NPPF requires development to deliver a net gain in biodiversity. The policy provides clarity for developers by specifying the use of the latest Defra Metric and for developments to deliver 10% net gain in biodiversity in order to satisfy the requirement in the NPPF for net gain. Disagree that Point D should be deleted/amended. Surveys to demonstrate presence of nightjar on a site are extremely difficult to undertake in a manner that provides reliable evidence or presence/absence. Nightjar will use a variety of sites for foraging and surveys only provide a snapshot of usage in time. The NPPF requires development to deliver a net gain in biodiversity and by specifying the need to ensure that developments within 3km of Thorne and Hatfield Moors SPA deliver a net gain in habitats that nightjar will use for foraging we are ensuring that the interests of the SPA are protected.

**Summary:**

commends Policy 32 for the consideration given to Local sites

**Response:**

Comment noted and thank you
A pleasant and attractive environment including woodlands, trees, shrubs and other green assets contributes to maintaining and improving the quality of life for people living and working in Doncaster and is significant in helping to attract new investment into the Borough. The evaluation of these existing assets is an important part of the design process for development proposals. Retaining positive green infrastructure assets wherever possible ensures the environment is not damaged and that these assets are available for the benefit of future generations. This is particularly important for woodlands, especially ancient woodlands which have an unbroken history of tree cover and are uniquely valuable and irreplaceable habitats, with no effective form of compensation for their loss or deterioration. Comment: Development of the Site will lead to destruction of a pleasant and attractive environment and positive infrastructure assets. The environment will be damaged and the impact will be irreparable and unable to be compensated for. The site is now a regenerating woodland and should be protected as being valuable an irreplaceable. As noted above, there is no effective form of compensation for the loss of the Site should it be developed.

Summary:
Site Ref 350/407 - Rosehill - Development of the Site will lead to destruction of a pleasant and attractive environment and positive infrastructure assets. The environment will be damaged and the impact will be irreparable and unable to be compensated for. The site is now a regenerating woodland and should be protected as being valuable an irreplaceable. There is no effective form of compensation for the loss of the Site should it be developed.

Response:
Comment noted. The site (350/407) is identified as a housing sites not green space or green infrastructure (GI). Housing sites have developer requirements which will provide GI assets as part of the proposal. Comments refer to a site proposed for development rather than the specifics of the policy.

Area: Chapter 10: Green Infrastructure

Policy: Policy 33: Woodlands, Trees & Hedgerows

Tests of Soundness: Justified Consistent with national

Comment:

Proposals will be supported where it can be demonstrated that woodlands, trees and hedgerows have been adequately considered during the design process, so that a significant adverse impact upon public amenity or ecological interest has been avoided. There will be presumption against development that results in the loss or deterioration of ancient woodland and/or veteran trees. Proposals will need to include: A) the submission of survey information of woodland, trees and hedgerows, as appropriate, to a recognised professional and fit for purpose standard which is able to demonstrate evaluation of these features for realistic long-term retention, and how this has positively informed the design process; B) demonstration of how retained features are to be protected during development; C) an adequate landscape buffer (which excludes built development and residential gardens) adjacent to existing woodlands, wildlife sites and at settlement edges; D) sufficient provision of appropriate replacement planting where it is intended to remove trees and hedgerows; and E) avoidance of the loss or deterioration of woodland. Comment: As noted earlier, the site is a diverse natural environment including scrubland, mature and younger trees, flowers and grasses, and bounded in parts by hedgerows, and supports a diverse array of flora and fauna, many of which are under threat and have declining habitats in the Doncaster area. Development of the site will be contrary to Policy 33 as it will result in significant adverse impact upon public amenity and ecological interest. Development will be unable to provide an adequate landscape buffer. In particular, development of the Site will not be able to provide sufficient provision of appropriate replacement planting to compensate for the removal of trees and hedgerows. Development of the Site will result in the loss or deterioration of the regenerating woodland developing on the Site. Further development adjoining a woodland LNR/SSSI will inevitably create pressures on this area and lead in time to its loss or deterioration.

Summary:

Site Ref 350/407 - Rosehill - The site is a diverse natural environment including scrubland, mature and younger trees, flowers and grasses, and bounded in parts by hedgerows, and supports a diverse array of flora and fauna, many of which are under threat and have declining habitats in the Doncaster area. Development of the site will be contrary to Policy 33 as it will result in significant adverse impact upon public amenity and ecological interest. Comment:

Doncaster’s landscapes are an important element of its distinctive character and make an important contribution to the setting of its settlements. We support this Policy which will help to ensure that development proposals conserve and enhance the Borough’s landscapes.

Response:

Support welcomed
A substantial revision of this policy is required in order to give landscape the importance it requires as the setting for all development and to reflect the European Landscape Convention. At present the explanatory text focuses only on policy not the importance of landscape to people and place. Landscape is more than just scenery: it is the interaction between people and place; the bedrock upon which our society is built. Landscape gives meaning and value to the world around us, contributing to our sense of identity and quality of life. Landscape is both rural and urban, and includes both beautiful and everyday places, as well as those in need of restoration. Through it all ecosystem services are delivered. Landscape makes connections between people and places, and between society and its environment. Involving all of society in shaping and celebrating our landscape will address many challenges facing us today, including demographic and lifestyle changes, food and energy security, heritage and biodiversity conservation. The European Landscape Convention was the world’s first treaty to focus specifically on landscape and was ratified by the UK Government in 2007. Its commitments include integrating landscape into all relevant policies in spatial planning; identifying, assessing and monitoring landscapes, describing their character and analysing what contributes to, or detracts from, their quality and distinctiveness; involving all members of society in the protection, management and planning of landscapes: safeguarding their heritage value, enabling positive change and looking ahead to adapt and create the landscapes of the future.

The European Landscape Convention was the world’s first treaty to focus specifically on landscape and was ratified by the UK Government in 2007. Its commitments include integrating landscape into all relevant policies in spatial planning; identifying, assessing and monitoring landscapes, describing their character and analysing what contributes to, or detracts from, their quality and distinctiveness; involving all members of society in the protection, management and planning of landscapes: safeguarding their heritage value, enabling positive change and looking ahead to adapt and create the landscapes of the future. NPPF paras 20(d), 127(c), 141, 149, 151, 170 (a & b), 171, and 180(b) require stronger protection of landscape and tranquil areas than the current policy. REP PROPOSED CHANGE A substantial revision of policy 34: All development should conserve the landscape character and quality of the Borough and should where possible, enhance and effectively manage the historic, natural and man-made landscape features that contribute to local distinctiveness of both rural and urban landscapes. This will require a landscape scale approach to the proposed development, with associated policy requirements. 1. Understanding of the context, characteristics and significance of the development should be provided and informed by the Doncaster Landscape Character Assessment. 2. Development will be expected to: i. Incorporate appropriate landscaping which reflects the character of the area, including its historical, biodiversity and cultural character, and tranquillity through appropriate design and management; ii. Where appropriate, provide suitable and appropriate mitigation for the restoration of damaged landscape areas; iii. conserve the distinctive setting of, and relationship between, settlements and buildings and the landscape including important views; iv. Preserve and promote local distinctiveness and diversity; v. Avoid the loss of habitats of significant landscape importance and the pattern of woodland, forests, trees, field boundaries, vegetation and other features; where suitable mitigation measures are not achievable on site, then development should provide appropriate net biodiversity gain off site; vi. Protect and / or conserve the historical and ecological qualities of an area, and the special qualities of rivers, waterways, wetlands and their surroundings; and vii Protect the topography of the area including sensitive skylines, hillsides and geological features. viii Protect tranquil areas which have remained relatively undisturbed by noise and are prized for their recreational and amenity value for this reason; ix Consider cumulative impacts on landscape and visual amenity; x Where development proposals would result in a significant impact on the Borough’s landscape, consider alternative site selection; the scale, massing, design, form, layout, orientation and / or operation of the development; and the incorporation of suitable mitigation measures. 3. Where development is considered to be acceptable in principle, measures will be sought to integrate it into the landscape character of the area by: i. Protecting, restoring and enhancing the character and appearance of the local area through suitable planting, landscape and / or woodland; ii. Making suitable provision for better public access to, and enjoyment of, local landscapes; Landscape works shall be appropriate to the scale of the development in accordance with Policy 49 (Landscaping of New Developments) and may require consideration at a landscape scale. The explanation below the policy also requires amending with the following paras before para 10.50: Landscape is more than just scenery: it is the interaction between people and place; the bedrock upon which our society is built. Landscape is both rural and urban, and includes both beautiful and everyday places, as well as those in need of restoration. Involving all of society in shaping and celebrating our landscape will address many challenges facing us today, including climate change, demographic and lifestyle changes, food and energy security, heritage and biodiversity conservation. The European Landscape Convention was the world’s first treaty to focus specifically on landscape and was ratified by the UK Government in 2007. Its commitments include integrating landscape into all relevant policies in spatial planning; identifying, assessing and monitoring landscapes, describing their character and analysing what contributes to, or detracts from, their quality and distinctiveness; involving all members of society in the protection, management and planning of landscapes: safeguarding their heritage value, enabling positive change and looking ahead to adapt and create the landscapes of the future.
Summary:
This policy should be substantially revised to give landscape the importance it requires as the setting for all development and to reflect the European Landscape Convention. The explanatory text focuses only on policy not the importance of landscape to people and place. Landscape is more than scenery - it is the interaction between people and place. NPPF paras 20(d), 127(c), 141, 149, 151, 170 (a & b), 171, and 180(b) require stronger protection of landscape and tranquil areas than the current policy. Proposed change: A substantial revision of policy 34: All development should conserve the landscape character and quality of the Borough and should where possible, enhance and effectively manage the historic, natural and man-made landscape features that contribute to local distinctiveness of both rural and urban landscapes. This will require a landscape scale approach to the proposed development, with associated policy requirements. 1. Understanding of the context, characteristics and significance of the development should be provided and informed by the Doncaster Landscape Character Assessment. 2. Incorporate appropriate landscaping which reflects the character of the area, including its historical, biodiversity and cultural character, and tranquility through appropriate design and management; ii. Where appropriate, provide suitable and appropriate mitigation for the restoration of damaged landscape areas; iii. conserve the distinctive setting of, and relationship between, settlements and buildings and the landscape including important views; iv. Preserve and promote local distinctiveness and diversity; v. Avoid the loss of habitats of significant landscape importance and the pattern of woodland, forests, trees, field boundaries, vegetation and other features; where suitable mitigation measures are not achievable on site, then development should provide appropriate net biodiversity gain off site; vi. Protect and / or conserve the historical and ecological qualities of an area, and the special qualities of rivers, waterways, wetlands and their surroundings; and vii Protect the topography of the area including sensitive skylines, hillsides and geological features. viii Protect tranquil areas which have remained relatively undisturbed by noise and are priced for their recreational and amenity value for this reason; ix Consider cumulative impacts on landscape and visual amenity; x Where development proposals would result in a significant impact on the Borough's landscape, consider alternative site selection; the scale, massing, design, form, layout, orientation and / or operation of the development; and the incorporation of suitable mitigation measures. 3. Where development is considered to be acceptable in principle, measures will be sought to integrate it into the landscape character of the area by: i. Protecting, restoring and enhancing the character and appearance of the local area through suitable plantings, landscape and / or woodland; ii. Making suitable provision for better public access to, and enjoyment of, local landscapes; Landscape works shall be appropriate to the scale of the development in accordance with Policy 49 (Landscaping of New Developments) and may require consideration at a landscape scale. The explanation below the policy also requires amending with the following paras before para 10.50: Landscape is more than just scenery: it is the interaction between people and place; the bedrock upon which our society is built. Landscape is both rural and urban, and includes both beautiful and everyday places, as well as those in need of restoration. Involving all of society in shaping and celebrating our landscape will address many challenges facing us today, including climate change, demographic and lifestyle changes, food and energy security, heritage and biodiversity conservation. The European Landscape Convention was the world's first treaty to focus specifically on landscape and was ratified by the UK Government in 2007. Its commitments include integrating landscape into all relevant policies in spatial planning; identifying, assessing and monitoring landscapes, describing their character and analysing what contributes to, or detracts from, their quality and distinctiveness; involving all members of society in the protection, management and planning of landscapes: safeguarding their heritage value, enabling positive change and looking ahead to adapt and create the landscapes of the future.

Response:
It is considered that the existing Policy is consistent with the NPPF references quoted by CPRE. One change to refer to cumulative impact is considered a helpful addition to the Policy paragraph preceding Part F. NPPF para 20d - is covered by opening para to Policy which refers to both conservation and enhancement. NPPF para 127c - Part A refers to landscape character and setting. NPPF para 141 - The Local Plan defers Green Belt policy to the NPPF. NPPF para 149 - climate change is referred to in the policy supporting text in para 10.54 first bullet point. NPPF para 151 - consideration of landscape impact of renewable and low carbon is included in Policy 59, Part B5. NPPF para 170a&b - there are no national landscape designations in Doncaster; all landscapes are of local value (described in local landscape character assessment) and covered by the Policy. The references to recognition of intrinsic character and beauty of the countryside is national NPPF policy which does not need to be repeated in the Local Plan (both should be read together). Policy 34 applies to both Doncaster’s Countryside and Green Belt whereas NPPF Para 170b relates only to Countryside. NPPF para 171 - There are no national landscape designations in Doncaster; all landscapes are of local value (described in local landscape character assessment) and covered by the Policy. Policy 34 is supported by Policy 27 (Green Infrastructure) which seeks to protect, enhance and, where possible, extend Doncaster’s Green Infrastructure, including landscapes. This Policy can seek contributions to landscapes that operate at a catchment or landscape scale. Policy 49 (Landscaping of New Developments) also requires considerations of Green Infrastructure. NPPF para 180 - it is acknowledged a change to refer to cumulative impact would benefit the policy and this is suggested as a possible Proposed Modification. In terms of tranquillity .... criterion A of the Policy requires consideration of tranquility as does Criterion A4 of Policy 27 (Green Infrastructure). More generally the impact of noise pollution is addressed by Policy 55 / Appendix 11.
Comment: We continue to welcome the reference in part D) with regards to the special qualities of rivers, waterways and their surroundings; which has been carried forward from the Draft Local Plan. This should help ensure that development positively addresses the waterway network in Doncaster; and should make the Local Plan more effective in meeting the aims of Policy 27.

Summary: We continue to welcome the reference in part D) with regards to the special qualities of rivers, waterways and their surroundings; which has been carried forward from the Draft Local Plan. This should help ensure that development positively addresses the waterway network in Doncaster; and should make the Local Plan more effective in meeting the aims of Policy 27.

Response: Support noted.
Comment Ref: C/Policy 34/05014/1/008

Name: United Kingdom Onshore Oil And Gas

Organisation: United Kingdom Onshore Oil and Gas

Date: 30/09/2019

Reason: Tests of Soundness:

Summary: Policy 34. Comment? Oil and gas production sites are screened by trees or natural features. Restoration takes place in line with planning conditions taking account of landscape character.

Response: Comment noted. Screening and restoration conditions will determined using local policies.
Comment:

Onshore oil and gas developments have operated safely within sensitive environments for many years. It is important to recognise that minerals can only be worked where they occur. If necessary, exploration and appraisal sites can be temporarily screened and production sites could be screened by trees or other natural features and designed in a way to minimise any adverse impacts on the character and distinctiveness of the landscape. Once a site is decommissioned, the land can be restored in-line with planning conditions and any environment consenting requirements, taking full account of landscape character.

Summary:

Policy 34. Should recognise minerals can only be worked where they are found and mineral sites can be screened and restored in line with planning conditions which take note of landscape character.

Response:

Comment noted. The local plan should be read as a whole. With regard to planning applications appropriate conditions (such as those related to screening and landscape character) will be applied using the policies in the plan. Paragraph 14.33 also covers temporary nature of mineral workings.
We support the suite of non-Strategic Policies which amplify the Strategic Policy for the historic environment (Policy 35). These Policies cover areas about which either the NPPF is largely silent or are needed to address local circumstances of the Plan area. Taken as a whole, these Policies provide clear guidance about how decision makers should react to development proposals affecting the historic environment [NPPF Paragraph 16(d)]. In conjunction with the Core Strategy Policy 35, these Policies help to satisfy the requirement in Paragraph 185 of the NPPF that the Local Plan should set out a “positive strategy for the conservation and enjoyment of the historic environment”.

Response:
Support welcomed. Representation’s reference to ‘Core Strategy Policy 35’ should read ‘Local Plan Policy 35’
We support this Strategic Policy for the historic environment. We particularly endorse Criterion A which will help decision makers understand which elements of Doncaster’s historic environment are of especial importance to the distinct character of the Borough (and, as a result, which might warrant greater consideration in determining the appropriateness of development proposals) and will assist those preparing any subsequent Neighbourhood Plans. We also welcome the clearly-stated support for proposals which will improve accessibility and enjoyment of the key historic visitor sites within the plan area.

Summary: 'Sound'. We support this Strategic Policy for the historic environment. We particularly endorse Criterion A which will help decision makers understand which elements of Doncaster’s historic environment are of especial importance to the distinct character of the Borough (and, as a result, which might warrant greater consideration in determining the appropriateness of development proposals) and will assist those preparing any subsequent Neighbourhood Plans. We also welcome the clearly-stated support for proposals which will improve accessibility and enjoyment of the key historic visitor sites within the plan area.

Response: Support welcomed
We support this Policy which sets out clearly the information that will be required to support development proposals affecting Doncaster’s heritage assets. This will assist in the delivery of the Plan’s objectives regarding the protection and enhancement of the historic environment.

We support this Policy which sets out clearly the information that will be required to support development proposals affecting Doncaster’s heritage assets. This will assist in the delivery of the Plan’s objectives regarding the protection and enhancement of the historic environment.

**Response:**

Support welcomed
Comment needs rewording to properly reflect NPPF (para 189) to make the policy sound as follows:

Proposals that affect known or potential heritage assets will require:

A) The provision of a heritage statement (or its equivalent) with a level of detail proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance that includes:

1. sufficient information to gain an understanding of the potential impact that the proposals will have on the significance of any heritage assets or historic environment likely to be affected; and
2. for heritage sites with archaeological interest, at least a desk-based assessment and, where appropriate, the results of a field evaluation.

B) In the exceptional circumstances where harm could be justified, detailed investigation and recording will be required to an agreed standard in advance of any alteration, demolition or groundwork to ensure that an understanding of the affected heritage asset is gained, and that knowledge is widely publicised.

Summary:

Policy 36. A) The provision of a heritage statement (or its equivalent) with a level of detail proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance that includes:

Response:

Comment noted. No proposed change. Appropriate wording contained within explanatory text. And local plan policy not required to repeat NPPF wording.
Comment: We support this Policy which sets out clearly the approach that will be taken to development proposals involving the alteration or extension to Doncaster's listed buildings. This will assist in the delivery of the Plan's objectives regarding the protection and enhancement of the historic environment.

Summary: 'Sound'. We support this Policy which sets out clearly the approach that will be taken to development proposals involving the alteration or extension to Doncaster's listed buildings. This will assist in the delivery of the Plan's objectives regarding the protection and enhancement of the historic environment.

Response: Support welcomed

**Comment:**

Whilst it is important to set out a positive strategy for the conservation and enhancement of the historic environment across the whole of the Borough, the historic environment should not preclude future development in appropriate villages. For example, conservation areas should not preclude development but, ensure that special care is taken when considering any future proposal / design, that the new development is built to a high standard and, where possible, seek to preserve and / or enhance the significance of the associated heritage asset. As long as it is acknowledged that the historic environment should not preclude future development we have no further comments to make in respect of Policy 38.

**Summary:**

Whilst it is important to set out a positive strategy for the conservation and enhancement of the historic environment across the whole of the Borough, it should be acknowledged that the historic environment should not preclude future development in appropriate villages. For example, conservation areas should not preclude development but, ensure that special care is taken when considering any future proposal / design, that the new development is built to a high standard and, where possible, seek to preserve and / or enhance the significance of the associated heritage asset.

**Response:**

Policy 38 on conservation areas does not state that new development is precluded but that proposals should take heritage significance into account and amplifies the NPPF by outlining the criteria by which such proposals would be assessed. Whether this precludes any development on a particular site or part of a conservation area would depend very much on the extent of harm to its heritage significance, how this is mitigated, and whether the extent of public benefits outweighs this harm (which is in line with the NPPF). The policy states that proposals that can be shown to enhance the character and appearance of a conservation area would be supported (with particular reference to local distinctiveness cross-referenced to policies 35 and 42).

                Consistent with national

Comment:
Whilst it is important to set out a positive strategy for the conservation and enhancement of the historic environment across the whole of the Borough, the historic environment should not preclude future development in appropriate villages. For example, conservation areas should not preclude development but, ensure that special care is taken when considering any future proposal / design, that the new development is built to a high standard and, where possible, seek to preserve and / or enhance the significance of the associated heritage asset. As long as it is acknowledged that the historic environment should not preclude future development we have no further comments to make in respect of Policy 38.

Summary:
Whilst it is important to set out a positive strategy for the conservation and enhancement of the historic environment across the whole of the Borough, it should be acknowledged that the historic environment should not preclude future development in appropriate villages. For example, conservation areas should not preclude development but, ensure that special care is taken when considering any future proposal / design, that the new development is built to a high standard and, where possible, seek to preserve and / or enhance the significance of the associated heritage asset.

Response:
Policy 38 on conservation areas does not state that new development is precluded but that proposals should take heritage significance into account and amplifies the NPPF by outlining the criteria by which such proposals would be assessed. Whether this precludes any development on a particular site or part of a conservation area would depend very much on the extent of harm to its heritage significance, how this is mitigated, and whether the extent of public benefits outweighs this harm (which is in line with the NPPF). The policy states that proposals that can be shown to enhance the character and appearance of a conservation area would be supported (with particular reference to local distinctiveness cross-referenced to policies 35 and 42).

**Comment:** We support this Policy which sets out clearly the approach that will be taken to development proposals likely to affect Doncaster’s Historic Parks and Gardens. This will assist in the delivery of the Plan’s objectives regarding the protection and enhancement of the historic environment. We particularly welcome the identification of Parks and Gardens of Local Interest and commend the approach and the detailed analysis which has gone into identifying the landscapes on the local list. This will help to ensure that these important elements of Doncaster’s character are appropriately conserved.

**Summary:** 'Sound'. We support this Policy which sets out clearly the approach that will be taken to development proposals likely to affect Doncaster’s Historic Parks and Gardens. This will assist in the delivery of the Plan’s objectives regarding the protection and enhancement of the historic environment. We particularly welcome the identification of Parks and Gardens of Local Interest and commend the approach and the detailed analysis which has gone into identifying the landscapes on the local list. This will help to ensure that these important elements of Doncaster’s character are appropriately conserved.

**Response:** Support welcomed
Designation of Local Historic Interest and the designations do not match historical connections. The evidence base and policy approach therefore need to be thoroughly reviewed. At Cusworth Hall the boundary of the Local Historic Interest expands beyond the Registered Park and Garden to land which is not associated with Cusworth Hall. It is clear from early historic Ordnance Survey maps and earlier cartographic sources that the proposed area of Local Historic Interest sits immediately outside the north eastern extent of the formal parkland of Cusworth Hall. Currently this area has a clear agricultural use with no formal historical connection to the parkland other than the western edge which follows the boundary of part of the Registered Historic Park and Garden. The area therefore has no Local Historic Interest other than a limited visual connection which can be managed through other policies in the plan. The area of Local Historic Interest should therefore be reviewed.

The Plan is its present form is not justified and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. However, we consider that with increased the suggested amendments to the extent of the Cusworth Hall parks and Gardens of Local Historic Interest the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change

To overcome the objection and address soundness matters, the Council should:
- Amend Cusworth Hall Local Historic Interest to remove the north eastern field.

The NPPF expects that local authorities set out a positive strategy for the conservation and enjoyment of the historic environment. As part of a positive strategy we have identified undesignated heritage assets such as parks and gardens of local historic interest (with a commitment to identify buildings and structures of local interest as well). The evidence base for this was then subject to public consultation. The representation does not appear to challenge the principle, that as part of plan making, the local authority has the right to identify undesignated heritage assets and support with policies for their protection. Rather, the representation refutes the identification of one particular site as having local historic interest as an extension of a national designation.

**Response:**

The NPPF expects that local authorities set out a positive strategy for the conservation and enjoyment of the historic environment. As part of a positive strategy we have identified undesigned heritage assets such as parks and gardens of local historic interest (with a commitment to identify buildings and structures of local interest as well). The evidence base for this was then subject to public consultation. The representation does not appear to challenge the principle, that as part of plan making, the local authority has the right to identify undesigned heritage assets and support with policies for their protection. Rather, the representation refutes the identification of one particular site as having local historic interest as an extension of a national designation.
Policy 39 'Historic Parks and Gardens' sets out that development affecting Historic Parks and Gardens will be assessed against the following principles: a) Development proposals within, or affecting Doncaster’s nationally registered parks and gardens, and parks and gardens of local historic interest should preserve and, where appropriate, enhance the heritage significance of these parks and gardens. b) Proposals affecting a historic park of local or national significance should not result in harm to the built or landscape features or key views or vistas which contribute to the significance of the historic park or garden, or which might prejudice future restoration. c) Where proposals result in harm or substantial harm to the significance of a nationally designated historic park the proposal will be considered in relation to the extent of harm arising from the proposal, the relative significance of the historic park and garden, and any public benefits arising from the proposal. In the case of parks and gardens of local interest a balanced judgement will be taken weighing the scale of any harm against the significance of the park. DLP query the need of Policy 39 given the protection to Heritage Assets set out in the National Planning Policy Framework. In respect of the proposed Special Policy Area of Major Developed Site in the Green Belt, any future development proposals for the site will be sensitively designed in respect to the sites setting within High Melton Park and the High Melton Conservation Area. As part of any future planning application an assessment will be made of the developments impact on the significance of these heritage assets. Recommendation It is recommended that Policy 39 is removed from the Draft Local Plan.

Summary:
Policy 39 - Historic Parks and Gardens'. o This Policy should be removed. o Query the need for this policy given the protection of heritage assets in the NPPF.

Response:
The NPPF expects that local authorities set out a positive strategy for the conservation and enjoyment of the historic environment. As part of our positive strategy we have identified undesignated heritage assets such as parks and gardens of local historic interest (with a commitment to identify buildings and structures of local interest as well). The evidence base for this was then subject to public consultation. We are also proposing policies for their conservation. Policy 39 covers parks and gardens of both local and of national significance but (in line with the NPPF) differentiates how they are to be treated according to their heritage significance. It amplifies policy where the NPPF is silent and is part of our positive strategy so we see no reason to withdraw Policy 39. The study we undertook recommended that the parkland of High Melton Hall had sufficient heritage interest in its own right to be considered a historic park and garden of local interest. Its boundary is not contiguous with the boundary of the conservation area but it will make some contribution to its character and appearance as well as the setting of the listed High Melton Hall. Any future planning application would be expected to consider all aspects of heritage significance of which the character of the historic park and garden is one aspect. Green Belt designation is unrelated to these heritage designations and not all parks and gardens are within the Green Belt. We do not accept the argument that the whole of Policy 39 should be removed on the grounds of this element of the objection which appears to be site specific.
Comment: We support this Policy which sets out clearly the approach that will be taken to development proposals likely to affect the archaeology of the Borough. This will assist in the delivery of the Plan's objectives regarding the protection and enhancement of the historic environment.

Summary: 'Sound'. We support this Policy which sets out clearly the approach that will be taken to development proposals likely to affect the archaeology of the Borough. This will assist in the delivery of the Plan’s objectives regarding the protection and enhancement of the historic environment.

Response: Support welcomed
We support this Policy which sets out clearly the approach that will be taken to development proposals likely to affect buildings or structures of local interest. This will assist in the delivery of the Plan’s objectives regarding the protection and enhancement of the historic environment.
Comment:
Unsound because measures to incorporate low and zero-carbon design into buildings and places are not integrated or strategic. The urgent need to embrace zero carbon as a feature of all new developments is not reflected in this chapter. The references to it in Clause 11 of Policies 43 and 45, and Policy 47(B) sit in some isolation from each other, and are treated as development management policies, whereas the role of design and placemaking in addressing climate change should in fact be a major strategic feature of the Plan if it is to be achieved. Proposed change: Adding an overall 'design and placemaking for climate change response' strategic policy, which refers to policies 42, 43, 45, 46, 47 as implementation policies, but also includes the importance of other characteristics, such as walkability, street trees, densities and mix of uses, and public transport connectivity, as crucial aspects of design and placemaking.

Summary:
Unsound as measures to incorporate low and zero-carbon design into buildings and places are not integrated or strategic. The urgent need to embrace zero carbon as a feature of all new developments is not reflected here. The references to it in Clause 11 of Policies 43 and 45, and Policy 47(B) sit in some isolation from each other, and are treated as development management policies, whereas the role of design and place making in addressing climate change should in fact be a major strategic feature of the Plan if it is to be achieved. Proposed change: Adding an overall 'design and place making for climate change response' strategic policy, which refers to policies 42, 43, 45, 46, 47 as implementation policies, but also includes the importance of other characteristics, such as walkability, street trees, densities and mix of uses, and public transport connectivity, as crucial aspects of design and place making.

Response:
The place making aspects of climate change and low carbon design are a theme throughout the policies of the Local Plan and are picked up in numerous strategic and DM policies in addition to those that have been identified. It was considered this was a better way of covering such issues instead of having another standalone policy which would repeat topics covered under relevant other policies.

### Area

Chapter 12: Design & the Built Environment

### Policy

Policy 42: Character & Local Distinctiveness

### Reason

We support this Policy especially the requirement that development should reinforce the character of local landscapes and building traditions, be of a high quality design that contributes to local distinctiveness, respond positively to their context, setting and existing site features, and integrate visually and functionally with the immediate and surrounding area. We particularly welcome the requirement that proposals will need to demonstrate an understanding of the context, history, character and appearance of the site, neighbourhood and the wider area to inform the appropriate design approach. This will help to deliver the Plan’s Objectives regarding quality of place.

### Summary

'Sound'. We support this Policy especially the requirement that development should reinforce the character of local landscapes and building traditions, be of a high quality design that contributes to local distinctiveness, respond positively to their context, setting and existing site features, and integrate visually and functionally with the immediate and surrounding area. This will help to deliver the Plan’s Objectives regarding quality of place.

### Response

Support welcomed
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Persimmon Homes provides high-quality family housing products which are known to be popular in the local market. Our range of products includes a wide-variety of architectural features and local character can be responded to with the use of these house types and their positioning within and design of the overall layout of a scheme, including character areas. Part B of this policy seeks to impose strict requirements on national house builders to justify the use of house types which have been used before or to adapt house types to complement or re-interpret local character. This policy has not been justified and it does not provide an appropriate strategy. The requirement for major urban extensions, high profile and prominent developments to provide or make a contribution towards permanent public art is not compliant with national policy. Paragraph 56 of the Framework outlines the tests which planning obligations must meet and they must be necessary to make a development acceptable in planning terms and directly related to the development. Neither of these points apply to large residential development schemes.

Policy 42 attempts to encourage developers to propose homes which are suited to local character or develop new distinctive developments with strong identity suited to the local area. Persimmon's representation suggests they have products which are capable of being adapted to suit local character which is what the policy is trying to achieve. Part B is not considered to be a strict requirement, but reflects good practice in terms of contextual analysis and developing a design response suited to the local area. P.15 of the National Design Guide reflects this approach. NPPF para 127 c states Planning policies and decisions should ensure that developments are sympathetic to local character and history, including the surrounding built environment and landscape setting, while not preventing or discouraging appropriate innovation or change (such as increased densities). The LP objectives include seeking to ensure our towns, suburbs, villages and countryside benefit from high quality appropriate development that reinforces distinctive and vibrant places. Public art is considered an important element to achieve this. The Council has an emerging public art strategy, and policy 42 is designed to help implement these aspirations. Many of the sites identified in the policy are Council owned and the requirement will apply equally to public sector led developments. We are successfully incorporating public art into the design of a number of public and private developments with no significant adverse effect on development viability. NPPF para 125. States that plans should, at the most appropriate level, set out a clear design vision and expectations, so that applicants have as much certainty as possible about what is likely to be acceptable. The policy aims to achieve this.

### Comment:

2.42 Part b) of the policy states 'Where an applicant wishes to utilise standardised, or 'off the shelf' designs which have been used previously, unless these designs are rigorously justified under the requirements of part E of this policy, the designs must be adapted to complement or re-interpret local character, or make them more distinctive by developing an appropriate locally inspired new identity and appearance for the development ’ 2.43 Whilst the wording of part b) has changed slightly the restrictive still results in a negative presumption towards the use of major housebuilders standard house types. This is unfair and is not based on any evidence which justifies its inclusion within the policy; for these reasons our Client objects to this part of the policy. 2.44 It is however accepted that in some cases revisions may be required to the detailing of certain house types, however, the policy enables the Council free reign to request revisions to house types. 2.45 Our Client will also identify the most appropriately designed houses for each location to ensure that the character and appearance of the area is maintained and not adversely affected. Part b) of the policy is not effective, justified, positively planned or in accordance with national planning policy and is therefore unsound and should be deleted.

### Summary:

Policy 42 - Character and Local Distinctiveness  Part b)  1. Objects to this part of the Policy. 2. Has a negative presumption towards the use of standard house types. This is unfair and is not based on any evidence which justifies its inclusion within the policy  3. It is not sound and does not accord with national planning policy.

### Response:

Policy 42 attempts to encourage developers to propose homes which are suited to local character or develop new distinctive developments with strong identity suited to the local area. The representation suggests their clients have products which are capable of being adapted to suit local character which is what the policy is trying to achieve. Part B provides flexibility for the applicants to justify the use of a standard house type which have been used previously, but places the emphasis upon them to show this is the case with reference to the local area by undertaking a robust contextual analysis as is good practice urban design. Part B is not considered to be unfair or a strict requirement, but reflects good practice in terms of contextual analysis and developing a design response suited to the local area. P.15 of the National Design Guide reflects this approach. NPPF para 127 c states Planning policies and decisions should ensure that developments are sympathetic to local character and history, including the surrounding built environment and landscape setting, while not preventing or discouraging appropriate innovation or change (such as increased densities). NPPF para 125. States that plans should, at the most appropriate level, set out a clear design vision and expectations, so that applicants have as much certainty as possible about what is likely to be acceptable. The policy aims to achieve this.
Comment: 2.42 Part b) of the policy states ‘Where an applicant wishes to utilise standardised, or ‘off the shelf’ designs which have been used previously, unless these designs are rigorously justified under the requirements of part E of this policy, the designs must be adapted to complement or re-interpret local character, or make them more distinctive by developing an appropriate locally inspired new identity and appearance for the development ’ 2.43 Whilst the wording of part b) has changed slightly the restrictive still results in a negative presumption towards the use of major housebuilders standard house types. States that plans should, at the most appropriate level, set out a clear design vision and expectations, so that applicants have as much certainty as possible about what is likely to be acceptable. The policy aims to achieve this.
1.1. Avant Homes is concerned with aspects of Policy 42 therefore consider that the Policy 42 unsound. Test of Soundness  
1.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about?  
X - Positively Prepared  
X - Effective  
X - Justified  
X - Consistency with National Policy  
Justification  
11.3. Avant Homes support the principles of Policy 42, however are concerned with aspects which require the adaptation of standard house types to complement or reinterpret the local character.  
11.4. This could impact on viability and therefore the deliverability of schemes. It is not clear how the whole plan viability has taken into account the requirement for high quality design. Avant Homes consider this requirement will inevitably lead to increases in professional fees and build costs, associated with use of high quality materials. Avant Homes consider additional sensitivity testing is required to consider the impacts this policy.  
11.5. The requirement is not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy.  
11.6. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound.  
11.7. However, we consider that with increased flexibility and review of the viability evidence the Local Plan can be found sound. The Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan.  
Proposed Change  
11.8. To overcome the objection and address soundness matters, the Council should: - Test the impact of the policy on viability, and revise the policy to reflect the findings.  

Summary:  
Policy 42 - Local Character and Distinctiveness.  
1. Could impact of deliverability and viability of schemes.  
2. Impact of policy should be tested on viability and revised to reflect the findings.  

Response:  
Support for the principles of policy 42 is noted. No robust evidence has been presented to the Council to support the assertions made in this representation in terms of negative impacts on viability and deliverability. The representation only raises 'concerns' suggests policy 42 'could' impact on viability. High quality design is clearly an objective of National Planning Policy (NPPF para 124) and should therefore be factored into any development appraisal. It is not considered the requirements of policy 42 will have significantly adverse impacts on development viability. It does not necessarily follow that policy 42 will require the use of high quality materials in every case. Whilst professional fees may increase slightly in some instances, as the design team may need to re-design external elevations to be more suited to local areas, these professional fees will be marginal overall and will not result in significant viability implications. If it were to be the case that this policy (alone or in combination with other requirements) was having a significant adverse impact on viability it would be considered under policy 67 with the applicants given the opportunity to demonstrate why this is the case.
11.1. Metroland is concerned with aspects of Policy 42 therefore consider that the Policy 42 unsound. Test of Soundness 11.2. Metroland considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 11.3. Metroland support the principles of Policy 42, however are concerned with aspects which require the adaptation of standard house types to complement or reinterpret the local character. 11.4. This could impact on viability and therefore the deliverability of schemes. It is not clear how the whole plan viability has taken into account the requirement for high quality design. Metroland consider this requirement will inevitably lead to increases in professional fees and build costs, associated with use of high quality materials. Metroland consider additional sensitivity testing is required to consider the impacts this policy. 11.5. The requirement is not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 11.6. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 11.7. However, we consider that with increased flexibility and review of the viability evidence the Local Plan can be found sound. The Metroland will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 11.8. To overcome the objection and address soundness matters, the Council should: - Test the impact of the policy on viability, and revise the policy to reflect the findings.

Summary:
Policy 42 - Local Character and Distinctiveness. 1. Could impact of deliverability and viability of schemes. 2. Impact of policy should be tested on viability and revised to reflect the findings.

Response:
Support for the principles of policy 42 is noted. Attend Examination: Attend Hearing

Reason: We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 12: Design & the Built Environment

Policy: Policy 42: Character & Local Distinctiveness

Tests of Soundness: Justified Consistent with national

Comment:

Persimmon Homes provides high-quality family housing products which are known to be popular in the local market. Our range of products includes a wide-variety of architectural features and local character can be responded to with the use of these house types and their positioning within and design of the overall layout of a scheme, including character areas. Part B of this policy seeks to impose strict requirements on national house builders to justify the use of house types which have been used before or to adapt house types to complement or re-interpret local character. This policy has not been justified and it does not provide an appropriate strategy. The requirement for major urban extensions, high profile and prominent developments to provide or make a contribution towards permanent public art is not compliant with national policy. Paragraph 56 of the Framework outlines the tests which planning obligations must meet and they must be necessary to make a development acceptable in planning terms and directly related to the development. Neither of these points apply to large residential development schemes.

Summary:

Part B of Policy 42 seeks to impose strict requirements on national house builders to justify the use of house types which have been used before or to adapt house types to complement or re-interpret local character. This policy has not been justified and it does not provide an appropriate strategy. The requirement for major urban extensions, high profile and prominent developments to provide or make a contribution towards permanent public art is not compliant with national policy. Paragraph 56 of the Framework outlines the tests which planning obligations must meet and they must be necessary to make a development acceptable in planning terms and directly related to the development. Neither of these points apply to large residential development schemes.

Response:

Policy 42 attempts to encourage developers to propose homes which are suited to local character or develop new distinctive developments with strong identity suited to the local area. Persimmon’s representation suggests they have products which are capable of being adapted to suit local character which is what the policy is trying to achieve. Part B is not considered to be a strict requirement, but reflects good practice in terms of contextual analysis and developing a design response suited to the local area. P.15 of the National Design Guide reflects this approach. NPPF para 127 states Planning policies and decisions should ensure that developments are sympathetic to local character and history, including the surrounding built environment and landscape setting, while not preventing or discouraging appropriate innovation or change (such as increased densities). The LP objectives include seeking to ensure our towns, suburbs, villages and countryside benefit from high quality appropriate development that reinforces distinctive and vibrant places. Public art is considered an important element to achieve this. The Council has an emerging public art strategy, and policy 42 is designed to help implement these aspirations. Many of the sites identified in the policy are Council owned and the requirement will apply equally to public sector led developments. We are successfully incorporating public art into the design of a number of public and private developments with no significant adverse effect on development viability. NPPF para 125. States that plans should, at the most appropriate level, set out a clear design vision and expectations, so that applicants have as much certainty as possible about what is likely to be acceptable. The policy aims to achieve this.
Reason:

**Comment:**

We support this Policy. This will help to deliver the Plan’s Objectives regarding quality of place.

**Summary:**

'Sound'. We support this Policy. This will help to deliver the Plan’s Objectives regarding quality of place.

**Response:**

Support welcomed
Whilst Gladman recognise the importance of high-quality design, planning policies and the documents sitting behind them should not be overly prescriptive and need flexibility in order for schemes to respond to site specifics and the character of the local area. There will not be a 'one size fits all' solution in relation to design and sites should be considered on a site-by-site basis with consideration given to various design principles. Gladman therefore suggest that more flexibility is provided in the policy wording to ensure that a high quality and inclusive design is not compromised by aesthetic requirements alone. We consider that to do so could act to impact on the viability of proposed residential developments. We suggest that regard should be had to paragraph 126 of the Framework which states that: “To provide maximum clarity about design expectations at an early stage, plans or supplementary planning documents should use visual tools such as design guides and codes. These provide a framework for creating distinctive places, with a consistent and high quality standard of design. However their level of detail and degree of prescription should be tailored to the circumstances in each place, and should allow a suitable degree of variety where this would be justified.”.

Response:
Agree. The policy sets out accepted objectives and principles of good urban design as a flexible framework in acknowledgement that policies should not be overly prescriptive. It is considered the policy is flexible enough whilst being clear in what it is trying to achieve. It does not solely focus on aesthetic considerations, many of the principles incorporate functional considerations such as safety, legibility, adaptability and integration. The policy also seeks to set out a process which reflects good practice. Part B specifically states this. In these respects the policy is considered flexible enough to cover different types of development and the wide ranging contexts found within the borough, it is in keeping with para 126 of the NPPF.

Comment:
The requirement of this policy for proposals of 10 residential units or more to make use of the design review process should not be a requirement, but instead should be encouraged. A mandatory requirement for design review could adversely impact on site delivery and a flexible policy approach should be taken. As it stands, this policy is not effectively justified and does not provide an appropriate strategy. This policy should be modified to 'encourage' the use of design review rather than require it.

Summary:
The requirement of Policy 43 for proposals of 10 residential units or more to make use of the design review process should not be a requirement, but instead should be encouraged. A mandatory requirement for design review could adversely impact on site delivery and a flexible policy approach should be taken. As it stands, this policy is not effectively justified and does not provide an appropriate strategy. This policy should be modified to 'encourage' the use of design review rather than require it.

Response:
The policy does not make design review mandatory. The first para of policy 43 states that 'Proposals for new development will be expected to follow a best practice inclusive design process and where appropriate use established design tools to support good urban design'. It goes on to say this should make use of design review. It does not state that it must. Likewise para 12.10 states 'we encourage applicants to seek design advice and independent design review prior to submission of an application' and under the bullet points 'independent design review where appropriate'.

Comment:

2.46 Our Client is generally supportive of policies 43 and 45, which seek to ensure that high quality designs and development is brought forward. 2.47 However, the policies should include a caveat which states that the provisions within the policy are subject to viability.

Summary:

Policy 43 - Good Urban Design & Policy 45 - Residential Design  1. Generally supportive of Policy. 2. However, should include a caveat which states that the provisions within the policy are subject to viability.

Response:

Support noted. However it is not considered a viability caveat is required as any development proposal would also be assessed against policy 67. Para 1.14 is clear that all policies should be read together and that individual policies do not necessarily refer to other relevant policies. If it were to be the case that this design policy (alone or in combination with other requirements) was having a significant adverse impact on viability it would be considered under policy 67 with the applicants given the opportunity to demonstrate why this is the case.

Comment:

We support this Policy especially the requirements that:- - There is to be an exceptional standard of design quality for buildings, spaces and environmental improvements at higher-profile gateway locations. - Important views, panoramas and vistas are to be protected and enhanced, particularly where these may be affected by a taller building. Developments should not create a crowding effect around, obstruct, or appear too close, dominant or high in relation to any significant heritage asset, particularly Doncaster Minster. - New development at the edge of a settlement should visually and physically integrate with the existing settlement, be sensitive to adjacent uses, should protect the character of the wider landscape and enhance views from sensitive locations such as heritage assets. This Policy will help to deliver the Plan's Objectives regarding quality of place.

Summary:

'Sound'. We support this Policy especially the requirements that:- - There is to be an exceptional standard of design quality for buildings, spaces and environmental improvements at higher-profile gateway locations. - Important views, panoramas and vistas are to be protected and enhanced, particularly where these may be affected by a taller building. Developments should not create a crowding effect around, obstruct, or appear too close, dominant or high in relation to any significant heritage asset, particularly Doncaster Minster. - New development at the edge of a settlement should visually and physically integrate with the existing settlement, be sensitive to adjacent uses, should protect the character of the wider landscape and enhance views from sensitive locations such as heritage assets. This Policy will help to deliver the Plan's Objectives regarding quality of place.

Response:

Support welcomed
Policy 44 states that important views, panoramas and vistas are to be protected and enhanced. Gladman note that the Policy does not identify which views, panoramas and vistas are to be protected and enhanced. For the purposes of clarity and consistency in decision making, we consider it essential that potential views for protection and enhancement are clearly identified and set out. Gladman submit that new development can often be located appropriately without eroding the landscape and locally important views. Proposals can be sensitively designed to take into consideration the wider landscape features of a surrounding area to provide new vistas and views. In addition, as set out in case law, an important view that should be protected must have some form of additional quality that would ‘take it out of the ordinary’ rather than views which may not have any landscape significance and are based solely on community support. To be valued, a view would need to have some form of physical attribute, especially since opinions on landscape are highly subjective. Therefore, without the proportionate and robust evidence required by the PPG to demonstrate why these views and landscape areas are considered special, Gladman fail to see how Policy 44 meets the requirements set out in the Framework. Gladman therefore suggest this element of the policy is deleted as it does not provide clarity and support for a decision maker to apply the policy predictably and with confidence. It is therefore contrary to paragraph 16(d) of the Framework.

The explanatory text at 12.13 sets out the key strategic views. These are not identified as protected views. It is not considered that every view e.g. views in Conservation Areas need to be set out in the Local Plan when the importance of these are more clearly explained within Conservation area appraisals. Agree that development can often be located and designed without causing unacceptable harm and can be sensitively designed to take into consideration local issues and create new views. That is why the Local Plan policies advocate a contextual design approach in other LP policies and at 12.14. The policy wording under 44a and 12.13 allows for enhancement, not just protection for the sake of it, and in this sense allows scope for new development where it is sensitive to the characteristics of the key view.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

The important views outlined in Policy 44 B and expanded upon within the explanatory text (12.13) are not supported by proportionate evidence. The Landscape Character Assessment is outdated and cannot be relied upon to provide robust details of important views within the district. In addition no evidence is provided for the need for the strict requirements on edge of settlement locations. The policy is therefore not justified.

The views are not derived from the Landscape Character Assessment. The key views are not ‘protected views’ under policy 43. The policy wording under 44a, 44c and 12.13 allows for enhancement, not just protection for the sake of it, and in this sense allows scope for new development where it is sensitive to the characteristics of the key view. Development can often be located and designed without causing unacceptable harm and can be sensitively designed to take into consideration local issues and create new views. That is why the Local Plan policies advocate a contextual design approach in other LP policies and at 12.14. It is not considered that the design requirements for edge of settlement locations are strict. The policy reflects existing UDP policies and seeks to draw attention to a specific important design issue and set out key considerations. If the design process advocated under policies 42-43 are undertaken properly as is good practice (see National Design Guide) the contextual analysis will identify the most appropriate design response to the settlement edge.
**Reason:** We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

**Comment:** The important views outlined in point B and expanded upon within the explanatory text (12. 13) are not supported by proportionate evidence. The Landscape Character Assessment is outdated and cannot be relied upon to provide robust details of important views within the district. In addition no evidence is provided for the need for the strict requirements on edge of settlement locations. The policy is therefore not justified.

**Summary:**

The important views outlined in Policy 44 B and expanded upon within the explanatory text (12.13) are not supported by proportionate evidence. The Landscape Character Assessment is outdated and cannot be relied upon to provide robust details of important views within the District. In addition no evidence is provided for the need for the strict requirements on edge of settlement locations. The policy is therefore not justified.

**Response:**

The views are not derived from the Landscape Character Assessment. The key views are not 'protected views' under policy 43. The policy wording under 44a, 44c and 12.13 allows for enhancement, not just protection for the sake of it, and in this sense allows scope for new development where it is sensitive to the characteristics of the key view. Development can often be located and designed without causing unacceptable harm and can be sensitively designed to take into consideration local issues and create new views. That is why the Local Plan policies advocate a contextual design approach in other LP policies and at 12.14. It is not considered that the design requirements for edge of settlement locations are strict. The policy reflects existing UDP policies and seeks to draw attention to a specific important design issue and set out key considerations. If the design process advocated under policies 42-43 are undertaken properly as is good practice (see National Design Guide) the contextual analysis will identify the most appropriate design response to the settlement edge.

**Response:**

At this stage it is unclear as to whether the Space Standards Policy will be found sound. If it is, we are happy to delete the reference under policy 45. If it is not, then we would suggest it remains under policy 45 as a key design consideration for new homes.
Comment: 2.46 Our Client is generally supportive of policies 43 and 45, which seek to ensure that high quality designs and development is brought forward. 2.47 However, the policies should include a caveat which states that the provisions within the policy are subject to viability.

Summary: Policy 45 1. Generally supportive of Policy. 2. However, should include a caveat which states that the provisions within the policy are subject to viability.

Response: Support noted. However it is not considered a viability caveat is required as any development proposal would also be assessed against policy 67. Para 1.14 is clear that all policies should be read together and that individual policies do not necessarily refer to other relevant policies. If it were to be the case that this design policy (alone or in combination with other requirements) was having a significant adverse impact on viability it would be considered under policy 67 with the applicants given the opportunity to demonstrate why this is the case.

Comment:
The majority of the Doncaster area is served by Yorkshire Water and Severn Trent Water. Anglian Water is the sewerage undertaker for part of Doncaster Borough only (parishes of Auckley, Austerfield, Blaxton and Finningley) within and close to Doncaster Sheffield Airport. We are also the water undertaker for part of Finningley Parish. The following comments are submitted on behalf of Anglian Water and relate to our company area only. Anglian Water in our previous comments had asked Doncaster Council to consider including a policy which requires the optional higher water efficiency standard for residential developments (110 litres per person, per day). To assist the preparation of Local Plans, Anglian Water and the Environment Agency have produced this joint advice note relating to optional water efficiency standard. We consider that there is sufficient evidence to demonstrate a need for the optional higher water efficiency standard in the Anglian Water company area. We also consider the adoption of this standard will not raise any financial viability issues for Local Plans or individual development proposals. PROPOSED CHANGE It is therefore proposed that the following wording or similar be added to Policy 46 ‘New housing proposals should meet the Building Regulation optional higher water efficiency standard of 110 litres per person per day as set out in building regulations part G2’.

Summary:
Policy 46 should be amended to require the optional higher water efficiency standard for residential developments (110 litres per person, per day) by addition of the following wording or similar : ‘New housing proposals should meet the Building Regulation optional higher water efficiency standard of 110 litres per person per day as set out in building regulations part G2’.

Response:
No substantive evidence has been found, or provided to the Council, demonstrating a need for the optional water standards in the Anglian Water area or within the wide Borough. Anglian Water only serves a small part of the Borough for sewerage on the south eastern extreme of the Borough boundary. Clean water is provided by Yorkshire Water and Severn Trent, neither of which have raised water availability as an issue and therefore this optional requirement has not been viability tested. The government commissioned Water stressed areas - final Classification, July 2013, Developed by the Environment Agency and Natural Resources Wales does highlight Anglian Water as having a higher propensity for water stress, but both other utility suppliers in the vast majority of the Doncaster area are identified as having moderate stress which is categorised as not serious.
To allow for greater discussion of the industry concerns and to address any points that arise during the examination.

Policy 46: Housing Design Standards

The Home Builders Federation

The evidence does not demonstrate this need. The Housing Design Standards Policy Evidence Paper (June 2019) surveyed 246 homes across 47 sites, to determine how many met the NDSS. It is not apparent if these sites had been submitted after the Government introduction of the NDSS, but it seems unlikely that it would have been in place at the time many of the applications were submitted. The Council indicate that through their research they have identified that a number of properties have not been built to the NDSS. They state that ‘201 out of the 246 plans assessed met the gross internal floor area based on their proposed number of bedrooms’ and that ‘plans were more likely to fail against the NDSS based on storage space or bedroom size, highlighting an internal design issue as opposed to dwelling plot size’. The Council also suggest that the NDSS would be beneficial in providing ventilation, reducing under-occupancy and over-crowding. However, the evidence provided is limited in terms of numbers of properties considered and the potential market comparisons made. It is not evident from the information provided what ‘need’ there actually is for properties built to the standards there is no evidence that these smaller properties are not selling, there is no evidence provided that customers are not satisfied with these properties or that these properties are not comparable to other properties available in the market area. The HBF consider that if the Government had just expected all properties to be built to NDSS they would have made these standards mandatory rather than optional. The HBF consider that standards can, in some instances, have a negative impact on viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The industry knows its customers and what they want, our members would not sell homes below the enhanced standard size if they did not appeal to the market. It should be noted that the HBF Annual Industry Customer Satisfaction Survey published March 2019 and completed by 60,955 new homeowners highlights that 90% of people who have bought a new home would do so again. It also highlights that 93% of homeowners are satisfied with the internal design and layout of their new home. This does not suggest that new homeowners have issues with the size of roofs provided or that there is a need for the NDSS to be introduced. Accessible and Adaptable Dwellings (M4(2)) Policy 46 looks for 65% of homes on developments of 10 or more (or over 0.5ha) to be at M4(2) standards, and for 5% to be provided at M4(3) standards. The HBF is generally supportive of providing homes that are suitable to meet the needs of those with limiting long term illnesses or disabilities. However, if the Council wishes to adopt the higher optional standards for accessible, adaptable and wheelchair homes the Council should only do so by applying the criteria set out in the PPG. It must be remembered that all new homes will be built to Part M4(1). According to Part M of the Building Regulations meeting M4(1) will ensure reasonable provision for most people, including wheelchair users, to approach and enter the dwelling and to access habitable rooms and sanitary facilities on the entrance storey. As such these standards are likely to be suitable for the majority of people. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. It is incumbent on the Council to provide a local assessment evidencing the specific case for Doncaster which justifies the inclusion of optional higher standards for accessible / adaptable homes in its Local Plan policy. The Housing Design Standards Policy Evidence Paper (June 2019) identifies that 18.78% of the population of Doncaster was over 65 yrs in 2017 and that 24.83% will be by 2035. The HBF does not dispute the ageing population within Doncaster, however, it is not clear how this ageing population and potential future need reflects in the need for 65% of all new homes to be provided at M4(2) standards. If it had been the Government’s intention that generic statements identifying an ageing population justified adoption of the accessible & adaptable homes standards, then the logical solution would have been to incorporate the M4(2) as mandatory via the Building Regulations which the Government has not done. The optional higher M4(2) standard should only be introduced on a “need to have” rather than a “nice to have” basis. The evidence does not demonstrate this need. The Housing Design Standards Policy Evidence Paper (June 2019) also that older people and individuals with a long-term health problem or disability (LTHPD) would prefer to live in smaller, one or two bed-properties. It is not clear how this evidence has been considered in relation to the policy. The Whole Plan Viability Testing (2019) report shows the issues of viability for a number of sites. It shows that schemes in the low value areas are not viable and will not be able to support the optional housing standards along with the cumulative requirements from other policies. If the Council can provide the appropriate evidence and...
this policy is to be included, then the HBF recommend that an appropriate transition period is included within the policy. The PPG also identifies other requirements for the policy including the need to consider site specific factors such as vulnerability to flooding, site topography and other circumstances; and that policies for wheelchair accessible homes should only be applied to dwellings where the local authority is responsible for allocating or nominating a person to live in that dwelling.

Summary:
Policy 46 is not considered to be sound as it is not justified or consistent with national policy. Nationally Described Space Standard. The Housing Design Standards Policy Evidence Paper (June 2019) surveyed 246 homes across 47 sites, to determine how many met the NDSS. It is not apparent if these sites had been submitted after the Government introduction of the NDSS, but it seems unlikely that it would have been in place at the time many of the applications were submitted. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. The evidence does not demonstrate this need. The Housing Design Standards Policy Evidence Paper (June 2019) also that older people and individuals with a long-term health problem or disability (LTHPD) would prefer to live in smaller, one or two bed properties. It is not clear how this evidence has been considered in relation to the policy. The Whole Plan Viability Testing (2019) report shows the issues of viability for a number of sites. It shows that schemes in the low value areas are not viable and will not be able to support the optional housing standards along with the cumulative requirements from other policies. If the Council can provide the appropriate evidence and this policy is to be included, then the HBF recommend that an appropriate transition period is included within the policy. The PPG also identifies other requirements for the policy including the need to consider site specific factors such as vulnerability to flooding, site topography and other circumstances; and that policies for wheelchair accessible homes should only be applied to dwellings where the local authority is responsible for allocating or nominating a person to live in that dwelling.

Response:
Due to non-applicability of the NDSS within Doncaster post the introduction of the optional standards, this point is considered irrelevant as the circumstances of development had not changed for the sites surveyed. The Council considers that the breadth of evidence presented in the evidence base paper highlights a strong need for the implementation of the NDSS within Doncaster. The standards are currently not required in Doncaster, as such consumers do not have a choice and can only buy what the market builds. The standards are currently not required in Doncaster, as such consumers do not have a choice and can only buy what the market builds even if this is substandard in certain regards. The implication of the NDSS will not significantly change the dwelling size of new builds in terms of number of bedrooms, it is the quality of each bedroom. With a set standard of decent bedroom sizes and adequate storage space, future home buyers, including those on lower incomes, may feel they do not need to buy a larger house with an increased number of bedrooms, thus offering them a cheaper, more affordable and quality option. For example they may only need to buy a good quality 2 bed property rather than a more expensive 3 bed with insufficient bedroom sizes and storage. The standards are currently not required in Doncaster, as such consumers do not have a choice and can only buy what the market builds even if this is substandard in certain regards. Whilst the Council acknowledges the results from the survey conducted by the HBF it questions the validity in relation to this argument and therefore relevance in relation to the implementation of the NDSS. It is reasonable and not unexpected to assume that the majority of new home owners would be satisfied with their product within a reasonable timeframe of completion and moving in. It is also not understood what specifically is referenced, if anything, in relation to room sizes, when the HBF refers to 'internal design and layout'- this could mean a lot of different things to different people. These surveys are primarily focused on the point of sale with questions regarding the condition of the home on move-in day, quality of finish and build defects, rather than focusing on the experience of living in the home. Support noted. The evidence base document applies the criteria in the NPPG. Whilst it is acknowledged that all homes are required to be built to M4(1) standard, and this may be suitable for certain households, the mandatory standard is not acceptable for the needs of an ever growing percentage of the population hence why the government have introduced higher accessibility standards. The
acknowledgment that M4(1) standards are not sufficient has been presented by the Housing Communities and Local Government Committee and the Women and Equalities Committee whom both set out recommendations that M4(2) should be transferred from optional to mandatory for all new dwellings. In their report, it was stated that making M4(2) mandatory was needed as the current M4(1) was evidently too low to meet the needs of the population. Generic statements where made are supported by evidence. Data presented on the ageing population in Doncaster is considered alongside the detailed further evidence set out within the evidence paper, as required by the NPPG. The ageing population data is considered against the context of all the other data the evidence base is presenting. The NPPG requires local authorities to consider the size needed to meet specifically evidenced needs. The evidence paper demonstrates the aspiration for smaller dwelling size properties for the ageing population and a preference to downsize, but also acknowledges that some households would prefer larger dwelling sizes. It is not the intention of the policy to determine the mix of dwelling sizes upon sites. The discussion within the evidence paper is to demonstrate the potential size needed as required by the NPPG. The evidence paper presents the findings from the two Council Viability studies that have fed into the development of the Local Plan. - The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. It also presents the additional costs of the standards as presented in the Government’s impact assessment at the time which highlight a minimal increase in build costs. This is also considered alongside other societal benefits of the standards that were acknowledged in the Government’s impact assessment. The Council has also included in the policy the provision for applicants to robustly demonstrate, with appropriate evidence, that adhering to the standards is not viable. It is considered that if it was the Government’s intention to provide an appropriate transition period to accompany the adoption of the accessible and adaptable home standards, then the requirement for one would have been set out in the NPPF or NPPG as is the case with space standards. Policy 46 and the supporting text sets out the NPPG required further considerations that should be taken into account; Policy 46 C acknowledges that policies for wheelchair accessible homes should only be applied to dwellings where the local authority is responsible for allocating or nominating a person to live in that dwelling, as such the policy specifies the requirement of wheelchair adaptable dwellings only.
11.1. Strata Homes is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 11.2. Strata Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy. Justification 11.3. Strata Homes is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 11.4. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a 'need to have' rather than a 'nice to have' basis. 11.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that 'where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 11.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 11.7. Viability - the impact of adopting the space standard should be considered as part of a plan's viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 11.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions'. 11.9. Strata Homes welcomes the provision of new evidence on Housing Design Standards Policy. Strata Homes consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 11.10. On NDSS Strata Homes would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 11.11. Strata Homes note that the viability assessment has applied an average house size which is stated to reflect NDSS, However Strata Homes note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, Strata Homes consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 11.12. Strata Homes is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 11.13. Strata Homes is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council's position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Strata Homes reserve the right to comment further when this is made available. 11.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 11.15. The Written Ministerial Statement dated 25th March 2015 stated that: 11.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 11.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made "optional" with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 11.18. Strata Homes does not dispute the population is ageing. However, it is unclear
how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 11.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65's grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 11.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. The paper also notes that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8, Therefore, Strata Homes consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Strata Homes would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 11.21. Strata Homes consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 11.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 11.23. However, Strata Homes consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 11.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:
Part A of Policy 46 is seeking to implement national space standards without the requisite justification and evidence. Strata Homes welcomes the provision of new evidence on Housing Design Standards Policy. Strata Homes consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. On NDSS Strata Homes would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. Strata Homes note that the viability assessment has applied an average house size which is stated to reflect NDSS, However Strata Homes note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, Strata Homes consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. Strata Homes is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). Strata Homes is generally supportive of providing homes for older and disabled persons. However, the SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justifiy the Council's position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Strata Homes reserve the right to comment further when this is made available. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made "optional" with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. Strata Homes does not dispute the population is ageing. However, it is unclear how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65's grows from 18.7% to 25%, Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards, It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8, Therefore, Strata Homes consider that this could result in
stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Strata Homes would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. Strata Homes consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Response:

The Council has addressed these issues within the evidence paper, and in some of the more detailed responses below. The implication of the NDSS will not change the dwelling size of new builds in terms number of bedrooms, it is the quality of each bedroom. With a set standard of decent bedroom sizes and adequate storage space, future home buyers, including those on lower incomes, may feel they do not need to buy a larger house with an increased number of bedrooms, thus offering them a cheaper, more affordable and quality option. For example they may then only need to buy a good quality 2 bed property rather than a more expensive 3 bed with insufficient bedroom sizes and storage. The Council acknowledged this point about innovation in the drafting of Policy 46 and points to the allowance of a potential deviation from the NDSS through being robustly justified and offset through exceptional or innovative design, outlined within the Policy and explanatory text. The Council rejects the idea that the implementation of the NDSS would have a negative impact on the yield of sites, and consequently resulting in the Council failing to meet their housing targets. The Council has addressed the plot size of dwellings required to meet the standards compared to the survey sample in the evidence paper. - The viability testing (Pg 55) explains why it has taken an overall average dwelling size approach given the vast number of variable combinations/appraisals that would result otherwise e.g. different sizes are prescribed depending on number of bedrooms, number of persons and number of storeys. Policy 8 does not prescribe a set mix of housing, but states that sizes, types, price and tenure should address needs and market demand identified in the latest SHMA or other robust evidence. The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. The Council acknowledges that the publication version includes a higher percentage requirement for Policy 46 B), however the figures presented during the informal consultation were not fixed and at the time the evidence base was still under preparation. This policy requirement has been developed using the evidence in the Housing Design Standards Evidence Base. The Council feels the evidence provided meets the requirements set out in the PPG for the implementation of the policy. The PPG sets out the evidence required for the standards the Council is implementing in Policy 46. For standards reflecting accessibility and adaptability, evidence is required to show the likely future need, size, location, type and quality of dwellings needed, evaluation of existing stock, how needs vary across tenures and viability impact. For standards impacting space, evidence is required to show need, viability and timing. The evidence paper uses a range of local and national data sources to demonstrate each of the required sections, as well as analyse the data holistically. The Housing Needs Survey 2019 is available online. The Council has robustly outlined why the policy has stated a requirement of 65% within the evidence paper. The evidence base, and policy percentage requirement, acknowledges that the existing stock will play some part with the emerging population demographic change. However, the existing stock can only play a limited part in the establishment of appropriate homes in Doncaster as outlined within the evidence paper. The Council has outlined why the policy has stated a requirement of 65% within the evidence paper. See response above in respect to the need to take a holistic look at the viability evidence base as opposed to just looking at a single test result. No robust evidence has been provided by the representor, or others with similar representations, to demonstrate viability is an issue. The evidence paper presents the findings from the two Council Local Plan Viability studies that have fed into the development of the Local Plan, which was informed by information from (and workshops with) the industry. The evidence paper also presents the additional costs of the standards as presented in the Government’s impact assessment at the time which highlight a minimal increase in build costs. This is also considered alongside other societal benefits of the standards that were acknowledged in the Government’s impact assessment. The Council has also included in the policy the provision for applicants to robustly demonstrate, with appropriate evidence, that adhering to the standards is not viable.
Policy 46 seeks that development meets national space standards as a minimum. Gladman would remind the Council these standards, introduced by Government, are intended to be optional and should only be a policy requirement where there is a clear need and they retain development viability. As such they were introduced on a ‘need to have’ rather than on a ‘nice to have’ basis. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas: - Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. - Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. - Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’. We consider it essential that the Council have robust and justifiable evidence to introduce any of the optional housing standards, based on the above criteria. Further we suggest that standards can, in some instances, have a negative impact upon viability, consumer choice and increase affordability issues.

Summary:
It is essential that the Council demonstrates that it has robust and justifiable evidence to introduce any of the optional housing standards, based on the criteria set out in PPG (ID 56-020). Standards can, in some instances, have a negative impact upon viability, consumer choice and increase affordability issues.

Response:
National policy in the NPPF and NPPG says LPA’s can bring in optional housing standards where a need can be demonstrated and this has been viability tested. The evidence paper sets out the need and viability has been considered under the whole plan viability testing.
3.49 Policy 46 states that:  

a) In order to ensure homes are large enough for the intended number of inhabitants, all new housing should meet the Nationally Described Space Standard as a minimum.  
b) In order to provide suitable and genuine housing choices for an ageing population and those with Limiting Long Term Illnesses or Disabilities, at least 65% of all new homes on housing developments of over 0.5 hectare or 10 or more units should meet Building Regulation requirement M4(2) ‘accessible and adaptable dwellings’.  
c) In order to provide suitable and genuine housing choices for occupants with more specific needs, at least 5% of all new homes on housing developments of over 0.5 Hectare or 10 or more units should meet Building Regulations requirement M4(3) ‘wheelchair adaptable dwellings’.  

3.50 Policy 46 also sets out that the above standards (or any subsequent equivalents or improved national mandatory minimum requirements) should be met in all cases, and any deviation from the minimum space standards must be robustly justified and offset through exceptional or innovative design.  

3.51 We object to Policy 46.  

Recommendation 3.52 The matter of housing standards should be dealt with under national policy.

Summary:  
Object to Policy 46 - the matter of housing standards should be dealt with under national policy.

Response:  
Housing standards are dealt with under national policy. National policy in the NPPF and NPPG says LPA’s can bring in optional housing standards where a need can be demonstrated and this has been viability tested. The evidence paper sets out the need and viability has been considered under the whole plan viability testing.
### Tests of Soundness:

### Comment:

Nationally Described Space Standards This policy requires residential development proposals to meet national space standards as a minimum. However, these enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and where they do not have an adverse impact on viability which might undermine the delivery of a plan. As such they can only be introduced on a ‘need to have’ rather than a ‘nice to have’ basis. The Council has produced an evidence based document entitled the 'Housing Design Standards Policy Local Plan Evidence Base' with the objective of justifying the policy. This aims to provide justification for the requirement of internal space standards and, as outlined by the PPG (ID56-020), this is broken down into three areas: need, viability, and timing. Need The evidence base highlights that on average new dwellings in the UK and in particular in the Yorkshire and Humber are significantly smaller than developments in Europe despite similar issues and restrictions. While this may indicate a wider issue it is not locally specific to the Council. As part of his study DMBC surveyed 246 homes across 47 sites to determine how many met the nationally described space standards (NDSS) of the area suggests that of current new dwellings and their floor plans only 23 out of 246 dwellings would meet the NDSS as proposed. It is not apparent if these sites had been submitted after the Government introduction of the NDSS, but it seems unlikely that it would have been in place at the time many of the applications were submitted. The Council indicate that through their research they have identified that a number of properties have not been built to the NDSS. They state that ‘201 out of the 246 plans assessed met the gross internal floor area based on their proposed number of bedrooms’ and that ‘plans were more likely to fail against the NDSS based on storage space or bedroom size, highlighting an internal design issue as opposed to dwelling plot size’. This is a small sample of only 246 dwellings and therefore provides insignificant evidence to base the policy upon. It also suggests that the majority of sites are meeting some of the standards and therefore the actual need within the Borough appears to be overestimated. The Council also suggest that the NDSS would be beneficial in providing ventilation, reducing under-occupancy and over-crowding. However, the evidence provided is limited in terms of numbers of properties considered and the potential market comparisons made. It is not evident from the information provided what ‘need’ there actually is for properties built to the standards there is no evidence that these smaller properties are not selling, there is no evidence provided that customers are not satisfied with these properties or that these properties are not comparable to other properties available in the market area. Viability It is stated that the impact on affordability would differ depending on how far the current design is divergent from the standard. The Council contend that the sample survey indicates that the vast majority of dwellings would only need internal design changes to meet the NDSS, and thus there would be little extra cost incurred by the developer or buyer. It is also stated that the benefit of increased storage space and bigger sized bedrooms could allow some households to buy a house with fewer bedrooms than they would have originally looked for. The council contends that the impact on affordability would be minimal. However, the introduction of the NDSS would significantly reduce customer choice. Persimmon Homes build family homes which includes a range of entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms, in order that customers can adequately house their families. This includes a range of products geared towards first-time buyers, first-time movers and young families. Arbitrarily increasing the size of all homes will result in an increase in build cost. Persimmon Homes builds in excess of 16,500 homes each year in around 375 prime locations and is proud to be one of the UK’s leading house builders, committed to the highest standards of design, construction and service. The industry understands customers and their needs and, accordingly, designed homes which appeal to the market. Timing It is suggested by the Council that as the Emerging Local Plan is still to go through an examination and that as consultation has been undertaken as part of the Local Plan process over a significant period of time that this has provided sufficient time to notify developers of the upcoming changes. The Local Plan policies have yet to be formally assessed by an inspector and may be subject to modifications during this process. Although developers may be aware of draft policies sufficient time post adoption should be allowed as a transitional period. In addition, changes to internal layout requirements may take developers some time to design. The proposal within the policy is that 100% of new dwellings should meet the standards. The policy stating that any deviation from the NDSS must be robustly justified, clearly evidenced and offset through exceptional and innovative design. This is overly restrictive and will force developers to provide onerous evidence. Persimmon Homes consider that this policy has not been prepared in a manner which is consistent with national policy and guidance and that it has not been positively prepared. The policy has not been effectively justified to provide a clear rationale for the imposition of the NDSS standards or for the quantum of 100% of new homes. The Council should, unless they can provide sufficient evidence, remove this policy. With regards to the quantum, the Council has not tested alternative options such as requiring a lower percentage of homes to meet the NDSS standard. The policy is therefore not based on an appropriate strategy and all options should be tested and subject to sustainability appraisal. Accessible and Adaptable Dwellings (M4(2)) Policy 46 seeks to require 65% of homes on developments of 10 or more (or over 0.5ha) to meet the M4(2) optional standard, and for 5% of homes to meet the M4(3) standard. While the provision of homes suitable for those with limiting long term illnesses or disabilities is supported, if the Council wishes to adopt the higher optional standards for accessible, adaptable and wheelchair homes the Council should only do so by applying the criteria set out in the PPG. It must be remembered that all new homes will be built to part M4(1). According to Part M of
the Building Regulations meeting M4(1) will ensure reasonable provision for most people, including wheelchair users, to approach and enter the dwelling and to access habitable rooms and sanitary facilities on the entrance storey. As such these standards are likely to be suitable for the vast majority of people. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. It is incumbent on the Council to provide a local assessment evidencing the specific case for Doncaster which justifies the inclusion of optional higher standards for accessible / adaptable homes in its Local Plan policy. The Housing Design Standards Policy Evidence Paper (June 2019) identifies that 18.78% of the population of Doncaster was over 65 years in 2017 and that 24.83% will be by 2035. It is not clear how this ageing population and potential future need is reflected in or justifies the proposed requirement for 65% of all new homes to be provided at M4(2) standards. If it had been the Government’s intention that generic statements identifying an ageing population justified adoption of the accessible & adaptable homes standards, then the logical solution would have been to incorporate the M4(2) as mandatory via the Building Regulations which the Government has not done. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. The evidence does not demonstrate this need. The Whole Plan Viability Testing (2019) report outlines that the policy will result in viability issues for some sites. It shows that schemes in the low value areas are not viable and will not be able to support the optional housing standards along with the cumulative requirements of other policies. If the Council can provide the appropriate evidence and this policy is to be included, then it is recommended that an appropriate transition period is included within the policy. The PPG also identifies other requirements for the policy including the need to consider site specific factors such as vulnerability to flooding, site topography and other circumstances; and that policies for wheelchair accessible homes should only be applied to affordable housing provided in certain tenures for example. The policy should therefore be removed, or requirement reduced significantly to reflect the evidence and viability concerns.

Summary:
The Council’s evidence base document ‘Housing Design Standards Policy Local Plan Evidence Base’ does not justify the policy. Policy 46 requires residential development to meet national space standards as a minimum. However, these enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and where they do not have an adverse impact on viability which might undermine the delivery of a plan. As such they can only be introduced on a ‘need to have’ rather than a ‘nice to have’ basis. Need There is a lack of Doncaster-specific evidence to demonstrate need and the sample size is too small to draw conclusions. Evidence used suggests that the majority of sites are meeting some of the standards and therefore the actual need within the Borough appears to be overestimated. Viability It is stated that the impact on affordability would differ depending on how far the current design is divergent from the standard. The Council contended that the sample survey indicates that the vast majority of dwellings would only need internal design changes to meet the NDSS, and thus there would be little extra cost incurred by the developer or buyer. It is also stated that the benefit of increased storage space and bigger sized bedrooms could allow some households to buy a house with fewer bedrooms than they would have originally looked for. The Council contends that the impact on affordability would be minimal. However, the introduction of the NDSS would significantly reduce customer choice. Persimmon Homes build family homes which includes a range of entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms, in order that customers can adequately house their families. This includes a range of products geared towards first-time buyers, first-time movers and young families. Arbitrarily increasing the size of all homes will result in an increase in build cost. Timing Although developers may be aware of draft policies sufficient time post adoption should be allowed as a transitional period. In addition, changes to internal layout requirements may take developers some time to design. Accessible and Adaptable Dwellings (M4(2)) PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. It is incumbent on the Council to provide a local assessment evidencing the specific case for Doncaster which justifies the inclusion of optional higher standards for accessible / adaptable homes in its Local Plan policy. The Housing Design Standards Policy Evidence Paper (June 2019) identifies that 18.78% of the population of Doncaster was over 65 years in 2017 and that 24.83% will be by 2035. It is not clear how this ageing population and potential future need is reflected in or justifies the proposed requirement for 65% of all new homes to be provided at M4(2) standards. If it had been the Government’s intention that generic statements identifying an ageing population justified adoption of the accessible & adaptable homes standards, then the logical solution would have been to incorporate the M4(2) as mandatory via the Building Regulations which the Government has not done. The Whole Plan Viability Testing (2019) report outlines that the policy will result in viability issues for some sites. It shows that schemes in the low value areas are not viable and will not be able to support the optional housing standards along with the cumulative requirements of other policies. If the Council can provide the appropriate evidence and this policy is to be included, then it is recommended that an appropriate transition period is included within the policy.

Response:
National policy in the NPPF and NPPG says LPA’s can bring in optional housing standards where a need can be demonstrated and this has been viability tested. The evidence paper sets out the need and viability has been considered under the whole plan viability testing. The Council considers that the breadth of evidence presented in the evidence base paper highlights a strong need for the implementation of the NDSS within Doncaster. The implication of the NDSS will not change the dwelling size of new builds in terms of number of bedrooms, it is the quality of each bedroom. With a set standard of decent bedroom sizes and adequate storage space, future home buyers, including those on lower incomes, may feel they do not need to buy a larger house with an increased number of bedrooms, thus offering them a cheaper, more affordable and quality option. For example they may then only need to buy a good quality 2 bed property rather than a more expensive 3 bed with insufficient bedroom sizes and storage. Generic statements where made are supported by evidence. Data presented on the ageing population in Doncaster is considered alongside the detailed further evidence set out within the evidence paper, as required by the NPPG. The ageing population data is considered against the context of all the other data the evidence base is presenting. The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. No robust evidence has been provided by the representor, or others with similar representations, to demonstrate viability is an issue. The evidence paper presents the findings from the two Council Local Plan Viability studies that have fed into the development of the Local Plan, which was informed by information from (and workshops with) the industry. The evidence paper also presents the additional costs of the standards as presented in the Government’s impact assessment at the time which highlight a minimal increase in build costs. This is also considered alongside other societal benefits of the standards that were acknowledged in the Government’s impact assessment. The Council has
also included in the policy the provision for applicants to robustly demonstrate, with appropriate evidence, that adhering to the standards is not viable.
11.1. H. Burtwistle & Son is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 11.2. H. Burtwistle & Son considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 11.3. H. Burtwistle & Son is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 11.4. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a 'need to have' rather than a 'nice to have' basis. 11.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 11.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 11.7. Viability - the impact of adopting the space standard should be considered as part of a plan's viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 11.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’. 11.9. H. Burtwistle & Son welcomes the provision of new evidence on Housing Design Standards Policy. H. Burtwistle & Son consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 11.10. On NDSS H. Burtwistle & Son would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 11.11. H. Burtwistle & Son note that the viability assessment has applied an average house size which is stated to reflect NDSS, However H. Burtwistle & Son note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, H. Burtwistle & Son consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 11.12. H. Burtwistle & Son is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 11.13. H. Burtwistle & Son is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council's position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. H. Burtwistle & Son reserve the right to comment further when this is made available. 11.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 11.15. The Written Ministerial Statement dated 25th March 2015 stated that: 11.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 11.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made "optional" with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on
11.18. H. Burtwistle & Son does not dispute the population is ageing. However, it is unclear how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a “need to have” rather than a “nice to have” basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 11.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65’s grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states “not all of this demand will be met through new builds, and existing stock will play some part”. The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 11.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards, It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8, Therefore, H. Burtwistle & Son consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. H. Burtwistle & Son would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 11.21. H. Burtwistle & Son consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 11.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 11.23. However, H. Burtwistle & Son consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 11.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:

Policy 46 - Housing Design Standards. 1. Policy could impact on deliverability and viability. 2. Part A - national space Standards - no evidence to justify implementation. 3. Remove or increase flexibility 4. Part B - remove or reduce the requirement (65% of all new homes to be accessible/adaptable).

Response:

Refer to response for representation 02073 which raises similar issues.
H. Burtwistle & Son is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 11.2. H. Burtwistle & Son considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy. Justification 11.3. H. Burtwistle & Son is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 11.4. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a 'need to have' rather than a 'nice to have' basis. 11.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that 'where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 11.6. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:
Part A of Policy 46 is seeking to implement national space standards without the requisite justification and evidence. Welcome the provision of new evidence on Housing Design Standards Policy. Consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. Concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). Generally supportive of providing homes for older and disabled persons. However, the SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. H Burtwistle & Son does not dispute the population is ageing. However, it is unclear how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a ”need to have” rather than a ”nice to have” basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65’s grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states ”not all of this demand will be met through new builds, and existing stock will play some part”. The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards, It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8, Therefore, consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. Consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Response:
Refer to response for representation 02073 which raises similar issues.
2.48 As currently drafted our Client objects to part a) of Policy 46, which states "in order to ensure homes are large enough for the intended number of inhabitants, all new housing should meet the Nationally Described Space Standard as a minimum". 2.49 It does not appear that the Council have provided any justification as to why there is a need for the Nationally Described Space Standards to be introduced into the borough, and without this information, they can not seek to impose the standards. The Planning Practice Guidance is clear (ID 56-020), that "where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies". As part of this process, the Council need to demonstrate the need for larger units, that the introduction of the policy would not impact adversely upon viability, and that a transitional period may be required. 2.50 It does not appear that the Council have considered any of these factors and as such, our Client has concerns regarding the introduction of this policy as there does not appear to be any evidence which underpins the request. The policy should therefore be deleted as it is unsound and does not meet the tests of paragraph 35 of the Framework.

Summary:
Policy 46 - Housing Design Standards 1. Object to part (a) of the Policy 2. No justification for Nationally Described Space Standards to be introduced 3. No justification of the 'need' as described in the National guidance. 4. Introduction may have an adverse impact on viability. 5. Policy should be removed - does not comply with NPPF.

Response:
National policy in the NPPF and NPPG says LPA's can bring in optional housing standards where a need can be demonstrated and this has been viability tested. The Housing Standards evidence paper sets out the need and viability has been considered under the whole plan viability testing. The Council considers that the breadth of evidence presented in the evidence base paper highlights a strong need for the implementation of the NDSS within Doncaster.
Comment:

2.48 As currently drafted our Client objects to part a) of Policy 46, which states "in order to ensure homes are large enough for the intended number of inhabitants, all new housing should meet the Nationally Described Space Standard as a minimum". 2.49 It does not appear that the Council have provided any justification as to why there is a need for the Nationally Described Space Standards to be introduced into the borough, and without this information, they can not seek to impose the standards. The Planning Practice Guidance is clear (ID 56-020), that "where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies". As part of this process, the Council need to demonstrate the need for larger units, that the introduction of the policy would not impact adversely upon viability, and that a transitional period may be required. 2.50 It does not appear that the Council have considered any of these factors and as such, our Client has concerns regarding the introduction of this policy as there does not appear to be any evidence which underpins the request. The policy should therefore be deleted as it is unsound and does not meet the tests of paragraph 35 of the Framework.

Summary:

Policy 46 - Housing Design Standards 1. Object to part (a) of the Policy 2. No justification for Nationally Described Space Standards to be introduced 3. No justification of the 'need' as described in the National guidance. 4. Introduction may have an adverse impact on viability. 5. Policy should be removed - does not comply with NPPF.

Response:

National policy in the NPPF and NPPG says LPA's can bring in optional housing standards where a need can be demonstrated and this has been viability tested. The Housing Standards evidence paper sets out the need and viability has been considered under the whole plan viability testing. The Council considers that the breadth of evidence presented in the evidence base paper highlights a strong need for the implementation of the NDSS within Doncaster.
Framecourt Homes is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a ‘need to have’ rather than a ‘nice to have’ basis. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’. Framecourt Homes welcomes the provision of new evidence on Housing Design Standards Policy. Framecourt Homes consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative development. On NDSS Framecourt Homes would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. Framecourt Homes note that the viability assessment has applied an average house size which is stated to reflect NDSS. However Framecourt Homes note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, Framecourt Homes consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. Framecourt Homes is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). Framecourt Homes is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Framecourt Homes reserve the right to comment further when this is made available. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. The Written Ministerial Statement dated 25th March 2015 stated that: The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and/or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made “optional” with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on...
project viability. 11.18. Framecourt Homes does not dispute the population is ageing. However, it is unclear how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 11.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65’s grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 11.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unavailable before the consideration of the impact of M4(2) and M4(3) standards, it also demonstrates that the application of M4(2) and M4(3) some typologies are unavailable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. Therefore, Framecourt Homes consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Framecourt Homes would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 11.21. Framecourt Homes consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 11.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 11.23. However, Framecourt Homes consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 11.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:
Consider Policy 46 to be unsound. Concerned Part A seeks to implement national space standards without the requisite justification and evidence. The policy looks to meet national standards as a minimum, when the government intended these to be optional and need to have, not nice to have. PPG states Local Authorities should look at need, viability and timing. Whilst the new evidence is welcome, in some instances it will have an impact on viability, increase affordability issues and reduce customer choice. Some entry level houses may not meet space standards but are required to ensure those on lower incomes. The housebuilding industry knows its customers and the demand. Space standards can impact on affordability and stifle innovative design. The Council must understand that these requirements will lead to a larger land take up being required. This in turn will impact on site yields and could lead to the Council failing to meet it’s housing targets. The viability assessment assesses the design standards, but does not reflect the mix stipulated in Policy 8. Furthermore, the viability demonstrates the site typologies in low value areas are unavailable based on the assumptions, and viability is worsened with the addition of other planning requirements of the Local Plan. 23% affordable housing has not been tested in combination with the requirements of Policy 46. There needs to be greater flexibility with regards to the space standards. Also concerned that 46 B states that 65% of all new homes on sites of 10+ units should be build to M4(2) building regulations. This is a significant increase on the requirement in the previous draft (30%). Generally support providing housing for older and disabled people, however if the Council wishes to adopt higher optional standards, they should do so using the criteria in the PPG. The SHMA, PBA report and Housing Design Standards Evidence paper does not provide sufficient evidence and does not justify the position of the policy. Reserve the right to comment on the Housing Needs Assessment 2019 when available. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. Category M4 2 or 3 standards are optional with the position being the case for requiring such standards in future new homes should be made through the adoption of Local Plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account things such as project viability. It is unclear how the ageing population translates into a need to have 65% of new homes on sites 10+ units to be M4(2) standard. This should only be where needed, not just because it would be desired. The ageing population in itself is not sufficient justification. Not all people will require a new or adapted home. The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. The viability implications must be realised. In low value areas, all typologies are unavailable before M4(2) and (3) is considered, and the application of both is unviable for some typologies in medium value areas against the 15% requirement. This could result in stalled development where time is taken to discuss viability. It is unrealistic to negotiate every site on one by one basis due to base line policy requirements being too high, and this will risk future housing delivery. The 5% of requirements should be reduced to ensure policy deliverability. Policy 46 not justified or in accordance with the framework or national policy. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Response:
Refer to response for representation 02073 which raises similar issues.
Avant Homes is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness

12.1. Avant Homes is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 12.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 12.3. Avant Homes is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 12.4. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a ‘need to have’ basis rather than a ‘nice to have’ basis. 12.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas’. 12.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 12.7. Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 12.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’. 12.9. Avant Homes welcomes the provision of new evidence on Housing Design Standards Policy. Avant Homes consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 12.10. On NDSS Avant Homes would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 12.11. Avant Homes note that the viability assessment has applied an average house size which is stated to reflect NDSS, However Avant Homes note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement have not been tested in combination with all the requirements of Policy 46, Avant Homes consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 12.12. Avant Homes is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be build to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 12.13. Avant Homes is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Avant Homes reserve the right to comment further when this is made available. 12.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 12.15. The Written Ministerial Statement dated 25th March 2015 stated that: 12.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 12.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas is not so obvious. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made “optional” with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 12.18. Avant Homes does not dispute the population is ageing. However, it is unclear
how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 12.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65's grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 12.20.

It is important that the Council recognises the viability implications of requiring all houses to meet these strengthened standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value area areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. Therefore, Avant Homes consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Avant Homes would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 12.21. Avant Homes consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 12.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 12.23. However, Avant Homes consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 12.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:
Concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. The policy looks to make these a minimum. The enhanced standards are intended by the government to be optional and can only be introduced where there is a clear need and they retain development viability - a need to have basis, not 'nice to have'. PPG identifies the evidence required to introduce such a policy. It should be justified by taking into account need, viability and timing. Welcome the provision of new evidence on Housing Design Standards. Consider that in some instances they may impact on viability, increase affordability issues and reduce customer choice. Some may not be able to meet these and provide 2 - 4 bed entry level homes to ensure those on lower incomes can afford a property with the bedrooms they need. House builders know their customers and the housing in demand. Space standards can impact on delivery of affordably products and stifle innovative design. Encourage the Council to recognise the larger land take such houses will require more land take.

Delivery of this will reduce the yield of sites and could have potential implications on the yields identified on sites and ultimately a failure to meet housing targets. The mixed tested in the viability assessment do not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. 23% affordable requirement not tested with requirements of Policy 46 and their needs to be greater flexibility. Concerned about the significant increase in the requirements of Part B that 56% of new homes on developments of 10+ units should be built to M4 (2) standards. I the council want to adopt higher optional standards they should apply PPG criteria. No evidence sufficiently justifies the Council's position. Reserve right to comment on Housing Needs Assessment when public. If seeking the higher optional standards, the evidence should be forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. A ministerial statement 25/03/15 stated that these should only be required through any new local plan if the address a clearly evidenced need and where viability impacts have been considered. PPG states where a policy is adopted to provide enhanced accessibility / adaptability they should only do so by reference to M4(2) or M4(3). This ensures clarity which aids procurement. Not everyone needs M4(2) or (3) standard homes, which is why this is optional. Unclear how an ageing population and potential future needs reflect the need for 65% of all new homes 10+ units to be M4(2) standards. Ageing population is not amount to justification required for the optional standard pf Policy 46. Not all people over 65 need a new home or an adaptable home, as the standards paper recognises (2.53). Not enough evidence for the 65% requirement. The Council must recognise the viability implications. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. This could result in stalled development where viability needs to be debated. Urge the percentage to be reduced. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. Policy not justified or an appropriate strategy. Could fail to deliver sustainable development. The plan is unsound. Proposed change: remove or increase the flexibility in part A of the policy which refers to national space standards, and remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Policy 46: Housing Design Standards

Chapter 12: Design & the Built Environment

Test of Soundness: Positively prepared

Consistent with national

12.1. Avant Homes is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 12.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistent with National Policy

Policy 46: Housing Design Standards

Justification 12.3. Avant Homes is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 12.4. This policy looks for development to meet national space standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a ‘need to have’ rather than a ‘nice to have’ basis. 12.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 12.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 12.7. Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 12.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’. 12.9. Avant Homes welcomes the provision of new evidence on Housing Design Standards Policy. Avant Homes consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 12.10. On NDSS Avant Homes would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 12.11. Avant Homes note that the viability assessment has applied an average house size which is stated to reflect NDSS. However Avant Homes note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement have not been tested in combination with all the requirements of Policy 46, Avant Homes consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 12.12. Avant Homes is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 12.13. Avant Homes is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Avant Homes reserve the right to comment further when this is made available. 12.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 12.15. The Written Ministerial Statement dated 25th March 2015 stated that: 12.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 12.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement implications that previously arose from a series of different standards in different areas are consistent. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made “optional” with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 12.18. Avant Homes does not dispute the population is ageing. However, it is unclear
how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 12.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65’s grows from 18.7% to 25%, Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 12.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards, It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8, Therefore, Avant Homes consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Avant Homes would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 12.21. Avant Homes consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 12.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 12.23. However, Avant Homes consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 12.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:

Concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. The policy looks to make these a minimum. The enhanced standards are intended by the government to be optional and can only be introduced where there is a clear need and they retain development viability - a 'need to have' basis, not 'nice to have'. PPG identifies the evidence required to introduce such a policy. It should be justified by taking into account need, viability and timing. Welcome the provision of new evidence on Housing Design Standards. Consider that in some instances they may impact on viability, increase affordability issues and reduce customer choice. Some may not be able to meet these and provide 2 - 4 bed entry level homes to ensure those on lower incomes can afford a property with the bedrooms they need. House builders know their customers and the housing in demand. Space standards can impact on delivery of affordably products and stifle innovative design. Encourage the Council to recognise the larger land take such houses will require more land take. Delivery of this will reduce the yield of sites and could have potential implications on the yields identified on sites and ultimately a failure to meet housing targets. The mix tested in the viability assessment do not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. 23% affordable requirement not tested with requirements of Policy 46 and their needs to be greater flexibility. Concerned about the significant increase in new requirements of Part B that 56% of new homes on developments of 10+ units should be built to M4 (2) standards. I the council want to adopt higher optional standards they should apply PPG criteria. No evidence sufficiently justifies the Council's position. Reserve right to comment on Housing Needs Assessment when public. If seeking the higher optional standards, the evidence should be forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. A ministerial statement 25/03/15 stated that these should only be required through any new local plan if the address a clearly evidenced need and where viability impacts have been considered. PPG states where a policy is adopted to provide enhanced accessibility / adaptability they should only do so by reference to M4(2) or M4(3). This ensures clarity which aids procurement. Not everyone needs M4(2) or (3) standard homes, which is why this is optional. Unclear how an ageing population and potential future need reflects the need for 65% of all new homes 10+ units to be M4(2) standards. Ageing population is not amount to justification required for the optional standard pf Policy 46. Not all people over 65 need a new home or an adaptable home, as the standards paper recognises (2.53). Not enough evidence for the 65% requirement. The Council must recognise the viability implications. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards, It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. This could result in stalled development where viability needs to be debated. Urge the percentage to be reduced. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. Policy not justified or an appropriate strategy. Could fail to deliver sustainable development. The plan is unsound. Proposed change: remove or increase the flexibility in part A of the policy which refers to national space standards, and remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Response:

Refer to response for representation 02073 which raises similar issues.
12.1. Avant Homes is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness  12.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about?  X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification  12.3. Avant Homes is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence.  12.4. This policy looks for development to meet national space standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a 'need to have' rather than a 'nice to have' basis. 12.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that 'where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 12.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes.  12.7. Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 12.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’.  12.9. Avant Homes welcomes the provision of new evidence on Housing Design Standards Policy. Avant Homes consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that some lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 12.10. On NDSS Avant Homes would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 12.11. Avant Homes note that the viability assessment has applied an average house size which is stated to reflect NDSS, However Avant Homes note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, Avant Homes consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS.  12.12. Avant Homes is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 12.13. Avant Homes is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasting and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Avant Homes reserve the right to comment further when this is made available. 12.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 12.15. The Written Ministerial Statement dated 25th March 2015 stated that: 12.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 12.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made "optional" with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 12.18. Avant Homes does not dispute the population is ageing. However, it is unclear
how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 12.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65's grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 12.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8, Therefore, Avant Homes consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Avant Homes would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 12.21. Avant Homes consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 12.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 12.23. However, Avant Homes consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 12.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:
Concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. The policy looks to make these a minimum. The enhanced standards are intended by the government to be optional and can only be introduced where there is a clear need and they retain development viability - a "need to have" basis, not 'nice to have'. PPG identifies the evidence required to introduce such a policy. It should be justified by taking into account need, viability and timing. Welcome the provision of new evidence on Housing Design Standards. Consider that in some instances they may impact on viability, increase affordability issues and reduce customer choice. Some may not be able to meet these and provide 2 - 4 bed entry level homes to ensure those on lower incomes can afford a property with the bedrooms they need. House builders know their customers and the housing in demand. Space standards can impact on delivery of affordably products and stifle innovative design. Encourage the Council to recognise the larger land take such houses will require more land take. Delivery of this will reduce the yield of sites and could have potential implications on the yields identified on sites and ultimately a failure to meet housing targets. The mix tested in the viability assessment do not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. 23% affordable requirement not tested with requirements of Policy 46 and their needs to be greater flexibility. Concerned about the significant increase in the requirements of Part B that 56% of new homes on developments of 10+ units should be built to M4 (2) standards. I the council want to adopt higher optional standards they should apply PPG criteria. No evidence sufficiently justifies the Council's position. Reserve right to comment on Housing Needs Assessment when public. If seeking the higher optional standards, the evidence should be forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. A ministerial statement 25/03/15 stated that these should only be required through any new local plan if the address a clearly evidenced need and where viability impacts have been considered. PPG states where a policy is adopted to provide enhanced accessibility / adaptability they should only do so by reference to M4(2) or M4(3). This ensures clarity which aids procurement. Not everyone needs M4(2) or (3) standard homes, which is why this is optional. Unclear how an ageing population and potential future needs reflect the need for 65% of all new homes 10+ units to be M4(2) standards. Ageing population is not amount to justification required for the optional standard pf Policy 46. Not all people over 65 need a new home or an adaptable home, as the standards paper recognises (2.53). Not enough evidence for the 65% requirement. The Council must recognise the viability implications. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. This could result in stalled development where viability needs to be debated. Urge the percentage to be reduced. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. Policy not justified or an appropriate strategy. Could fail to deliver sustainable development. The plan is unsound. Proposed change: remove or increase the flexibility in part A of the policy which refers to national space standards, and remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Response:
Refer to response for representation 02073 which raises similar issues.
13.1. Avant Homes is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 13.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Consistent with National Policy: Justification 13.3. Avant Homes is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 13.4. This policy looks for development to meet national standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a ‘need to have’ rather than a ‘nice to have’ basis. 13.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiringinternal space policies. Local planning authorities should take account of the following areas. 13.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 13.7. Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 13.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’. 13.9. Avant Homes welcomes the provision of new evidence on Housing Design Standards Policy. Avant Homes consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 13.10. On NDSS Avant Homes would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 13.11. Avant Homes note that the viability assessment has applied an average house size which is stated to reflect NDSS, However Avant Homes note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement have not been tested in combination with all the requirements of Policy 46, Avant Homes consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 13.12. Avant Homes is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 13.13. Avant Homes is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Avant Homes reserve the right to comment further when this is made available. 13.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 13.15. The Written Ministerial Statement dated 25th March 2015 stated that: 13.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 13.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made “optional” with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 13.18. Avant Homes does not dispute the population is ageing. However, it is unclear
how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 

13.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65’s grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 

13.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards, It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. Therefore, Avant Homes consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Avant Homes would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 

13.21. Avant Homes consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 

13.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 

13.23. However, Avant Homes consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 

13.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards. - Remove or significantly reduce the requirement in part B of the policy which requires 65% of all new homes to be accessible and adaptable homes.

Summary:

Policy 46 - Housing Design Standards. 1. Policy could impact on deliverability and viability. 2. Part A - national space Standards - no evidence to justify implementation. 3. Remove or increase flexibility 4. Part B - remove or reduce the requirement (65% of all new homes to be accessible/adaptable).

Response:

Refer to response for representation 02073 which raises similar issues.
11.1. Priority Space is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 11.2. Priority Space considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy. Justification 11.3. Priority Space is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 11.4. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a 'need to have' rather than a 'nice to have' basis. 11.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that 'where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 11.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 11.7. Viability - the impact of adopting the space standard should be considered as part of a plan's viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 11.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions'. 11.9. Priority Space welcomes the provision of new evidence on Housing Design Standards Policy. Priority Space consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationaly Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 11.10. On NDSS Priority Space would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 11.11. Priority Space note that the viability assessment has applied an average house size which is stated to reflect NDSS, However Priority Space note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, Priority Space consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 11.12. Priority Space is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expected in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 11.13. Priority Space is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Priority Space reserve the right to comment further when this is made available. 11.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 11.15. The Written Ministerial Statement dated 25th March 2015 stated that: 11.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 11.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made "optional" with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 11.18. Priority Space does not dispute the population is ageing. However, it is unclear
how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 11.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65’s grows from 18.7% to 25%, Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 11.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards, It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. Therefore, Priority Space consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Priority Space would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 11.21. Priority Space consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 11.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 11.23. However, Priority Space consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 11.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:

Policy 46 - Housing Design Standards. 1. Policy could impact on deliverability and viability. 2. Part A - national space Standards - no evidence to justify implementation. 3. Remove or increase flexibility. 4. Part B - remove or reduce the requirement (65% of all new homes to be accessible/adaptable).

Response:

Refer to response for representation 02073 which raises similar issues.
Firsure is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 11.4. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a ‘need to have’ rather than a ‘nice to have’ basis.

11.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 11.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 11.7. Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 11.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’.

11.9. Firsure welcomes the provision of new evidence on Housing Design Standards Policy. Firsure consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. 11.10. On NDSS Firsure would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 11.11. Firsure note that the viability assessment has applied an average house size which is stated to reflect NDSS. However Firsure note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, Firsure consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 11.12. Firsure is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4(2). 11.13. Firsure is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council's position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Firsure reserve the right to comment further when this is made available. 11.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 11.15. The Written Ministerial Statement dated 25th March 2015 stated that: 11.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 11.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made "optional" with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 11.18. Firsure does not dispute the population is ageing. However, it is unclear how this ageing population and potential future need reflects in the need for 65 percent of all new
homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 11.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65's grows from 18.7% to 25%, Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 11.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. Therefore, Firsure consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Firsure would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 11.21. Firsure consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 11.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 11.23. However, Firsure consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Firsure must work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 11.24. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards - Remove or significantly reduce the requirement in Part B of the policy which requires 65% of all new homes to be accessible and adaptable.

Summary:
Part A of Policy 46 is seeking to implement national space standards without the requisite justification and evidence. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a 'need to have' rather than a 'nice to have' basis. Welcomes the provision of new evidence on Housing Design Standards Policy. Standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. The Council should recognise the larger land take from such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. The viability assessment has applied an average house size which is stated to reflect NDSS. However, the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 4. There needs to be greater flexibility in Policy 46 with regards to the use of NDSS. Also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4(2). If the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council's position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. It is important to note that if the Council are seeking the higher optional standards that the evidence is forthcoming. Do not dispute the population is ageing. However, it is unclear how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65's grows from 18.7% to 25%, Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states "not all of this demand will be met through new builds, and existing stock will play some part". The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8. This could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. The Council should reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. With increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound.

Response:
Refer to response for representation 02073 which raises similar issues.
13.1. Metroland is concerned with Policy 46 and consider that the Policy 46 is unsound. Test of Soundness 13.2. Metroland considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy. Justification 13.3. Metroland is concerned that part A of this policy is seeking to implement national space standards without the requisite justification and evidence. 13.4. This policy looks for development to meet national spaces standards as a minimum (for residential). The enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and they retain development viability. As such they were introduced on a ‘need to have’ rather than a ‘nice to have’ basis. 13.5. PPG (ID 56-020) identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas. 13.6. Need - evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. 13.7. Viability - the impact of adopting the space standard should be considered as part of a plan’s viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. 13.8. Timing - there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions’. 13.9. Metroland welcomes the provision of new evidence on Housing Design Standards Policy. Metroland consider that standards can, in some instances, have a negative impact upon viability, increase affordability issues and reduce customer choice. In terms of choice some developers will provide entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms. The housebuilding industry knows its customers what type and size of housing is in demand. The use of Nationally Described Space Standards, can therefore impact on the delivery of affordable products, and can serve to stifle innovative design. As such Metroland consider that NDSS should only be applied to affordable housing and not to open market. 13.10. On NDSS Metroland would encourage the Council to recognise the larger land take such houses will require more land take. Therefore to deliver this would reduce the yield of sites and could have potential implications on the site yields identified by the Council on identified and allocated sites, ultimately resulting in the Council failing to meet their housing targets. 13.11. Metroland note that the viability assessment has applied an average house size which is stated to reflect NDSS, However Metroland note that the mix tested does not reflect the Policy 8 requirement. Further the viability demonstrates that site typologies in low value areas are unviable based on the base assumptions, and viability is worsened with addition of other planning requirements of the Local Plan, and in some circumstances some typologies in medium value areas were demonstrated to be unviable. The 23% affordable housing requirement has not been tested in combination with all the requirements of Policy 46, Metroland consider that there needs to be greater flexibility in Policy 46 with regards to the use of NDSS. 13.12. Metroland is also concerned that part B of this policy states that 65% of all new homes on housing developments of 10 or more units should be built to Part M4(2) of the Building Regulations i.e. accessible and adaptable dwellings. This is a significant increase in the requirement expressed in the earlier draft which required 30% of all housing to meet the standards of Building regulation requirement M4 (2). 13.13. Metroland is generally supportive of providing homes for older and disabled persons. However, if the Council wishes to adopt the higher optional standards for accessible and adaptable homes the Council should only do so by applying the criteria set out in the PPG. The SHMA, Economic Forecasts and Housing Needs Assessment and subsequent Housing Design Standards Policy Evidence paper unfortunately does not provide sufficient evidence and does not justify the Council’s position identified in the policy. The Housing Needs Assessment 2019, whilst referred to in the background paper and Local Plan was not available at the time of writing. Metroland reserve the right to comment further when this is made available. 13.14. It is important that if the Council are seeking the higher optional standards that the evidence is forthcoming. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. 13.15. The Written Ministerial Statement dated 25th March 2015 stated that: 13.16. The optional new national technical standards should only be required through any new Local Plan policies if they address a clearly evidenced need, and where their impact on viability has been considered, in accordance with the NPPG. 13.17. NPPG states that where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to requirement M4(2) and / or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. This is to ensure that all parties have the clarity and certainty of knowing which standards they have to deal with and can factor these into their plans. For developers, this ensures that the design and procurement complications that previously arose from a series of different standards in different areas are avoided. It was recognised that it was not appropriate to apply Category 2 or 3 standards to all new homes as not all people who buy or move in to new homes need or wish to have such provision. Category 2 and 3 standards were therefore made "optional" with the position being that the case for requiring such standards in future new homes should be made through the adoption of local plan policies that have properly assessed the level of requirement for these standards in the local area, also taking into account other relevant factors including the impact on project viability. 13.18. Metroland
does not dispute the population is ageing. However, it is unclear how this ageing population and potential future need reflects in the need for 65 percent of all new homes on sites of 10 or more dwellings to be provided at M4(2) standards. The optional higher M4(2) standard should only be introduced on a “need to have” rather than a “nice to have” basis. Although there is evidence of an ageing population having regard to the PPG this does not amount to the justification required for the Council to include the optional standard as specified in Policy 46. 13.19. The Councils housing Design Standards Policy Evidence Paper evidences the ageing population, indicating that the percentage of over 65’s grows from 18.7% to 25%. Not all people over 65 will require a new home or adapted home. Indeed the paper recognises this in paragraph 2.53 where it states “not all of this demand will be met through new builds, and existing stock will play some part”. The paper notes considers the level of people with Limiting Long Term Illnesses or Disabilities and expects just less than 40% of households will have a person with a long term health problem or disability, the majority of people with a long term health problem or disability are over 65 (60%). Thus there is not sufficient evidence to support a requirement of 65% based on evidence of need. 13.20. It is important that the Council recognises the viability implications of requiring all houses to meet these enhanced standards. The whole plan viability evidence notes that all typologies in low value areas are unviable before the consideration of the impact of M4(2) and M4(3) standards. It also demonstrates that the application of M4(2) and M4(3) some typologies are unviable in medium value areas, when tested against a base assumption for affordable housing of 15% and not 23% as sought through Policy 8, Therefore, Metroland consider that this could result in stalled development where time is taken to debate viability issues. The Council must be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Metroland would urge the Council to reduce the percentage requirements to ensure the deliverability of any policy. The policy must not be set at such a scale that will threaten development to be in line with the Framework and guidance established in PPG. 13.21. Metroland consider that the requirements in Policy 46 are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 13.22. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. However, Metroland consider that with increased flexibility in Part A in relation to NDSS, and a reduction of the target in part B to reflect evidence on need the Local Plan can be found sound. Metroland will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 13.23. To overcome the objection and address soundness matters, the Council should: - Remove or increase the flexibility in part A of the policy which refers to national space standards. - Remove or significantly reduce the requirement in part B of the policy which requires 65% of all new homes to be accessible and adaptable homes.

Summary:
Policy 46 - Housing Design Standards: 1. Policy could impact on deliverability and viability. 2. Part A - national space Standards - no evidence to justify implementation. 3. Remove or increase flexibility. 4. Part B - remove or reduce the requirement (65% of all new homes to be accessible/adaptable).

Response:
Refer to response for representation 02073 which raises similar issues.
Policy 46 seeks to implement the Nationally Described Space Standards (NDSS) as a minimum for all new houses. It is important to recognise that the National Planning Policy Guidance (NPPG) suggest that authorities can chose to apply or dis-apply the NDSS in particular locations or for particular development types, such as BTR schemes (Note 1 - Paragraph: 011 Reference ID: 60-011-20180913). However, there is no recognition in the Policy that particular types of housing which have special circumstances, such as BTR, should not rigidly confirm to the NDSS. Part of BTR's popularity is the standard of living accommodation provided within apartments, in particular the fundamental characteristic of shared (communal) amenity space, rather than private amenity space within homes, to create a community feel within the development. BTR apartments are often far more efficiently laid out and, despite being smaller, and provide the standard of living space as a NDSS-compliant unit; through open plan living space, etc. This is recognised in the industry standard document, produced by the Urban Land Institute ("Build to Rent: A Best Practice Guide Second Edition"). Section 4.3 of the guidance recognises the specific layout and space requirements of BTR, and how these differ from traditional forms of housing, noting: 'Build to Rent requires a different approach to the design of the layout compared to traditional private housing? Viable Build to Rent developments will require more efficient design of the resident's private dwelling areas and associated circulation? However, this saved space on accommodation levels is redistributed to residents' shared internal and external amenities and facilities? The good practice principle is that residents should feel they are "renting the whole building" not just the private dwelling and this should be reflected in the design of the layout. This is not about less space but a redistribution to reflect the priorities of rental tenure.'

Furthermore, when compared to build-to-sell models, BTR has a much lower rate of return, which can create viability issues. Applying the same space standards to BTR in the same manner as traditional market products can place undeliverable demands on the design, in turn impacting on the deliverability of new homes in this sector. As set out under Draft Policy 8, DC should warrant BTR specific recognition and support within the DLP. Draft Policy 46 would therefore not be justified and not consistent with national planning policy guidance. The Policy should be amended to reflect that whilst the Council will pursue NDSS, this would be dis-applied in particular circumstances where it is not viable, and it can be proven to provide quality accommodation. The characterises of BTR should be referenced as a format where it may not be appropriate to apply NDSS.

CONCLUSION: However, in relation to the draft policies listed below, the DLP as currently drafted is not justified and unsound. To make the plan sound, the following amendments noted above are required. Policy: Policy 46 Topic: Housing Design Standards Requested Change: The Policy should be amended to reflect that a deviation to NDSS will be allowed, where the characteristics or circumstances of a development means it is appropriate to do so, specifically referencing BTR as a format where this is the case.

Summary:
Policy 46 (Housing Design Standards) should be amended to reflect that a deviation to Nationally Described Space Standards (NDSS) will be allowed, where the characteristics or circumstances of a development means it is appropriate to do so, specifically referencing Build to Rent as a format where this is the case. Part of BTR’s popularity is the standard of living accommodation provided within apartments, in particular the fundamental characteristic of shared (communal) amenity space, rather than private amenity space within homes, to create a community feel within the development. BTR apartments are often far more efficiently laid out and, despite being smaller, and provide the standard of living space as a NDSS-compliant unit; through open plan living space, etc. This is recognised in the industry standard document, produced by the Urban Land Institute ("Build to Rent: A Best Practice Guide Second Edition"). Section 4.3 of the guidance recognises the specific layout and space requirements of BTR, and how these differ from traditional forms of housing. Furthermore, when compared to build-to-sell models, BTR has a much lower rate of return, which can create viability issues. Applying the same space standards to BTR in the same manner as traditional market products can place undeliverable demands on the design, in turn impacting on the deliverability of new homes in this sector.

Response:
The Council acknowledged this point in the drafting of Policy 46 and points to the allowance of a potential deviation from the NDSS through being robustly justified and offset through exceptional or innovative design, as outlined within the Policy text and the explanatory text at 12.31. The Council has also included in the policy the provision for applicants to robustly demonstrate, with appropriate evidence, that adhering to the standards is not viable.
Nationally Described Space Standards  This policy requires residential development proposals to meet national space standards as a minimum. However, these enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and where they do not have an adverse impact on viability which might undermine the delivery of a plan. As such they can only be introduced on a 'need to have' rather than a 'nice to have' basis. The Council has produced an evidence based document entitled the 'Housing Design Standards Policy Local Plan Evidence Base' with the objective of justifying the policy. This aims to provide justification for the requirement of internal space standards and, as outlined by the PPG (ID56-020), this is broken down into three areas: need, viability, and timing. The evidence base highlights that on average new dwellings in the UK and in particular in the Yorkshire and Humber are significantly smaller than developments in Europe despite similar issues and restrictions. While this may indicate a wider issue it is not locally specific to the Council. As part of his study DMBC surveyed 246 homes across 47 sites to determine how many met the nationally described space standards (NDSS) of the area suggests that of current new dwellings and their floor plans only 23 out of 246 dwellings would meet the NDSS as proposed. It is not apparent if these sites had been submitted after the Government introduction of the NDSS, but it seems unlikely that it would have been in place at the time many of the applications were submitted. The Council indicate that through their research they have identified that a number of properties have not been built to the NDSS. They state that '201 out of the 246 plans assessed met the gross internal floor area based on their proposed number of bedrooms' and that 'plans were more likely to fail against the NDSS based on storage space or bedroom size, highlighting an internal design issue as opposed to dwelling plot size'. This is a small sample of only 246 dwellings and therefore provides insignificant evidence to base the policy upon. It also suggests that the majority of sites are meeting some of the standards and therefore the actual need within the Borough appears to be overestimated. The Council also suggest that the NDSS would be beneficial in providing ventilation, reducing under-occupancy and overcrowding. However, the evidence provided is limited in terms of numbers of properties considered and the potential market comparisons made. It is not evident from the information provided what 'need' there actually is for properties built to the standards there is no evidence that these smaller properties are not selling, there is no evidence provided that customers are not satisfied with these properties or that these properties are not comparable to other properties available in the market area. Viability  It is stated that the impact on affordability would differ depending on how far the current design is divergent from the standard. The Council contend that the sample survey indicates that the vast majority of dwellings would only need internal design changes to meet the NDSS, and thus there would be little extra cost incurred by the developer or buyer. It is also stated that the benefit of increased storage space and bigger sized bedrooms could allow some households to buy a house with fewer bedrooms than they would have originally looked for. The council contends that the impact on affordability would be minimal. However, the introduction of the NDSS would significantly reduce customer choice. Persimmon Homes build family homes which includes a range of entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms, in order that customers can adequately house their families. This includes a range of products geared towards first-time buyers, first-time movers and young families. Arbitrarily increasing the size of all homes will result in an increase in build cost. Persimmon Homes builds in excess of 16,500 homes each year in around 375 prime locations and is proud to be one of the UK's leading house builders, committed to the highest standards of design, construction and service. The industry understands customers and their needs and, accordingly, designed homes which appeal to the market.

Timing  It is suggested by the Council that as the Emerging Local Plan is still to go through an examination and that as consultation has been undertaken as part of the Local Plan process over a significant period of time that this has provided sufficient time to notify developers of the upcoming changes. The Local Plan policies have yet to be formally assessed by an inspector and may be subject to modifications during this process. Although developers may be aware of draft policies sufficient time post adoption should be allowed as a transitional period. In addition, changes to internal layout requirements may take developers some time to design. The proposal within the policy is that 100% of new dwellings should meet the standards. The policy wording states that any deviation from the NDSS must be robustly justified, clearly evidenced and offset through exceptional and innovative design. This is overly restrictive and will force developers to provide onerous evidence. Persimmon Homes consider that this policy has not been prepared in a manner which is consistent with national policy and guidance and that it has not been positively prepared. The policy has not been effectively justified to provide a clear rationale for the imposition of the NDSS standards or for the quantum of 100% of all new homes. The Council should, unless they can provide sufficient evidence, remove this policy. With regards to the quantum, the Council has not tested alternative options such as requiring a lower percentage of homes to meet the NDSS standard. The policy is therefore not based on an appropriate strategy and all options should be tested and subject to sustainability appraisal. Accessible and Adaptable Dwellings (M4(2))  Policy 46 seeks to require 65% of homes on developments of 10 or more (or over 0.5ha) to meet the M4(2) optional standard, and for 5% of homes to meet the M4(3) standard. While the provision of homes suitable for those with limiting long term illnesses or disabilities is supported, if the Council wishes to adopt the higher optional standards for accessible, adaptable and wheelchair homes the Council should only do so by applying the criteria set out in the PPG. It must be remembered that all new homes will be built to part M4(1). According to Part M of
the Building Regulations meeting M4(1) will ensure reasonable provision for most people, including wheelchair users, to approach and enter the dwelling and to access habitable rooms and sanitary facilities on the entrance storey. As such these standards are likely to be suitable for the vast majority of people. PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. It is incumbent on the Council to provide a local assessment evidencing the specific case for Doncaster which justifies the inclusion of optional higher standards for accessible / adaptable homes in its Local Plan policy. The Housing Design Standards Policy Evidence Paper (June 2019) identifies that 18.78% of the population of Doncaster was over 65 years in 2017 and that 24.83% will be by 2035. It is not clear how this ageing population and potential future need is reflected in or justifies the proposed requirement for 65% of all new homes to be provided at M4(2) standards. If it had been the Government’s intention that generic statements identifying an ageing population justified adoption of the accessible & adaptable homes standards, then the logical solution would have been to incorporate the M4(2) as mandatory via the Building Regulations which the Government has not done. The optional higher M4(2) standard should only be introduced on a "need to have" rather than a "nice to have" basis. The evidence does not demonstrate this need. The Whole Plan Viability Testing (2019) report outlines that the policy will result in viability issues for some sites. It shows that schemes in the low value areas are not viable and will not be able to support the optional housing standards along with the cumulative requirements of other policies. If the Council can provide the appropriate evidence and this policy is to be included, then it is recommended that an appropriate transition period is included within the policy. The PPG also identifies other requirements for the policy including the need to consider site specific factors such as vulnerability to flooding, site topography and other circumstances; and that policies for wheelchair accessible homes should only be applied to affordable housing provided in certain tenures for example. The policy should therefore be removed, or requirement reduced significantly to reflect the evidence and viability concerns.

Summary:
The Council's evidence base document 'Housing Design Standards Policy Local Plan Evidence Base' does not justify the policy. Policy 46 requires residential development to meet national space standards as a minimum. However, these enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and where they do not have an adverse impact on viability which might undermine the delivery of a plan. As such they can only be introduced on a 'need to have' rather than a 'nice to have' basis. Need There is a lack of Doncaster-specific evidence to demonstrate need and the sample size is too small to draw conclusions. Evidence used suggests that the majority of sites are meeting some of the standards and therefore the actual need within the Borough appears to be overestimated. Viability It is stated that the impact on affordability would differ depending on how far the current design is divergent from the standard. The Council contend that the sample survey indicates that the vast majority of dwellings would only need internal design changes to meet the NDSS, and thus there would be little extra cost incurred by the developer or buyer. It is also stated that the benefit of increased storage space and bigger sized bedrooms could allow some households to buy a house with fewer bedrooms than they would have originally looked for. The Council contends that the impact on affordability would be minimal. However, the introduction of the NDSS would significantly reduce customer choice. Persimmon Homes build family homes which includes a range of entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms, in order that customers can adequately house their families. This includes a range of products geared towards first-time buyers, first-time movers and young families. Arbitrarily increasing the size of all homes will result in an increase in build cost. Timing Although developers may be aware of draft policies sufficient time post adoption should be allowed as a transitional period. In addition, changes to internal layout requirements may take developers some time to design. Accessible and Adaptable Dwellings (M4(2)) PPG (ID 56-07) identifies the type of evidence required to introduce such a policy, including the likely future need; the size, location, type and quality of dwellings needed; the accessibility and adaptability of the existing stock; how the needs vary across different housing tenures; and the overall viability. Response:
Refer to response for representation 0129 which raises similar issues.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

**Area:** Chapter 12: Design & the Built Environment

**Policy:** Policy 46: Housing Design Standards

**Tests of Soundness:**
- Positively prepared
- Justified
- Consistent with national

**Comment:**
Nationally Described Space Standards This policy requires residential development proposals to meet national space standards as a minimum. However, these enhanced standards, as introduced by Government, are intended to be optional and can only be introduced where there is a clear need and where they do not have an adverse impact on viability which might undermine the delivery of a plan. As such they can only be introduced on a 'need to have' rather than a 'nice to have' basis. The Council has produced an evidence based document entitled the 'Housing Design Standards Policy Local Plan Evidence Base' with the objective of justifying the policy. This aims to provide justification for the requirement of internal space standards and, as outlined by the PPG (ID56-020), this is broken down into three areas: need, viability, and timing. Need The evidence base highlights that on average new dwellings in the UK and in particular in the Yorkshire and Humber are significantly smaller than developments in Europe despite similar issues and restrictions. While this may indicate a wider issue it is not locally specific to the Council. As part of his study DMBC surveyed 246 homes across 47 sites to determine how many met the nationally described space standards (NDSS) of the area suggests that of current new dwellings and their floor plans only 23 out of 246 dwellings would meet the NDSS as proposed. It is not apparent if these sites had been submitted after the Government introduction of the NDSS, but it seems unlikely that it would have been in place at the time many of the applications were submitted. The Council indicate that through their research they have identified that a number of properties have not been built to the NDSS. They state that '201 out of the 246 plans assessed met the gross internal floor area based on their proposed number of bedrooms' and that 'plans were more likely to fail against the NDSS based on storage space or bedroom size, highlighting an internal design issue as opposed to dwelling plot size'. This is a small sample of only 246 dwellings and therefore provides insignificant evidence to base the policy upon. It also suggests that the majority of sites are meeting some of the standards and therefore the actual need within the Borough appears to be overestimated. The Council also suggest that the NDSS would be beneficial in providing ventilation, reducing under-occupancy and over-crowding. However, the evidence provided is limited in terms of numbers of properties considered and the potential market comparisons made. It is not evident from the information provided what 'need' there actually is for properties built to the standards there is no evidence that these smaller properties are not selling, there is no evidence provided that customers are not satisfied with these properties or that these properties are not comparable to other properties available in the market area. Viability It is stated that the impact on affordability would differ depending on how far the current design is divergent from the standard. The Council contend that the sample survey indicates that the vast majority of dwellings would only need internal design changes to meet the NDSS, and thus there would be little extra cost incurred by the developer or buyer. It is also stated that the benefit of increased storage space and bigger sized bedrooms could allow some households to buy a house with fewer bedrooms than they would have originally looked for. The council contends that the impact on affordability would be minimal. However, the introduction of the NDSS would significantly reduce customer choice. Persimmon Homes build family homes which includes a range of entry level two, three and four-bedroom properties which may not meet the optional nationally described space standards but are required to ensure that those on lower incomes can afford a property which has their required number of bedrooms, in order that customers can adequately house their families. This includes a range of products geared towards first-time buyers, first-time movers and young families. Arbitrarily increasing the size of all homes will result in an increase in build cost. Persimmon Homes builds in excess of 16,500 homes each year in around 375 prime locations and is proud to be one of the UK's leading house builders, committed to the highest standards of design, construction and service. The industry understands customers and their needs and, accordingly, designed homes which appeal to the market. Timing It is suggested by the Council that as the Emerging Local Plan is still to go through an examination and that as consultation has been undertaken as part of the Local Plan process over a significant period of time that this has provided sufficient time to notify developers of the upcoming changes. The Local Plan policies have yet to be formally assessed by an inspector and may be subject to modifications during this process. Although developers may be aware of draft policies sufficient time post adoption should be allowed as a transitional period. In addition, changes to internal layout requirements may take developers some time to design. The proposal within the policy is that 100% of new dwellings should meet the standards. The policy wording states that any deviation from the NDSS must be robustly justified, clearly evidenced and offset through exceptional and innovative design. This is overly restrictive and will force developers to provide onerous evidence. Persimmon Homes consider that this policy has not been prepared in a manner which is consistent with national policy and guidance and that it has not been positively prepared. The policy has not been effectively justified to provide a clear rationale for the imposition of the NDSS standards or for the quantum of 100% of all new homes. The Council should, unless they can provide sufficient evidence, remove this policy. With regards to the quantum, the Council has not tested alternative options such as requiring a lower percentage of homes to meet the NDSS standard. The policy is therefore not based on an appropriate strategy and all options should be tested and subject to sustainability appraisal. Accessible and Adaptable Dwellings (M4(2)) Policy 46 seeks to require 65% of homes on developments of 10 or more (or over 0.5ha) to meet the M4(2) optional standard, and for 5% of homes to meet the M4(3) standard. While the provision of homes suitable for those with limiting long term illnesses or disabilities is supported, if the Council wishes to adopt the higher optional standards for accessible, adaptable and wheelchair homes the Council should only do so by applying the criteria set out in the PPG. It must be remembered that all new homes will be built to part M4(1). According to Part M of
the Building Regulations meeting M4(1) will ensure reasonable provision for most people, including wheelchair users, to approach and enter the dwelling and to access habitable rooms and sanitary facilities on the entrance storey. Response:
Refer to response for representation 0129 which raises similar issues.
We support the requirement in Criterion A1 that proposals for Non-Residential, Commercial and Employment Developments should be sympathetic to local character in terms of their layout, siting, height, massing, form, scale, detailing, materials, landscaping or, where appropriate, their heritage significance. We also welcome the requirement that historic shop fronts are to be retained unless their loss can be justified. Doncaster has many examples of historic shop fronts. These make an important contribution to the character of the local area. These measures will help to deliver the Plan's Objectives regarding quality of place and the historic environment.

Response:
Support welcomed
Tests of Soundness:

Comment:
We continue to welcome the reference in part A) carried forward from the Draft Local Plan, which aims to maximise links access to Open Space, which would benefit the wellbeing of new (and existing) communities.

Comment Ref: C/Policy 49/03431/1/017

Reason: We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 12: Design & the Built Environment

Policy: Policy 49: Landscaping of New Developments

Tests of Soundness: Justified

Comment:

Bullet C within this policy requires 'generous tree, shrub and hedgerow planting', the explanatory text for this policy states that 1 tree per dwelling is required. No evidence is provided to support this requirement. This policy is therefore not justified.

Summary:

Policy 49 Part C requires 'generous tree, shrub and hedgerow planting'. The explanatory text states that 1 tree per dwelling is required. No evidence is provided to support this requirement. This policy is therefore not justified.

Response:

This is a clear objective and easily measurable target to deliver the environmental benefits of tree planting. It exactly reflects an existing requirement in the Council’s adopted DGAR SPD which has been in operation for a number of years without any significant adverse implications or viability issues. Persimmon have already adequately met this requirement on a number of sites in the Borough without disagreement with the Council.
Comment:

2.51 Our Client is generally supportive of this policy, it is in their interests to make their developments as visually attractive as possible. However, we would advise that the Policy is revised to add a caveat that the proposals within the policy are subject to viability.

Summary:

Policy 49 - Landscaping of New Development o Generally supportive of Policy but should be revised to assess impact on viability

Response:

Support noted. The policy requirements reflects existing requirements in the Council's adopted DGAR SPD which has been in operation for a number of years without any significant adverse implications or viability issues. it is not considered a viability caveat is required as any development proposal would also be assessed against policy 67. If it were to be the case that this design policy (alone or in combination with other requirements) was having a significant adverse impact on viability it would be considered under policy 67 with the applicants given the opportunity to demonstrate why this is the case.

**Comment:**
No clarification is provided as to what is meant in this policy by 'healthcare infrastructure implications'. There is also no evidence provided as to why the borough has special local characteristics for such a requirement and it is therefore unjustified. Where the Council wishes to seek planning obligations, this should be based on evidence which demonstrates a clear need for the contribution, and that any such contributions meet the relevant tests.

**Summary:**
No clarification is provided as to what is meant in Policy 51 by 'healthcare infrastructure implications'. There is also no evidence provided as to why the borough has special local characteristics for such a requirement and it is therefore unjustified. Where the Council wishes to seek planning obligations, this should be based on evidence which demonstrates a clear need for the contribution, and that any such contributions meet the relevant tests.

**Response:**
Policy 66 sets out developer contributions, Policy 51 suggests that healthcare infrastructure implications of any relevant proposed development have been considered and addressed. This may include additional consultation with healthcare providers to ensure the proposed development will improve and promote strong, vibrant and healthy communities.
Test of Soundness:

Unsound - not stated

Comment:

2.52 Part f) of the policy states that "the developer will demonstrate they have undertaken, and responded to the findings of, a Health Impact Assessment (HIA) ". 2.53 The requirement for a HIA should be dealt with via the Council’s local validation check list and not through a specific planning policy. Our Client therefore objects to the policy on the basis that it is not effective or consistent with the Framework, and we would advise that it is deleted. 2.54 Our understanding is that the information that forms part of the HIA is often matters which are beyond the control of the applicant and relate to the choices of individuals who occupy developments. 2.55 Our Client is supportive of a strategic policy which seeks to improve the health and wellbeing of Doncaster residents, however, the policy, as written is unsound. It takes a broad brush approach and there appears to be no evidence which suggests that a HIA would be required for all schemes over 100 houses (as per the Screening Tool).

Summary:

Policy 51 - Health 1. Policy as written is un-sound. 2. Re need for a Health Impact Assessment (HIA) - Should be dealt with through the ‘validation checklist’ and not the Policy. 3. Often matters which are beyond the control of the applicant and relate to the choices of individuals who occupy developments. 4. Appears to be no evidence which suggests that a HIA would be required for all schemes over 100 houses (as per the Screening Tool).

Response:

Support noted. Doncaster’s local validation checklist does include a Health Impact Assessment to be submitted with planning applications when determined by the Planning Authority. They enable the decision making process to consider the ever increasing demand on planning authorities to create healthy places and promote healthy behaviours and environments and reduce health inequalities for people of the borough.

Comment: UKOOG Response: Policy 51, F) states; ‘that proposals for development or change of use will be assessed against the Health Impact Assessment Screening Tool and, when determined if required, the developer will demonstrate they have undertaken, and responded to the findings of, a Health Impact Assessment (HIA).’ We would like to advise the council that where development is subject to EIA, Health impacts will be included in that process and a separate HIA should not be a separate requirement.

Summary: Policy 51. Comment? where development is subject to EIA, Health impacts will be included and a HIA should not be a separate requirement.

Response: Comment noted. No change proposed

**Comment:**
Where development is subject to Environmental Impact Assessment (EIA), health impacts should be included in that process. It is considered a separate HIA should not be a requirement of development (F) and should only be required on a case by case basis.

**Summary:**
Where development is subject to Environmental Impact Assessment (EIA), health impacts should be included in that process. It is considered a separate HIA should not be a requirement of development (F) and should only be required on a case by case basis.

**Response:**
Comment noted. No proposed change. NPPF paragraph 91 states planning policies... should aim to achieve healthy, inclusive and safe places... enable and support healthy lifestyles.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Tests of Soundness:

Justified

Comment:

No clarification is provided as to what is meant in this policy by 'healthcare infrastructure implications'. There is also no evidence provided as to why the borough has special local characteristics for such a requirement and it is therefore unjustified. Where the Council wishes to seek planning obligations, this should be based on evidence which demonstrates a clear need for the contribution, and that any such contributions meet the relevant tests.

Summary:

No clarification is provided as to what is meant in Policy 51 by 'healthcare infrastructure implications'. There is also no evidence provided as to why the borough has special local characteristics for such a requirement and it is therefore unjustified. Where the Council wishes to seek planning obligations, this should be based on evidence which demonstrates a clear need for the contribution, and that any such contributions meet the relevant tests.

Response:

Policy 66 sets out developer contributions, Policy 51 suggests that healthcare infrastructure implications of any relevant proposed development have been considered and addressed. This may include additional consultation with healthcare providers to ensure the proposed development will improve and promote strong, vibrant and healthy communities.

Comment:
There is no clear and transparent process for determining how and when on-site provision is required. The explanatory text states that in some cases that some individual or mixed-use proposals could be large enough to generate the need for new schools, this should provide clear guidance on what would trigger such a requirement. The site by site nature of the assessment gives uncertainty for developers. This could affect the deliverability of sites and affect the ability of the Borough to meet its housing need. The policy needs further revision to clarify to ensure that it is clear and transparent.

Response:
Policy 66 sets out developer contributions, Policy 53 considers new education facilities inline with NPPF (para 94) and PPG requirements.

Comment:

As there is no mention of our representation in the consultation summary, we do not know why our previous comments have not been included in this policy. It appears that our previous comments, recommending how this policy could be strengthened, have not been taken on board. The policy still does not make reference to Source Protection Zones, nor does it give detail on appropriate mitigation measures or sources of information on this (in particular signposting to the Humber River Basin Management Plan). Additionally, we do not feel that the policy is ambitious enough; it only states that “particular consideration will be given to any adverse effects on the quantity, quality and ecology features of water bodies and groundwater resources”. We recommend this policy should demonstrate a commitment against supporting development proposals which could adversely affect surface or ground waterbodies, and additionally demonstrate a commitment to support proposals which would maintain and ideally enhance waterbodies (quantity, quality and ecological features).

Summary:

Policy 55 - Pollution - no response to previous comments and the policy does not make reference to Source Protection Zones or appropriate mitigation. Additionally do not feel the policy is ambitious enough and expect a commitment to not supporting proposals which could adversely affect surface or ground waterbodies and support those that would maintain and ideally enhance waterbodies (quantity, quality and ecological features).

Response:

SPZ’s were being proposed to be dealt with via Policy 61: Protecting & Enhancing Doncaster’s Soil & Water Resource part E2 and explanatory text paras 14.28-14.30, but given the importance of this issue, and that there are numerous SPZ’s across the Borough, then in additional we now propose the following to address these concerns: Policy 55 - Pollution - Part D D) any adverse effects on the quantity, quality and ecology features of water bodies and groundwater resources, including contamination to Source Protection Zones. Explanatory text - para 13.22 (new para) 13.22 Groundwater is an important resource that we rely on every day and provides the majority of drinking water, sustains base flow and ecology in our rivers, and supports lakes and wetland ecosystems. Contamination in or on land can present unacceptable risks to human health and the wider environment, including to groundwater. Doncaster’s water supply depends on groundwater abstractions in the Principal aquifer which has high permeability and needs to be protected to avoid any kind of contamination. The protection is given by buffer zones around the source of drinking water called Source Protection Zones which are divided into 3 zones (inner, outer, and source catchment protection). The Environment Agency provides further guidance on what activities are possible in these zones - see also Policy 61. The Council’s view is that Policy 61 Part E covers matters in relation to not supporting proposals which could adversely affect surface or ground waterbodies etc.
We are encouraged to see the consideration of protected species within this policy. However we would be pleased to see a slight amendment of wording within E to state 'conservation of biodiversity and protected species'. We also feel there should be an additional explanation (13.22) to consider how lighting can be designed to minimise impacts to protected species and notable habitats. This should include consideration for the BCT Guidance note (due to be regularly updated from 2020 hence should reference the most recent version at time of application) and request for detailed lux contour plans (showing max lux levels not averages) to show how dark corridors will be retained on site with sufficient buffers and protection of sensitive habitats. The implementation of this measure is of particular importance due to the presence of Thorne and Hatfield Moors SPA within Doncaster, designated for the presence of European nightjar, Caprimulgus europaeus. Nightjars are a nocturnal species and as such one of the SPA conservation objectives is to minimise disturbance caused by human activity, including light.

Summary:
Policy 55 - YWT likes the consideration of protected species within the policy. Want an amendment to Policy 55. E) to change the word 'or to 'and' to say 'conservation of biodiversity and protected species'. Requesting additional explanation (13.22) to consider how lighting can be designed to minimise impacts to protected species and notable habitats, which should include consideration for the BCT Guidance note (due to be regularly updated from 2020). Request for 'lux' contour plans not averages to show dark corridors (particularly for Nightjar).

Response:
Recommended Policy 55 wording change to include 'and' and not 'or'. Additional paragraph included to explain Part E of Policy 55.
Comment: Additional wording is required to the first paragraph of the policy to reflect the NPPF para 182 which deal with the agent of change principle as follows; Proposed Changes (deletions in strikethrough; new text in bold) - These cannot be shown therefore deletions shown in brackets with X either sides (x deleted text x) and new text in CAPITAL) Development proposals that are likely to cause pollution, or be exposed to pollution, will only be permitted where it can be demonstrated that pollution can be avoided, or where mitigation measures (such as those incorporated into the design and layout of development) will minimise significantly harmful impacts to acceptable levels that protect health, environmental quality and amenity. When determining planning applications, THE AGENT OF CHANGE PRINCIPLE WILL BE APPLIED, AND particular consideration will be given to:

Summary:
Policy 55 Pollution Additional text in capitals. Development proposals that are likely to cause pollution, or be exposed to pollution, will only be permitted where it can be demonstrated that pollution can be avoided, or where mitigation measures (such as those incorporated into the design and layout of development) will minimise significantly harmful impacts to acceptable levels that protect health, environmental quality and amenity. When determining planning applications, THE AGENT OF CHANGE PRINCIPLE WILL BE APPLIED, AND particular consideration will be given to:

Response:
It is not considered necessary to repeat national policy in respect to the agent of change principle.
We are supportive of policy 55, in particular Bullet point D: "any adverse effects on the quality and ecology features of waterbodies and groundwater resources." As detailed above the protection of water resources will be vital to the provision of sustainable new development.

Summary:
Supports policy 55, in particular Bullet point D: "any adverse effects on the quality and ecology features of waterbodies and groundwater resources." The protection of water resources will be vital to the provision of sustainable new development.

Response:
Support noted.
Comment: UKOOG Response: Policy 55 states; ‘Development proposals that are likely to cause pollution, or be exposed to pollution, will only be permitted where it can be demonstrated that pollution can be avoided, or where mitigation measures (such as those incorporated into the design and layout of development) will minimise significantly harmful impacts to acceptable levels that protect health, environmental quality and amenity, when determining planning applications, particular consideration will be given to: A) an assessment of the risks to public health and the impact of cumulative effects and where necessary that the provision for mitigation against the total effects has been provided B) the presence of noise generating uses close to the site, and the potential noise likely to be generated by the proposed development. A Noise Assessment will be required to enable clear decision-making on any relevant planning application. C) the impact on national air quality; especially but not limited to Air Quality Management Areas, areas potentially close to the EU limit value, other sensitive areas and the aims and objectives of the Air Quality Action Plan. An Air Quality Assessment will be required to enable clear decision making on any relevant planning application. D) any adverse effects on the quantity, quality and ecology features of water bodies and groundwater resources. E) the impact of artificial lighting. Artificial lighting has the potential to cause unacceptable light pollution in the form of sky-glow, glare or intrusion onto other property and land. Development proposals should ensure that adequate and reasonable controls to protect dwellings and other sensitive property, the rural night-sky, observatories, road-users, and designated sites for conservation of biodiversity or protected species are included within the proposals.’

Emissions, alongside other potential environmental impacts associated with Oil and Gas developments are regulated by the EA through the Environmental Permitting Regulations, as stated in the evidence base for hydrocarbons. This includes the venting and flaring of methane and other gasses associated with exploration, appraisal and production. ‘Site Containment’ plans are also required by the EA to address any risks to surface or groundwater and the wider environment. This should be stated clearly in the policy and any justification text to avoid confusion. Planning authorities are directly engaged through the EIA process, where one is required. EIA requires an assessment of all potential environmental and health impacts associated with a proposed development. It considers all potential risks, any measures to avoid these risks and suitable mitigation to reduce any remaining potential consequences. An EIA typically includes an assessment of impacts relating to noise, ecology, transport, air quality, archaeology and water, in line with national guidance. The role of EIA should be clearly stated in the policy and justification text. Regarding noise impacts and lighting, Planning Practice Guidance is clear on how noise and other nuisance issues should be addressed and therefore this policy should clearly reference this guidance.

Response: Comment noted. Policy 55 is not just aimed at hydrocarbon development proposals. Where required Planning and Pollution Control will work with and liaise with the EA as required by NPPF / NPPG.
Comment Ref: C/Policy 55/05058/1/003

Attend Examination: Attend Hearing

Reason: The issue raised is complex and we have found it helpful when responding to other plans for the matter to be debated. This was done most recently at East Riding of Yorkshire in January 2019 where the Inspector was able to hear the points raised on each side of the argument and to understand that there was in fact little between the parties in terms of principle. In our submission this may not have been fully apparent in reviewing written submissions and this was confirmed by the conduct of the Hearing where the Inspector thanked the parties for their frankness, helpfulness and courtesy.

Area: Chapter 13: Health, Wellbeing & our Communities

Policy: Policy 55: Pollution

Tests of Soundness:

Comment:

Emissions and any potential environmental impacts associated with hydrocarbon developments are regulated by the Environment Agency (EA) through the Environmental Permitting Regulations, as stated in the evidence base for hydrocarbons. This includes the venting and flaring of methane and other gasses associated with exploration, appraisal and production. 'Site Containment' plans are also required by the EA to address any risks to surface or groundwater and the wider environment. This should be stated clearly in the policy and any justification text to avoid confusion. Planning authorities are directly engaged through the EIA process, where one is required. EIA requires an assessment of all potential environmental and health impacts associated with a proposed development. It considers all potential risks, any measures to avoid these risks and suitable mitigation to reduce any remaining potential consequences. An EIA typically includes such issues as noise, ecology, transport, air quality, archaeology and hydrology, in line with national guidance. The role of EIA should be clearly stated in the policy and justification text. Regarding noise impacts, Planning Practice Guidance is clear on how noise should be addressed and therefore this policy should clearly reference this guidance. Reference should be made to the overlapping roles of other regulators and the Local Plan policies should defer to these regulators.

Summary:

EA (through permitting) regulate environmental impacts. Should state in policy that venting and flaring is regulated by EA permitting regs. The role of EIA should be clearly stated in the policy and justification text. Reference should be made to the overlapping roles of other regulators and the Local Plan policies should defer to these regulators.

Response:

Policy 55 Pollution Comment noted. The Local Plan should be read as a whole. Policy 55 is not just aimed at hydrocarbon development proposals. Where required Planning and Pollution Control will work with and liaise with the EA when and where required as required by NPPF / NPPG. The role of regulators is covered in NPPG. (Paragraphs 014 and 110.) and not required to be repeated in policy. Propose a minor modification to Policy 65 to clarify when an EIA is required? 'If they meet the criteria as set out in the Town and Country Planning Act (EIA Regulations). This will be clarified through a screening or scoping request.'
The Policy is supported in principle. Emissions and any potential environmental impacts associated with oil and gas developments are regulated by the Environment Agency (EA) through their permitting regulations, as stated in the Councils Evidence Base for hydrocarbons. This includes the venting and flaring of methane and other gasses associated with exploration, appraisal and production. 'Site Containment' plans are also required by the EA to address any risks to surface or groundwater and the wider environment. It is considered their responsibilities should be set out in the policy or in the supporting justification to avoid confusion. EIA requires an assessment of all potential environmental and health impacts associated with a proposed development. It considers all potential risks, any measures to avoid these risks and suitable mitigation to reduce any remaining potential consequences. An EIA typically includes an assessment noise, ecology, transport, air quality, and archaeology and water issues, in line with national guidance. The role of EIA should be clearly stated in the policy and justification text. Planning Practice Guidance is clear on how noise should be addressed and therefore this policy or the supporting explanation should refer to such. IGas previously commented that this policy appears to address impacts on amenity rather than pollution and that the policy should recognise the role of other regulators, particularly for the purposes of onshore oil and gas as referred to above. For example, the EA or the Environmental Health Officer manages air quality; the EA protects ground water; and the Health and Safety Executive (HSE) is responsible for the administering borehole regulations. Issues such as noise can be appropriately mitigated or avoided in accordance with standards set out in Planning Practice Guidance and therefore should be better separated from a ‘Pollution’ policy. IGas notes there are no proposed changes to the Policy following initial consultation. Further, there is no acknowledgment or reference to the roles and responsibilities of other regulators in this Policy (or Policy 65) or their respective supporting explanations. It is considered the absence of such is at odds with national guidance. IGas would request the Council to carefully consider the wording of this policy to ensure the Plan is sound. Regarding noise impacts and lighting, Planning Practice Guidance is clear on how noise and other nuisance issues should be addressed and therefore this policy should clearly reference this guidance.

Policy 55 supported (in principle). Should identify EA role and responsibility in regulation to avoid confusion. The role of an EIA should be clearly stated in the policy and justification. The policy should recognise the role of other regulators particularly for onshore oil and gas (examples provided in representation). Policy should reference the NPPG on noise and other nuisances for guidance.

Comment noted. The role of regulators is covered in NPPG. (Paragraphs 014 and 110.) NPPF and NPPG not required to be duplicated in the Local Plan.

Light pollution is only mentioned twice in the draft Plan. Whilst we agree that it is important that it is a consideration under the Planning proposals (Policy 55), a strategy to reduce the Borough’s overall light pollution should be a consideration of the Plan.

Response:
Comment noted. Considered Policy 55 meets NPPF and PPG requirements.
Comment:
Again there is no explanation of the council's position in relation to our previous representation, we therefore reiterate our previous comments. We would like the Council to include a requirement for developers to undertake a Preliminary Risk Assessment to be submitted along with any planning application for sites where any current or former uses may have led to land contamination, and offer the following suggested wording: Cont/d.. "should any proposed sites currently or previously have been subject to land-use(s) which have the potential to have caused contamination of the underlying soils and groundwater then any planning application must be supported by a Preliminary Risk Assessment to demonstrate that the risks posed to 'controlled waters' by any contamination are understood by the applicant and can be safely managed." We would also like to see the following comments included in the policy justification/ supporting text: It is recommend that developers consider using the National Quality Mark Scheme for Land Contamination Management which involves the use of competent persons to ensure that land contamination risks are appropriately managed and refer to the contaminated land pages on GOV.UK for more information.

Summary:
Policy 56 - Contamination & Unstable Land - no response to previous comments and would like inclusion of requirement for developers to undertake a PRA where current/former uses may have led to land contamination - wording suggested.

Response:
Agree with the response and propose to include suggested wording verbatim as follows: Policy 56 - Part E (new criteria) E) should any proposed site, currently or previously, have been subject to land-use(s) which have the potential to have caused contamination of the underlying soils and groundwater then any planning application must be supported by a Preliminary Risk Assessment to demonstrate that the risks posed to 'controlled waters' by any contamination are understood by the applicant and can be safely managed. Explanatory text - para 13.23 (new para ref in light of change above) National planning policy states that any potentially contaminated or unstable land being assessed for development through the planning process should be dealt with at this stage ensuring that it poses no unacceptable risk to future occupiers or the wider environment. It is recommended that developers consider using the National Quality Mark Scheme for Land Contamination Management which involves the use of competent persons to ensure that land contamination risks are appropriately managed and refer to the contaminated land pages on GOV.UK for more information.
| **Tests of Soundness** |  |  |  |  |

**Comment:**
The Coal Authority supports the inclusion of Policy 56: Contaminated and Unstable Land which requires applicants to demonstrate that they have considered the ground conditions and the land is suitable for its intended use

**Summary:**
supports the inclusion of Policy 56: Contaminated and Unstable Land

**Response:**
Comment noted

**Comment:**

UKOOG Response: Policy 56 states; ‘Proposals will be required to mitigate contamination or land stability by: A) demonstrating there is no significant harm, or risk of significant harm, to human health, or land, natural environment, pollution of soil or any watercourse or ground water; B) ensuring necessary remedial action is undertaken to safeguard users or occupiers of the site or neighbouring land and protect the environment and any buildings or services from contamination during development and in the future; C) demonstrating that adverse ground conditions have been properly identified and safely treated; and; D) clearly demonstrating to the satisfaction of the Local Planning Authority, that the land is suitable for its proposed use’. Oil and Gas sites require a number of environmental permits from the EA before they can operate. These permits are only granted when it is proven that the methods (Best Available Techniques - BAT) being used at a particular site protect the environment from harm and potential contamination. All sites must be monitored for up to two years before site activities commence. This enables a baseline condition to be established, which forms the base environmental condition against which permits are then granted and operations subsequently measured. The results of operational monitoring collected during the life of the site are compared against this baseline to ensure there are no contamination issues. Therefore, it is our view that many of the issues presented in this policy are regulated by the EA, and this should be clearly stated in supporting justification text. Where a project is subject to an EIA all potential impacts on the environment and human health are routinely assessed and suitable avoidance or mitigation measures must be identified. This policy should state this and any justification text make it clear. Reference should also be made to PDR (Part K) for onshore oil and gas exploration sites, as these rights include for the identification of old mine workings which may have an impact on ground conditions and allow operators to gather evidence to inform their site selection and design.

**Summary:**

Policy 56. Comment. The issues presented in this policy are regulated by the EA, and this should be clearly stated in supporting justification text. The policy should state (and justification should clarify) ? Where a project is subject to an EIA all potential impacts on the environment and human health are routinely assessed and suitable avoidance or mitigation measures must be identified. Should refer to Permitted Development Right (Part K) 2015 (for old mine workings)

**Response:**

Policy 56 is not just aimed at hydrocarbon development proposals. Where required Planning and Pollution Control will work with and liaise with the EA when and where required as required by NPPF / NPPG The Local Plan is not required to repeat legislation, (including statutory instruments 596 part K), national policy or guidance. Coal Authority are a consultee, due to previous mining in Doncaster. The council also has the Coal Authority’s unstable land layer for reference and use in application decision making.
Oil and Gas sites require a number of environmental permits from the EA before they can operate. Permits are only issued when it has been demonstrated that the proposed methods to be used at a particular site protect the environment from harm and potential contamination using Best Available Techniques. All sites must be monitored for up to two years before site activities commence. This enables a baseline condition to be established against which permits are then issued and operations subsequently measured. The results of operational monitoring collected during the life of the site are compared against this baseline to ensure there are no contamination issues. Therefore, many of the criterion to this policy are regulated by the EA, and this should be clearly stated in the explanation.

**Summary:**

Policy 56 many criterion in the policy are regulated by the EA. This should be stated in the policy explanation.

**Response:**

Comment noted. The role of regulators is covered in NPPG. (Paragraphs 014 and 110.) NPPF and NPPG not required to be duplicated in the Local Plan.
We also believe there requires to be additional policies to specifically deal with the safeguarding of ancillary mineral development and transport infrastructure as required by NPPF para 204 (e) as follow: Railheads, rail links and wharves identified on the Policies Map, with a 250m buffer zone, will be safeguarded against development which would prevent or frustrate the use of the infrastructure for minerals or waste transport purposes, unless: i) The need for the alternative development outweighs the benefits of retaining the facility; and ii) Where the minerals or waste transport infrastructure is in active use on the land, a suitable alternative location can be provided for the displaced infrastructure; or iii) The infrastructure is not in use and there is no reasonable prospect of it being used for minerals or waste transport in the foreseeable future. Where development, other than exempt development as defined in the Safeguarding Exemption Criteria list, is proposed within an identified buffer zone the agent of change principle will be applied and permission will only be granted where adequate mitigation can, if necessary, be provided to reduce any impacts from the existing or proposed adjacent minerals or waste transport infrastructure uses to an acceptable level, and the benefits of the proposed use outweigh any safeguarding considerations. The suggested Safeguarding Exemption Criteria list is as follows; - Infilling in an otherwise built up frontage within a settlement - Householder applications within the curtilage of a property - Advertisement applications - Reserved matters applications - Applications for new or improved accesses - Minor extensions/alterations to existing uses/buildings which do not fundamentally change the scale and character of the use/building 'Temporary' development (for up to five years) - Agricultural buildings adjacent to existing farmsteads - 'Minor' works such as fences, bus shelters, gates, walls, accesses. - Amendments to current permissions (with no additional land take involved) - Changes of use - Applications for development on land which is already allocated in an adopted local plan where the plan took account of minerals and waste safeguarding requirements - Listed Building Consent and applications for planning permission for demolition in a conservation area - Applications for works on trees or removal of hedgerows - Prior notifications for telecommunications, forestry, agriculture and demolition - Redevelopment of previously developed land not increasing the footprint of the former development - Certificates of Lawfulness of Existing Use of Development and - Certificates of Lawfulness of Proposed Use or Development

Response:
No proposed additional policies. Minerals ancillary infrastructure (such as wharves) is protected through policy 62A.7 as required by NPPF para 204e. Applications pertaining to ancillary minerals infrastructure will be determined in line with NPPF / NPPG and relevant policies within the local plan. See also policy 13. D3 for wharf facilities and key waterways, which encourages improving the efficiency of freight transport by navigable waterways.
Tests of Soundness:

Comment:
We made a number of representations against the different policies for Mineral Sites relating to groundwater protection, which do not appear to have been addressed and are not detailed in the consultation statement. Groundwater, and particularly source protection zones, are particularly susceptible to adverse effects of mineral workings and restoration. We ask the council to provide their response to our previous representations.

Summary:
Minerals Developments General Comments - we made a number of comments against the minerals policies relating to groundwater protection which have not been accepted

Response:
Noted - it is considered that Policy 55 amendments as per the above provides a strong policy framework (noting that Policy 61 also relates to SPZs) for all development, including minerals, so our response to Policy 55 now should address these concerns as well as all policies in the plan where relevant will be applied.

Area: Chapter 14: Climate Change, Mineral Resources & Energy

Policy: Minerals

Tests of Soundness: 

Comment:
In many respects this is an excellent plan but it fails to recognise that Climate Change, probably the most urgent issue of the age, requires attention across the board and that its mitigation requires action far beyond the types of drainage, floods and low carbon energy generation. Transport is increasingly the main producer of carbon emissions while other areas of the economy are seeing reductions. Nevertheless increases in transport infrastructure are supported. In particular the endorsement of Doncaster Sheffield Airport’s development proposals runs contrary to any policy to reduce the damage of climate change. This represents a serious contradiction at the heart of the Plan.

Summary:
Legally compliant - no comment Sound - no comment  The plan fails to recognise that climate change requires attention across all areas, not just flooding, drainage and low carbon energy generation. Transport is a high producer of carbon emissions but other areas of the economy are seeing reductions. Endorsing DSA is contrary to any policy to reduce the damage of climate change and is a 'serious contradiction' of the plan.

Response:
Comment noted. Local Plan paragraph 14.2 identifies how the plan will help Doncaster adapt to climate change
We also believe there requires to be additional policies to specifically deal with the safeguarding of ancillary mineral development and transport infrastructure as required by NPPF para 204(e) as follow: Minerals ancillary infrastructure sites identified on the Policies Map, with a 250m buffer zone, will be safeguarded against development which would prevent or frustrate the use of the site for minerals ancillary infrastructure purposes, unless: i) The need for the alternative development outweighs the benefits of retaining the site; and ii) Where minerals ancillary infrastructure is in active use on the land, a suitable alternative location can be provided for the displaced infrastructure; or iii) The site is not in use and there is no reasonable prospect of it being used for minerals ancillary infrastructure in the foreseeable future. Where development, other than exempt development as defined in the safeguarding exemption criteria list, is proposed within an identified buffer zone the agent of change principle will apply and permission will only be granted where adequate mitigation can, if necessary, be provided to reduce any impacts from the existing or proposed adjacent minerals ancillary infrastructure uses to an acceptable level, and the benefits of the proposed use outweigh any safeguarding considerations.

Response:
No proposed additional policies. Minerals ancillary infrastructure protected through policy 62A.7 as required by NPPF para 204e. Applications pertaining to ancillary minerals infrastructure will be determined in line with NPPF/NPPG and relevant policies within the local plan.
Marr Parish Council considered it vital to assess the value of minerals before any development takes place and that the impact on the environment, landscape, and local communities is fully understood. They agreed with DMBC that no homes should be developed near potential Mineral sites which may hamper or prevent extraction. They thought this was a sensible approach.

**Marr Parish considers that it is vital to assess the value of minerals before any development takes place and the impact on environment, landscape and local communities is fully understood. We agree with DMBC that no homes should be developed near potential Mineral sites which may hamper or prevent extraction. We think this is a sensible approach.**

**Summary:**

It is vital to assess the value of minerals before any development takes place and the impact on environment, landscape and local communities is fully understood. No homes should be developed near potential mineral sites which may hamper or prevent extraction.

FCC supports the following statements in paragraphs 14.33, 14.53 and 14.54 in the Local Plan Publication Draft: “Minerals, such as sand and gravel, limestone and clay are essential to meeting society’s needs for economic growth and development” (para 14.33).

Response:
Support noted.
FCC supports the following statements in paragraphs 14.33, 14.53 and 14.54 in the Local Plan Publication Draft: "Minerals Safeguarding Areas are areas of known mineral resources that are considered to be of sufficient economic or conservation value to warrant protection beyond the plan period? Doncaster’s Mineral Safeguarding Areas have been developed using an agreed methodology which assesses the best available geological and mineral resource information against a variety of issues and constraints modified from our sustainability appraisal criteria" (para 14.53).

Summary:
FCC supports the following statements in paragraphs 14.33, 14.53 and 14.54 in the Local Plan Publication Draft: "Minerals Safeguarding Areas are areas of known mineral resources that are considered to be of sufficient economic or conservation value to warrant protection beyond the plan period? Doncaster’s Mineral Safeguarding Areas have been developed using an agreed methodology which assesses the best available geological and mineral resource information against a variety of issues and constraints modified from our sustainability appraisal criteria" (para 14.53).

Response:
Support noted.
FCC supports the following statements in paragraphs 14.33, 14.53 and 14.54 in the Local Plan Publication Draft: “Doncaster has considerable mineral resources within the Magnesium Limestone ridge - between Barnsdale Bar in the north and Stainton in the south?” (para 14.54).

Summary:
FCC supports the following statements in paragraphs 14.33, 14.53 and 14.54 in the Local Plan Publication Draft: “Doncaster has considerable mineral resources within the Magnesium Limestone ridge - between Barnsdale Bar in the north and Stainton in the south?” (para 14.54).

Response:
Support noted.
Comment:
The majority of the Doncaster area is served by Yorkshire Water and Severn Trent Water. Anglian Water is the sewerage undertaker for part of Doncaster Borough only (parishes of Auckley, Austerfield, Blaxton and Finningley) within and close to Doncaster Sheffield Airport. We are also the water undertaker for part of Finningley Parish. The following comments are submitted on behalf of Anglian Water and relate to our company area only. We note that a number of changes have been made to Policy 57 of the Local Plan to address comments made by Anglian Water as part of the previous consultation. Anglian Water is generally supportive of the wording as proposed but would ask that reference be made to detriment where it proposed to discharge surface water into the public sewerage network as a last resort. The proposed additional wording as set out below would ensure that Policy 57 is effective where a connection to the public sewerage network is required by ensuring the risk of flooding within the surface water sewerage network is considered at application stage. PROPOSED CHANGE It is therefore proposed that the following wording is added to Policy 57 (to follow Point E): "Where an existing surface water sewer is utilised there must be no detriment to the users of the existing sewer"

Summary:
Policy 57 should be amended to ensure that where a connection to the public sewerage network is required the risk of flooding within the surface water sewerage network is considered at application stage. The following should be added to follow Criterion E: 'Where an existing surface water sewer is utilised there must be no detriment to the users of the existing sewer'
We welcome the identification in part F) of the potential for drainage to our watercourses, and the requirement for prior approval of the navigation authority. The Trust do allow drainage into our network, where practical and where a necessary license and agreement can be made.

Response:
Support noted.

**Comment:**

Part D of this policy seeks an outright prevention of new culverting of existing watercourses. In designing development proposals, we would always seek to avoid culverting, however, there are times when it may be necessary to culvert (for example, to achieve a safe access point). This policy should be re-worded to provide sufficient flexibility so that the impact of culverting can be judged on a case-by-case basis.

**Summary:**

Part D of Policy 57 seeks an outright prevention of new culverting of existing watercourses. In designing development proposals, we would always seek to avoid culverting. However, there are times when it may be necessary to culvert (for example, to achieve a safe access point). This policy should be re-worded to provide sufficient flexibility so that the impact of culverting can be judged on a case-by-case basis.

**Response:**

DMBC have an anti-culverting policy in order to avoid the challenging maintenance involved with culverts and to aid ease of inspection. The policy states the we aim to avoid new culverting therefore, however we would take any application on a case by case basis and, if culverting is the only practicable option, this would be permitted.
We are supportive of policy 57. It is essential that for the long term management of a sewerage system and development of a sustainable water cycle that surface water run off is controlled in an appropriate way, the utilisation of SuDS represent the most sustainable and adaptable approach. Where SuDS are implemented correctly, they can provide wider benefits through improved water quality, biodiversity and amenity. The implementation of SuDS can help to provide open and green space or corridors that help to provide a sense of place and setting for new development. Policy 57, continues on to highlight the use of the Drainage Hierarchy. Directing surface water to sustainable outfalls such as infiltration or watercourses, is preferable to connecting to the public sewerage system.

Supports Policy 57. "Proposals in flood zones 2 or 3a (or other significant sources of flood risk such as surface water flooding) outside of Development Allocations will need to identify whether there are any alternative and reasonably available sites, normally in the areas specified in the policy, that are sequentially preferable to satisfy the Sequential Test." As per our comments to Policy 58, development within flood zones, development in low-lying areas such flood zones can result in increased deterioration and ineffective sewerage systems, particularly where surface water sewers are designed to outfall to the watercourse, the lack of sufficient elevation to create the hydraulic pressure to flow out into the watercourse can result in flooding from the sewers.

Response:
Noted - this will need to be considered as part of any planning application from such proposals.
We are supportive of the principle to consider the risk of flooding when determining if a site is suitable for development. Development within flood plain, not only has the risk of flooding properties, or causing access issues, but it can also result in increased deterioration of underground assets such as sewers.

Policy: Policy 59: Low Carbon & Renewable Energy

Tests of Soundness:

Comment:
Inappropriately-sited or poorly-designed low carbon and renewable energy developments can harm elements which contribute to the significance of heritage assets in their vicinity. Therefore, we support Criterion B5 of this Policy that, in all cases, low carbon and renewable energy proposals should have no significant adverse impacts, including cumulative impacts, on the built and natural environment (including landscape character, and historic assets). This will help to support the Plan's Objectives regarding the historic environment.

Summary:
'Sound'. Inappropriately-sited or poorly-designed low carbon and renewable energy developments can harm elements which contribute to the significance of heritage assets in their vicinity. Therefore, we support Criterion B5 of this Policy that, in all cases, low carbon and renewable energy proposals should have no significant adverse impacts, including cumulative impacts, on the built and natural environment (including landscape character, and historic assets). This will help to support the Plan's Objectives regarding the historic environment.

Response:
Support welcomed
Unsound because: - Not positively prepared to address national carbon reduction targets; no low carbon/renewable energy (RE) generation targets set - Not justified in relation to the available evidence, notably the Committee on Climate Change's report on meeting net carbon zero (May 2019) - Not effective: is unlikely to help deliver the radical carbon reductions necessary nor contribute sufficient low carbon energy, in part due to no targets/milestones being set; does not encourage or prioritise community energy schemes as a mechanism to address the concerns of affected local communities nor empower them to help shape their local energy response - Is not consistent with national targets (CCC five year carbon budgets) to radically reduce carbon emissions by 2035 The radical reductions in carbon emissions now required by the national policy to meet a net zero carbon target by 2050 will require the mass deployment of a wide range of low carbon solutions. In turn this will require the engaged consent of communities, enabled by participative decision-making and effective strategic spatial planning of renewable energy assets at local and supra-local levels. To allow planning to deliver net carbon zero as a priority (and the proportionate reductions within the plan period, contributing to the carbon budgets set by the CCC), the Borough must set measurable targets for low carbon energy production (including renewables), based on a landscape capacity-led approach. This has been done for wind, although no targets have been set, but would need to be more comprehensive, including biomass, solar, hydro and a range of other options, based on the natural resources of the Borough. It is unclear how proposals for large scale forestry (see A)1.) will meet the aspirations of this policy and this needs to be clarified. Paragraph 14.13 states 'In particular there is a significant opportunity for solar power schemes to be installed on the roofs of existing and planned large scale commercial and employment developments across the Borough'. Simple text encouragement to fit or retrofit onto commercial and employment developments is not sufficient - this must be mandated by complementary policies for new and existing developments within Policy 47: Design of Non-Residential, Commercial and Employment Developments (p.141). PROPOSED CHANGE Alter pre-ambles text: ‘We aim to increase the supply of low carbon and renewable energy generated in the Borough to at least xx GW installed capacity by 2035, to contribute to meeting the carbon reductions set out in national carbon budgets, and in accordance with the principles set out below.’ Add new policy criterion: A) 6. Community energy schemes where either local ownership (in part or whole) or significant community benefits are demonstrated. And amend: B) 1. are community owned (in part or whole) or have the engaged consent of communities and demonstrate how they will deliver environmental, social and economic benefits;

Summary:
Unsound as it: - is not positively prepared to address national carbon reduction targets; no low carbon / renewable energy generation targets set. - not justified in relation to the available evidence, especially the Committee on Climate Changes report on meeting net carbon zero by 2050. - is ineffective - unlikely to help deliver the radical carbon reductions needed or contribute enough to low energy. No targets / milestones have been set and it does not encourage or prioritise community engagement in community energy schemes - inconsistent with national targets (CCC five year carbon budgets) to radically reduce carbon emissions by 2035. Radical reductions in carbon emissions required by national policy will require a range of low carbon solutions and the engagement of communities and effective planning of renewable energy assets at local / supra local levels. To allow planning to deliver net carbon zero as a priority, and proportionate reductions in the plan period related to net zero carbon, the borough must set measurable targets for low carbon energy production, based on a landscape capacity approach. This has been done for wind, although no targets have been set, but would need to be more comprehensive, including biomass, solar, hydro and a range of other options, based on the natural resources of the Borough. It is unclear how proposals for large scale forestry (see A)1.) will meet the aspirations of this policy and this needs to be clarified. Text relating to solar panels (14.13) re: retrofitting solar is not sufficient, this must be mandated by complementary policies for new and existing developments within Policy 47: Design of Non-Residential, Commercial and Employment Developments (p.141). Proposed change: Alter pre-ambles text: ‘We aim to increase the supply of low carbon and renewable energy generated in the Borough to at least xx GW installed capacity by 2035, to contribute to meeting the carbon reductions set out in national carbon budgets, and in accordance with the principles set out below.’ Add new policy criterion: A) 6. Community energy schemes where either local ownership (in part or whole) or significant community benefits are demonstrated. And amend: B) 1. are community owned (in part or whole) or have the engaged consent of communities and demonstrate how they will deliver environmental, social and economic benefits;

Response:
As far as the Council is aware, there is no requirement for LPAs to set renewable energy generation targets in the Planning and Compulsory Purchase Act 2004 or the NPPF. The NPPG specifically says ‘Whilst local authorities should design their policies to maximise renewable and low carbon energy development, there is no quota which the Local Plan has to deliver’ (para 003). It is considered policies 59 and 60 alongside other Local Plan policies, provide a supportive framework. They provide a positive strategy for energy from renewable and low carbon energy sources, that maximises the potential for suitable development, while ensuring that adverse impacts are addressed satisfactorily. Suitable areas for renewable and low carbon energy sources are identified on the policies map including areas of search for wind energy and heat opportunity areas. Policy 47 b has a requirement that all new major development developments must provide 10% of their energy from renewable sources and Large footprint buildings should ensure roofs are designed to accommodate the potential for solar panel arrays. The NPPF states at 152...
Local planning authorities should support community-led initiatives for renewable and low carbon energy, including developments outside areas identified in local plans or other strategic policies that are being taken forward through neighbourhood planning. It is not therefore considered necessary to repeat this under the Local Plan policy. However it is acknowledged the policies could be reframed to better support community energy schemes. In this respect policy 59A could be amended to read: A) Proposals will be supported which give priority to: 1. Community energy schemes that are in full or part community ownership; 2. biomass and energy crop schemes especially to the north and south east of the main urban area, for example mixed woodland, single species short rotation forestry and large-scale forestry, outside of areas of high quality arable farmland; 3. heat or power generation from light, water, waste and other low carbon heat sources; 4. landfill and sewage gas energy generation schemes; 5. wind power projects which meet the criteria of Policy 60; and 6. micro-renewable energy technologies and decentralised heat and power systems within new development.

**Policy:** Policy 59: Low Carbon & Renewable Energy

**Comment:**

We welcome the identification that heat or power generation can be sought from water within part A). The Trust does have agreements with landowners nationally to utilise our water for the use by water coursed heating systems. The water flowing through our waterways contains enough thermal energy to produce approximately 640 MW of energy. Our waterway network is included in the National Heat Map produced by the Department of Energy & Climate Change (now Department for Business, Energy & Industrial Strategy). It provides an overview of the opportunity that exists across the country. Identification of the many sources of renewable energy production could make it clearer to decision makers as to how the aims of paragraphs 148 and 151 of the National Planning Policy Framework can be met. This would make the Local Plan more effective.

**Summary:**

Comment:

In the Local Plan proposals, Doncaster describes how it will strive to be a leader in Renewable Energy. Marr Parish believes this to be an admiral objective & is still one that it would like to support, however, it has major concerns on how DMBC are to achieve this status. Scarring the Greenbelt Landscape with Wind Turbines Solar Panel Farms is an issue we strongly object to. If DMBC are to deliver this objective then perhaps compulsory Solar installations on all new builds could be the first step, followed by suitable large Roof Tops e.g: Industrial, Commercial & Agricultural buildings & large shed structures and a managed roll out of residential roof spaces. Thus utilising, existing, vast redundant acres of space. This would be fully aligned to the Borough’s Vision, Aims and Objectives. Until we maximise & exhaust the opportunities that currently exist, we cannot support any proposal to cover valuable Greenbelt or Agricultural Land.

Summary:

Support is given to the delivery of Renewable Energy. However, concern is expressed how this will be achieved is this is to mean delivery by wind turbines and solar panel farms on Green Belt land. Would prefer to see solar installations on all new builds, large roof tops, e.g: Industrial, Commercial & Agricultural buildings and large shed structures and a managed roll out of residential roof spaces.

Response:

Support and concerns noted. The wind energy policy 60 seeks to direct wind turbines to areas with the most capacity to accommodate them, including land outside the green belt. Policy 47 b has a requirement that all new major commercial developments must provide 10% of their energy from renewable sources and Large footprint buildings should ensure roofs are designed to accommodate the potential for solar panel arrays. The most efficient way of reducing residential energy use is through enhanced insulation / fabric efficiency which it is anticipated will be improved over coming years through the building regulation changes indicated by Government and green initiatives for existing homes such as was implemented previously through the green deal. Local Plan policy 59A5 supports and prioritises micro-renewable energy schemes.
Comment:
We previously highlighted that bullet point I) should include reference to other waterways in addition to canals. This has not been included in the publication draft version, and there is no explanation in the consultation summary.

Response:
Noted and agree, proposed to make minor amendment to policy text as follows: I) any proposed turbine would be setback from any highway boundary, railway line, canal or other waterway, public footpath or bridleway by a sufficient distance to be safe; and,
Comment:

Inappropriately-sited or poorly-designed wind energy developments can harm elements which contribute to the significance of heritage assets potentially at some distance from the development itself. We support Criterion E of this Policy that, in all cases, wind energy proposals should have no significant adverse impacts, including cumulative impacts, on the built and natural environment (including landscape character, and historic assets). This will help to support the Plan’s Objectives regarding the historic environment.

Summary:

'Sound'. Inappropriately-sited or poorly-designed wind energy developments can harm elements which contribute to the significance of heritage assets potentially at some distance from the development itself. We support Criterion E of this Policy that, in all cases, wind energy proposals should have no significant adverse impacts, including cumulative impacts, on the built and natural environment (including landscape character, and historic assets). This will help to support the Plan’s Objectives regarding the historic environment.

Response:

Support welcomed
Unsound because: - Not positively prepared to address national carbon reduction targets; no generation targets set - Not justified in relation to the available evidence, notably the Committee on Climate Change’s report on meeting net carbon zero (May 2019) - Not effective: is unlikely to help deliver the radical carbon reductions necessary or contribute sufficient low carbon energy, in part due to no targets/milestones being set; does not encourage or prioritise community energy schemes as a mechanism to address the concerns of affected local communities nor empower them to help shape their local energy response; the Plan does not highlight the full range of landscape capacity types (or spatial areas) over the whole borough - Is not consistent with national targets (carbon budgets) to radically reduce carbon emissions by 2035 We also query, and require clarification of, the meaning of ‘directed towards’ the respective landscape capacity areas in 60 A and B). Once applications are submitted, they will either be largely within or without the defined capacity areas. It is unclear what the burden on the scheme proposer is. Text at 14.19 refers readers to Figure 13. We believe it is also necessary to reproduce the full Landscape Capacity for Windpower plan (Figure 10 in the 2006 ECUS study; shown at Appendix A in the supporting document Wind Energy Development Policy: Local Plan Evidence Base (DMBC, July 2019) to ensure clarity regarding the borough wide sensitivity analysis. PROPOSED CHANGE Amend criterion: J) schemes are in full or part community ownership or have the engaged consent of communities and it can be demonstrated that the planning impacts identified by affected local communities have been fully addressed and therefore the proposal has their backing.

Summary:
Unsound as it: - is not positively prepared to address national carbon reduction targets; no low carbon / renewable energy generation targets set. - not justified in relation to the available evidence, especially the Committee on Climate Changes report on meeting net zero carbon by 2050. - is ineffective - unlikely to help deliver the radical carbon reductions needed or contribute enough to low energy. No targets / milestones have been set and it does not encourage or priorities community engagement in community energy schemes - inconsistent with national targets (CCC five year carbon budgets) to radically reduce carbon emissions by 2035. Clarification needed on the meaning of "directed towards" the respective landscape capacity areas in 60 A and B. Once applications are submitted, they will either be largely within or without the defined capacity areas. It is unclear what the burden on the scheme proposer is. Text at 14.19 refers readers to Figure 13. We believe it is also necessary to reproduce the full Landscape Capacity for Wind power plan (Figure 10 in the 2006 ECUS study; shown at Appendix A in the supporting document Wind Energy Development Policy: Local Plan Evidence Base (DMBC, July 2019) to ensure clarity regarding the borough wide sensitivity analysis. Proposed change: Amend criterion: J) schemes are in full or part community ownership or have the engaged consent of communities and it can be demonstrated that the planning impacts identified by affected local communities have been fully addressed and therefore the proposal has their backing.

Response:
As far as the Council is aware, there is no requirement for LPA’s to set renewable energy generation targets in the Planning and Compulsory Purchase Act 2004 or the NPPF. The NPPG specifically says ‘Whilst local authorities should design their policies to maximise renewable and low carbon energy development, there is no quota which the Local Plan has to deliver’ (para 003). It is considered policies 59 and 60 alongside other Local Plan policies, provide a supportive framework. They provide a positive strategy for energy from renewable and low carbon energy sources, that maximises the potential for suitable development, while ensuring that adverse impacts are addressed satisfactorily. Suitable areas for renewable and low carbon energy sources are identified on the policies map including areas of search for wind energy and heat opportunity areas. Policy 60 A is very clear that medium to large-scale proposals are directed toward areas with the highest relative landscape capacity within the Area of Search for Wind Energy Developments as shown on the Policies Map. The NPPF states at 152 ‘Local planning authorities should support community-led initiatives for renewable and low carbon energy, including developments outside areas identified in local plans or other strategic policies that are being taken forward through neighbourhood planning’. It is not therefore considered necessary to repeat this under the Local Plan policy. However it is acknowledged the policies could be reframed to better support community energy schemes. In this respect policy 59A could be amended to read: A) Proposals will be supported which give priority to: 1. Community energy schemes that are in full or part community ownership; 2. biomass and energy crop schemes especially to the north and south east of the main urban area, for example mixed woodland, single species short rotation forestry and large-scale forestry, outside of areas of high quality arable farmland;

Justified Consistent with national

Comment:
As described in the Parish Council’s previous consultation submission. Other than the river Don floodbank the proposed area adjacent to Barnby Dun is very low lying with no woodland and is extremely close to the canal and village with its public rights of way and housing. The Parish Council suggested that any development should be sited to the west of the river Don floodbank and this submission has inadequately been addressed even though the Parish Council was asked to be fully engaged in the process. PROPOSED CHANGE Revising the proposed site boundary to the west of the river Don floodbank ensures that local residents have been fully engaged in the process and their views adequately addressed.

Summary:
Legally compliant - no Sound - no (not positively prepared, not effective) The Parish Council suggested that any development should be sited to the west of the river Don flood bank and this submission has inadequately been addressed even though the Parish Council was asked to be fully engaged in the process. Site boundary should be revised and residents have been ignored.

Response:
No evidence has been provided to demonstrate why this change would be needed and it is considered that the policy 60 criteria are robust enough to manage any negative impacts on local communities. It is clear the local community would prefer to see the area of search boundary further from the edge of the settlement to the west of the Don flood defences and this would need to be considered as part of the community engagement policy 60 requires.

Comment:
The policy states locations where windfarms will be permitted and identifies an area of search in the map. (fig 13, p 163). There is no mention of where permission has already been granted for windfarms. Doncaster’s Infrastructure Strategy Annex 2019 states that planning permission has been granted for a windfarm at Clayton. The Local Plan is misleading by omission, because, if indeed planning permission has been granted, then the Local Plan should say so. However, it may be that the land is safeguarded because of the proposed HS2 Phase 2b route. If so, the Local Plan should state this is the case.

Summary:
The policy states locations where windfarms will be permitted and identifies an area of search in the map. (fig 13, p 163). There is no mention of where permission has already been granted for windfarms. Doncaster’s Infrastructure Strategy Annex 2019 states that planning permission has been granted for a windfarm at Clayton. The Local Plan is misleading by omission, because, if indeed planning permission has been granted, then the Local Plan should say so. However, it may be that the land is safeguarded because of the proposed HS2 Phase 2b route. If so, the Local Plan should state this is the case.

Response:
Don’t agree that the Local Plan needs to list existing permissions, but a clearer list in the Infrastructure Strategy would be useful. If the windfarm at Clayton is affected by the HS2 line, it is a statement of fact, but the Local Plan does not need to say this as it does not need to identify existing permissions but set out a future strategy and policy for wind energy.
Comment:

With regards to the proposed site for wind turbines that stretches from Stainforth to Bentley. These shouldn’t be situated so close to villages. Prevailing wind levels dictate suitable locations, but these should be kept far away from communities. With Barnby Dun in particular they should be located to the west of Thorpe Marsh. ‘A significant distance’ is unacceptable and should be defined in the Local Plan.

Summary:

The area of search for wind turbines/actual turbines themselves should not be located so close to villages and communities. Should be located to the west of Thorpe Marsh and need to define what is a ‘significant distance’.

Response:

It is not considered appropriate to set out specific stand-off distances within the policy as there may be instances when a proposal is acceptable below a stand-off distance depending on the size of the turbine and it’s proposed location- for example if there was an area of intervening woodland between a property and a moderate scale wind turbine. National Planning Policy Guidance states that Local planning authorities should not rule out otherwise acceptable renewable energy developments through inflexible rules on buffer zones or separation distances. Other than when dealing with set back distances for safety, distance of itself does not necessarily determine whether the impact of a proposal is unacceptable. Distance plays a part, but so does the local context including factors such as topography, the local environment and near-by land uses. No evidence has been provided to demonstrate why this change would be needed and it is considered that the policy 60 criteria are robust enough to manage any negative impacts on local communities. It is clear the local community would prefer to see the area of search boundary further from the edge of the settlement to the west of the Don flood defences and this would need to be considered as part of the community engagement policy 60 requires.
3.1. Policy 60 of the Doncaster Local Plan and the accompanying Background Policy Document on Wind Energy Development seek to establish the parameters for future wind energy development across the Borough. It indicates that Wind Energy Development will be permitted in areas with the highest relative landscape capacity within the Area of Search for Wind Energy Development, as shown on the Policy Map. The area of search was based on a landscape character assessment which predate the operation of a number of windfarm operations including at Tween Bridge, which form an integral component of the landscape. As a result existing wind farm operations have been omitted from the Council’s area of Search for wind energy development. The evidence to support Policy 60 and the background document in particular is out of date. EON therefore consider that the Policy 60 is unsound. Test of Soundness 3.2. EON considers that the Doncaster Local Plan 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 3.3. The Framework is clear that Plans should take a proactive approach to mitigating and adapting to climate change. Paragraph 151, states that to help increase the use and supply of renewable and low carbon energy and heat plans should: - Provide a positive strategy for energy from these sources, that maximizes the potential for suitable development, while ensuring that adverse impacts are addressed satisfactorily (including cumulative landscape and visual impacts); - Consider identifying suitable areas for renewable and low carbon energy sources, and supporting infrastructure, where this would help secure their development; and - Identify opportunities for development to draw its energy supply from decentralised, renewable or low carbon energy supply systems and for co locating potential heat customers and suppliers. 3.4. Critically, footnote 49 states that ‘A proposed wind energy development involving one or more turbines should not be considered acceptable unless it is in an area identified as suitable for wind energy development in the development plan; and following consultation, it can be demonstrated that the planning impacts identified by the affected local community have been fully addressed and the proposal has their backing’. 3.5. National Planning Practice Guidance (NPPG) reiterates the need to increase the amount of energy from renewable and low carbon technologies to make sure the UK has a secure energy supply, reduce greenhouse gas emissions to slow down climate change and stimulate investment in new jobs and businesses. Further, NPPG is clear that planning has an important role in the delivery of new renewable and low carbon energy infrastructure in locations where the local environmental impact is acceptable. Paragraph 001 5-001-20140306. 3.6. NPPG provides guidance on the identification of suitable areas for renewable energy and states that local planning authorities should take into account the requirements of the technology, and critically the potential impacts on the local environment, including from cumulative impacts. 3.7. NPPG considers that it is important to set out the factors that will be taken into account when considering individual proposals. It states ‘In considering impacts, assessments can use tools to identify where impacts are likely to be acceptable. For example landscape character areas could form the basis for considering which technologies at which scale may be appropriate in different types of location’ Paragraph 005 5-005-20150618. 3.8. In summary, the Framework and NPPG emphasise the need for Local Plans to take a proactive approach to mitigating and adapting to climate change, the need to increase the use and supply of renewable and low carbon energy and heat, and help ensure that the UK has a secure energy supply. Within the current framework new wind energy development (one or more turbines) should not be considered acceptable unless it is in an area identified as suitable for wind energy development in the plan. 3.9. Therefore, it is critical that any area of search that is identified within a Local Plan is based on up to date and robust evidence. Otherwise there is a risk of stifling development which could make a positive contribution to the Frameworks wider objectives. It could also hinder the achievement of the Doncaster Local Plan vision and objectives which comprise to reducing the dependency on fossil fuels the encouragement of a low carbon economy to combat climate change. 3.10. Policy 60 of the Doncaster Local Plan states that wind energy development will be permitted, for medium to large proposals, where they are directed towards areas with the highest relative landscape capacity within the Area of Search for Wind Energy Development, as shown on the Policies Map. The explanatory text in 14.18 notes that landscape character is important and that the Doncaster Landscape Character Assessment highlights potential areas of moderate landscape sensitivity, where wind power schemes may be more suitable. It highlights areas that would be sensitive to such development including the ‘internationally important Thorne and Hatfield Moors’. It goes on to state that the ‘Areas of Search for Wind Energy Development’ focuses on directing medium-scale to large -scale wind turbines to the less sensitive locations within the Don Flood Plain. 3.11. The Background Document - Wind Energy Development Policy Local Plan Evidence Base (July 2019) summarises the evidence base that underpins Policy 60. This comprises the Doncaster Renewable and Low Carbon Energy Study (2012) and the Doncaster Landscape Character Assessment (2006/7). The former clarified the technical potential including maximum theoretical potential for wind power and mapped constraints against this. The Landscape Character Assessment was used to refine the potential search area. The Landscape Character Assessment clearly underpins Policy 60 and the Policies Map. Critically, this evidence was prepared in advance of the operation of Tween Bridge which was approved following an Public Inquiry in 2007. The Landscape Character Assessment and the resultant area of search fails to acknowledge that existing turbines, including the 22 turbines at Tween Bridge, and those at other locations within the Borough that have become operational since 2006/7, form an integral part of the landscape. 3.12. In relation to Tween Bridge, the Landscape Character Assessment considered that wind power would be a new type of development in the character area. It noted that turbines may disrupt a highly valued and high quality relatively undeveloped landscape with relatively few man made influences, built elements or vertical elements. Further, it considered that wind development could be detrimental to the remote setting of Thorne Moors. This is contrary to the Inspectors conclusion following the public inquiry (2007) in which the Inspector concluded that there was no convincing case for refusal on the grounds of landscape and visual impact including cumulative impact.
Thus the evidence is not only out of date but its conclusions in relation to Tween Bridge area are clearly challengeable. 3.13. Additionally, the Landscape Character Assessment sets out parameters where the capacity for wind power was judged to be highest. They included: 1. Locations are away from large settlements where turbines would be too prominent for large numbers of viewers; 2. Where the landscape already has some disturbance from movement; and 3. Where there are already modern man made elements in the landscape. 3.14. The application of the criteria established within the landscape character assessment following the operation of Tween Bridge, would provide support for the inclusion of Tween Bridge and other appropriate existing wind energy operations within the area of search. Further it would seem to challenge the currently defined Area of Search which is adjacent to the main urban area of Doncaster. The evidence that underpins Policy 60, the Area of Search and the Background Document is not consistent with the requirements of national policy. The evidence is not up-to-date and cannot be considered to be adequate for the purpose of defining an Area of Search. 3.15. EON would like to emphasise that at Inquiry the Inspector also concluded that ‘For Tween Bridge I conclude that subject to appropriate conditions any effects on the nightjar or the integrity of the Thorne Moor SPA/SAC would not be so significant to justify withholding consent’. EON have commissioned further work in this respect when considering the potential for additional turbines at Tween Bridge. The Scoping Report for windfarm extension in the context of European nightjar movements, by University of York, concludes that additional Turbines at Tween Bridge are unlikely to impact on the breeding ground of nightjars. The findings of this report are summarised in section 4 and are attached in appendix 1. (SEE EMAIL FOR Appendix) 3.16. EON contend that the addition of a limited number of turbines to the existing operational wind farm at Tween Bridge could be successfully assimilated into the landscape without harm to environmental interests, including population of nightjars, or leading to unacceptable coalescence of areas dominated by wind energy. 3.17. EON consider that Doncaster Local Plan Policy 60 and the accompanying Background Policy Document on wind energy development is not justified since the Local Plan should be an appropriate strategy, taking into account the reasonable alternatives and based on proportionate evidence (Paragraph 35). Furthermore, the Framework in paragraph 31 is explicit that Plans should be underpinned by relevant and up-to-date evidence that is adequate and proportionate (paragraph 31). The Plan in its present form is informed by outdated landscape information and could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 3.18. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 3.19. However, EON consider that with the inclusion of Tween Bridge within the Area of Search for Wind Energy Developments, the Local Plan can be found sound. EON will continue to work with the Council to develop appropriate modifications to the Local Plan Proposed Change 3.20. To overcome the objection and address soundness matters, the Council should: 1. Update the Landscape Character Assessment Capacity for wind power and the background document that underpins Policy 60. The landscape character assessment and the resultant area of search should reflect that existing windfarm turbines form an integral component of the landscape. The area of search shown on the Policies Map and Policy 60 should be amended to support the consideration of further wind energy development at Tween Bridge. 2. Tween Bridge should be included within the Council’s Area of Search for Wind Energy Development on the Policies Map.

Summary:
Policy 60 - wind Energy Development. 1. Policy is unsound. 2. Evidence in support of Policy is out of date. 3. It does not include ‘Areas of search’ for sites developed post ‘Landscape Character Assessment (LCA) (2007/7) 4. Critical that ‘Areas of search’ identified are based on up to date and robust evidence. 5. The landscape Character assessment (2006/7) that underpins the Policy is out of date. 6. The Tween Bridge site should be included as an area Of Search. 7. The evidence for Tween Bridge (LCA) is clearly challengeable as it was granted planning permission following a public enquiry (2007). 8. Future development could be assimilated successfully at Tween Bridge. Proposed changes: 1. Update Landscape Character Assessment. 2. Include Tween Bridge as an area of search on the Policies Map. Also included with the representation: 1. ‘Scoping report for the windfarm extension in the context of European Nightjar movement’ (University of York) 2. In a nutshell - little evidence of conflict between Nightjars and windfarm.

Response:
The comments are noted. The Area of Search is based, in part, on the council’s landscape evidence base and is considered to be justified and consistent with national policy. It is noted that the policy does not exclude such proposals from coming forward in other appropriate locations and subject to all other relevant policies in the plan.
EON commissioned a 'Scoping Report for Windfarm Extension in the Context of European nightjar (Caprimulgus europaeus) Movements' to inform the potential for further turbines at Tween Bridge. The report follows on from three years of GPS and radio-tracking on Thorne Moors, this has shown relatively little interaction of the foraging birds with the turbines. The tracking data from the last three breeding seasons shows the area where the new turbines are proposed is used infrequently. Overall nightjars do not make regular use of the arable area around Thorne Moor, particularly further than 400m from the edge of the moor. The report notes movement between Thorne and Crowle Moors, to the south east. Significantly, the analysis of data suggests that there has not been a decline in species since the construction and operation of the existing wind turbines, and notes a steady increasing trend over the last 13 years. The report concludes that the use of the proposed new turbine area by nightjars is low overall and the construction of turbines is unlikely to cause any problems to the breeding population of nightjars on Thorne Moor. The report does note that there is more regular use of the area between Thorne and Crowle Moors on the south eastern site, and recommends further work should for this area specifically. It should be noted that no such recommendations are made in respect of the land and turbines proposed to the west of the Moor the area considered within these representations. The full report is appended to these representation in Appendix 1. (SEE EMAIL FOR Appendix)

Summary:
EON commissioned a 'Scoping Report for Windfarm Extension in the Context of European nightjar (Caprimulgus europaeus) Movements' to inform the potential for further turbines at Tween Bridge. The report concludes that the use of the proposed new turbine area by nightjars is low overall and the construction of turbines is unlikely to cause any problems to the breeding population of nightjars on Thorne Moor. The full report is appended to the representation.

Response:
Scoping Report noted - see response to detailed reps set out elsewhere in this document.
We reiterate comments made previously, that although we are pleased to see the commitment not to support proposals which would have adverse effects on/lead to deterioration of water resources, the policy again does not seem ambitious enough. As previously stated, we would recommend also including a statement to the effect of "proposals would be supported which would make positive progress towards achieving "good" status or potential under the Water Framework Directive in the borough's surface and ground waterbodies".

**Summary:**
Policy 61 - Protecting & Enhancing Doncaster's Soil & Water Resources - reiterate previous comments that the policy is not ambitious enough and recommend wording in respect to supporting proposals that make positive progress towards achieving 'good' status or potential under Water Framework Directive

**Response:**
Noted and agree, proposed to make amendment to policy text part E as follows (Main Modification) with existing Part E becoming Part F:

E) Proposals will be supported which will: 1. make positive progress towards achieving 'good' status or potential under the Water Framework Directive in the borough's surface and ground waterbodies; and/or, 2. promote water efficiency measures which take account of current water availability (e.g. informed by Catchment Abstraction Management Strategies) and future demand.
Comment:

Although the Sustainability Appraisal previously indicated that issues around water availability and water efficiency had been considered in the development of the Local Plan, there are no explicit references to any of the following in the publication version of the Plan itself - "water availability", "water efficiency", "drought", "CAMS (Catchment Abstraction Management Strategies)". This is concerning and suggests that matters relating to water resources have not been fully addressed. We would certainly expect to see wording in at least one of the policies giving support to development proposals that promote water efficiency measures, and which take account of current water availability (e.g. using CAMS as an initial information resource) and future demand.

Summary:

General Water Resource Comments - although the SA previously indicated that issues around water availability and efficiency had been considered in the development of the plan, there are no explicit references in the plan itself in respect to water availability, water efficiency, drought or Catchment Abstraction Management Strategies which is concerning and suggests that water resource matters have not been fully addressed.

Response:

Noted - it is proposed to add an additional criteria to Policy 61 as set out above to comment reference 10 to address these concerns:
The majority of the Doncaster area is served by Yorkshire Water and Severn Trent Water. Anglian Water is the sewerage undertaker for part of Doncaster Borough only (parishes of Auckley, Austerfield, Blaxton and Finningley) within and close to Doncaster Sheffield Airport. We are also the water undertaker for part of Finningley Parish. The following comments are submitted on behalf of Anglian Water and relate to our company area only. Anglian Water had previously asked for reference to be added to the submission requirements for surface water and groundwater sources in Policy 61. We note that the supporting text has been included to refer to groundwater sources and how development proposals will only be acceptable where pollution risks can be mitigated as well as the requirements of the Water Framework Directive.

### Summary:
Anglian Water had previously asked for reference to be added to the submission requirements for surface water and groundwater sources in Policy 61. It is noted that the supporting text has been included to refer to groundwater sources and how development proposals will only be acceptable where pollution risks can be mitigated as well as the requirements of the Water Framework Directive.

### Response:
Comment noted. Surface water is also covered in policy 57 'Development sites must incorporate satisfactory measures for dealing with their drainage impacts to ensure waste water and surface water run-off are managed appropriately'. Section F of policy 57 identifies the appropriate networks for dealing with surface water runoff. Groundwater is also referenced in paragraph 14.28 of policy 61 explanatory text... 'The quality of groundwater is at risk from nitrate pollution, particularly within the vicinity of Thorne and Hatfield Moors. Doncaster has a number of source protection zones, including at Hatfield, Dunsforth, Edenthorpe, Cantley, Rossington, Bessacarr and Austerfield, where development might cause pollution or undermine ground water sources, such as wells and springs. In these areas, proposals will only be allowed where they can demonstrate that any pollution risks can be mitigated during its construction and operation.'
Comment: Unsound because: Not positively prepared in relation to identified need to store water (text at 14.32) but without related and specific proposals or policies - Not effective in fully integrating extensive forms of land-based energy generation schemes within the policy - Supporting text ('Explanation') at 14.25 does not cover likely energy generation-related proposals (e.g. ground-mounted solar schemes: 'solar farms') and we suggest that explicit reference to such forms of development will add useful clarity. Text at 14.32 identifies 'a need to store water within the landscape' for the purposes of irrigation and protection of wetland habitats but does not offer policies (e.g. as to appropriate scale of storage) or spatial plans to plan for these positively. PROPOSED CHANGE Amend text (third sentence) at 14.25 as follows: Proposals for other uses of agricultural land for purposes such as flood storage, biomass planting schemes (e.g. reed bed creation) and energy generation (e.g. solar power) will be supported where they avoid the loss of high quality agricultural land.

Summary:
Unsound as: Not positively prepared in relation to identified need to store water, but without specific related proposals / policies - Ineffective in fully integrating extensive forms of land-based energy generation schemes within the policy - Supporting text at 14.25 does not cover likely energy generation related proposals and reference should be specifically made. Text at 14.32 does not offer policies or spatial plans to plan positively for these. Proposed change: Amend text (third sentence) at 14.25 as follows: Proposals for other uses of agricultural land for purposes such as flood storage, biomass planting schemes (e.g. reed bed creation) and energy generation (e.g. solar power) will be supported where they avoid the loss of high quality agricultural land.

Response:
Comment Noted Paragraph 14.28 of the Local Plan acknowledges, Doncaster overlies two principal aquifers (Doncaster water storage areas): Sherwood Sandstone (from which drinking water is obtained) and the Magnesian Limestone (from which drinking water can be obtained). Sherwood Sandstone is the second most important source of ground water in the UK. However, ground water supplies within both aquifers are relatively low due to over abstraction. We acknowledge the aquifers replenish over time through percolating rainwater and the EA will generally refuse new abstraction licenses in these areas. NPPF does not make explicit reference to solar energy and uses the term 'renewables'. NPPG covers solar farms. these are classed as temporary development and conditions are required to ensure the land is restored to its previous use. NPPG paragraph 013 identifies the planning considerations that relate to large scale ground-mounted solar photovoltaic farms and NPPG is not required to be repeated in the Local Plan.
With respect to the issue of dealing with waste water from new developments, and the potential for an impact on the Humber Estuary, we note that you are still waiting for further information from Yorkshire Water and Anglian Water. The information that is ultimately provided will need to be incorporated into a future draft of the Habitat Regulations Report and any further assessment and/or necessary recommendations made at that point. This was raised in our response dated 30 January 2019 reference: 67266. It appears there are safeguards in the plan to outline that infrastructure needs to be in place to meet demand (Policy 57 requires developments to ensure they have an adequate means of foul sewage disposal). However if developers are unable to demonstrate this the application(s) will fail so there is no threat to the designated site. What this means for deliverability is for the LPA to outline and demonstrate. The safeguards provided in the plan ensure that waste water infrastructure should be in place to meet the demands of new development. This protects designated sites in terms of avoiding overcapacity and negative effects as a result. How this affects deliverability of housing sites is not something Natural England would comment on. Natural England endorses policy requirements in the NPPF in terms of ensuring sufficient infrastructure provision (para 20, NPPF), including infrastructure for waste water, to ensure policies in plans are deliverable and planning applications can progress.

Response:
The Council has attempted to engage with Yorkshire Water throughout the local plan process to date. For example, proposed site allocations have been sent in GIS format to assist with their own service planning and in order to allow them to assess the sites in terms of capacity of their utility network, in particular waste water treatment. Due to resource issues at Yorkshire Water, the organisation has made it clear that they are no longer resourced to be able to respond to development plans. The remainder of the Borough is served by Seven Trent Water (with Anglian Water serving a small inset around the Airport). Both of these utility providers have engaged with the local plan, for example see Representations made by both to the Regulation 19 plan. It should be noted that a number of upgrades to Yorkshire Water’s waste water treatment network were made in recent years and as the Representation notes, Policy 57 requires development to ensure adequate means of foul sewage disposal. Possible risks to delivery are noted, but as set out in response to Policy 3 and 6, there is a significant allocation above the requirement which provides flexibility should occasional sites not come forward as envisaged.
We are supportive of Policy 61: in particular Bullet point E: “Proposals will not be supported which would: 1. have an adverse impact on the ecological status or recreational value of rivers and other water bodies such as flood storage areas; 2. lead to the deterioration in the quality of surface and ground waters; and 3. lead to a reduction in groundwater levels (or reduced flows in watercourses).” The protection of water resources will be vital to providing potable water for future growth and development.

Support noted.
2.56 Part a) of the policy states that: "proposals on non-allocated sites that involve the loss of the best and most versatile agricultural land (grades 1, 2 and 3a) will only be supported where: - there is an overriding need for the proposal; - there are no other suitable alternative locations on lower quality agricultural land (or non-agricultural land) available; or - the land can be reinstated back to its previous state (where possible)." 2.57 Our Client objects to this policy as currently drafted as it does not align with national planning policy and is therefore unsound. The Revised NPPF at footnote 53 is clear that it is only where significant areas of best and most versatile agricultural land will be lost, that areas of poorer quality should be sought as an alternative. It is our understanding that planning appeals have found that significant development in this context is circa 20 hectares.

Summary:
Policy 61 - Protecting and Enhancing Doncaster's Soil and Water Resources 1. Re Part (a) of the Policy. 2. Does not conform to NPPF footnote 53. 3. Should be only where significant areas of best and most versatile agricultural land will be lost as per footnote 53 NPPF.

Response:
Comment noted. The word 'significant' does feature in policy 61 and is therefore NPPF compliant. The policy says? Proposals on non-allocated sites that involve the significant loss of the best and most versatile agricultural land (grades 1, 2 and 3a) will only be supported where: 1. there is an overriding need for the proposal; 2. there are no other suitable alternative locations on lower quality agricultural land (or non-agricultural land) available; or 3. the land can be reinstated back to its previous state (where possible).

2.56 Part a) of the policy states that: "proposals on non-allocated sites that involve the loss of the best and most versatile agricultural land (grades 1, 2 and 3a) will only be supported where: - there is an overriding need for the proposal; - there are no other suitable alternative locations on lower quality agricultural land (or non-agricultural land) available; or - the land can be reinstated back to its previous state (where possible)". 2.57 Our Client objects to this policy as currently drafted as it does not align with national planning policy and is therefore unsound. The Revised NPPF at footnote 53 is clear that it is only where significant areas of best and most versatile agricultural land will be lost, that areas of poorer quality should be sought as an alternative. It is our understanding that planning appeals have found that significant development in this context is circa 20 hectares.

Summary:

Policy 61 - Protecting and Enhancing Doncaster's Soil and Water Resources 1. Re Part (a) of the Policy. 2. Does not conform to NPPF footnote 53. 3. Should be only where significant areas of best and most versatile agricultural land will be lost as per footnote 53 NPPF.

Response:

Comment noted. The word 'significant' does feature in policy 61 and is therefore NPPF compliant. The policy says? Proposals on non-allocated sites that involve the significant loss of the best and most versatile agricultural land (grades 1, 2 and 3a) will only be supported where: 1. there is an overriding need for the proposal; 2. there are no other suitable alternative locations on lower quality agricultural land (or non-agricultural land) available; or 3. the land can be reinstated back to its previous state (where possible).
East Riding does not raise any objection to the wording of policies within the Publication Draft Doncaster Local Plan under the tests of soundness, but would like to raise the following comment relating to the locally sourced supply of sand and gravel in the supporting text to Policy 62: Providing for and Safeguarding Mineral Resources (Strategic Policy). It is noted that part A3 of Policy 62 on providing for minerals, requires landbanks of 7 and 10 years for sand and gravel and limestone respectively. Part A4 of this policy links the monitoring to an annual aggregate assessment. It is assumed that this monitoring would be through the Local Aggregate Assessment (LAA) as table 10 in the supporting text then references figures from the 2018 LAA including landbank figures. The Council agrees this wording of the policy is appropriate, however in order for the policy to be as effective as possible and positively act to meet aggregate needs, landbanks need to be appropriately monitored through the LAA. In our previous responses to the last two Doncaster LAAs, East Riding raised our concern about the method of landbank monitoring being used stating that: "There remains concern the Doncaster/Rotherham landbank figure is inflated by lower 10 year average sales figures over time. This is clearly shown in table 2 where in 2008 there was a land bank of 12.4 years with a reserve of 10.0Mt, but in 2017 there is a much higher land bank of 18.1 years but a lower reserve of 5.6Mt. This results in there being little imperative to allocate, encourage or permit additional supplies of sand and gravel to come forward within Doncaster/Rotherham by virtue of the area far exceeding a 7 year land bank. This approach to calculating the land bank may therefore perpetuate a less sustainable pattern of supply of importing sand and gravel aggregate from elsewhere, including from the East Riding, into Doncaster/Rotherham. A way of counteracting this would be to uplift the 10 year sand and gravel sales average and calculate the land bank based on this, rather than on purely the 10 year average. The West Yorkshire, North Yorkshire, and Humber LAAs all do this to some degree already and may provide examples of ways in which a similar approach could be taken forward in the Doncaster/Rotherham." Under National Planning Policy (NPPF) (para 207e), landbanks are principally used as an indicator of the security of aggregate minerals supply, and to indicate the additional provision that needs to be made for new aggregate extraction and alternative supplies in mineral plans. National Planning Practice Guidance (NPPG) Paragraph: 082 Reference ID: 27-082-20140306 states landbanks are an essential component of planning decision-making in establishing the basis of the level of provision of new aggregate allocations, revising the provision of aggregates in the area, and an indicator that applications should be permitted as a matter of importance should the landbank be low. Our understanding (as highlighted above) is that Doncaster bases its aggregate landbank calculation on a decreasing average of 10 years of sales figures, without the inclusion of any uplift for demand or other considerations of the overall reduction in the known amount of sand and gravel supply 'banked' in Doncaster. Our remaining concern is that this method will continue to artificially inflate the years of available land banks in Doncaster. This would not allow a low supply to be evidenced and then used as a trigger to consider the identification of other minerals supply in the way envisaged by the NPPF and NPPG. Specifically using the current calculation in your LAA, the aim of Para 207e of the NPPF would not be able to come into effect. Additionally, NPPG Paragraph: 080 Reference ID: 27-080-20140306, also envisages landbanks principally as a monitoring tool to provide a mineral planning authority with early warning of possible disruption to the provision of an adequate and steady supply of land-won aggregates in their particular area and as a trigger for review of aggregate provision. East Riding is concerned that these provisions in the NPPF and NPPG will be unable to come into effect as envisaged, therefore creating a risk that the insecurity of sand and gravel supply to the District is not highlighted and that additional provision or alternative supplies are not fully planned for. This then creates a knock-on risk for shortfalls in supply in Doncaster to create increases in supplying areas, such as the East Riding. This has the potential to require additional aggregates to be sourced within East Riding that are currently not planned for in our recently examined Joint Minerals Local Plan. This raises the additional issues over associated impacts on sustainability of increasing haulage miles and decreasing self-sufficiency in aggregate provision. In order to address this issue, East Riding advises that the Doncaster Council should factor in 'other relevant local information' into its demand forecast in the LAA that is used to calculate the landbank in line with Para 207a of the NPPF. It should also be noted that NPPG Paragraph: 064 (Reference ID: 27-064-20140306) also clearly states that LAAs must also consider other relevant local information in addition to the 10 year rolling average supply. This adjusted 'demand forecast' could then be used as the basis of a revised local provision figure in table 10 of Publication Draft Doncaster Plan. To reiterate, East Riding's does not make an objection to the Doncaster Local Plan under the tests of soundness and the Council agrees that sand and gravel reserves are declining in Doncaster and that it is not possible to allocate sites elsewhere, including from the East Riding, into Doncaster/Rotherham. However East Riding would like to advise that when this is the case, acknowledging this through a comprehensively calculated landbank would then allow the relevant national policy mechanisms to kick in. Options to increase provision of sand and gravel in the district, such as making further Local Plan allocations or seeking increased imports from neighbouring producing areas could then be explored to provide a solution. This would allow the overall cross boundary approach to minerals planning to work more transparently in line with the Managed Aggregate Supply System and allowing wider sub-regional aggregate supply chains to meet the appropriate demands of the development industry.
East Riding does not raise any objection to the wording of policies within the Publication Draft Doncaster Local Plan under the tests of soundness. The policy wording is appropriate, however in order for the policy to be as effective as possible and positively act to meet aggregate needs, land banks need to be appropriately monitored through the LAA. Doncaster council should factor in 'other information' into the demand forecast in the LAA, and uplift the 10 year sand and gravel sales average and calculate the land bank based on this, rather than on purely the 10 year average. The adjusted demand forecast could be used as a basis for a revised local provision figure. East Riding quote NPPF 207e and NPPG paragraphs 082 which say land banks are principally used as an indicator of the security of aggregate minerals supply and essential component of planning decision-making in establishing the basis of the level of provision of new aggregate allocations, East Riding’s does not make an objection to the Doncaster Local Plan under the tests of soundness and the Council agrees that sand and gravel reserves are declining in Doncaster and that it is not possible to allocate sites where there is little evidence of available resources. Acknowledging resource decline through a comprehensively calculated land bank would allow the relevant national policy mechanisms to kick in and increase provision of sand and gravel by allocating sites in the Local Plan or seeking imports from neighbouring authorities. The shortfall in Doncaster has potential to require additional aggregates to be sourced within East Riding that are currently not planned for in our recently examined Joint Minerals Local Plan.

Response:
The Local Plan and 2018 Local Aggregates Assessment (LAA) identifies a 5.6Mt reserve and land bank of 18.1 years for sand and gravel based on ten year average sales (which does include periods of low sales). The plan also acknowledges a short fall in sharp sand and gravel evidenced from previous annual surveys (see paragraph 14.47). Doncaster Council has identified other information in the Local Plan to identify ‘Local Provision’. The Local Plan evidence base includes information identifying the depletion of sharp sand and gravel resources. These documents include: o BGS - Mineral Resource Information in Support of National, Regional and Local Planning (South Yorkshire) (C/04/173N) (pre NPPF), and; o BGS - Yorkshire & Humber Region Sand and Gravel Resources and Environmental Assets - Phase One (CR/04/216N), Which states 'older river gravels that were the focus of extraction have now been depleted' o 2009 and 2014 (national) Aggregate Mineral Surveys; which identifies reserves and output o Yorkshire & Humber AWP Annual Aggregates Monitoring Reports; which clarifies the depletion of sharp sand and gravel resources. o Forecasting the Demand for Aggregates (evidence base paper); which identifies the 'Local Need' for South Yorkshire based on previous extraction and known housing delivery. Doncaster disagrees that the land bank has provided little imperative to encourage or permit additional supplies of sharp sand and gravel. The amount of available sharp sand and gravel and not the 'landbank' has been the principle driver for allocating sites since the adoption of the 2012 Core Strategy. This principle is retained in the Local Plan. See policy 65 A.5. Which states applications need to demonstrate at least 20% sharp sand and gravel. The 2019 LAA (ratified by the Y&H AWP in October 2019) shows land banks based on 10 year and 3 year averages. This 3 year average NPPG para 064) is used to identify short term trends and identifies that if extraction continues at the current rate the sand and gravel reserve will last only 9.8 years. In terms of ten year average sales or three year average sales for use in considering whether it might be appropriate to increase supply, this is only possible if resources are available. The Local Plan allocates all appropriate sand and gravel representations received. And goes further to allocate extensive areas of search to allow for the minerals industry to explore for any remaining resources in the area. Given that each LAA has been ratified by the Y&HAWP it should be acknowledged that the evidence base supporting the Local Plan is sound. Proposed amendment to the Local Plan include: Clarifying the level of provision, by amending the table 10 to show average sales for ten and three years, additional provision (local plan proposals) and additional years on the land bank. This will also lead to minor amendments to the explanatory text to clarify what Doncaster can supply during the plan period.
Doncaster has, for many years, been a source of building stone for buildings and structures both within the Borough but also the surrounding areas. Whilst the majority of these were within the Southern Magnesian Limestone Ridge, there are known to be other building stones and areas where stone has, in the past, been quarried within the Doncaster area. There is, for example, a historic building stone quarry within the Rotliegendes Group and several areas of sandstone were worked within both the Pennine Middle Coal Measures and the Pennine Upper Coal Measures. We welcome the recognition of this important mineral resource. However, the Policy makes no reference to how the plan will address this resource. PROPOSED CHANGE Policy 62, Criterion A add the following additional Criterion: “Enabling the reopening of historic sources of building stone where they are required to facilitate the conservation of a heritage asset”
Unsound because: - Is not consistent with national targets (carbon budgets) to radically reduce carbon emissions by 2035. Policy 62 (policy and supporting text/explanation) is not properly cognisant of the Government’s recently adopted/revised policy to meet a carbon net zero target by 2050 by overstating the need for oil and gas, which will not be consistent with future carbon budgets. The rationale for italicisation of part of explanatory text at 14.41 is unclear. We also suggest a change below to better reflect the reducing need for fossil fuels (imported or indigenous).

PROPOSED CHANGE
Amend text of 14.33, as follows: Minerals, such as sand and gravel, limestone and clay are essential to meeting society’s needs for economic growth and development. Others, such as gas and oil, are important in helping meet our needs for energy, although, as fossil fuels, they will need to be phased out to facilitate a rapid transition to a low carbon economy. Policy 62 to be amended as follows:

2. providing for sufficient industrial and energy minerals that balance both the economic and environmental benefits, taking into account the need to move to a low carbon economy;
Criterion B) 5. of Policy 62 needs re-writing/clarifying so that it is plainer that ‘permitted’ refers to permitted development (i.e. under GDO) unless it has some other meaning? Change last sentence of 14.41 to: Our approach to supporting the need for industrial and energy minerals will have regard to both the local economy and environment, including the need to phase out hydrocarbon use in line with national carbon budgets.

Response:
Comments noted. The minerals policies and supporting text conforms to the NPPF, NPPG, which identifies the short term need for hydrocarbons to contribute towards a long term low carbon economy. No changes proposed to paragraph 14.33. No change proposed to Policy 62 (including B5), which is clarified in supporting text 14.55 No change proposed to 14.41 your proposal is not compliant with NPPF.

supports the inclusion of Policy 62: Providing for and Safeguarding Minerals

**Response:**

Comment noted
The policy needs to be consistent with the NPPF which requires Mineral Planning Authorities to ‘plan for a steady and adequate supply of minerals’. We suggest the policy is re-worded to ensure consistency with the NPPF. Proposed Changes (deletions in strikethrough; new text in bold) (THIS CANNOT BE SHOWN - DELETIONS REMOVED, NEW TEXT SHOWN AS CAPITAL) The extraction and production of aggregate, industrial, building stone and energy minerals that contribute to infrastructure and construction projects will be supported through the following principles:

A) The Council will aim to PLAN FOR A STEADY AND ADEQUATE SUPPLY OF minerals during the plan period by: 1. encouraging the use of suitable secondary and recycled material in the first instance, minimising the need for primary extraction; 2. PLAN FOR A STEADY AND ADEQUATE SUPPLY of industrial, and energy minerals that balance both the economic and environmental benefits: 3. contributing toward local provision by maintaining, a landbank of permitted reserves for at least seven years for sand and gravel and with Rotherham Council at least ten years for aggregate limestone; 4. monitoring and reviewing the permitted reserves of sand and gravel, and aggregate limestone and producing an annual aggregate assessment AND REVIEWING THE PLAN AT LEAST EVERY 5 YEARS. 5. requiring proposals for sand and gravel to demonstrate that the mineral resource includes at least 20% sharp sand and gravel; 6. identifying on the Proposals Map existing mineral sites, new mineral proposals (preferred areas), and ‘Areas of Search’; (see Table below) 7. identifying on the Proposals Map minerals supporting infrastructure to be safeguarded during and beyond the plan period (see Table below); and B) Proposals for non-mineral development within Mineral Safeguarding Areas AND PERMITTED MINERAL OPERATIONS, and the 250m buffer zone, OF THEIR BOUNDARY, WILL HAVE THE AGENT OF CHANGE PRINCIPLE APPLIED AND FURTHERMORE will be supported where it can be demonstrated that: 1. consideration has been given to the long-term economic value of the mineral AND A FULL GEOLOGICAL REPORT IDENTIFYING THE EXTENT AND QUALITY OF THE MINERAL FORMS PART OF ANY APPLICATION FOR NON-MINERAL DEVELOPMENT; 2. non-mineral development can take place without preventing the mineral resource from being extracted in the future TAKING INTO ACCOUNT THE AGENT OF CHANGE PRINCIPLE; 3. the proposal can feasibly incorporate the prior extraction of any minerals of economic value in an environmentally acceptable way; 4. the need for the development outweighs the need to safeguard the site for future; 5. the development is temporary in nature, OR IS CONSIDER AS EXEMPT DEVELOPMENT ON THE SAFEGUARDING CRITERIA LIST. The suggested Safeguarding Exemption Criteria list is as follows; - Infilling in an otherwise built up frontage within a settlement - Householder applications within the curtilage of a property - Advertisement applications - Reserved matters applications - Applications for new or improved accesses - Minor’ extensions/alterations to existing uses/buildings which do not fundamentally change the scale and character of the use/building ’Temporary’ development (for up to five years) - Agricultural buildings adjacent to existing farmsteads - ‘Minor’ works such as fences, bus shelters, gates, walls, accesses. - Amendments to current permissions (with no additional land take involved) - Changes of use - Applications for development on land which is already allocated in an adopted local plan where the plan took account of minerals and waste safeguarding requirements - Listed Building Consent and applications for planning permission for demolition in a conservation area - Applications for work on trees or removal of hedgerows - Prior notifications for telecommunications, forestry, agriculture and demolition - Redevelopment of previously developed land not increasing the footprint of the former development - Certificates of Lawfulness of Existing Use of Development and - Certificates of Lawfulness of Proposed Use or Development

Legally compliant - no comment Sound - no (not positively prepared) Policy 62. To be compliant with the NPPF policy wording changes are required? (deletions within asterisk *xxx*; new text in capitals)

A) The Council will aim to PLAN FOR A STEADY AND ADEQUATE SUPPLY OF *efficiently and sustainably sourced* minerals 1. no change 2. providing PLAN FOR A STEADY AND ADEQUATE SUPPLY OF *for sufficient* industrial, and energy minerals 3. contributing toward local provision by maintaining, where possible, a land bank of permitted reserves 4. monitoring and reviewing the permitted reserves of sand and gravel, and aggregate limestone and producing an annual aggregate assessment AND REVIEWING THE PLAN AT LEAST EVERY 5 YEARS. 5. no change 6. no change 7. no change

B) Proposals for non-mineral development within Mineral Safeguarding Areas AND PERMITTED MINERAL OPERATIONS, and the 250m buffer zone, OF THEIR BOUNDARY, WILL HAVE THE AGENT OF CHANGE PRINCIPLE APPLIED AND FURTHERMORE will be supported where it can be demonstrated that: 1. consideration has been given to the long-term economic value of the mineral AND A DULL GEOLOGICAL REPORT IDENTIFYING THE EXTENT AND QUALITY OF THE MINERAL FORMS PART OF ANY APPLICATION FOR NON-MINERAL DEVELOPMENT; 2. non-mineral development can take place without preventing the mineral resource from being extracted in the future taking into account the agent of change principle; 3. no change 4. no change 5. the development is *permitted, minor* or temporary in nature, OR IS CONSIDER AS EXEMPT DEVELOPMENT ON THE SAFEGUARDING CRITERIA LIST.
Response:

Part A) comment noted. No change proposed. Section 17 of the NPPF is entitled ‘facilitating the sustainable use of minerals’, which acknowledges the need for secure long term conservation as such there should be both a steady and adequate supply of minerals which should be efficiently and sustainably sourced. A.2) comment noted. No change proposed. covered in point A A.3) comment noted. No change proposed. flexibility may be needed in terms of the land bank due to sand and gravel resource depletion A.4) comment noted. No change proposed. no requirement to duplicate national policy  B.1) comment noted. No change proposed. see Local Plan paragraph 14.23, which identifies requirement for a geological report B.2) comment noted. No change proposed. Agent of change principle, and requirement for mineral survey information are in paragraph 14.55 B.5) comment noted. No change proposed. See Local Plan paragraph 14.55, which clarifies the policy requirement

Comment:

8.1 Peel has a number of comments on the LP’s other strategic and non-strategic policies as currently drafted. These are summarised below: 8.11 The draft policy and policies map appears to identify specific areas of the Borough which are existing and proposed mineral workings; ‘Areas of Search’ and areas which are safeguarded. It is not clear if the policy is the definitive position of mineral workings or safeguarding across the borough as it would appear, on this basis, that the Mineral Safeguarding Area which previously existed to the west of the airport has been removed. 8.12 For completeness, Peel request clear and categoric confirmation within the LP that any Mineral Safeguarding Area which has previously been identified within the Airport Masterplan’s demise is indeed removed, as appears to be the case; the plan and policies map should make this clear. The Airport and its masterplan area is the borough’s biggest economic asset and will deliver most economic potential and growth across the borough and SCR. It should not be unnecessarily constrained in its delivery.

Summary:
The policy and proposals may appears to identify specific areas of the borough which are existing minerals areas of search and areas which are safeguarded. It is not clear if the policy is the definitive position on mineral workings or safeguarding across the borough as it would appear the safeguarding area to the west of the airport has been removed. For completeness, clear and categoric confirmation within the LP that any mineral safeguarding area which was previously identified with the airport masterplan are is indeed removed and the plan / map should make this clear. The masterplan area and airport is the borough’s biggest economic asset and should not be unnecessarily constrained in its delivery.

Response:

Comment Noted. Policy 62 and the policies map identifies mineral sites, preferred areas, areas of search and safeguarding areas across the borough. The mineral safeguarding area for sand and gravel to the east of the borough has been retained and expanded, not removed. Paragraph 14.55 states that mineral safeguarding areas are identified under developed / sterilised areas to allow for prior extraction consideration should this be appropriate as part of a redevelopment / regeneration scheme.
The policy needs rewording to be consistent with the NPPF and therefore make it sound. Proposed Changes (deletions in strikethrough; new text in bold) - These cannot be shown therefore deletions shown in brackets with X either sides (x deleted text x) and new text in CAPITAL) The extraction and production of aggregate, industrial, building stone and energy minerals that contribute to infrastructure and construction projects will be supported through the following principles A) The Council will (X aim to X) plan for a steady AND adequate SUPPLY OF (X efficiently and sustainably sourced X) minerals during the plan period by: 1. encouraging the use of suitable secondary and recycled material in the first instance, minimising the need for primary extraction; 2. Response:
Comment noted. The policy is worded in a way that provides flexibility, addresses sustainability, and meets with the NPPF requirements of being positively prepared. Not required to repeat NPPF with regard to plan review period. Agent of change wording in explanatory text 14.55. Plan should be read as a whole
Comment: The Planning service team has looked at Policies relation to Minerals and Waste and have the following comments. Support the policy, the mineral safeguarding area which adjoins the North Yorkshire County Council boundary matches the North Yorkshire County Council safeguarded area. The reference to 'Agent of Change' in paragraph 14.55 is also supported.

Response: Comment Noted
FCC also supports Policy 62 'Providing for and Safeguarding Mineral Resources' particularly the following statements, "The extraction and production of aggregate, industrial, building stone and energy minerals that contribute to infrastructure and construction projects will be supported. 7. Identifying on the Policies Map minerals and ancillary minerals infrastructure to be safeguarded from non-mineral development during and beyond the plan period". This is considered to be in line with paragraph 203 of the NPPF which states that "It is essential that there is a sufficient supply of minerals to provide the infrastructure, buildings, energy and goods that the country needs?" and paragraph 204 "Planning policies should c) safeguard mineral resources by defining Mineral Safeguarding Area; and adopt appropriate policies so that known locations of specific minerals resources of local and national importance are not sterilised by non-mineral development where this should be avoided?". As such, the Local Plan Publication Draft is considered to be consistent with national policy. Under the submission Policies Map and as illustrated on Table 15 in the Local Plan Publication Draft, FCC's Barnsdale Bar landholding is located within a Minerals Safeguarding Area. FCC support this allocation and are currently investigating the potential to extend the existing Barnsdale Bar Quarry to the south between Woodfield Road and Long Lane.

**Summary:**

FCC also supports Policy 62 'Providing for and Safeguarding Mineral Resources' particularly the following statements, "The extraction and production of aggregate, industrial, building stone and energy minerals that contribute to infrastructure and construction projects will be supported. 7. Identifying on the Policies Map minerals and ancillary minerals infrastructure to be safeguarded from non-mineral development during and beyond the plan period". As such, the Local Plan Publication Draft is considered to be consistent with national policy. Under the submission Policies Map and as illustrated on Table 15 in the Local Plan Publication Draft, FCC's Barnsdale Bar landholding is located within a Minerals Safeguarding Area. FCC support this allocation and are currently investigating the potential to extend the existing Barnsdale Bar Quarry to the south between Woodfield Road and Long Lane.

**Response:**

Support noted.
It is essential that there is a sufficient supply of minerals to provide the infrastructure, buildings, energy and goods the country needs. Since minerals are a finite natural resource, and can only be worked where they are found, best use needs to be made of them to secure their long-term conservation. Paragraph 205 - "When determining planning applications, great weight should be given to the benefits of mineral extraction, including to the economy. In considering proposals for mineral extraction, minerals planning authorities should:

a) as far as is practical, provide for the maintenance of landbanks of non-energy minerals from outside National Parks, the Broads, Areas of Outstanding Natural Beauty and World Heritage Sites, scheduled monuments and conservation areas; b) ensure that there are no unacceptable adverse impacts on the natural and historic environment, human health or aviation safety, and take into account the cumulative effect of
multiple impacts from individual sites and/or from a number of sites in a locality; c) ensure that any unavoidable noise, dust and particle emissions and any blasting vibrations are controlled, mitigated or removed at source, and establish appropriate noise limits for extraction in proximity to noise sensitive properties; d) not grant planning permission for peat extraction from new or extended sites; e) provide for restoration and aftercare at the earliest opportunity, to be carried out to high environmental standards, through the application of appropriate conditions. Bonds or other financial guarantees to underpin planning conditions should only be sought in exceptional circumstances; f) consider how to meet any demand for small-scale extraction of building stone at, or close to, relic quarries needed for the repair of heritage assets, taking account of the need to protect designated sites; and g) recognise the small-scale nature and impact of building and roofing stone quarries, and the need for a flexible approach to the duration of planning permissions reflecting the intermittent or low rate of working at many sites. The proposals are considered compliant with the existing Doncaster Core Strategy 2011-2028 - Policy CS20: Minerals and the following proposed policies set out in the emerging new Local Plan 2015-2035: - Policy 62: Providing for and Safeguarding Mineral Resources (Strategic Policy); - Policy 63: Mineral Development Proposals, Borrow Pits and Incidental Extraction and - Policy 64: Reclamation of Mineral Sites (Restoration and Aftercare). The Proposed Development fulfils a number of strategic objectives including sustaining sand and gravel mineral production, retaining jobs and supporting wider economic development, which ultimately support and complement the objectives of the emerging Doncaster Local Plan. The proposals are unlikely to result in any adverse environmental effects that would be a constraint to development, with any planning application supported by an Environmental Statement and EIA technical assessments. As such the proposals are considered broadly positive, to which significant weight should be afforded. Overall, we support and commend the allocation of Grange Farm as a preferred minerals site. The Local Planning Authority can also be assured that detailed proposals and an Environmental Impact Assessment is being progressed to bring forward the Site as quickly as possible, accounting for scarcity of concreting aggregate resources, under the current extant planning policy position. As such, it is not only considered Sound to allocate provision of mineral from the Site, it is also practical and Effective. i.e. the proposals have operator commitment, are currently being detailed up and would be considered deliverable over the early years of the plan period. We would however request the Council to consider accounting for and recognising the existence of the Ninescores Farm IDO (registered planning permission) through its LAA process in support of the emerging Local Plan, for which it is intended to bring forward and regularise the Ninescores permission as a composite part of the Grange Farm mineral planning proposals on the basis of maximising the valuable resources at the Site, particularly in respect of sharp sand and concreting aggregates. This will be further justified on sustainable minerals recovery. Also enclosed are the following documents: - CE - Doc 1 - Doncaster Local Plan - Local Plan evidence Base - Assessing Mineral Site Representations - Land at Grange Farm Representation - CE - Doc 2 - Mineral Sites Map - Site Reference - 1011 (SEE EMAIL FOR Appendices)

Summary:

Legally Compliant - Yes Sound - Yes The emerging Doncaster Local Plan 2015-2035 supports the inclusion of Land at Grange Farm, as a proposed new mineral allocation Site - Reference 1011. Site offers approximately 1.55 million tonnes of sand and gravel mineral reserve North Lincs Property Holdings (our client) want to include land at Ninescores Farm, Finningley, Doncaster, DN93DY (land adjacent site to Grange Farm) (site extension) Ninescores Farm, has an Interim Development Order (IDO) providing approximately 400,000 to 600,000 tonnes of additional sand and gravel reserve. The composite application proposal, will enable mineral reserves to be blended on Site, ensuring that the locally and regionally scarce mineral reserves found at the Site, (i.e. the sharp sand / concreting aggregates) Grange Farm area 40ha and Ninescores Farm 24ha The proposal will contribute an estimated reserve 2.1Mt The representation highlights the Core Strategy, Emerging Local Plan and 2018 LAA. ‘Historic returns have confirmed that only a small proportion of the remaining permitted reserve in Doncaster is however suitable for use as concreting aggregate’ Proposal complies with NPPF paragraphs 203 and 205. Proposal compliant with Core Strategy CS20 and emerging Local Plan Policies 62, 63, 64. The Proposed Development fulfils a number of strategic objectives including sustaining sand and gravel mineral production, retaining jobs and supporting wider economic development, which ultimately support and complement the objectives of the emerging Doncaster Local Plan. Overall, we support and commend the allocation of Grange Farm as a preferred minerals site.

Response:

Comment noted. The site is allocated in the Local Plan as there is a need for sharp sand and gravel in Doncaster. Comment noted. The additional site NineScores Farm has been identified as a late site addition, which require SAIing Comment noted. If the proposal comes forward as application before submission of the Local Plan the application will be assessed using the Core Strategy and UDP policies.
Comment:
That which relates to Stainton Quarry. The Town Council support the Plan and not to include provision for any extension of the Quarry activity for wider limestone mineral extraction in the areas that Breedon’s would like to develop. The Town Council support the comment on there being sufficient landbanked mineral supplies for the next 25 years and do not want to see any further extension beyond that which is regulated by the existing permission or any encroachment further towards Edlington/Old Edlington.

Summary:
Supports the plan as legally compliant and ‘sound’. In respect to Stainton Quarry, the Town Council supports the Plan’s decision not to include provision for any extension of the Quarry activity for wider limestone mineral extraction. The Town Council support the comment on there being sufficient land banked mineral supplies for the next 25 years and do not want to see any further extension beyond that which is regulated by the existing permission or any encroachment further towards Edlington/Old Edlington.

Response:
Support welcomed. Representation’s reference to pages 20 and 22 are references to the Minerals Site Selection Methodology Report (May 2018) rather than the Local Plan document.
MARSHALLS ACKNOWLEDGE AND SUPPORT DMBCS PROPOSED ALLOCATION OF ITS STAINTON MINERALS PROCESSING AND CONCRETE PRODUCT WORKS AS SAFEGUARDED ANCILLARY MINERALS INFRASTRUCTURE WITHIN THE DRAFT PLAN.

Supports the continued allocation of the Maltby/Stainton site (ref 006 Holme Hall Quarry) as a 'Safeguarded Ancillary Minerals Infrastructure' site, as per Local Plan Table 14.
The Coal Authority supports the inclusion of Policy 63: Minerals Development Proposals, Borrow Pits and Incidental Extraction which sets out criteria again which proposals will be considered.

Summary:
supports the inclusion of Policy 63: Minerals Development Proposals, Borrow Pits and Incidental Extraction

Policy: Policy 63: Minerals Development Proposals, Borrow Pits & Incidental Extraction

Tests of Soundness: Unsound - not stated

In addition, in October 2018 we submitted the following suggestion with regard to policy 63. 'We suggest the inclusion of another requirement which encourages a developer to permit temporary access to excavations in superficial and bedrock geology for the purpose of recording geological data, some of which may be rarely-seen, by suitably qualified experts.' We note that our suggestion, sadly has not been adopted in the Local Plan Publication version (August 2019). We can not stress enough the value of having access to such sites in recording features of the underlying geology and would like it to be included for this reason.

Summary:

Policy 63. Not added previous suggestion? "We suggest the inclusion of another requirement which encourages a developer to permit temporary access to excavations in superficial and bedrock geology for the purpose of recording geological data, some of which may be rarely-seen, by suitably qualified experts."

Response:

Comment noted. Covered by policy 31. A6
Comment:
The policy needs expanding to make it effective as follows; Proposed Changes (deletions in strikethrough; new text in bold) - These cannot be shown therefore deletions shown in brackets with X either sides (x deleted text x) and new text in CAPITAL) Proposals for mineral development including aggregate extraction (in preferred areas and areas of search), underground mining and hydrocarbon exploration, appraisal and development (including production) will be supported where all potential impacts are addressed and appropriately mitigated in accordance with policies in the Local Plan, national policy and guidance. Incidental mineral extraction and borrow pits will be supported where: A) the use of reclaimed, recycled or waste material has been considered and is not practical or suitable; B) the proposal is short term and provides a clear amenity, environmental or local economic benefit; and C) (x the borrow pit is situated next to and used only for the project it is intended to supply X) SAND AND GRAVEL BORROW PITS WILL ONLY BE CONSIDERED WHERE IT IS DEMONSTRATED THAT: 1. GEOGRAPHICALLY THEY ARE WELL RELATED TO THE PROJECT THEY WILL SERVE 2. THE QUANTITY AND TIMESCALE FOR THE SUPPLY OF SAND AND GRAVEL MAY NOT POSE PROBLEMS OF SUPPLY FROM EXISTING QUARRIES, OR PREJUDICE THE STEADY SUPPLY OF CONSTRUCTION MATERIAL FOR THE LOCAL MARKET 3. AN UNACCEPTABLE LEVEL OF MINERAL TRAFFIC, AND / OR MOVEMENTS OF UNSUITABLE MATERIAL ARISING FROM THE SCHEME, WILL BE REMOVED FROM THE PUBLIC HIGHWAY AND / OR FROM PASSING THROUGH LOCAL COMMUNITIES 4. THE SITE WILL BE RESTORED WITHIN THE SAME TIMESCALE AS THE PROJECT TO WHICH IT RELATES, AND THAT RESTORATION CAN BE ACHIEVED TO AN APPROVED SCHEME IN THE EVENT THAT IT IS ONLY PART WORKED 5. THERE WILL BE NO IMPORTATION OF MATERIALS OTHER THAN FROM THE PROJECT ITSELF UNLESS REQUIRED TO ACHIEVE BENEFICIAL RESTORATION AS SET OUT IN AN APPROVED SCHEME. D) PROPOSALS FOR DEVELOPMENT INVOLVING THE INCIDENTAL EXTRACTION AND OFF SITE REMOVAL OF MINERAL, WILL ONLY BE PERMITTED WHERE IT CAN BE DEMONSTRATED: 1. THERE IS A PROVEN NEED FOR THE PROPOSAL 2. THAT ANY MINERAL EXTRACTED WILL BE USED IN A SUSTAINABLE MANNER 3. WHERE THE PROPOSAL RELATES TO A RESERVOIR, THE DESIGN MINIMISES ITS SURFACE AREA BY MAXIMISING ITS DEPTH 4. THE MINIMUM AMOUNT OF MINERAL IS TO BE EXTRACTED CONSISTENT WITH THE PURPOSE OF THE DEVELOPMENT 5. THE PHASING AND DURATION OF DEVELOPMENT PROPOSED ADEQUATELY REFLECTS THE IMPORTANCE OF THE EARLY DELIVERY OF WATER RESOURCES OR OTHER APPROVED DEVELOPMENT THE DETERMINATION OF PLANNING APPLICATIONS WILL HAVE REGARD TO THE OBJECTIVES AND POLICIES IN THIS PLAN.

Summary:
Policy 63 proposed (x deletions x) and additions (in capitals) C) (x the borrow pit is situated next to and used only for the project it is intended to supply x) SAND AND GRAVEL BORROW PITS WILL ONLY BE CONSIDERED WHERE IT IS DEMONSTRATED THAT: 1. GEOGRAPHICALLY THEY ARE WELL RELATED TO THE PROJECT THEY WILL SERVE 2. The Planning service team has looked at Policies relation to Minerals and Waste and have the following comments. Support the policy

**Summary:**

**Response:**

Comment Noted
Tests of Soundness:

Comment:

This policy has been significantly altered and shortened compared to the previous version. Our comments have not been taken into account and there is no explanation in the consultation summary. However, we note that paragraph 14.73 makes reference to working with all the relevant key regulators. The Environment Agency is one of the member organisations which forms the Shale Environmental Regulator Group (SERG). SERG is committed to helping Mineral Planning Authorities to understand and have confidence in the role and decisions of regulators.

Summary:

Policy 65 - Providing for Energy Minerals - the policy has been significantly altered since the last consultation and cannot see reference to comments made previously although note reference to working with all relevant key regulators which would include the EA

Response:

Noted - the Policy has been significantly amended as a result of the last consultation. There is no political support for unconventional hydrocarbon extraction and as such applications will be determined in line with national policy and guidance.
Unsound because: - Is not justified: it fails to take properly into account local constraints to development; - Is not effective: without suitable constraint-related policy criteria, there is a substantial risk that development will be inconsistent with the proper protection of rural areas of the Borough; Oil and gas exploration and production (especially for unconventional hydrocarbons, including use of hydraulic fracturing) have a related but different set of impacts from other minerals (aggregates and industrial minerals) and these need to be addressed by specific policies if such development is to be properly controlled and mitigated. We are unclear as to why 'conventional and unconventional hydrocarbons (text in first sentence of 14.72) is italicised. Suggest change to plain (Roman) text. PROPOSED CHANGE Remove current Policy 65 in its entirety and substitute the below: Policy 65 Proposals for exploration and appraisal of hydrocarbons Proposals for exploration and appraisal of onshore oil and gas will be permitted where they meet all of the following criteria:  a. well sites and associated facilities are located in the least sensitive areas from which the target reservoir can be accessed;  b. any adverse impacts can be avoided or mitigated to the satisfaction of the Mineral Planning Authority, with safeguards to protect highway, environmental and amenity interests put in place as necessary;  c. it can be demonstrated that there would be no adverse impact on the underlying integrity of the geological structure or on groundwater or surface water regimes;  d. an indication of the extent of the reservoir and the extent of the area of search within the reservoir is provided;  e. exploration and appraisal operations are for an agreed, temporary length of time;  f. well sites and associated facilities are restored at the earliest practicable opportunity if oil and gas is not found in economically viable volumes, or they are developed within an agreed time frame. Policy 66 Proposals for production of hydrocarbons Proposals for the production of hydrocarbons will be considered against the following criteria:  a. Exploration and appraisal operations are for an agreed, temporary length of time.  b. Extraction, processing, dispatch and transport facilities are sited, designed and operated to minimise environmental and amenity impacts and provide proportionate environmental enhancements.  c. Any adverse impacts, both individual and cumulative can be avoided or mitigated to the satisfaction of the Mineral Planning Authority.  d. Existing facilities are used for the development of any additional fields discovered unless the applicant satisfies the Mineral Planning Authority that this would not be feasible and any adverse impacts can be mitigated.  e. Where a proposal uses existing production facilities, the integrity of the existing infrastructure can be demonstrated, having regard to local environmental factors.  f. Developments for hydrocarbon production will be required to use pipelines. Where it can be demonstrated that this is not feasible, economically and/or environmentally, rail or road transport will be considered. Where road transportation is the only feasible option, it should be demonstrated that this would not give rise to unacceptable impacts on the environment or highway safety.  g. The well site and all associated facilities are restored at the earliest practicable opportunity following the final cessation of hydrocarbon production.  h. Where a proposal demonstrates that it will have a net zero impact on climate change. Amend Explanation text as follows: 14.70. In line with national guidance 'Petroleum Exploration and Development Licences' and permitted hydrocarbon sites will be are shown on the Policies Map for information. Applications for the exploration, appraisal and development (including production) of on-shore gas and oil in licenced areas will be determined in line with National Policy, Guidance and Policies 65 and 66 above. Add to explanatory text, insert at (new) 14.73 and retain current 14.73 text as 14.77 and renumber remaining text 14.78, (Peat and other minerals)14.79 and 14.80 : 14.73 If economic concentrations of hydrocarbons are found, the operator may seek to develop the field commercially. Small fields may be exploited using the existing exploration and appraisal wells where oil/gas can be stored on site, with tankers transporting the hydrocarbon off site. However, larger fields may require additional wellhead sites linked by pipelines. 14.74 Directional drilling, whereby a number of wells are drilled from a single location, may be used to minimise the number of sites required to exploit the field. Directional drilling is considered preferable to the creation of additional well sites. Above ground facilities including, potentially, a gathering station to provide a central facility to prepare the hydrocarbons for export, transport links, pipelines and offices may be required. Impacts similar to industrial development may be experienced, with pollution prevention being a potential long-term issue. 14.75 As there is likely to be some flexibility as to the location of extraction and processing facilities, they should be located to minimise adverse effects on landscape, nature conservation interests, residential amenity, historic environment and best and most versatile agricultural land. 14.76 Consideration will need to be given to the use of tree screens and appropriately managed areas around well sites or facilities in order to reduce visual impact. Additionally, where areas are sensitive ecologically, opportunities for habitat management should be explored.

Summary:

Unsound as: - Unjustified and does not take properly into account local development constraints - Ineffective without constraint related criteria, there is risk development will be inconsistent with proper protection of rural areas in the borough. Oil and gas have different impact to other minerals and need to be separately addressed in specific policies, if development is to be controlled and mitigated properly. Unclear why 'conventional and unconventional hydrocarbons (text in first sentence of 14.72) is italicised. Suggest normal text. Proposed change: Remove current Policy 65 in its entirety and substitute the below: Policy 65 Proposals for exploration and appraisal of hydrocarbons Proposals for exploration and appraisal of onshore oil and gas will be permitted where they meet all of the following criteria:  a. well sites and associated facilities are located in the least sensitive areas from which the target reservoir can be accessed;  b. any adverse impacts can be avoided or mitigated to the satisfaction of the Mineral Planning Authority, with safeguards to protect highway, environmental and amenity interests put in place as necessary;  c. it can be demonstrated that there would be no adverse impact on the underlying integrity of the geological structure or on
d. an indication of the extent of the reservoir and the extent of the area of search within the reservoir is provided; e. exploration and appraisal operations are for an agreed, temporary length of time; f. well sites and associated facilities are restored at the earliest practicable opportunity if oil and gas is not found in economically viable volumes, or they are developed within an agreed time frame. Policy 66 Proposals for production of hydrocarbons Proposals for the production of hydrocarbons will be considered against the following criteria: a. Exploration and appraisal operations are for an agreed, temporary length of time. b. Extraction, processing, dispatch and transport facilities are sited, designed and operated to minimise environmental and amenity impacts and provide proportionate environmental enhancements. c. Any adverse impacts, both individual and cumulative can be avoided or mitigated to the satisfaction of the Mineral Planning Authority. d. Existing facilities are used for the development of any additional fields discovered unless the applicant satisfies the Mineral Planning Authority that this would not be feasible and any adverse impacts can be mitigated. e. Where a proposal uses existing production facilities, the integrity of the existing infrastructure can be demonstrated, having regard to local environmental factors. f. Developments for hydrocarbon production will be required to use pipelines. Where it can be demonstrated that this is not feasible, economically and/or environmentally, rail or road transport will be considered. Where road transportation is the only feasible option, it should be demonstrated that this would not give rise to unacceptable impacts on the environment or highway safety. g. The well site and all associated facilities are restored at the earliest practicable opportunity following the final cessation of hydrocarbon production. h. Where a proposal demonstrates that it will have a net zero impact on climate change. Amend Explanation text as follows: 14.70. In line with national guidance 'Petroleum Exploration and Development Licences' and permitted hydrocarbon sites will be are shown on the Policies Map for information. Applications for the exploration, appraisal and development (including production) of on-shore gas and oil in licenced areas will be determined in line with National Policy, Guidance and Policies 65 and 66 above. Add to explanatory text, insert at (new) 14.73 and retain current 14.73 text as 14.77 and renumber remaining text 14.78, (Peat and other minerals)14.79 and 14.80 : 14.73 If economic concentrations of hydrocarbons are found, the operator may seek to develop the field commercially. Small fields may be exploited using the existing exploration and appraisal wells where oil/gas can be stored on site, with tankers transporting the hydrocarbon off site. However, larger fields may require additional wellhead sites linked by pipelines. 14.74 Directional drilling, whereby a number of wells are drilled from a single location, may be used to minimise the number of sites required to exploit the field. Directional drilling is considered preferable to the creation of additional well sites. Above ground facilities including, potentially, a gathering station to provide a central facility to prepare the hydrocarbons for export, transport links, pipelines and offices may be required. Impacts similar to industrial development may be experienced, with pollution prevention being a potential long-term issue. 14.75 As there is likely to be some flexibility as to the location of extraction and processing facilities, they should be located to minimise adverse effects on landscape, nature conservation interests, residential amenity, historic environment and best and most versatile agricultural land. 14.76 Consideration will need to be given to the use of tree screens and appropriately managed areas around well sites or facilities in order to reduce visual impact. Additionally, where areas are sensitive ecologically, opportunities for habitat management should be explored.

Response:
Comments noted. No proposed change to policy 65 or additional policy and text changes. The Policy has been significantly amended as a result of the previous informal consultation in 2018. There is no political support for hydrocarbon extraction and as such applications will be determined in line with the positively prepared national policy and guidance as identified by the policy.
The Coal Authority supports the inclusion of Policy 65: Providing for Energy Minerals which states that PEDL areas will be identified on the Policies Maps. We are also pleased to see that this policy notes that applications which come forward will be considered in line with National and relevant Local Policies.
C/Policy 65/05014/1/014
Chapter 14: Climate Change, Mineral Resources & Energy

Policy 65: Providing for Energy Minerals

Tests of Soundness:

Comment:

UKOOG Response: Policy 65 states; ‘Petroleum Exploration and Development Licence’ (PEDL) areas and hydrocarbon sites are identified on the Policies Map for information. Applications for the exploration, appraisal and development (including production) of on-shore gas and oil in licenced areas will be determined in line with National Policy, Guidance and relevant policies within the Local Plan. And provides explanatory text as follows; 14.70. In line with national guidance ‘Petroleum Exploration and Development Licences’ and permitted hydrocarbon sites will be shown on the Policies Map for information. 14.71. The Government awards PEDLs to operators to give exclusive access to operators to ‘search, bore for and get’ oil and gas resources which are owned by the Crown. The award of the licence is to help ensure maximum use of a natural resource. Operators are still required to get landowner consent, planning permission and other regulatory consents as necessary. The online ‘Onshore Oil and Gas Activity’ interactive map provides information on licence references, ownership, start date, status, size, and licence end date. 14.72. National planning policy states that both conventional and unconventional hydrocarbons (gas and oil) are minerals of national and local importance and that Minerals Plans (i.e. the Local Plan) should include policies for their extraction. This includes applications for both conventional and unconventional hydrocarbons. Applications for hydrocarbon exploration, appraisal or production, will only be acceptable in areas where the Oil and Gas Authority have issued a petroleum licence under the Petroleum Act 1998 (a Petroleum Licence). Hydrocarbon applications will be determined in line with national policy, planning practice guidelines and relevant policies in this plan. Applicants are encouraged to engage with the planning authority and local community at the earliest opportunity to ensure all potential impacts are addressed and mitigated at each separate planning application stage. Applications which include (or may include) proposals for hydraulic fracturing will also be required to produce an Environmental Impact Assessment (EIA). Proposals which may damage the integrity of Thorne Moor SAC, Hatfield Moor SAC or Thorne and Hatfield Moors SPA will not be supported in line with Policy 31. 14.73. When determining applications the Council will consult and work with all the relevant key regulators and organisations. 14.74. Applications for underground gas storage and carbon storage will also be considered against national policy and guidance, and relevant policies within the Local Plan. Peat and other minerals 14.75. Peat is an economically important mineral resource and Thorne and Hatfield Moors are the largest lowland peat resources in the country. These deposits, however, occur within internationally designated conservation areas where, in line with national guidance, peat extraction (other than as part of on-site restoration) will not be supported. However, where peat is found in areas outside the moors, such as the land to the north of the West Moor link road at junction 4 of the M18, pre-development extraction may be considered as part of a development, re-development / regeneration project. 14.76. Applications for the extraction of other minerals (for example, coal and clay) will be considered on their merits in line with national policy, guidance, relevant policies within this Plan and the need for the mineral. ’ We are supportive of the changes made in Policy 65 and within the supporting text, which recognises the need to align with national policy and guidance (and references 'NPPG Paragraph: 106 Reference ID: 27-106-20140306. Paragraph: 107 Reference ID: 27-107-20140306 - National Planning Policy Framework paragraphs 209 to 211’), we are also pleased to see the inclusion of a policies map that identifies the location of granted PEDLs and permitted hydrocarbon sites, as outlined in explanation section 14.70 and 14.71. In our view it would be beneficial to expand the explanation text in 14.73 to cover the role of the other regulators, such that there is clarity on the issues that each regulator addresses outside of the planning system. This would ensure that any confusion over the role of the other regulators is avoided. With respect to the specific wording of Policy 65, in our view there would be benefit in expanding the policy text covering the 3 distinct phases of hydrocarbon development; Exploration, Appraisal and Production. It is important that the criteria established elsewhere in the local plan can be applied proportionately against the relevant development stage, as the planning issues associated with each stage are significantly varied, both in terms of scale and duration. Furthermore, we believe the term ‘determined’ should be replaced with ‘supported’, where a proposed development is in line with National Policy, Guidance and meets the relevant policies within the Local Plan’. We note that there are no specific policies covering, or references made to, other energy minerals, such as coal or mine methane, except for a short statement on paragraph 14.76. In our view policy 65 should include text on Mine Methane and Coal, such that these important energy minerals are sufficiently addressed.

Summary:

Policy 65. Supportive of change to policy 65. Wording should be changed further. The word ‘determined’ should be replaced with the word ‘supported’. The policy text covering the 3 distinct phases of hydrocarbon development; Exploration, Appraisal and Production should be expanded. Note no references made to other energy minerals, such as coal or mine methane, except for a short statement on paragraph 14.76

Area: Chapter 14: Climate Change, Mineral Resources & Energy

Response:

Policy 65. Comment noted. No change proposed to policy or explanatory text. It is not politically acceptable to use the word ‘support’ in the policy. Applications will be determined fairly and proportionally by development management officers in line with local policies, national policy and guidance. Phases of extraction covered in NPPG ? The role of regulators is covered in NPPG paragraph 110.
The issue raised is complex and we have found it helpful when responding to other plans for the matter to be debated. This was done most recently at East Riding of Yorkshire in January 2019 where the Inspector was able to hear the points raised on each side of the argument and to understand that there was in fact little between the parties in terms of principle. In our submission this may not have been fully apparent in reviewing written submissions and this was confirmed by the conduct of the Hearing where the Inspector thanked the parties for their frankness, helpfulness and courtesy.

**Tests of Soundness:**

Background Regulation 18 of the Development Plan Regulations requires the local planning authority to collect evidence and to identify key issues.

Unconventional gas is one such key issue. National Planning Policy Framework (NPPF) states that each planning authority should ensure that their local plan is based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics of the area. That evidence is required to be tightly focused on supporting and justifying particular policies in the Local Plan. The UK Government’s energy policies seek to encourage the use of natural resources indigenous to the UK as part of achieving self-sufficiency in energy production and increasing security of energy and gas supplies. This covers a range of onshore hydrocarbons that include inter alia; shale, coal bed methane and oil. The Local Plan requires a policy to cover all the hydrocarbons that are potentially found in the area licenced by the Government under the Petroleum Exploration & Licence (PEDL) regime and could be extracted over the plan period. Onshore hydrocarbons are important to the UK because they are a potential long-term source of indigenous natural gas. These untapped energy resources have the potential to meet the UK’s need for a secure and diverse energy supply. The Local Plan needs to recognise that there are a range of sources of this resource and policy should cover all onshore hydrocarbons, and recognise that the planning and other regulatory process provide sufficient safeguards to enable the LDP to contain a positive statement of support for the process, in line with the support given in NPPF. Therefore, the Local Plan should address the full range of onshore hydrocarbon extraction including: - Conventional onshore oil and gas development. - Extraction of petroleum or hydrocarbon oils and gases by drilling and pumping. - Capture of methane that has accumulated in mines. - Coal bed methane and gas derived from shale reservoirs. Onshore hydrocarbon exploration and development is incremental in nature with a phased approach to exploration, appraisal and production. The initial exploration phases, if successful, determine the strategy for the development of the PEDL area. With CBM, testing the ability of a coal seam to produce commercial volumes of gas cannot be achieved with the use of one borehole. Typically a number of boreholes will be drilled across a known isolated slab of coal within a Licence Area. These wells will then be pumped as a collective to have a uniform drainage effect on the coal. Commercial production will be determined by the volume of gas being produced when the volume of water that is being produced has reached a plateau. If the initial Pilot Test is successful additional wells are added to the initial appraisal cluster in order to scale up the production and commercialisation of an area. Each well bore is expected to have a useful production life of up to 25 years. Shale gas also requires a number of boreholes across the Licence area. These boreholes will be tested and, if commercial production is determined to be achievable, additional wells may be added to the initial cluster. Each shale wellbore is expected to have a useful production life of up to 25 years. Similar principles apply to exploration of the other onshore hydrocarbon resources identified above. In every case there is strong regulation outside the planning process. Planning provides significant controls to monitor the land use implications. Having regard to these safeguards there is no reason for the Local Plan not to contain a positive statement of support through policy and its supporting text. Support within the Local Plan and future associated documents is therefore essential to enable long term onshore hydrocarbon development strategy to realise these nationally valuable resources.

Suggested Policy Approach We set out below draft supporting text and policy that we would like to see incorporated into the Local Plan. It notes that the main concerns are with the environment and residential amenity but as there are other policies dealing with such impacts, each containing assessment criteria, Policy 65 of the plan does not need to list these considerations in its policy. The supporting text should provide background and justification, which links to the National Planning Policy Framework and other Government policies, and the PEDLs are mapped and safeguarded. The suggested approach is informed by the Written Ministerial Statements (WMS) of May 2018 and May 2019 and the revised NPPF. (a) Written Ministerial Statements The WMS of May 2018 and May 2019 are material consideration and should be given great weight as a statement of national policy, especially given that the announcement is so recent. The WMS of May 2018 confirms its status by noting that This Statement is a material consideration in decision-taking, alongside relevant policies of the existing National Planning Policy Framework (2012), in particular those on mineral planning (including conventional and unconventional hydrocarbons). The statement is also clear that Shale gas development is of national importance. The Government expects Mineral Planning Authorities to give great weight to the benefits of mineral extraction, including to the economy. This includes shale gas exploration and extraction. It therefore directly applies to the draft Local Plan minerals policies and confirms the importance to the country of undertaking the activity proposed by the development. It is Government’s view that there are potentially substantial benefits from the safe and sustainable exploration and development of our onshore shale gas resources. The Statement notes that This joint statement should be considered in planning decisions and plan-making in England. This confirms that Government considers there are potentially benefits arising from shale exploration. Again, we would expect that draft Plan will give great weight to this strategic factor. WMS also states that The UK must have safe, secure and affordable supplies of energy with carbon emissions levels that are consistent with the carbon budgets defined in our Climate Change Act and our international obligations. We believe that gas has a key part to play in meeting these objectives both currently and in the future. It also observes that Gas still makes up around a third of our current energy usage and every scenario proposed by the Committee on Climate Change setting out how the UK could meet its legally-binding 2050 emissions reduction target includes demand for natural gas. Furthermore it states that The UK must have safe secure and
affordable supplies of energy" and estimates that we could be importing up to 72% of our gas by 2030. This confirms that unconventional hydrocarbons does not conflict with climate change objectives, and that it is necessary to continue to explore and ultimately extract gas in the UK in order to provide a local and secure source of gas. On this basis, Government believe[s] that it is right to utilise our domestic gas resources to the maximum extent and exploring further the potential for onshore gas production from shale rock formations in the UK, where it is economically efficient, and where environment impacts are robustly regulated. INEOS considers that unconventional hydrocarbons have a material benefit in the form of information to help assess the future potential for shale gas extraction in this area of the country, and that it accords with the requirement to assess environmental effects robustly. The WMS notes that a new shale gas exploration and production sector could provide a new economic driver and that the sector could create a "new model" of the most environmentally robust onshore shale gas sector. Without developments progressing, these opportunities will not be realised. It also sets out proposals to consult on whether certain unconventional hydrocarbons development should in fact be considered to be permitted development. This indicates that Government's view is that this type of development is not likely to have significant enough effects to warrant express planning control. The Secretary of State on 23rd May 2019 reiterated support for the onshore oil and gas industry in planning terms: On the 6th of March 2019, Mr Justice Dove handed down his judgment in the case of Stephenson vs SoS MHCLG [2019] EWHC 519 (Admin). In accordance with the terms of the Court Order, paragraph 209(a) of the National Planning Policy Framework has been quashed. For the avoidance of doubt the remainder of the National Planning Policy Framework policy and, in particular, Chapter 17 on 'Facilitating the Sustainable Use of Minerals' remain unchanged and extant. For the purposes of the National Planning Policy Framework, hydrocarbon development (including unconventional oil and gas) are considered to be a mineral resource. Specific policy on the planning considerations associated with their development is set out at paragraphs 203-205 and the remainder of 209 of the National Planning Policy Framework. In particular, paragraph 204(a) of the National Planning Policy Framework states that planning policies should "provide for the extraction of mineral resources of local and national importance" with paragraph 205 stating that "[w]hen determining planning applications, great weight should be given to the benefits of mineral extraction, including to the economy". In addition, the Written Ministerial Statements of 16th September 2015 on 'Shale Gas and Oil Policy' and 17th May 2018 on 'Planning and Energy Policy' also remain unchanged and extant. The Written Ministerial Statements sit alongside the National Planning Policy Framework. Planning Practice Guidance is also unaffected by the ruling. This suite of policies and guidance remain material considerations in planning decision making and decision taking for hydrocarbon development and they should be afforded appropriate weighting as determined by the decision maker. We remain committed to the safe and sustainable exploration and development of our onshore shale gas resources. In summary, the text of the Local Plan should take account of the following points made in the two recent WMS, which show consistency in Government policy approach and should then be reflected in the drafting of policy: - Shale gas development is of national importance. The Government expects Mineral Planning Authorities to give great weight to the benefits of mineral extraction, including to the economy. This includes shale gas exploration and extraction. - Mineral Plans should reflect that minerals resources can only be worked where they are found and applications must be assessed on a site by site basis and having regard to their context. Plans should not set restrictions or thresholds across their plan area that limit shale development without proper justification. - The Government expects mineral planning authorities to recognise the fact that Parliament has set out in statute the relevant definitions of hydrocarbon, natural gas and associated hydraulic fracturing. In addition, these matters are described in Planning Practice Guidance, which Plans must have due regard to. - Consistent with this Planning Practice Guidance, policies should avoid undue sterilisation of mineral resources (including shale gas). (b) Publication of new NPPF Paragraph 209, as originally published, stated that mineral planning authorities should: a) recognise the benefits of on-shore oil and gas development, including unconventional hydrocarbons, for the security of energy supplies and supporting the transition to a low-carbon economy; and put in place policies to facilitate their exploration and extraction; b) when planning for on-shore oil and gas development, clearly distinguish between, and plan positively for, the three phases of development (exploration, appraisal and production), whilst ensuring appropriate monitoring and site restoration is provided for; Subsequently the High Court quashed paragraph 209(a) of the NPPF due to a lack of proper consultation. However the rest of the NPPF and in particular the parts that are supportive of development of this type are unaffected. Given the nature of the Judicial Review challenge, it was a flaw in the consultation process that was carried out rather than any express or implied admission on the part of the UK Government that its position as set out in para 209 (a) was wrong, that led to the revision. As the most recent WMS of 23rd May 2019 pointed out, the remainder of the previous supportive suite of WMS5s and the remainder of para 209 which urges mineral planning authorities to plan "positively" for each of the stages of onshore unconventional oil and gas development, remain in place. Suggested Revisions to Policy 65 Whilst INEOS supports the positive approach to hydrocarbons of the draft Local Plan we believe that changes should be made. Having regard to practice elsewhere, we believe that there should be a single policy dealing with hydrocarbons. This should be simple and positively worded and recognise that the policy is supported by other policies in the Local Plan, which provide the details for necessary assessment of impacts. INEOS' suggested revised policy is as follows: Oil and Gas Development Exploration 1. Proposals for hydrocarbon exploration will be supported provided they do not give rise to any unacceptable impacts on the environment and residential amenity. Appraisal 2. Where hydrocarbons are discovered, proposals to appraise, drill and test the resource will be permitted provided that they are consistent with an overall scheme for the appraisal and delineation of the resource and do not give rise to any significant unacceptable impacts on the environment and residential amenity. Extraction 3. Proposals for the extraction of hydrocarbons will be supported provided they are consistent with an overall scheme for enabling the full development of the resource and do not give rise to significant unacceptable impacts on the environment and residential amenity. 4. Where proposals for hydrocarbon development coincide with areas containing other underground mineral resources evidence must be provided to demonstrate that their potential for future exploitation will not be unreasonably affected. Restoration 5. All applications for hydrocarbon development will be accompanied with details of how the site will be restored once the development is no longer required. This suggested policy is positively worded. It notes that the main concerns are with two matters: the site and residual amenity but as there is already policy dealing with such impacts, each containing assessment criteria, the hydrocarbon development policy of the plan does not need to list these considerations in its policy. The supporting text should provide background and justification, which links to the National Planning Policy Framework and other Government policies, and the PEDLs are mapped and safeguarded. This approach to policy wording will ensure that the policy is in accordance with Government Guidance, in particular the WMS of May 2018 and May 2019 and NPPF. In support of this policy approach, we suggest that the following supporting text should also be included within the Local Plan: The UK Government's energy policies seek to encourage the use of natural resources indigenous to the UK as part of achieving self-sufficiency in energy production and increasing security of energy and gas supplies. On-shore hydrocarbon extraction is comprehensively regulated. The Department of Energy and Climate Change has awarded a Petroleum, Exploration and Development Licence (PEDL) for an area within the Council’s area. Onshore hydrocarbons provide an opportunity to extract a nationally important natural energy resource without the environmental impact normally associated with minerals extraction. The extraction of CBM and shale gas will be incremental and involve more than one exploration and production site. Due to advanced drilling techniques, these sites can be up to 1km apart. Exploration and development rights granted through a PEDL create land use rights across the licence area, subject to obtaining necessary site specific consents. Safeguarding is important because rights create a land use consideration that may be a material factor in assessing other land use proposals in the area. It is a potential land use consideration that others using the planning service need to take into account. The PEDL licence does not create automatic development rights and the effects may not apply equally across
Summary:

the Local Plan should address the full range of onshore hydrocarbon extraction including:
- Conventional onshore oil and gas development.
- Extraction of petroleum or hydrocarbon oils and gases by drilling and pumping.
- Capture of methane that has accumulated in mines.
- Coal bed methane and gas derived from shale reservoirs.

Suggested Revisions to Policy 65

Whilst INEOS supports the positive approach to hydrocarbons of the draft Local Plan we believe that changes should be made. Having regard to practice elsewhere, we believe that there should be a single policy dealing with hydrocarbons. This should be simple and positively worded and recognise that the policy is supported by other policies in the Local Plan, which provide the details for necessary assessment of impacts. INEOS' suggested revised policy is as follows:

Oil and Gas Development

Exploration 1. Proposals for hydrocarbon exploration will be supported provided they do not give rise to any unacceptable impacts on the environment and residential amenity.

Appraisal 2. Where hydrocarbons are discovered, proposals to appraise, drill and test the resource will be permitted provided that they are consistent with an overall scheme for the appraisal and delineation of the resource and do not give rise to any significant unacceptable impacts on the environment and residential amenity.

Extraction 3. Proposals for the extraction of hydrocarbons will be supported provided they are consistent with an overall scheme for enabling the full development of the resource and do not give rise to significant unacceptable impacts on the environment and residential amenity.

4. Where proposals for hydrocarbon development coincide with areas containing other underground mineral resources evidence must be provided to demonstrate that their potential for future exploitation will not be unreasonably affected.

Restoration 5. All applications for hydrocarbon development will be accompanied with details of how the site will be restored once the development is no longer required.

Response:

Policy 65 Local Plan is not required to repeat national policy or guidance. NPPG paragraphs 091 to 131 comprehensively covers the requirements for shale gas and hydrocarbons and should not be repeated in the Local Plan. Paragraph 106 identifies what the Local Plans should include.

Petroleum Licence Areas on their policies maps and criteria-based policies. This has been done. The local plan should be read as a whole and contains criteria based policies against which applications can be determined. As an example policies in the chapters on green infrastructure, historic environment and health and wellbeing will be used to determine applications. As will national policy and guidance. The relevant criteria based policies can be used at different stages of an application process.
Comment:
We are supportive of the changes made since the draft of Policy 65 including changes to the supporting text, which recognises the need to align with national policy and guidance, namely NPPF Paragraphs 209 - 211, and PPG Paragraphs 106 and 107. We are also pleased to see the inclusion of a policies map that identifies the location of granted PEDLs and permitted hydrocarbon sites, as outlined in explanation sections 14.70 and 14.71. It would be beneficial to expand the explanation text in 14.73 to cover the role of the other regulators, such that there is clarity on the issues that each regulator addresses outside of the planning system. This would help to minimise any confusion regarding the role of other regulators. With respect to the specific wording of Policy 65, there would be benefit in expanding the policy text to include the 3 distinct phases of hydrocarbon development (Exploration, Appraisal, and Production) to ensure consistency with NPPF Paragraph 209 (b). It is important that the other policies (and their associated criteria) of the local plan are able to be applied proportionately against the relevant hydrocarbon development stage, as the planning considerations associated with each stage tend to vary significantly, both in terms of scale and duration. The final part of paragraph 2 of Policy 65 should be amended, primarily to replace the word ‘determined’ with ‘supported’ so that it reads "Applications for the exploration, appraisal and production of onshore gas and oil in licenced areas will be supported, where a proposed development is in line with National Policy, Guidance and relevant policies within the Local Plan."

Summary:
pleased at inclusion of a policies map that identifying granted PEDLs and permitted hydrocarbon sites in paragraphs 14.70 and 14.71. beneficial to expand the explanation text in 14.73 to cover the role of the other regulators. benefit in expanding the policy text to include the 3 distinct phases of hydrocarbon development (Exploration, Appraisal, and Production) to ensure consistency with NPPF Paragraph 209 (b). Want other policies in the Local Plan applied proportionally. Amend Policy 65 to replace the word ‘determined’ with ‘supported’

Response:
pleased at inclusion of a policies map that identifying granted PEDLs and permitted hydrocarbon sites in paragraphs 14.70 and 14.71 - Comment noted. beneficial to expand the explanation text in 14.73 to cover the role of the other regulators - The Local Plan is not required to repeat national policy and guidance. Regulators are identified in NPPG paragraphs 014, with 110 and 111 specifically relating to hydrocarbons benefit in expanding the policy text to include the 3 distinct phases of hydrocarbon development (Exploration, Appraisal, and Production) to ensure consistency with NPPF Paragraph 209 (b) - The Local Plan is not required to repeat national policy and guidance. See NPPG paragraphs 092 to 103.  Want other policies in the Local Plan applied proportionally. The Local Plan is a planning tool to be applied fairly and proportionally by development management officers Amend Policy 65 to replace the word ‘determined’ with ‘supported’ - There is no political support for unconventional hydrocarbon extraction in Doncaster and as such applications will be determined fairly and proportionally by development management officers in line with national policy and guidance.
There are hydrocarbon energy minerals other than gas and oil, such as coal. Given the policy is specific to hydrocarbons, the policy may benefit from being titled as such, particularly given the emerging technology in coal gasification and the presence of deep coal deposits in the Plan area referred to in Paragraph 14.34 and identified and referred to as shallow coal deposits on Figure 14 - Minerals Resources Key Diagram; this would be consistent with the authority’s ‘Hydrocarbon Evidence Base Update’ document (August 2018) and similar policies in other mineral planning authority plans which provide for hydrocarbon reserves. It is noted that there are no mineral policies, general or otherwise, against which proposals relating to the winning and working of coal in whatever guise could be assessed and no reference to such, other than its presence, is referred to in any of the supporting text to the policies. This is considered to be a short coming of the Plan which you may wish to address. IGas welcomes the proposed changes to Policy 65. IGas is pleased to see the inclusion of PEDLs and permitted hydrocarbon sites on the Maps policy as referred to in the first part of the policy in accordance with Government guidance. However, the second part of the policy now simply requires applications for the exploration, appraisal and development (including production) of on-shore gas and oil in licenced areas to be determined in line with National Policy, Guidance and relevant policies within the Local Plan. It is not clear which National Policy or guidance is being referred to. If, as assumed, it refers to the National Planning Policy Framework (note 2 - 2https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/810197/NPPF_Feb_2019_revised.pdf) and Planning Practice Guidance - Minerals (note 3 - https://www.gov.uk/guidance/minerals), perhaps these should be specified. The NPPF is quite clear that local planning authorities must clearly distinguish between, and plan positively for the three phases of development (exploration, appraisal and production) whilst ensuring appropriate monitoring and site restoration is provided for. Policy 65 in its current form fails to do this. If the Policy is to be retained in its current form, IGas is of the view that the term ‘determined’ should be replaced with ‘supported’. The supporting explanation to the Policy acknowledges that national planning policy requires mineral local plans should include policies for mineral extraction and that applications for hydrocarbons will be determined in line with national policy, planning practice guidance and relevant policies of the local plan. However, the Plan does not support the principle of hydrocarbon development, identify the different stages of hydrocarbon exploration, appraisal and production or include criterion against which proposals will be assessed; consequently it is considered that the Plan falls short of the requirements of the NPPF and the Councils oil and gas ‘Hydrocarbon Evidence Base Update’ document (August 2019) (see below). The supporting explanation requires applications which include or may include hydraulic fracturing to be the subject of an EIA. This was not a requirement of the earlier draft Policy and it is questionable whether it should be a requirement at all. The need for an EIA is set out in the Town and Country Planning (Environmental Impact Assessment Regulations) 2017 (the Regulations) (Note 4 - http://www.legislation.gov.uk/uksi/2017/571/schedule/1/made). Proposals for hydrocarbon exploration and appraisal do not fall within Schedule 1 of the Regulations. Production may fall within Schedule 1 subject to the specific thresholds being met or exceeded. Proposals for hydrocarbon exploration and appraisal may fall within Schedule 2 of the Regulations subject to the exceedance of the specified thresholds and criteria. This would be determined by the nature and scale of a proposed development and which could be the subject of a screening and or scoping request. It is therefore considered inappropriate for the supporting explanation to require applications which include (or may include) proposals for hydraulic fracturing to be required to produce an EIA, particularly in the absence of any reference to such in the policy. Irrespective, the industry has committed to undertake site specific EIAs, and for shale sites, Environmental Risk Assessments below). The supporting explanation requires applications which include or may include hydraulic fracturing to be the subject of an EIA. This was not a requirement of the earlier draft Policy and it is questionable whether it should be a requirement at all. The need for an EIA is set out in the Town and Country Planning (Environmental Impact Assessment Regulations) 2017 (the Regulations) (Note 4 - http://www.legislation.gov.uk/uksi/2017/571/schedule/1/made). Proposals for hydrocarbon exploration and appraisal do not fall within Schedule 1 of the Regulations. Production may fall within Schedule 1 subject to the specific thresholds being met or exceeded. Proposals for hydrocarbon exploration and appraisal may fall within Schedule 2 of the Regulations subject to the exceedance of the specified thresholds and criteria. This would be determined by the nature and scale of a proposed development and which could be the subject of a screening and or scoping request. It is therefore considered inappropriate for the supporting explanation to require applications which include (or may include) proposals for hydraulic fracturing to be required to produce an EIA, particularly in the absence of any reference to such in the policy. Irrespective, the industry has committed to undertake site specific EIAs, and for shale sites, Environmental Risk Assessments, in consultation with local communities and the statutory consultees. Where there is a proposal to stimulate the flow of hydrocarbons through the use of high-volume hydraulic fracturing, there is a commitment to carry out an EIA irrespective of the requirements of the EIA Regulations (Note 5 - http://www.ukoog.org.uk/regulation/environment). However, it is considered inappropriate for this to be a requirement of the Plan and would invite the Council to carefully consider whether the inclusion of such makes the plan sound.

Summary:

Policy 65. There are hydrocarbon energy minerals other than gas and oil, such as coal. No mineral policies for coal. Presence referred to in supporting text. This should be addressed. Pleased to see inclusion of PEDLs, but second part of the Policy requires applications for the exploration, appraisal and development (including production) of on-shore gas and oil in licenced areas to be determined in line with National Policy, Guidance and relevant policies within the Local Plan. Policy 65 is not positively prepared, does not distinguish between and plan positively for three phases of development (exploration, appraisal and production) and does not refer to all hydrocarbons. If policy retained in current form the term 'determined' should be replaced with 'supported'. The Plan does not support the principle of hydrocarbon development, identify the different stages of hydrocarbon exploration, appraisal and production or include criterion against which proposals will be assessed. does not reflect EIA regulations and does not reflect roles of regulators. Proposals for hydrocarbon exploration and appraisal do not fall into schedule 1 of the regulations. Production may fall in to schedule 1 subject to thresholds being met or exceeded. EIA requirement determined by a screening scoping request. (Industry is committed to undertake site specific EIAs)
Policy 65 comment noted. No changes proposed to policy 65. The Local Plan is not required to repeat national policy and guidance. See NPPG paragraphs 092 to 103. It is not politically acceptable to use the word ‘support’ in the policy 65. A policy is provided (as required), which defers directly to national policy and guidance, which is positive in nature.

<td>Comment:</td>
<td>The ‘hydrocarbon evidence base’ document 2018, states, ‘Policies will be developed in the Local Plan which will comply with the national policy, guidance and legislation; this statement was supported. It is noted the evidence base has been updated (June 2019). Unfortunately the Council's August 2018 evidence base appears to have been removed from your website. It is assumed there has been little, if any, changes other than those to the Summary/Conclusion. The previous commitment appears to have changed, now referring to the revised policy which ‘directs applicants to the national policy, guidance and legislation, and relevant policies within the Local Plan’. This appears to be in conflict with earlier parts of the evidence base which sets out the national policy and legislation (Section 2) and which requires: 2.1 The National Planning Policy Framework (NPPF) sets out the minerals planning policy for oil, gas and coal exploration and extraction. Mineral Planning Authorities are required to: when planning for on-shore oil and gas development, clearly distinguish between, and plan positively for the three phases of development (exploration, appraisal and production), whilst ensuring appropriate monitoring and site restoration is provided for ensure appropriate monitoring and restoration is provided for. 2.2 ?? criteria-based policies for each of the exploration, appraisal and production phases of hydrocarbon extraction should set clear guidance and criteria. And Section 3: 3.3 When updating the Local Plan the Planning Authority is required to identify Petroleum Exploration &amp; Development Licences (PEDL) and existing hydrocarbon extraction sites on the Local Plan policies map, and provide for criteria based policies for each phase of hydrocarbon extraction. There similarly appears to be some discrepancy between the revised summary and conclusion and the Policy. Whilst the summary ‘directs’ applicants Policy states ‘Applications for the exploration, appraisal and development (including production) of on-shore gas and oil in licenced areas will be determined in line with National Policy, Guidance and relevant policies within the Local Plan’ i.e., it is the policy and guidance against which an application will be assessed, not against which an applicant must prepare an application. Irrespective of any minor change to the wording that could address this, it is considered that the evidence base, as updated, has still not been used to fully inform draft Policy 65 for the reasons set out above. IGas previously suggested it may assist to look at policies and supporting explanations that have been through examination, found sound and subsequently adopted. Given the above, this suggestion is maintained. As stated in previous representations, it would be helpful to set out the roles of other regulating bodies, as outlined in section 3 of the Hydrocarbon Evidence Base as updated in either the policy or supporting explanation so it is clear what the role of the planning authority is in the context of surface development for onshore oil and gas; this would accord with national planning guidance and assist in making the plan sound.</td>

Summary:
Policy 65 Hydrocarbon Evidence Base update. Evidence base states policies will be developed in the local plan that comply with national policy guidance and legislation, but previous policy commitment has changed.

Response:
Comment noted. It is not politically acceptable to use the word ‘support’ in the policy. The policy defers directly to national policy and guidance, which is positive in nature. Applications will be determined using criteria based policies in the local plan and national policy and guidance as required. PEDLs are shown as required.
Comment:
The Planning service team has looked at Policies relation to Minerals and Waste and have the following comments. The policy is acceptable in principle, but notice it has changed significantly since the informal consultation on Draft policies and sites and now only relies on national policy and regulations without the local focus of the previous draft policy.

**Comment:**

While much of the Local Plan appears to meet most of the requirements of 'soundness', in so far as the JRP can judge on the evidence provided, it can only be effective if there are robust monitoring and enforcement measures.

**Summary:**

While much of the Local Plan appears to meet most of the requirements of 'soundness', in so far as the JRP can judge on the evidence provided, it can only be effective if there are robust monitoring and enforcement measures.

**Response:**

Noted and agree - Chapter 15 and the associated Appendix sets out extensive monitoring indicators to ensure the plan is working as envisaged. Planning Enforcement is also a function of the council but not directly related to the local plan.
Strata Homes is concerned with aspects of Policy 66. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8. 12.5. Strata Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 12.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 12.7. Strata Homes are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change 12.9. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Summary:

Strata Homes is concerned with aspects of Policy 66. Strata Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8. Strata Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Response:

The viability testing considers a number of different viability scenarios. This includes the `base? appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific `low-cost? developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
3.53 Policy 66 states the following regarding developer contributions: It is important that new proposals are planned in step with the necessary supporting infrastructure, and can make appropriate contributions towards new infrastructure as required, in order to deliver sustainable development. However, developments should not be subject to such a scale of developer contributions or policy requirements that development viability is put at risk. To help ensure this balance is achieved, proposals will be expected to accord with the following: a) Where necessary, directly related to the development, and fair and reasonable in scale and kind, developer contributions will be sought to mitigate the impacts of development through: 1. direct provision on site (e.g. for on-site affordable housing, education facilities, biodiversity net gain, open space, or sustainable drainage schemes); 2. provision off site, to ensure the development can be delivered in line with other policy objectives, and to a safe and satisfactory standard (such as off-site affordable housing, education facilities, biodiversity net gain, flood mitigation, or highways improvements); and 3. contributions towards softer interventions to ensure the benefits of the development are maximised by local communities (such as skills and training programmes including local labour agreements). b) Where infrastructure is to be provided either on or off site, provision for its long-term maintenance will be required (which may include its adoption either by the Council or a third party, subject to the provision of appropriate maintenance funding from the developer). c) To address developer requirements as a whole, where development proposals on a large composite or naturally defined area are sub divided into multiple applications (or phases) over time, planning applications which form part of a more substantial proposed development, on the same or adjoining land will be treated as one application for the whole development. 3.54 We object to the current wording of Policy 66. Recommendation 3.55 The specific developer contribution requirements need to be defined either in policy, a supplementary planning document or a CIL document for clarity and to ensure deliverability and soundness of the plan. Justification 3.56 Policy 66 is inadequately clear and ineffective, and therefore unsound.
2.54 Policy 66 states the following regarding developer contributions: It is important that new proposals are planned in step with the necessary supporting infrastructure, and can make appropriate contributions towards new infrastructure as required, in order to deliver sustainable development. However, developments should not be subject to such a scale of developer contributions or policy requirements that development viability is put at risk. To help ensure this balance is achieved, proposals will be expected to accord with the following: a) Where necessary, directly related to the development, and fair and reasonable in scale and kind, developer contributions will be sought to mitigate the impacts of development through: 1. direct provision on site (e.g. for on-site affordable housing, education facilities, biodiversity net gain, open space, or sustainable drainage schemes); 2. provision off site, to ensure the development can be delivered in line with other policy objectives, and to a safe and satisfactory standard (such as off-site affordable housing, education facilities, biodiversity net gain, flood mitigation, or highways improvements); and 3. contributions towards softer interventions to ensure the benefits of the development are maximised by local communities (such as skills and training programmes including local labour agreements). b) Where infrastructure is to be provided either on or off site, provision for its long-term maintenance will be required (which may include its adoption either by the Council or a third party, subject to the provision of appropriate maintenance funding from the developer). c) To address developer requirements as a whole, where development proposals on a large composite or naturally defined area are sub divided into multiple applications (or phases) over time, planning applications which form part of a more substantial proposed development, on the same or adjoining land will be treated as one application for the whole development. 2.55 We object to the current wording of Policy 66. Recommendation 2.56 The specific developer contribution requirements need to be defined either in policy, a supplementary planning document or a CIL document for clarity and to ensure deliverability and soundness of the plan. Justification 2.57 Policy 66 is inadequately clear and ineffective, and therefore unsound.
**Reason:** We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

**Area:** Chapter 15: Implementation & Monitoring

**Policy:** Policy 66: Developer Contributions

**Comment:**

Part C of this policy requires clarification to ensure that where the Council is considering an application for part of a site, that part of the site will not face planning obligations over and above what is necessary, proportionate and reasonably related in scale and in kind to that part of the site.

**Summary:**

Part C of Policy 66 requires clarification to ensure that where the Council is considering an application for part of a site, that part of the site will not face planning obligations over and above what is necessary, proportionate and reasonably related in scale and in kind to that part of the site.

**Response:**

Part A of the policy makes clear that any contributions must be fair and reasonable in scale and kind.
Comment:

2.86 Policy 66 states the following regarding developer contributions: "It is important that new proposals are planned in step with the necessary supporting infrastructure, and can make appropriate contributions towards new infrastructure as required, in order to deliver sustainable development. However, developments should not be subject to such a scale of developer contributions or policy requirements that development viability is put at risk. To help ensure this balance is achieved, proposals will be expected to accord with the following: a) Where necessary, directly related to the development, and fair and reasonable in scale and kind, developer contributions will be sought to mitigate the impacts of development through: 1. direct provision on site (e.g. for on-site affordable housing, education facilities, biodiversity net gain, open space, or sustainable drainage schemes); 2. provision off site, to ensure the development can be delivered in line with other policy objectives, and to a safe and satisfactory standard (such as off-site affordable housing, education facilities, biodiversity net gain, flood mitigation, or highways improvements); and 3. contributions towards softer interventions to ensure the benefits of the development are maximised by local communities (such as skills and training programmes including local labour agreements). b) Where infrastructure is to be provided either on or off site, provision for its long-term maintenance will be required (which may include its adoption either by the Council or a third party, subject to the provision of appropriate maintenance funding from the developer). c) To address developer requirements as a whole, where development proposals on a large composite or naturally defined area are subdivided into multiple applications (or phases) over time, planning applications which form part of a more substantial proposed development, on the same or adjoining land will be treated as one application for the whole development." 2.87 We object to the current wording of Policy 66. Recommendation 2.88 The specific developer contribution requirements need to be defined either in policy, a supplementary planning document or a CIL document for clarity and to ensure deliverability and soundness of the plan. Justification 2.89 Policy 66 is inadequately clear and ineffective, and therefore unsound.

Summary:

Policy 66. specific developer contributions need to be defined either in policy, a supplementary planning document or a CIL document for clarity and to ensure deliverability and soundness of the plan. Policy 66 is inadequately clear and ineffective, and therefore unsound.

Response:

Further details of contributions are set out in other Local Plan policies, for example Policy 29 sets out the detail of open space in new developments. Should the Council look to introduce CIL in the future then this process itself will have to make clear what is covered by CIL and what will still be negotiated via S106 as set out in the explanatory text to the policy at para 15.4

### Comment:

12.1. H. Burtwistle & Son is concerned with aspects of Policy 66. Test of Soundness 12.2. H. Burtwistle & Son considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

Justification 12.3. H. Burtwistle & Son is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 12.4. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8. 12.5. H. Burtwistle & Son is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 12.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 12.7. H. Burtwistle & Son are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework. 12.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change 12.9. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

### Summary:

Policy 66 - Developer Contributions. 1. Should not impact on viability. 2. Need for viability assessment of schemes on a regular basis could undermine deliverability. 3. Review and update viability assessment and then modify policy requirements accordingly.

### Response:

The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
Summary:
Concerned with aspects of Policy 66. Concerned that with all the policy requirements the High Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 12.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 12.7. H. Burtwistle & Son are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework. 12.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change 12.9. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Response:
The viability testing considers a number of different viability scenarios. This includes the ‘base’ appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost’ developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
Earlier iterations of this policy identified that developer contributions will be sought for off-site highway works to mitigate the impacts of the development and that pooled contributions for schemes (necessitated through the cumulative impact of a number of developments) would be collected. However, point D) has now been removed in the Local Plan Publication Version which allowed for pooled contributions to be taken from multiple developments. **PROPOSED CHANGE** Further discussions will need to be held between Highways England and Doncaster Council, as should the cumulative impact assessment reveal that significant improvements will be required at the SRN, there needs to be mechanisms put in place where these could be contributed to by multiple developers.

**Summary:**

The Local Plan has removed a part of earlier iterations which allowed for pooled contributions from multiple developers. Proposed change: should the cumulative impact assessment reveal that significant improvements will be required at the SRN, mechanisms need to be in place that could be contributed to by multiple developers. Further discussion between Highways England and DMBC will need to be held.

**Response:**

Noted - there is ongoing work with Highways England looking at the cumulative effects of Local Plan growth as part of the modelling and will feed into the Infrastructure Delivery Plan.
12.1. Framecourt Homes is concerned with aspects of Policy 66. Test of Soundness 12.2. Framecourt Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

Justification 12.3. Framecourt Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 12.4. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8. 12.5. Framecourt Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 12.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspersion of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 12.7. Framecourt Homes are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework. 12.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change 12.9. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Summary:

Concerned with aspects of Policy 66. Consider that the plan is unsound. Support the need for developer contributions, but the framework is clear that these should account for viability as well as need. There should not be such a burden as would threaten deliverability. Appendices 3 - 10 show a number of viability issues for a number of sites. Schemes in low value areas may not be able to support 15% affordable housing, and in some cases typologies in medium areas are also unviable. Although higher value areas are viable, this did not consider cumulative / in combination impact of all the policy requirements and assessed this against 15% and not 23% requirement as sought by Policy 8. Concerned that the policy requirements will undermine housing delivery through a need for viability assessments of schemes on a regular basis. A significant proportion of sites will not be able to achieve affordable housing due to viability matters. The government are keen to avoid a situation of numerous viability assessments being submitted. This could impact the delivery of housing targets. Site negotiations should be should be occasional rather than routine. The policy is unjustified and not consistent with the framework. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Response:

The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
13.1. Avant Homes is concerned with aspects of Policy 66. Test of Soundness 13.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

13.3. Avant Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 13.4. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. ### Test of Soundness

13.1. Avant Homes is concerned with aspects of Policy 66. Test of Soundness 13.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

13.3. Avant Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 13.4. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8. 13.5. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 13.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 13.7. Avant Homes are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework. 13.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change 13.9. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

### Summary

Supportive of need for developer contributions. Appendices 3 - 10 of the viability report show viability issues for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8. Concerned that policy requirements could undermine the delivery of sites through viability assessments being regularly needed. The viability assessment shows a proportion of sites will not be able to achieve affordable housing due to viability matters. Council should be aware of the impact that viability assessments and subsequent obligation negotiations can have on development delivery, which could impact on the delivery of housing. The Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. Be mindful it is unrealistic to negotiate every site on a one by one basis because the base line policy aspiration is set too high. Negotiations should be occasional rather than routine. Policy requirements are not justified or consistent with the framework. Plan is not sound. Proposed changes: review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

### Response

The viability testing considers a number of different viability scenarios. This includes the 'base' appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific 'low-cost' developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
14.1. Avant Homes is concerned with aspects of Policy 66. Test of Soundness  14.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy  Justification 14.3. Avant Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened.  14.4. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8.  14.5. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 14.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.  14.7. Avant Homes are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework.  14.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change  14.9. To overcome the objection and address soundness matters, the Council should: - Review the viability assessment and modify policy requirements to reflect the findings and representations contained herein.

Summary:
Policy 66 - Developer Contributions. 1. Should not impact on viability. 2. Need for viability assessment of schemes on a regular basis could undermine deliverability. 3. Review and update viability assessment and then modify policy requirements accordingly.

Response:
The viability testing considers a number of different viability scenarios. This includes the ‘base’ appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost’ developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. Policy 66: Developer Contributions

Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Firsure is concerned that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

12.1. Firsure is concerned with aspects of Policy 66. Test of Soundness 12.2. Firsure considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

12.3. Firsure is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable.

12.4. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8.

12.5. Firsure is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable.

12.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.

12.7. Firsure are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change

12.8. In some circumstances, the Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable.

12.9. To overcome the objection and address soundness matters, the Council should: Review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Summary:

Concerned with aspects of Policy 66. The Framework is clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support provision of 15% affordable housing. In some circumstances some site typologies in the medium value areas would also be unviable. The whole plan viability report concluded that generally schemes in high and medium value areas were demonstrated to be viable. However, it should be noted that this did not consider the cumulative/in combination impact of all of the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8.

Concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable.

The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.

The Council should review and update the viability assessment and modify the policy requirements to reflect the findings and representations contained herein.

Response:

The viability testing considers a number of different viability scenarios. This includes the ‘base’ appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost’ developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
14.1. Metroland is concerned with aspects of Policy 66. Test of Soundness 14.2. Metroland considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy  Justification 14.3. Metroland is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2019) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 14.4. Appendices 3-10 of the Viability Report show the issues of viability for a number of sites. However, it should be noted that this did not consider the cumulative/in combination impact of all the policy requirements and assessed other Plan requirements against the delivery of 15% affordable housing and not 23% affordable housing as sought by Policy 8. 14.5. Metroland is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 14.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 14.7. Metroland are concerned that the policy requirements of the Plan are not justified and are not consistent with the Framework. 14.8. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. Proposed Change 14.9. To overcome the objection and address soundness matters, the Council should: - Review the viability assessment and modify policy requirements to reflect the findings and representations contained herein.

Summary:
Policy 66 - Developer Contributions. 1. Should not impact on viability. 2. Need for viability assessment of schemes on a regular basis could undermine deliverability. 3. Review and update viability assessment and then modify policy requirements accordingly.

Response:
The viability testing considers a number of different viability scenarios. This includes the ‘base? appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost? developer model (Sensitivity Test 10 Pg 119) where all urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Comment:
Part C of this policy requires clarification to ensure that where the Council is considering an application for part of a site, that part of the site will not face planning obligations over and above what is necessary, proportionate and reasonably related in scale and in kind to that part of the site.

Summary:
Part C of Policy 66 requires clarification to ensure that where the Council is considering an application for part of a site, that part of the site will not face planning obligations over and above what is necessary, proportionate and reasonably related in scale and in kind to that part of the site.

Response:
Part A of the policy makes clear that any contributions must be fair and reasonable in scale and kind.
Comment:

Part C of this policy requires clarification to ensure that where the Council is considering an application for part of a site, that part of the site will not face planning obligations over and above what is necessary, proportionate and reasonably related in scale and in kind to that part of the site.

Summary:

Part C of Policy 66 requires clarification to ensure that where the Council is considering an application for part of a site, that part of the site will not face planning obligations over and above what is necessary, proportionate and reasonably related in scale and in kind to that part of the site.

Response:

Part A of the policy makes clear that any contributions must be fair and reasonable in scale and kind.
Comment:

2.65 Policy 66 states the following regarding developer contributions: It is important that new proposals are planned in step with the necessary supporting infrastructure, and can make appropriate contributions towards new infrastructure as required, in order to deliver sustainable development. However, developments should not be subject to such a scale of developer contributions or policy requirements that development viability is put at risk. To help ensure this balance is achieved, proposals will be expected to accord with the following: a) Where necessary, directly related to the development, and fair and reasonable in scale and kind, developer contributions will be sought to mitigate the impacts of development through: 1. direct provision on site (e.g. for on-site affordable housing, education facilities, biodiversity net gain, open space, or sustainable drainage schemes); 2. provision off site, to ensure the development can be delivered in line with other policy objectives, and to a safe and satisfactory standard (such as off-site affordable housing, education facilities, biodiversity net gain, flood mitigation, or highways improvements); and 3. contributions towards softer interventions to ensure the benefits of the development are maximised by local communities (such as skills and training programmes including local labour agreements). b) Where infrastructure is to be provided either on or off site, provision for its long-term maintenance will be required (which may include its adoption either by the Council or a third party, subject to the provision of appropriate maintenance funding from the developer). c) To address developer requirements as a whole, where development proposals on a large composite or naturally defined area are sub divided into multiple applications (or phases) over time, planning applications which form part of a more substantial proposed development, on the same or adjoining land will be treated as one application for the whole development. 2.66 We object to the current wording of Policy 66, as it is not considered to be justified by appropriate evidence.

Recommendation 2.67 The specific developer contribution requirements need to be defined either in policy, a supplementary planning document or a CIL document for clarity and to ensure deliverability and soundness of the plan. Justification 2.68 DLP Planning reserves the right to comment further on the viability testing of the Local Plan as this will be impacted by further amendments proposed by the Council in order to ensure soundness of the Plan.

Summary:

Policy 66: Developer Contributions o the specific developer contribution requirements need to be defined either in policy, a supplementary planning document or a CIL document for clarity and to ensure deliverability and soundness of the plan.

Response:

Further details of contributions are set out in other Local Plan policies, for example Policy 29 sets out the detail of open space in new developments. Should the Council look to introduce CIL in the future then this process itself will have to make clear what is covered by CIL and what will still be negotiated via S106 as set out in the explanatory text to the policy at para 15.4
Policy 67 is not considered to be sound as it is not consistent with national policy for the following reasons: The HBF considers that there may be some circumstances where this policy and the use of trigger points can be utilised to bring forward the delivery of homes. However, the HBF have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. The HBF considers that this policy causes unnecessary uncertainty and additional risk for developers, and that such disincentivising of developers could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods.

Summary:
Policy 67 is not considered to be sound as it is not consistent with national policy. The HBF considers that there may be some circumstances where this policy and the use of trigger points can be utilised to bring forward the delivery of homes. However, the HBF have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. The HBF considers that this policy causes unnecessary uncertainty and additional risk for developers, and that such disincentivising of developers could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods.

Response:
In line with the revisions to national policy and guidance, the Council’s view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.
13.1. Strata Homes is concerned with aspects of Policy 67. Test of Soundness 13.2. Strata Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

13.3. Strata Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 13.4. Appendices 3-10 of the Viability Report (2019) show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support 15% affordable housing, prior to consideration of other policy requirements. In some circumstances schemes in the medium value areas would also struggle to provide the 15 percent required by this policy, when other policy requirements were considered. It should be noted that the Policy B requirement for affordable housing is 23% for high and medium value areas.

13.5. Strata Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 13.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 13.7. Furthermore, Strata Homes considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, Strata Homes have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments.

13.8. Strata Homes are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Strata Homes considers that the Plan is not justified and are not consistent with the Framework. 13.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 13.10. Strata Homes consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. Strata Homes will continue to work with the Council to develop appropriate modifications. Proposed Change 13.11. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove.

Summary:
09 October 2019 11:10 Strata Homes is concerned with aspects of Policy 67. Strata Homes is supportive of the need for developer contributions. The NPPF is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Appendices 3-10 of the Viability Report (2019) show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support 15% affordable housing, prior to consideration of other policy requirements. In some circumstances schemes in the medium value areas would also struggle to provide the 15 percent required by this policy, when other policy requirements were considered. It should be noted that the Policy B requirement for affordable housing is 23% for high and medium value areas. Strata Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. Furthermore, Strata Homes considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, Strata Homes have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. Strata Homes considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and
compromise the deliverability of large sites particularly those phased and implemented over long time periods. Strata Homes are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Strata Homes considers that the Plan is not justified and are not consistent with the Framework. Strata Homes consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove.

Response:
See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council's view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.

Policy: Policy 67: Development Viability

Tests of Soundness: Positively prepared  Justified
Effective  Consistent with national
Legally Compliant

Comment:
Objection is made to this Policy as drafted, the requirement for 23% affordable homes in the higher value areas in the District is not justified by the evidence. It is noted in para 6.9 that the overall requirement for 209 units per annum, which is 23% of the annual housing target [believed to be the upper end of the range] does not take account of what has been committed through applications and is therefore an unreliable figure. The Plan should include a robust figure, and needs to include text that makes it clear that the affordable housing has to be viable. Viability testing on sites at this stage will be unreliable until a full suite of technical documents have assessed the site development costs and infrastructure requirements. The Plan should therefore reflect affordable housing requirements as aspirational but subject to detailed site viability. PROPOSED CHANGE 8. Amend the developer guidelines to be flexible and justified. As explained in detail above.

Summary:
Objects to policy - 23% affordable housing requirement is not justified by the evidence. 209 units/annum affordable does not take account of permissions so is an unreliable figure. The Plan should include a robust figure and the text make clear that affordable housing has to be viable. Testing sites at this stage will be unreliable until full technical studies have assessed development costs and infrastructure requirements. Should therefore reflect affordable housing requirements are aspirational but subject to detailed site viability. Proposed change - amend the developer guidelines to be flexible and justified.

Response:
See response to Policy 8 and/or 66 in respect to the viability testing evidence base.
**Reason:** We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

**Tests of Soundness:**

<tr>
<td>It is considered that there may be some circumstances where this policy and the use of trigger points can be utilised to bring forward the delivery of homes. However, we have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. We consider that this policy causes unnecessary uncertainty and additional risk for developers, and that such disincentiving of developers could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods.</td>

<tr>
<td>In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council’s view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.</td>

13.1. H. Burtwistle & Son is concerned with aspects of Policy 67. Test of Soundness 13.2. H. Burtwistle & Son considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

Comment:

13.1. H. Burtwistle & Son is concerned with aspects of Policy 67. Test of Soundness 13.2. H. Burtwistle & Son considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

Justification 13.3. H. Burtwistle & Son is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 13.4. Appendices 3-10 of the Viability Report (2019) show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support 15% affordable housing, prior to consideration of other policy requirements. In some circumstances schemes in the medium value areas would also struggle to provide the 15 percent required by this policy, when other policy requirements were considered. It should be noted that the Policy 8 requirement for affordable housing is 23% for high and medium value areas. 13.5. H. Burtwistle & Son is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 13.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 13.7. Furthermore, H. Burtwistle & Son considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, H. Burtwistle & Son have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. H. Burtwistle & Son considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods. 13.8. H. Burtwistle & Son are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. H. Burtwistle & Son considers that the Plan is not justified and are not consistent with the Framework. 13.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 13.10. H. Burtwistle & Son consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications. Proposed Change 13.11. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove.

Summary:

Policy 67 - Development Viability. 1. Policy is an impediment to development and compromises deliverability. 2. Viability assessment should be reviewed and updated. 3. Provide clarity in Part B or remove trigger points - they are a burden on development.

Response:

See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council's view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.

Comment:

2.76 Whilst we continue to welcome the pragmatic and flexible approach towards planning obligations as stated in this policy, our concerns remain regarding Part B of the Policy. As written Part B may result in the re-assessment of an agreed lower level of contribution once development commences. This will introduce unnecessary uncertainty to developers. Further information is required regarding when such re-assessment may be considered to be appropriate, and what constitutes 'suitable trigger point(s)'.

Summary:

Framecourt Homes considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods. 13.8. Framecourt Homes are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Framecourt Homes considers that the Plan is not justified and are not consistent with the Framework. 13.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 13.10. Framecourt Homes consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications. Proposed Change 13.11. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove.

Summary:
Supportive of the need for developer contributions, but these must take account of need and viability. Para 34 establishes the importance of viability to ensure development should not be burdened with obligations which might threaten deliverability. Some areas cannot deliver 15% affordable housing prior to consideration of any other policy requirements. Some medium areas would also struggle to provide this when other policy requirements are considered, even though the requirement is 23% in high and medium value areas. Concerned that this could undermine delivery through the need for regular viability assessments.

Response:
See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council's view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

The Plan should include a robust figure and needs to include text that makes it clear that the affordable housing has to be viable. Viability testing on sites at this stage will be unreliable until a full suite of technical documents have assessed the site development costs and infrastructure requirements. The Plan should therefore reflect affordable housing requirements as aspirational but subject to detailed site viability.

**PROPOSED CHANGE**

7. Provide a robust figure for affordable housing. As explained in detail above.

**Summary:**

Objects to policy - 23% affordable housing requirement is not justified by the evidence. 209 units/annum affordable does not take account of permissions so is an unreliable figure. The Plan should include a robust figure and the text make clear that affordable housing has to be viable. Testing sites at this stage will be unreliable until full technical studies have assessed development costs and infrastructure requirements. Should therefore reflect affordable housing requirements are aspirational but subject to detailed site viability.

**Response:**

See response to Policy 8 and/or 66 in respect to the viability testing evidence base.
Policy 67: Development Viability

Tests of Soundness:
- Positively prepared
- Consistent with national
- Justified
- Effective

Comment:

14.1. Avant Homes is concerned with aspects of Policy 67. Test of Soundness 14.2. Avant Homes considers that the Local Plan is unsound.
Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

14.3. Avant Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 14.4. Appendices 3-10 of the Viability Report (2019) show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support 15% affordable housing, prior to consideration of other policy requirements. In some circumstances schemes in the medium value areas would also struggle to provide the 15 percent required by this policy, when other policy requirements were considered. It should be noted that the Policy B requirement for affordable housing is 23% for high and medium value areas.

14.5. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 14.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.

14.7. Furthermore, Avant Homes considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, Avant Homes have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. Avant Homes considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods. 14.8. Avant Homes are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Avant Homes considers that the Plan is not justified and are not consistent with the Framework. 14.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 14.10. Avant Homes consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. Avant Homes will continue to work with the Council to develop appropriate modifications. Proposed Change 14.11. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove.

Summary:
Supportive of developer contributions, however the framework is clear that the derivation of developer contributions should take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. Appendices 3-10 of the Viability report show real issues for some sites, such as scheme in low value areas being unable to support 15% affordable housing prior to consideration of other policy requirements. Some medium value area sites would also struggle when other considerations are factored in.

Concerned that with all other policy requirements this could undermine the delivery of housing through the need for regular viability assessments. Must be aware that viability assessments and subsequent obligation negotiation can have impacts on delivery. It is unrealistic to negotiate on a one by one site basis because the obligations are too high. Negotiations should be occasional, not routine. Concern that there may be some circumstances where the policy and use of trigger points in part B can be utilised to bring forward the delivery of homes. Have significant concerns about the implementation of the policy and how often it will be used. Trigger points create further burden for developers. The policy created unnecessary uncertainty and additional risk for developers, and therefore impede development process and compromise the delivery of large sites and those phased over time. Concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Avant Homes considers that the Plan is not justified and are not consistent with the Framework. Do not consider the plan sound. Proposed change: review and update the viability assessment and provide clarity on Part B or remove.
See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council's view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.
14.1. Avant Homes is concerned with aspects of Policy 67. Test of Soundness 14.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 14.3. Avant Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 14.4. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 14.7. Furthermore, Avant Homes considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, Avant Homes have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. Avant Homes considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods. 14.8. Avant Homes are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Avant Homes considers that the Plan is not justified and are not consistent with the Framework. 14.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 14.10. Avant Homes consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. Avant Homes will continue to work with the Council to develop appropriate modifications. Proposed Change 14.11. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove.

Summary:
Supportive of developer contributions, however the framework is clear that the derivation of developer contributions should take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. Appendices 3 - 10 of the Viability report show real issues for some sites, such as scheme in low value areas being unable to support 15% affordable housing prior to consideration of other policy requirements. Some medium value area sites would also struggle when other considerations are factored in. Concerned that with all other policy requirements this could undermine the delivery of housing through the need for regular viability assessments. Must be aware that viability assessments and subsequent obligation negotiation can have impacts on delivery. It is unrealistic to negotiate on a one by one site basis because the obligations are too high. Negotiations should be occasional, not routine. Concern that there may be some circumstances where the policy and use of trigger points in part B can be utilised to bring forward the delivery of homes. Have significant concerns about the implementation of the policy and how often it will be used. Trigger points create further burden for developers. The policy created unnecessary uncertainty and additional risk for developers, and therefore impede development process and compromise the delivery of large sites and those phased over time. Concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Avant Homes considers that the Plan is not justified and are not consistent with the Framework. Do not consider the plan sound. Proposed change: review and update the viability assessment and provide clarity on Part B or remove.
See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council's view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.
Policy 67: Development Viability

Attend Hearing

Consistency with National Policy

Summary:

Supportive of developer contributions, however the framework is clear that the derivation of developer contributions should take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. Appendices 3-10 of the Viability Report (2019) show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support 15% affordable housing, prior to consideration of other policy requirements. In some circumstances schemes in the medium value areas would also struggle to provide the 15 percent required by this policy, when other policy requirements were considered. It should be noted that the Policy B requirement for affordable housing is 23% for high and medium value areas.

Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable.

Furthermore, Avant Homes considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, Avant Homes have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments.

Avant Homes considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods.

Avant Homes are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Avant Homes considers that the Plan is not justified and are not consistent with the Framework.

Concerned with all other policy requirements this could undermine the delivery of housing through the need for regular viability assessments. Must be aware that viability assessments and subsequent obligation negotiation can have impacts on delivery. It is unrealistic to negotiate on a one by one site basis because the obligations are too high. Negotiations should be occasional, not routine. Concern that there may be some circumstances where the policy and use of trigger points in part B can be utilised to bring forward the delivery of homes. Have significant concerns about the implementation of the policy and how often it will be used. Trigger points create further burden for developers.

The policy created unnecessary uncertainty and additional risk for developers, and therefore impede development process and compromise the delivery of large sites and those phased over time.

Concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Avant Homes considers that the Plan is not justified and are not consistent with the Framework. Do not consider the plan sound. Proposed change: review and update the viability assessment and provide clarity on Part B or remove.

Proposed Change
See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council's view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.
15.1. Avant Homes is concerned with aspects of Policy 67. Test of Soundness 15.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

15.3. Avant Homes is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 15.4. Appendices 3-10 of the Viability Report (2019) show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support 15% affordable housing, prior to consideration of other policy requirements. In some circumstances schemes in the medium value areas would also struggle to provide the 15 percent required by this policy, when other policy requirements were considered. It should be noted that the Policy B requirement for affordable housing is 23% for high and medium value areas. 15.5. Avant Homes is concerned that with all the policy requirements the Local Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of obligations. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable. 15.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely. 15.7. Furthermore, Avant Homes considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, Avant Homes have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. Avant Homes considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods. 15.8. Avant Homes are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Avant Homes considers that the Plan is not justified and are not consistent with the Framework. 15.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 15.10. Avant Homes consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. Avant Homes will continue to work with the Council to develop appropriate modifications. Proposed Change 15.11. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove Part B.

Summary:
Policy 67 - Development Viability. 1. Policy is an impediment to development and compromises deliverability. 2. Viability assessment should be reviewed and updated. 3. Provide clarity in Part B or remove trigger points - they are a burden on development.

Response:
See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council's view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. 13.1. Priority Space is concerned with aspects of Policy 67. Test of Soundness 13.2. Priority Space considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

Justification

13.3. Priority Space is supportive of the need for developer contributions. The Framework is, however, clear that the derivation of developer contributions must not only take account of need but also viability. Paragraph 34 of the Framework (2018) established the importance of viability to ensure that development identified in the Plan should not be subject to such scale of obligations and policy burden that their ability to be delivered might be threatened. 13.4. Appendixes 3-10 of the Viability Report (2019) show the issues of viability for a number of sites. It shows that the schemes in the low value areas were not able to support 15% affordable housing, prior to consideration of other policy requirements. In some circumstances schemes in the medium value areas would also struggle to provide the 15 percent required by this policy, when other policy requirements were considered. It should be noted that the Policy B requirement for affordable housing is 23% for high and medium value areas.

13.5. Priority Space is concerned that with all the policy requirements the Local Plan details could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The viability assessment shows that a significant proportion of sites will not be able to achieve affordable housing due to viability matters. The Government is keen to avoid such a situation where viability assessments are being submitted regularly to vary planning policy obligations. The Council must be aware of the impact that viability assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing target. Instead, the Council should ensure this policy is well tested to ensure the site identified and allocated are deliverable. 13.6. The Council should be mindful that it is unrealistic to negotiate every site on a one by one basis because the base-line aspiration of a policy or combination of policies is set too high as this will jeopardise future housing delivery. Therefore, site by site negotiations on these sites should occur occasionally rather than routinely.

13.7. Furthermore, Priority Space considers that there may be some circumstances where this policy and the use of trigger points in Part B can be utilised to bring forward the delivery of homes. However, Priority Space have significant concerns around the implementation of this policy and how frequently it will be used. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. Priority Space considers that this policy causes unnecessary uncertainty and additional risk for developers, and therefore the policy could become an impediment to the development process and compromise the deliverability of large sites particularly those phased and implemented over long time periods. 13.8. Priority Space are concerned that the whole plan viability does not fully consider the in combination impacts of the Plan requirements. It is also considered that Part B does not provide sufficient certainty. Priority Space considers that the Plan is not justified and are not consistent with the Framework. 13.9. In these circumstances, we do not consider the Doncaster Local Plan, in its current form, to be sound. 13.10. Priority Space consider that with increased flexibility in the Plan requirements and review of the viability assessment the Plan can be made sound. Priority Space will continue to work with the Council to develop appropriate modifications. Proposed Change 13.11. To overcome the objection and address soundness matters, the Council should: - Review and update the viability assessment. - Provide clarity on Part B or remove.

Summary:

Policy 67 - Development Viability. 1. Policy is an impediment to development and compromises deliverability. 2. Viability assessment should be reviewed and updated. 3. Provide clarity in Part B or remove trigger points - they are a burden on development. Includes as an Appendix (1): Regeneris Report - Review of Objectively Assessed Housing need.

Response:

See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council’s view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.

**Response:**

In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council’s view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Reason: The matters raised in our representation go to the heart of the Local Plan. It is considered that attendance at the relevant hearing sessions will allow further comment to be made where appropriate.

Area: Chapter 15: Implementation & Monitoring

Policy: Policy 67: Development Viability

Comment:

This policy is not considered to be sound as it is not consistent with national policy. There may be some circumstances where this policy and the use of trigger points can be utilised to bring forward the delivery of homes. However, we have significant concerns around the implementation of this policy and how frequently it will be used. Simply put, the use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. This policy causes unnecessary uncertainty and additional risk for developers, and that could become an impediment to the development process.

Summary:

Policy 67 Trigger Points. The use of trigger points could add further burdens to any developer who will need to reproduce viability assessments at a potentially regular basis, going against Government initiatives which are looking to reduce the need for viability assessments. This policy causes unnecessary uncertainty and additional risk for developers, and that could become an impediment to the development process.

Response:

See response to Policy 8 and/or 66 in respect to the viability testing evidence base. In respect to Part b of Policy 67, in line with the revisions to national policy and guidance, the Council’s view is that the need for appraisals at application stage should be exceptional rather than the norm with an up-to-date local plan and policies tested for whole plan viability upfront. However, where genuine circumstances warrant an appraisal as part of an application then it is considered only best practice to allow for a future review, especially for very large developments that may build out over several years during which market conditions may change. It is also considered that this policy could apply to circumstances where economic conditions change for the worse, as was the case post 2008 when a number of applications started to be accompanied with a viability appraisal and seeking reduced/deferred/future consideration of planning obligations in the interests of development viability and delivery.
Limited infilling or the partial or complete re-development of the site for housing would deliver 12 or more family dwellings would deliver 15% of the land as open space or a commuted sum in lieu of open space (if not designed in). The Site can be considered as limited infill in the villages of Arksey and Stockbridge. The railway line to the west provides a defined boundary as a physical feature that is recognisable and as such provides a very likely permanent feature that will ensure that the village of Arksey will not merge to Stockbridge and Bentley. The railway line and the former Arksey and Stockbridge Station, which served the villages of Arksey and Stockbridge. The railway line to the west of the site now forms part of the East Coast Main Line and that there is a permanent brick structure remaining on site. (SEE EMAIL FOR Aerial Photo) The site backs on to Arksey Cemetery and is bound by mature trees. There is a single point of vehicular access onto Station Road with pedestrian access from Station Road, through the site to the cemetery. The formal public right of way does not cross the site, however, the pedestrian access from the cemetery through the site is regularly used and maintained by the land owner. (SEE EMAIL FOR PROW Route) A 4-mile walk starts at Arksey Church and takes a circular route around the village and surrounding countryside including Arksey Ings, a designated local wildlife site, to the northern boundary. Station Road benefits from street lighting, a 30mph speed restriction and there is a bus stop directly outside of the site. The Site  The site is 0.39Ha in size and currently used as grazing land and brownfield land in that it was associated with the railway line and the former Arksey and Stockbridge Station, which served the villages of Arksey and Stockbridge. The railway line to the west of the site now forms part of the East Coast Main Line and that there is a permanent brick structure remaining on site. (SEE EMAIL FOR Aerial Photo) The site backs on to Arksey Cemetery and is bound by mature trees. There is a single point of vehicular access onto Station Road with pedestrian access from Station Road, through the site to the cemetery. The formal public right of way does not cross the site, however, the pedestrian access from the cemetery through the site is regularly used and maintained by the land owner. (SEE EMAIL FOR PROW Route) A 4-mile walk starts at Arksey Church and takes a circular route around the village and surrounding countryside including Arksey Ings, a designated local wildlife site, to the northern boundary. Station Road benefits from street lighting, a 30mph speed restriction and there is a bus stop directly outside of the site. The Site is within close proximity to the level crossing. Site Allocation and Planning Policy The site is currently defined as Green Belt within the Adopted Doncaster Unitary Development Plan 1998. The site is outside of the Conservation Area. (SEE EMAIL FOR UDP Extract) Core Strategy The Core Strategy defines Arksey as a Larger Defined Village within the Settlement Hierarchy whereby defined villages will be conserved and enhanced. Quality infill will be permitted. Existing village boundaries will be amended only if necessary to establish defensible boundaries and, within the Green Belt, where there are exceptional circumstances. Emerging Local Plan The settlement hierarchy defines Arksey as a ‘Defined Village’, defined villages are identified as suitable for limited development in ‘appropriate’ locations within defined village development limits. NPPF 2018 The NPPF states that the Local Planning Authority should have regard to the construction of new buildings as inappropriate development in the Green Belt except: - Limited infilling in villages; - Limited infilling or the partial or complete re-development of previously developed land, whether redundant or in continuing use (excluding temporary buildings), which would: o Not have a greater impact on the openness of the existing development; or o Not cause substantial harm to the openness of the Green Belt, where development would re-use previously developed land and contribute towards meeting an affordable housing need within the area of the local planning authority. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Flood Risk Parts of the site to the east and west lie within Flood Zone 1, a low risk of flooding. The centre of the site lies within Flood Zone 2, a medium probability of flooding. The Environment Agency classifies residential development as 'more vulnerable' and as such as part of the site is located within Flood Zone 2 a flood risk assessment is required. The land owner is committed to commissioning a site-specific flood risk assessment for the site, if required. (SEE EMAIL FOR Flood Map) The site is close to Bentley, which is defined as part of the Doncaster Main Urban area, however, most of Bentley is affected by a high risk of flood (Flood Zone 3) and as such housing delivery in this particular area will be challenging as the Council’s approach to discount all Flood Zone 3 sites as part of the Local Plan. Sustainability and Access to Services The site is: - around 1 mile from Bentley Train Station - around 3.5 miles from Doncaster - in easy access to the A1 motorway - within close proximity to Arksey Primary School - close to tea rooms, public house, shops and other local facilities - within easy reach of countryside walks and opportunities for health and wellbeing. Material Planning Considerations In promoting the site for residential development, the following points support the inclusion of the land within the development limit of Arksey. - The railway line to the west provides a defined boundary as a physical feature that is recognisable and as such provides a very likely permanent feature that will ensure that the village of Arksey will not merge to Stockbridge and Bentley. - It is not necessary to keep the land permanently open in that it does not serve any useful purpose in meeting in relation to keeping a check of unrestricted sprawl or safeguarding the countryside from encroachment as this provided by the existing cemetery to the south east of the site. - The site can be considered as limited infill in the defined village of Arksey and will complete the linear settlement along Station Road characterised by the development opposite the site to the north west. The development of the site will provide a natural completion to the village with the development limit formed by the railway line. - The land is brownfield and serves no useful purpose as open space or Green Belt purpose, the designation of the land as housing or mixed use will potentially deliver regeneration and housing benefits to village of Arksey, which is close to Bentley, one of the most deprived areas of Doncaster. - Development of the site for housing would deliver 12-14 Residential Units (compliant with the South Yorkshire Residential Design Guide). - 10 or more family dwellings would deliver 15% of the land as open space or a commuted sum in lieu of open space (if not designed in) which would enhance the current open space provision in Arksey or the local area. The community profile area of Bentley is deficient in informal play space, formal play space and public parks. - Residential development would deliver Council Tax benefits to the Borough. - The site is within a sustainable location. Availability The land is available within 0-5 years as the land is within one ownership and the private land owner has committed to initial feasibility studies in relation to the site. Achievability The site is not being actively marketed, the land owner/developer will directly progress the delivery of the site. It will be possible to deliver the site as a whole, within one phase and will contribute toward the SME developer offer. Abnormal Costs In terms of bringing the site forward there are no known abnormal costs above and
beyond the normal development management considerations. The material considerations and required surveys are as follows: - Tree and Ecology Surveys - The site is constrained by trees albeit these are on the boundary of the site many of which could be retained as part of the development. The frontage trees along Station Road are of amenity value and provide an attractive entrance to the village. Surveys have been commissioned in respect of the condition of the trees and any potential habitats. - Highway Access and Transportation - The site has the benefit of a vehicular access; however, further assessment will be required in terms of access and highway layout. Station Road is a busy road with vehicles backing from the level crossing however, potential alternative access could be taken from the cemetery road subject to further negotiation. - Flooding - The site is located within flood zones 1 and 2. There are very few pockets of low flood risk areas in the locality. A site-specific flood risk assessment would identify mitigation measures to be incorporate into the site layout and design. - Contaminated Land - There is no known contaminated land associated with the site however a Phase 1 Assessment would outline any potential risks that may need to be mitigated. - Noise - The site is close to the railway line and as such noise impact can be mitigated through construction techniques and noise attenuation buffer along the railway boundary. - The site is close to existing utilities infrastructure in terms of drainage, electricity, mains gas and communications. Exceptional Circumstances - The use of the land for housing would not impact on openness and as such there will be no harm on the Greenbelt or visual impact on the countryside beyond the cemetery. - The railway line acts as a permanent feature in preventing urban sprawl. - The development of the site would not represent encroachment into the countryside. - The development of the site would not affect the setting and special character of the historic village. - The use of the land for housing is sustainable development in that it would meet the economic, social and environmental objectives as set out above. - The inclusion of the land within the settlement of Arksey will provide a small permanent structure in preventing urban sprawl. - The development of the site would not affect the setting and special character of the historic village. - The use of the land for housing is sustainable development in that it would meet the economic, social and environmental objectives as set out above. - The inclusion of the land within the settlement of Arksey will provide a small permanent structure in preventing urban sprawl. Exceptional Circumstances - The use of the land for housing would not impact on openness and as such there will be no harm on the Greenbelt or visual impact on the countryside beyond the cemetery. - The railway line acts as a permanent feature in preventing urban sprawl. - The development of the site would not represent encroachment into the countryside. - The development of the site would not affect the setting and special character of the historic village. - The use of the land for housing is sustainable development in that it would meet the economic, social and environmental objectives as set out above. - The inclusion of the land within the settlement of Arksey will provide a small permanent structure in preventing urban sprawl. - The development of the site would not affect the setting and special character of the historic village. - The use of the land for housing is sustainable development in that it would meet the economic, social and environmental objectives as set out above. - The inclusion of the land within the settlement of Arksey will provide a small permanent structure in preventing urban sprawl. - The development of the site would not represent encroachment into the countryside. - The development of the site would not affect the setting and special character of the historic village.

Response:

The Local Plan is not seeking to allocate any land in Arksey as this is not deemed to be one of the sustainable locations for growth in the Borough. Additionally, the site is in both Green Belt and partially in flood zone 2, the latter not being land the Local Plan will allocate on, and the former requiring exceptional circumstances.

Summary:

Site South of Station Road Arksey. 1. Proposing site for allocation for residential use. 2. Not previously put forward. 3. Site is Greenbelt. 4. Includes data/information to support proposed use and allocation.

Response:

The Local Plan is not seeking to allocate any land in Arksey as this is not deemed to be one of the sustainable locations for growth in the Borough. Additionally, the site is in both Green Belt and partially in flood zone 2, the latter not being land the Local Plan will allocate on, and the former requiring exceptional circumstances.
These representations should be read in conjunction with our previous representations submitted by Johnson Mowat, on our behalf, in relation to site 829 (HELAA) for the land to the north of Arksey Common Lane, Arksey. We continue to strongly object to the publication version of the Plan and do not consider that there is any justification provided why Defined Villages are not included in the distribution of Doncaster’s housing requirement. The publication version of the Plan continues to define Arksey as one of 40 Defined Villages where there is no proposed housing growth, aside from windfall opportunities. The publication version states that all of these villages have poorer service provision than the 18 settlements identified for housing growth. We continue to maintain that Arksey is inappropriately defined as a 'Defined Village', given its particular credentials and location abutting Bentley and thereby the Main Urban Area of Doncaster. Arksey is therefore considered to function in a manner which is distinctly different from the other Defined Villages and is the only Defined Village that is very well linked to the Main Urban Area. The Main Urban Area settlement maps include Arksey as part of the Bentley settlement, and the Bentley Ward includes Arksey, further demonstrating the close functional relationship of the settlements. Arksey is therefore a sustainably located settlement, yet on the basis of its designation as a Defined Village alone, it is identified for no growth in the form of land allocated for development. The main developed areas of Arksey and Bentley lie within a quarter of a mile of one another and are effectively connected by development including industrial/warehouse, caravan site, and railway in between the two areas. PROPOSED CHANGE We continue to maintain that an adjustment to the settlement boundaries and categorisations is required to appropriately reflect the location and function of Arksey within the settlement hierarchy. This would be best achieved by the re-designation of the main urban area boundary and list of settlements incorporated to include Arksey given its location abutting Bentley. This would accurately reflect the locational and functional relationship of the settlements and the sustainability resulting from its proximity to Doncaster itself. In this case it would then be appropriate to consider land in and around the existing village to be allocated for housing development. Without the changes suggested above, we object to the distribution of housing proposed which directs no growth to such locations, we consider that growth in these locations is necessary to provide flexibility and choice in the housing offer. Policy 2 Spatial Strategy and Settlement Hierarchy (Strategic Policy) and Policy 3 Level and Distribution of Growth (Strategic Policy) should be amended to reflect this. The policy supporting text recognises that there may be opportunities to deliver sustainable proposals beyond the development limits of defined villages in the countryside to enhance or maintain the vitality of these rural communities. We consider that the Local Plan should allocate these sites, recognising the need to maintain the vitality of these communities. Site 829 represents one of these opportunities. Site 829, land north of Arksey Common Lane is presented in two parts as it is able to be developed in two phases, as indicated on the site location plan (attached). Part 1 of the site extends to approximately 5.25 ha with potential for development of c.105 dwellings. Part 2 extends to c.4 ha and could accommodate c.100 dwellings which could be allocated or safeguarded in the Local Plan for delivery towards the end of the plan period. Site 829 is considered to be a suitable, available and deliverable site for housing development in Arksey, a sustainably located settlement, which offers the potential for phased development of up to c.205 dwellings over the plan period. The allocation of Site 829 would provide for a mix of dwellings within the plan period, including affordable housing and public open space.

Summary:
Re Site 829 - land North of Arksey Common lane. o Site is classified as ‘Remaining sites at Defined Villages not considered capable of contributing towards Local Plan spatial strategy’ (Table A2.2 Local Plan) 1. Object to defined villages not being part of the housing distribution. 2. Arksey is inappropriately defined as a ‘defined village’. 3. Is distinctly different in function to other defined villages - it is well linked to the Main Urban Area (MUA). 4. Arksey is sustainably located settlement. 5. MUA boundary should be adjusted to include Arksey. 6. Policy 2 (spatial strategy and settlement hierarchy) and Policy 3 (level and distribution of growth) should be amended to reflect this. 7. Site 829 is considered ‘suitable’, ‘available’ and ‘deliverable’.

Response:
The Local Plan strategy is a result of consultation. The distribution has been derived from the results of the settlement audit. Arksey was not deemed sustainable or enough in its own right to warrant housing being allocated towards it, not is it part of the Main Urban Area, and is clearly physically separate. The Housing Topic Paper explains this, and sites are assessed in the Site Selection Methodology. Policy 2 and 3 do provide opportunities for some development to come forward within or adjacent to settlements in the countryside. It should be noted the site is in flood zone 3, where the Local Plan will not be allocating any sites.
We write on behalf of our client Bellway Homes to provide Doncaster Council (the Council) with further information in respect of the deliverability of their land interest at Doncaster Road, Branton which we would like to put forward as a housing land allocation within the emerging Doncaster Local Plan. We object to the site being rejected as a potential housing allocation within the Publication Draft Local Plan. It is our considered opinion that the site can deliver a comprehensive development of market and affordable housing alongside a number of community benefits to meet the needs and aspirations of the local area over the plan period. The development proposals are situated in a suitable and highly sustainable location in respect of existing settlement form and there are no technical or environmental (built and natural) constraints that would preclude the development of the site. As the previous version of the Local Plan didn’t propose to deliver any new homes to Branton, in our letter dated 26th October 2018 we raised concerns that the Council’s proposed approach would only result in the need for people to move away from the Village to seek a home to meet their housing needs. It would have the opposite impact that national planning guidance requires in respect of enhancing or maintaining the vitality of the Village. Accordingly, we have undertaken an independent assessment of the Village’s current and future housing needs in order to ascertain what is needed to ensure the sustainable growth of the settlement. The Housing Market Needs Assessment prepared by Huw Jones Consulting (July 2019) is enclosed and a summary of the key conclusions raised are provided within this letter. Our development proposals for the site have been revised to take into account the conclusions of the independent Housing Needs Assessment work. The proposals can deliver a residential development of at least 100 new homes, alongside a number of community benefits. This letter re-iterates the site’s planning, sustainability and deliverability criteria and is again supported by the following technical work: - Concept Masterplan 100 Homes - Pegasus Group - Concept Masterplan Approx. 200 Homes - Pegasus Group - Promotional Report - Pegasus Group - Transport Appraisal - White Young Green - Flood Risk & Drainage Review - White Young Green - Technical Ecology Report - Rachel Hacking Ecology (SEE EMAIL FOR Technical Reports) The Concept Masterplan and Promotional Report have been updated to present both the new proposed 100 home development option at the site and the previously proposed 200 home development option. Both of which can deliver the independently identified housing needs of the Village. The above submitted technical reports were prepared in respect of the previously proposed development of 200 homes at the site. Each of which confirmed that there were no constraints to the delivery of the site and indeed that the site could deliver a number of community facilities and environmental enhancements. The newly proposed option of delivering 100 homes at the site would still importantly deliver the same level of benefits as previously proposed. Whist we want to work alongside the Council to ensure the delivery of a sound Local Plan for Doncaster, we are concerned that unless changes are made to the Publication Draft Local Plan prior to its submission to the Secretary of State, it will not be in a position where it can be found sound in respect of the guidance provided in Paragraph 35 of the NPPF 2019

Summary:

The Representation is on behalf of Bellway Homes and objects to their site at Branton (Ref: 1018) not being allocated which can deliver market and affordable housing alongside other community benefits. The site is suitable and in a highly sustainable location with no constraints. Previously objected to Branton not being a settlement identified for allocations and will result in people having to leave the Village to seek their housing needs in homes elsewhere rather than enhancing or maintaining the vitality of the village in line with NPPF. Provides an assessment of the settlement’s housing needs (Report by Huw Jones Consulting July 2019). Development proposals have been revised to reflect this study with a scheme that can deliver at least 100 dwellings alongside community benefits. Provides the following technical reports: - Concept Masterplan 100 Homes - Pegasus Group - Concept Masterplan Approx. 200 Homes - Pegasus Group - Promotional Report - Pegasus Group - Transport Appraisal - White Young Green - Flood Risk & Drainage Review - White Young Green - Technical Ecology Report - Rachel Hacking Ecology The Concept Masterplan and Promotional Report have been updated to present both the new proposed 100 home development option at the site and the previously proposed 200 home development option. Both of which can deliver the independently identified housing needs of the Village. Concerned that unless changes are made to the Publication Draft Local Plan prior to its submission to the Secretary of State, it will not be in a position where it can be found sound in respect of the guidance provided in Paragraph 35 of the NPPF 2019

Response:

As explained in the Housing Topic Paper, Branton has not been identified as a settlement for housing to be allocated to. However, Policy 2 and 3 indicate that some development could come forward here subject to the caveats set out. Branton is close to larger settlements (including the Main Urban Area) where housing is being allocated, and so local needs can be met relatively close by in more sustainable settlements. The Settlement Audit assessed the service provision in Branton and found it not to be on the levels of settlements where housing is being allocated. The Site Selection Methodology explains the reasons sites have been included or excluded.
The site is located to the east of Branton, to the east of Doncaster Road and Whiphill Top Lane. The site currently consists of agricultural fields with landscape features located along the site’s northern, western and eastern boundaries. The site is bound to the north and west by existing residential development, to the south and east by Doncaster Road and open fields to the east. The site is currently designated within the Open Countryside and an Area of Special Landscape Value within the Doncaster Unitary Development Plan. It is important to state at this point that the size of any proposed development at the site can be commensurate with the number of homes required to meet the housing and community infrastructure needs of Branton. The topography of the site is relatively flat, meaning that in visual terms it is more closely related to the existing residential area of Branton when viewed from the south and the approach from Auckley. The site is located predominantly within Flood Risk Zone 1. There are areas of Flood Risk Zone 2 & Flood Risk Zone 3 on the site’s eastern and southern boundary, but any proposal would be designed to ensure that there would be no residential dwellings located in this area of the site. Vehicular, pedestrian and cycle access to the site can be taken from Doncaster Road and Whiphill Top Lane. The site is located within a sustainable location, within walking and cycling distance to a number of facilities and services located within Branton. The site is also within walking distance of a number of bus stops located along Doncaster Road. The site is located such that prospective residents will be provided with attractive opportunities for travel by sustainable modes. The Concept Masterplan enclosed with this letter identifies that the development of the site provides the opportunity to deliver the following: - A size, layout and configuration capable of supporting a sustainable housing scheme of at least 100 homes providing the ability to meet a range of housing needs including affordable housing. - The size of development at the site can be commensurate with the number of homes required to meet the housing and community infrastructure needs of Branton. - The site’s size can ensure the delivery of substantial benefits to the local area, benefits which a collection of smaller sites may not be able to match. - The opportunity to strengthen the eastern and southern boundaries of the site to deliver a more logical defensible boundary for the wider open countryside and protection from coalescence with Auckley in perpetuity. - The opportunity to deliver biodiversity enhancements through the provision of swales and surface water attenuation ponds within the development proposals. - The opportunity to deliver biodiversity enhancements through the provision of large areas of greenspace within the development proposals, particularly within the southern parcel of the site. - The opportunity to create a new community park along the entire eastern boundary, which will include a play area, community orchard and allotment to be used by the neighbouring residents. - The creation of a community centre to serve the neighbouring and surrounding local residents where they can gather for group activities, social support, public information, and other purposes. - Delivery of vehicular access from Doncaster Road. - The retention and enhancement of existing landscaping located on the site’s boundaries. - The creation of strong pedestrian and cycle links throughout the site and the existing/adjoining residential areas of Branton. - In terms of design, potential housing fronting onto Doncaster Road and Milton Road would be designed to enable the existing character of the Village to be maintained. The homes located along the northern/western boundaries of the site will be orientated to maximise views out of the site. (SEE EMAIL FOR Concept Masterplan) On account of the above, the proposed development of the site could achieve a high standard of design that protects and enhances the local area’s setting and character. It will also deliver significant community benefits to the Village. Finally, it would also ensure that there are no issues in respect of coalescence with Auckley. The enclosed nature of the site means that the openness of the wider open countryside would remain, and a new permanent boundary would be readily provided through an enhancement to the site’s existing landscape boundaries. Overall, we believe that the site can be considered a logical extension to the settlement area of Branton, with the site having the potential to be designed in a manner which will enable it to be largely enclosed on all sides.

Summary:
Provides a description of the site (agricultural fields) and current designation (Countryside Policy Area) and topography being flat so little visual impact. Predominantly FRZ1 and areas of FRZ2/3 will be avoided from built development. Access can be taken from Doncaster Road and Whiphill Top Lane. The site is suitably located for services including public transport. Provides a concept masterplan. The proposed development of the site could achieve a high standard of design that protects and enhances the local area’s setting and character. It will also deliver significant community benefits to the Village. Finally, it would also ensure that there are no issues in respect of coalescence with Auckley. The enclosed nature of the site means that the openness of the wider open countryside would remain, and a new permanent boundary would be readily provided through an enhancement to the site’s existing landscape boundaries.

Response:
Noted. The Local Plan is not seeking to allocate any sites in Branton, as set out in the Housing Topic Paper.
Based on the justification provided above it is considered that Bellway Homes' Doncaster Road, Branton development proposals will create a sustainable, high quality and accessible development which will provide significant social and economic benefits to Branton and the wider Doncaster area. It is our considered opinion that the site can deliver a comprehensive development of market and affordable housing alongside a number of community benefits to meet the needs and aspirations of the local area over the plan period. The development proposals are situated in a suitable and highly sustainable location in respect of existing settlement form and there are no technical or environmental (built and natural) constraints that would preclude the development of the site. The submitted technical reports confirm this to be the case. The proposed development of the site could achieve a high standard of design that protects and enhances the local area's setting and character. It would also ensure that there are no issues in respect of coalescence with Auckley. The site can be considered a logical extension to the settlement area of Branton, with the site having the potential to be designed in a manner which will enable it to be largely enclosed on all sides. Bellway Homes proposals represent a truly deliverable residential development site on account of it being suitable, available and achievable for residential development now. Branton should be defined as a "Service Town & Village" within the next version of the Doncaster Local Plan and accordingly, our client’s proposed development site at Doncaster Road, Branton should be included as a proposed housing allocation. The independent Housing Market Needs Assessment enclosed with this letter identifies that there is very strong evidence for new housing allocations to be identified in the Branton in the emerging Local Plan that can provide additional affordable housing options in the village and create a housing mix capable of sustaining the viability and vibrancy of the village into the future. Without additional new housing options in the village, it will be extremely difficult to attract new households, especially actual or potential families, to the village and remain in the village rather than have to move elsewhere to meet their housing needs, requirements and aspirations. There could also be difficulties in enabling older households needing to move to smaller properties in the village to do so, running the risk of further 'silting up' the housing chain in the area and frustrating necessary movement within the village. This in turn could threaten the viability of local facilities and amenities. Our development proposals for the site have been revised to take into account the conclusions of the independent Housing Market Needs Assessment work. The proposals seek to deliver at least 100 new homes, alongside a number of community benefits. If the Council's approach remains unchanged then the housing needs of the Village will not be met before 2035. Resulting in a negative impact on the vitality of the Village, including its services and facilities, contrary to the guidance presented in Paragraph 78 of the NPPF. Whilst we want to work alongside the Council to ensure the delivery of a sound Local Plan for the District, we are concerned that unless changes are made to the Publication Draft Local Plan prior to its submission to the Secretary of State, it will not be in a position where it can be found sound. In light of the guidance provided in Paragraph 35 of the NPPF 2019, we consider the following: - The Local Plan is not objectively assessed development and infrastructure requirements of Doncaster; - The Local Plan is not justifiable as there is compelling evidence available that it does not present an appropriate strategy for Doncaster, when considered against the reasonable alternatives, based on proportionate evidence; - The Local Plan is not effective as the evidenced and identified housing needs of Doncaster’s most sustainable Villages will not be met, resulting in the full objectively assessed housing needs of Doncaster not being met; & - The Local Plan is not consistent with national policy on account of the combined impact of the above factors when considered together. It will not deliver the sustainable development of Doncaster in the plan period. When each of the above points are considered holistically there is a compelling case for the release of additional land as housing allocations within future versions of the Local Plan in order to meet the District’s full objectively assessed housing needs. On account of the above we object to our client’s Doncaster Road, Branton site being rejected as a potential housing allocation within the Publication Draft Local Plan.

Summary:

Based on the justification provided it is considered that Bellway Homes' Doncaster Road, Branton development proposals will create a sustainable, high quality and accessible development which will provide significant social and economic benefits to Branton and the wider Doncaster area. The site can deliver a comprehensive development of market and affordable housing alongside a number of community benefits to meet the needs and aspirations of the local area over the plan period. The development proposals are situated in a suitable and highly sustainable location in respect of existing settlement form and there are no technical or environmental (built and natural) constraints that would preclude the development of the site. The submitted technical reports confirm this to be the case. There is a compelling case for the release of additional land as housing allocations within future versions of the Local Plan in order to meet the District’s full objectively assessed housing needs. On account of the above we object to our client’s Doncaster Road, Branton site being rejected as a potential housing allocation within the Publication Draft Local Plan.

Response: Site promotion noted, however as explained in the Housing Topic Paper and previous comments, no sites are being allocated in Branton, and the Borough can comfortably meet its housing requirement without releasing land here.
Tests of Soundness:

Comment:

Rachel Hacking Ecology have been commissioned by Bellway Homes Limited to provide a technical note regarding ecological constraints and opportunities associated with the development of the site. The technical note is enclosed with these representations. (SEE EMAIL FOR Ecology Technical Note) The note identifies that the habitats on the site are species-poor. The arable land offers limited ecological value. The mature trees and hedgerows are the most ecologically valuable habitats and these can be retained or easily mitigated for if lost. No rare or locally uncommon plant species or habitats exist on site. Great Crested Newt, [protected species] and bats are not considered to be a constraint on development, although it is recommended that the trees are checked for potential bat roosting habitat as part of a future planning application. Nesting birds can be mitigated for by avoiding disturbance to nesting sites within the bird nesting season or undertaking a bird nest check first. There is opportunity to bring significant biodiversity gain to the site and the locality by incorporating the following landscape features, some of which can be seen on the Concept Masterplan: - - Species-rich, native hedgerows along open boundaries, including plugging of any gaps within existing hedgerows. - Planting of native tree species on field boundaries. - Creation of wildflower grassland. - Provision of new ponds. The eastern edge of the allocation site extends into grazing marsh habitat, good examples of which are UK Priority Habitat. During the site visit, this was noted to be species-poor. It is recommended that the eastern part of the residential site provides good quality marshy habitat, such as wetland wildflower meadows. It is noted that attenuation ponds are designed into the eastern part of the site and these can be enhanced for wildlife with the provision of native, species-rich marginal planting. The eastern boundary of the site would, therefore, include a buffer habitat zone, to protect the remaining adjacent priority habitat and watercourses. The Concept Masterplan for the development proposals identifies that each of the proposed recommendations can be delivered to provide ecological and biodiversity enhancements to the area. (SEE EMAIL FOR Concept Masterplan) Future development should be undertaken with the implementation of a Construction Environmental Management Plan (CEMP), which will protect adjacent and retained habitats, and which will include, for example, a sensitive lighting scheme. The conclusions and recommendations provided within he submitted Ecology Technical Note confirm that there are no ecological issues that would preclude the development of the site for residential use.

Summary:

Rachel Hacking Ecology have been commissioned by Bellway Homes Limited to provide a technical note regarding ecological constraints and opportunities associated with the development of the site. The technical note is enclosed with these representations. The note identifies that the habitats on the site are species-poor. There is opportunity to bring significant biodiversity gain to the site and the locality. The Concept Masterplan for the development proposals identifies that each of the proposed recommendations can be delivered to provide ecological and biodiversity enhancements to the area. Future development should be undertaken with the implementation of a Construction Environmental Management Plan which will protect adjacent and retained habitats, and which will include, for example, a sensitive lighting scheme. The conclusions and recommendations provided within he submitted Ecology Technical Note confirm that there are no ecological issues that would preclude the development of the site for residential use.

Response:

Noted. The Local Plan is not seeking to allocate any sites in Branton, as set out in the Housing Topic Paper.
WYG have undertaken a High Level Flood Risk and Drainage Assessment of the proposed allocation site. The enclosed report identifies the following conclusions in respect of the potential development of the site:

- A review of all existing flood risks and consideration of how the site can be drained has confirmed that subject to complying with the relevant design guidance and policies and undertaking the identified further investigations, there are no identified flood risk and drainage constraints which would prevent the proposed development being allocated within the Local Plan;
- The Site is greenfield in flood risk terms. The Site levels fall from west to the north and east. The Site is bounded by an ordinary watercourse known as Common Drain to the east and by Old Mill Dike approximately 70m to the south east;
- The Site is shown on the EA Statutory Flood Maps for Planning as being predominantly within Flood Zone 1, partly in Flood Zone 2 and partly in Flood Zone 3. A review of the site contours suggests that the existing Flood 2 and possibly Flood Zone 3 area are suspect, and that site-specific hydraulic modelling is likely to reduce the extent of the flood zones within the site;
- A review of the existing flood risk has identified that the majority of the Site it is at low risk of fluvial, pluvial, surface water, groundwater, sewer and overland flow flooding. The northern and eastern parts of the site are shown as being at risk of flooding from the adjacent ordinary watercourses;
- The proposed development components are classified as 'More Vulnerable' in accordance with Table 2 of the PPG (Flood Risk & Coastal Change). Hence, according to Table 3 of the PPG, development within the FZ 1 part of the Site is considered acceptable in flood risk terms and not required to pass the Sequential and Exception Tests;
- The existing total greenfield Qbar discharge rate has been assessed as being 1.46 l/s per hectare; - If infiltration proves to be unfeasible, surface water runoff from the proposed development site can be discharged to the existing watercourses;
- In developing any future SUDS systems, it will be necessary to undertake a full site investigation study including permeability testing in accordance with BRE Digest 365 guidelines and ground water monitoring; - It is proposed to provide attenuation by means of a SUDS management train including possible options such as permeable paving, rain water butts, swales and detention basins located within the natural low points and any future masterplan should allow for the provision of such basins and means of access to maintain them; and - It is proposed to incorporate a fully compliant SUDS drainage design where deliverable and viable to drain the surface water runoff from the site and a more detailed assessment will be provided to support any future outline or detailed planning application. (SEE EMAIL FOR Flood Risk and Drainage Assessment) Further to the above, the enclosed report identifies the following recommendations should be taken account of in the proposed development of the site:
- A Flood Risk & Drainage Assessment will be required to support any future planning application.
- A full review and liaison with Severn Trent Water should be undertaken to assess the feasibility and viability of the off-site foul water drainage connection points. - The future surface discharge rate shall be restricted to the equivalent pre-development greenfield Qbar rate or any other rate agreed with either Doncaster MBC LFA or Severn Trent Water. - The final site layout and surface water drainage design including the required attenuation shall incorporate above ground SuDS system as much as practicable. Each of the identified recommendations will be fully taken into account in the progression of any future planning application at the site. The submitted Concept Masterplan has already taken into account the delivery of SuDS systems. Accordingly, there are no flood risk or drainage issues that would preclude the development of the site.

Summary:

WYG have undertaken a High Level Flood Risk and Drainage Assessment of the site. The enclosed report identifies the following conclusions in respect of the potential development of the site. Each of the identified recommendations will be fully taken into account in the progression of any future planning application at the site. The submitted Concept Masterplan has already taken into account the delivery of SuDS systems. Accordingly, there are no flood risk or drainage issues that would preclude the development of the site.

Response:

Noted. The Local Plan is not seeking to allocate any sites in Branton, as set out in the Housing Topic Paper.
White Young Green (WYG) have undertaken a transport appraisal to support the proposal for a residential development of up to 200 homes at the site. Whilst a second development option of at least 100 homes is now being proposed, the findings of the WYG work does of course confirm that a development of 100 homes would also not have an adverse impact on the local highway network. (SEE EMAIL FOR the Transport Appraisal) The appraisal confirms that a suitable and safe access to the site can be provided on to the B1396 Doncaster Road. The layout of the proposed junction is shown on drawing number A111155/21/T5/SK 001 Rev P1, which is enclosed within the document. The junction layout drawing shows a 5.5m wide carriageway with a 2.0m footway along each side and 6m kerb radii at the access junction. The junction also includes a priority ghost island arrangement which has been designed to meet the standard in the DfT’s DMRB TD 42/95. The proposed access junction falls within the 30mph section of Doncaster Road and, based on posted speed limits, the guidance recommends a 2.4m set back from the give-way line as the x-distance and a 43m distance along the y axis. However, given that the speed limit changes to 40 mph in close proximity to the junction, an extended y-distance of 63m to the left of the junction has been incorporated into the design. The appraisal identifies that it may be appropriate to extend the 30mph speed limit beyond the extents of the proposed site access junction. The available visibility from the proposed access is well in excess of that required by the Manual for Streets extending to 153m to the right and 153m to the left. In respect of accessibility, the appraisal confirms the position presented above, that Branton is a sustainable location for residential development, that the site is accessible within a reasonable walk or short cycle ride to the services and facilities available within the Village, and that there are public transport options available for journeys further afield to locations such as Doncaster With regards to Traffic Impacts, the appraisal identifies that the proposed development proposal is predicted to generate relatively small numbers of pedestrians, cyclists and public transport trips. Improvements beyond providing connections to the external networks are unlikely to be needed. The numbers of additional vehicles would trigger a Full Transport Assessment for planning, and it is expected the local road network would be able to accommodate the extra traffic. The enclosed appraisal concludes that the development site satisfies the key issues considered in this appraisal and is therefore considered suitable, in transportation terms, for residential development.

Summary:
White Young Green have undertaken a transport appraisal to support the proposal for a residential development of up to 200 homes at the site. Whilst a second development option of at least 100 homes is now being proposed, the findings of the WYG work does of course confirm that a development of 100 homes would also not have an adverse impact on the local highway network. The appraisal confirms that a suitable and safe access to the site can be provided on to the B1396 Doncaster Road. In respect of accessibility, the appraisal confirms that Branton is a sustainable location for residential development, that the site is accessible within a reasonable walk or short cycle ride to the services and facilities available within the Village, and that there are public transport options available for journeys further afield to locations such as Doncaster

Response:
Noted. The Local Plan is not seeking to allocate any sites in Branton, as set out in the Housing Topic Paper.
In accordance with the definition provided within Annex 2 of the revised National Planning Policy Framework, we believe that the site can be considered as a Deliverable residential development site on account of:-  

**Suitability** The site is located in a suitable location for residential development now. As identified above, a sustainable development can be delivered at the site with pedestrian and cycle access to existing services, facilities and public transport. A suitable access can be provided from existing highways and there are no technical constraints which would preclude the development of the site for residential use.  

**Availability** The site is available for development now. The site is available for residential development as there are no legal or ownership constraints as Bellway Homes have an interest in the site and by virtue of this and previous submissions are expressing an intention to develop the site for residential use.  

**Achievability** A viable housing development can be delivered on the site within the next 5 years. Bellway Homes are seeking to develop the site for residential use. Prior to the progression of development sites they undertake a thorough marketing and economic viability assessment for each site, including an assessment of any site specific abnormal costs. The site is considered to be achievable for residential development now as there is a realistic prospect that the site can deliver new homes within the next 5 years.  

**Deliverability Conclusion** The site can be considered a deliverable residential development site and its release would deliver significant economic and social benefits in the form of: - Construction Investment to the area; - Creation of direct & indirect employment opportunities; - A mix of homes to deliver identified housing needs; - Social infrastructure investment to the area through S106 contributions; - Increased expenditure from residents to the area; and - Council Tax payments & New Homes Bonus payments which will help to sustain Council services.

---

**Response:**

Noted. The Local Plan is not seeking to allocate any sites in Branton, as set out in the Housing Topic Paper.
1.1 These representations have been prepared in response to the Doncaster Local Plan Publication Version Consultation. 1.2 These representations are made on behalf of the Frickley and Warmsworth Estate who have landholdings in and adjacent to Clayton. 1.3 This statement seeks to provide comment on the Publication Version of the Local Plan and support the Council in preparing a sound document.

Summary:
Reps are provided on behalf of Frickley & Warmsworth Estate in respect to their landholdings at Clayton.

Response:
Noted
2.23 This policy sets out the basic approach to the identification and release of sites in the later parts of the Plan. In paragraph 4.44 it states that the new urban edge allocations have of necessity required land previously designated in the UDP as Green Belt or Countryside; and resulted therefore in amendments to town and village development boundaries to create new defensible boundaries. 2.24 This process however has not been undertaken in an appropriate manner as it has omitted sites which clearly represent reasonable alternatives to the selected allocations. As such the assessment of the impact on the Green Belt of these proposed allocations dealt with collectively under Policy 6 then individually in Tables H1, H2 and H3 which are set out in detail in Chapter 16 has not been undertaken on a sound basis. 2.25 The approach to the assessment is described in detail in Appendix 1 of this objection. Our objection to the selected housing and mixed use allocations which are to be removed from the Green Belt is that the assessment of the impact of removing these sites from the Green Belt and their subsequent development is unsound. This based on the fact that the approach assessed sites in an inappropriate manner which failed to take into account the nature and impact of the sites being considered for release. 2.26 In the case of Brodsworth Quarry the impact of the Green Belt was assessed as part of a much larger site of some 481 hectares which did not share the same Green Belt characteristics as the Quarry itself. If the redevelopment of the Quarry only was to be assessed then the impact of the Green Belt would be considerably different. This is illustrated by our assessment of the Green Belt function of the Brodsworth Quarry site in Appendix 1. Recommendation 2.27 The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. 2.28 Brodsworth Quarry should be removed from the Green Belt and identified as a location for mixed use development. Justification 2.29 For the reasons set out above and within the appended SPRU report, it is correct to accommodate growth based on meeting requirements under the full assessment of jobs-led growth (1,073 dpa) for the full plan period to 2035 and for a new allocation to be made at Brodsworth Quarry to assist in meeting this requirement in the most sustainable way.

Summary:

Summary of Policy 3 including saying that new urban edge allocations are either Green Belt or Countryside thus creating new defensible boundaries to towns and villages. However this process had not been undertaken in an appropriate manner as it omits reasonable alternatives. The assessment of the impact on the Green Belt (under Policy 6 and then in Tables H1, H2 and H3) has not been undertaken on a sound basis. Our objection is that the assessment of the housing and mixed use allocations which are to be removed from the Green Belt is unsound. The approach has assessed sites in a manner which fails to take account the nature and impact of the sites being allocated. Regarding Brodsworth Quarry, the impact on the Green Belt was assessed as part of a much larger site of some 481 ha which do not share the same Green Belt characteristics as the Quarry. If the Quarry was assessed on its own then the impact on the Green Belt would be considerably different. The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. Brodsworth Quarry should be removed from the Green Belt and identified as a location for mixed use development. The supporting appendix provides a more detailed assessment of Brodsworth Quarry against the five Green Belt purposes. Purpose 1: To check the unrestricted sprawl of large built-up areas - The removal of this site from the Green Belt for residential purposes would result in a minor extension of the built up part of the settlement, but it would not undermine the area. The remaining land surrounding the site will still perform this function as the scale of this release and its well defined visual boundaries would not result in unrestricted sprawl. Part of the site is contiguous to Highfields, and is in close proximity to the Adwick and Woodlands settlement - it is considered reasonable to score the site as 2 again purpose 1. Purpose 2: To prevent neighbouring towns from merging into one another - The site, Brodsworth Community Woodland and Highfields Country Park separate Highfields and Woodlands. There is significant tree coverage. The remainder of the general area has a very limited role in preventing neighbouring towns from merging. Some additional development away from the road which would not risk merging settlements. The allocation of this site for development would involve a rounding off within the settlement edge. It is considered reasonable to score the site as 1 against this sub-criteria of purpose 2. Purpose 3: To assist in safeguarding the countryside from encroachment - There is established vegetation around the perimeter of the site that provides a degree of physical separation from the wider landscape. Additional landscape buffers can be provided to ensure development does not undermine the Green Belt. The removal of this site from the Green Belt for residential development would not detract from the character of the town or undermine the environmental value of the landscape. It is considered fair to score the site as 2 (moderate to low). Purpose 4: To preserve the setting and special character of historic towns - There are no views to the historic core of Doncaster from the Green Belt area associated with this site. The assessment of the specific site is therefore 1. Purpose 5: Approach to defining the extent to which Green Belt 'assists in urban regeneration, by encouraging the recycling of derelict and other urban land' - The Stage 1 Review report lists a number of regeneration priority areas, which includes Adwick le Street / Woodlands which is directly north of the site beyond the tree belt. As the tree belt is not within the site's red line boundary, it is considered that the site is located in close proximity to the regeneration priority area (Adwick le Street / Woodlands) but the Green Belt designation of this site itself is not fundamental to the delivery of urban regeneration priority area projects. It is considered reasonable to score the site as a 1.
The Green Belt Review has assessed sites on a consistent basis using a methodology agreed with other local authorities. Site 184 was not assessed within this as there is no housing allocation in Brodsworth and therefore no need to assess Green Belt that would not be released in any eventuality. This is based on the Settlement Hierarchy which was the result of consultation on the spatial strategy.

The site is proposed to be located within the Green Belt and outside of the settlement boundary for Marr. Following approval of the application reference 17/02585/FULM and 17/02586/LBCM, the settlement framework boundary of Marr should be updated to reflect the approved scheme and remove land as shown in plan (Page 1 of letter) from the Green Belt. This is in order to provide a new defensible boundaries to the Green Belt.

Response:
There is no notable change on the ground that warrant the removal of this site from the Green Belt, despite the extant permission. There are no exceptional circumstances at this time to amend the Green Belt boundary here.
The site is located to the north of Stainton, off Limekiln Lane and is circa 0.8 hectares in size. The land is a greenfield site currently used for agriculture and is generally flat in topography albeit slightly undulates from the north-western corner to the south-eastern corner of the site. Existing residential development is located to the South and West of the site with an agricultural steading located to the East and agricultural land located to the North. The land is under a single private ownership and whilst subject to a tenancy, the tenancy can be terminated for development purposes and therefore the development potential is available immediately. There are trees and hedgerows located along the boundary of the site but this would not be a constraint to development. The existing trees and hedgerows could be easily accommodated within a future residential development scheme. (See EMAIL FOR Figure 6 Aerial Photograph of the site and its surroundings) Access would be off Limekiln Lane which runs along the sites southern boundary and is within a 30mph speed limit zone. There are no existing footpath located within or near the site and the site is not subject to any scheduled ancient monument’s or heritage assets. The site is located within Flood Zone 1 although there is higher risk associated with Ruddle Dike to the south of the site. See Figure 14 below for extracts from the Flood Risk Map for the area. (See EMAIL FOR Figure 7 Extract from the Governments Flood Risk Map - From Rivers and Sea) In conclusion, there are no known physical or technical restrictions to bringing the site forward for development. The only constraint to bringing the site forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered a suitable to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. The site does not comply with all of the five purposes of the Green Belt as outlined at paragraph 134 of the NPPF. We therefore respectfully request that this site (Land to North of Limekiln Lane, Stainton - HLEAA Reference 358) is deleted from the Green Belt and identified as a housing allocation in the next draft of the Local Plan. Based on a 75% developable area, it is considered that the site could accommodate circa 10-20 new dwellings. In conclusion, we request that Land to North of Limekiln Lane, Stainton be deleted from the Green belt and included within the defined village boundary for Stainton, so that it can accommodate suitable residential development, as part of the Doncaster Local Plan going forward. A site location plan is provided in Appendix A. The Sandbeck Estate welcome discussions with the Council should they want to include some or all of the site within the defined village boundary for Stainton. A proposed redefined village boundary for Stainton is also provided in Appendix B to include land at Manor Farm and land North of Limekiln Lane for residential development. There are a number of settlements located in close proximity to Stainton which are listed below: - Maltby (3.2km South West); - Tickhill (5.1km East); - Bramley (8.2km West) Proposed residential development at Stainton complies with the NPPF, at paragraph 78, which states that "To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby." It is considered that the residential development of these sites will comply with paragraph 78 of the NPPF whilst helping to meet the OAN for the Borough. (See EMAIL FOR Appendices)

Summary:
Site 358 ("Land north of Limekiln Lane, Stainton ") should be allocated for housing. It is identified as a deliverable / developable sites in the HELAA and therefore has no physical or technical reasons as to why it could not come forward for residential development (the only constraint being that the land lies within Green Belt). The only constraint in the short term is that the site is currently designated as Green Belt. The site does not comply with all of the five purposes of the Green Belt as outlined at paragraph 134 of the NPPF. There are a number of settlements located in close proximity to Stainton (Maltby; Tickhill; and Bramley). Proposed residential development at Stainton would comply with NPPF, paragraph 78, which states that "To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby." It is considered that the residential development of these sites will comply with paragraph 78 of the NPPF whilst helping to meet the OAN for the Borough.

Response:
The site is Green Belt and not in a location where the Local Plan will seek to make housing allocations, as set out in the Housing Topic Paper. In order to satisfy the requirements of para. 78, Policy 2 and 3 do provide opportunities for development to come forward in rural locations subject to caveats, however in Green Belt locations such as this national policy will apply.
The Site is located to the south of Stainton, off Scotch Spring Lane and is circa 1.5 hectares in size. The land is a greenfield site currently used for agriculture and is generally flat in topography. Existing residential development is located to the North and East of the site with agricultural land located to the South and playing fields to the West. The land is under a single private ownership and whilst subject to a tenancy, the tenancy can be terminated for development purposes and therefore the development potential is available immediately. There are trees and hedgerows located along the boundary of the site but this would not be a constraint to development. The existing trees and hedgerows could be easily accommodated within a future residential development scheme. (SEE EMAIL FOR Figure 3 Aerial Photograph of the site and its surroundings)

Access would be off Scotch Spring Lane rather than School Lane. Scotch Spring Lane runs along the sites western boundary. There are no existing footpath located within or near the site and the site is not subject to any scheduled ancient monument’s or heritage assets. The site is located within Flood Zone 1. See Figure 11 and 12 below for extracts from the Flood Risk Map for the area. (SEE EMAIL FOR: Figure 4 Extract from the Governments Flood Risk Map - From Rivers and Sea Figure 5 Extract from the Governments Flood Risk Map - From Surface Water Flooding) In conclusion, there are no known physical or technical restrictions to bringing the site forward for development. The only constraint to bringing the site forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered a suitable to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. The site does not comply with all of the five purposes of the Green Belt as outlined at paragraph 134 of the NPPF. We therefore respectfully request that this site (Land at Manor Farm, Stainton HLEAA Reference 359) is deleted from the Green Belt and identified as a housing allocation in the next draft of the Local Plan. Based on a 75% developable area, it is considered that the site could accommodate circa 30-35 new dwellings. In addition to being deleted from the Green belt it is considered that the site is also included within the defined village boundary for Stainton, so that it can accommodate suitable residential development, as part of the Doncaster Local Plan going forward. A site location plan is provided in Appendix A. The Sandbeck Estate welcome discussions with the Council should they want to include some or all of the site within the defined village boundary for Stainton. (SEE EMAIL FOR Appendix)
Tests of Soundness:

Comment:

(This rep is for this this site only - see other reps for other two sites) 6.34. Avant Homes objects that no housing allocations are identified in Wadworth and that HELAA Site 871 has not been considered. Wadworth is a large village with services and facilities located close to the southern edge of Doncaster. The settlement can therefore accommodate some new housing and should also be positioned further up the settlement hierarchy. Furthermore, opportunities for growth at Tickhill from the Site Options currently considered appear limited with sites rejected due to site constraints. Tickhill and Wadworth are in relative close proximity and have good linkages and therefore the settlements work together. Wadworth is also well related to Doncaster Main Urban Area and the Main Urban Area is accessible via a range of sustainable transport modes. Notwithstanding that there should be allocations in smaller settlements which serve a wide hinterland. Particularly where this will enhance or maintain or enhance the vitality of rural communities. Paragraph 78 of the Framework indicates that planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Avant Homes therefore proposes that their site at Wadworth Hill, Wadworth (HELAA Site 871) be allocated for housing. 6.35. Avant Homes considers the proposed housing allocation is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 6.36. The deliverability and benefits of the Wadworth Hill, Wadworth site are contained within the attached advocacy report and delivery statement submitted alongside these representations. (SEE EMAIL FOR document) Proposed Change 6.37. To overcome the objection and address soundness matters, the Council should: - Allocate: o HELAA Site (871): Wadworth Hill, Wadworth

Summary:

Object to the fact that no housing is proposed in Wadworth and that site 871 has not been considered. Wadworth is a large village with services and facilities located close to the southern edge of Doncaster. It can accommodate new housing and should be further up the hierarchy. It could also offset the lack of sites in nearby Tickhill (close proximity and good links). Wadworth is also well related to the main urban area and accessible via a variety of nodes. Notwithstanding this, there should be allocations in smaller settlement to serve the rural hinterland, particularly where they will enhance or maintain the vitality of rural communities (para. 78 NPPF). The site is available, suitable and achievable and therefore in accordance with the framework and can come forward in the short term. To overcome the objection and address soundness matters, the council should allocate site 871. Advocacy document attached.

Response:

Wadworth has a small population compared to other larger settlements and also does not score especially well in the Settlement Audit. It is not appropriate to allocate this village for housing, as set out previously in the Settlement Strategy and as also shown in the Housing Topic Paper. A range of more sustainable villages are being allocated, however, and Policy 2 allows infill within Green Belt village such as this, whilst national Green Belt policy applies outside of the village.
6.1. Avant Homes objects to Policy 6 and the proposed distribution of housing and that the following sites are not proposed allocations: - Site 494: Green Lane, Scawthorpe - HELAA Site 1036: Melton Road, Newton - HELAA Site (871): Wadworth Hill, Wadworth 6.2. These sites are summarised below and technical information and advocacy reports will be submitted shortly. Test of Soundness 6.3. Avant Homes considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy  Justification 6.4. Avant Homes is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 Avant Homes recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. Avant Homes is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. 6.6. The proposed distribution against the Council's own targets shows a deficiency and a significant under provision in: - Doncaster - Adwick - Conisborough - Denaby - Mexborough - Thorne - Moorends - Sprotbrough - Tickhill - Bawtry 6.7. Avant Homes, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. 6.8. Avant Homes, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy. 6.9. Avant Homes is particularly concerned that there is an under provision of housing in Doncaster, which the spatial distribution, established in policy 2, suggests should be accommodating at least 50% of new homes. This would equate to 9200 Homes based on the requirement of 18400. The total permissions and allocations in Doncaster equate to 7441 homes (not accounting for completions). This is significantly short of that requirement for Doncaster, further the main urban area is identified as the focus for economic and housing growth and should be accommodating more housing. 6.10. Further Avant Homes are concerned about the deliverability of a number of allocations within the main urban areas. These include but are not limited to the following sites: 6.11. Further Avant Homes object to the allocation of site 838, which whilst benefiting from an extant permission the Residential Land Availability Report 2018 indicates that there are no completions on site and the site is not currently being developed. Further the council have been unable to produce any further deliverability information to support its inclusion within the Doncaster 5 Year Deliverable Housing Land Supply Statement. As a minimum the forecast contribution to the local plan should be reduced. 6.12. Avant Homes object to the allocation of site 843. Avant Homes consider that the delivery rates for this site are unrealistic based on performance at the site. The Residential Land Availability Report states that completions for the last year amounted to 39 dwellings. The local plan is suggesting a delivery rate of 70 dwellings per year. This is significantly over what has been achieved at this site or indeed other sites in Doncaster according to data in the residential land availability report. 6.13. Avant Homes consider that the delivery rates for this site are unrealistic. The Local Plan indicates that this is an outline permission. There are significant constraints, it is a brownfield site that is entirely within Flood Zone 3. However the Local Plan is assuming a delivery rate of 56 dwellings per annum in the first five years and 64 dwellings per annum in year 6-10. This is overly optimistic, and not consistent with the planning status, constraints and likely viability issues associated with site. 6.14. Based on the above it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Doncaster to ensure that the Plans strategy can be delivered. 6.15. As indicated in response to Policy 2 Avant Home are also concerned that the Plan does not provide sufficient support for development in Defined Villages. Avant Homes consider that in line with the provision of the Framework, paragraph 78, which is clear that to promote sustainable development in rural areas, 'Housing should be located where it will enhance or maintain the vitality of rural communities. Planning Policies should identify opportunities for villages to grow and thrive, especially where this will support local services'. 6.16. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be deliverable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 Avant Homes suggest that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.17. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 6.18. However, Avant Homes consider that with the proposed allocations and the deletion or adjustment in anticipated delivery within the plan period of sites 838, 843, and 984 that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.19. To overcome the objection and address soundness matters, the Council should 6.20. Avant Homes consider that the following sites should be deleted or the yield within the plan period
Object to policy 6 and the proposed distribution of housing, and that the following sites are not allocated: - Site 494: Green Lane, Scawthorpe - HELAA Site 1036: Melton Road, Newton - HELAA Site (871): Wadworth Hill, Wadworth

The Local Plan is not producing sufficient homes for the borough. Further to comments on Policy 3, further sites should be identified to meet and exceed the requirement and provide a suitable buffer to deal with any under delivery which is likely to occur from some sites. This ensures the plan is positively prepared and flexible. The distribution does not reflect the spatial strategy, but importantly does not address the focus for economic growth in the SCR and Yorkshire and the Humber as a whole. There is a deficiency and under provision in Doncaster; Adwick; Conisbrough - Denaby; Mexborough; Thorne - Moorends; Sprotbrough; Tickhill and; Bawtry. The plan does not provide for the growth of the borough and does not reflect the role, function and location of settlements. Further housing is needed and an amended approach to the spatial strategy too. There should be further growth of Rossington to address regeneration and provide new infrastructure, as well as growth in Thorne - Moorends, and regeneration focus in Carcroft - Skellow should elevate the settlement to a Main Town. New housing should be provided in Tickhill as there is under provision here. Wadworth should accommodate some housing to reflect its role and function and provision should be made in the villages to address the rural economy. 9,200 new homes should be in the urban area according to Policy 2 and a total of 18,400 homes over the plan period. The total is 7,441 which is significantly short of this requirement. The urban area is identified as a focus for economic and housing growth and should accommodate more housing. There is also concern about deliverability in this location. Object to the allocation of 838 as the RLA indicates no completions and the site is not currently being developed. There is no information to support it in the 5 year supply statement. As a minimum the forecast contribution should be reduced. Object to the allocation of site 843 as the delivery rates for the site are unrealistic. Completions 17/18 were only 39, but 70 per annum is suggested - over what has been achieved on this and other sites. Object to the allocation of 984 as the delivery rates are unrealistic and the site is brownfield in flood zone 3 but assumes 56dpa in the first 5 years and 64dpa thereafter. Likely to be viability issues also. Further allocations are therefore required and delivery rates reviewed. There is not sufficient support for defined villages, opportunities should be identified for housing in these, especially when it will support local services in accordance with NPPF para. 78. There should also be safeguarded land identified. The policy is not justified or consistent with the framework and the Local Plan is therefore not sound - however with the proposed deletion or delivery adjustment for sites 838, 843 and 984, the plan can be found sound. Proposed change: delete or reduce the yield of 838, 843 and 984 and allocate 494, 1036 and 871.

Response:
