Full Representations on the Local Plan Regulation 19 Publication Version - Redacted Version for Publishing

March 2020
This document contains full Representations as submitted to the Doncaster Local Plan Regulation 19. The Representations are set out in Local Plan document order (followed by the evidence base) and each Representation includes the verbatim comment (unless such comments have needed to be redacted as the Council reserves the right not to publish or take into account any Representations which are openly offensive or defamatory). A Council summary of the comment, followed by a short/initial response from the Council to the Representation is also provided. Please note, a number of the Representations also submitted additional supporting information, such as advocacy documents, site technical surveys and assessment work, masterplans etc. These supporting documents are not included but it should be noted that all the Representations can be viewed in full via the following web-link:

https://www.doncaster.gov.uk/services/planning/local-plan-publication-representation

It should also be noted that a number of the Representations also includes contextual and background comments, reiterates tests of soundness and national policy, and/or including comments that are introductory or conclusions in nature rather than considered to be an actual key part of the Representation. Where this is clear, such comments have been filtered out but do still appear at the end of this document for completeness. Please note, these comments have also been summarised but will generally not have responses to them.

The Regulation 22 Statement of Consultation (Doc Ref: CSD10) also includes a summary of the main issues raised followed by a Council response in Local Plan document order.
Tickhill Town Council is generally supportive of the Doncaster Local Plan (2015-2038). We particularly commend its commitment to the vitality and viability of town centres and its recognition of the permanence of the Green Belt, both of which are strongly welcomed by Tickhill community. We agree with the assessment that the quality of the contribution of the Green Belt around Tickhill warrants its protection against further development in it while difficulties of accessing sites also militate against the allocation of further housing sites.

Summary:

Tickhill Town Council is generally supportive of the Local Plan. It's commitment to the vitality and viability of town centres and its recognition of the permanence of Green Belt are strongly welcomed by the local community. We agree with the assessment that the quality of the contribution the Green Belt makes to land around Tickhill warrants its protection and that access is also an issue for local sites.

Response:

Support welcomed

Comment:
Edenthorpe Parish Council members give their support to Doncaster Local Plan and would also like to thank you for all the help and advice you gave towards Edenthorpe Neighbourhood Plan.

Summary:
Supports the Doncaster Local Plan 2015-2035

Response:
Support welcomed
At its meeting on 19 September 2019 the Parish Council decided that no objection should be raised in respect of the draft Local Plan for 2015 - 2035 but, that the Clerk be requested to register the Council’s concerns about the absence of meaningful traffic impact assessments when developments are considered because:
- there is no reliable, or current, base data for traffic movements on A, B and classified unnumbered roads which makes meaningful assessment impossible.
- traffic impact assessments are only ever undertaken within the immediate area of a proposed development by developers’ contractors.
- traffic impact assessments ignore the impact of developments on the road network in communities near to proposed developments.
- traffic impact assessments do not take account of the loss of amenity in nearby communities.

It is requested that consideration be given to requiring more meaningful traffic impact assessments in future so that the effects on the local road network and communities are properly considered and any Section 106 financial considerations are applied to the affected communities in consultation with the Parish Council(s) in the area. (SEE EMAIL FOR IMAGE OF AREA)

Summary:
The Parish Council raises no objection to the Draft Local Plan. But it would like to register it’s concerns about the absence of meaningful traffic impact assessments when developments are considered because:
- there is no reliable, or current, base data for traffic movements on A, B and classified unnumbered roads which makes meaningful assessment impossible.
- traffic impact assessments are only ever undertaken within the immediate area of a proposed development by developers’ contractors.
- traffic impact assessments ignore the impact of developments on the road network in communities near to proposed developments.
- traffic impact assessments do not take account of the loss of amenity in nearby communities. Consideration should be given in the future to more meaningful traffic impact assessments so that the effects on the local road network and communities are properly considered and any Section 106 financial considerations are applied to the affected communities in consultation with the Parish Council(s) in the area.

Response:
The Council notes the comments regarding traffic impact assessments. Traffic modelling has taken place as part of the Local Plan process for both the local and strategic road network. They are also undertaken as part of planning applications.

Comment:
Thank you for consulting Wakefield Council on the Publication Draft of the Doncaster Local Plan. Officers have reviewed the plan and have no comments to make on this draft of the plan. The Council supports the plans submission for public examination.

Summary:
Wakefield Council has reviewed the plan and has no comments to make. The Plan is supported for submission for public examination.

Response:
Noted. Support is welcomed.
After reviewing the Doncaster Local Plan, it contains policies on: - protecting playing fields in accordance with the NPPF. - promoting new sport facilities as part of new housing developments in accordance with their PPS - and promoting active design. This considers the plan meets the tests of soundness.
This is a good Plan. First of all, the Plan has clearly been informed throughout and its policies drafted to achieve consistency with the National Planning Policy Framework. It also very clearly recognises that the basis on which the Plan has been prepared could change within a short timescale and this is reflected in the commitment to review the Plan at least every 5 years and in the flexibility provided particularly by Policy 2(5) Countryside and Policy 26. The Plan balances the Council’s aspirations for economic growth/to achieve a more diverse economy and to increase the supply of homes to meet all needs/to create mixed and balanced communities with the need to protect environmental and heritage assets and to recognise technical constraints to the development.

Summary:

**Comment:**

I am responding on behalf of the Sheffield City Region (SCR) Local Enterprise Partnership and the SCR Mayoral Combined Authority, particularly in regard to the headline economic growth ambitions of the LEP and their linked ambitions for housing in the City Region. As set out in my previous response to the informal consultation stage of the Local Plan (26 October 2018), Doncaster has an important role to play in delivering the growth ambitions of the SCR Strategic Economic Plan. As such, I note that the Local Plan has the aim of delivering 481 ha of employment land over the 2015-2035 period which would make a significant contribution to our economic targets as well as provide headroom to deliver any new targets being developed through a refresh of the current Strategic Economic Plan. The Local Plan also emphasises the important position of Doncaster Urban Centre, Doncaster-Sheffield Airport and Unity. These are three of eight Major Growth Areas identified by the MCA and LEP in its Integrated Infrastructure Plan for SCR and in subsequent work on investible propositions. The areas have a significant role in the city region’s economic future and it is therefore right for these areas to play a key role in the Local Plan. Linked to their economic ambitions, the LEP and MCA have also emphasised the important role that new housing has to play in creating the conditions for growth. The Local Plan’s aim of delivering 18,400 new homes between 2015 and 2035 (ie up to 920 per annum) is therefore welcomed as an ambitious target which is above and beyond the Government’s own Local Housing Need calculation, reflecting an uplift for the growth envisaged. Although the refresh of the LEP’s current Strategic Economic Plan is still be concluded, I support the work that has been done to anticipate this in Doncaster’s Local Plan and consider that the housing requirement it sets will help to deliver the growth ambitions that we set in a new Strategic Economic Plan. Furthermore, the new Strategic Economic Plan is also likely to focus upon sustainability, inclusion and quality of economic growth which aligns with the proposed Local Plan.

**Summary:**

The response is on behalf of the SCR LEP and the SCR Mayoral Combined Authority in regard to the LEP economic growth ambitions and the linked housing ambitions. Doncaster has an important role to play in delivering the SCR’s growth ambitions. Note that the Local Plan aims to deliver 481 ha of employment land over the plan period which will make a significant contribution to the SCR economic targets and provide headroom to deliver new targets through the refresh of the Strategic Economic Plan. The Local Plan correctly emphasises the position of Doncaster Urban Centre, Doncaster Sheffield Airport and Unity which are three of the eight Major Growth Areas identified in the SCR Integrated Infrastructure Plan and investible propositions. The Local Plan’s aim of delivering 18,400 new homes within the plan period is welcomed as an ambitious target which is above the Government’s own Local Housing Need calculation. The work on the Local Plan is supported and consider that the housing requirement will help to deliver growth ambitions that will be set in the new Strategic Economic Plan. The new SEP will also focus on sustainability, inclusion and quality of economic growth which will align with the Local Plan.

**Response:**

Noted. The support given by Sheffield City Region/Mayoral Combined Authority is welcomed.
In principle the Council has resolved to support the Local Plan. The Council recognised the need for Doncaster to introduce a planning framework through the Local Plan to help shape the growth and development of the district. Notwithstanding the Council's general position of support, the Council would like to make the following comments: (SEE OTHER COMMENTS)

Summary:
Comment noted

Response:
Support in principle welcomed
Comment:
Highways England has not yet reached a position whereby we can determine the plan to be sound or unsound. We are currently working with Doncaster to undertake technical assessments of the traffic impacts of Local Plan traffic on the Strategic Road Network (SRN). Our expectation is to have an agreed position prior to Examination in Public (EIP).

Summary:
Highways England cannot yet determine whether the plan is sound or unsound. Highways England is working with DMBC to undertake technical assessments of the traffic impacts on the SRN. Highways England expects to have a position agreed prior to Examination.

Response:
Position is noted and discussions are ongoing as part of the technical assessment the Representation refers to.

IGas supports the process of local plan considerations and wishes to ensure that any proposed plan with respect to onshore hydrocarbons is sound and meets with the criteria and policies outlined by Government in the NPPF (as amended), Planning Practice Guidance and related Written Ministerial Statements. In particular, any policy framework which serves to significantly impede or prevent such development in areas where minerals are found and have been licensed by the Government for hydrocarbon development, will be contrary to national policy unless there is strong evidential justification. The planning process for onshore oil and gas is one of five regulatory processes that are required under the current policy framework set by government. It is, therefore, considered that the Plan should reference each regulatory function and identify those areas, which fall outside of the planning process. Planning Policy Guidance 012 and 122 make clear that mineral planning authorities are not responsible for matters covered by other regulatory regimes. It states, MPAs “should assume that these regimes will operate effectively. Whilst these issues may be put before mineral planning authorities, they should not need to carry out their own assessment as they can rely on the assessment of other regulatory bodies.” This planning policy principle has been re-confirmed in a number of legal cases (see Frack Free Balcombe Residents Association v West Sussex CC 2014). (Note 1 - [http://www.bailii.org/ew/cases/EWHC/Admin/2014/4108.html](http://www.bailii.org/ew/cases/EWHC/Admin/2014/4108.html))

**Summary:**

Any policy framework which serves to significantly impede or prevent such development in areas where minerals are found and have been licensed by the Government for hydrocarbon development, will be contrary to national policy unless there is strong evidential justification.

Comment noted
The NYCC Council Plan 2019-2023 sets the ambition that 'North Yorkshire is a place with a strong economy and a commitment to sustainable growth that enables our citizens to fulfil their ambitions and aspirations' with priorities including, 'Delivering a modern integrated transport network - delivering a Strategic Transport Prospectus and Local Transport Plan, connecting North Yorkshire to the rest of the North and the UK'; and, 'enhancing the environment and developing tourism and the green economy, by promoting and improving the county’s environmental, ecological and heritage assets to deliver a high quality natural and built environment?' The Strategic Transport Prospectus sets out how NYCC would like to work with government, Transport for the North and the Northern City Regions on transport improvements and to ensure that improved transport connections allow England’s largest County to both contribute to and share in the economic benefits of The Northern Powerhouse. It identifies three Strategic Transport Policies: - Improving east-west connectivity (including Trans Pennine links) - Improving access to High Speed and conventional rail - Improving long distance connectivity to the north and south

### Comment:

Following our most recent Parish meeting and on the resident's feedback we have previously reviewed the Draft proposal on Homes and Settlements and the accompanying Green Belt Reviews, Sustainability Appraisal along with the Feedback from previous consultations. Reference has also been made to the various accompanying evidence based Reports and the amended Vision, Aims and Objectives and consideration has been given to the Local Plan in its entirety, including the Appendices, HELAA, Settlement Background Paper, Settlement Audit, Local Plan Evidence Base, Doncaster Infrastructure Strategy, Green Belt Topic Paper, Green Belt Stage 3 Site Summaries, Section 106 Monitoring Report, and NPPF March 2019. Based on available documents the Marr Residents have requested that I, on their behalf, formally register their contribution to the Inspector on the updated proposals for Doncaster’s Local Plan. Marr Parish Meeting agreed that its response could be better conveyed through a written submission. We would like to congratulate the Council on their in-depth analysis and acknowledge the work and effort of DMBc staff in collating these reports, with special recognition to the Planning Department for their time and effort in collating these reports. We would also like to pass on our personal thanks to the Planning Officers for their assistance in explaining how the proposals within the Local Plan may affect our Parish. This was very much appreciated and their proactive response encouraged a belief that our resident's views were important and would be carefully considered. We appreciate the extended deadline for contributions, as once again, time scheduling of the consultation process has been conducted during holiday periods. However, due to the vast number of reports that have only recently been made available, together with the very short consultation period, this has meant it has been an onerous task for the Parish to assimilate and review the information from the numerous and lengthy documents in order to form its opinion and give credible feedback. We would like to suggest and reiterate once again, that for future consultations, Reports are made publically available when they are completed in a timelier manner rather than, in this instance, all reports generated over the two years being released all at once. This would greatly assist local Parishes. The Joint Rural Parishes are to submit a more detailed feedback on the Local Plan on our behalf, all of which Marr Parish Meeting fully supports and endorses.

### Summary:

To aid future consultations, it is suggested that Local Plan reports should be made publically available when they are completed rather than being released all at once during one consultation.

### Response:

Comments are noted - the vast majority of the local plan evidence base was published alongside the 2018 consultation. It is not always possible to publish documents on an ad-hoc basis as there are democratic and constitutional decision-making processes that must be followed. For example, the decision to publish the Local Plan (Reg 19) is a Full Council function. The documents were made available for a period of 7 weeks, which is considered as being reasonable, and in line with the Statement of Community Involvement. It is noted that the Planning Regulations only require a 6 week consultation.
Wadworth Parish Council have no comments to make.

Response:
Noted
Public consultation took place in July 2015 when High Melton College was operational as outlined in Doncaster Infrastructure Strategy Annex, Education Learning Chapter 2 page 15 2.22 Education. Developments/changes since that time will have a major impact on the everyday life of local residents and no further consultation has taken place. The site went up for sale in 2017 and since then a preferred bidder has been on the scene for 2 years and other than securing a grant from Sheffield City Region of £4.1 million (Chapter 8 6.4) no further action has taken place and the site remains semi-derelict in the ownership of DN Colleges Group. Chapter 6, Community, Sports and Culture Facilities page 61, Local residents are well aware that in the event that this development proceeds there will be a need to build large sound studios on Greenbelt land. DMBC by agreeing to contribute £2.1 million to this development are approving the development of this project on this site without any consultation with residents or Parish Council or any reference to permission needed from Secretary of State. (Contrary to National Policy Framework White Paper 2012 1.39 ref Greenbelt land.) By doing so, DMBC has not followed national planning policy and additionally by not disclosing "special circumstance" for the use of this Greenbelt land DMBC are being not compliant with this legislation. There is ambiguity in the Doncaster Infrastructure Strategy document regarding the status (as at September 2019) of the High Melton College site. Is a one-off consultation adequate in these dynamic changing times? PROPOSED CHANGE Clarity on the status of the High Melton College site is needed. The site is neither operational as a college, nor does it appear to be in development as a media venture. There is indeed uncertainty as to whether this preferred bidder has the capacity to raise the funds to go ahead with this development. Acknowledgement that in some circumstance on-going consultation is needed to meet with the requirement of Statement of Community Involvement. (Town and Parish Councils page 7 3.22) Transparency on the status of Greenbelt land is required not an arbitrary re-designation of Greenbelt land to ‘formerly’ Greenbelt land. (Settlement Profile Table H2(P) and H2 (K)

Summary:
Clarity is sought as to the Local Plan status of the former High Melton College site following its closure and subsequent proposals to redevelop the site for film studio, noting the outdated reference within the Infrastructure Strategy to it being an operational college. Concern should the site be removed from the Green Belt.

Response:
The site is currently designated as Green Belt in the current development plan (UDP) and is remaining in the Green Belt as per the local plan. Any proposal therefore would need to comply with national planning policy and demonstrate very special circumstances.

The consultation response of the Joint Rural Parishes Group is endorsed and supported.

Noted
The Duty to Cooperate is a legal requirement established through Section 33(A) of the Planning and Compulsory Purchase Act 2004, as amended by Section 110 of the Localism Act. It requires local authorities to engage constructively, actively and on an ongoing basis with neighbouring authorities on cross-boundary strategic issues throughout the process of plan preparation. As demonstrated through the outcome of the 2012 Coventry Core Strategy Examination, the 2013 Mid Sussex Core Strategy Examination and the 2016 St Albans Local Plan Examination, if a Council fails to satisfactorily discharge its Duty to Cooperate, this cannot be rectified through modifications and an Inspector must recommend non-adoption or withdrawal of the Plan. Whilst Gladman recognises that the Duty to Cooperate is a process of ongoing engagement and collaboration as set out in the PPG, it is clear that it is intended to produce effective policies on cross-boundary strategic matters. In this regard, Doncaster Council must be able to demonstrate that they have engaged and worked with neighbouring authorities, alongside their existing joint working arrangements, to satisfactorily address cross-boundary strategic issues. This is not simply an issue of consultation but a question of effective cooperation. The need to positively plan to meet full housing, development and infrastructure needs across neighbouring local authority areas should not be underestimated. It is all too easy for the duty to cooperate to be seen as an administrative exercise, however the fundamental social and economic need to ensure a supply of land for good quality housing and employment uses to meet requirements across a wider area is a key issue that must be addressed appropriately through the plan making process. Whilst it may be the case that a local planning authority has sought to work positively with its neighbours, the extent to which a plan tackles strategic priorities that arise from that strategic cross-boundary working and its associated evidence base are issues to be explored and considered from an early stage in the plan making process and ultimately in assessing the soundness of the Local Plan. Important cross-boundary issues should not simply be deferred for consideration at a later date.

Summary:

Refers to the need for the Local Plan to satisfy the requirements of the Duty to Cooperate and in particular to plan positively to meet full housing, development and infrastructure needs.

Response:

Comments are generic and not specific to Doncaster’s local plan and the Duty to Cooperate.
Comment:
Apologies for the delay in getting back to you. I have looked at your draft SOCG and my only comment is why Selby is not included in agreement 4 relating to Gypsy and Traveller provision. As a neighbouring authority, surely there is the potential for cross-boundary impacts?

Summary:
Have looked at the draft SOCG - why is Selby not included in agreement 4 relating to Gypsy and Traveller provision. Surely there is the potential for cross-boundary impacts?

Response:
Noted and agreed. The Statement of Common Ground has been amended to include Selby in Agreement 4.
Comment:

Thanks for the amendments to the SoCG to address the concerns we raised. Having read through the revised draft then subject to their being no further fundamental changes we would be happy to sign up to the relevant agreements identified for Rotherham. I can confirm that the signatory would be Councillor Denise Elliott: Cabinet Member - Jobs and the Local Economy. We would expect to take a briefing note to Cllr Elliott and the Leader to endorse sign up to the final SoCG, and we do have monthly briefing meetings with Cabinet Member so I would not envisage the sign off taking too long from our side of things. We are hoping to let you have some comments on the Publication Local Plan too in due course.

Summary:

Thanks for the amendments to the SoCG to address the concerns we raised. Subject to there being no further fundamental changes we would be happy to sign up to the relevant agreements identified for Rotherham. The signatory would be Councillor Denise Elliott: Cabinet Member - Jobs and the Local Economy. We would expect to take a briefing note to Cllr Elliott and the Leader to endorse sign up to the final SoCG, and we do have monthly briefing meetings with Cabinet Member so would not envisage the sign off taking too long from our side of things.

Comment:
We are fine with the amended version. My only queries are in relation to the section about the Joint Waste Plan. Paragraph 82 (shown below) refers to the authorities preparing a Memorandum of Understanding. Should this be Statement of Common Ground? Also beyond a SOCG do we need a formal legal agreement? Waste Management (ref 17) 82. Doncaster previously co-operated with Barnsley and Rotherham Councils to produce the Joint Waste Core Strategy, adopted in 2012 and continue to co-operate in the ongoing monitoring of the Plan. Doncaster contributes to ongoing co-operation regarding waste through the Yorkshire and Humber Waste Technical Advisory Board. The authorities of Doncaster, Rotherham, Barnsley and Sheffield are working towards producing a new Joint Waste Local Plan. The authorities are currently procuring consultants to produce an initial evidence base to identify what is needed and will use this information to identify the next stages of the project. All the authorities still need to sign up to a memorandum of understanding and legal agreement directly relating to the production of the Joint Waste Local Plan.

Summary:
Fine with the amended version of the Statement of Common Ground. Paragraph 82 of the current Statement of Common Ground refers to a Memorandum of Understanding, should this refer to a Statement of Common Ground instead?

Response:
Noted. A Memorandum of Understanding will be produced in the interim in order to produce the Waste Plan. A Statement of Common Ground will be produced after that.

East Riding welcomes the changes that have been made to this draft Statement of Common Ground based on our earlier comments. However, in line with the comments above regarding minerals and aggregate supply and earlier comments referring to how Doncaster calculates its aggregate landbanks in the LAA, the Council would recommend changes to Agreements 19.3 and 19.7 as follows:

Recommendations for Agreement 19.3:
The Text in this agreement be amended to read (tracked changes in red - COLOUR CANNOT BE SHOWN SO SHOWN AS CAPITAL): "That there are national, regional and sub-regional concerns regarding the supply of concreting aggregates, namely sharp sand and gravel. Doncaster, Nottinghamshire, North Yorkshire and East Riding’s supply of sharp sand and gravel is declining. SUBJECT TO SHORTAGES IN AGGREGATE SUPPLY BEING RECOGNISED AS PART OF LANDBANK CALCULATIONS WITHIN DONCASTER’S LAA IT IS ACKNOWLEDGED THAT resources from other areas may be required (in the long term) to provide additional imports into the South Yorkshire sub-region to meet Local Plan requirements. This raises concerns of accelerated resource depletion. THE LANDBANK DROPPING BELOW THE 7 YEAR LEVEL FOR SAND AND GRAVEL AND 10 YEARS FOR CRUSHED ROCK WOULD BE A GOOD INDICATOR OF AGGREGATE SHORTAGES IN THE BOROUGH". It is noted that the agreement references ‘Local Plan requirements’. However in reviewing the Publication Draft Local Plan, no reference to what the requirements are could be clearly found. Recommendations for Agreement 19.7: - Should refer to ‘each non-primary aggregate producing authority’. - Add ‘for example by making greater use of secondary and recycled aggregates, where possible after the bracketed section of the agreement. - At the end should refer to ‘primary aggregate producing authorities’ rather than ‘Mineral Planning Authority areas’.

If the changes suggested above can be made, I can confirm that East Riding will be happy to sign up to this statement of Common Ground, subject to agreement with our Portfolio Holder for Enhancing Communities. I can also confirm that East Riding Council will be able to sign this Statement of Common Ground, within 1 month of you sending the request to us with the final version of the Statement.

The comprehensive evidence base identifies the land bank is not the ‘principle’ indicator in Doncaster for identifying an issue with the security of aggregate mineral supply. This is identified by the depleting reserve and supporting evidence base documents, which reiterates the sharp sand and gravel required for concrete forms only 20 to 30% of the 5.6Mt reserve. There is no requirement in the NPPF / NPPG or the Managed Aggregates Supply System (MASS) that requires the setting of a fixed uplifted figure to ensure the land bank decreases to show an issue with security of supply. The MASS does not work for Doncaster. As sand and gravel sites go ‘off line’ and are not replaced (due to resource depletion) output will continue to decline and give the false impression of a long land bank. Doncaster will provide a separate note in the SoCG identifying what East Riding agree and disagree on.
I can confirm that North Lincolnshire Council is content with the Revised Draft Statement of Common Ground and that there are no further issues that the council wishes to raise on this document or the Publication Version of the Doncaster Local Plan.

**Comment:**

The SYPTE provided a tracked changes version of the Draft Statement of Common Ground. In summary, they want the following added in to the document: 1. Para 69 should include reference to 'bus, tram, tram/train and train; 2. the Section on Rail should include a specific reference to local rail (service and infrastructure); and 3. have asked for 'SYPTE' to be inserted into Agreement 8, 9 and 10.

**Response:**

Noted. Appropriate amendments have been made to the Statement of Common Ground.
Comment:
Regarding the revised draft of your SOCG, thank you for taking account of most of our previous comments and suggestions. There is just one, regarding Waste management that we would like you to include, as per our previous submission as the revised version of the SOCG does not appear to have fully picked up on this. The text of your revised SoCG states “This is relevant but SCC have not yet formally confirmed their intention to prepare a joint Waste Plan. We recognise the importance of working with neighbouring authorities and are working jointly with them on producing a brief to procure a waste plan evidence base, ahead of any commitment to produce a joint plan.” As it is currently worded, in the revised version noted above and in the previous version SCC would have to disagree with that statement and would suggest replacing with the text previously suggested (see extract below). Appendix 2: Item 17 in the table - 'Waste Management' Our previous comments were as follows: 17) Waste Management This is relevant but SCC have not yet formally confirmed their intention to prepare a joint Waste Plan. We recognise the importance of working with neighbouring authorities and are working jointly with them on producing a brief to procure a waste plan evidence base, ahead of any commitment to produce a joint plan. As it is currently worded, SCC would have to disagree with this statement and would suggest replacing it with the following text: 'Work with the South Yorkshire authorities to undertake joint research into waste planning issues and investigate the potential of creating a new joint Waste Plan. Liaise with other relevant authorities as and when required.'

Response:
Noted and agreed. The Waste section of the Statement of Common Ground has been amended accordingly.

Comment:

Thank you for asking Wakefield Council to provide comments on the revised draft of the Doncaster Local Plan Statement of Common Ground. I can confirm that the Council have no further comments on the draft. As set out in the document our portfolio holder Cllr. Denise Jeffery will sign the final version when it is produced. This should take around 1 month as it will need to go to Cabinet Member Briefing. If this time scale is an issue for you please let us know when you send through the final version as we may be able to expedite the process.

Summary:

Wakefield Council have no further comments to make on the revised draft Statement of Common Ground. The relevant Portfolio Holder will sign the final version when it is produced.

Response:

Noted.
Agreement 7 states that 'A Memorandum of Understanding with Highways England may be required after Local Plan Adoption if mitigation cannot be agreed during plan preparation.' This agreement presents concern for Highways England given that in order to understand whether the Local Plan is sound, it is necessary to identify the scale of highways improvements required to accommodate Local Plan traffic and that there is confidence that they can be delivered. This should be determined before the plan is adopted. **PROPOSED CHANGE** Highways England would like to see this reference removed from Agreement 7. It is important to ascertain that it is possible for the cumulative impacts of the Local Plan development traffic to be accommodated on the SRN, either without mitigation or with mitigation on a scale that is deliverable. This needs to be determined prior to the adoption of the plan. The general principles (relevant to the Strategic Road Network) set out in the Local Plan Publication Version document and the Draft Statement of Common Ground are generally supported by Highways England, but the cumulative impact of the Local Plan upon the SRN is yet to be fully assessed. Highways England is currently working with Doncaster Council on the cumulative impact assessment to determine the principle of the mitigation requirements prior to EIP. The high level mitigation requirements can then be linked to the appropriate allocated sites and should form part of the Doncaster IDP. High level cost estimates are also to be produced. These costs are not intended to be published within the plan, but used as a guide to determine deliverability i.e. the soundness of the plan. Potential funding mechanisms for any necessary mitigation will also need to be outlined in the IDP.

**Summary:**

Highways England are concerned about Agreement 7 which states a Memorandum of Understanding may be required if mitigation cannot be agreed during plan preparation. In order to understand whether the plan is sound, it is necessary to understand the scale of highways improvements required to accommodate additional traffic and be sure they can be delivered. This should be determined before adoption. Proposed change: This reference should be removed from Agreement 7. It is important to ascertain that it is possible for the cumulative impacts of the Local Plan to be accommodated in the SRN, with or without mitigation, but this must be determined prior to the adoption of the plan. The general principles set out in the Local Plan and draft Statement of Common Ground but the cumulative impacts are yet to be fully assessed. Highways England is working with DMBC to this end, prior to Examination. High level mitigation can be linked to the appropriate allocated sites and should form part of the Infrastructure Delivery Plan. High level cost estimates will also be produced. These costs will are not intended to be published in the plan, but are a guide to determine deliverability (soundness). Potential funding mechanisms and mitigation will need to be outlined in the Infrastructure Delivery Plan.

**Response:**

Noted. Work is ongoing with Highways England and the Statement of Common Ground has been updated accordingly.
The Agreements identified within the Revised Draft SoCG that require Highways England to be a signatory are Agreements 3, 6 and 7. The principles of Agreements 3 and 6 appear appropriate and as such Highways England could sign these agreements. However, it is noted that there is a typo in Agreement 6 that needs to be addressed. This Agreement should read ”?..to ensure adequate infrastructure is provided to meet the scale and location of employment need.” The wording of Agreement 7 is unacceptable for Highways England. It is advised that the reference to “a MoU with Highways England may be required after Local Plan Adoption if mitigation cannot be agreed during plan preparation” should be removed from Agreement 7, before Highways England can agree to it.

Comments noted. The typo in Agreement 6 has been corrected as requested. A reference to an MoU has been removed from the Statement of Common Ground and words have been agreed by Highways England for a revised Agreement 7.
The County Council welcomes the opportunity to provide comments and considers this part of the on-going dialogue on cross-boundary strategic matters required under the Duty to Cooperate. Pleased to see the Plan progress to this advance stage through to submission.

Tests of Soundness:

Comment:

2.1 The Statement of Common Ground is currently in draft, with no signatories. It is noted that at the time of writing the Council's page identifies that there remain unresolved issues which will require further change. The extent and scope of these issues is not wholly clear. 2.2 Our client's interests in relation to the Statement of Common Ground primarily relate to accommodating housing needs. Table 2 of the Statement of Common Ground indicates that to date no neighbouring authorities are able to assist Doncaster in meeting its housing need. Likewise, Doncaster is not proposing to meet the needs of any neighbouring authorities. 2.3 Several neighbouring authorities, such as Sheffield, East Riding, Selby and Rotherham are in the process of updating their existing plans. It is, therefore, possible that these authorities may require assistance in the future. The Statement of Common Ground correctly states that the issue of housing need will be kept under review. Therefore, whilst our client does not wish to object to this issue at present, we reserve the right to make further comments at a later date.

Summary:
The SOCG is still draft and has no signatories. In respect to housing needs it states that Doncaster is not expecting any other authority to take any of its housing needs, and likewise is not planning to accommodate any neighbouring authorities need. Sheffield, East Riding, Selby and Rotherham are all in the process of updating their plans so therefore possible that they may require assistance in the future and the SOCG identifies that this will rightly be kept under review. Reserve the right to make further comments in due course.

Response:

Noted. The Statement of Common Ground concerns this iteration of the Local Plan. It will updated as and when a review of the Local Plan takes place.
The AWP decided that it was not appropriate to be a formal signatory to our Statement of Common Ground and instead should note the preparation of the SCG and a minute of the meeting to this effect should be appended to the SCG. The SCG will therefore reference this. I gather this approach has been taken in the SE and E of England AWPs to other SCG. The reasoning behind this is that the AWP does not get involved as a formal consultee on the development of Minerals Plans and is a technical body not a policy making one. As such it helps provide the background evidence for DTC discussions between authorities. As it involves the industry side also, the MPA and operators present did not consider they could be seen to "certify" any Plan in such a way when members/MPA may be raising formal objections. There was some discussion that the reference to AWPs within the MHCLG guidance resulted from lack of appreciation of this point.

Response:
Comment noted
Apologies for the very late response to your Statement of Common Ground (SCG) document from earlier this summer. Due to ongoing work on the remaining marine plan document drafting and limited staff resources during the summer, I am only able to reply in person to you now. I realise that the deadline for commenting on your SCG has passed, but wanted to make contact now to help with the future development of your plan/SCG. Your plan mentions that: “The following Prescribed Bodies have been consulted throughout the Local Plan preparation process and to date no response or communication has been received. Therefore, they are not mentioned further in this Statement. The bodies are: - Civil Aviation Authority - Marine Management Organisation. ” As you will note below this email, we did send a pro forma response to your email below, which would have been the case for any invitation to consult on your local plans that might have been sent to the MMO. I wonder whether this email might have ended up in a spam folder possibly? While we note your efforts to meet the Duty to Cooperate and appreciate the engagement, we do not consider there to be any significantly relevant cross-boundary issues arising from the Doncaster Local Plan to warrant agreement on a SCG. Issues to do with water quality and flooding in your area fall under the EA/other local authorities’ remit.

Summary:

Response:
Noted. The Statement of Common Ground has been amended to show that the Marine Management Organisation do not consider that there are any significant relevant cross-boundary issues arising from the Doncaster Local Plan.
Doncaster Council has been very supportive in helping to develop and agree an SCR wide Statement of Common Ground. This addresses strategic planning matters at the SCR scale and reflects all the points made above. A draft version of the SCR Statement of Common Ground was discussed at the Infrastructure Board in July 2019 and is due to be formally agreed later this year. I am happy that the draft Doncaster Statement of Common Ground is being developed to be consistent with the SCR Statement of Common Ground and look forward to both being finalised.

Response:
Noted. The support given by Sheffield City Region/Mayoral Combined Authority is welcomed.
Comment:

I object to the wording on page 3 of the Doncaster Local Plan 2018 as below:-

Looking Further Ahead 1.11 Improved understanding of residual flood risk to the Main Town of Thorne-Moorends following completion of Hydraulic Modelling being finalised by the Environment Agency at the time of Plan preparation. The lack of detailed modelling available prior to adoption of this version of the Local Plan's evidence base at that point.

I asked the Environment Agency to explain the above paragraph as with use of words such as 'completion' and 'finalised' it is difficult to work out whether the Hydraulic modelling has been completed. The whole wording of the paragraph is confusing and it shouldn't be and it certainly, to me reads that it has been completed. The Environment Agency, via an FOI request, sent me the following information which clarified that the Hydraulic Modelling was still in production. See following statement from the Environment Agency dated 17th September 2019.

The Hydraulic Modelling mentioned in paragraph 1.11 on pages 2 and 3 of the current local plan (publication version) is still in production. Once finalised and published it will provide a better understanding of flood risk in the borough, particularly round Thorne Moorends, however as it is still in production it couldn't be used by the Council to provide the evidence base. The Environment Agency made it easy it to understand.

Summary:

_objects to allocation of site 001. Hydraulic modelling is not complete as LP (page 11) states. EA has confirmed that modelling is not complete. Feels that this is misleading.

Response:

Section 1.11 'Looking further ahead' of the LP states that Hydraulic Modelling is being 'finalised' by the Environment Agency at time of the Plan preparation. It does not say the modelling is complete.
Comment: This Paragraph provides a good summary of the range and wealth of heritage assets across the Borough.

Summary: This Paragraph provides a good summary of the range and wealth of heritage assets across the Borough.

Response: Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum
We would endorse the identification of safeguarding Doncaster’s historic environment as being one of the Challenges for the Borough.
Comment:
Doncaster’s historic environment offers huge potential for the Borough in terms of helping to create distinctive, attractive places for people to live in, work in and visit. This ought to be recognised with the Opportunities. PROPOSED CHANGE Add the following to Table 1, Opportunities:
"Using the historic environment to create distinctive, attractive places"

Summary:
"Unsound" - Doncaster’s historic environment offers huge potential for the Borough in terms of helping to create distinctive, attractive places for people to live in, work in and visit. This ought to be recognised with the Opportunities. PROPOSED CHANGE Add the following to Table 1, Opportunities: "Using the historic environment to create distinctive, attractive places"

Response:
It is proposed to accept the proposed additional wording to Table 1 (Opportunities - Environmental section) as a minor non-material amendment to the Local Plan - proposed wording has therefore been included in the Schedule of Minor Non-material Amendments submitted alongside the Local Plan.
We would endorse the identification of Doncaster's high environmental quality and its rich and diverse historic environment being two of the Strengths of the Borough.

Summary:
Supports as 'sound' - We would endorse the identification of Doncaster’s high environmental quality and its rich and diverse historic environment being two of the Strengths of the Borough.

### Comment

One of the weaknesses of the area are the numbers of heritage assets that have been identified as being at risk. For example, Doncaster has the second-highest number of Conservation Areas at risk in Yorkshire. **PROPOSED CHANGE:** Table 1, Weaknesses insert: "Number of heritage assets identified as being 'at risk'"  

### Summary

'Unsound' - One of the weaknesses of the area are the numbers of heritage assets that have been identified as being at risk. For example, Doncaster has the second-highest number of Conservation Areas at risk in Yorkshire. **PROPOSED CHANGE:** Table 1, Weaknesses insert: "Number of heritage assets identified as being 'at risk'"  

### Response

It is proposed to accept the proposed additional wording to Table 1 (Weaknesses - Environmental section) as a minor non-material amendment to the Local Plan - proposed wording has therefore been included in the Schedule of Minor Non-material Amendments submitted alongside the Local Plan.
Anglian Water would wish to reserve our right to appear to serve our interest as a water and sewerage undertaker.

Tests of Soundness:

Comment:
The majority of the Doncaster area is served by Yorkshire Water and Severn Trent Water. Anglian Water is the sewerage undertaker for part of Doncaster Borough only (parishes of Auckley, Austerfield, Blaxton and Finningley) within and close to Doncaster Sheffield Airport. We are also the water undertaker for part of Finningley Parish. The following comments are submitted on behalf of Anglian Water and relate to our company area only. Objective 11: Anglian Water is supportive of the objective which relates growth in homes and jobs to new and improved infrastructure.

Summary:
Anglian Water is supportive of Objective 11 which relates growth in homes and jobs to new and improved infrastructure.

Response:
Comment Noted.
We support this Objective especially the encouragement given to the reuse of existing buildings and underused floorspace. This approach is not only sustainable but may also help to encourage the reuse of, and investment in, the Borough's underused heritage assets.

Summary:
'Sound'. We support this Objective especially the encouragement given to the reuse of existing buildings and underused floor space. This approach is not only sustainable but may also help to encourage the reuse of, and investment in, the Borough's underused heritage assets.

Response:
Support welcomed
The Doncaster Local Plan Publication consultation outlines 20 Objectives which will be used to guide and monitor delivery of the vision. It is important that the vision is capable of being delivered and that the Plan Objectives and Policies in the plan reflect the need to make the vision a reality. Broadly speaking, Gladman support the objectives set out in the Doncaster Plan. We do however consider that Plan Objective 4 requires rewording so as to ensure that it is not interpreted as meaning that development of brownfield land is prioritised over other sustainable development opportunities. The Council should seek to build upon mechanisms such as the Brownfield Register to encourage the re-use of previously developed land alongside greenfield opportunities.

Comment:

The Doncaster Local Plan Publication consultation outlines 20 Objectives which will be used to guide and monitor delivery of the vision. The Council should seek to build upon mechanisms such as the Brownfield Register to encourage the re-use of previously developed land alongside greenfield opportunities.

Response:

Comment noted. No proposed changes. It does not say the development of brownfield land is to be prioritised over other sustainable development opportunities. the objective encourages the re use of well located, underused brownfield sites and buildings.
We support this Objective. This will help to ensure that new development is of a high quality and reinforces the distinct identity of the various parts of Doncaster.
We support this Objective. Although the total number of designated heritage assets in Doncaster may be relatively small compared to some of the other authorities in Yorkshire, nonetheless, the area has a significant legacy of important buildings and features. It is important, therefore, that the plan sets out an appropriate strategy for the conservation of these assets.

Summary:

'Sound'. We support this Objective. It is important, therefore, that the plan sets out an appropriate strategy for the conservation of these assets.

Response:

Support welcomed
2.1 This section of the representation statement provides comment on the Local Plan Publication Version Consultation Document. 2.7 The vision seeks to ensure the sustainability of villages through appropriate development, yet there are no objectives which will ensure that the needs of rural villages will be met in accordance with paragraph 78 of the NPPF. Reference is only made to supporting the rural economy yet the housing needs of rural communities should also be supported. On this basis, the plan is not effective as the objectives should support the delivery of the vision.

Summary:
The vision seeks to ensure the sustainability of villages through appropriate development, yet there are no objectives which will ensure that the needs of rural villages will be met in accordance with paragraph 78 of the NPPF. Reference is only made to supporting the rural economy yet the housing needs of rural communities should also be supported. On this basis, the plan is not effective as the objectives should support the delivery of the vision.

Response:
Comment noted. The objectives serve as a ‘hook’ to hang the policies on. The Local Plan does focus new housing in the most sustainable locations. the settlement hierarchy identifies suitable locations for development including the main urban area, main towns and service towns & villages, and defined villages in rural locations. Smaller villages (in rural locations) also have infill opportunities. See policies 2, 3 and 26.
Severn Trent are supportive of Objectives 19 and 20. “Encourages more efficient use of natural resources including water and secure and maintain a steady and adequate supply of mineral resources to facilitate development.” “Protect and enhance the quality of our water and soil resources (including high grade agricultural land).” To enable water companies to provide potable water for future generations, including growth it will be vital that we start to use of water more sustainably, development has the potential to have an adverse impact through increased demand or the contamination of water sources. The introduction of water efficient technology through new development can help to mitigate the impacts on water supply. Through the implementation of Sustainable Drainage Systems, helps to pass surface water through new developments and back into the natural water cycle cleanly helping to protect the natural water cycle.

Response:
Support Noted.
We support the Vision especially the intention that, by 2035, Doncaster will:
- enhance the vitality of the town centres and the wider Borough making a more attractive, healthier, safer and more active place to live, visit and work;
- protect and enhance the natural and historic environment including our tourist attractions, with new developments taking account of their local surroundings and character;
The HBF is generally supportive of the bullet point within the vision states that states that Doncaster will 'meet our communities housing needs and aspirations focusing growth in the main urban area, main towns, service towns and larger villages providing a diverse range of homes'. Meeting the housing needs of the area is a key element of the plan, which will not only provide social benefits but is required if the Council is to meet its economic aspirations.

Support noted.

**Comment:**
Gladman are supportive of the Council's vision for Doncaster to 2035. It is key that this positive vision remains within the Doncaster Local Plan and that it seeks to provide for economic growth and housing to meet the full needs of the Borough. Alongside this, it is fundamental that the associated infrastructure is planned for and delivered at the appropriate time.

**Summary:**
Gladman are supportive of the Council's vision for Doncaster to 2035. Comment:
2.1 This section of the representation statement provides comment on the Local Plan Publication Version Consultation Document. 2.2 Paragraph 2.13 of the consultation document acknowledges that Doncaster is largely rural yet this is not reflected in the vision. 2.3 The vision should be amended to give greater recognition to the rural nature of the Borough and support development in these smaller communities. The vision only refers to ensuring the sustainability of villages and rural economy through appropriate development, yet the plan and the vision needs to facilitate that appropriate development through identifying suitable development sites in and adjoining the villages. 2.4 There is also no recognition in the vision that many of the small rural settlements are not in isolated locations and therefore services and facilities can be easily accessed from rural settlements. For example, residents of Clayton can readily access a range of shops and services in nearby Thurnscoe, which also has a train station thereby providing easy access to Doncaster. 2.5 Paragraph 78 of the NPPF supports this approach where it is stated that to promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. It is stated that planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby. This approach would apply to Clayton and the nearby settlement of Thurnscoe. 2.6 The vision is not therefore consistent with national policy in the context of the rural nature of Doncaster as the vision should be supportive of sustainable development in rural areas.

Summary:
The Local Plan acknowledges that Doncaster is largely rural yet this is not reflected in the vision. The Vision should be amended to give great recognition to the rural nature of the Borough and support development in the smaller communities.

Response:
Comment noted. The objectives serve as a 'hook' to hang the policies on. The Local Plan does focus new housing in the most sustainable locations. the settlement hierarchy identifies suitable locations for development including the main urban area, main towns and service towns & villages, and defined villages in rural locations. Smaller villages (in rural locations) also have infill opportunities. See policies 2, 3 and 26.
We respond on behalf of our client, Theakston Estates Ltd (Theakston Estates), in relation to land at Scawsby Lane, Scawsby (ref 436) which is located within the Main Urban Area (MUA). We welcome the Council’s ambitious strategy, which ties in with the Sheffield City Growth Plan, for Doncaster to "become an important economic hub". Given Doncaster’s location in proximity to Doncaster Sheffield Airport, the East Coast Mainline and the strategic road network, there is a clear opportunity for Doncaster to become a leading centre in logistics, aviation, rail and civil engineering which is recognised in the vision. Investment and growth in transport infrastructure is a key component of the Northern Powerhouse initiative to make the cities of the north a powerhouse for the UK economy once more. Capitalising upon its excellent road and rail links, and the international connectivity offered by Robin Hood Airport, Doncaster has become an important logistics hub. Similarly, the financial and business sectors have grown significantly, alongside a focus on creative and digital industries, further diversifying and strengthening Doncaster’s economy.

The outlook for Doncaster, in this context, is extremely positive with the Borough forecast to experience significant economic and population growth in the future. There are 20 draft objectives proposed to realise this vision including 9, 10 and 11 relating to homes and communities. Objectives 9 and 10 require that "housing provision meets the housing need and aspirations by increasing the provision of new homes for all to meet current and future needs" and to "focus new homes primarily within the main urban area of Doncaster". Theakston Estates agrees with the approach to focus the delivery of new housing in the main urban area (MUA) as this is clearly the most appropriate and sustainable location for growth. However, as set out in our other responses (including those to draft Policies 2, 3 and 6), the plan does not currently meet these objectives as there is a clear shortfall of sites identified in the MUA. Furthermore, the draft Plan is currently seeking that at least 50% of new homes is delivered in the MUA; however, the 'Doncaster Council Core Strategy 2011-2028' (adopted May 2012) seeks a higher figure of closer to 64% in the MUA. PROPOSED CHANGE To ensure a sound Plan through ensuring that its strategy is consistent with the Plan’s vision and objectives, additional sites need to be identified and allocated within the Main Urban Area. This is discussed in response to Policies 2, 3 and 6.
Comment: Persimmon Homes support the general vision for the Borough. However, it is noted that the economic aspirations for the Borough do not align with the housing targets set. In order to meet economic growth aspirations, the Council should seek to deliver the required number of homes to provide for the necessary labour force. This point is discussed further below.

Summary: Persimmon Homes support the general vision for the Borough. However, it is noted that the economic aspirations for the Borough do not align with the housing targets set. In order to meet economic growth aspirations, the Council should seek to deliver the required number of homes to provide for the necessary labour force.

Attend Examination: Attend Hearing

Reason: In order to explain further the rationale behind the suggested changes and be given the opportunity to respond to any changes the Council propose to make and any further evidence that is presented.

Area: Chapter 3: Our Vision for the Future

Policy: Vision & Objectives

Tests of Soundness: Positively prepared

Comment:

4.1 Peel supports the overall strategic Vision and Objectives of the LP and their emphasis on supporting a strong and productive economy within Doncaster and the wider region. These also refer to the need to focus on enhancing its distinctive strengths and assets to better connect Doncaster to other economies, alongside creating significant new job opportunities for local residents within a key economic hub. 4.2 Peel specifically welcomes the reference to Doncaster becoming a 'leading centre in logistics and aviation' and the willingness to harness the potential of the 'growth corridor' between the airport and Doncaster town centre. However the vision should also be specific that by 2030, the region’s international gateway airport (DSA), will have grown significantly in terms of passenger and cargo throughput and the range, extent and choice of flight destinations; the aim is for it to have developed into a genuine intercontinental gateway, with further scheduled intercontinental services beyond the already launched Trans-Atlantic destinations. Alongside an enlarged DSA will be a significant mixed-use growth area. Collectively, the Airport and the adjoining growth area are branded and identified as AeroCentre Yorkshire (ACY). In this context it is important to specifically identify that DSA/ACY is included within the growth corridor. The accompanying objectives and should be reworded to ensure consistency and clarity.

Summary:

Support the overall strategic vision and objectives of the plan and the emphasis on supporting a strong and productive economy. Specifically welcome the reference to Doncaster becoming a leading centre in logistics and aviation and the willingness to harness the potential of the growth corridor between the airport and town centre. The vision should also specify that by 2030 the airport will have grown significantly in passenger and cargo terms and developed into a genuine intercontinental gateway with new intercontinental services beyond those already launched. There will also be a significant mixed-use growth area alongside this. It is important to specifically identify the airport / AeroCentre Yorkshire in the growth corridor. The accompanying objectives should be reworded for consistency and clarity.

Response:

Comment Noted. No proposed change to the vision and objectives to make them more specific to one business. The Local Plan supports the sustainable growth of Doncaster Sheffield Airport in key proposals and with a policy in the Local Plan. See Local Plan summary page 2 and chapter 5.
We have no comment on the vision however some observations on the objectives; Objective 4 states; We have no argument with the sentiment of this objective but should be reworded to ensure existing business are not hampered in the ability to operate due to new development encroaching (agent of change principle NPPF para 182) as follows; Proposed Changes (deletions in strikethrough; new text in bold) - These cannot be shown therefore deletions shown in brackets with X either sides (x deleted text x) and new text in CAPITAL) encourage the re-use of sites and buildings, especially well located and underused brownfield land (e.g. redundant/unused land and empty properties) WHILE ENSURING ANY EXISTING BUSINESS /OPERATIONS ARE NOT PREJUDICED BECAUSE OF ANY SUCH NEW DEVELOPMENT, to help revitalise areas of low demand and stimulate growth;

**Summary:**
No comment on Vision. Proposed added text in capitals Objective 4. encourage the re-use of sites and buildings, especially well located and underused brownfield land (e.g. redundant/unused land and empty properties) WHILE ENSURING ANY EXISTING BUSINESS /OPERATIONS ARE NOT PREJUDICED BECAUSE OF ANY SUCH NEW DEVELOPMENT, to help revitalise areas of low demand and stimulate growth.

**Response:**
Comment noted. No proposed change. Policies in the Local Plan will consider the appropriateness of new development.
Comment:
2.1 The Local Plan sets a clear and ambitious vision for the future of the borough. The Local Plan is informed by the 'Team Doncaster' strategy 'Doncaster Growing Together'. This strategy has an over-arching vision for Doncaster to be a "thriving place to learn, work, live and care". The Local Plan (para. 3.4) clearly sets out that the vision is informed by the ambitions of the City Region, its Strategic Economic Plan as well the Northern Powerhouse. The vision is also supported by several clear outcomes, including: - be a more important economic hub with a stronger, more balanced and productive economy; - become a University City and ensured residents have the education and skills businesses need; - meet our communities housing needs and aspirations focusing growth in the main urban area, main towns, service towns and larger villages providing a diverse range of homes, services and improved links in between; - enhance the vitality of our existing town centres and the wider Borough making a more attractive, healthier, safer and more active place to live, visit and work; and - ensure the sustainability of villages and rural economy through appropriate development. 2.2 Our client is supportive of this vision and the identified outcomes. 2.3 The Local Plan and its policies must provide a positive framework for the future of the Borough; in a way that is aspirational but deliverable. The economic aspirations of the Borough are clear in their intent to expand existing and attract new business; become an important economic hub, a University City and a leading centre in logistics, aviation, rail and civil engineering. 2.4 The economic aspirations of the Borough must be matched by a clear commitment to deliver the area's future housing needs as a minimum. Objective 9 of the Local Plan seeks to; "ensure housing provision meets the housing need and aspirations by increasing the provision of new homes for all to meet current and future needs and create mixed and balanced communities." 2.5 Unfortunately, the proposed policies and strategy within the Local Plan do not meet this challenge. This clearly has implications for the soundness of the plan. Our client’s concerns are discussed in greater detail against the relevant policies below.

Summary:
Client is supportive of this vision and the identified outcomes. Economic aspirations of the Borough must be matched by a clear commitment to deliver the area’s future housing needs as a minimum. Proposed policies and strategy within the Local Plan do not meet this challenge resulting in soundness issues.

Response:
Comment noted. We acknowledge your support of this vision and outcomes.
2.4 We welcome the references in the Vision to Doncaster being an important economic hub with the goal of delivering a more balanced and productive economy, and having shaped economic success in line with Doncaster’s Inclusive Growth Strategy. 2.5 We do however consider that the wording in the Vision should be amended to align housing growth with the economic aspirations. This is partially covered in the Homes and Communities Objectives 9 to 11, however linkages between economic growth and housing could be better aligned in the Vision. 2.6 In relation to regeneration and community pride Objective 4 encourages the re-use of sites and buildings. It should be recognised that this encouragement does not constitute a prioritisation for brownfield land. There could be equally if not better located greenfield land that could “help revitalise areas of low demand and stimulate growth”, similar to brownfield sites, and this should be made clear.

Comment:

Response:

Comment noted. No proposed changes to objectives 4 and 9 to 11. The vision and objectives do align with the housing growth and economic aspirations of the borough. They are the 'hook' for the policies in the plan. Encouraging the re-use of sites and buildings, well located and underused brownfield land is a good objective to help revitalise areas and stimulate growth.

Summary:

Welcome references in the vision to Doncaster being an important economic hub with the goal of delivering a more balanced and productive economy, and having shaped economic success in line with Doncaster’s Inclusive growth strategy. The vision wording should be amended to align housing growth with economic aspirations. It should be acknowledged that for Objective 4, the encouragement of brownfield land does not constitute a prioritisation of it. There could be equal if not better located greenfield that could help revitalise areas of low demand and stimulate growth - this should be made clear.

Response:

Comment noted. No proposed changes to objectives 4 and 9 to 11. The vision and objectives do align with the housing growth and economic aspirations of the borough. They are the 'hook' for the policies in the plan. Encouraging the re-use of sites and buildings, well located and underused brownfield land is a good objective to help revitalise areas and stimulate growth.
UKOOG Response: Onshore oil and gas can make a positive contribution to Doncaster's vision and objectives, helping meet the aims of a Sustainable community. Specifically, the onshore industry can positively contribute towards the following objective areas; - Objective 1) 'encourage and support a competitive diverse and stable economy focusing' - Objective 2) 'create and improve access to high quality employment and training opportunities' - Objective 18) 'ensure that Doncaster adapts to the effects of climate change through careful planning and design of developments' - Objective 19) 'encourage more efficient use of natural resources';

Summary:
Chapter 3: Vision. Onshore oil and gas can make a positive contribution to Doncaster's vision and objectives, specifically objectives 1, 2, 18 and 19.

Response:
Comments Noted.
IGas is supportive of the development of a local plan for Doncaster, as it will establish the vision and objectives for development, including minerals, to 2035. IGas is of the view that onshore oil and gas can assist in achieving objectives 1 and 2. Further, IGas supports the intentions of 3.5 objective 17 to reduce the reliance on fossil fuels and minimise the impacts on climate change. IGas also supports the intentions of 3.5 Objective 19 to encourage the 'more efficient use of natural resources' and maintain a steady and adequate supply of mineral resources to facilitate development. IGas is of the view that onshore oil and gas development is compatible with this vision, specifically through the development of an adequate supply of domestic minerals under a regulatory environment superior to that of countries from which the UK imports its minerals. It is also important that the plan recognises the need to combat climate change. A domestic oil and gas supply offers significant carbon savings over fuels, which otherwise would be imported from overseas, possibly without regulatory regimes as strong as those in the UK, generating much needed local jobs in fields such as engineering and contributing to the transition towards a low carbon economy. Objective 19 could be enhanced by recognising that the more efficient use of natural mineral resources would contribute to the local and wider economy.

Summary:
Supports vision and objectives (IGas can support achieving objectives 1 and 2 and supports 3.5 to reduce reliance on fossil fuel. Objective 19 could be enhance to recognise the more efficient use of natural minerals to contribute to the local and wider economy)

Comment:

Summary of Vision and Objectives 4.1 The Local Plan Strategy is 'Doncaster Growing Together'. It has one vision for Doncaster; ‘A thriving place to learn, work, live and care.’ 4.2 The Strategy has four themes to bring the vision to life: - Learning - Working - Living - Caring 4.3 Paragraph 3.3 of the Plan states that a key ambition of the Strategy is to use economic growth to ensure that all residents can participate in a strong and productive economy with higher living standards. 4.4 The Plan sets out a number of targets to assist the growth of Doncaster over the next 15 years. This includes ’investing in the future, encouraging existing businesses to expand. Soundness of Providing the Vision and Objectives 4.5 We support the proposed vision and objectives set out in Chapter 3 of the plan. It is considered the strategy is sound as it has been positively prepared.

Summary:
support the proposed vision and objectives set out in Chapter 3 of the plan

Response:

Comment noted. We acknowledge your support of this vision and objectives
Persimmon Homes support the general vision for the Borough. However, it is noted that the economic aspirations for the Borough do not align with the housing targets set. In order to meet economic growth aspirations, the Council should seek to deliver the required number of homes to provide for the necessary labour force. This point is discussed further below.

Comment:
Persimmon Homes support the general vision for the Borough. However, it is noted that the economic aspirations for the Borough do not align with the housing targets set. In order to meet economic growth aspirations, the Council should seek to deliver the required number of homes to provide for the necessary labour force.

Response:
Comment Noted.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 3: Our Vision for the Future
Policy: Vision & Objectives

Comment:

**Comment:**

Gladman are fully supportive of the policy on Sustainable Development. The ethos of sustainable development is key to assessing planning proposals. This policy should provide assurance of a local approach to planning that will actively seek to improve the social, environmental and economic wellbeing of the area by ensuring that development demonstrably contributes to the specific strategy, local vision and objectives of the DLP. The ethos of achieving the delivery of sustainable development is key to assessing planning proposals and should also be reflected in the policy wording, as it is the key thread running through both the previous and revised Framework.

**Response:**

Support noted.
Comment: Point B) sets out the following: B) Planning applications that accord with the policies in this plan (and, where relevant, with policies in neighbourhood plans) will be approved without delay unless material considerations indicate otherwise. No reference is made to consulting with Statutory Consultees. PROPOSED CHANGE Following the adoption of the plan Highways England will still expect to be consulted on all planning applications that could potentially impact on the SRN. The traffic impact will need to be demonstrated and potentially mitigated. The principle of mitigation should be determined at the Plan stage and included within the IDP. The larger site allocations or those located close to the SRN may impact individually which will need to be assessed and potentially mitigated through the planning application process. Text could potentially be added stating that statutory consultees will be consulted.

Summary: Point B) makes no reference to statutory consultees. Proposed change: Highways England will still be expected to be consulted on all planning applications which impact on the SRN. The traffic impact will need to be demonstrated and potentially mitigated. This principle should be determined at Plan stage and included in the Infrastructure Delivery Plan. Large allocations or those close to the SRN may individually impact on the SRN and this will need to be assessed and potentially mitigated through the planning application process. Text could be added stating consultees will be consulted.

Response: There is no need to refer to consulting with statutory consultees in the policy wording or supporting text. As a statutory requirement this is required irrespective of the wording of any Local plan policy.
Comment: 2.1 Our Client welcomes the provision of a policy which sets out that development proposals will be considered in the context of the presumption in favour of sustainable development. However, as highlighted through previous consultation stages, the wording of the policy has too much repetition and parts b) and c) are unnecessary and should be deleted. Part a) of the policy quite rightly states that when considering development proposals the Council will take a positive approach which reflects the presumption in favour of sustainable development contained within the National Planning Policy Framework. That should be sufficient for the policy. 2.2 However, part b) and c) then set out the presumption in favour of sustainable development, but this does not accurately align the wording within the Framework. There is no reference to the presumption being subject to material considerations where proposals accord with policies in the plan. 2.3 Our Client recommends that the policy is revised and that parts b) and c) should be removed.

Summary:
Policy 1 - presumption in favour of sustainable development. 1. Supports policy but parts b & c should be deleted, as they are unnecessary. 2. Parts b&c do not accord with the plan in that the presumption 'being subject to material considerations where proposals accord with policies in the Plan'.

Response:
Paragraph 036 Reference ID: 61-036-20190723 of the 'Plan Making' section of National Planning Practice Guidance requires Local Plan to set out how they will apply the presumption in favour of sustainable development locally. When read in conjunction with NPPG para 11, Policy 1 sets out the key principles as to how it will do this.
Comment:

2.1 Our Client welcomes the provision of a policy which sets out that development proposals will be considered in the context of the presumption in favour of sustainable development. However, as highlighted through previous consultation stages, the wording of the policy has too much repetition and parts b) and c) are unnecessary and should be deleted. Part a) of the policy quite rightly states that when considering development proposals the Council will take a positive approach which reflects the presumption in favour of sustainable development contained within the National Planning Policy Framework. That should be sufficient for the policy. 2.2 However, part b) and c) then set out the presumption in favour of sustainable development, but this does not accurately align the wording within the Framework. There is no reference to the presumption being subject to material considerations where proposals accord with policies in the plan. 2.3 Our Client recommends that the policy is revised and that parts b) and c) should be removed.

Summary:

Policy 1 - presumption in favour of sustainable development. 1. Supports policy but parts b & should be deleted as they are unnecessary. 2. Parts b&C do not accord with the plan in that the presumption 'being subject to material considerations where proposals accord with policies in the Plan'.

Response:

Paragraph 036 Reference ID: 61-036-20190723 of the 'Plan Making' section of National Planning Practice Guidance requires Local Plan to set out how they will apply the presumption in favour of sustainable development locally. When read in conjunction with NPPG para 11, Policy 1 sets out the key principles as to how it will do this.
Comment: Draft Policy 1 and the importance of sustainable development is generally supported, as advocated by paragraph 8 of the NPPF. It is positive that DMBC has also focused on sustainable development, as discussed under policies 2 and 3. DMBC, in parallel with the NPPF, has set out part A) of the policy in relation to economic, social and environmental benefits therefore development options should be brought forward in this context. Neighbourhood Plans form an essential part of the Development Plan, however we would question part B of the policy which states 'that planning applications that accord with policies in this plan (and where relevant, with policies in neighbourhood plans) should be approved’. We would like to highlight that under paragraph 30 of the NPPF, the provisions are in place for DMBC to override the Neighbourhood Plans if particular circumstances dictate. Recommendation 1: Doncaster should continue to strive for sustainable development on the grounds of sustainability (economic, social and environmental) as well as provide further details on relationship between the Local Plan and Neighbourhood plan in the interests of consistency with national policy and justified plan making.

Summary:
Policy 1 is generally supported. It is positive that has also focussed on sustainable development as discussed under Policies 2 and 3. We question part B of Policy 1 which states ‘that planning applications that accord with policies in this plan (and where relevant, with policies in neighbourhood plans) should be approved’. NPPF Paragraph 30 says that provisions are in place for DMBC to override the Neighbourhood Plans if particular circumstances dictate. It is considered that the Council should continue to strive for sustainable development as well as provide further details on relationship between the Local Plan and Neighbourhood plan so to be consistent with national policy and justified plan making.

Response:
No change is considered necessary. Local Plan and NPPF policy is to be read together. There is no need to duplicate the wording of NPPF para 30 in Policy 1.
Comment: UKOOG supports the approach advocated in the draft policy that, 'Doncaster’s strategic approach is based on a desire to deliver sustainable growth; growth that is not for its own sake, but which brings benefits for all sectors of the community' and 'when considering development proposals, we will take a positive approach that reflects the presumption in favour of sustainable development contained in the National Planning Policy Framework'. We believe that sustainable domestic development is of great importance to the UK. This is especially the case, as the plan makes clear, when it ‘brings benefits for all sectors of the community’. Failure to develop UK minerals in a sustainable and heavily regulated domestic environment will result in the offshoring of tax revenue, jobs, and our carbon emissions.

Summary:
Policy 1. Supports approach

Response:
Comment Noted
IGas supports Policy 1. Sustainable domestic development is of great importance to the UK. This is especially the case when it 'brings benefits for all sectors of the community'. Failure to develop minerals in a sustainable and heavily regulated domestic environment will result in the offshoring of tax revenue, jobs, and carbon emissions. It is important to recognise the contribution hydrocarbons can make in the transition to a zero carbon economy within the Plan period and to ensure the policies of the Plan are positively prepared in accordance with the NPPF. IGas has concerns that Policy 65 falls short of this requirement (see below).

**Summary:**
Policy 1 - supported. But must recognise the contribution that hydrocarbons make toward zero carbon economy and plan positively for hydrocarbons during plan period.

**Response:**
Comment noted. National Policy makes this connection
We welcome and support Policy 1. It is considered to be integral to ensuring that the growth of the Borough is sustainable and improves the economic, social and environmental conditions of the area.

**Summary:**
Policy 1 - welcome and support this policy. It is integral to ensuring the growth of the Borough is sustainable and improves the economic, social and environmental conditions of the area.

**Response:**
Noted. Support welcomed.

**Comment:**

Attendance at the hearing will enable a thorough discussion regarding the deliverability of the strategy of the plan.

**Area:** Chapter 4: Strategic Approach

**Policy:** Policy 1: Presumption in Favour of Sustainable Development

**Reason:**

Summary of Sustainable Development Strategic Policy

4.6 Policy 1 of the Plan sets out the desire to deliver sustainable growth which brings benefits to all sectors of the community. The policy states that the Council will work with applicants to find solutions which mean that proposals can be approved wherever possible and to secure development that improves the economic, social and environmental conditions of the Borough. Soundness of the Scale of Development

4.7 We support the proposed approach to deliver sustainable growth which is in accordance with National Planning Policy Framework. It is considered the policy is sound and has been positively prepared.

**Response:**

Support noted
3.6. We generally agree with Draft Policy 1. In continuation to the NPPF (para 8), there is great importance on sustainable development and it is a positive move that DMBC has also focused on sustainable development, also discussed under policies 2 and 3. Doncaster in parallel with the NPPF has set out part A) of the policy in relation to economic, social and environmental benefits. Therefore development options should be brought forward in this context. 3.7. However whilst we agree Neighbourhood Plans form an essential part of the Development Plan, we would question part B of the policy which states ‘that planning applications that accord with policies in this plan (and where relevant, with policies in Neighbourhood plans) should be approved’. We would like to highlight that under paragraph 30 of the NPPF, the provisions are in place for DMBC to override the Neighbourhood Plans if particular circumstances dictate. Recommendation 1: Doncaster should continue to strive for sustainable development on the grounds of sustainability (economic, social and environmental) as well as provide further details on relationship between the Local Plan and Neighbourhood plan in the interests of consistency with national policy and justified plan making.

Response:
No change is considered necessary. Local Plan and NPPF policy is to be read together. There is no need to duplicate the wording of NPPF para 30 in Policy 1.

Summary of Sustainable Development Strategic Policy

4.6 Policy 1 of the Plan sets out the desire to deliver sustainable growth which brings benefits to all sectors of the community. The policy states that the Council will work with applicants to find solutions which mean that proposals can be approved wherever possible and to secure development that improves the economic, social and environmental conditions of the Borough.  

Soundness of the Scale of Development  
4.7 We support the proposed approach to deliver sustainable growth which is in accordance with National Planning Policy Framework. It is considered the policy is sound and has been positively prepared.

**Summary:**

We support the proposed approach to deliver sustainable growth which is in accordance with National Planning Policy Framework. It is considered the policy is sound and has been positively prepared.

**Response:** Support noted
The matters raised in our representation go to the heart of the Local Plan. It is considered that attendance at the relevant hearing sessions will allow further comment to be made where appropriate.

Area: Chapter 4: Strategic Approach
Policy: Policy 1: Presumption in Favour of Sustainable Development

Comment:
We welcome and support Policy 1. It is considered to be integral to ensuring that the growth of the Borough is sustainable and improves the economic, social and environmental conditions of the area.

Summary:

Response:
Support noted.
We welcome and support the inclusion of the additional explanation of 'appropriate locations' as a footnote within this policy, and provision of the explanation below the policy (paragraphs 4.17 and 4.18). We note the reference to the Flood Risk Topic Paper - our comments on the draft are given below.

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy
Tests of Soundness: Unsound - not stated
Comment:
Whilst there are clear advantages to directing proportionately more growth to the larger and more sustainable towns and villages, the scale of growth proposed for each settlement must be compatible with safeguarding its character and landscape setting. PROPOSED CHANGE Policy 2, Section 1 (Overall Strategy), first Paragraph, line 2 amend to read: “... sustainable growth, appropriate to the size of the individual settlements and their capacity to accommodate that growth without harm to their character or landscape setting, that meets the needs ?”
Response:
Historic England’s request for reference to safeguarding character landscape setting of settlements is not considered necessary as such matters, alongside a whole host of other spatial planning objectives, are considered through the Sustainability Appraisal process in terms of both quantum's and distribution of development and then individual sites.
We support the clarification of what constitutes an 'appropriate location' in terms of non-allocated sites. We also welcome the requirement that such proposals should not significantly harm the settlement's character or appearance nor its rural setting. These measures will help to ensure that any proposals which do come forward safeguard the distinctive character of Doncaster's towns and villages.

Summary:
'Sound'. We support the clarification of what constitutes an 'appropriate location' in terms of non-allocated sites. We also welcome the requirement that such proposals should not significantly harm the settlement's character or appearance nor its rural setting. These measures will help to ensure that any proposals which do come forward safeguard the distinctive character of Doncaster's towns and villages.

Response:
Support welcomed

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness:

Comment:
We support the requirements set out in Criteria B and C. These will help to ensure that any development in the countryside adjacent to the Development Limits safeguards the settlement character and its landscape setting.

Summary:
'Sound'. We support the requirements set out in Criteria B and C. These will help to ensure that any development in the countryside adjacent to the Development Limits safeguards the settlement character and its landscape setting.

Response:
Support welcomed
Not positively prepared to address the climate challenge. Not justified by the available evidence of the need to address the climate challenge. NPPF Para 148 states that "The planning system should shape places in ways that contribute to radical reductions in greenhouse gas emissions?" No Local Plan policy can be more important to place-shaping than the spatial strategy and settlement hierarchy. Policy 2 makes no reference at all to the climate challenge, when for the Plan to be sound it should feature strongly in the opening paragraph. Policy 2 (5): Countryside Not positively prepared to ensure that new development is consistent with the rest of the settlement hierarchy; Unsound because there is no spatial strategy for the countryside. The settlement hierarchy essentially defines 'countryside' as being land outside development limits, and that on that land 'proposals for new development in the countryside, including those which support the rural economy, will be supported where in accordance with Policy 26'. Policy 26 is basically a development management policy. It is therefore worrying that, within this headline strategic policy, the majority of the text on development in the countryside is dedicated to the basis on which exceptions to that expectation of development could be made. In other words, the Plan offers no spatial strategy for the countryside, other than to express where the characteristics of the countryside and the rural economy could be diluted or circumvented to enable 'non-rural' development. Considering that the majority of land in the Borough is in the countryside (some Green Belt, some not) this is an alarming omission. Looking in detail at clauses A-E of Policy 2(5), they actually have the effect of creating an additional tier of the settlement hierarchy - sites which are outside all but the smaller, level 4 settlements, but which are not allocated in the Plan. The proposal is therefore that, in the absence of a 5-year borough-wide supply of housing land, development outside, but adjacent to, settlements will be supported so long as they accord with other policies in the Plan. It is easy to see why this policy would be unacceptable in practice, and would also attract a great deal of attention from landowners seeking to extract value from their land. For example, let us suppose that a significant brownfield site in Balby was allocated in the Plan, and was envisaged to contribute to the 5-year land supply. If an applicant could demonstrate that site's delivery would be delayed, and that this reduced the Borough's land supply to slightly less than five years, that applicant could make a strong case that their greenfield site just outside say, Harlington, would be supported by Policy 2(5) - despite the fact that it would inevitably be providing housing for a very different sector of the market. Therefore this policy creates a direct incentive for landowners and developers to talk down the 5-year land supply in order to gain planning permission in rural locations. This would undermine other policies in the Plan, including Policy 26, and would have a tendency to weaken the implementation of the spatial strategy and settlement hierarchy by enabling less sustainably-located development. PROPOSED CHANGE - Reworking the first paragraph of Policy 2 as follows: Doncaster's Spatial Strategy will focus on delivering development that is appropriate to the size and needs of individual settlements, and better equips those settlements to achieve the radical reductions in greenhouse gas emissions required by national policy. This development should meet the needs for new homes and jobs, regenerate places and communities, support necessary infrastructure, services and facilities, and enable transformative improvements to carbon efficiency and opportunities for active travel. Please also see our comments on Chapter 9, wherein our recommendations for a sub-area approach may also affect the use of the settlement hierarchy. Policy 2(5) amending to: provide a stronger spatial vision for the Borough's countryside (see our comments on Chapter 9); specify that 'small scale residential developments may be considered for permission if adjacent to a development limit in levels 1-3 above, where?' delete clause E so that this policy is not triggered by the 5-year supply, and such sites are not assessed on the basis of their strategic contribution to housing land supply - since this should have been established by the Plan.

Summary:
The Local Plan is not positively prepared to address climate change and not justified by the available evidence of the need to address climate change. Policy 2 makes no reference to climate change despite being a place making policy. Policy 2 (5) - Countryside - is not positively prepared to ensure that new development is consistent with the rest of the settlement hierarchy and is unsound as there is no spatial strategy for the countryside. It is worrying that in Policy 2 and Policy 26 (cross referenced), the majority of text is on development in the countryside is dedicated to the basis on which exceptions for development can be made. The plan offers to countryside spatial strategy other than to express where the characteristics of the countryside and the rural economy could be diluted or circumnavigated by non-rural development. This is alarming given how much of Doncaster is countryside. Policy 2 (5) A-E actually creates an additional tier of the settlement hierarchy which could allow countryside development in the absence of a 5 year supply. This could be open to abuse by landowners who could delay delivery of urban brownfield land to open up the opportunity to deliver greenfield land, with no regard for locational or end user similarities. This is unacceptable in practice. The policy creates an incentive for landowners to take down the five year supply to gain permission in rural locations. This would undermine other Plan policies, including Policy 26 and would weaken the spatial strategy and settlement hierarchy by enabling less sustainably located development. Proposed change: Policy 2 should be reworded to say: "Doncaster's Spatial Strategy will focus on delivering development that is appropriate to the size and needs of individual settlements, and better equips those settlements to achieve the radical reductions in greenhouse gas emissions required by national policy. This development should meet the needs for new homes and jobs, regenerate places and communities, support necessary infrastructure, services and facilities, and enable transformative improvements to carbon efficiency and opportunities for active travel." Policy 2 (5) should be amended to provide a stronger spatial vision for the countryside and specify that ‘small scale residential developments may be considered for permission if adjacent to a development limit in levels 1-3 above, where?’ Clause E should
be deleted so that this policy is not triggered by the 5-year supply, and such sites are not assessed on the basis of their strategic contribution to housing land supply - since this should have been established by the Plan.

Response:

Addressing climate change is a theme that runs throughout the plan. It is the intention of countryside policies to specify what is acceptable development in the countryside, but this does not mean the intention is to erode this. The countryside is strongly protected in the plan, but a differentiation has to be identified. NPPF para. 78 requires the promotion of sustainable development in the countryside. In the event of the lack of a 5-year supply, such sites would inevitably come under pressure in any event. No proposed amendments to policy wording.

Reason: To assist the Inspector by using our submitted representations to answer his/her questions, particularly in light of the evidence submitted by other representors and any other matters the Inspector may raise.

Area: Chapter 4: Strategic Approach

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness: Positively prepared

Justified

Summary: Unsound because it fails to show the potential for rail connectedness of many settlements, with potential implications for the settlement hierarchy. The only rail route shown in Figure 2 is the East Coast Main Line. This means that relatively strong rail connectedness of the following settlements is not shown: Conisbrough, Mexborough, Bentley, Adwick-le-Street, Kirk Sandall, Hatfield-Stainforth, Thorne. This is not simply an oversight of graphical representation. It allows the reader to consider the relationship between different centres in the Borough without visualising how they connect to each other by rail, and the potential implications of that for how those centres may be expected to provide services to their areas, and the levels of growth that may be appropriate there. For example, if a significant number of residents in a community are to be encouraged to use rail travel and reduce car dependency, then it is important to have enough local facilities situated along the walking routes from local stations to residential neighbourhoods; and there is also a need to facilitate higher residential densities in those areas to support the local facilities and rail patronage. PROPOSED CHANGE Show the full rail network on Figure 2, and indicate how rail accessibility informs the provisions for different centres.

Response: The base map shows the rail lines in the borough and the Settlement Audit, Settlement Strategy and Settlement Profiles (particularly) all cover rail connectivity both in the borough and on the wider network.
Comment:
Not justified in light of evidence of the need to address urban sprawl to the east of Doncaster. CPRE has consistently called for the completion of a Green Belt designation around Doncaster. The need for this is evidenced by the increasing risk of coalescence of settlements east of Doncaster, principally along the A18 where Edenthorpe (ie Doncaster main urban area), Dunsville, Duncroft and Hatfield have all stretched towards each other in recent years. This in turn has made it more difficult to direct large-scale development to regeneration areas including Hungerhill (Edenthorpe) and the Unity site at Hatfield-Stainforth.

Summary:
Policy not justified - there is evidence of a need to address sprawl in eastern Doncaster. CPRE has consistently called for the Green Belt to be extended around Doncaster. Settlements principally along the A18 are at risk of merging with each other (Edenthorpe and Hatfield). This has made it more difficult to direct large-scale development to regeneration areas such as Hungerhill or Unity.

Response:

**Comment:**

This policy sets out the proportion of homes that will be completed in the 'Main Urban Area', 'Main Towns' and the 'Service Towns and Larger Villages'. The HBF would expect the spatial distribution of sites to follow a logical hierarchy, provide an appropriate development pattern and support sustainable development within all market areas.

**Summary:**

Policy 2 sets out the proportion of homes that will be completed in the 'Main Urban Area', 'Main Towns' and the 'Service Towns and Larger Villages'. The HBF would expect the spatial distribution of sites to follow a logical hierarchy, provide an appropriate development pattern and support sustainable development within all market areas.

**Response:**

Noted.
Draft Policy 2 sets out the Council's spatial strategy and settlement hierarchy and states that new development will be focused in and around existing urban areas (primarily the MUA, the main towns and services towns and villages. This policy continues by stating that "at least 50% of new homes will go to the 'Main Urban Area'" (Theakston Estates emphasis). Theakston Estates agrees with the approach to focus the majority of housing delivery in the MUA. However, this is a significant dilution the amount of housing which was previously directed to the MUA, and endorsed by the Inspector, in the adopted Core Strategy which is up to 64% (Table 1). The supporting text states: "The South Yorkshire sub-regional centres (e.g. Doncaster) play an important part in driving economic growth but their ability to do this is hampered by a dispersed settlement pattern and unless this issue is resolved South Yorkshire will not be able to transform its economy and environment and address the problems of social disadvantage and exclusion." (para. 3.10). "The policy seeks to distribute growth and regeneration where it would do most good in terms of supporting prosperous and sustainable communities by improving the economic performance of towns, promoting regeneration and tackling deprivation. It seeks to achieve a balance between a focus on Doncaster and sufficient growth and regeneration in the outlying towns." (para. 3.12) The Inspector’s ‘Report to Doncaster Metropolitan Borough Council’ (26 March 2012) stated in relation to the Core Strategy distribution focusing on the MUA that: "In this way, the Core Strategy seeks to change the pattern of development to ensure better access to services and especially public transport. This is a vital aspect of sustainable development." (para. 35) (Lichfields emphasis) Importantly, with regard to the Doncaster MUA, the Inspector’s Report concludes that the "assets, challenges and potential of the town require a figure at or very near the top of that range." (para. 15) (Lichfields emphasis). As such, it is clear that the Inspector considered that the housing requirement for the MUA should be around 64%. Theakston Estates submits that the proportion of development in the MUA should follow the Core Strategy (i.e. 64% of new homes within the MUA). This would alleviate pressure on less sustainable settlements and would focus new development in the most accessible locations, which, as the Inspector advised in his report, is a vital aspect of sustainable development. Increasing the number of new homes delivered in the MUA would also make a significant contribution towards driving forward the economic growth of Doncaster as an important sub-regional centre in South Yorkshire. With regard to the settlement hierarchy, Theaston Estates agrees with the recognition in draft Policy 2 that to strengthen the role and to meet the growth objectives and regeneration needs, Doncaster MUA "will be the main focus for development in the Borough, including housing, retail, leisure, cultural, office and other employment development." Furthermore, there has been a substantial shortfall of completions in the MUA over the last 4 years, with an average of 42.7% being in this area. The number of completions in the MUA compared with the total for the Borough are provided in the following table: Year - 2014/15 MUA - 308 Borough Total - 881 Year - 2015/16 MUA - 459 Borough Total - 1,025 Year - 2016/17 MUA - 555 Borough Total - 1,049 Year - 2017/18 MUA - 426 Borough Total - 1,137 MUA - 1,748 Borough Total - 4,092 Source: Doncaster’s Residential Lane Availability Reports Taking the above into account, there is an identified need to achieve a step change and allocate more homes in the MUA ahead of the requirement, or the plan will fail to achieve its objective and policy requirement to deliver a majority of new homes in this area. Proposed change: To ensure soundness, the proportion of development in the urban area should follow the Core Strategy target of 64%. Theakston Estates agrees that the majority of housing should be in the urban area, however there has been a serious dilution from the core strategy figure which was endorsed by the inspector (64% to the urban area). The inspector endorsed this as a sustainable location with good transport links and assessed that delivery would need to be near the top of this range. It is clear that the inspector considered the housing requirement for the MUA to be about 64%. The Local Plan should follow the Core Strategy and alleviate pressure on less sustainable locations and focussing development in the most sustainable locations - which the inspector advised is a key component of sustainable development. Increasing homes in the MUA would also make the most significant contribution towards driving the economic growth of Doncaster. Theakston Estates agree with the recognition in Policy 2 that the MUA will be the main focus for development in the borough. Furthermore, there has been a substantial shortfall of completions in the MUA over the last 4 years, with an average of 42.7% being in this area. The number of completions in the MUA compared with the total for the Borough are provided in the following table (Source: RLA): Year - 2014/15 MUA - 308 Borough Total - 881 Year - 2015/16 MUA - 459 Borough Total - 1,025 Year - 2016/17 MUA - 555 Borough Total - 1,049 Year - 2017/18 MUA - 426 Borough Total - 1,137 MUA - 1,748 Borough Total - 4,092 Taking this into account, there is an identified need to achieve a step change and allocate more houses in the MUA ahead of the requirement, or the plan will fail to achieve its objective and policy requirement to deliver a majority of new homes in this area. Proposed change: To ensure soundness, the proportion of development in the urban area should follow the Core Strategy target of 64%. Theakston Estates agrees that the majority of housing should be in the urban area, however there has been a serious dilution from the core strategy figure which was endorsed by the inspector (64% to the urban area). The inspector endorsed this as a sustainable location with good transport links and assessed that delivery would need to be near the top of this range. It is clear that the inspector considered the housing requirement for the MUA to be about 64%. The Local Plan should follow the Core Strategy and alleviate pressure on less sustainable locations and focussing development in the most sustainable locations - which the inspector advised is a key component of sustainable development. Increasing homes in the MUA would also make the most significant contribution towards driving the economic growth of Doncaster. Theakston Estates agree with the recognition in Policy 2 that the MUA will be the main focus for development in the borough. Furthermore, there has been a substantial shortfall of completions in the MUA over the last 4 years, with an average of 42.7% being in this area. The number of completions in the MUA compared with the total for the Borough are provided in the following table (Source: RLA): Year - 2014/15 MUA - 308 Borough Total - 881 Year - 2015/16 MUA - 459 Borough Total - 1,025 Year - 2016/17 MUA - 555 Borough Total - 1,049 Year - 2017/18 MUA - 426 Borough Total - 1,137 MUA - 1,748 Borough Total - 4,092 Taking this into account, there is an identified need to achieve a step change and allocate more houses in the MUA ahead of the requirement, or the plan will fail to achieve its objective and policy requirement to deliver a majority of new homes in this area. Proposed change: To ensure soundness, the proportion of development in the urban area should follow the Core Strategy target of 64%.
The Local Plan replaces the Core Strategy and has consulted on a new approach to the spatial strategy and distribution, as per the Housing Topic Paper. The Main focus for growth is still the Main Urban Area but other sustainable locations will get some housing based on their existing households and service provision. 50% Main Urban Area growth does not put undue pressure on smaller locations, rather provides the opportunities for local needs to be met locally. The plan is allocating 7,211 units in the Main Urban Area (18 - 33), which is 54.5% of the overall 15 year allocated requirement for this period. This location is therefore delivering the majority of new homes here, as set out in the strategy. Many means of calculating housing need and distributing housing have been put forward, but the Council's preferred strategy achieves the preferred spread and distribution, informed by Peter Brett's assessment of housing need.
4.1. Strata Homes is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 4.2. Strata Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 4.3. Strata Homes is concerned with the Spatial Strategy and distribution. Strata Homes would expect the spatial strategy and distribution to provide an appropriate development pattern and support economic growth and sustainable development within all market areas. 4.4. The Strategy at present focuses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. Therefore no new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. Strata Homes are concerned that this risks focusing development in less viable areas and risks under delivery 4.5. The implementation of the Spatial Strategy will be discussed in response to Policy 6 and the proposed allocations. 4.6. Doncaster is an integral part of the Sheffield City Region and the ambitious growth aspirations. The Strategic Economic Plan sets out the Sheffield City Region's plans to transform the local economy over the next decade. At the heart of the plan is the creation of 70,000 new private sector jobs and 6,000 new businesses. 4.7. Therefore, to achieve the aspirered growth that the City Region is seeking to achieve and is securing Government funding for the level of new housing needs to reflect the ambitions of the Strategic Economic Plan. 4.8. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI [2012] Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every #1 spent on construction projects yields a total of #2.84 expenditure in the wider economy. It is estimated that approximately #2,000 per annum per household spending on local convenience goods, and approximately #2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least #400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. 4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. 4.10. To achieve this approach, Strata Homes consider the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3. - To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at iPort. Thorne and Moorsend should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadworth is of a similar scale and function of these settlements and should therefore be defined as such, recognising its proximity and connectivity to the Main Urban Area. - Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). 4.11. Strata Homes consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development. 4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Strata Homes is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Strata Homes do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. 4.13. Whilst there is no definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should 'identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period', and that local authorities should 'be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period'. Given that the council
The Local Plan's Spatial Strategy and distribution does not provide an appropriate development pattern that supports economic growth and sustainable development within all market areas. The Strategy focuses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. No new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. Strata Homes are concerned that this risks focusing development in less viable areas and risks under delivery Doncaster is an integral part of the Sheffield City Region and an appropriate level of new housing is needed to meet the ambitious growth aspirations of the Strategic Economic Plan. To achieve the growth needed the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. - Focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at iPort. Thorne and Moorends should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Make provision in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadworth is of a similar scale and function of these settlements and should therefore be defined as such, recognising its proximity and connectivity to the Main Urban Area. - Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Strata Homes is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Strata Homes do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. Given that the council considers that the majority of sites will be delivered within the plan period it is highly likely that further alterations to the green belt will be required at the next review of the Plan and safeguarded land should be identified across the spatial hierarchy, including smaller settlements per the earlier spatial approach. Strata Homes consider that with the proposed changes to the strategy and establishing the approach to safeguarding land the Local Plan can be found sound. To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy.

The approach to the distribution of housing is explained in the Housing Topic Paper. The approach allocates housing to the most sustainable locations, including economic growth to the more sustainable Main Urban Area and Main Towns, but does provide opportunities for some limited development in smaller localities to support these rural areas as set out in Policy 2 & 3. The approach to Green Belt, including the decision not to safeguard land, is discussed in the Green Belt Topic Paper. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness: Justified

Policy 2 of the Publication Local Plan identifies Finningley as a Level 3 settlement 'Service Town & Village'. Additional growth on non-allocated sites in appropriate locations within the development limits of Services Towns and Villages. The policy goes on to state that in regards to the Countryside is defined as that outside of the Green Belt and beyond the defined settlement limits. Residential development will also be supported in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 where: a) It is consistent with the role and service function of the settlement in the settlement hierarchy set out above; b) The site is well related to the existing built form of the settlement and would represent a logical extension to the built up area or is of a scale and nature that is in keeping with the core shape, form and size of the settlement; c) It will not cause significant adverse harm to settlement’s character, setting and appearance (including partial or total coalescence with another settlement) or to the intrinsic character of the surrounding countryside; d) It accords with other policies in the Local Plan; and e) A five year borough wide of housing land cannot be demonstrated and the development would make a significant positive contribution to housing land supply. The site off Station Road is proposed to be located within Countryside Policy Area and it is considered that the development limit for Finningley should be amended to encompass the site. We therefore object to the current proposed designation of the site within the Countryside Policy Area. Recommendation The development limit of Finningley is amended to incorporate the site. Justification The site is suitable, deliverable, developable, and is capable of being brought forward and will make best use of previously developed land. The site is also located in a sustainable location within close proximity to services and amenities in Finningley, the development of this site represents a sustainable form of development. Moreover, the site has been assessed within the 2018 HELAA Report under site reference 315 'Land west of Station Road' and acknowledges that the site is suitable, available and deliverable within 5 years and the capacity to deliver 31 dwellings.

Summary:

Object to the site being located in the Countryside. The development limit for Finningley should be extended to incorporate this site. It is suitable, deliverable and developable, is capable of being brought forward and makes the best use of previously developed land. It is in a sustainable location and close to services and amenities in Finningley. The HELAA acknowledges the site is suitable, available and deliverable within 5 years and can deliver 31 dwellings.

Response:

Finningley is defined as a "Service Town and Village" in the settlement hierarchy of Policy 2. The site is greenfield and countryside and would form an extension to the settlement. Given Finningley can meet most of its housing target via permissions (being just 5 short of its target of 55), it is not considered that such an extension into the countryside is necessary, nor can it be justified.
1. Doncaster’s Draft Local Plan reiterates the proposals in the Draft Sites and Policies of the Local Plan (autumn of 2018) and disregards the objection made by the Parish Council, the Neighbourhood Plan Group and others. 2. The Draft Plan proposes an allocation of 80 new homes on: “A single greenfield urban extension, on land formerly designated as Green Belt, to the north of Cadby Road and to the west of the village.” 3. The Parish Council’s original submission was: (i) “The Parish endorse the views of the Sprotbrough Neighbourhood Planning Group (Sprotbrough Champions) and the views of Sprotbrough residents expressed in the questionnaire circulated to residents, that there should be no development in the green belt surrounding Sprotbrough. The Parish Council believe that no case has been made by DMBC for exceptional circumstances that would justify approval for residential development within the green belt areas around Sprotbrough and that these amenity areas should be preserved. (ii) The Parish Council asks DMBC to justify their decision to split Sprotbrough into two parts when designating areas within the proposed Local Plan. Currently one part of Sprotbrough is in the urban area and the other part is not and is classified under the heading of Sprotbrough (village). The Parish Council believes that this separation does not take any account of the approved Neighbourhood Plan area or the remit of the Parish Council who serve the whole of Sprotbrough.” 4. The Parish Council’s objection in 3(i) & our reasons for objecting have not been incorporated into the Plan. The Parish Council still consider that DMBC Planners have not clarified or explained the reasoning for their decision to divide Sprotbrough into two areas, east and west of the A1(M) and designate that to the west "Sprotbrough Village". At a Parish Council meeting in January 2019 DMBC Planning Officers stated that this division of Sprotbrough for planning purposes was not new. However the decision to separate Sprotbrough for housing allocation purposes is in the Parish Councils view an unjustified decision with no consideration of or reference to the points raised by the Parish Council in opposition to this decision. 5. The Draft Local Plan fails to address this crucial issue. Yet this decision to divide Sprotbrough into two areas for planning purposes is fundamental to the issue of encroachment into the Green Belt. The whole of Sprotbrough is one community and is all within the Sprotbrough & Cusworth Parish boundary. It is one entity and it is vitally important for community harmony that the whole of Sprotbrough is treated equally. From the Parish Council perspective it would appear that DMBC have drawn an arbitrary line on Melton Road at the A1(M). 6. The draft Neighbourhood Development Plan area covers the whole of Sprotbrough and has been approved by DMBC. There has been a great deal of consultation with DMBC Planners on the Neighbourhood Plan and no suggestion was made that Sprotbrough should be divided into two areas. 7. The reason this issue is crucial is because if Sprotbrough is not divided into two areas, the justification for encroachment into the Green Belt surrounding Sprotbrough would seem to disappear. 8. The National Planning Policy Framework (NPPF) makes it very clear that development into the Green Belt should only be permitted in exceptional circumstances. The Parish Council consider that exceptional circumstances do not exist here.

Summary:
Sprotbrough Parish Council objects any development in the Green Belt surrounding Sprotbrough, and in particular the proposed allocation of a site for 80 new homes in current Green Belt. The Council also object to the division of Sprotbrough Parish and its Neighbourhood Plan area into two areas for Local Plan purposes. If Sprotbrough is not divided into two areas, the justification for encroachment into the Green Belt would seem to disappear.

Response:
The current development plan (and indeed emerging local plan) has always differentiated between the village of Sprotbrough to the west of the A1(M) as a separate settlement to that to the east of the A1(M) which forms part of the Doncaster Main Urban Area. The 2 settlements are separated by Green Belt. As the representation notes, the only thing that has changed is that a larger range of the Villages in Doncaster are now being proposed for an allocation compared to the current Development Plan; this was subject to early consultation through the Issues & Options & Homes & Settlements stages. Disagree that were the 2 to be treated as a single settlement there would be no sites proposed in the Green Belt as Sprotbrough 'Village' would become part of the Doncaster Main Urban Area which is the main focus for housing growth and Green Belt allocations are being proposed at the Main Urban Area too. Sprotbrough 'Village' sites would have been assessed alongside all the other Main Urban Area Green Belt site options and the conclusion likely to have been the same based on the site selection methodology. Exceptional circumstances are set out in the Green Belt Topic paper and NPPF is clear that Green Belt boundaries can be changed through the preparation (or review) of a local plan.
23. The Parish Council consider that there are no "exceptional circumstances" or "very special circumstances" justifying development into the Green Belt. The proposal is not the result of an assessed need in that part of Sprotbrough but is solely the result of an allocation of housing to an area of its "share" of Doncaster's total housing need, which would inevitably result in encroachment into the Green Belt. 24. The Parish Council believe that even if there were exceptional circumstances, site 788 would be the obvious choice for housing. 25. Therefore it is the Parish Council's belief that the Draft Local Plan does not meet the "test of soundness" in respect of its housing proposals for Sprotbrough.

Summary:
There are no exceptional circumstances justifying development in the Green Belt, and even if there were, Site 788 would be the obvious choice for housing.

Response:
Conclusion type comments, detailed points will be picked up through other parts of this document, no response required.
Policy 2 sets out the housing strategy, specifically providing details regarding the spatial approach to the delivery of housing across the Borough. The largest proportion of the annual requirement (50%) goes to the ‘Main Urban Area’ of Doncaster. The ‘Main Towns’ of Adwick - Woodlands, Armthorpe; Conisborough & Denaby; Dunsford, Dunslooe, Hatfield & Stainforth; Mexborough; Rossington; and Thorne & Moorends are collectively attributed 40% of the growth target. Approximately 10% of the growth is to be met in the ‘Service Towns and Villages’. Whilst we support the intention for the bulk of development to focus on the large settlements in the Borough and in particular Doncaster, Gladman suggest that through the Local Plan, there is an opportunity to improve the sustainability of a wide range of settlements by allocating a meaningful amount of land for development of housing and associated services, particularly in sustainable settlements outside the Green Belt such as Finningley. In allocating sites, the Council should be mindful that to give itself a suitable baseline on which to maintain housing land supply, the widest possible range of sites, by size and market location are required so that house builders of all types and sizes have access to suitable land in order to offer the widest possible range of products. The key to increased housing supply is the number of sales outlets across a wide range of local markets. The maximum delivery is achieved not just because there are more sales outlets, but because the widest possible range of products and locations are available to meet the widest possible range of demand. Paragraph 78 of the Framework (2019) seeks to promote sustainable development in rural areas to maintain and enhance rural vitality and viability. It is essential therefore, that the needs of the rural settlements across the Borough are assessed and a meaningful level of growth apportioned to them to ensure their ongoing sustainability, vitality and viability. This will help to preserve and enhance rural services and facilities and allow local rural communities to meet their own needs for housing whilst providing much needed affordable housing in the parts of the Borough that suffer with the greatest affordable housing need. It is important to consider existing services and facilities in a settlement when assessing their suitability for accommodating new development. Daily needs are particularly important with a primary school, shop and access to public transport being the key considerations. It must be recognised that there may be an ability, through new development, to improve some of these services and facilities, particularly access to public transport, that should be considered in any settlement hierarchy exercise as well as the role that new development can play in ensuring these facilities are maintained and are not lost because of a lack of support. Gladman consider it essential that the Council recognises that the Main Urban Area of Doncaster is constrained by Green Belt, flooding and in part by the M18 and A1(M) Motorways and numerous railways. In line with this, we suggest that sufficient flexibility is established in this and any related policy to ensure delivery of the identified overall housing target set out in Policy 3, is not compromised by a stringent adherence to the settlement hierarchy and defined distribution of growth. Therefore, we recommend, that if the Council intend to push ahead with the spatial distribution set out in this consultation, the wording of the policy is amended to read ‘approximately 50% of new housing’ instead of ‘at least 50% of new housing’. Gladman object to the use of the chosen approach to draw tight development limits around sustainable settlements where this provides no flexibility in line with the presumption in favour of sustainable development. It leads to an approach whereby countryside policies are brought forward that are more akin to the outdated national policy approach to protect the countryside for its own sake. Local policies should recognise that sustainable development opportunities exist beyond the built limits of sustainable settlements that are located outside of the Green Belt and that such proposals have the ability to be brought forward for development when the need arises in a manner that respects the intrinsic character and beauty of the countryside that is advocated by the NPPF (2019).

Summary:

Whilst support is given to the intention for the bulk of development to focus on the large settlements in the Borough, and in particular Doncaster, Gladman suggest that there is an opportunity to improve the sustainability of a wide range of settlements by allocating a meaningful amount of land for development of housing and associated services, particularly in sustainable settlements outside the Green Belt, such as Finningley. In allocating sites, the Council should be mindful that to give itself a suitable baseline on which to maintain housing land supply, the widest possible range of sites, by size and market location are required so that house builders of all types and sizes have access to suitable land in order to offer the widest possible range of products. The key to increased housing supply is the number of sales outlets across a wide range of local markets. The maximum delivery is achieved not just because there are more sales outlets, but because the widest possible range of products and locations are available to meet the widest possible range of demand. Paragraph 78 of the Framework (2019) seeks to promote sustainable development in rural areas to maintain and enhance rural vitality and viability. It is essential therefore, that the needs of the rural settlements across the Borough are assessed and a meaningful level of growth apportioned to them to ensure their ongoing sustainability, vitality and viability. This will help to preserve and enhance rural services and facilities and allow local rural communities to meet their own needs for housing whilst providing much needed affordable housing in the parts of the Borough that suffer with the greatest affordable housing need. It is important to consider existing services and facilities in a settlement when assessing their suitability for accommodating new development. Daily needs are particularly important with a primary school, shop and access to public transport being the key considerations. It must be recognised that there may be an ability, through new development, to improve some of these services and facilities, particularly access to public transport, that should be considered in any settlement hierarchy exercise as well as the role that new development can play in ensuring these facilities are maintained and are not lost because of a lack of support. The Council should recognise that the Main Urban Area of Doncaster is constrained by Green Belt.
flooding and in part by the M18 and A1(M) Motorways and numerous railways. It is therefore suggested that sufficient flexibility is established in this and any related policy to ensure delivery of the identified overall housing target set out in Policy 3 is not compromised by a stringent adherence to the settlement hierarchy and defined distribution of growth. If the Council intend to proceed with the spatial distribution set out in this consultation, the wording of the policy should be amended to read ‘approximately 50% of new housing’ instead of ‘at least 50% of new housing’. Gladman object to the use of drawing tight development limits around sustainable settlements where this provides no flexibility in line with the presumption in favour of sustainable development. It leads to an approach whereby countryside policies are brought forward that are more akin to the outdated national policy approach to protect the countryside for its own sake. Local policies should recognise that sustainable development opportunities exist beyond the built limits of sustainable settlements that are located outside of the Green Belt and that such proposals have the ability to be brought forward for development when the need arises in a manner that respects the intrinsic character and beauty of the countryside that is advocated by the NPPF (2019).

Response:
The Local Plan proposes an appropriate strategy that steers development to the most sustainable locations taking into account Green Belt and existing countryside designations. Policy 2 introduces flexibility for permitting additional growth subject to meeting its conditional criteria. Development have been identified (according to a methodology that has been consulted upon) - to allow the identification of rational and robust boundaries which for the application of "Countryside" policy and identification of settlement boundaries within which development is prioritised. This supports the plan led approach to development.

Policy 2 firstly states: "New development (including homes, supporting services and associated jobs) will be focussed in and around existing urban areas (primarily Doncaster’s 'Main Urban Area', its 7 ‘Main Towns’ and 10 ‘Service Towns and Villages’).” 2.2 It is of note that Highfields is designated as a Defined Village in Policy 2. 2.3 Policy 2 also states that: “At least 50% of new homes will go to the ‘Main Urban Area’, approximately 40% to the ‘Main Towns’ and about 10% to the ‘Service Towns and Villages’.” Object to none going to the defined villages such as Highfields. 2.4 Further to the above, Policy 2 states that: “Housing allocations and mixed-use allocations to accommodate economic-led housing growth are directed to the most sustainable and deliverable urban and urban extension sites in the Main Urban Area and Main Towns in accordance with the growth ranges set out in Policy 3 and in accordance with a sequential approach to flood risk.” 2.5 We object to failure of the plan to allocate any housing or employment growth to the defined villages. 2.6 In particular the approach fails to recognise the individual attributes of certain potential locations such as Brodsworth Quarry. This is a substantial area of land which is not capable of productive use in terms of agriculture and yet, unlike other locations in Doncaster, is not subject to flood risk. In addition, while described as being adjacent to Highfields it is also immediately south of Adwick le Street. 2.7 The despoiled nature of the land itself coupled with its general location and overall size, means that its redevelopment for a mixed use scheme could provide significant environmental, social and economic benefits. These benefits would not only be for the immediate residents of Highfields in terms of improvement to access of facilities and employment but also to the wider area, especially as it would reduce the amount of agricultural land that will be released for development and reduce the number of dwellings that will be in areas at risk of flooding. 2.8 The sustainability character of the site is set out in full in section 3 of this report. Recommendation 2.9 The Council should identify the Brodsworth Quarry site as a specific location to accommodate further housing and employment growth in Policy 2 as part of the overall strategy. 2.10 It is further recommended that the site is specifically identified for Green Belt release in part 6) of the policy. Justification 2.11 The site is located in a sustainable location which is suitable for housing and employment growth. Also, given the size of the site and its potential capacity, the site provides an opportunity to create an urban extension to Highfields and deliver significant economic and housing growth.

Summary:

Policy 2 states that new development will be focussed in and around existing urban areas and that 50% of new homes will go to the Main Urban Area, 40% to the Main Towns and about 10% to Service Towns. Highfields is a Defined Village. Objection to no houses going to defied villages. Policy 2 also states that housing and mixed use allocations to accommodate economic-led housing growth are directed to the most sustainable deliverable urban and urban extension site in the Main Urban Area and Main Towns. We object to the failure of the plan to allocate any housing and employment growth to the defined villages. The approach fails to recognise the attributes of certain locations such as Brodsworth Quarry. This is an area of land which is not capable of productive use and is not subject to flood risk. It is immediately south of Adwick le Street. The redevelopment for a mixed use scheme could provide significant environmental, social and economic benefits. These benefits would be for the residents of Highfields (access to facilities and employment) and also the wider area - it would reduce the amount of agricultural land that will be released for development and reduce the number of dwellings that will be in areas at risk of flooding. The Council should identify the Brodsworth Quarry site as a specific location to accommodate further housing and employment growth in Policy 2 as part of the overall strategy. It should also be identified for Green Belt release in part 6) of the policy.

Response:

Policy 2 does not prevent development in Defined Villages but in line with their relative low sustainability, which justifies the lack of allocations, allows for development subject to other policies in the Plan. Development proposals in the Green Belt will be considered against national Green Belt policy in the NPPF.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

We object to the policy as drafted on the basis that the text indicates that the split of new development will be 50% of new homes to Doncaster urban, 40% to main towns and 10% to the service towns and villages. Of these proportions only local needs housing is distributed on a pro rata basis, and the economic led housing growth is distributed only to Doncaster Urban and the Main towns. None of this part of the housing growth is allocated to the service towns and villages and there is no cogent explanation of why these sustainable settlements should not have a proportionate share of this part of the proposed housing growth. The strategy as drafted in this Policy therefore does not reflect the sustainability and potential of the service towns and villages to meet a share of the economic led housing growth. Part 3 of the Policy sets out the role of the service towns and villages, and indicates that these settlements will be a focus for a level of growth to meet their “local needs” as well as regenerating run down areas. There is no explanation of what is meant by local needs in this part of the policy, but it can only be assumed that this is the local needs housing element of the overall requirement minus the economic growth housing. This is a false distinction in terms of land allocation in these settlements which should receive a proportionate share of economic growth housing as set out above. Within these service towns and villages, growth within the development boundaries is considered favourably. The Policy also makes provision for other new development on sites adjacent/ outside the development boundary in certain circumstances; which include the situation where the Planning Authority cannot demonstrate a five year land supply. The Plan does not identify any locations where this could take place and does not make clear what the role of the other reserve sites are in this context. It is not considered that the current reserved sites represent the best options for future land release. PROPOSED CHANGE 1. To include the proposed allocations 186 and 165 within the development limit of Carcroft/ Skellow. As explained in detail above.

Objection is made to the policy as drafted on the basis that the text indicates that the split of new development will be 50% of new homes to Doncaster urban, 40% to main towns and 10% to the service towns and villages. Of these proportions only local needs housing is distributed on a pro rata basis, and the economic led housing growth is distributed only to Doncaster Urban and the Main towns. None of this part of the housing growth is allocated to the service towns and villages and there is no cogent explanation of why these sustainable settlements should not have a proportionate share of this part of the proposed housing growth. The strategy as drafted in this Policy therefore does not reflect the sustainability and potential of the service towns and villages to meet a share of the economic led housing growth. Part 3 of the Policy sets out the role of the service towns and villages, and indicates that these settlements will be a focus for a level of growth to meet their “local needs” as well as regenerating run down areas. There is no explanation of what is meant by local needs in this part of the policy, but it can only be assumed that this is the local needs housing element of the overall requirement minus the economic growth housing. This is a false distinction in terms of land allocation in these settlements which should receive a proportionate share of economic growth housing as set out above. Within these service towns and villages, growth within the development boundaries is considered favourably. The Policy also makes provision for other new development on sites adjacent/outside the development boundary in certain circumstances; which include the situation where the Planning Authority cannot demonstrate a five year land supply. The Plan does not identify any locations where this could take place and does not make clear what the role of the other reserve sites are in this context. It is not considered that the current reserved sites represent the best options for future land release. PROPOSED CHANGE 1. To include the proposed allocations 186 and 165 within the development limit of Carcroft/ Skellow. As explained in detail above.

Objects to policy and distribution of development with only local needs being directed to Service Towns/Villages; these are sustainable settlements so should also receive a share of the economic growth-led housing and there is no explanation for this. The strategy does not reflect the sustainability potential of these settlements therefore. The policy allows development adjacent/outside of settlement limits in certain circumstances but does not identify any locations where this could take place and does not make clear what the role of reserve sites are in this context. It is not considered the current reserve sites are the best options for future land release. Development limits should be drawn to include housing allocation at Carcroft-Skelloy (Ref 186/165).

The strong messages that came out of the Issues & Options stage and Homes & Settlements consultation was support for meeting local housing needs locally which has resulted in a more dispersed settlement hierarchy, which introduces a greater number of settlements suitable for allocations (larger service villages) compared to the Core Strategy in the first instance. However, the economic-growth led housing component is more footloose and has been directed to the higher tier settlements which reflects their stronger sustainability credentials. The approach has also allowed a sequential approach to avoidance of flood risk at spatial strategy level so that the strategy (and then subsequent sites) have both been identified in line with national policy’s requirement to avoid flood risk where possible. Approaches to more dispersal/greater concentration/current Core Strategy approach etc. were all options that were considered and subject to SA. A Settlement Background Paper was published alongside the Publication Plan (and previous 2018 consultation) setting out more details and will be updated and republished as a Topic Paper for Submission. Part 5 of the policy provides flexibility to bring forward additional development outside of allocations in the east of the borough and is a criteria based policy that could be used at any of the settlements with Countryside (but not Green Belt) boundaries. Reserve Sites are the subject of Policy 6 (and identified in Chapter 16 and on the Policies Map) and are a separate source of potential housing supply unrelated to Part 5 of this policy and are not necessary in terms of meeting the housing requirement.
Comment Ref: C/Policy 2/03431/1/002

Attend Examination: Attend Hearing

Reason: We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 4: Strategic Approach

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness:

Consistent with national

Comment:

The removal of safeguarded land within this policy is not supported by Persimmon Homes. While there is no definitive guidance indicating the amount of land which should be safeguarded, the National Planning Policy Framework (NPPF) (2019) is clear that where necessary Local Plans should 'identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period', and that local authorities should 'be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period'. The evidence base document entitled Green Belt Topic Paper (2019) produced by Doncaster Metropolitan Borough Council (the Council) provides some explanatory text to support the exclusion of safeguarded land from the Local Plan. It does not, however, provide sufficient evidence that Green Belt boundaries will not need to be altered at the end of the Plan period. This policy is therefore not compliant with the NPPF and is not justified, because it has not been demonstrated that the plan will provide a robust long-term Green Belt boundary nor certainty for residents and developers alike in terms of likely growth locations beyond the end of the plan period. The defined development limits outlined in this policy are also overly restrictive and unsound. Placing a blanket ban on residential development outside defined settlements apart from in exceptional circumstances or for rural exceptions is not consistent with national policy, which outlines that plans should be prepared with the objective of contributing to the achievement of sustainable development. Much of the land adjacent to the defined development limits is in sustainable locations which could contribute to meeting the housing need and provide sustainable development. The restriction imposed by such a policy may prevent the area from meeting its housing need. Proposals for development in these locations should not be required to demonstrate exceptional circumstances or clear local support in order to achieve support from the Council.

Summary:

Objects to the lack of safeguarded land between urban area and Green Belt. The Green Belt Topic Paper (2019) provides some justification but does not provide sufficient evidence that Green Belt boundaries will not need to be altered at the end of the Plan period. The defined development limits outlined in this policy are also overly restrictive and unsound. Placing a blanket ban on residential development outside defined settlements apart from in exceptional circumstances or for rural exceptions is not consistent with national policy, which outlines that plans should be prepared with the objective of contributing to the achievement of sustainable development. Much of the land adjacent to the defined development limits is in sustainable locations which could contribute to meeting the housing need and provide sustainable development. The restriction imposed by such a policy may prevent the area from meeting its housing need. Proposals for development in these locations should not be required to demonstrate exceptional circumstances or clear local support in order to achieve support from the Council.

Response:

The Local Plan does not propose to identify Safeguarded Land in the Green Belt for the reasons given in the Green Belt Topic Paper.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

The Development Limits methodology was subject to previous consultation (2018) and re-published alongside the Publication version for the plan. It has always proposed that greenfield urban extension allocations should be excluded from development limits, but would be incorporated when the permission/development has been implemented through a future review of the plan. This is a logical approach, especially so for larger allocations where development will include not just housing but other non-urban uses which may still remain outside of development limits depending on final layouts e.g. landscaping, public open space, balancing ponds etc.

Object is made to this Policy  The Doncaster main urban area is defined on the Proposals Map. The development limits shown on the map exclude the proposed allocation from the urban area. The allocation of the site as an extension of the urban area means that it is necessarily part of the Doncaster urban area. The Plan should be changed to reflect this, together with the text in Policy 2 at part 1, which defines the extent of the Doncaster Urban Area.  PROPOSED CHANGE  1. To include the proposed allocations 164 and 430 within the development limit of Doncaster Urban Area. As explained in detail above.
4.1. H. Burtwistle & Son is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 4.2. H. Burtwistle & Son considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 4.3. H. Burtwistle & Son is concerned with the Spatial Strategy and distribution. H. Burtwistle & Son would expect the spatial strategy and distribution to provide an appropriate development pattern and support economic growth and sustainable development within all market areas. 4.4. The Strategy at present focuses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. Therefore no new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. H. Burtwistle & Son are concerned that this risks focusing development in less viable areas and risks undermining the delivery of the Plan 4.5. The implementation of the Spatial Strategy will be discussed in response to Policy 6 and the proposed allocations. 4.6. Doncaster is an integral part of the Sheffield City Region and the ambitious growth aspirations. The Strategic Economic Plan sets out the Sheffield City Region's plans to transform the local economy over the next decade. At the heart of the plan is the creation of 70,000 new private sector jobs and 6,000 new businesses. 4.7. Therefore, to achieve the aspired growth that the City Region is seeking to achieve and is securing Government funding for the level of new housing needs to reflect the ambitions of the Strategic Economic Plan. 4.8. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every £1 spent on construction projects yields a total of £2.84 expenditure in the wider economy. It is estimated that approximately £2,000 per annum per household spending on local convenience goods, and approximately £2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least £400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new Household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. 4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. 4.10. To achieve this approach, H. Burtwistle & Son consider the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3. - To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at IPort. Thorne and Moorends should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadworth is of a similar scale and function of these settlements and should therefore be defined as such, recognising its proximity and connectivity to the Main Urban Area. - Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). 4.11. H. Burtwistle & Son consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development. 4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. H. Burtwistle & Son is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. H. Burtwistle & Son do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. 4.13. Whilst there is no definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should 'identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs including well beyond the plan period', and that local authorities should 'be able to demonstrate that Green Belt boundaries will not need to
Policy 2 - Spatial strategy and Settlement Hierarchy. 1. Distribution of housing should be reviewed and include more at service towns and villages. 2. Defined villages should have some growth. 3. Rossington/Thorne Moorends/Carcroft Skellow should have a greater share. 4. This would be a more sustainable approach. Reserve sites - 1. The identified sites have significant technical constraints. 2. They are not a suitable pool of sites. 3. Object to them being in the Plan. Greenbelt Boundaries 1. Boundaries as drawn are too tight. 2. Likely they will need re-drawing at next review of plan. Safeguarded land. 1. Not an adequate amount of safeguarded Land. 2. Should be identified across the spatial hierarchy.

Proposed changes: 1. Policy should reflect economic and housing growth aspirations. 2. Spatial strategy should be amended. 3. Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy.

Response:

The approach to the distribution of housing is explained in the Housing Topic Paper. The approach allocates housing to the most sustainable locations, including economic growth to the more sustainable Main Urban Area and Main Towns, but does provide opportunities for some limited development in smaller localities to support these rural areas as set out in Policy 2 & 3. The approach to Green Belt, including the decision not to safeguard land, is discussed in the Green Belt Topic Paper. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.
4.1. H. Burtwistle & Son is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 4.2. H. Burtwistle & Son considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 4.3. H. Burtwistle & Son is concerned with the Spatial Strategy and distribution. H. Burtwistle & Son would expect the spatial strategy and distribution to provide an appropriate development pattern and support economic growth and sustainable development within all market areas. 4.4. The Strategy at present focusses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. Therefore no new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. H. Burtwistle & Son are concerned that this risks focusing development in less viable areas and risks undermining the delivery of the Plan. 4.5. The implementation of the Spatial Strategy will be discussed in response to Policy 6 and the proposed allocations. 4.6. Doncaster is an integral part of the Sheffield City Region and the ambitious growth aspirations. The Strategic Economic Plan sets out the Sheffield City Region’s plans to transform the local economy over the next decade. At the heart of the plan is the creation of 70,000 new private sector jobs and 6,000 new businesses. 4.7. Therefore, to achieve the aspired growth that the City Region is seeking to achieve and is securing Government funding for the level of new housing needs to reflect the ambitions of the Strategic Economic Plan. 4.8. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every £1 spent on construction projects yields a total of £2.84 expenditure in the wider economy. It is estimated that approximately £2,000 per annum per household spending on local convenience goods, and approximately £2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least £400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new Household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. 4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. 4.10. To achieve this approach, H. Burtwistle & Son consider the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3. - To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at IPort. Thorne and Moorends should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadworth is of a similar scale and function of these settlements and should therefore be defined as such, recognising its proximity and connectivity to the Main Urban Area. - Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). 4.11. H. Burtwistle & Son consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development. 4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. H. Burtwistle & Son is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. H. Burtwistle & Son do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. 4.13. Whilst there is no definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should 'identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period', and that local authorities should 'be able to demonstrate that Green Belt boundaries will not need to be
altered at the end of the plan period'. Given that the council considers that the majority of sites will be delivered within the plan period. It is highly likely that further alterations to the green belt will be required at the next review of the Plan. This is not consistent with the provisions of the Framework. 4.14. H. Burtwistle & Son consider that Policy 2 should establish the approach to Safeguarding land and that safeguarded land should be identified, not only provide a robust long-term Green Belt boundary but will also provide certainty for residents and developers alike in terms of likely growth locations beyond the end of the plan period. H. Burtwistle & Son therefore suggest that such land be allocated in the Plan across the spatial hierarchy, including smaller settlements per the earlier spatial approach. 4.15. H. Burtwistle & Son consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 4.16. However, H. Burtwistle & Son consider that with the proposed changes to the strategy and establishing the approach to safeguarding land the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 4.17. To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Summary:
The Local Plan's Spatial Strategy and distribution does not provide an appropriate development pattern that supports economic growth and sustainable development within all market areas. The Strategy focusses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. No new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. Concerns that this risks focusing development in less viable areas and risks under delivery. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. Given that the council considers that the majority of sites will be delivered within the plan period it is highly likely that further alterations to the green belt will be required at the next review of the Plan and safeguarded land should be identified across the spatial hierarchy, including smaller settlements per the earlier spatial approach. H Burtwistle & Son consider that with the proposed changes to the strategy and establishing the approach to safeguarding land the Local Plan can be found sound. To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Response:
The approach to the distribution of housing is explained in the Housing Topic Paper. The approach allocates housing to the most sustainable locations, including economic growth to the more sustainable Main Urban Area and Main Towns, but does provide opportunities for some limited development in smaller localities to support these rural areas as set out in Policy 2 & 3. The approach to Green Belt, including the decision not to safeguard land, is discussed in the Green Belt Topic Paper. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.
The JRP agrees in principle with the 'Spatial Strategy and Settlement Hierarchy'. However, the figures for housing need, which include the evidence from Economic Forecasts and Housing Needs Assessment (note 1 - Peter Brett Associates (May 2018)), the Government’s Standard Housing methodology, together with DMBC’s planned economic growth figure may be inflated. Clearly plans will need reviewing regularly to ensure supply and demand is balanced.

Summary:
The JRP agrees in principle with the 'Spatial Strategy and Settlement Hierarchy'. However, the figures for housing need, which include the evidence from Economic Forecasts and Housing Needs Assessment (note 1 - Peter Brett Associates (May 2018)), the Government’s Standard Housing methodology, together with DMBC’s planned economic growth figure may be inflated. Clearly plans will need reviewing regularly to ensure supply and demand is balanced.

Response:
The general support for the spatial strategy is noted. The housing requirement is explained in the Housing Topic Paper based on evidence primarily given in the Peter Brett’s commissioned ‘Economic Forecasts and Housing Need Assessment’.

### Comment:  
Settlement Hierarchy: (1) explains the settlement hierarchy for Main Urban Area, Main Towns, Service Towns and Villages and Defined Villages in its proposals for new development. However, there are anomalies where clarifications are required. For example, in the section on Main Urban Area (MUA) and Defined Villages, Green Lane, classified by DMBC as Brodsworth, a 'defined village', has been placed in the MUA of Scawsby, which clearly has different criteria for development. This needs clarification. (Letter from DMBC enclosed).

### Summary:  
Policy 2, Part 1: Settlement Hierarchy - explains the settlement hierarchy for Main Urban Area, Main Towns, Service Towns and Villages and Defined Villages in its proposals for new development. However, there are anomalies where clarifications are required. For example, in the section on Main Urban Area (MUA) and Defined Villages, Green Lane, classified by DMBC as Brodsworth, a 'defined village', has been placed in the MUA of Scawsby, which clearly has different criteria for development. This needs clarification.

### Response:  
Green Lane is not mentioned in Policy 2. It is shown as washed over by Green Belt on the Policies Map. The rationale for washing over Green Belt villages and settlements is given in the Green Belt Topic Paper.
The JRP agrees that, in order to make communities sustainable, some appropriate development may be required in villages and countryside and welcomes the statement of community involvement in any development. Clearly, there are challenges to ensure that these villages, identified as ‘defined’ do not stagnate. However, should DMBC continue to uphold its previous position to include the ‘call for sites’ 2014, it follows that some of the sites could be an additional supply of housing (windfalls) in the defined villages. The JRP reiterates, as in the previous response to the Local Plan in 2018, that no development, other than small scale infill should be permitted. We request that that DMBC remove these sites entirely to avoid developers coming forward with applications for development. Although a distinction has been made between ‘service villages’ and ‘defined villages’ in relation to new developments, the Local Plan states that non-residential development is justified to support a prosperous rural economy. This statement needs further clarification. For example, change of use of existing agricultural buildings should not justify larger scale industrial developments to occur in the small defined villages and hamlets.

Policy 2 does not identify allocations in the Defined Villages but instead promotes an appropriately balanced approach to supporting appropriate development in order to include a positive approach to supporting rural development. In defined villages, development will be supported “subject to other policies in the Plan”. The reference to supporting a prosperous rural economy is a reference to NPPF policy (primarily para 83) which is not repeated in the Local Plan to avoid unnecessary duplication - but this does represent the clarification sought.
5.1 Peel support the emphasis within the policy to promote sustainable growth and ensuring that development helps to create strong, sustainable, cohesive and inclusive communities. 5.2 Peel also welcomes the statement that major new employment sites will be focused at Doncaster Sheffield Airport (DSA). However, this reference to DSA should also be broadened to reflect that draft Policy 7 (DSA) seeks to deliver a significant mixed use growth area at the airport (which encompasses airside and landside employment, housing, aviation, hotel, retail and other commercial uses and community uses, all within the wider ACY area) commensurate with the ambition and vision of the DSAM. For instance, the draft policy is silent in respect of the fact that DSA has significant residential development potential and seeks to deliver, in effect, a new Central Plaza facility for DSA and the surrounding community. 5.3 For clarity, consistency and completeness, draft Policy 2 (including Table 2 - network and hierarchy of town centres) and draft Policy 3 (including the growth distribution table presented in the policy) need to refer to the full proposition at DSA to reflect and be consistent with draft Policy 7 in that the mixed use growth area proposed and supported at DSA/ACY sits outside the settlement hierarchy and housing delivery but it is, nevertheless, an integral element of the Plan - in terms of development needs, economic growth and spatial distribution of growth. It should be clear that the new Central Plaza is an allocation which means that applications which accord with the allocation will not be subject to the NPPF sequential and impact tests. 5.4 In respect of housing delivery, draft Policy 2 sets out the position in the event that the Council fails to demonstrate a five year Borough housing supply. It sets out the circumstances in which proposals to develop land for housing in the Countryside around its Level 1-3 settlements (note 2 - Doncaster Main Urban Area, Main Towns, and Service Towns and Villages) will be considered. 5.5 While the policy seeks to ensure that sustainable housing development is delivered in appropriate locations in the event a 5 year supply is not maintained, the effect of the policy could result in a stream of unplanned, sporadically located and speculative planning applications across the majority of its settlements in less sustainable locations. 5.6 Peel considers that the policy should be modified to ensure that in the event that further housing delivery is required in the absence of a five year housing land supply, such delivery should be guided to DSA in the first instance and ahead of any sporadic incursion into the open countryside. 5.7 As the DSAM articulates, DSA is a significant, well planned, mixed-use sustainable growth opportunity and has the potential to deliver up to 3,000 dwellings across sites 940 E2 and E3 and therefore has sufficient capacity to deliver further homes over and above the 1,200 units already identified in the LP as currently drafted. 5.8 There is also an additional site on the east side of Gate House Lane which was previously identified at Regulation 18 LP stage as a potential housing site (Site Ref 1010) which had yet to be assessed. On this Regulation 19 LP version, without explanation, this site has been retained as an isolated area of open countryside. This matter is discussed further in Chapter 8.

Summary:
Support emphasis on promotion of sustainable growth and creating strong, sustainable, cohesive and inclusive communities. Welcome statement major employment sites will be focussed at DSA, however the reference should be broadened to reflect draft policy 7, which seeks to deliver significant mixed use airport growth. The Policy is silent on the fact that DSA has significant residential development potential and seeks to deliver a new central plaza for the airport and community. Policy 2 and 3 need to refer to the full proposition at DSA to be consistent with Policy 7 and show that despite sitting outside the settlement hierarchy it is nevertheless an integral part of the plan in terms of development needs, economic growth and spatial distribution of growth. It should be clear that the new Central Plaza is an allocation which means that applications which accord with the allocation will not be subject to the NPPF sequential and impact tests. With regards to failure to deliver a 5 year supply, the policy could lead to a stream of unplanned sporadically located and speculative applications in less sustainable locations. In the first instance in such cases, delivery should be directed to DSA ahead of any sporadic incursion into the countryside. The masterplan shows this to be a sustainable growth opportunity with the potential for up to 3,000 dwellings. There is also the additional site east of Gatehouse Lane (1010).

Response:
It is the intention that the airport policy and proposals sit outside of the wider settlement strategy as a special case. However, in light of comments made, amendments have been made to provide a link from Policy 2 / 3 to Polcy 7. The Local Plan makes it clear that the plaza is an allocation, however this will be made clear in referencing (Now 940 E1). There is no justification to amend policies to make it so that in the absence of a 5 year supply, development is directed to the airport housing site specifically. There is also no need to allocate additional land at Gate House Lane as the settlement already has ample housing supply, and Policy 7 will allow for additional housing linked to jobs.
In order to explain further the rationale behind the suggested changes and be given the opportunity to respond to any changes the Council propose to make and any further evidence that is presented.

Area: Chapter 4: Strategic Approach

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness: Positively prepared  Effective

Comment:
5.1 Peel support the emphasis within the policy to promote sustainable growth and ensuring that development helps to create strong, sustainable, cohesive and inclusive communities. 5.2 Peel also welcomes the statement that major new employment sites will be focused at Doncaster Sheffield Airport (DSA). However, this reference to DSA should also be broadened to reflect that draft Policy 7 (DSA) seeks to deliver a significant mixed use growth area at the airport (which encompasses airside and landside employment, housing, aviation, hotel, retail and other commercial uses and community uses, all within the wider ACY area) commensurate with the ambition and vision of the DSAM. For instance, the draft policy is silent in respect of the fact that DSA has significant residential development potential and seeks to deliver, in effect, a new Central Plaza facility for DSA and the surrounding community. 5.3 For clarity, consistency and completeness, draft Policy 2 (including Table 2 - network and hierarchy of town centres) and draft Policy 3 (including the growth distribution table presented in the policy) need to refer to the full proposition at DSA to reflect and be consistent with draft Policy 7 in that the mixed use growth area proposed and supported at DSA/ACY sits outside the settlement hierarchy and housing delivery but it is, nevertheless, an integral element of the Plan - in terms of development needs, economic growth and spatial distribution of growth. The Policy is silent on the fact that DSA has significant residential development potential and seeks to deliver a new central plaza for the airport and community. Policy 2 and 3 need to refer to the full proposition at DSA to be consistent with Policy 7 and show that despite sitting outside the settlement hierarchy it is nevertheless an integral part of the plan in terms of development needs, economic growth and spatial distribution of growth. It should be clear that the new Central Plaza is an allocation which means that applications which accord with the allocation will not be subject to the NPPF sequential and impact tests. With regards to failure to deliver a 5 year supply, the policy could lead to a stream of unplanned sporadically located and speculative applications in less sustainable locations. In the first instance in such cases, delivery should be directed to DSA ahead of any sporadic incursion into the countryside. The masterplan shows this to be a sustainable growth opportunity with the potential for up to 3,000 dwellings. There is also the additional site east of Gatehouse Lane (1010).

Response:
It is the intention that the airport policy and proposals sit outside of the wider settlement strategy as a special case. However, in light of comments made, amendments have been made to provide a link from Policy 2 / 3 to Policy 7. The Local Plan makes it clear that the plaza is an allocation, however this will be made clear in referencing (Now 940 E1). There is no justification to amend policies to make it so that in the absence of a 5 year supply, development is directed to the airport housing site specifically. There is also no need to allocate additional land at Gate House Lane as the settlement already has ample housing supply, and Policy 7 will allow for additional housing linked to jobs.
1. Rossington Hall Investment Ltd (RHI) would generally support the settlement hierarchy detailed in the Publication Draft Policy which identifies Rossington as one of the 'seven main towns'. Rossington is a large settlement of over 13,500 residents with a good range of services and employment opportunities. The Audit (2015) undertaken by the Borough Council places Rossington second in the list of settlements (outside the main urban area) in terms of the availability of primary and secondary services and facilities. Only the combined settlements of Conisbrough and Denaby score higher. It is noted however that Rossington only fails to score the maximum because it does not have a train station and surprisingly it does not apparently meet the Council's Informal POS standard. There is perhaps little than can be done about the former, but the latter will be addressed following the creation of the new parkland on land at Rossington Grange Farm as part of the wider Torne Park development.

2. In response to feedback that the Settlement Audit could be expanded on to better understand what services have been recorded in each settlement, Settlement Profiles have been developed to aid understanding of the Settlement Audit. The Settlement Profile for Rossington states that 'the settlement has a designated local centre but based on recent evidence given the offer of goods and services is more akin to a District Centre.' The settlement profile also expands further on the open space provision - 'Rossington has sufficient formal open space (+19ha), but a deficiency of informal open space (-2.87ha).

3. Overall therefore Rossington is already one of the most sustainable locations in the Borough, in which to live. This is confirmed in the Settlement Profile which states that 'Rossington is one of the best provided for settlements in the borough in terms of service provision.' This position will improve further in the near future as a result of the above as well as employment opportunities at iPort, Doncaster Sheffield Airport and Torne Park. iPort alone is expected to provide over 5000 new jobs. In line with representations submitted in Connection with Policy 3 - Level and Distribution of Growth, Rossington should be identified as a location for meeting more than just 'local needs housing growth' 'on a pro-rata basis'. It should instead be the focus a for a significantly larger % of the economic-led housing growth than currently proposed and additional land should be allocated for housing development to reflect this position/potential. On this basis RHI believe the Local Plan to be ineffective and has not been positively prepared in order to meet the real housing need.

4. The land south of Grange Road, Rossington (Figure 1 below), identified as Site No 306 in the Council's Site Assessment Report, would represent a sustainable urban extension in a location that is not at risk of flooding and is close to shops, community facilities as well as existing and future employment opportunities. The Council's own Site Assessment Report confirms that the only constraint to housing development on this site is a policy constraint i.e. its Green Belt status. Unlike most other sites considered no other factors are identified would prevent development. (SEE EMAIL FOR Figure 1 Land South of Grange Rd, Rossington - Site 306) 5. This assessment is confirmed below which also demonstrates that the inclusion of this site in the Green Belt can no longer justified, if indeed it ever was in the first place. Changes in local circumstances, in particular the development of iPort and the land raising and the creation of parkland on the Rossington Grange Farm land to the west, (see Figure 2 overleaf) means Site 306 does not need to be kept permanently open to achieve any of the five purposes for including land in the Green Belt. On this basis, the Local Plan is not compliant with national policy. RHI object to this site remaining within the Green Belt. 6. Paragraph 134 of the NPPF states that there are five purposes for including land within the Green Belt: a) to check the unrestricted sprawl of large built-up areas; As the land South of Grange Road is being promoted for development through the Development Plan process its subsequent development could not be categorised as 'unrestricted sprawl' but would represent a planned expansion of the urban area that is both proportionate and necessary to address the anticipated development needs of Rossington and the Borough as a whole, both within and beyond the plan period. As a result, the Green Belt 'purpose' is not relevant in such circumstances. b) to prevent neighbouring towns merging into one another; The land South of Grange Road lies on the south western edge of New Rossington, with the nearest town being 3km to the west (Wadworth). It is however important to note that the character of the gap between these two settlements has changed significantly in the last couple of years and is due to change even more in the future following the completion of the iPort development and development at Torne Park. Collectively these developments have already significantly reduced the gap between the built-up areas of Rossington and Wadworth (as shown at Figure 2 below).

Any development on land South of Grange Road will lie well to the east of these new developments and as a result have no practical impact on the extent or perception of separation. It is also noted that the site does not extend any further south that the existing southern limit of the built-up area of New Rossington. As a result, development on the land south of Grange Road would not result in any merging of neighbouring towns into one another. As a result, the land South of Grange Road does not need to be allocated as Green Belt or retained to prevent neighbouring town merging into one another. c) to assist in safeguarding the countryside from encroachment; The site is physically well defined to the west, north and east and that as a result its removal from the Green Belt and allocation for housing or safeguarding would not result in any further pressure for development or encroachment on the surrounding countryside in this part of Rossington. The site itself is in intensive agricultural use. It is not identified as being of particular ecological or landscape or recreational value and being on the edge on urban areas it suffers from various urban fringe problems e.g. trespass. At the same time it occupies a sustainable location for new housing development. The Council, in its emerging Local Plan, already acknowledges the need to identify Greenfield land to meet the Borough's housing requirement over the plan period and in such circumstances we consider the land south of Grange Road to offer a sustainable development option with minimal impact in terms of countryside encroachment. d) to preserve the setting and special character of historic towns; and This purpose is not relevant to the land south of Grange Road. The site makes no contribution towards the setting or special character of any historic town. e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The recycling of by far the largest area of derelict land in Rossington (i.e. the
former Colliery site) is already committed and well underway. The allocation of the land South of Grange Road for housing through the Local Plan will not compromise these works, but instead will assist in supporting the regeneration of Rossington. The more new housing that can be attracted to New Rossington, the more people will be attracted to the town with the resulting beneficial impact on the vitality and viability of local shops, services and community facilities. The prospect of 5000+ jobs being created on the edge of the town provides a unique opportunity to revitalise New Rossington. It needs to be complemented by new good quality housing in attractive and sustainable locations in and around Rossington to attract and retain the workforce. Housing development on the Rossington Colliery site on its own is not sufficient to maximise these benefits and additional sites need to be allocated through the Local Plan. 7. In the light of the above RHI would, the first instance, seek the allocation of Site 306 for housing as part of this emerging Local Plan in order to meet housing needs and demands and provide a range and choice of sites in the settlement. Failing this RHI would seek its removal from the Green Belt and its allocation as Safeguarded Land for potential housing development beyond the current Plan period. 8. Further to this, RHI objects to the lack of Safeguarded Land in the Local Plan. It is not appropriate for a Local Plan with a significant amount of Green Belt land to not have a Safeguarded Land Policy. It is not effective, justified or in line with national policy. Settlements within the Green Belt should have the capacity to expand in the future. (SEE EMAIL FOR Figure 2) PROPOSED CHANGE 1. As set out above, RHI consider the Local Plan is not sound on all aspects. 2. In order to make the Local Plan sound a Safeguarded Land policy should be included. This would make the Local Plan effective, justified and national policy compliant. 3. Further to this, Policy 2 needs to allow more flexibility with regard to housing allocations rather than being distributed on a ‘pro-rata basis’. This would mean that the plan is positively prepared and allows for development to adapt as circumstances change across the plan period. 4. RHI consider that the site South of Grange Road, Rossington should be removed from the Green Belt as it fails to meet any of the five purposes set out a paragraph 134 of the NPPF. This would mean that the Local Plan is compliant with national policy. 5. On this basis RHI would suggest that Rossington should be a focus for a larger proportion of housing development than currently proposed and the site South of Grange Road should be allocated or safeguarded for housing development to reflect this position/potential.

Summary:

RHI generally support settlement hierarchy but consider the Local Plan is not sound on all aspects. Settlement Audit should be expanded on to better understand, Rossington is considered one of the most provided for settlements in the borough, and should be the focus for a significantly larger % of growth. In order to make the Local Plan sound a Safeguarded Land policy should be included. This would make the Local Plan effective, justified and national policy compliant. Policy 2 needs to allow more flexibility with regard to housing allocations rather than being distributed on a ‘pro-rata basis’. This would mean that the plan is positively prepared and allows for development to adapt as circumstances change across the plan period. RHI consider that the site South of Grange Road, Rossington should be removed from the Green Belt as it fails to meet any of the five purposes set out a paragraph 134 of the NPPF. This would mean that the Local Plan is compliant with national policy. On this basis RHI would suggest that Rossington should be a focus for a larger proportion of housing development than currently proposed and the site South of Grange Road should be allocated or safeguarded for housing development to reflect this position/potential.

Response:

General support to Rossington's identification as a Main Town welcomed and the POS standard is based on current/existing provision as all settlements may have an improved/different 'score' through the Audit once factoring in current/future development and proposals. The spatial strategy has been developed through several rounds of consultation (Reg 18 stages) with summaries published along the way. Approaches to more dispersal/greater concentration/current Core Strategy approach etc were all options that were considered and subject to SA. A Settlement Background Paper was published alongside the Publication Plan (and previous 2018 consultation) setting out more details and will be updated and republished as a Topic Paper for Submission. There has been various competing calls throughout the process for different settlements to have a "bigger slice of the cake" but none of them are considered to amount to a more justified or coherent strategy than what has been proposed. It is not considered there are exceptional circumstances to allocate sites in the Green Belt at Rossington when its housing requirement for the plan period (and beyond) has been identified through non-Green Belt supply. It is proposed that IPort itself remains washed over by Green Belt given the very special circumstances that led tot e granting of permission for this facility included the need to be located adjacent to the the existing rail infrastructure. There is no safeguarded land proposed through the Local Plan as it is not considered that the requirements of NPPF para 139c has been identified i.e. 'where necessary' as a future strategy may not necessitate the need for Green Belt release or alterations.
3.1 This policy is considered unsound as it is not justified or effective. 3.2 The policy seeks to distribute the majority of new development to the most sustainable locations, these being the Main Urban Area of Doncaster, the 7 Main Towns and the 10 Service Towns and Villages. This general principle is considered appropriate and is supported. It is, however, important that this is sustainable and deliverable. 3.3 Bawtry is identified as in the 'Service Towns and Villages' category. The Local Plan identifies that this level of settlement will "provide a good range of services meeting their own needs and the local area. To maintain and enhance their role as service towns and villages which provide housing, employment, retail, and key services and facilities for the local area, these settlements will be a focus for accommodating an appropriate level of growth to meet their local needs, as well as renewing and regenerating any run-down neighbourhoods." 3.4 The identification of Bawtry within the Service Town and Village tier is supported. It is a high performing settlement and provides many primary services. It is well served by a district centre containing local services and amenities, including a primary school and health care provision. It also has excellent public transport connections to higher level centres such as Doncaster, Worksop, Retford and Gainsborough through regular bus services. Bawtry is, therefore, considered a sustainable settlement suitable for new growth. 3.6 In terms of new homes the policy seeks to deliver at least 50% within the 'Main Urban Area' of Doncaster and 40% within the 7 'Main Towns' with just 10% allocated to the 'Service Towns and Villages'. The derivation of this split is discussed within the 'Sustainability Appraisal of the Doncaster Local Plan 2015-2035: Publication Version' (SA) and 'Settlement Background Paper'. The key criteria used is a 'proportional' split based upon population and the 'economic element' of the housing requirement uplift being split between the Main Urban Area and Main Towns (Settlement Background Paper para 3.1.6 and 3.1.7). None of the economic uplift element is distributed to lower tier settlements. 3.7 The distribution takes no account of other factors such as affordable housing need, deliverability or development opportunities. The Council’s viability evidence ‘Whole Plan Viability Testing - Update, May 2019’ (2019 Viability Report) identifies the challenges of delivering within many areas of the borough. The 2019 Viability Report identifies three ‘value zones’ across Doncaster, these being High, Medium and Low. The low value zones are generally concentrated in and around the Main Urban Area and Main Towns. 3.8 The 2019 Viability Report highlights that; "viability pressure was at its highest for schemes in low value areas. These schemes were shown to be unviable if a 20% (or higher) affordable housing provision was applied. However, some schemes did return a viable outcome if the affordable housing provision was reduced to 15%, although typically this also required a reduction in the other 5106 policy contributions.” (our emphasis, para. 7.5). 3.9 It is notable that Policy 8 of the Local Plan reduces affordable housing to 15% in the low value areas. However, based upon the output from the 2019 Viability Report it is likely that many schemes within these areas will remain unviable even with the reduced level of affordable housing. This threatens the deliverability of the plan and the ability to meet the affordable housing needs of the area. 3.10 The Council’s background paper ‘Housing Need Study / Affordable Housing Need’ identifies a need for 209 affordable dwellings per year. The 2019 Viability Report highlighted that; "viability pressure was at its highest for schemes in low value areas. These schemes were shown to be unviable if a 20% (or higher) affordable housing provision was applied. However, some schemes did return a viable outcome if the affordable housing provision was reduced to 15%, although typically this also required a reduction in the other 5106 policy contributions.” (our emphasis, para. 7.5). 3.11 To ensure that the plan is deliverable and that it provides the greatest opportunity to deliver much needed affordable housing it is recommended that an increased percentage of housing be allocated to lower tier settlements. Given their inherent sustainability the majority of this re-distribution should be within the Service Towns and Villages, such as Bawtry.
2.8 This policy contains a large amount of information, some of which should logically be included as supporting text rather than policy wording. The text should direct the reader to the background document/s that justify the percentage distribution of new homes (at least 50% to the Main Urban Area, about 40% to the Main Towns and around 10% to the Service Towns and Larger Villages). It is not clear whether the overall percentage distributions to the three settlement tiers have been influenced by seeking to minimise Green Belt, or whether it is based solely on the sustainability and size of settlements. There is no reference in the overall strategy part of this policy which makes reference to Green Belt constraints in the Borough. The Topic Paper which will explain the Plans Settlement Strategy and Hierarchy is not available until Plan Submission, which does not give representors the opportunity of understanding or commenting on the strategy. 2.9 The Spatial Strategy is not, therefore, justified by the evidence and is unsound.

Summary:
The spatial strategy is not justified by evidence and is unsound. It is unclear whether the overall percentage distribution to the tiers have been influenced by seeking to minimise Green Belt or solely on the sustainability and size of settlements. The topic paper is unavailable until submission which does not give representors the opportunity of understanding or commenting on the strategy.

Response:
The strategy approach was explained in both the Settlement Background Paper in 2018, and the Housing Background Paper and Green Belt Topic Paper for the 2019 consultation, and is now further covered in the Housing Topic Paper. These documents show this to be both sound and justified, being in accordance with consultation on the settlement strategy.

</tr>
</thead>
</table>

2.10 We maintain our objection to the joining of Auckley and Hayfield Green as a combined settlement. The justification provided for the treatment of Auckley and Hayfield Green as a combined settlement is inadequate. In the Settlement Audit (February 2017 update) Auckley and Hayfield Green were treated as separate settlements, and in the settlement scoring Auckley performed better than Hayfield Green in terms of the number of Primary Services and the number of combined Primary and Secondary Services. The Homes and Settlements Consultation (March 2016) however, treats Auckley and Hayfield Green as a combined settlement. 2.11 The Settlement Background Paper that forms part of the Local Plan Evidence base makes reference to the Settlement Audit and the merging of Auckley and Hayfield Green Community Profile Areas. The explanation given is simply "adjacent settlements and Parish boundary". There is inadequate justification. Hayfield Green is no nearer Auckley than it is to Branton, but there is no suggestion of merging those two settlements. The parish boundary is a historical artefact that pre-dates the establishment of what is effectively a new settlement at Hayfield Green. Nothing has changed since the February 2017 Settlement Audit to warrant that amendment. 2.12 There are two other combined settlements within the Service Towns and Villages tier of the settlement hierarchy. These are Barnburgh - Harlington, and Carcroft - Skellow. The distances between the respective edges of the built form of these three combined settlements are as follows: Auckley to Hayfield Green c. 540 metres Barnburgh to Harlington c. 80 metres Carcroft to Skellow c. 0 metres 2.13 It is clear from the above distances and the below extracts from the Local Plan interactive map that Auckley and Hayfield Green are materially different to the other two combined settlements. The settlement boundary is clearly defined around Auckley, separate from Hayfield Green settlement limit, whereas Barnburgh/Harlington and Carcroft/Skellow are considered as combined settlements with a development limit surrounding and joining them. SEE EMAIL FOR Plan showing Auckley and Hayfield Green - Individual settlement boundaries and Plans showing Carcroft - Skellow and Barnburgh - Harlington. Both with combined settlement limits.) 2.14 Auckley has a population of 2,038 according to the Settlement Audit and scores 3 against the Primary facilities score, and scores 2 against the secondary facilities score giving a combined score of 5. The Homes and Settlements Consultation categorised a larger village as having a population of over 1,000 and 4 or 5 key services. Auckley would therefore fall into this category as a stand alone settlement and would justifiably be considered as a standalone 'larger village' within the 'Service Village and Larger Village' tier of the Settlement Hierarchy. Without doing so, local housing need in Auckley will not be met. 2.15 For the reasons outlined above Auckley should be considered as a separate settlement to Hayfield Green, and receive its own housing requirement separate from Hayfield Green within the Service Towns and Villages tier of the settlement hierarchy. 2.16 The Settlement Hierarchy is not, therefore, justified by the evidence nor will it be effective in meeting the Plans objective of ensuring local housing need is met in each settlement. It is therefore unsound.

Summary:
The 2017 settlement audit treats them differently, but the Homes and Settlements (2016) does not. Hayfield Green is no nearer to Auckley than it is to Branton and the parish boundary is a historical artefact that pre-dates the establishment of what is effectively a new settlement at Hayfield Green. Since 2017, nothing has changed to warrant this amendment. The other merged settlements are far nearer to each other: Auckley to Hayfield Green c. 540 metres Barnburgh to Harlington c. 80 metres Carcroft to Skellow c. 0 metres Auckley - Hayfield Green is clearly materially different to these, where the respective settlement limits are well defined as opposed to combined at Barnburgh - Harlington and Carcroft - Skellow. Given service provision in Auckley, it would fall into the category of service town and village on its own and would have its own need to meet, which would not be met as the requirement is met in Hayfield Green at present. The settlement hierarchy is therefore not justified by evidence, nor will it be effective in meeting the plan objective of ensuring local housing need is met in each settlement, and is therefore unsound.

Response:
The Settlement Audit assesses these individually due to using Community Profile Areas to assess service provision - which are often on a smaller scale to the actual proposed settlements, however these are then combined where necessary to show the proposed overall area. This is also the case in other settlements, including the Main Urban Area, Barnburgh and Harlington. Throughout the Local Plan, Auckley and Hayfield Green have always been proposed as one settlement, and this is reflective of the Parish (and the Neighbourhood Plan area) which includes both areas.
Tests of Soundness:

Comment:
Paragraph 4.17 It is felt that the following sentence is open to miss interpretation and should be re-worded. "Opportunities to reduce the causes and impacts of flooding from new development should be sought.” NPPF is clear that new development should not result in an increase in flood risk on or off site, the above statements suggest that in some cases this may be acceptable. We would therefore recommend that the wording is amended to: Opportunities to reduce the causes and impacts of flooding through new development should be sought.

Summary:
Paragraph 4.17 is open to misinterpretation and should be re-worded. "Opportunities to reduce the causes and impacts of flooding from new development should be sought.” NPPF is clear that new development should not result in an increase in flood risk on or off site, the above statements suggest that in some cases this may be acceptable. We would therefore recommend that the wording is amended to: Opportunities to reduce the causes and impacts of flooding through new development should be sought.

Response:
The wording in para 4.17 reflects wording in NPPF para 157c. It does not require amendment.

**Comment:**

Edenthorpe, Kirk Sandall, Barnby Dun, Hatfield, Dunsville and Thorne area of Doncaster has taken a significant majority of the housing allocation within Doncaster. The spread of housing development should be more equal throughout Doncaster. Although unfavourable (to mainly developers) due to a reduction in profits, a new village should be considered in Doncaster instead of sprawling villages continuously. The housing methodology adopted with the Local increases strain on doctors, dentists and schools. An independent, sufficient village with the amenities and services would also elevate many constraints associated with the expansion of existing villages.

**Summary:**

The spread of housing allocation should be more dispersed with too much directed to Barnby Dun, Hatfield-Stainforth, Thorne, and Edenthorpe-Kirk Sandall areas. A new village should be considered instead of sprawling villages continuously. Housing puts strains on infrastructure such as schools, GPs, dentists.

**Response:**

A new settlement was considered early in the process but ruled out given the time this could take to establish and the need to continue to regenerate urban areas. Barnby Dun has a comparatively modest housing requirement of 105 dwellings and a suitable site has been found which can deliver this. It is not felt that the distribution of sites is overly focussed in the areas mentioned. There are permissions in Edenthorpe for c. 1000 houses and 3100 at Hatfield - Stainforth, but these are also clearly physically separate to Barnby Dun. It is not considered that site 147 leads to sprawl, and this site would actually round off the built form here.

Tests of Soundness:

Comment:

The excessive rate of expansion throughout Doncaster is intrusive and unpopular to residents throughout the Borough. There is a general feeling that the rate of growth is too quick and important factors are dis-regarded in favour of increasing the number of residents in Doncaster. This is evident by the allocation of development land in open countryside areas before the re-utilisation of brownfield sites. The over expansion of housing throughout Doncaster negatively impacts efforts to invigorate deteriorating high street retail. Congestion in Doncaster is a much greater issue than what is briefly outlined in the Local Plan. Further thorough research should be conducted into the implications of the high number of houses and resultant traffic on accessibility to Doncaster high streets and amenities.

Summary:

Too much emphasis on growth which is not supported by communities. Brownfield sites should come forward before open countryside. Over expansion of housing negatively impacts on efforts to invigorate deteriorating high street retail. Congestion is much greater than that outlined in the local plan and needs more research into the impacts new housing will have on traffic.

Response:

Brownfield sites have all been considered and allocated before greenfield sites. There are no brownfield opportunities in Barnby Dun that can deliver the required levels of housing. Local traffic impacts have been modelled by AECOM and impacts / solutions are proposed in their transport modelling report. Not clear as to how housing growth impacts on high street retail. Housing allocations here are to support local needs and reflect the requirement for Barnby Dun without policy intervention over the plan period.

**Comment:**

We support the overall strategy which states that Doncaster’s Spatial Strategy will focus on delivering sustainable growth, appropriate to the size of individual settlements, that meets the needs for new homes and jobs, regenerates places and communities, and supports necessary improvements to infrastructure, services and facilities. It is important that development should help create and maintain strong, sustainable, cohesive and inclusive communities. Whilst we support the use of brownfield sites, there is a great need for greenfield sites to be developed to achieve the Plan Strategy as it is important to acknowledge that the remaining previously developed / brownfield sites are limited and can have viability implications (e.g. costs linked with remedial works associated with contamination etc.). We agree with the assertion that decisions on the location and scale of development should be informed by Doncaster’s Settlement Hierarchy. We fully support the inclusion of a Settlement Hierarchy within the Local Plan, as it is agreed that this a great way of indicating the best locations for future development (both for local residents, landowners and developers). The settlement hierarchy shows what types and levels of development are appropriate for settlements in each of the six ‘tiers’ set out in the hierarchy. For example, Doncaster Main Urban Area will be the main focus for development in the Borough. The Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts arranged around the town-centre; such as Warmsworth. We support this approach. In addition to supporting the use of a Settlement Hierarchy, we also support the use of Development Limits to be drawn around settlements, but only if these limits are not onerously tight. We therefore welcome the flexibility proposed within the draft policy text which states that “Appropriate development will be supported outside settlement Development Limits, new allocations and the Green Belt, if adjacent or close to a Development Limit of a settlement?”, subject to meeting four set criteria, however, we request that the following text is deleted “in levels 1-3 above”, as it is vital that all settlements are able to grow commensurate to their size. If settlements are tightly constrained by Development Limits and Green Belt, (for example the village of Clayton has limited infill opportunities and the Green Belt is drawn tightly around the existing built up areas restricting any future growth), then settlements risk future demise if the community cannot grow to support the existing services and facilities. Clayton, for example, is a village where there is support for some growth, but such aspirations cannot be met due to the policy restrictions associated with the Green Belt. As part of the emerging Local Plan, both the settlement limits and Green Belt needs reviewing for this settlement. It is our understanding that this would be supported as the community would like to prepare a Neighbourhood Plan to allow some flexibility regarding new development going forward. The Council should therefore support future development in Clayton to ensure that the positive Neighbourhood Plan can be prepared in the future. Furthermore, whilst we support the policy in principle, subject to some amendments, it is considered that development per each settlement should be monitored regularly as some allocations may not come forward for some time. If this does occur then this should not preclude other development (in addition to the allocations) from taking place as it is important that settlements continue to grow throughout the Plan period to remain viable and to support the existing and future residents and the associated local services and facilities. Additionally, we also have some concerns over the description that infill sites are defined as “the filling of a small gap in an otherwise built up frontage - a small gap is defined as a gap which fronts onto a highway and has a width less than 20 metres between existing buildings”. It is considered that this is too prescriptive and therefore should be amended to the following: “The development of a relatively small gap between existing buildings”; and each site should be considered on its own individual merits. Subject to the above changes regarding development limits, supporting all settlement with regard to future growth and infill sites, we have no further comment to make on this policy.

**Summary:**

Support is given to overall strategy. Whilst supporting use of brownfield sites, it is important to acknowledge that the remaining previously developed / brownfield sites are limited and can have viability implications (e.g. costs linked with remedial works associated with contamination etc.). Support the Settlement Hierarchy including the definition of the Doncaster Main Urban Area. Support the use of Development Limits to be drawn around settlements but only if these limits are not onerously tight. Welcome the flexibility proposed within the draft policy text which states that “Appropriate development will be supported outside settlement Development Limits, new allocations and the Green Belt, if adjacent or close to a Development Limit of a settlement?”, subject to meeting four set criteria, however, we request that the following text is deleted “in levels 1-3 above”, as it is vital that all settlements are able to grow commensurate to their size. Whilst support the policy in principle, subject to some amendments, it is considered that development per each settlement should be monitored regularly as some allocations may not come forward for some time. If this does occur then this should not preclude other development (in addition to the allocations) from taking place as it is important that settlements continue to grow throughout the Plan period to remain viable and to support the existing and future residents and the associated local services and facilities. Concerned with the description that infill sites. It is too prescriptive and therefore should be amended to the following: “The development of a relatively small gap between existing buildings”; and each site should be considered on its own individual merits.
Support is welcomed regarding the overall strategy, the Settlement Hierarchy and the use of Development Limits. Policy 2 does allow some development adjacent to Defined Villages in the Countryside (i.e. not defined a Levels 1 - 3 in the policy) subject to it being ‘exceptional circumstances’ and have clear community support. Regarding settlement in the Green Belt, national policy applies. Therefore there is no requirement to delete the reference to Levels 1-3. Paragraph 4.12 sets out the circumstances where housing can be delivered if the Council fails to demonstrate a five-year housing supply. In line with national guidance, the Local Plan will also be reviewed at least every 5 years. The current wording aims to be offer clarity and certainty. It is important not to have inappropriate development which is of an appropriate scale and nature and in keeping with the core shape, form and size of the settlement.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is a small gap in Savills Warde-Aldam Estates. Policy 2: Spatial Strategy & Settlement Hierarchy. Attend Hearing 27/09/2019 Savills Chapter 4: Strategic Approach

We support the overall strategy which states that Doncaster’s Spatial Strategy will focus on delivering sustainable growth, appropriate to the size of individual settlements, that meets the needs for new homes and jobs, regenerates places and communities, and supports necessary improvements to infrastructure, services and facilities. It is important that development should help create and maintain strong, sustainable, cohesive and inclusive communities. Whilst we support the use of brownfield sites, there is a great need for greenfield sites to be developed to achieve the Plan Strategy as it is important to acknowledge that the remaining previously developed / brownfield sites are limited and can have viability implications (e.g. costs linked with remedial works associated with contamination etc.). We agree with the assertion that decisions on the location and scale of development should be informed by Doncaster’s Settlement Hierarchy. We fully support the inclusion of a Settlement Hierarchy within the Local Plan, as it is agreed that this a great way of indicating the best locations for future development (both for local residents, landowners and developers). The settlement hierarchy shows what types and levels of development are appropriate for settlements in each of the six ‘tiers’ set out in the hierarchy. For example, Doncaster Main Urban Area will be the main focus for development in the Borough. The Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts arranged around the town-centre; such as Warmsworth. We support this approach. In addition to supporting the use of a Settlement Hierarchy, we also support the use of Development Limits to be drawn around settlements, but only if these limits are not onerously tight. We therefore welcome the flexibility proposed within the draft policy text which states that “Appropriate development will be supported outside settlement Development Limits, new allocations and the Green Belt, if adjacent or close to a Development Limit of a settlement?”, subject to meeting four set criteria, however, we request that the following text is deleted “in levels 1-3 above”, as it is vital that all settlements are able to grow commensurate to their size. If settlements are tightly constrained by Development Limits and Green Belt, (for example the village of Clayton has limited infill opportunities and the Green Belt is drawn tightly around the existing built up areas restricting any future growth), then settlements risk future demise if the community cannot grow to support the existing services and facilities. Clayton, for example, is a village where there is support for some growth, but such aspirations cannot be met due to the policy restrictions associated with the Green Belt. As part of the emerging Local Plan, both the settlement limits and Green Belt needs reviewing for this settlement. It is our understanding that this would be supported as the community would like to prepare a Neighbourhood Plan to allow some flexibility regarding new development going forward. The Council should therefore support future development in Clayton to ensure that the positive Neighbourhood Plan can be prepared in the future. Furthermore, whilst we support the policy in principle, subject to some amendments, it is considered that development per each settlement should be monitored regularly as some allocations may not come forward for some time. If this does occur then this should not preclude other development (in addition to the allocations) from taking place as it is important that settlements continue to grow throughout the Plan period to remain viable and to support the existing and future residents and the associated local services and facilities. Additionally, we also have some concerns over the description that infill sites are defined as "the filling of a small gap in an otherwise built up frontage - a small gap is defined as a gap which fronts onto a highway and has a width less than 20 metres between existing buildings". It is considered that this is too prescriptive and therefore should be amended to the following: "The development of a relatively small gap between existing buildings"; and each site should be considered on its own individual merits. Subject to the above changes regarding development limits, supporting all settlement with regard to future growth and infill sites, we have no further comment to make on this policy.

Summary:
Support is given to overall strategy. Whilst supporting use of brownfield sites, it is important to acknowledge that the remaining previously developed / brownfield sites are limited and can have viability implications (e.g. costs linked with remedial works associated with contamination etc.). Support the Settlement Hierarchy including the definition of the Doncaster Main Urban Area. Support the use of Development Limits to be drawn around settlements but only if these limits are not onerously tight. Welcome the flexibility proposed within the draft policy text which states that "Appropriate development will be supported outside settlement Development Limits, new allocations and the Green Belt, if adjacent or close to a Development Limit of a settlement?", subject to meeting four set criteria, however, we request that the following text is deleted "in levels 1-3 above", as it is vital that all settlements are able to grow commensurate to their size. Whilst support the policy in principle, subject to some amendments, it is considered that development per each settlement should be monitored regularly as some allocations may not come forward for some time. If this does occur then this should not preclude other development (in addition to the allocations) from taking place as it is important that settlements continue to grow throughout the Plan period to remain viable and to support the existing and future residents and the associated local services and facilities. Concerned with the description that infill sites. It is too prescriptive and therefore should be amended to the following: "The development of a relatively small gap between existing buildings"; and each site should be considered on its own individual merits.
Response:

Support is welcomed regarding the overall strategy, the Settlement Hierarchy and the use of Development Limits. Policy 2 does allow some development adjacent to Defined Villages in the Countryside (i.e. not defined a Levels 1 - 3 in the policy) subject to it being 'exceptional circumstances' and have clear community support. Regarding settlement in the Green Belt, national policy applies. Therefore there is no requirement to delete the reference to Levels 1-3. Paragraph 4.12 sets out the circumstances where housing can be delivered if the Council fails to demonstrate a five-year housing supply. In line with national guidance, the Local Plan will also be reviewed at least every 5 years. The current wording aims to be offer clarity and certainty. It is important not to have inappropriate development which is of an appropriate scale and nature and in keeping with the core shape, form and size of the settlement.
We support the overall strategy which states that Doncaster's Spatial Strategy will focus on delivering sustainable growth, appropriate to the size of individual settlements, that meets the needs for new homes and jobs, regenerates places and communities, and supports necessary improvements to infrastructure, services and facilities. It is important that development should help create and maintain strong, sustainable, cohesive and inclusive communities. Whilst we support the use of brownfield sites, there is a great need for greenfield sites to be developed to achieve the Plan Strategy as it is important to acknowledge that the remaining previously developed / brownfield sites are limited and can have viability implications (e.g. costs linked with remedial works associated with contamination etc.). We agree with the assertion that decisions on the location and scale of development should be informed by Doncaster’s Settlement Hierarchy. We fully support the inclusion of a Settlement Hierarchy within the Local Plan, as it is agreed that this a great way of indicating the best locations for future development (both for local residents, landowners and developers). The settlement hierarchy shows what types and levels of development are appropriate for settlements in each of the six 'tiers' set out in the hierarchy. For example, Doncaster Main Urban Area will be the main focus for development in the Borough. The Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts arranged around the town-centre; such as Warmsworth. We support this approach. In addition to supporting the use of a Settlement Hierarchy, we also support the use of Development Limits to be drawn around settlements, but only if these limits are not onerously tight. We therefore welcome the flexibility proposed within the draft policy text which states that "Appropriate development will be supported outside settlement Development Limits, new allocations and the Green Belt, if adjacent or close to a Development Limit of a settlement?", subject to meeting four set criteria, however, we request that the following text is deleted "in levels 1-3 above", as it is vital that all settlements are able to grow commensurate to their size. If settlements are tightly constrained by Development Limits and Green Belt, (for example the village of Clayton has limited infill opportunities and the Green Belt is drawn tightly around the existing built up areas restricting any future growth), then settlements risk future demise if the community cannot grow to support the existing services and facilities. Clayton, for example, is a village where there is support for some growth, but such aspirations cannot be met due to the policy restrictions associated with the Green Belt. As part of the emerging Local Plan, both the settlement limits and Green Belt needs reviewing for this settlement. It is our understanding that this would be supported as the community would like to prepare a Neighbourhood Plan to allow some flexibility regarding new development going forward. The Council should therefore support future development in Clayton to ensure that the positive Neighbourhood Plan can be prepared in the future. Furthermore, whilst we support the policy in principle, subject to some amendments, it is considered that development per each settlement should be monitored regularly as some allocations may not come forward for some time. If this does occur then this should not preclude other development (in addition to the allocations) from taking place as it is important that settlements continue to grow throughout the Plan period to remain viable and to support the existing and future residents and the associated local services and facilities. Additionally, we also have some concerns over the description that infill sites are defined as "the filling of a small gap in an otherwise built up frontage - a small gap is defined as a gap which fronts onto a highway and has a width less than 20 metres between existing buildings". It is considered that this is too prescriptive and therefore should be amended to the following: "The development of a relatively small gap between existing buildings"; and each site should be considered on its own individual merits. Subject to the above changes regarding development limits, supporting all settlement with regard to future growth and infill sites, we have no further comment to make on this policy.

To allow our concerns to be fully understood and be explored in detail and in order to exercise our legal right to be given the opportunity of attending a hearing (section 20(6) of the Planning and Compulsory Purchase Act 2004),

Policy 2 Spatial Strategy and Settlement Hierarchy (Strategic Policy) attempts to set out an unduly restrictive approach towards rural development that extends well beyond national planning policy in the NPPF and Planning Practice Guidance. As such the plan fundamentally fails to have due regard to national planning policy and the plan advances no reasoning why such an approach is justified in Doncaster. The NPPF approach towards the role of rural housing was previously set out in paragraphs 54 and 55 of the 2012 NPPF. This is now set out in paragraphs 77, 78 and 79 of the 2019 NPPF, however the overall approach towards rural housing has not been amended, therefore previous appeal and case law interpretations of paragraph 55 of the 2012 NPPF remain valid and relevant to the determination of conformity with national planning policy. Paragraph 78 of the 2019 NPPF states: "To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby." In some respects this approach is more explicit than the former NPPF that villages, even small villages should be given an opportunity to grow and thrive. The Doncaster Local Plan seeks to resist residential development in the countryside generally. It goes well beyond resisting isolated dwellings in the countryside. Sites in settlements and groupings of development that may not be identified as a defined village can in no way can be considered to be isolated in our view. The Framework does not define "isolated", therefore Inspectors tend to rely on the everyday definition of the word as meaning lonely or remote or as the Courts have concluded 'far away from people or places'. The countryside is proposed to wash over settlements that are not identified as a defined village and groupings of development that are not visually or physically isolated, and are not functionally isolated relative to services and facilities. The High Court judgment in Braintree District Council v Secretary of State for Communities and Local Government & Ors [2017] handed down on 15th November 2017 regarding paragraph 55 of the 2012 NPPF and new isolated homes in the countryside. The High Court judgment considers that "isolated" should be given its ordinary objective meaning of "far away from other places, buildings or people; remote". Consequently any proposed new residential property within or on the edge of a settlement including settlements that are not identified as a defined village and groupings of development cannot be considered isolated in terms of paragraph 55 of the previous 2012 NPPF, now paragraph 79 of the 2019 NPPF. This judgement has been confirmed as being perfectly valid in the Court of Appeal. At this time the obiter of Lord Justice Lindblom in the Court of Appeal in Braintree District Council v Secretary of State for Communities & Local Government [2018] is highly relevant. In paragraph 32 of his judgement he states: "What constitutes a settlement for these purposes is also left undefined in the NPPF. The NPPF contains no definitions of a "community", a "settlement", or a "village". There is no specified minimum number of dwellings, or population. It is not said that a settlement or development boundary must have been fixed in an adopted or emerging local plan, or that only the land and buildings within that settlement or development boundary will constitute the settlement. In my view a settlement would not necessarily exclude a hamlet or a cluster of dwellings, without, for example, a shop or post office of its own, or a school or community hall or a public house nearby, or public transport within easy reach. Whether, in a particular case, a group of dwellings constitutes a settlement, or a "village", for the purposes of the policy will again be a matter of fact and planning judgment for the decision-maker. In the second sentence of paragraph 55 the policy acknowledges that development in one village may "support services" in another. It does not stipulate that, to be a "village", a settlement must have any "services" of its own, let alone "services" of any specified kind." The obiter of Lord Justice Lindblom is clear that in his view the NPPF does not require a grouping of development to be either within a defined settlement boundary or be designated as such in a development plan to fall to be considered to be a 'settlement'. In addition he is also clear that a grouping of development does not need to be any minimum size or have any services and facilities to be deemed to be a 'settlement' in planning terms. The obiter of Lord Justice Lindblom in paragraphs 30 and 31 of the Court of Appeal judgement also referred to "isolated" as meaning "standing apart or alone, detached or separate from other things or persons; unconnected with anything else; solitary?" He then went on to clearly state: "In my view, in its particular context in paragraph 55 of the NPPF, the word "isolated" in the phrase "isolated homes in the countryside" simply connotes a dwelling that is physically separate or remote from a settlement. Whether a proposed new dwelling is, or is not, "isolated" in this sense will be a matter of fact and planning judgment for the decision-maker in the particular circumstances of the case in hand." The restrictive approach of Policies 2 and 26 is in our view clearly inconsistent with National Planning Policy in paragraphs 78 and 79 of the NPPF; the advice in Planning Practice Guidance; and case law established in both of the Braintree cases. Again the obiter of Lord Justice Lindblom in the Court of Appeal in Braintree District Council v Secretary of State for Communities & Local Government [2018] is highly relevant. In paragraph 29 of his judgement he states: "?the policy explicitly concerns the location of new housing development. The first sentence of paragraph 55 tells authorities where housing should be located. The location is "where it will enhance or maintain the vitality of rural communities". The concept of the "vitality" of such a community is wide, and undefined. The example given in the second sentence of paragraph 55 - "development in one village" that "may support services in a village nearby" - does not limit the notion of "vitality" to a consideration of "services" alone. But it does show that the policy sees a possible benefit of developing housing in a rural settlement with no, or relatively few, services of its own. The third sentence of the paragraph enjoins authorities to avoid "new isolated homes in the countryside". This is a distinction between places. The contrast is explicitly and simply a geographical one. Taken in the context of the preceding two sentences, it simply differentiates between the development of housing within a settlement - or "village" - and new dwellings that would be "isolated" in the sense of being separate or remote from a settlement. Under the
Response:

The policy as drafted is considered to be positive and in line with NPPF and the need to balance supporting rural uses and the vitality of smaller settlements in the countryside with channelling development to sustainable locations in line with wider spatial planning objectives. The Local Plan does not intend to repeat national planning policy.
2.4 The Council outline their proposed settlement hierarchy and level of distribution within the policy. It is noted that at least 50% of the baseline housing growth figure (8,775 homes) will be located within the ‘Main Urban Area’ of Doncaster, with 40% being delivered in the ‘Main Towns’ of Dunscroft, Dunsville, Hatfield & Stainforth, Thorne & Moorends, Conisbrough & Denaby, Mexborough, Armthorpe, Rossington, and Adwick & Woodlands. The remaining 10% of the housing requirement, which equates 877 over the entire plan period (just 44 dwellings per year) would be delivered across the ‘Service Towns and Villages’. 2.5 As per our previous representations our Client objects to the distribution of housing through the settlement hierarchy; it is too heavily focused on both the Main Urban Area and the Main Towns, with 90% of the Council’s housing to be delivered in these areas. 2.6 In addition, our Client objects to the baseline housing growth figure (8,775 houses) being used when distributing housing. This figure ignores the planned economic growth over the plan period, which would result in an additional 327 homes per year. This would result in an additional 33 dwellings per year across settlements like Bawtry. 2.7 There are considered to be deliverability issues in Doncaster and some of the Main Towns and this is reflected by the fact that the Council have consistently failed to demonstrate a 5 year housing land supply, as demonstrated by planning appeal decisions. The proposed settlement hierarchy and distribution is very similar to the existing approach set out in the adopted Core Strategy, and it has to be questioned why the Council are taking such a similar approach, when it has led to issues previously and is perpetuating failure. 2.8 We have genuine concerns that by carrying the same approach through to the new Local Plan will again increase the risk of the Council not being able to deliver the required level of housing, as well as being unable to demonstrate a 5 year housing land supply. This will inevitably leave the Council susceptible to planning applications for windfall development. A sound approach would be to reduce the reliance in areas which have previously had deliverability issues. 2.9 Whilst it is accepted that the most sustainable settlements should generally accommodate higher levels of growth, the current distribution is unacceptable. Our Client suggests that growth should be more evenly distributed across the Authority, with higher levels of growth in the Service Towns and Villages. The Council have a duty to ensure that they deliver the level of housing set out within the Plan and it is important that housing is directed towards areas where it can be delivered and where people want to live. 2.10 Preventing towns and villages from growing is not acceptable. The provision of additional housing assists in ensuring the services and facilities in such places can remain in business through increasing investment. In several instances villages have aging populations and the provision of new housing can assist in providing opportunities for younger generations to get on the housing ladder in locations they want to live. This in turn helps to provide mixed communities, an element of sustainability which is often overlooked. 2.11 The proposed distribution is unsound as it fails to meet the tests outlined in paragraph 35 of the Revised National Planning Policy Framework. The approach is not effective or positively planned and should be revised to spread the distribution more evenly within the settlement hierarchy. 2.12 Our Client objects to the Council’s proposals in respect to the development of non-allocated sites within settlement boundaries in the Main Urban Areas, Main Towns, Service Towns and Villages and defined villages. As per previous Draft Policies, Policy 2 continues to state that development of non-allocated sites within development limits will be supported in appropriate locations, which are defined as sites that would “retain the core shape and form of the settlement; not significantly harm the settlement’s character and appearance; and not significantly harm the character and appearance of the surrounding countryside or the rural setting of the settlement”. 2.13 The Revised National Planning Policy Framework has a clear presumption in favour of development that falls within development limits and it is unacceptable and unreasonable to add a negatively worded policy which seeks to restrict development in such areas. The qualifying criteria for an ‘appropriate location’ are all matters that should be covered by separate policies, as such, this element of the policy should be deleted as it is unsound. 2.14 Policy 2 states that in exceptional circumstances, and subject to the demonstration of clear local community support, residential development in appropriate locations may also be supported in the Countryside on land adjacent to the development limit of a Defined Village. Our Client objects to this approach based on the fact that all planning applications should be considered against adopted planning policy and material planning considerations, not influenced or based on community support.

Summary:
Policy 2 - Spatial Strategy and Settlement Hierarchy 1. Object to distribution of housing through settlement hierarchy. Too focused on Main Urban area and Main Towns. 2. Object to baseline only growth outside Main Urban Area and Main Towns. Other settlements should get a share. 3. 5 year land supply- there are deliverability issues. 4. Council consistently failed to demonstrate a 5 year land supply. 5. The settlement hierarchy is contributing to the shortfall. 6. Continuing this approach will lead to acceptance of more ‘windfall’ development. 7. Approach should be to reduce reliance on areas with previous deliverability issues. 8. Growth should be more evenly distributed across the Borough with higher levels of growth in Service Towns and villages. 9. Preventing Towns and villages from growing is unacceptable. 10. Proposed distribution does not comply with NPPF para.35 11. Object to the proposals in respect of the support of development for none allocated sites within settlement boundaries. Feels that is negatively worded and will restrict development. 12. Object to the exceptional circumstances being reliant on ‘community support’. Decisions should be made against adopted planning policy and material planning considerations and not influence or based on community support.
Response:
The spatial strategy has been developed through several rounds of consultation (Reg 18 stages) with summaries published along the way. Approaches to more dispersal/greater concentration/current Core Strategy approach etc were all options that were considered and subject to SA. A Settlement Background Paper was published alongside the Publication Plan (and previous 2018 consultation) setting out more details and will be updated and republished as a Topic Paper for Submission. There has been various competing calls throughout the process for different settlements to have a “bigger slice of the cake” but none of them are considered to amount to a more justified or coherent strategy than what has been proposed. The Council has always been able to demonstrate a 5-year housing land supply and has not lost any Appeals due to such matters so this is factually incorrect. The most recent Appeal (recovered by the Secretary of State) states that there is in excess of a 10 year housing land supply (see para 14 - APP/F4410/W/17/3169288) which supports the deliverability of sites in the borough. The role new housing plays in providing housing to meet local needs and maintain and support service provision is noted and forms part of the justification for the spatial strategy i.e. meeting local needs locally and is considered as being a ‘sound approach’. It is not considered the part f the policy referring to additional development on non-allocated sites is negatively worded and other policies (e.g. Policy 5/11) will apply which provide more detail depending on the proposal. If the policy is respect to community support is adopted throughout he Local Plan then it will form part of the development plan by which any application (where relevant) will be assessed.
2.4 The Council outline their proposed settlement hierarchy and level of distribution within the policy. It is noted that at least 50% of the baseline housing growth figure (8,775 homes) will be located within the 'Main Urban Area' of Doncaster, with 40% being delivered in the 'Main Towns' of Dunscroft, Dunsville, Hatfield & Stainforth, Thorne & Moorends, Conisbrough & Denaby, Mexborough, Armthorpe, Rossington, and Adwick & Woodlands. The remaining 10% of the housing requirement, which equates 877 over the entire plan period (just 44 dwellings per year) would be delivered across the 'Service Towns and Villages'. 2.5 As per our previous representations our Client objects to the distribution of housing through the settlement hierarchy; it is too heavily focused on both the Main Urban Area and the Main Towns, with 90% of the Council’s housing to be delivered in these areas. 2.6 In addition, our Client objects to the baseline housing growth figure (8,775 houses) being used when distributing housing. This figure ignores the planned economic growth over the plan period, which would result in an additional 327 homes per year. This would result in an additional 33 dwellings per year across settlements like Bawtry. 2.7 There are considered to be deliverability issues in Doncaster and some of the Main Towns and this is reflected by the fact that the Council have consistently failed to demonstrate a 5 year housing land supply, as demonstrated by planning appeal decisions. The proposed settlement hierarchy and distribution is very similar to the existing approach set out in the adopted Core Strategy, and it has to be questioned why the Council are taking such a similar approach, when it has led to issues previously and is perpetuating failure. 2.8 We have genuine concerns that by carrying the same approach through to the new Local Plan will again increase the risk of the Council not being able to deliver the required level of housing, as well as being unable to demonstrate a 5 year housing land supply. This will inevitably leave the Council susceptible to planning applications for windfall development. A sound approach would be to reduce the reliance in areas which have previously had deliverability issues. 2.9 Whilst it is accepted that the most sustainable settlements should generally accommodate higher levels of growth, the current distribution is unacceptable. The most recent Appeal (recovered by the Secretary of State) states that there is in excess of a 10 year housing land supply (see para 14 - APP/F4410/W/17/3169288) which supports the deliverability of sites in the borough. The role new housing plays in providing housing to meet local needs and maintain and support service provision is noted and forms part of the justification for the spatial strategy i.e. meeting local needs locally and is considered as being a ‘sound approach’. It is not considered the part of the policy referring to additional development on non-allocated sites is negatively worded and other policies (e.g. Policy 5/11) will apply which provide more detail depending on the proposal. If the policy is respect to community support is adopted through the Local Plan then it will form part of the development plan by which any application (where relevant) will be assessed.

CUSREF: 04960
Name: Johnson Mowat
Date: 30/09/2019
Organisation: Johnson Mowat
Representing: Mr And Mrs S Hall

Comment Ref: C/Policy 2/04960/1/006

Attended Examination: Attend Hearing

Reason: To allow participation in discussions regarding the proposed housing requirement and distribution of development including site selection and allocations.

Area: Chapter 4: Strategic Approach

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness:
- Positively prepared
- Effective
- Justified
- Consistent with national

2.8 This policy contains a large amount of information, some of which should logically be included as supporting text rather than policy wording. The text should direct the reader to the background document/s that justify the percentage distribution of new homes (at least 50% to the Main Urban Area, about 40% to the Main Towns and around 10% to the Service Towns and Larger Villages). It is not clear whether the overall percentage distributions to the three settlement tiers have been influenced by seeking to minimise Green Belt, or whether it is based solely on the sustainability and size of settlements. The Topic Paper which will explain the Plans Settlement Strategy and Hierarchy is not available until Plan Submission, which does not give representors the opportunity of understanding or commenting on the strategy.

Response:
The strategy approach was explained in both the Settlement Background Paper in 2018 and the Housing Background Paper and Green Belt Topic Paper, both available for the 2019 consultation, and is now further covered in the Housing Topic Paper. The Council has gone to great lengths to explain the thought process for this and other matters.
Comment:

Overall, we support the focus of development in the most sustainable locations and within the Main Urban Areas and Main Towns of Doncaster. The emerging Local Plan designates Armthorpe as a Main Town, falling within the second tier of the settlement hierarchy and stating that the Main Towns will be the focus for substantial housing growth, supported by appropriate levels of employment, retail growth and wider service provision. As such, site 149 is located in a highly sustainable and suitable location to deliver further growth. Overall, we support the focus of development in the most sustainable locations and within the Main Towns of Doncaster. We do however, have fundamental concerns over DMBC’s draft strategic approach and its evidence base as referenced below.

Summary:

Policy 2 - We support focussing development in the most sustainable locations and within the Main Urban Area and Main Towns. Armthorpe is a Main Town and therefore site 149 is a located in a highly sustainable and suitable location for further growth. We have fundamental concerns over the Council’s draft strategic approach and its evidence base.

Response:

Noted. Support welcomed regarding development on the most sustainable locations.
4.1 This policy is considered unsound as it is not justified or effective. 4.2 The policy seeks to distribute the majority of new development to the most sustainable locations, these being the Main Urban Area of Doncaster, the 7 Main Towns and the 10 Service Towns and Villages. This general principal is considered appropriate and is supported. It is, however, important that this is sustainable and deliverable. 4.3 Bawtry is identified as in the 'Service Towns and Villages' category. The Local Plan identifies that this level of settlement will "provide a good range of services meeting their own needs and the local area. To maintain and enhance their role as service towns and villages which provide housing, employment, retail, and key services and facilities for the local area, these settlements will be a focus for accommodating an appropriate level of growth to meet their local needs, as well as renewing and regenerating any run-down neighbourhoods." 4.4 The identification of Bawtry within the Service Town and Village tier is supported. It is a high performing settlement and provides many primary services. It is well served by a district centre containing local services and amenities, including a primary school and health care provision. It also has excellent public transport connections to higher level centres such as Doncaster, Worksop, Retford and Gainsborough through regular bus services. Bawtry is, therefore, considered a sustainable settlement suitable for new growth. 4.5 In terms of new homes, the policy seeks to deliver at least 50% within the 'Main Urban Area' of Doncaster and 40% within the 7 'Main Towns' with just 10% allocated to the 'Service Towns and Villages'. The derivation of this split is discussed within the 'Sustainability Appraisal of the Doncaster Local Plan 2015-2035: Publication Version' (SA) and 'Settlement Background Paper'. The key criteria used is a 'proportional' split based upon population and the 'economic element' of the housing requirement uplift being split between the Main Urban Area and Main Towns (Settlement Background Paper para. 3.1.6 and 3.1.7). None of the economic uplift element is distributed to lower tier settlements. 4.6 The distribution takes no account of other factors such as affordable housing need, deliverability or development opportunities. The Council's viability evidence 'Whole Plan Viability Testing - Update, May 2019' (2019 Viability Report) identifies the challenges of delivering within many areas of the borough. The 2019 Viability Report identifies three 'value zones' across Doncaster, these being High, Medium and Low. The low value zones are generally concentrated in and around the Main Urban Area and Main Towns. 4.7 The 2019 Viability Report highlights that; "viability pressure was at its highest for schemes in low value areas. These schemes were shown to be unviable if a 20% (or higher) affordable housing provision was applied. However, some schemes did return a viable outcome if the affordable housing provision was reduced to 15%, although typically this also required a reduction in the other S106 policy contributions." (our emphasis, para. 7.5). 4.8 It is notable that Policy 8 of the Local Plan reduces affordable housing to 15% in the low value areas. However, based upon the output from the 2019 Viability Report it is likely that many schemes within these areas will remain unviable even with the reduced level of affordable housing. This threatens the deliverability of the plan and the ability to meet the affordable housing needs of the area. 4.9 The Council's background paper 'Housing Need Study / Affordable Housing Need' identifies a need for 209 affordable dwellings per annum. The viability report shows low value zones are generally around the Main Urban Area and Main Towns. It shows many areas earmarked for 15% affordable housing would remain unviable, even with the reduced level of housing. This threatens the deliverability of the plan and the ability to meet the affordable housing needs of the area. The need for 209 affordable housings per annum is 23% of the overall borough need, but 15% combined with the concentration of development in low value areas means that the affordable housing needs are unlikely to be met. 4.10 To ensure that the plan is deliverable and that it provides the greatest opportunity to deliver much needed affordable housing it is recommended that an increased percentage of housing be allocated to lower tier settlements. Given their inherent sustainability the majority of this redistribution should be within the Service Towns and Villages, such as Bawtry.
Response:

Policy 8 seeks to deliver affordable housing and provides for appropriate levels to high and low value areas. It is not considered reasonable to increase the housing requirement to provide higher levels of affordable housing. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council’s Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc which will also assist people in being able to afford/access housing.
3.1 This policy is considered unsound as it is not justified or effective. 3.2 The policy seeks to distribute the majority of new development to the most sustainable locations, these being the Main Urban Area of Doncaster, the 7 Main Towns and the 10 Service Towns and Villages. This general principle is considered appropriate and is supported. It is, however, important that this is sustainable and deliverable. 3.3 Carcroft & Skellow is identified as in the 'Service Towns and Villages' category. The Local Plan identifies that this level of settlement will "provide a good range of services meeting their own needs and the local area. To maintain and enhance their role as service towns and villages which provide housing, employment, retail, and key services and facilities for the local area, these settlements will be a focus for accommodating an appropriate level of growth to meet their local needs, as well as renewing and regenerating any run-down neighbourhoods."

3.4 The identification of Carcroft & Skellow within the Service Town and Village tier is supported. It is a high performing settlement and provides many primary services. It is well served by a district centre containing local services and amenities, including a primary school and health care provision. It also has excellent public transport connections to higher level centres such as Doncaster, Askern and Woodlands through regular bus services. Carcroft & Skellow is, therefore, considered a sustainable settlement suitable for new growth. 3.5 In terms of new homes the policy seeks to deliver at least 50% within the 'Main Urban Area' of Doncaster and 40% within the 7 'Main Towns' with just 10% allocated to the 'Service Towns and Villages'. The derivation of this split is discussed within the 'Sustainability Appraisal of the Doncaster Local Plan 2015-2035: Publication Version' (SA) and 'Settlement Background Paper'. The key criteria used is a 'proportional' split based upon population and the 'economic element' of the housing requirement uplift being split between the Main Urban Area and Main Towns (Settlement Background Paper para 3.1.6 and 3.1.7). None of the economic uplift element is distributed to lower tier settlements. 3.6 The distribution takes no account of other factors such as affordable housing need, deliverability or development opportunities. The Council's viability evidence 'Whole Plan Viability Testing - Update, May 2019' (2019 Viability Report) identifies the challenges of delivering within many areas of the borough. The 2019 Viability Report identifies three 'value zones' across Doncaster, these being High, Medium and Low. The low value zones are generally concentrated in and around the Main Urban Area and Main Towns. 3.8 The 2019 Viability Report highlights that; "viability pressure was at its highest for schemes in low value areas. These schemes were shown to be unviable if a 20% (or higher) affordable housing provision was applied. However, some schemes did return a viable outcome if the affordable housing provision was reduced to 15%, although typically this also required a reduction in the other S106 policy contributions." (our emphasis, para. 7.5). 3.9 It is notable that Policy 8 of the Local Plan reduces affordable housing to 15% in the low value areas. However, based upon the output from the 2019 Viability Report it is likely that many schemes within these areas will remain unviable even with the reduced level of affordable housing. This threatens the deliverability of the plan and the ability to meet the affordable housing needs of the area. 3.10 The Council’s background paper ‘Housing Need Study / Affordable Housing Need’ identifies a need for 209 affordable dwellings per annum. This represents almost 23% of the districts overall housing need. The reduction to 15% within areas of low value, combined with the concentration of development within these areas will ensure that the affordable housing needs of the area are unlikely to be met. 3.11 To ensure that the plan is deliverable and that it provides the greatest opportunity to deliver much needed affordable housing it is recommended that an increased percentage of housing be allocated to lower tier settlements. Given their inherent sustainability the majority of this re-distribution should be within the Service Towns and Villages, such as Carcroft & Skellow.

Summary:

Policy is considered unsound as it is not justified or effective. Distribution principle in general is supported and considered appropriate but it must be sustainable and deliverable. Carcroft - Skellow as a Service Town and Village is supported and it is sustainable and has a number of services. The housing distribution takes no account of factors such as affordable housing need, deliverability or development opportunities. The viability report shows low value zones are generally around the Main Urban Area and Main Towns. It shows many areas earmarked as affordable housing would remain unviable, even with the reduced level of housing. This threatens the deliverability of the plan and the ability to meet the affordable housing needs of the area. The need for 209 affordable housings per annum is 23% of the overall borough need, but 15% combined with the concentration of development in low value areas means that the affordable housing needs are unlikely to be met. To ensure the plan is deliverable and provides the greatest opportunity to deliver much needed affordable housing, an increased amount of housing should be allocated to the lower tier settlements. Given their inherent sustainability the majority of this re-distribution should be within the Service Towns and Villages, such as Carcroft & Skellow.
Response:

Policy 8 seeks to deliver affordable housing and provides for appropriate levels to high and low value areas. It is not considered reasonable to increase the housing requirement to provide higher levels of affordable housing. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council’s Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc which will also assist people in being able to afford/access housing.
3.1 This policy is considered unsound as it is not justified or effective. 3.2 The policy seeks to distribute the majority of new development to the most sustainable locations, these being the Main Urban Area of Doncaster, the 7 Main Towns and the 10 Service Towns and Villages. This general principal is considered appropriate and is supported. It is, however, important that this is sustainable and deliverable. 3.3 Carcroft & Skellow is identified as in the 'Service Towns and Villages' category. The Local Plan identifies that this level of settlement will "provide a good range of services meeting their own needs and the local area. To maintain and enhance their role as service towns and villages which provide housing, employment, retail, and key services and facilities for the local area, these settlements will be a focus for accommodating an appropriate level of growth to meet their local needs, as well as renewing and regenerating any run-down neighbouring communities." 3.4 The identification of Carcroft & Skellow within the Service Town and Village tier is supported. It is a high performing settlement and provides many primary services. It is well served by a district centre containing local services and amenities, including a primary school and health care provision. It also has excellent public transport connections to higher level centres such as Doncaster, Askern and Woodlands through regular bus services. Carcroft & Skellow is, therefore, considered a sustainable settlement suitable for new growth. 3.5 In terms of new homes the policy seeks to deliver at least 50% within the 'Main Urban Area' of Doncaster and 40% within the 7 'Main Towns' with just 10% allocated to the 'Service Towns and Villages'. Response:

Policy 8 seeks to deliver affordable housing and provides for appropriate levels to high and low value areas. It is not considered reasonable to increase the housing requirement to provide higher levels of affordable housing. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council’s Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc which will also assist people in being able to afford/access housing.
With regard to existing planning policy guidance, Branton is currently identified as a Larger Defined Village within the adopted Doncaster Core Strategy, which specifically states that: - Defined villages will be conserved and enhanced. Quality infill will be permitted. Existing village boundaries will be amended only if necessary to establish new defensible boundaries and, within the Green Belt, where there are exceptional circumstances. The Publication Draft Local Plan identifies in Policy 2 that the Council will focus on delivering sustainable growth, appropriate to the size of individual settlements, that meets the needs for new homes and jobs, regenerates places and communities, and supports necessary improvements to infrastructure, services and facilities. It further states that housing allocations and mixed-use allocations to meet local needs housing growth are distributed on a pro-rata basis to the most sustainable and deliverable urban and urban extension sites. The policy defines Branton as a "Defined Village" which are considered to have a "limited number of services and house commuters to destinations elsewhere. These villages do not have allocations for new development. Within their defined Development Limits, development proposals will be considered against other policies of the Plan as shown on the Policies Map". The policy further states that in exceptional circumstances, and subject to the demonstration of clear local community support, residential development in appropriate locations may also be supported in the Countryside on land adjacent to the development limit of a Defined Village. However, it will only be supported if it "does not exceed (a) the development size limit permissible for an individual scheme or site of the relevant Defined Village; and (b) does not exceed the cumulative growth limit over the Plan Period (as is defined in Policy 3) of the relevant Defined Village". "Appropriate locations" are identified in the policy as a location which does not conflict, when taken as a whole, with national policy or policies in the Local Plan. In addition, to qualify as an 'appropriate location', the site, if developed, would: - retain the core shape and form of the settlement; - not significantly harm the settlement's character and appearance; and - not significantly harm the character and appearance of the surrounding countryside or the rural setting of the settlement. Accordingly, at present no new housing allocations are proposed in Branton. Thus, severely restricting the ability to meet the housing needs of the Village. In accordance with the proposed distribution strategy, the Publication Draft Local Plan identifies a defined village cumulative growth limit of 70 homes over the plan period. To be brought forward in schemes no larger than 20 homes or 0.8 hectares in size. But only where strict planning policy criteria are met, including "exceptional circumstances". The Publication Draft Local Plan seeks to change the Village's designation in the settlement hierarchy from a Larger Village to a Defined Village. The sustainability credentials of the Village have not changed since the adoption of the Doncaster Core Strategy. The Village benefits from a primary school, a pub, a post office and a number of local businesses. The Village (and indeed the site) are located within 2km of the Main Urban Area of Doncaster, including The McAuley Catholic High School. 2km is of course the acceptable distance identified in Manual for Streets for walking and cycling. There are also employment opportunities on the Village's doorstep at the Yorkshire Wildlife Park. Finally, and importantly, the site is located within 3km of Doncaster Airport and the number of employment opportunities the facility and supporting businesses supply to the area. The Village has therefore become more sustainable as a location for housing development since the adoption of the Doncaster Core Strategy. Which is likely as a result of recent housing developments that have taken place in the Village. The enclosed Promotional Report provides a comparison of the services and facilities available for Branton, Sprotbrough, Barnby Dun, Auckley, Barnburgh, Harlington and Finningley. Each of these settlements are proposed to be defined as "Service Towns and Villages" within the emerging Local Plan. Accordingly, these settlements are proposed to receive new housing allocations. Whereas, Branton is not. (SEE EMAIL FOR Promotional Report) The conclusion of this comparison is that Branton can be considered to be as sustainable or more sustainable than Sprotbrough, Barnby Dun, Auckley, Barnburgh, Harlington and Finningley. This is due to the number of services and facilities located within the Village and its proximity to the Main Urban Area of Doncaster and Doncaster Airport. Branton is also the closest of the aforementioned Villages to the Main Urban Area of Doncaster. Furthermore, Policy 8 of the Draft Local Plan identifies a threshold of 15 dwellings or more associated with the delivery of affordable homes. If the Council maintained their current approach to the distribution of homes to Branton then it is highly likely that the Village will not receive any new affordable homes before 2035. At a potential affordable housing provision of 23%, a scheme at the identified "limit" of 20 homes in size would need to deliver 4.6 affordable homes. This would almost certainly result in developers bringing forward scheme of 15 dwellings in size, given the viability implications of delivering affordable homes. If development in the Village was left to current policy wording, then it is likely that the only opportunities to deliver new homes in the "Defined Villages" would be through small-scale windfall sites or rural exception sites. There is no evidence to back up the delivery of new affordable homes through other mechanisms, including rural exception sites. Which, if anything, would lead to a piecemeal release of land surrounding the Village. Which very few people would support. It is clear that the Council's current approach will not safeguard or enhance the vitality of Villages (as required by national planning guidance) nor will it satisfy the housing needs of the Village in the plan period up to 2035. The current approach will only result in the need for people to move away from the Village to seek a home to meet their housing needs. It will have the opposite impact that national planning guidance requires. These representations therefore strongly object to the Council's proposed distribution strategy. It is clear that there is substantial evidence to demonstrate Branton's sustainability credentials and its ability to cater for an appropriate level of new housing to meet market and affordable housing needs. Indeed, the Village is more sustainable now than it was when it was defined as a Larger Village in the Core Strategy. It also benefits from the same or more services and facilities than a number of other proposed "Service Towns & Villages". For the reasons identified above Branton should be defined as a "Service Town & Village" within the submission version of the Doncaster Local Plan and accordingly, our client's proposed development site at Doncaster Road, Branton should be included as a proposed housing allocation.
Summary:
Branton is currently identified as a Larger Defined Village within the adopted Doncaster Core Strategy and the Representation quotes Draft Local Plan Policy 2 and that no new allocations are proposed in Branton. Thus, severely restricting the ability to meet the housing needs of the Village. The Publication Draft Local Plan seeks to change the Village’s designation in the settlement hierarchy from a Larger Village to a Defined Village. The sustainability credentials of the Village have not changed since the adoption of the Doncaster Core Strategy. The Village has therefore become more sustainable as a location for housing development since the adoption of the Doncaster Core Strategy. Promotional Report provides a comparison of the services and facilities available for Branton, Sprotbrough, Barnby Dun, Auckley, Barnburgh, Harlington and Finningley. Each of these settlements are proposed to be defined as "Service Towns and Villages" within the emerging Local Plan. Accordingly, these settlements are proposed to receive new housing allocations. Whereas, Branton is not. The conclusion of this comparison is that Branton can be considered to be as sustainable or more sustainable than Sprotbrough, Barnby Dun, Auckley, Barnburgh, Harlington and Finningley. This is due to the number of services and facilities located within the Village and its proximity to the Main Urban Area of Doncaster and Doncaster Airport. Branton is also the closest of the aforementioned Villages to the Main Urban Area of Doncaster. Furthermore, Policy 8 identifies a threshold of 15 dwellings or more associated with the delivery of affordable homes. If the Council maintained their current approach to the distribution of homes to Branton then it is highly likely that the Village will not receive any new affordable homes before 2035. At a potential affordable housing provision of 23%, a scheme at the identified “limit” of 20 homes in size would need to deliver 4.6 affordable homes. This would almost certainly result in developers bringing forward scheme of 15 dwellings in size, given the viability implications of delivering affordable homes. If development in the Village was left to current policy wording, then it is likely that the only opportunities to deliver new homes in the "Defined Villages" would be through small-scale windfall sites or rural exception sites. There is no evidence to back up the delivery of new affordable homes through other mechanisms, including rural exception sites. Which, if anything, would lead to a piecemeal release of land surrounding the Village. Which very few people would support. Branton should be defined as a "Service Town & Village" within the submission version of the Doncaster Local Plan and accordingly, our client’s proposed development site at Doncaster Road, Branton should be included as a proposed housing allocation.

Response:
Branton is not considered as sustainable as any of the settlements mentioned, and this is backed up in the Settlement Audit, which has been updated in 2020 and reached the same conclusions. Policy 2 and 3 do set out that some development may come forward in countryside village locations subject to caveats, with Branton potentially receiving the largest amount of those set out - 70 dwellings. There are settlements closer to the airport that have housing allocations, and proximity to the Main Urban Area does not necessarily mean a settlement is sustainable in its own right when there is limited service provision within it and housing requirements for the urban area can be met in the urban area itself. Affordable housing would be a matter for any application, however the policies in the plan would facilitate this if appropriately sized sites are brought forward.
As the Publication Draft Local Plan still does not propose to deliver any new homes to Branton, as stated above, it is our view that the Council’s proposed approach would only result in the need for people to move away from the Village to seek a home to meet their housing needs. It would have the opposite impact that national planning guidance requires in respect of enhancing or maintaining the vitality of the Village. Accordingly, we have undertaken an independent assessment of the Village’s current and future housing needs in order to ascertain what is needed to ensure the sustainable growth of the settlement. The Housing Market Needs Assessment (HMNA) prepared by Huw Jones Consulting (July 2019) is enclosed and a summary of the key conclusions are provided here. (SEE EMAIL FOR The Housing Market Needs Assessment) The HMNA identifies that there is a justifiable need for new housing in the Branton area where there is a range of services (similar to those in currently defined ‘Larger Villages’) which would appear to make it a sustainable location for new housing development. The range of housing in Branton is currently limited and there is a preponderance of larger properties inhabited by an aging population. The current housing stock in the village is unlikely to be able to meet the demand for smaller homes arising from the requirements of starter households and downsizing older households, while the stock of larger housing with 3 bedrooms or more may not be enough to meet needs and aspirations as family housing needs change over time. This brings into question the future sustainability of the village. There are, however, no proposed allocated housing development sites listed in Branton, which leaves a highly constrained ability to meet newly arising housing need and demand either from within the village, or from households seeking to take up housing opportunities in the area. Based on current housing mix, demographic characteristics and housing market conditions and likely future trends, there is likely to be a need over a 15-year period for: - up to 133 new 2,3 and 4+ bedroom homes to meet the needs of existing residents as their needs and aspirations change. - up to 67 new 2,3 and 4+ bedroom homes to meet a potential demand from households seeking to move into the area from other parts of Doncaster, or from outside the district. The area is well located for people working at Doncaster Sheffield Airport and for households who may wish to live in the area and commute to Doncaster or Sheffield for work. Overall, it is estimated that up to 30% of new homes developed should have up to 2 bedrooms and should be aimed at ‘starter households (including first-time buyers) and older homeowners seeking to move to smaller housing. Up to 30% of new homes should have 3 bedrooms to meet a range of housing need and demand in the area including smaller households. There is likely to be pent up demand, either now or in the future, for larger properties from ‘second stagers’ (households with existing properties seeking to buy a larger home) and families with older children seeking a larger home. Building new homes with 3 bedrooms aimed at existing owners of 2-bedroom homes seeking a larger home would release 2-bedroom properties onto the market for starter households to buy at more affordable prices. In addition, smaller 3-bedroom homes may could better meet the needs and requirements of smaller starter households or older people downsizing by providing a smaller bedroom for potential use as a study, a ‘nursery’ or bedroom for a small child, or for visiting grandchildren, in addition to 2 ‘full size’ bedrooms. Up to 40% should have 4 bedrooms or more to provide opportunities for existing homeowners seeking to trade up to meet their needs and aspirations within the area itself rather than having to move elsewhere and would provide for demand from incoming families with existing equity from previous homes. The above average increase in prices of homes with 4 bedrooms or more suggests that supply is insufficient to meet demand for larger family homes in the area. There is clearly a need for additional affordable housing options in the area given the limited supply of affordable rented housing locally. - Despite house prices in Doncaster as a whole being lower than in some surrounding local authority areas, prices in the area containing Branton are higher than the average for Doncaster, bringing issues of affordability for households with modest or low incomes needing to live in the area either because of access to work (the two villages are very close to Doncaster Sheffield Airport) or a need to maintain family support. - It is important that new housing for sale is affordable and accessible to workers given the income distribution and employment patterns in the area, and the data above would suggest that new housing for sale at full market price should be at prices up to £200,000. Shared ownership might offer an option for lower income households to access home ownership. Help to Buy support attached to new build homes would ease access to home ownership in the area, although it may result in increased demand for larger homes. - Given the pressure on existing social housing stock, there is a need for new social housing to add to the capacity of existing stock to meet need. In addition, consideration should be given to intermediate housing options to meet need and demand, especially from households on low and very low incomes who may not have a priority need for social housing. There is a potential for encouraging partnerships between developers, funders and housing associations, (including co-housing organisations) to provide the rented housing needed. - New affordable housing provisions should be in line with current Doncaster policy requiring between 15% and 23% of new homes to be affordable. The HMNA concludes by stating that there is very strong evidence for new housing allocations to be identified in the Branton in the emerging Local Plan that can provide additional affordable housing options in the village and create a housing mix capable of sustaining the viability and vibrancy of the village into the future. Without additional new housing options in the village, it will be extremely difficult to attract new households, especially actual or potential families, to the village and remain in the village rather than have to move elsewhere to meet their housing needs, requirements and aspirations. There could also be difficulties in enabling older households needing to move to smaller properties in the village to do so, running the risk of further ‘sifting up’ the housing chain in the area and frustrating necessary movement within the village. This in turn could threaten the viability of local facilities and amenities. Our client’s Doncaster Road, Branton site represents a truly deliverable residential development site that can meet the identified local housing needs of Branton. Our development proposals for the site have been revised to take into account the conclusions of the independent Housing Market Needs Assessment work. The proposals seek to deliver a residential development of at least 100

Comment:

As the Publication Draft Local Plan still does not propose to deliver any new homes to Branton, as stated above, it is our view that the Council’s proposed approach would only result in the need for people to move away from the Village to seek a home to meet their housing needs. It would have the opposite impact that national planning guidance requires in respect of enhancing or maintaining the vitality of the Village. Accordingly, we have undertaken an independent assessment of the Village’s current and future housing needs in order to ascertain what is needed to ensure the sustainable growth of the settlement. The Housing Market Needs Assessment (HMNA) prepared by Huw Jones Consulting (July 2019) is enclosed and a summary of the key conclusions are provided here. (SEE EMAIL FOR The Housing Market Needs Assessment) The HMNA identifies that there is a justifiable need for new housing in the Branton area where there is a range of services (similar to those in currently defined ‘Larger Villages’) which would appear to make it a sustainable location for new housing development. The range of housing in Branton is currently limited and there is a preponderance of larger properties inhabited by an aging population. The current housing stock in the village is unlikely to be able to meet the demand for smaller homes arising from the requirements of starter households and downsizing older households, while the stock of larger housing with 3 bedrooms or more may not be enough to meet needs and aspirations as family housing needs change over time. This brings into question the future sustainability of the village. There are, however, no proposed allocated housing development sites listed in Branton, which leaves a highly constrained ability to meet newly arising housing need and demand either from within the village, or from households seeking to take up housing opportunities in the area. Based on current housing mix, demographic characteristics and housing market conditions and likely future trends, there is likely to be a need over a 15-year period for: - up to 133 new 2,3 and 4+ bedroom homes to meet the needs of existing residents as their needs and aspirations change. - up to 67 new 2,3 and 4+ bedroom homes to meet a potential demand from households seeking to move into the area from other parts of Doncaster, or from outside the district. The area is well located for people working at Doncaster Sheffield Airport and for households who may wish to live in the area and commute to Doncaster or Sheffield for work. Overall, it is estimated that up to 30% of new homes developed should have up to 2 bedrooms and should be aimed at ‘starter households (including first-time buyers) and older homeowners seeking to move to smaller housing. Up to 30% of new homes should have 3 bedrooms to meet a range of housing need and demand in the area including smaller households. There is likely to be pent up demand, either now or in the future, for larger properties from ‘second stagers’ (households with existing properties seeking to buy a larger home) and families with older children seeking a larger home. Building new homes with 3 bedrooms aimed at existing owners of 2-bedroom homes seeking a larger home would release 2-bedroom properties onto the market for starter households to buy at more affordable prices. In addition, smaller 3-bedroom homes may could better meet the needs and requirements of smaller starter households or older people downsizing by providing a smaller bedroom for potential use as a study, a ‘nursery’ or bedroom for a small child, or for visiting grandchildren, in addition to 2 ‘full size’ bedrooms. Up to 40% should have 4 bedrooms or more to provide opportunities for existing homeowners seeking to trade up to meet their needs and aspirations within the area itself rather than having to move elsewhere and would provide for demand from incoming families with existing equity from previous homes. The above average increase in prices of homes with 4 bedrooms or more suggests that supply is insufficient to meet demand for larger family homes in the area. There is clearly a need for additional affordable housing options in the area given the limited supply of affordable rented housing locally. - Despite house prices in Doncaster as a whole being lower than in some surrounding local authority areas, prices in the area containing Branton are higher than the average for Doncaster, bringing issues of affordability for households with modest or low incomes needing to live in the area either because of access to work (the two villages are very close to Doncaster Sheffield Airport) or a need to maintain family support. - It is important that new housing for sale is affordable and accessible to workers given the income distribution and employment patterns in the area, and the data above would suggest that new housing for sale at full market price should be at prices up to £200,000. Shared ownership might offer an option for lower income households to access home ownership. Help to Buy support attached to new build homes would ease access to home ownership in the area, although it may result in increased demand for larger homes. - Given the pressure on existing social housing stock, there is a need for new social housing to add to the capacity of existing stock to meet need. In addition, consideration should be given to intermediate housing options to meet need and demand, especially from households on low and very low incomes who may not have a priority need for social housing. There is a potential for encouraging partnerships between developers, funders and housing associations, (including co-housing organisations) to provide the rented housing needed. - New affordable housing provisions should be in line with current Doncaster policy requiring between 15% and 23% of new homes to be affordable. The HMNA concludes by stating that there is very strong evidence for new housing allocations to be identified in the Branton in the emerging Local Plan that can provide additional affordable housing options in the village and create a housing mix capable of sustaining the viability and vibrancy of the village into the future. Without additional new housing options in the village, it will be extremely difficult to attract new households, especially actual or potential families, to the village and remain in the village rather than have to move elsewhere to meet their housing needs, requirements and aspirations. There could also be difficulties in enabling older households needing to move to smaller properties in the village to do so, running the risk of further ‘sifting up’ the housing chain in the area and frustrating necessary movement within the village. This in turn could threaten the viability of local facilities and amenities. Our client’s Doncaster Road, Branton site represents a truly deliverable residential development site that can meet the identified local housing needs of Branton. Our development proposals for the site have been revised to take into account the conclusions of the independent Housing Market Needs Assessment work. The proposals seek to deliver a residential development of at least 100
new homes, alongside a number of community benefits. More specifically the development proposals will deliver: - 30% 2 Bedroom Homes - 30% 3 Bedroom Homes - 40% 4+ Bedroom Homes - A total of 23% Affordable Homes across the site. If the Council's approach remains unchanged then the housing needs of the Village will not be met before 2035. Resulting in a negative impact on the vitality of the Village, including its services and facilities, contrary to the guidance presented in Paragraph 78 of the NPPF.

Summary:
No allocations to Branton will result in people having to move away from the village to meet their housing needs which will not enhance or maintain the vitality of the village and is contrary to national guidance. Undertaken an independent assessment of the Village's current and future housing needs in order to ascertain what is needed to ensure the sustainable growth of the settlement. The Housing Market Needs Assessment (Huw Jones Consulting - July 2019) is enclosed and a summary of the key conclusions are provided here. The HMNA identifies that there is a justifiable need for new housing in the Branton area where there is a range of services (similar to those in currently defined 'Larger Villages') which would appear to make it a sustainable location for new housing development. The range of housing in Branton is currently limited and there is a preponderance of larger properties inhabited by an aging population. The current housing stock in the village is unlikely to be able to meet the demand for smaller homes arising from the requirements of starter households and downsizing older households, while the stock of larger housing with 3 bedrooms or more may not be enough to meet needs and aspirations as family housing needs change over time. This brings into question the future sustainability of the village. There are, however, no proposed allocated housing development sites listed in Branton, which leaves a highly constrained ability to meet newly arising housing need and demand either from within the village, or from households seeking to take up housing opportunities in the area. Without additional new housing options in the village, it will be extremely difficult to attract new households, especially actual or potential families, to the village and remain in the village rather than have to move elsewhere to meet their housing needs, requirements and aspirations. There could also be difficulties in enabling older households needing to move to smaller properties in the village to do so, running the risk of further 'silting up' the housing chain in the area and frustrating necessary movement within the village. This in turn could threaten the viability of local facilities and amenities. Our client's Doncaster Road, Branton site represents a truly deliverable residential development site that can meet the identified local housing needs of Branton. Our development proposals for the site have been revised to take into account the conclusions of the independent Housing Market Needs Assessment work. The proposals seek to deliver a residential development of at least 100 new homes, alongside a number of community benefits. More specifically the development proposals will deliver: - 30% 2 Bedroom Homes - 30% 3 Bedroom Homes - 40% 4+ Bedroom Homes - A total of 23% Affordable Homes across the site. If the Council’s approach remains unchanged then the housing needs of the Village will not be met before 2035. Resulting in a negative impact on the vitality of the Village, including its services and facilities, contrary to the guidance presented in Paragraph 78 of the NPPF.

Response:
The Representations' Housing Market Needs Assessment is noted. As set out in the response, Branton is proposed as a Defined Village so has not received any subsequent allocations. Policy 3 does however identify Branton (being one of the Larger Defined Villages adjacent to the Countryside so not Green Belt) as having scope for schemes of up to 20 dwellings (0.8ha) to a cumulative growth limit of 70 dwellings which is the highest of the Defined Villages totals. The policy, alongside infilling within current development limits provides opportunity for new housing, including the housing needed to meet local needs. National policy also allows for entry level exception sites to such locations in the Borough.
4.1. Framecourt Homes is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 4.2. Framecourt Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 4.3. Framecourt Homes is concerned with the Spatial Strategy and distribution. Framecourt Homes would expect the spatial strategy and distribution to provide an appropriate development pattern and support economic growth and sustainable development within all market areas. 4.4. The Strategy at present focusses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. Therefore no new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the approach set out in the UDP and subsequent core strategy. Framecourt Homes are concerned that this risks focusing development in less viable areas and risks undermining the delivery of the Plan 4.5. The implementation of the Spatial Strategy will be discussed in response to Policy 6 and the proposed allocations. 4.6. Doncaster is an integral part of the Sheffield City Region and the ambitious growth aspirations. The Strategic Economic Plan sets out the Sheffield City Region’s plans to transform the local economy over the next decade. At the heart of the plan is the creation of 70,000 new private sector jobs and 6,000 new businesses. 4.7. Therefore, to achieve the aspired growth that the City Region is seeking to achieve and is securing Government funding for the level of new housing needs to reflect the ambitions of the Strategic Economic Plan. 4.8. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every #1 spent on construction projects yields a total of #2.84 expenditure in the wider economy. It is estimated that approximately #2,000 per annum per household spending on local convenience goods, and approximately #2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least #400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. 4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. 4.10. To achieve this approach, Framecourt Homes consider the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3. - To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at IPort. Thorne and Moorends should grow to reflect its location on the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. - Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). 4.11. Framecourt Homes consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development. 4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Framecourt Homes is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Framecourt Homes do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. 4.13. Whilst there is no definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should 'identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period', and that local authorities should ‘be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period’. Given that the council considers that the majority of sites will be delivered within the plan period. It is highly likely that further alterations...
to the green belt will be required at the next review of the Plan. This is not consistent with the provisions of the Framework. 4.14. Framecourt Homes consider that Policy 2 should establish the approach to Safeguarding land and that safeguarded land should be identified, not only provide a robust long-term Green Belt boundary but will also provide certainty for residents and developers alike in terms of likely growth locations beyond the end of the plan period. Framecourt Homes therefore suggest that such land be allocated in the Plan across the spatial hierarchy, including smaller settlements per the earlier spatial approach. 4.15. Framecourt homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 4.16. However, Framecourt Homes consider that with the proposed changes to the strategy and establishing the approach to safeguarding land the Local Plan can be found sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 4.17. To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Summary:
Concerned with the spatial strategy and distribution. Would expect this to provide appropriate development pattern and support economic growth and sustainable development within all market areas. Concern that development is focussed in less viable areas and this risks undermining the delivery of the plan. The plan needs to deliver the growth aspired to by the SCR in the Strategic Economic Plan and the quality housing aspired to in the Integrated Infrastructure Plan. 70k - 100k new houses are needed in the SCR to support the proposed economic growth over the next 10 years. This provides accommodation to underpin the employment growth as well as wider economic benefits that housing investment brings. The GVA benefits that can be attributed to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits): As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. To achieve the growth in line with the Strategic Economic Plan growth aspirations, the Plan should: - Focus development in the Main Urban Area, but review yields from sites with permission and allocations so they can all be delivered in the plan period; - Focus Main Town growth and regeneration in a manner appropriate to their needs and borough growth aspirations. Rossington should be an area of growth due to the airport and iPort and associated infrastructure; Thorne and Moorends should grow to reflect its location, regeneration ambitions and connectivity to logistics parks and as having a local centre. Carcroft Skellow is similar in scale to the Main Towns and should be identified as such as it is close to the A1(M) and has a focus on regeneration and growth. - Service Town and Village provision should reflect their scale and function as sustainable locations servicing a hinterland. - Defined villages are sustainable villages servicing a rural economy and should accommodate development appropriate to their scale and function in line with NPPF para. 78. This would meet the Local Plan vision and objectives and is more aligned with sustainable development. Also concerned Green Belt boundaries are too tightly drawn and give little regard to intended permanency in the long term for boundaries to endure. There is no safeguarded land. The reserve sites have significant technical constraints and are not a suitable pool, therefore their inclusion is objected to. The framework is clear safeguarded land should be identified. It is suggested this should be identified across the hierarchy including smaller settlements as per the spatial approach. The policy is not justified or consistent with the framework and the plan could fail to deliver sustainable development in accordance with the framework. It is not sound. To overcome soundness issues, the following proposed changes are proposed: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Response:
The approach to the distribution of housing is explained in the Housing Topic Paper. The approach allocates housing to the most sustainable locations, including economic growth to the more sustainable Main Urban Area and Main Towns, but does provide opportunities for some limited development in smaller localities to support these rural areas. The approach to Green Belt, including the decision not to safeguard land, is discussed in the Green Belt Topic Paper. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.

**Policy:** Policy 2: Spatial Strategy & Settlement Hierarchy

**Tests of Soundness:**  
- Positively prepared  
- Effective  
- Legally Compliant

**Comment:**

Objection is made to the policy as drafted on the basis that the text indicates that the split of new development will be 50% of new homes to Doncaster urban, 40% to main towns and 10% to the service towns and villages. Of these proportions only local needs housing is distributed on a pro rata basis, and the economic led housing growth is distributed only to Doncaster Urban and the Main towns. None of this part of the housing growth is allocated to the service towns and villages and there is no cogent explanation of why these sustainable settlements should not have a proportionate share of this part of the proposed housing growth. The strategy as drafted in this Policy therefore does not reflect the sustainability and potential of the service towns and villages to meet a share of the economic led housing growth. Part 3 of the Policy sets out the role of the service towns and villages, and indicates that these settlements will be a focus for a level of growth to meet their “local needs” as well as regenerating run down areas. There is no explanation of what is meant by local needs in this part of the policy, but it can only be assumed that this is the local needs housing element of the overall requirement minus the economic growth housing. This is a false distinction in terms of land allocation in these settlements which should receive a proportionate share of economic growth housing as set out above. Within these service towns and villages, growth within the development boundaries is considered favourably. The Policy also makes provision for other new development on sites adjacent/outside the development boundary in certain circumstances; which include the situation where the Planning Authority cannot demonstrate a five year land supply. The Plan does not identify any locations where this could take place and does not make clear what the role of the other reserve sites are in this context. It is not considered that the current reserved sites represent the best options for future land release. Policy 2 sets out that development limits have been defined around the settlements of the hierarchy. The site at Barnby Dun is shown as outside the development boundary of Barnby Dun. The development Boundary should be amended to include this extension land within the defined development boundary of the settlement as it will form an integral part of the settlement.

**Summary:**

Objects to policy and distribution of development with only local needs being directed to Service Towns/Villages; these are sustainable settlements so should also receive a share of the economic growth-led housing and there is no explanation for this. The strategy does not reflect the sustainability potential of these settlements therefore. The policy allows development adjacent/outside of settlement limits in certain circumstances but does not identify any locations where this could take place and does not make clear what the role of reserve sites are in this context. It is not considered the current reserve sites are the best options for future land release. Development limits should be drawn to include housing allocation at Barnby Dun (Ref 147).

**Response:**

The spatial strategy has been developed through several rounds of consultation (Reg 18 stages) with summaries published along the way. One of the strong messages that came out of the issues Options stage and Homes Settlements consultation was support for meeting local housing needs locally which has resulted in a more dispersed settlement hierarchy, which introduces a greater number of settlements suitable for allocations (larger service villages) compared to the Core Strategy in the first instance. However, the economic-growth led housing component is more footloose and has been directed to the higher tier settlements which reflects their stronger sustainability credentials. The approach has also allowed a sequential approach to avoidance of flood risk at spatial strategy level so that the strategy (and then subsequent sites) have both been identified in line with national policy’s requirement to avoid flood risk where possible. Approaches to more dispersal/greater concentration/current Core Strategy approach etc were all options that were considered and subject to SA. A Settlement Background Paper was published alongside the Publication Plan (and previous 2018 consultation) setting out more details and will be updated and republished as a Topic Paper for Submission. Part 5 of the policy provides flexibility to bring forward additional development outside of allocations in the east of the borough and is a criteria based policy that could be used at any of the settlements with Countryside (but not Green Belt) boundaries. Reserve Sites are the subject of Policy 6 (and identified in Chapter 16 and on the Policies Map) and are a separate source of potential housing supply unrelated to Part 5 of this policy and are not necessary in terms of meeting the housing requirement. The Development Limits methodology was subject to previous consultation (2018) and re-published alongside the Publication version of the plan. It has always proposed that greenfield urban extension allocations should be excluded from development limits, but would be incorporated when the permission/development has been implemented through a future review of the plan. This is a logical approach, especially so for larger allocations where development will include not just housing but other non-urban uses which may still remain outside of development limits depending on final layouts e.g. landscaping, public open space, balancing ponds etc.
Comment:
Objection is made to the green belt boundary as drafted. The Boundary is drawn tightly around Manor Farm and fails to include the existing farm buildings on the western side and access into the site. The Boundary as drafted is therefore illogical and should be amended to include within the development limits the entirety of the Manor Farm complex. This would allow the redevelopment of these buildings to form an attractive entrance to the village and an enhancement to the Conservation Area. See below. (SEE EMAIL FOR Plan) PROPOSED CHANGE: The plan should be modified to - Amend the green belt boundary to omit Manor Farm from the green belt

Summary:
Objection is made to the Green Belt boundary which is drawn tightly around Manor Farm, Braithwell, and fails to include the existing farm buildings on the western side and access into the site. The boundary as drafted is therefore illogical and should be amended to include within the development limits the entirety of the Manor Farm complex. This would allow the redevelopment of these buildings to form an attractive entrance to the village and an enhancement to the Conservation Area. Plan shown in email attachment.

Response:
It is not considered that there are exceptional circumstances identified to justify changes to the Green Belt boundary. National policy allows for redevelopment and extension/alteration to existing buildings in the Green Belt subject to certain conditions.
Policy 2 is also welcomed and aligns with the settlement hierarchy for the Borough and the presumption in favour of sustainable development. The inclusion of Thorne as a 'second tier' Main Town is supported, as is the strategy of focussing new development to these towns and key transport corridors.

**Summary:**
Policy 2 is welcomed and aligns with the settlement hierarchy and the presumption in favour of sustainable development. The inclusion of Thorne as a 'second tier' Main Town is supported, as is the strategy of focussing new development to these towns and key transport corridors.

**Response:**
Noted. Support welcomed.
Policy 2 indicates that decisions on the location and scale of development should be informed by Doncaster’s Settlement Hierarchy and in accordance with Policy 3. Policy 2 states that Main Towns such as Rossington should be maintained and enhanced and should be the focus for substantial housing growth supported by appropriate levels of employment and retail growth. TVI support the identification of Rossington as a Main Town and as an appropriate location for housing and employment growth. We therefore find emerging Policy 2 to be sound.

Summary:
This section provides a summary of policy 2. TVI support the identification of Rossington as a Main Town and as an appropriate location for housing and employment growth. Policy 2 is sound.

Response:
Noted. Support welcomed.
4.1. Avant Homes is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 4.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every £1 spent on construction projects yields a total of £2.84 expenditure in the wider economy. It is estimated that approximately £2,000 per annum per household spending on local convenience goods, and approximately £2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least £400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. 4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. 4.10. To achieve this approach, Avant Homes consider the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3. - To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at iPort. Thorne and Moorsend should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadworth is of a similar scale and function of these settlements and should therefore be defined as such, with appropriate allocations made, recognising its proximity and connectivity to the Main Urban Area. - Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). Avant note that Barnsley Metropolitan Borough Council sought to take a similar approach and did not identify allocations within the villages. The Inspector considered that the Plan was not positively prepared in relation to the approach to the villages and considered that policy LG2 was unsound. In this case the local authority reviewed the settlements and identified additional sites within the villages to accommodate new development. 4.11. Avant Homes consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development. 4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Avant Homes is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Avant Homes do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. 4.13. Whilst there is no...
definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should ‘identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period’, and that local authorities should ‘be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period’. Given that the council considers that the majority of sites will be delivered within the plan period. It is highly likely that further alterations to the green belt will be required at the next review of the Plan. This is not consistent with the provisions of the Framework. 4.14. Avant Homes consider that Policy 2 should establish the approach to Safeguarding land and that safeguarded land should be identified, not only provide a robust long-term Green Belt boundary but will also provide certainty for residents and developers alike in terms of likely growth locations beyond the end of the plan period. Avant Homes therefore suggest that such land be allocated in the Plan across the spatial hierarchy, including smaller settlements per the earlier spatial approach. 4.15. Avant Homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 4.16. However, Avant Homes consider that with the proposed changes to the strategy and establishing the approach to safeguarding land the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 4.17. To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Summary:
Concerned about the spatial strategy and distribution - would expect it to provide an appropriate development pattern and support economic growth and sustainable development in all market areas. No housing is proposed in the rural economy in settlements which are relatively sustainable. The approach is broadly consistent with the UDP and Core Strategy. Concern that the focus on less viable areas risks undermining plan delivery. Level of new housing needs to reflect the ambitions of the SCR strategic economic plan. Housing and construction bring money into the wider economy. The GVA benefits that can be attributable to new housing include: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. It is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. Therefore, the Local Plan should: - Focus development on the urban area but review the likely yield from existing sites with permission and proposed allocations to ensure they can all be delivered in the plan period. - To ensure Main Town growth is of an appropriate scale for their needs and the boroughs economic growth aspirations. Rossington should be an area of growth given new infrastructure there and it’s location close to the airport, and iport. Thorne and Moorsend should also grow to reflect its location, regeneration ambitions connected to employment parks and level of facilities locally available. Carcroft - Skellow should also be identified as a Main Town given it's location close to employment parks and close to the A1(M) - Provision should be made in Service Towns and Villages to reflect their scale and function as sustainable locations which serve a hinterland. Wadworth should be defined as such as it is of a similar scale and function with appropriate allocations made recognising its proximity and connectivity to the urban area. - Defined villages are sustainable and serve a rural economy and should accommodate a level of development appropriate to their scale and function in line with para. 78 of the NPPF. Barnsley took a similar approach in not identifying village allocations (LG2) and the inspector found it unsound, leading to Barnsley reviving settlements and finding additional sites. The above approach would better align with the vision and objectives of the plan, as well as being better aligned with the principles of sustainable development. Concern that Green Belt boundaries have been tightly drawn around settlements and allocations and thus has no regard for permanence in the long term so boundaries endure. No safeguarded land is identified. Reserve sites have significant technical constraints to them. They are not a suitable pool due to the constraints and they are objected to their inclusion. It is highly likely given that most sites will be completed in the plan period that Green Belt will be required after it. Not safeguarding the land is therefore inconsistent with the NPPF which says boundaries should endure beyond the plan period. Safeguarded land should be identified and established in Policy 2 to provide certainty to developers and residents in terms of likely growth locations beyond the plan period. Land should be allocated across the hierarchy, including to smaller settlements as per the suggested spatial approach. The current policy is unjustified and not consistent with the framework, and the plan could fail to deliver sustainable development in accordance with the framework. As such, the plan is not considered sound. Proposed change: To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Response:
The approach to the distribution of housing is explained in the Housing Topic Paper. The approach allocates housing to the most sustainable locations, including economic growth to the more sustainable Main Urban Area and Main Towns, but does provide opportunities for some limited development in smaller localities to support these rural areas. The approach to Green Belt, including the decision not to safeguard land, is discussed in the Green Belt Topic Paper. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.
4.1. Avant Homes is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness

4.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

4.3. Avant Homes is concerned with the Spatial Strategy and distribution. Avant Homes would expect the spatial strategy and distribution to provide an appropriate development pattern and support economic growth and sustainable development within all market areas.

4.4. The Strategy at present focusses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. Therefore no new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. Avant Homes are concerned that this risks focusing development in less viable areas and risks undermining the delivery of the Plan.

4.5. The implementation of the Spatial Strategy will be discussed in response to Policy 6 and the proposed allocations.

4.6. Doncaster is an integral part of the Sheffield City Region and the ambitious growth aspirations. The Strategic Economic Plan sets out the Sheffield City Region’s plans to transform the local economy over the next decade. At the heart of the plan is the creation of 70,000 new private sector jobs and 6,000 new businesses.

4.7. Therefore, to achieve the aspired growth that the City Region is seeking to achieve and is securing Government funding for the level of new housing needs to reflect the ambitions of the Strategic Economic Plan. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every £1 spent on construction projects yields a total of £2.84 expenditure in the wider economy. It is estimated that approximately £2,000 per annum per household spending on local convenience goods, and approximately £2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least £400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows:

- Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits
- Household Maintenance Spend: Spend on products and services associated with each new household
- Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services
- Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets.

4.8. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every £1 spent on construction projects yields a total of £2.84 expenditure in the wider economy. It is estimated that approximately £2,000 per annum per household spending on local convenience goods, and approximately £2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least £400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows:

- Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits
- Household Maintenance Spend: Spend on products and services associated with each new household
- Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services
- Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets.

4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations.

4.10. To achieve this approach, Avant Homes consider the Local Plan should:

- Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3.
- To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at IPort. Thorne and Moorends should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth.
- Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadworth is of a similar scale and function of these settlements and should therefore be defined as such, with appropriate allocations made, recognising its proximity and connectivity to the Main Urban Area.
- Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78).

4.11. Avant Homes consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development.

4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Avant Homes is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Avant Homes do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan.
definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should ‘identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period’, and that local authorities should ‘be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period’. Given that the council considers that the majority of sites will be delivered within the plan period. It is highly likely that further alterations to the green belt will be required at the next review of the Plan. This is not consistent with the provisions of the Framework. 4.14. Avant Homes consider that Policy 2 should establish the approach to Safeguarding land and that safeguarded land should be identified, not only provide a robust long-term Green Belt boundary but will also provide certainty for residents and developers alike in terms of likely growth locations beyond the end of the plan period. Avant Homes therefore suggest that such land be allocated in the Plan across the spatial hierarchy, including smaller settlements per the earlier spatial approach. 4.15. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 4.16. However, Avant Homes consider that with the proposed changes to the strategy and establishing the approach to safeguarding land the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 4.17. To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Summary:
Concerned about the spatial strategy and distribution - would expect it to provide an appropriate development pattern and support economic growth and sustainable development in all market areas. No housing is proposed in the rural economy in settlements which are relatively sustainable. The approach is broadly consistent with the UDP and Core Strategy. Concern that the focus on less viable areas risks undermining plan delivery. - Level of new housing needs to reflect the ambitions of the SCR strategic economic plan. Housing and construction bring money into the wider economy. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.
Policy 2 (Spatial Strategy and Settlement Hierarchy) is not consistent with the National Planning Policy Framework (NPPF) for the following reasons: - The defined Development Limits as shown on the proposal map do not include all allocated sites, this should be updated to ensure all relevant sites are included; including site 970 (Land off Doncaster Road, Hatfield) which has planning permission, reserved matters approval and has commenced. - Criterion 5 sets out that residential development will be supported in the Countryside if adjacent to a Development Limit of a settlement in the Main Urban Area, Main Towns or Service Towns/Villages but excludes development within Defined Villages. This is contrary to the NPPF which supports sustainable development in suitable locations. Whilst Defined Villages are positioned at the bottom of the defined settlement hierarchy this does should not inhibit development of an appropriate scale within the Countryside if adjacent to a Development Limit. This criterion should therefore be reworded as follows: “Residential development will also be supported in the Countryside if adjacent to a Development Limit of a settlement as outlined above, where?” - Criterion 5E notes that residential development in the Countryside will only be supported where a five-year borough-wide supply of housing land cannot be demonstrated and the development would make a significant contribution to housing land supply. The NPPF supports sustainable development and whilst consideration of 5-year housing land supply may be an attribute which weighs into this consideration, there is no requirement for demonstration of a lack of a 5YHLS for development within the Countryside to be acceptable. NPPF paragraph 73 requires LPAs to be able to demonstrate a 5YHLS at all times as a minimum therefore waiting until this has occurred before releasing sustainable sites that would comply with the other criteria of part 5 is not positive and would be contrary to the NPPF. Sustainable sites that comply with part 5 should be released to ensure that supply remains above 5 years and/or 920 dwellings per annum (dpa). Criterion 5E should therefore be deleted in its entirety. In addition to the above we note that there is a tension between part 5 of Policy 2 (Spatial Strategy and Settlement Hierarchy) and Policy 26 (Development in the Countryside) in that they set out different requirements for development within the Countryside but lack clarity between the difference in consideration of edge of settlement sites and those located in isolated locations within the Countryside. The policies and their supporting text should be amended to make clear the difference between development proposals on the edge of sustainable settlements (Policy 2) and requirements for development in isolated areas of the Countryside (Policy 26). Notwithstanding the above, we acknowledge and support the Councils identification of Hatfield as a highly sustainable location within the settlement hierarchy which is suitable for development.

Summary:
Objects to Policy 2 (Spatial Strategy & Settlement Hierarchy) as not consistent with NPPF. All allocated sites should be included within development limits, including Site Ref 970 (Doncaster Road, Hatfield) which is permissioned and now commenced. Criterion 5 in respect to supporting development in the Countryside if adjacent to a development limit in a settlement in the top 2 tiers of the hierarchy excludes Defined Villages and NPPF supports sustainable development in suitable locations. Criterion 5E requires demonstration of a lack of 5YHLS and where the development would make a significant contribution. This does not comply with NPPF as does not require lack of 5YHLS to support development in the countryside. Must be able to demonstrate a 5YHLS at all times and waiting until this cannot be shown before releasing sites is not positive. Sustainable sites that comply with Criterion 5E should be released to ensure supply remains above 5 years and/or 920dpa. Criterion 5E should be deleted entirely. There is also a tension between part 5 of Policy 2 and Policy 26 in that they set out different requirements for development in the countryside but lack clarity in the consideration of edge of settlement sites and those located in isolated locations. Policies and supporting text should be amended to make clear the difference. Notwithstanding the above we acknowledge and support the Council’s identification of Hatfield as a highly sustainable location within the hierarchy and suitable for development.

Response:
The Development Limits methodology was subject to previous consultation (2018) and re-published alongside the Publication version of the plan. It has always proposed that greenfield urban extension allocations should be excluded from development limits, but would be incorporated when the permission/development has been implemented through a future review of the plan. This is a logical approach, especially so for larger allocations where development will include not just housing but other non-urban uses which may still remain outside of development limits depending on final layouts e.g. landscaping, public open space, balancing ponds etc. Policy 3 provides further policy in respect to growth to the Countryside Defined Villages outside of development limits. Criterion 5E is considered appropriate in the context of an up-to-date local plan with sufficient allocations being made for the plan period with numerous sources of additional housing supply and the government’s emphasis on having a plan-led approach. That said, should circumstances change during the plan period then the policy provides flexibility to bring forward a further source of supply and will assist ensuring that any such proposals come forward with some policy to help bring forward sustainable extensions to settlements with a Countryside boundary. It is not considered that there is a tension between Part 5 of this policy and Policy 26 (Countryside). General support for Hatfield being identified as a sustainable location within the hierarchy welcomed.
Chapter 4: Strategic Approach

Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness:
- Positively prepared
- Effective
- Consistent with national

Comment:

4.1. Priority Space is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness

4.2. Priority Space considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

4.3. Priority Space is concerned with the Spatial Strategy and distribution. Priority Space would expect the spatial strategy and distribution to provide an appropriate development pattern and support economic growth and sustainable development within all market areas. 4.4. The Strategy at present focusses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. Therefore no new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. Priority Space are concerned that this risks focussing development in less viable areas and risks undermining the delivery of the Plan. 4.5. The implementation of the Spatial Strategy will be discussed in response to Policy 6 and the proposed allocations: 4.6. Doncaster is an integral part of the Sheffield City Region and the ambitious growth aspirations. The Strategic Economic Plan sets out the Sheffield City Region’s plans to transform the local economy over the next decade. At the heart of the plan is the creation of 70,000 new private sector jobs and 6,000 new businesses. 4.7. Therefore, to achieve the aspired growth that the City Region is seeking to achieve and is securing Government funding for the level of new housing needs to reflect the ambitions of the Strategic Economic Plan. 4.8. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every £1 spent on construction projects yields a total of £2.84 expenditure in the wider economy. It is estimated that approximately £2,000 per annum per household spending on local convenience goods, and approximately £2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least £400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction may be important in mitigating losses of households from the city region that might otherwise occur. 4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. 4.10. To achieve this approach, Priority Space consider the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3. - To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at tIPort. Thorne and Moornds should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadworth is of a similar scale and function of these settlements and should therefore be defined as such, recognising its proximity and connectivity to the Main Urban Area. -Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). 4.11. Priority Space consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development. 4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Priority Space is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Priority Space do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. 4.13. Whilst there is no definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should 'identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period', and that local authorities should 'be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period'. Given that the council
considers that the majority of sites will be delivered within the plan period. It is highly likely that further alterations to the green belt will be required at the next review of the Plan. This is not consistent with the provisions of the Framework. 4.14. Priority Space consider that Policy 2 should establish the approach to Safeguarding land and that safeguarded land should be identified, not only provide a robust long-term Green Belt boundary but will also provide certainty for residents and developers alike in terms of likely growth locations beyond the end of the plan period. Priority Space therefore suggest that such land be allocated in the Plan across the spatial hierarchy, including smaller settlements per the earlier spatial approach. 4.15. Priority Space consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 4.16. However, Priority Space consider that with the proposed changes to the strategy and establishing the approach to safeguarding land the Local Plan can be found sound. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 4.17. To overcome the objection and address soundness matters, the Council should: - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy

Summary:

| Policy 2 - Spatial strategy and Settlement Hierarchy | Distribution of housing should be reviewed and include more at service towns and villages. 2. Defined villages should have some growth. 3. Rossington/Thorne Moorends/Carcroft Skellow should have a greater share - this would be a more sustainable approach. Reserve sites - 1. The identified sites have significant technical constraints. 2. They are not a suitable pool of sites. 3. Object to them being in the Plan. Greenbelt Boundaries 1. Boundaries as drawn are too tight. 2. Likely they will need re-drawing at next review of plan. Safeguarded land. 1. Not an adequate amount of safeguarded Land. 2. Should be identified across the spatial hierarchy. Proposed changes: 1. Policy should reflect economic and housing growth aspirations. 2. Sites with permission should be reviewed to access deliverability in the plan period. 3. Spatial strategy should be amended. 4. Identify safeguarded land or suitable reserve sites. |

Response:

The approach to the distribution of housing is explained in the Housing Topic Paper. The approach allocates housing to the most sustainable locations, including economic growth to the more sustainable Main Urban Area and Main Towns, but does provide opportunities for some limited development in smaller localities to support these rural areas. The approach to Green Belt, including the decision not to safeguard land, is discussed in the Green Belt Topic Paper. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.
4.1. Firsure is concerned that the Doncaster Local Plan 2015-2035 Publication Version is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 4.2. Firsure considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 4.3. Firsure is concerned with the Spatial Strategy and distribution. Firsure would expect the spatial strategy and distribution to provide an appropriate development pattern and support economic growth and sustainable development within all market areas. 4.4. The Strategy at present focusses growth towards Doncaster, followed by the Main Towns and then a smaller element in the Service Towns and Larger Villages and then no development in other defined villages. Therefore no new housing is proposed in the rural economy in settlements which are relatively sustainable. This approach is broadly consistent with the strategy set out in the UDP and subsequent Core Strategy. Firsure are concerned that this focuses development in less viable areas and risks under deliver. 4.5. The implementation of the Spatial Strategy will be discussed in response to Policy 6 and the proposed allocations. 4.6. Doncaster is an integral part of the Sheffield City Region and the ambitious growth aspirations. The Strategic Economic Plan sets out the Sheffield City Region's plans to transform the local economy over the next decade. At the heart of the plan is the creation of 70,000 new private sector jobs and 6,000 new businesses. 4.7. Therefore, to achieve the aspired growth that the City Region is seeking to achieve and is securing Government funding for the level of new housing needs to reflect the ambitions of the Strategic Economic Plan. 4.8. Furthermore, the Sheffield City Region Integrated Infrastructure Plan states: A quality housing offer has a crucial role to play in the future economic growth of the City Region. It is essential to attracting and retaining a skills base that supports inward investment as we as meeting existing and future community needs and retention of Sheffield City Region (SCR) talent. It has been identified that between 70,000 and 100,000 additional homes are needed in SCR to support the proposed economic growth over the next 10 years. These will have the dual benefit of providing accommodation that underpins the proposed increase in employment (70,000 jobs), as well as the wider economic benefits that housing investment brings. Housing forms a key component of the SCR construction sector. The CBI [CBI (2012) Bridging the Gap - Backing the Construction Sector to Create Jobs] estimates that every #1 spent on construction projects yields a total of #2.84 expenditure in the wider economy. It is estimated that approximately #2,000 per annum per household spending on local convenience goods, and approximately #2,700 per annum per household spending on local comparison goods can be attributed to residents in new housing. (Over the lifetime of the SEP, a similar amount would generate at least #400 million for the SCR economy). The GVA benefits that can be attributable to new housing are as follows: - Construction: material, labour professional skills and other services for construction, compounded by supply chain benefits - Household Maintenance Spend: Spend on products and services associated with each new household - Direct Job Uptake: GVA resulting from new productive workers moving into SCR, compounded by their spend on SCR products and services - Indirect (Chain) Benefits: As SCR residents move up the housing chain, this creates new available space in different sub-markets. - Preventing Displacement: The type and location of construction can be important in mitigating losses of households from the city region that might otherwise occur. 4.9. Within this context it is important that the Council plans for new jobs and associated new homes in accordance with the Strategic Economic Plan growth aspirations. 4.10. To achieve this approach, Firsure consider the Local Plan should: - Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing sites with planning permission and proposed allocations to ensure that they can all be delivered within the Plan Period. This is explained further in response to Policy 3. - To focus growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough. Rossington should be an area of growth given the provision of new infrastructure, its location near to Doncaster Airport, and the scale of economic growth planned at IPort. Thorne and Moorends should grow to reflect its location, regeneration ambitions connected with the logistics and employment parks, and level of facilities available within the designated town and local centres. Within that context Carcroft and Skellow is of similar scale to the Main Towns and should be identified as such, particularly with its provision of employment parks and location on the A1(M) and focus on regeneration and growth. - Provision should be made in the Service Towns and Larger Villages to reflect their scale and function. These are sustainable towns and villages which serve a hinterland. Wadhurst is of a similar scale and function of these settlements and should therefore be defined as such, recognising its proximity and connectivity to the Main Urban Area. - Defined Villages are sustainable villages serving a rural economy and should accommodate a level of development appropriate to their scale and function in line with the provisions Framework (paragraph 78). 4.11. Firsure consider that the above approach meets the Local Plan vision and objectives identified within the Local Plan but is also one that is more aligned with the principles of sustainable development. 4.12. Policy 2 establishes the strategic approach to the Green Belt within Doncaster and states that the general extent of the Green Belt will be retained. Firsure is concerned that Green Belt boundaries have been drawn tightly around settlements and proposed allocations and as such does not have regard to the intended permanence in the long term so that the boundaries can endure beyond the Plan period. Policy 3 and 6 do not identify any safeguarded land. The Plan does identify reserve sites. However these sites have significant technical constraints. Firsure do not consider that they are suitable pool of sites due to the significant constraints and object to their identification in the Plan. 4.13. Whilst there is no definitive guidance indicating the amount of land which should be safeguarded the Framework (2019) is clear that where necessary Local Plans should ‘identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period’, and that local authorities should ‘be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period’. Given that the council considers that the majority of sites will be delivered within the
The Local Plan should:

- Focus the majority of development upon Doncaster Main Urban Area but review the likely housing yield from existing safeguards and reserve sites. Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy.

- Amend the Spatial Strategy so that growth and regeneration on the Main Towns of appropriate scale for their needs and the economic growth aspirations of the Borough.

- Focussing growth at Doncaster, the Main Towns and Service Towns and Larger Villages with no significant technical constraints are not suitable to the significant constraints and should not be identified in the Plan. To overcome the objection and address soundness matters, the Council should:
  - Reflect economic and housing growth aspirations - Amend the Spatial Strategy as indicated - Identify safeguarded land or suitable Reserve Development Sites across the spatial hierarchy.

Summary:

The Spatial Strategy and distribution should provide an appropriate development pattern and support economic growth and sustainable development within all market areas. Focussing growth at Doncaster, the Main Towns and Service Towns and Larger Villages with no significant technical constraints are not suitable to the significant constraints and should not be identified in the Plan. To overcome the objection and address soundness matters, the Council should:

Response:

The approach to the distribution of housing is explained in the Housing Topic Paper. The approach allocates housing to the most sustainable locations, including economic growth to the more sustainable Main Urban Area and Main Towns, but does provide opportunities for some limited development in smaller localities to support these rural areas. The approach to Green Belt, including the decision not to safeguard land, is discussed in the Green Belt Topic Paper. NPPF states boundaries should be clearly defined and not include land which is unnecessary to keep permanently open and that boundaries should be drawn using readily recognisable features. Reserve development sites are sites which do not count towards any housing calculations, but are sites where housing could be located if the technical constraints can be overcome.
Tests of Soundness:

Comment:
This policy sets out the proportion of homes that will be completed in the 'Main Urban Area', 'Main Towns' and the 'Service Towns and Larger Villages'. We support that the distribution of sites will follow a logical hierarchical approach, provide an appropriate development pattern and support sustainable development within all market areas. As per paragraph 2.14 of the Publication Draft Local Plan, Mexborough and Thorne are the largest centres outside of Doncaster and provide a wide range of services (e.g. shops, banks, building societies, libraries and restaurants) serving a wide catchment area. We support that 40% of the housing should go to Main Towns, with particular focus to the most sustainable settlements which include Mexborough. This is echoed in the policy 'Housing allocations and mixed-use allocations to meet local needs housing growth are distributed on a pro-rata basis to the most sustainable and deliverable urban and urban extension sites and, in accordance with a sequential approach to flood risk, to these settlements.' Site 139 is a deliverable and suitable site that can contribute to the local housing growth via an urban extension in one of the most sustainable settlements in Doncaster. The Local Plan should be 'prepared with the objective of contributing to the achievement of sustainable development,' which can be achieved through the allocation of Site 139 for residential development.

Summary:
Policy 2 Spatial Strategy and Settlement Hierarchy o Support hierarchy and proposed distribution.

Response:
Support to the spatial strategy/settlement hierarchy welcomed, including the identification of Mexborough as a Main Town and the proposed housing allocation to the settlement. Note that site 139 is an urban extension to Mexborough capable of contributing towards the Town’s housing target, but the site selection methodology/ Green Belt Review has identified this site as having a weak case for inclusion in further site selection work due to performing strongly in respect to Green Belt purposes.

Attend Examination: Attend Hearing

Reason: In order to provide an up to date summary of the status of the development and provide clarification on the particulars of the development.

Area: Chapter 4: Strategic Approach

Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness:

Comment:

Proposed Allocation The Manor Farm site remains within the Green Belt, albeit adjacent to the settlement boundary in the draft plan. Policy 2 of the Publication Local Plan sets the Spatial Strategy and Settlement Hierarchy (Strategic Policy). Marr is designated as a Defined village within Policy 2 and as such, does not benefit from specific new housing allocations. However, the policies do support infill developments within settlements which would be considered against other policies of the Plan. Paragraph 4.44 states: "New urban edge allocations have of necessity required land previously designated in the UDP as Green Belt or Countryside; and resulted therefore in amendments to town and village development boundaries to create new defensible boundaries." The objective of the policy is broadly supported, however, it is considered that circumstances, in the form of the recently granted residential planning permission, necessitate an amendment to the Local Plan and proposals Map as drafted. We therefore object to the plan in its current form. The publication version of the Doncaster Local Plan (Regulation 19) Plan continues and proposals map (Fig 2) to identify the site at Manor Farm as Green Belt land located outside of the defined settlement boundary of a tier 4 settlement. (SEE EMAIL FOR Fig 2 - Local Plan Policy Map Extract. (Area edged in red represents suggested amendments to settlement boundary)) Recommendation Although no objection to the wider Green Belt policy is made, it is requested that the settlement boundary of Marr is amended to reflect this recent planning approval for development. Justification The approach taken at paragraph 4.44 has not been applied consistently across the Borough. Where planning applications are approved and are deliverable, these sites should be included within the amended settlement boundaries. Taking this approach, land west of the approved development (application ref. 17/02585/FULM and 17/02586/LBCM) represents infill development and should be included within the settlement boundary as it provides a logical rounding off to the settlement of Marr. The plan is not currently sufficiently Justified, as the Proposal Map does not reflect recently approved planning applications (specifically 17/02585/FULM) and as a result is not Effective in that the approach to settlement boundaries and the Green Belt is inconsistent. Amendments to town and village development boundaries should create new defensible boundaries. The omission of the approved site and adjacent land within the settlement boundary of Marr undermines the local plan methodology and reduces the effectiveness of the Green Belt policy. On this basis, we recommend that the land at Manor Farm is included within the Marr settlement boundary and omitted from the Green Belt to provide a strong defensible settlement boundary that reflects approved permissions for development.

Summary:

Policy 2 The objective of the policy is broadly supported. The recently granted residential planning permission, necessitate an amendment to the Local Plan and proposals Map as drafted. Therefore object to the plan in its current form. The publication version of the Doncaster Local Plan (Regulation 19) Plan continues and proposals map (Fig 2) to identify the site at Manor Farm as Green Belt land located outside of the defined settlement boundary of a tier 4 settlement.

Response:

No exceptional circumstances exist to warrant amendment to the Green Belt boundary.
4.34 It is considered that the site to the east of Broomhouse Lane adjoining the existing employment allocation should be considered for allocation towards the M18 corridor, does not provide a good spread. Proposed changes to make the plan sound 4.32 A review of the Green Belt s strategy development should maintain strong sustainable, cohesive and inclusive communities. 4.30 Taking into account the emphasis of the housing strategy is that need will be met in the most sustainable locations with more housing being allocated to the main urban area and main towns in locations attractive to the market with good access to the Strategic Network and Doncaster Sheffield Airport. 4.12 The second part of the policy sets out the settlement hierarchy as: Doncaster Main Urban Area - Main Towns - Service Towns and Villages - Defined Villages - Countryside - Green Belt. 4.13 The ten service towns and villages include Edlington. The policy states that the service towns and villages will be a focus for accommodating housing, employment, retail and key services to meet their local needs, as well as growth to renew and regenerate any run down neighbourhoods. 4.14 The Strategy is informed by a Settlement Audit of service provision across the Borough and seeks to provide growth proportionate to the existing pattern of development. The explanation for this strategy is to be provided in a Topic Paper which is not currently available. 4.15 Part 6 of the policy relates to the Doncaster Green Belt which is identified on the policies Map. 4.16 The policy states that within the Green Belt, National Planning policy will be applied including the presumption against inappropriate development except in very special circumstances. Soundness of the Spatial Strategy and Distribution of New Development 4.17 We support the general approach of Policy 2, however in the absence of the Settlement Topic Paper we are unable to comment as to whether the spatial strategy and distribution of new development is sound. We are therefore unable to comment on whether the plan and proposed strategy has been positively prepared. We therefore consider the policy is not sound. 4.18 In addition we object to the proposed Green Belt. We do not consider the review of the Green Belt has been positively prepared. We therefore consider the policy is not sound. Reasoning Green Belt Topic Paper 4.19 The Green Belt boundaries have been informed by the Green Belt Review. The text box accompanying Paragraph 4.13 of the Plan states that the Green Belt Topic Paper explains the approach taken in considering the need to release land from the Green Belt. 4.20 Paragraph 2.1.9 of the paper states that national planning policy is clear that the release of land from the Green Belt must be fully justified and only undertaken once a number of tests have been met to prove the case that exceptional circumstances exist for releasing land. 4.21 As a result, the Paper considers housing and employment land separately. The paper refers to the Plan Strategy and states that the main emphasis of the housing strategy is that need will be met in the most sustainable locations with more housing being allocated towards the main urban area and seven main towns as the most sustainable locations for growth. 4.22 For employment sites, the paper states that the focus within the plan is on people being able to travel from home to workplaces and as such sites do not need to be found within specified settlements to meet a strategy (as per housing) and that employment land is based on factors including marketability and location (Para 2.1.11). 4.23 The Green Belt review therefore concludes that there are no exceptional circumstances for releasing Green Belt land for employment purposes in Doncaster as the focus is not on allocating sites in settlements, rather allocating sites in the best locations across the Borough based on criteria including market demand, location and access to the motorway. 4.24 However, at paragraph two of Policy 2, the strategy states that (our underlining); Development should help create and maintain strong, sustainable, cohesive and inclusive communities making the most effective use of previously developed land and the best use of key transport corridors and existing infrastructure, enabling people to access jobs, services and facilities locally. 4.25 The policy continues to state that new development will be focussed in and around existing urban areas, main town and service towns and villages. Reference is made to Major new employment sites and that these will be focussed in locations accessible from the main urban area and main towns in locations attractive to the market with good access to the strategic transport network and Doncaster Sheffield Airport. 4.26 Reference is made to Policy 3 in the supporting text which we comment on separately. 4.27 Overall it is considered that the conclusion is that there are no exceptional circumstances for releasing Green belt land focuses on the delivery of major employment sites associated with the M18 and airport which can be delivered on sites outside the Green Belt. 4.28 The Green Belt review fails to consider the exceptional circumstances associated with other parts of the plan strategy, namely, to protect existing established employment sites and enabling people access to jobs locally. 4.29 There are a number of existing employment sites in the west of the borough and as stated in the strategy development should maintain strong sustainable, cohesive and inclusive communities. 4.30 Taking into account the evidence of existing live work patterns, it is therefore necessary to acknowledge that the housing and employment strategies have to overlap to ensure the plan can be effective. 4.31 The release of Green Belt land to enable housing growth in the main towns and service towns and villages should be met with sufficient land to maintain existing employment opportunities. The allocation of an employment site in the north in addition to those on the M18 corridor, does not provide a good spread. Proposed changes to make the plan sound 4.32 A review of the Green Belt should be carried out to consider the potential for new and expanded employment sites in the west of the borough to reflect and support the housing strategy. 4.33 We note that six potential employment sites were assessed to the south of Edlington at Stage 3 of the Green Belt review for completeness. 4.34 It is considered that the site to the east of Broomhouse Lane adjoining in the existing employment allocation should be considered for removal from the Green Belt. Proposed Employment Site 4.35 The site is currently allocated as open space and included in the Green Belt. The
Summary:
Provides a summary of Policy 2 and Local Plan Spatial Strategy and Settlement Hierarchy... which provides for 'up to 50% of housing is to be focussed on the Main Urban Area, with 40% in Main Towns and 10% in Service Towns and Villages'. The policy states that the service towns and villages will be a focus for accommodating housing, employment, retail and key services growth to meet their local needs, support the general approach of Policy 2. but in the absence of the Settlement Topic Paper we are unable to comment as to whether the spatial strategy and distribution of new development is sound. unable to comment on whether the plan and proposed strategy has been positively prepared. We therefore consider the policy is not sound. The Green Belt Review fails to consider the exceptional circumstances associated with other parts of the plan strategy, namely, to protect existing established employment sites and enabling people access to jobs locally. Proposed changes to make the plan sound A review of the Green Belt and consider the potential for new and expanded employment sites in the west of the borough to reflect and support the housing strategy. We note that six potential employment sites were assessed to the south of Edlington at Stage 3 of the Green Belt review for completeness. the site to the east of Broomhouse Lane should be removed from the Green Belt. Proposed Employment Site site is open space and in the Green Belt removal of the site from the green belt would provide the potential for an extension to the existing Broomhouse Lane industrial estate to provide additional land for the expansion of the existing Polypipe business which is in situ on the estate. The removal of the site from the Green Belt would bring the settlement boundary in line with the southern extent of the boundary to the west. Strong defensible boundaries would be formed by the existing Edlington woodland to the south and east. The amendment to the Green Belt would enable a further employment allocation in the west of the borough to support and meet the needs of existing employers in this area. The provision of new sites in the west of the borough will provide choice and flexibility and ensure that existing businesses expand and remain in the area to support the housing growth strategy. A stable economy will ensure the inclusive and sustainable communities in the west of borough are maintained.

Response:
Noted. Support welcomed. A Settlement Background Paper was produced which supported the Publication Version of the Local Plan and was made available at the same time. It was also made available at the Informal Consultation stage. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.
3.8. Draft Policy 2 sets out the preferred direction of housing to be developed over the plan period. The spatial strategy seeks to concentrate growth at the larger settlements of the Borough, where existing services and facilities are located so as to drive for sustainable housing developments. 3.9. We agree with focussing new homes in the Main Urban Areas followed by Doncaster’s 7 Main Towns and 10 Service Towns and Villages to make sure the plan is prepared with the objective of contributing to the achievement of sustainable development. In the interests of justified plan making and consistency with national policies. 3.10. We also welcome the new approach to development within the countryside and in doing so once adopted will replace the outdated ENV2 and ENV4 within the UDP. Point 5 of draft policy 2 specifically outlines the criteria which will support proposals for new development in the countryside. This is now in line with the new NPPF to make sure the plan is positively prepared and justified. 3.11. In principle we have no issue with the council’s approach to housing allocations, in that they should be the "most sustainable and deliverable urban and urban extension sites”. However we have concerns over the sites which have been selected not fulfilling the above criteria. A number of the sites selected are unviable. This will be discussed in detail under our comments for draft policy 6.

Recommendation 2: Ensure that a sustainable growth strategy is incorporated to guarantee consistency with DMBC’s aims and objectives and the NPPF in the interests of positive plan making. The plan should however ensure that all housing allocations are the most deliverable and can contribute to the supply of housing over the plan period in the interests of effective and justified plan making.

Summary:
Agree with focussing homes in the urban area, main towns and service towns / villages to make sure the plan contributes to achieving sustainable development. Also welcome the new approach to development in the countryside to replace ENV2 4. Point 5 of Policy 2 is now in line with the new NPPF to make sure the plan is positively prepared and justified. No issue in principle with the approach to housing allocations in that they should be the "most sustainable and deliverable urban and urban extension sites”, however concerns those selected do not fulfil the above criteria and a number are unviable. Recommendation 2: Ensure that a sustainable growth strategy is incorporated to guarantee consistency with DMBC’s aims and objectives and the NPPF in the interests of positive plan making. The plan should however ensure that all housing allocations are the most deliverable and can contribute to the supply of housing over the plan period in the interests of effective and justified plan making.

Response:
Support welcomed. The Local Plan seeks to allocate sites (including those with permission) which are deliverable. Deliverability is looked at through the HELAA as well as the '5 year Deliverable Housing Land supply Statement’ and Housing Topic Paper.
**Comment Ref:** C/Policy 2/05289/1/002

**Attend Examination:** Attend Hearing

**Reason:** We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

**Area:** Chapter 4: Strategic Approach

**Policy:** Policy 2: Spatial Strategy & Settlement Hierarchy

**Tests of Soundness:** Consistent with national

**Comment:**

The removal of safeguarded land within this policy is not supported by Persimmon Homes. While there is no definitive guidance indicating the amount of land which should be safeguarded, the National Planning Policy Framework (NPPF) (2019) is clear that where necessary Local Plans should ‘identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period’, and that local authorities should ‘be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period’. The evidence base document entitled Green Belt Topic Paper (2019) produced by Doncaster Metropolitan Borough Council (the Council) provides some explanatory text to support the exclusion of safeguarded land from the Local Plan. It does not, however, provide sufficient evidence that Green Belt boundaries will not need to be altered at the end of the plan period. This policy is therefore not compliant with the NPPF and is not justified, because it has not been demonstrated that the plan will provide a robust long-term Green Belt boundary nor certainty for residents and developers alike in terms of likely growth locations beyond the end of the plan period. The defined development limits outlined in this policy are also overly restrictive and unsound. Placing a blanket ban on residential development outside defined settlements apart from in exceptional circumstances or for rural exceptions is not consistent with national policy, which outlines that plans should be prepared with the objective of contributing to the achievement of sustainable development. Much of the land adjacent to the defined development limits is in sustainable locations which could contribute to meeting the housing need and provide sustainable development. The restriction imposed by such a policy may prevent the area from meeting its housing need. Proposals for development in these locations should not be required to demonstrate exceptional circumstances or clear local support in order to achieve support from the Council.

**Summary:**

Objects to the lack of safeguarded land between urban area and Green Belt. The Green Belt Topic Paper (2019) provides some justification but does not provide sufficient evidence that Green Belt boundaries will not need to be altered at the end of the Plan period. The defined development limits outlined in this policy are also overly restrictive and unsound. Placing a blanket ban on residential development outside defined settlements apart from in exceptional circumstances or for rural exceptions is not consistent with national policy, which outlines that plans should be prepared with the objective of contributing to the achievement of sustainable development. Much of the land adjacent to the defined development limits is in sustainable locations which could contribute to meeting the housing need and provide sustainable development. The restriction imposed by such a policy may prevent the area from meeting its housing need. Proposals for development in these locations should not be required to demonstrate exceptional circumstances or clear local support in order to achieve support from the Council.

**Response:**

The Local Plan does not propose to identify Safeguarded Land in the Green Belt for the reasons given in the Green Belt Topic Paper. The Local Plan proposes an appropriate strategy that steers development to the most sustainable locations taking into account Green Belt and existing countryside designations. Policy 2 introduces flexibility for permitting additional growth subject to meeting its conditional criteria. Development have been identified (according to a methodology that has been consulted upon) - to allow the identification of rational and robust boundaries which for the application of "Countryside" policy and identification of settlement boundaries within which development is prioritised. This supports the plan led approach to development.

Response:
The Local Plan does not propose to identify Safeguarded Land in the Green Belt for the reasons given in the Green Belt Topic Paper. The Local Plan proposes an appropriate strategy that steers development to the most sustainable locations taking into account Green Belt and existing countryside designations. Policy 2 introduces flexibility for permitting additional growth subject to meeting its conditional criteria. Development have been identified (according to a methodology that has been consulted upon) - to allow the identification of rational and robust boundaries which for the application of "Countryside" policy and identification of settlement boundaries within which development is prioritised. This supports the plan led approach to development.
Response:

Policy 2 of the DLP includes Finningley within Level 3 Service Towns and Villages. Our client's land interest however, lies outwith but adjacent to Finningley's development limits, as identified on the Policy Map, thus within the designated Countryside. This is despite it being largely a brownfield site. For the reasons set out in this representation, when read as a whole, it is our firm view that the development limits of Finningley should be revised to include our client's land interest (HELAA site 317) and that the site should be allocated for housing. Turning to the wording of Policy 2 (Spatial Strategy and Settlement Hierarchy), as currently drafted this is not consistent with the National Planning Policy Framework (NPPF). Criterion 5 of Policy 2 sets out that residential development will be supported in the Countryside if adjacent to a Development Limit of a settlement in the Main Urban Area, Main Towns or Service Towns/Villages but excludes development within Defined Villages. This is contrary to the NPPF which supports sustainable development in suitable locations. Whilst Defined Villages are positioned at the bottom of the defined settlement hierarchy this should not inhibit development within the Countryside if adjacent to a Development Limit. This criterion should therefore be reworded as follows: "Residential development will also be supported in the Countryside if adjacent to a Development Limit of a settlement as outlined above in levels 1-3 above, where?" Criterion 5E notes that residential development in the Countryside will only be supported where a five-year borough-wide supply of housing land cannot be demonstrated and the development would make a significant contribution to housing land supply. The NPPF supports sustainable development and whilst consideration of 5-year housing land supply may be an attribute which weighs into this consideration, there is no requirement for demonstration of a lack of a 5YHLS for development within the Countryside to be acceptable. NPPF paragraph 73 requires LPAs to be able to demonstrate a 5YHLS at all times as a minimum therefore waiting until this has occurred before releasing sustainable sites that would comply with the other criteria of part 5 is not positive and would be contrary to the NPPF. Sustainable sites that comply with part 5 should be released to ensure that supply remains above 5 years and/or 920 dwellings per annum (dpa). Criterion 5E should therefore be deleted in its entirety. The development limits outlined in the DLP presents a notion of controlling the location of development, which is a restrictive approach that is at odds with the NPPF. The NPPF directs that Local Plans should "provide a positive vision for the future of each area?" (NPPF paragraph 15). If development limits are proposed, their role should be to help direct development needed to the right places; providing sufficient flexibility to accommodate development needs not currently anticipated (NPPF paragraph 81). By including development limits to control development, the DLP conflicts with the NPPF (paragraph 16) which requires that Local Plans are "prepared positively, in a way that is aspirational but deliverable?". Whilst the NPPF expects Local Plans to identify land where development would be inappropriate and does not explicitly preclude the inclusion of settlement boundaries or development limits, it does not specify that Local Plans define settlement boundaries and does not instruct Local Plans to preclude development at the edge of a settlement. Rather, the NPPF simply supports sustainable development. The tightly drawn development limits around Finningley, designating our client's site, which is largely brownfield land (previously used for distribution and manufacturing, recycling and storage of construction waste and materials, and storage of construction plant), as countryside, restricts development to an extent that is at odds with the NPPF's presumption of sustainable development. Should development limits remain, the development limit of Finningley should be revised to include our client's land, which is largely brownfield land, adjacent to existing (or consented) residential development in a sustainable location. This would help achieve the NPPF's objective that Local Plans are based on robust evidence of development need with a buffer to provide sufficient flexibility. Furthermore, we note that there is a tension between part 5 of Policy 2 (Spatial Strategy and Settlement Hierarchy) and Policy 26 (Development in the Countryside) in that they set out different requirements for development within the Countryside but lack clarity between the difference in consideration of edge of settlement sites and those located in isolated locations within the Countryside. The policies and their supporting text should be amended to make clear the difference between development proposals on the edge of sustainable settlements (Policy 2) and requirements for development in isolated areas of the Countryside (Policy 26).

Summary:

- Policy 2 - Spatial Strategy and Settlement Hierarchy: 1. Site 317 (countryside) should be included within the development limits of Finningley. 2. Policy wording not consistent with the NPPF. Criterion 5 1. Should be amended to support residential development in Countryside adjacent to a 'Development Limit' of a settlement. 2. Criterion 5E should be deleted. Not compatible with the NPPF (para 73) in respect of the 5 year supply. 3. Imposing development limits is restrictive and at odds with the NPPF (para 15/1681). 4. Excluding site 317 which is BF is at odds with NPPF presumption of sustainable development. 5. Tension between Policies 2 (part 5) and Policy 26. Should be made clear difference between development on the edge of a sustainable settlement and requirements in isolated areas.

Response:

Policy 3 provides further policy in respect to growth to the Countryside Defined Villages outside of development limits. Development limits have been reviewed in line with the methodology which has been subject itself to consultation. It is not considered that there is a tension between Part 5 of this policy and Policy 26 (Countryside).
2.1 This section refers to relevant strategic policies in the Publication Draft Plan, notably Policy 2: Spatial Strategy and Settlement Hierarchy and Policy 3: Level and Distribution of Growth. 2.2 We support the approach to the spatial strategy set out in Policy 2 that seeks to distribute employment development across the Borough, with a focus on the defined 'Main Towns', such as Thorne and Moorends, as well as those areas that are attractive to the market and with good access to the Strategic Transport Network. 2.3 As identified within the plan's supporting text, it is important that the Local Plan identifies employment allocations across not just the main urban area, but also the Main Towns, in order to ensure that regeneration benefits are spread across the Borough. It is appropriate that Thorne and Moorends is identified as a Main Town, being one of the larger settlements outwith the urban area with a significant population, available workforce and a wide range of existing services. 2.4 Particular support is also given to focussing employment sites within accessible and attractive market locations, which is necessary to ensure that the spatial strategy is effective and deliverable. 2.5 As set out in further detail below, Site 001: Thorne North comprises such a site, being located outside the main urban area but accessible to the Main Town of Thorne and Moorends and its associated population/workforce, whilst also comprising a well located site with excellent access to the strategic transport network and is attractive to the market. The presence of Site 001 therefore demonstrates that sites which accord with the spatial strategy are available to enable the spatial strategy set out in Policy 2 to be brought forward, and that DMBC is justified in adopting this approach. 2.6 The approach adopted by Policy 2 is therefore considered to be justified, effective (deliverable) and positively prepared, and is therefore sound.

Summary:

Support the Spatial Strategy set out in Policy 2 which has a focus on the defined 'Main Towns' such as Thorne and Moorends, as well as those areas that are attractive to the market and with good access to the Strategic Transport Network. Particular support is given to focussing employment sites within accessible and attractive market locations which is necessary to ensure that the spatial strategy is effective and deliverable. Thorne North (Site 001) is such a site. It is outside the main urban area but accessible to the main town of Thorne and Moorends and its associated population/workforce. It is well located with excellent access to the strategic transport network and is attractive to the market. Site 001 demonstrates that sites which accord with the spatial strategy are available and that DMBC is justified in adopting the approach to the spatial strategy. The approach adopted by Policy 2 is justified, effective (deliverable) and positively prepared, and is therefore sound.

Response:
Noted. Support welcomed.
6.1 This section reviews other draft policies in the emerging Local Plan which are relevant to major housing development. 6.2 Draft Policy 2 sets out that residential development will be supported in the Countryside if adjacent to a Development Limit of a settlement in levels 1-3 and will meet a number of criteria. As drafted, Don Parkinson considers that the policy is unsound and not positively prepared or justified. It is considered that the Council should consider unallocated sites which may come forward during the plan period which are considered to be sustainable development. Part 5e is considered to be unduly onerous and is totally unjustified. As drafted it restricts any unallocated development which is found to be sustainable, the NPPF is clear that five year supply and proposed allocations should identify a minimum of housing. 6.3 Furthermore, it is considered that the Development Limits of Thorne should be amended to include the subject site (Sites 002,003, 004 and 005). 6.4 Draft Policy 26 sets out that planning permission for new dwellings within the Countryside will be granted for dwellings to meet the essential needs of agriculture, forestry, or other enterprise which justifies a rural location (which also meets a range of criteria). The policy does not take into account that some areas of Countryside identified on the policies map is located adjacent to Main Towns which are more urban in character than rural. The policy should be amended to support the delivery of unallocated housing sites which may come forward within such areas. 6.5 Don Parkinson considers that draft Policy 2 and 26 as drafted is unsound and not effective or justified. The Council should seek to amend the policies as discussed above.

Response:
Criterion 5E is considered appropriate in the context of an up-to-date local plan with sufficient allocations being made for the plan period with numerous sources of additional housing supply and the government’s emphasis on having a plan-led approach. That said, should circumstances change during the plan period then the policy provides flexibility to bring forward a further source of supply and will assist ensuring that any such proposals come forward with some policy to help bring forward sustainable extensions to settlements with a Countryside boundary. Development limits have been reviewed in line with the methodology which has been subject itself to consultation. Policies 2 and 3 sufficiently cover development adjacent to settlements in the eastern Countryside ‘half’ of the borough.

Comment:
The Spatial Strategy and Settlement Hierarchy (Policy 2) is supported, particularly the definition of the Doncaster main urban area (MUA). The distribution of new housing as between housing allocations and mixed use allocations to meet local needs housing growth and economic-lead housing growth and the clear explanation of the justification for this is in our view a sound approach to achieving sustainable patterns of development. The definition of the Doncaster MUA on the Proposals Map has been the subject of some criticism particularly from outlying communities which are considered to have separate identities from Doncaster itself. Whilst this local view is to some extent understandable, it does not reflect the reality on the ground. It is simply not possible to identify - for example - where "Doncaster" ends and "Warmsworth" begins. However, inclusion of these outlying communities within the Doncaster MUA does not mean that the communities themselves, whether or not they include Parish Councils, cannot continue to influence the details of any development which may occur as a result of Local Plan policies. Concentrating the bulk of new development in the Doncaster MUA as defined will result in a more sustainable pattern of development than would occur with a more dispersed housing distribution and should assist in the regeneration of Doncaster town centre. Consistent with other Local Plan policies. It will also reduce pressure on the green belt whilst allowing a wide range of rural settlements to grow in a manner proportionate to their existing size and character. Policy 2(5) Countryside and the associated Policies 3 and 26 together provide what is, in the writer's view, an exceptional approach, which should be supported, providing flexibility consistent with the NPPF and with the Council's objective of boosting employment and associated housing. The policy, rightly, includes environmental and other technical caveats (e.g. flood risk) and expects proposals that come forward under this policy to have local support. Flexibility is further embedded in the Plan through the inclusion of Reserve (housing) sites. The Plan correctly, in our view, does not repeat NPPF policy (e.g. in relation to flood risk and green belt) other than where there is a need for more detail than the Framework provides. This, too, is to be welcomed.

Area: Chapter 4: Strategic Approach
Policy: Policy 2: Spatial Strategy & Settlement Hierarchy

Tests of Soundness: 

Summary:

Response:
Support for Local Plan and Policies is noted.
Policy 2 of the Publication Local Plan sets out that, 'The openness and the permanence of Doncaster’s Green Belt will be preserved. The general extent of the Green Belt will be retained. Within the Green Belt, national planning policy will be applied including the presumption against inappropriate development except in very special circumstances'. The former Doncaster College Site at High Melton is currently washed over by Green Belt. There is opportunity for the Development Plan to accurately reflect the future intentions for the site and it is considered that the site could be allocated under its own Special Policy Area within the Local Plan. Alternatively it could be identified as a major developed site in the Green Belt. We therefore object to the current designation of the site within the Green Belt with a view to making progress with Doncaster MBC (DMBC) and Sheffield City Region (SCR) in securing the redevelopment of the site, which would be assisted by a positive planning policy context. It is understood that great importance is attached to Green Belts, with the fundamental aim to prevent urban sprawl by keeping land permanently open and therefore Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans. However, strategic policies within the Doncaster Local Plan should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period. In order to best facilitate the proposed investment at High Melton it is considered that an appropriate planning policy framework should reflect the proposals being prepared for the land, which are supported by DMBC and SCR due to their regional and national significance. In this instance the requirements of paragraph 137 of the National Planning Policy Framework ('Framework') can be demonstrated as having been met as the proposed allocation site is: a) a brownfield site, currently vacant and underutilised; b) would be an efficient use of land based on its proposed development as a Creative Media Industries Hub and Housing; and c) the development part of the High Melton Golf Course is essential in a single location in order that a critical mass of expertise and facilities is provided in a single location. Dispersal over a wider range of neighbouring authorities would not be an appropriate means by which to deliver the development or the significant social and economic benefits that come from such a use and the environmental benefits of delivering regeneration of a brownfield site. The proposed Special Policy Area allocation or Major Developed Site in the Green Belt designation performs poorly against the purposes of the Green Belt and is assessed against the five purposes (para 134 of the Framework) as follows; a) the site does not act to check the unrestricted sprawl of large built-up area. High Melton is not a large built up area and the brownfield nature of the site demonstrates that development has extended beyond the settlement envelope limits in the past with that relationship now being well established; b) the site is not, by virtue of its location, preventing neighbouring towns merging into one another. The nearest settlements are the village of Cadby 1.2 km to the south and Sprotborough 2.4 km to the east. The development of this site will not reduce these distances. This is not considered a material function of the land within the Green Belt in this instance; c) to assist in safeguarding the countryside from encroachment is not a function in this instance due to the brownfield nature of the site and that development has extended beyond the settlement envelope limits already. This has effectively established the nature of this area of land as being one of a major developed site in the Green Belt; d) whilst there are listed buildings within the vicinity of the site and their setting is protected, the Green Belt designation is not required to preserve the setting and special character of High Melton as a historic town. The listed building designations and Conservation Area boundaries and the protection afforded the setting of such heritage assets performs this function; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land, release of the site from the Green Belt as part of a Special Policy Area designation would achieve this and allow appropriate redevelopment of a brownfield site. The need to promote sustainable patterns of development should be taken into account in deciding to review the Green Belt in this location. The discussions between 360 Degree Media and the Council to date have demonstrated that this location is essential to the delivery of the Creative Media Hub. There would of course be the opportunity to mitigate the impact of the development as part of any further planning application, or indeed as a consequence of the decision to remove the land from the Green Belt through compensatory improvements to the environmental quality and accessibility of the site boundaries and wider retained open land as part of any proposed scheme. There is a significant opportunity to meet the economic investment objectives of the plan, as set out in Strategic Objective 2 and Policies 3, 4 and 5 of the Draft Plan for upskilling of work force through supporting development on this site. As previously noted, the land is not necessary to continue the function of the Green Belt in this location. The Green Belt boundaries can, through an appropriate process of development of the site proposals, be clearly set using physical features that are readily recognisable and are likely to be permanent beyond the plan period. Recommendation The site should be given its own Special Policy Area and the policies map updated to reflect this and with the Former Doncaster College Site removed from the Green Belt. Alternatively, the site should be reallocated as a 'Major Developed Site within the Green Belt' in order to ensure the policy is reflective of the Framework, which requires that strategic policies “make as much use as possible of suitable brownfield sites and underutilised land” (Paragraph 137). It is also recommended that to reflect this Special Policy Area, specific reference is made within the Green Belt section of Policy 2 to the redevelopment of this site at Creative Media Industries. Specific reference is made in Policy 3 to the site as an opportunity to secure investment in the Creative Industries: at Policy 4 reference is made to employment generation from Special Policy Area designation and articulated in Table 4 of the Local Plan. Justification The principle of the development of this site for Creative Media Industries, with an element of housing, has been subject to discussions with the Council who are supportive of the proposals due to the significant skills and economic benefits that the development will have for the Borough and wider economic area. This new development opportunity has already been acknowledged in Table 1 of Page 12 of the Publication Local Plan, but it is recommended that acknowledgement is made within Policy 2 itself. Paragraph 134 of the
National Planning Policy Framework sets out that Green Belt serves five purposes: a) To check the unrestricted sprawl of large built-up areas; b) To prevent neighbouring towns merging into one another; c) To assist in safeguarding the countryside from encroachment; d) To preserve the setting and special character of historic towns; and e) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. In respect to the proposed development of this and the five purposes of the Green Belt it is highlighted that the site will not result in the unrestricted sprawl of a large built-up area and will primarily result in the development of brownfield land. The site will not result in neighbouring towns merging into one another. The development will not encroach into the countryside any further than that of the existing built form and manicured landscape. The redevelopment of this site will help to secure the long-term future of the heritage assets on site and will be designed sensitively to respect the character of the historic parks and gardens. The development proposals for this site will assist in the regeneration of this site by redeveloping brownfield land. The site therefore performs poorly against the functions of the Green Belt and it should be allocated to reflect its previously developed nature and the forthcoming development proposals. A planning application is to be formally submitted imminently, and it is requested that the Policies Map and Policy 2 of the Local Plan are updated to reflect the nature of the emerging proposals, which have the benefit of support from the Sheffield City Region and Doncaster Metropolitan Borough Council.

Summary:
Re former High Melton College site. Land use allocation. o Objects to site being kept as part of the Greenbelt and Parks and gardens of Local Historic Interest. o Site should be allocated as its own 'Special Policy Area' or 'Major Developed Site in the Greenbelt'. o Re classification would assist the re development of the site by way of a "positive planning policy context" o The scheme is a regionally and nationally significant proposal. o Scheme is a significant economic opportunity and should be treated as such. Removal from Greenbelt o The site meets the criteria set out in NPPF para 137 (changes to Greenbelt boundary) o Any impacts would be mitigated against through the planning application process. o Land is not necessary to continue the function of the GB. Policy 2 - Spatial strategy and Settlement Hierarchy o Reference should be made in the Greenbelt section (6) to re-development of the site for 'Creative Media Industries'.

Response:
The scale of development being proposed and nature and extent of existing buildings do not warrant a specific designation ? can be addressed through current policy
Policy 2 states: “New development (including homes, supporting services and associated jobs) will be focussed in and around existing urban areas (primarily Doncaster’s ‘Main Urban Area’, its 7 ‘Main Towns’ and 10 ‘Service Towns and Villages’).” 2.2 Askern is designated as a Service Town and Village within Policy 2. It is considered that this is an appropriate designation. 2.3 Policy 2 also states that: “At least 50% of new homes will go to the ‘Main Urban Area’, approximately 40% to the ‘Main Towns’ and about 10% to the ‘Service Towns and Villages’.” 2.4 The delivery of the site adjacent Askern Saw Mill will support this policy objective. This site currently benefits from outline planning permission for a mixed use scheme comprising of the erection of up to 220 dwellings, Use Class A1/A3/A5 use and Use Class B1(c) and B2 use (ref: 08/01077/OUTA). A subsequent reserved matters application is currently awaiting a decision which details access, appearance, landscaping, layout and scale for mixed use redevelopment of land (ref: 16/01651/REMM). 2.5 In addition, Policy 2 states that: “Housing allocations and mixed-use allocations to accommodate economic-led housing growth are directed to the most sustainable and deliverable urban and urban extension sites in the Doncaster Main Urban Area and Main Towns in accordance with the growth ranges set out in Policy 3 and in accordance with a sequential approach to flood risk.” 2.6 We object to no development being focussed within Service Towns and Villages. 2.7 The sustainability character of the site is set out in full in Section 3 of this report. Recommendation 2.8 The Council should identify the site as a specific location to accommodate further housing and employment growth in Policy 2 as part of the overall strategy. 2.9 It is further recommended that the site is specifically identified for Green Belt release in part 6) of the policy. Justification 2.10 As provided in more detail in Section 3, the site is sustainably located and therefore suitable for housing and employment use. In addition, given the location of the site immediately adjacent to Askern Saw Mills, High Street, Askern which currently has outline permission. The site would form a logical extension to this allocated mixed use site and round off the development.

Summary:

Policy 2: Spatial Strategy and Settlement Hierarchy 1. Agree with Askern being a service town. 2. Object to development focus being on Main Urban Area, should include service towns. 3. Part (6) site should be identified as a GB release site.

Response:

The Local Plan proposes an appropriate settlement hierarchy and whilst alternative distributions have been suggested by others that proposed in the Local Plan is considered the most appropriate. As set out in the Housing Topic Paper and Green Belt Topic Paper, no additional sites are required in Askern as the settlement can meet and surpass its housing targets, and there are no exceptional circumstances to justify any Green Belt release here.

**Comment:**

3.1 This policy is considered unsound as it is not justified or effective. 3.2 The policy seeks to distribute the majority of new development to the most sustainable locations, these being the Main Urban Area of Doncaster, the 7 Main Towns and the 10 Service Towns and Villages. This general principal is considered appropriate and is supported. It is, however, important that this is sustainable and deliverable. 3.3 Tickhill is identified as in the 'Service Towns and Villages' category. The identification of Tickhill within the Service Town and Village tier is supported. It is a high performing settlement and provides many primary services. It is well served by a district centre containing local services and amenities, two primary schools and health care provision. 3.4 In terms of new homes the policy seeks to deliver at least 50% within the 'Main Urban Area' of Doncaster and 40% within the 7 'Main Towns' with just 10% allocated to the 'Service Towns and Villages'. The lack of housing allocated to Service Towns and Villages is disproportionately low and takes no account of the sustainability, deliverability, development opportunities or affordable housing need.

**Summary:**

Consider policy 2 unsound as it is not justified or effective. Generally support main principle of policy however its important that its sustainable and deliverable.  Tickhill is a Service Town and Village, and a high performing settlement providing many primary services however only allocated 10% of the borough distribution of new homes which is disproportionately low and takes no account of sustainability deliverability development opportunities or affordable housing need.

**Response:**

Tickhill has been allocated a housing requirement which is reflective of its size and service provision, and in line with other similar sized settlements. The approach is further explained in the Housing Topic Paper.
Summary of the Spatial Strategy and Settlement Hierarchy 4.8 The overall strategy seeks to concentrate growth at the larger settlements of the Borough with remaining growth delivered elsewhere to support the function of other sustainable settlements with growth distribution appropriate and proportionate to the size of the existing settlements. New development is to be focused in and around existing urban areas (primarily Doncaster’s Main Urban Area, its 7 Main Towns and 10 Service Towns and Villages). 4.9 The Policy seeks to ensure that development helps to create and maintain, sustainable, cohesive and inclusive communities, making use of existing transport corridors and infrastructure to enable people to access jobs, services and facilities locally. 4.10 Up to 50% of housing is to be focussed on the Main Urban Area, with 40% in Main Towns and 10% in Service Towns and Villages. 4.11 With regards to new employment sites these are to be focused in locations that are accessible from the Main Urban Area and Main Towns and in locations attractive to the market with good access to the Strategic Network and Doncaster Sheffield Airport. 4.12 The second part of the policy sets out the settlement hierarchy as: - Doncaster Main Urban Area - Main Towns - Service Towns and Villages - Defined Villages - Countryside - Green Belt. 4.13 The ten service towns and villages include Edlington. The policy states that the service towns and villages will be a focus for accommodating housing, employment, retail and key services growth to meet their local needs, as well as growth to renew and regenerate any run down neighbourhoods. 4.14 The Strategy is informed by a Settlement Audit of service provision across the Borough and seeks to provide growth proportionate to the existing pattern of development. The explanation for this strategy is to be provided in a Topic Paper which is not currently available. 4.15 Part 6 of the policy relates to the Doncaster Green Belt which is identified on the policies Map. 4.16 The policy states that within the Green Belt, National Planning policy will be applied including the presumption against inappropriate development except in very special circumstances. Soundness of the Spatial Strategy and Distribution of New Development 4.17 We support the general approach of Policy 2, however in the absence of the Settlement Topic Paper we are unable to comment as to whether the spatial strategy and distribution of new development is sound. We are therefore unable to comment on whether the plan and proposed strategy has been positively prepared. We therefore consider the policy is not sound. 4.18 In addition we object to the proposed Green Belt. We do not consider the review of the Green Belt has been positively prepared. We therefore consider the policy is not sound. Reasoning Green Belt Topic Paper 4.19 The Green Belt boundaries have been informed by the Green Belt Review. The text box accompanying Paragraph 4.13 of the Plan states that the Green Belt Topic Paper explains the approach taken in considering the need to release land from the Green Belt. 4.20 Paragraph 2.1.9 of the paper states that national planning policy is clear that the release of land from the Green Belt must be fully justified and only undertaken once a number of tests have been met to prove the case that exceptional circumstances exist for releasing land. 4.21 As a result, the Paper considers housing and employment land separately. The paper refers to the Plan Strategy and states that the emphasis of the housing strategy is that need will be met in the most sustainable locations with more housing being allocated towards the main urban area and seven main towns as the most sustainable locations for growth. 4.22 For employment sites, the paper states that the focus within the Plan is on people being able to travel from home to workplaces and as such sites do not need to be found within specified settlements to meet a strategy (as per housing) and that employment land is based on factors including marketability and location (Para 2.1.11). 4.23 The Green Belt review therefore concludes that there are no exceptional circumstances for releasing Green Belt land for employment purposes in Doncaster as the focus is not on allocating sites in settlements, rather allocating sites in the best locations across the Borough based on criteria including market demand, location and access to the motorway. 4.24 However, at paragraph two of Policy 2, the strategy states that (our underlining); Development should help create and maintain strong, sustainable, cohesive and inclusive communities making the most effective use of previously developed land and the best use of key transport corridors and existing infrastructure, enabling people to access jobs, services and facilities locally. 4.25 The policy continues to state that new development will be focussed in and around existing urban areas, main town and service towns and villages. Reference is made to Major new employment sites and that these will be focussed in locations accessible from the main urban area and main towns in locations attractive to the market with good access to the strategic transport network and Doncaster Sheffield Airport. 4.26 Reference is made to Policy 3 in the supporting text which we comment on separately. 4.27 Overall it is considered that the conclusion that there are no exceptional circumstances for releasing Green Belt land focuses on the delivery of major employment sites associated with the M18 and airport which can be delivered on sites outside the Green Belt. 4.28 The Green Belt review fails to consider the exceptional circumstances associated with other parts of the plan strategy, namely, to protect existing established employment sites and enabling people access to jobs locally. 4.29 There are a number of existing employment sites in the west of the borough and as stated in the strategy development should maintain strong sustainable, cohesive and inclusive communities. 4.30 Taking into account the evidence of existing live work patterns, it is therefore necessary to acknowledge that the housing and employment strategies have to overlap to ensure the plan can be effective. 4.31 The release of Green Belt land to enable housing growth in the main towns and service towns and villages should be met with sufficient land to maintain existing employment opportunities. The allocation of an employment site in the north in addition to those on the M18 corridor, does not provide a good spread. Proposed changes to make the plan sound 4.32 A review of the Green Belt should be carried out to consider the potential for new and expanded employment sites in the west of the borough to reflect and support the housing strategy. 4.33 We note that six potential employment sites were assessed to the south of Edlington at Stage 3 of the Green Belt review for completeness. 4.34 It is considered that the site to the east of Broomhouse Lane adjoining in the existing employment allocation should be considered for removal from the Green Belt. Proposed Employment Site 4.35 The site is currently allocated as open space and included in the Green Belt. The
Provides a summary of Policy 2 and Local Plan Spatial Strategy and Settlement Hierarchy... which provides for 'up to 50% of housing is to be focussed on the Main Urban Area, with 40% in Main Towns and 10% in Service Towns and Villages'.

ten service towns and villages include Edlington and the policy states that the service towns and villages will be a focus for accommodating housing, employment, retail and key services growth to meet their local needs, support the general approach of Policy 2. but in the absence of the Settlement Topic Paper we are unable to comment as to whether the spatial strategy and distribution of new development is sound. unable to comment on whether the plan and proposed strategy has been positively prepared. We therefore consider the policy is not sound.

Evidence Paper considers housing and employment land separately. The paper states that the emphasis of the housing strategy is that need will be met in the most sustainable locations with more housing being allocated towards the main urban area and seven main towns as the most sustainable locations for growth employment sites, the paper states that the focus within the plan is on people being able to travel from home to workplaces and as such sites do not need to be found within specified settlements to meet a strategy (as per housing) and that employment land is based on factors including marketability and location (Para 2.1.11) Emphasised last line of paragraph 2 of Policy 2, which says 'existing infrastructure, enabling people to access jobs, services and facilities locally.' policy also says that new development will be focussed in and around existing urban areas, main town and service towns and villages, with focus on new major employment sites in accessible locations. The Green Belt Review fails to consider the exceptional circumstances associated with other parts of the plan strategy, namely, to protect existing established employment sites and enabling people access to jobs locally. Proposed changes to make the plan sound A review of the Green Belt and consider the potential for new and expanded employment sites in the west of the borough to reflect and support the housing strategy. We note that six potential employment sites were assessed to the south of Edlington at Stage 3 of the Green Belt review for completeness. the site to the east of Broomhouse Lane should be removed from the Green Belt. Proposed Employment Site site is open space and in the Green Belt removal of the site from the green belt would provide the potential for an extension to the existing Broomhouse Lane industrial estate removal of the site from the Green Belt would bring the settlement boundary in line with the southern extent of the boundary to the west Amendment to the Green Belt would enable a further employment allocation in the west of the borough to support and meet the needs of existing employers in this area

Response:

Noted. Support welcomed. A Settlement Background Paper was produced which supported the Publication Version of the Local Plan and was made available at the same time. It was also made available at the Informal Consultation stage. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.

Comment:

2.1 This section of the representation statement provides comment on the Local Plan Publication Version Consultation Document. 2.8 The proposed changes to settlement hierarchy result in Clayton now being identified as a 'Defined Village' which has a limited number of services and houses commuters to elsewhere. In the previous consultation draft there were only 12 defined villages and the Publication Version now includes 40 defined villages. We support the identification of Clayton as a defined village in principle. 2.9 The policy states that within their defined Development Limits development proposals will be considered against other policies of the Plan. Non-residential development will be supported if justifiable to support a prosperous rural economy. Whilst the policy supports development within settlement limits in principle, the reality is that there are few if any development opportunities within defined villages as the boundaries are tightly drawn to existing buildings and as such development is restricted. 2.10 Policy 2 supports development in the Countryside if adjacent to a tier 1-3 settlement and if the proposal meets the 5 stated criteria, one of which is that the Council are unable to demonstrate a 5 year housing land supply. The defined villages lie within tier 4 of the settlement and therefore this part of the policy would not support development adjacent to defined villages. 2.11 The final part of the Policy states that in exceptional circumstances, and subject to the demonstration of clear community support, residential development in appropriate locations may also be supported in the Countryside on land adjacent to the development limit of a Defined Village. However, it will only be supported if it does not exceed (a) the development size limit permissible for an individual scheme or site (as defined in Policy 3) of the relevant Defined Village and (b) does not exceed the cumulative growth limit over the Plan Period (defined in Policy 3) of the relevant Defined Village. 2.12 An appropriate location is defined as: "a location which does not conflict, when taken as a whole, with national policy or policies in this Local Plan. In addition, to qualify as an appropriate location, the site, if developed, would:- - Retain the core shape and form of the settlement; - Not significantly harm the settlement’s character and appearance; and - Not significantly harm the character and appearance of the surrounding countryside or the rural setting of the settlement. 2.13 The policy states that an exceptional circumstance is: "a matter for the decision maker to determine, but could be, for example, where there is a clear demonstrable need for a development, not foreseen by the Plan, that brings significant sustainable development benefits and is consistent with national planning policy in the NPPF. The provision of affordable homes is an example of development likely to meet this definition. For clarity, areas at risk of flooding (flood zone 2 or 3) are not considered as appropriate locations for the purposes of this part of the policy" 2.14 The term ‘demonstration of clear local community support’ is stated to mean: "That at the point of submitting a planning application to the Council, there should be clear evidence of local community support for the scheme, including, where appropriate, that of the applicable Parish or Town Council generated via a thorough but proportionate pre-application consultation exercise.” 2.15 Whilst we welcome the change to Policy 2 which could allow an extension to a Defined Village in principle, it is maintained the changes do not go far enough to support rural communities and the settlements in which growth will be supported is more limited than this policy suggests. 2.16 This part of the policy refers to development size limits set out in Policy 3. A review of Policy 3 highlights that only 14 defined villages are listed with size limits of 5-20 dwellings. There is no reference to the other 26 defined villages, although the footnote to the policy that states the development may be permissible in the 14 listed defined villages. The supporting text at paragraph 4.46 states there will be limited development opportunities on a smaller scale in the 40 defined villages. The text in Policy 2 is therefore misleading, as it appears that Policy 3 only supports development in 14 of the 40 defined villages and Clayton is not one of the listed villages where development is supported, despite the settlement’s proximity to Thurnscoe, which has a range of services and a train station. 2.17 There is greater support for settlement extensions in the higher tiers (1-3) though only in the absence of a 5 year supply, yet given these settlements are larger there will naturally be more opportunities for infill and brownfield development within those settlement. In contrast, it is the defined villages where boundaries are tightly drawn where there are few if any opportunities for development within settlement limits and where there should be greater support for appropriate extensions to the settlement. 2.18 The policy should be amended to support the extension of all the Defined Villages where there are limited opportunities for infill development. At the very least, this could be identified as an example of an ‘exceptional circumstance’. 2.19 Without any amendment, the spatial strategy for the Defined Villages is not justified as Policy 2 principally supports infill development in the Villages yet there are very limited opportunities for such development given that settlement boundaries are tightly drawn. Whilst the policy supports the extension of some of the Defined Villages in exceptional circumstances, this is not an appropriate strategy given settlements such as Clayton are sustainably located and would not meet the requirements for extensions to the settlement as it is not listed in Policy 3. The proposed approach is not consistent with paragraph 78 of the NPPF which supports sustainable development in rural areas.
Support the identification of Clayton as a defined village in principle. Policy 2 allows an extension to a Defined Village but does not go far enough to support rural communities and the settlements in which growth will be supported is more limited than the policy suggests. Policy 3 highlights that only 14 defined villages are listed with size limits of 5-20 dwellings. There is no reference to the other 26 defined villages, although the footnote to the policy that states the development may be permissible in the 14 listed defined villages. The supporting text at paragraph 4.46 states there will be limited development opportunities on a smaller scale in the 40 defined villages. The text in Policy 2 is therefore misleading, as it appears that Policy 3 only supports development in 14 of the 40 defined villages and Clayton is not one of the listed villages where development is supported, despite the settlement's proximity to Thurnscoe, which has a range of services and a train station.

Policy 2 supports the extension of villages in the Countryside in certain circumstances. However for settlements in the Green Belt national policy will be applied and this is explained in the Policy and explanatory text.
We agree with the proposal to include Cadeby amongst the "Defined Villages" under the Settlement Hierarchy but note that the proposal for the Green Belt to 'wash over' Cadeby has been removed from the final draft. We would like this to be reconsidered.

Summary:
Support is given to the proposal to include Cadeby amongst the "Defined Villages" under the Settlement Hierarchy. However, it is noted that the proposal in the 2018 Consultation Version of the Local Plan for the Green Belt to ‘wash over’ Cadeby has been removed from the final draft. This should be reconsidered.

Response:
The Parish Council is right to note that it was proposed to include all Defined Villages in the Green Belt as "washed over" Green Belt settlements. However, as explained in the Green Belt and Housing topic papers, this is no longer proposed as it is considered that exceptional circumstances for this cannot be justified.
Harlington 66, these are modest in the Harlington have long

that development cannot be supported in villages which have no services whatsoever. We do not support an allocation
Policy 2: Spatial Strategy & Settlement Hierarchy
all of which will result in increased vehicle traffic on
Marr Parish Council
Chapter 4: Strategic Approach
Response:
with the proposed development sites and scale of development in these two villages. Marr Parish acknowledges that DMBC has undertaken a detailed review of all Settlements and an assessment of local Services in these locations — including those services currently in Sprotbrough Village and Barnburgh/Harlington. The Local Plan asserts that some services exist in these rural villages however, it neither considers nor assesses service availability. Services in both these villages are at capacity, with bus routes and local roads congested and oversubscribed schools. It is impossible to see how development here could be considered sustainable. As such, we do not agree with the proposed development sites and scale of development identified within the Proposed Local Plan for these two Defined Villages. Unacceptable levels of congestion continue to plague and impede vehicle movement on these and surrounding ‘B’ routes. This will be further compounded by the addition of a proposed 445 new houses in Mexborough, huge development plans along the Dearne Valley Parkway which Barnsley Council propose to deliver through their own Local Plan - all of which will result in increased vehicle traffic on routes through and around the villages. We strongly object to the inclusion of these new developments within the local plan, as they cannot be considered reasonable or sustainable.

Summary:
Marr should be identified as a "Smaller Green Belt Village" with no identified 'Development Limits" as was proposed in the 2018 Consultation. The previous identification of villages with 'washed over Green Belt' status should be reinstated provided only Infill development would be permitted in the small villages and hamlets in line with the stated policy and with the assurance that any application for such development which must be proportionate, sympathetic and in keeping with their character. DMBC have stated that: 5.2.3 It is acknowledged that some sites within the existing settlement limits (infilling) of the 'Defined Villages' could still come forward and would be compliant with the settlement hierarchy as set out, but these are not being relied upon for the purposes of the Local Plan. Any such sites will be an additional supply of housing (windfalls). Due to the Local Plan not being reliant on this source of supply for housing allocations to meet the plan period's housing target, they were not assessed any further. Since the 'Call for Sites' stage in autumn 2014, some of these sites could (and indeed have) come forward with a planning application in advance of the Local Plan e.g. existing UDP allocations, or land within designated Residential Policy Areas. We noted that the proposed settlement strategy did not direct housing to the smaller 'washed over Green Belt' villages (now Defined Villages) and DMBC have stated that they do not propose to allocate sites in these settlements within the proposed Local Plan, irrespective of the Green Belt status. We would therefore urge DMBC to remove any and all proposed development sites identified and included within the previous 'Call-for-sites' for our village as these should now be considered inappropriate and unsupported by both Marr Parish and DMBC. It is contrary to the settlement hierarchy, any development is 'not relied' upon to achieve DMBC’s housing target and development cannot be considered sustainable since it is well documented by DMBC - that development cannot be supported in villages which have no services whatsoever. We do not support an allocation of housing distribution for Barnburgh & Harlington and Sprotbrough Village which have been categorised as 'Defined Villages'. Sprotborugh Village has already identified its housing needs and has created a Neighbourhood Plan. The Local Plan development proposals now conflict with this. Particular consideration must also be given to the impact of new dwellings proposed on land that floods at Barnburgh/Harlington. Marr Parish acknowledges that DMBC has undertaken a detailed review of all Settlements and an assessment of local Services in these locations - including those services currently in Sprotbrough Village and Barnburgh/Harlington. The Local Plan asserts that some services exist in these rural villages however, it neither considers nor assesses service availability. Services in both these villages are at capacity, with bus routes and local roads congested and oversubscribed schools. It is impossible to see how development here could be considered sustainable. As such, we do not agree with the proposed development sites and scale of development identified within the Proposed Local Plan for these two Defined Villages. Unacceptable levels of congestion continue to plague and impede vehicle movement on these and surrounding ‘B’ routes. This will be further compounded by the addition of a proposed 445 - 1000 new houses in Mexborough, huge development plans along the Dearne Valley Parkway which Barnsley Council propose to deliver through their own Local Plan - all of which will result in increased vehicle traffic on routes through and around the villages. We strongly object to the inclusion of these new developments within the local plan, as they cannot be considered reasonable or sustainable.

Response:
The Green Belt Topic Paper sets out why the Council have reverted to defining Marr as a village inset within the Green Belt rather than covered by it. There is not considered to be sufficient justification to make this settlement Green Belt. Sprotbrough and Barnburgh - Harlington have long been earmarked as Service Towns and Villages with housing requirements in the Local Plan and through the Local Plan process. There is no conflict with Sprotbrough NP, which does not make allocations. Site 777 at Barnburgh is not within an area of high flood risk, although there is a functional flood plain to the south. Development in Sprotbrough will deliver 80 houses, and Barnburgh will deliver 80 houses, and Barnburgh - Harlington 66, these are modest in the scheme of things and not deemed to be overly intrusive on the landscape or of such a scale that services will be unduly impacted upon within the villages.

Page 189
Marr Parish notes from previous consultation feedback, the "Homes and Settlements" proposal, Doncaster’s current population = 300,000. If, as the Draft Proposal suggests, 13,800 new homes will be added over the next 15 years and assuming two residents per new home, this translates to an additional 27,600 potential new residents - equating to a +9% increase on the current population. We appreciate that a more detailed Settlement Review has been conducted along with services identified within each settlement area. We further note and agree with the decision that targeted development for new dwellings has been directed to areas where services are more prevalent and more readily available. However, even after consultation has been conducted with service providers, we remain unconvinced that the Local Plan has assessed or has made robust plans for, how it will adequately address the impact on such services. The Local Plan must ensure that the needs of the projected increase in population can be met by all current major providers and all other essential services e.g. schools, GP’s, Dentists, Public transport capacity and duration and Hospitals. It is our opinion that these services are critical to sustainability and should be further scrutinised. Without confidently outlining how this is to be delivered, any proposed Local Plan cannot be considered "sound, effective or robust" if we are unable to ensure that our services meet current and future needs. There are several recent examples e.g. where a large new housing development in Woodlands has led to issues where there are no available school places at the local schools. This has resulted in children and parents having to travel significant distances to remote schools at Hooton Pagnell etc where even at this school there is no classroom availability and makeshift classrooms have been created in the main school hall. This cannot continue and it is most certainly not 'effective or sound' practice for a new Local Plan which has targeted a significant growth in housing. This also encourages more travelling than should be necessary and subsequently, is contrary to and is not in keeping with DMBC’s reduction of carbon emission Local Plan Policies. We have further concerns regarding Doncaster Royal Infirmary, the main Hospital for the Borough and availability of service. Since it has been well publicised that the hospital has capacity issues and is struggling to maintain services for the current population, with suggestion that #millions of pounds of investment is required just to service the current volume of patients. Marr Parish maintain that additional investigation is needed to ensure provision of services can be provided for all existing as well as the projected new resident increase if the Local Plan is to be considered 'sound'.

Policy: Policy 3: Level & Distribution of Growth

Tests of Soundness: Positively prepared
Justified

Comment:

Not positively prepared to decouple employment opportunities from dependence on road traffic, will therefore fail to address UK carbon budgets. Not positively prepared because additional housing numbers above the Standard Methodology are not linked to sustainable development outcomes.

Summary:
The Plan is not positively prepared to separate employment opportunities from dependence on road traffic. It will fail to address UK carbon budgets. Not positively prepared because additional housing numbers above the Standard method are not linked to sustainable development outcomes.

Response:
The outcome of consultation on the preferred strategy was that jobs did not necessarily need to be located next to residential areas, and the focus is on providing employment in accessible locations that are accessible to workers. Additionally, Policy 13 deals with road network improvements that can help facilitate the strategy.
The basic principle of regarding the Standard Methodology figure as the lower end of a range for the housing requirement is broadly in line with our recommendations in response to the Homes & Settlements consultation last year. In that response, we took the position that any uplift above the standard figure should be associated with delivering specific outcomes, such as transforming affordable housing provision, delivering innovative zero carbon homes, self-build etc. This would also enable the market to be more segmented, recognising that volume housebuilders and other, more diverse providers have a complementary role in meeting housing need. This would mean, for example, that a scheme to remodel and densify an under-used site for co-working units would be considered to contribute to the uplift, but not to the baseline. Therefore our recommended approach is to regard the standard figure (unclear if this is 572 or 585) as the baseline target, and to use this as the basis for the 5-year land supply calculation. The Plan appears to have taken this approach, which we support. However, the Plan has not made any provision to secure additional outcomes from exceeding the baseline figure, in terms of the better affordable provision, zero-carbon homes or market diversification that we have proposed. Were our recommended approach to be taken, it would enable the Plan to treat around 36% of new housing as providing specific opportunities for enhancing places, and to be able to set very high standards for that housing accordingly.

Instead the range figure up to 920 is simply aimed towards supporting economic uplift, such that the generalised housing requirement is assumed to grow in proportion to any above-trend economic growth. This is a missed opportunity which will cause the Plan to fall short on delivering a range of planning outcomes beyond housing numbers, especially in design, housing mix and making efficient use of land. PROPOSED CHANGE: We recommend setting a policy framework for the specific policy outcomes that new housebuilding at any rate exceeding 585 would be expected to deliver, and make clear that release of land to enable higher build rates would be conditional on clear proposals to implement that.

Response:
The uplift is tied to delivering economic growth for the borough, however other policies in the plan will ensure that housing delivered in the borough can deliver affordable housing, good design outcomes, environmental enhancement and overall sustainable development.
Comment: 5.5 According to the 'Housing & Employment Site Selection Methodology & Results Report' (June 2019) the 481 hectares will comprise 318 hectares of land which already has the benefit of planning permission (as at 31 March 2018) and 164 hectares of land which the Council is allocating for employment use through its Local Plan allocations. 5.6 We comment specifically on the allocation of employment sites in the plan below. However, as a general point we consider that the allocations that have been made are not justified or effective because land is required in the south-west quadrant of the M18 and not in the north where sites already exist. This is because the Unity site (site reference 418) already provides significant land in this area to meet demand. The allocation of further land in the north is not effective because the market demand is looking for land in the south-west.

Summary:
The Housing and Employment Site Selection Methodology & Results report states that the 481 ha is made up of 318 ha which has planning permission and 164 ha of allocations. The allocations are not justified or effective as land is required in the south-west quadrant of the M18 and not in the north. The Unity site (ref 418) provides significant land in the north to meet demand. The allocation of further land in the north is not effective as there is no market demand.

Response:
Noted. No change needed as there is no evidence to suggest that land is required in the south west of the M18 rather than the north.
5.2 Policy 3 of the Publication Draft Local Plan states that the aim of the Local Plan is to facilitate delivery of, inter alia, at least 481 hectares of employment land over the plan period (2015-2035). 5.3 We consider that the plan is not positively prepared or effective because the need identified in the Employment Land Need Assessment (2019) is too low. The take up of employment sites in the last three years has been significant; 129 hectares of employment land has been built out of the 318 hectares identified in Table 9.25 of the 'Housing & Employment Site Selection Methodology & Results Report'. 5.4 Accordingly, the amount of employment land required in the plan under Policy 3 needs to be increased. The failure to allocate sufficient land for increased employment needs means that the plan has not been positively prepared. The current level of employment land in the plan is not justified or effective.

Summary:
The Plan is not positively prepared at the need identified in the Employment Land Need Assessment and then included in Policy 3 is too low. The employment land take up in the last three years has been significant - 129 ha has been built out of the 318 ha identified in Table 9.25 of the Site Selection report. The amount of land in Policy 3 needs to be increased. The current level of employment land is not justified or effective.

Response:
Noted. No change required. Section 6 of the ELNA explains how the employment land need figure has been calculated i.e. additional factors such as competition and choice have been taken into account in the final figure. There is also an Employment Land Supply Buffer Note which explains this in more detail. There is no need therefore for additional land to be provided.
Tests of Soundness:

Comment:
It is noted that the Plan period runs from 2015 until 2035. Paragraph 22 of the NPPF looks for Plans to have a 15-year period from adoption. As the consultation is only just being undertaken for the Regulation 19 stage, it is unlikely that the Plan will be adopted in 2020. Therefore, the HBF consider that it may be beneficial to take a cautious approach and to extend the Plan period. The HBF also note that the Plan period for land supply runs from 2018, and in the case of housing appears to run until 2033. This appears confused and an unnecessary complication.

Summary:
The Plan period should be extended to ensure that a 15-year plan period exists from adoption. It is also noted that the Plan period for land supply runs from 2018, and in the case of housing appears to run until 2033. This appears confused and an unnecessary complication.

Response:
The current Local Development Scheme identifies potential adoption of the Local Plan in 2020. All of the baseline information in terms of land supply commences at April 2018 as this was/is the latest monitoring and land supply identified for the whole plan period that meets the requirement.

Comment:

Policy 3 is not considered to be sound as it is not positively prepared, justified or consistent with national policy for the following reasons: The Council has continued to identify a net housing requirement of 920 dwellings per annum (dpa) over the plan period 2015-2035. Paragraph 60 of the NPPF 2019 states that “to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals”. The HBF have considered the local housing need (LHN) using the Standard Methodology set out in PPG, it can be calculated as follows: Step 1 - Setting the baseline: 2014-based household projections in England average annual household growth over a 10 year period, with the current year being used as the starting point. The household projection for 2019 is 131,355 and in 2029 is 136,591, therefore the growth equals 5,236, giving an average of 523.6 dwellings each year. Step 2 - An adjustment to take account of affordability: The most recent median workplace-based affordability ratio for Doncaster (2018) is 4.81. Where an adjustment is to be made, the formula is: Adjustment factor = ((Local affordability ratio - 4) / 4) x 0.25 + 1 For Doncaster this would be: Adjustment Factor = (((4.81 - 4) / 4) x 0.25) + 1 = 1.051 Minimum annual local housing need figure = (adjustment factor) x projected household growth. For Doncaster this would be: Minimum annual local housing need figure = 1.051 x 523.6 = 550 dpa. Step 3 - Capping the level of any increase: The Doncaster Core Strategy was adopted more than 5 years ago, therefore the local housing need figure is capped at 40% above whichever is the higher of: the projected household growth for the area over the 10 year period identified in step 1; or the average annual housing requirement figure set out in the most recently adopted strategic policies. The Doncaster Core Strategy has a housing requirement of 1,230 new homes each year 2011-2028, 40% above the 1920 dpa would be 1,727dpa. The capped figure is greater than the minimum annual local housing need figure and therefore does not limit the increase to the local authority’s minimum annual housing need figure. It should be noted that the Standard Method identifies a minimum annual housing need figure, it does not produce a housing requirement figure. It should also be noted that the Government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The Standard Method provides a minimum starting point, and there may be circumstances where it is appropriate to consider whether the actual housing need is higher than the Standard Method indicates. PPG (ID: 2a-010) goes on to states that these circumstances can include growth strategies for the area; strategic infrastructure improvements; previous levels of delivery; or where previous assessments of need are significantly greater than the outcome from the Standard Method. The Peter Brett Economic Forecasts and Housing Needs Assessment 2018 identifies a demographic starting point from the 2014-based household projections of 562dpa, which if adjusted to match a business as usual job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region it identifies a jobs-led housing need pf 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. The Council identify that the housing requirement will be expressed as a range with the bottom of the range being the LHN and the top of the range being the 920 dpa. As set out above the HBF do not consider that the LHN produced from the Standard Method would provide an appropriate housing requirement, it is evident that the actual housing requirement should be higher. The HBF do not consider that it would be appropriate to limit the housing requirement at the top end of the requirement either, and do not consider that this would be consistent with the NPPF requirement to support the Government’s objective to boost the supply of homes. The HBF do not wish to comment upon the exact distribution of development. The HBF is keen to ensure that the Council produces a plan which can deliver against its housing requirement. To do this it is important that a strategy is put in place which provides a sufficient range of sites to provide enough sales outlets to enable delivery to be maintained at the required levels. The HBF consider that it is important that the levels of development proposed for each settlement is informed by appropriate analysis of the deliverability and viability of the sites. The HBF and our members can provide valuable advice on issues of housing delivery and would be keen to work proactively with the Council on this issue. It is no use continually promoting growth in locations if there is little or no prospect of them being brought forward. The HBF also consider that it would not be appropriate to utilise the settlement hierarchy to limit development in other suitable locations, and as such it is important that the housing figures are taken as a minimum not a limit.

Summary:

Policy 3 is not considered to be sound as it is not positively prepared, justified or consistent with national policy. The HBF do not consider that the Local Housing Need produced from the Standard Method would provide an appropriate housing requirement. Using the standard housing need methodology set out in PPG, and given the Core Strategy housing requirement, it is evident that the actual housing requirement should be higher. The HBF do not consider that it would be appropriate to limit the housing requirement at the top end of the requirement either, and do not consider that this would be consistent with the NPPF requirement to support the Government’s objective to boost the supply of homes. The HBF also consider that it would not be appropriate to utilise the settlement hierarchy to limit development in other suitable locations, and as such it is important that the housing figures are taken as a minimum not a limit.
Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth.

**Comment:**

7. The Local Plan does not adequately provide positive growth allocation for Moorends. The absence of planned growth in Moorends may only serve to see this settlement become further isolated than it may already be considered by some to be, and excluded from future investment. To this end the Plan has not been positively prepared in so far as Moorends is concerned.

**Summary:**

Moorends. There is an inadequate 'positive growth' allocation for Moorends. The settlement will become more isolated and as a result and be excluded from future investment.

**Response:**
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing target for Thorne Moorends.
Policy 3 (Level and Distribution of Growth)  Policy 3 identifies the need to deliver 18,400 new homes in the period 2015 to 2035 (920 per annum), with sufficient land allocated to deliver 15 years' supply of housing (13,230, or 882 dpa once supply in the years 2015 to 2018 is deducted from the overall requirement). However, 2019 to 2035 is 17 years, not 15 years and hence the Plan is 2 years short. Theakston Estates consider that this is a significant change since the Draft Plan for informal consultation. Policy 3 has shifted from stating that the 920 dpa is a minimum figure (‘at least’), to stating that the housing requirement is a range from the Local Housing Need (585 dpa) to 920 dpa. Theakston Estates does not feel that this policy is sound as it does not support a positively prepared plan which is supportive of boosting significantly the supply of housing. We consider it important that the wording in Policy 3 should state that the 920 dpa is a minimum and reflect the wording in the Draft Plan for informal consultation where the 920 dpa was stated as ‘at least 920 dpa’. Notwithstanding the above, the 920 dpa identified in Policy 3 is not evidenced within the ‘Economic Forecasts and Housing Needs Assessment’ (June 2018) (prepared by PBA) and it is unclear upon which evidence the 920 dpa figure is based. The PBA report states that in order to support the job-led scenario which supports the economic ambition of Doncaster and the Sheffield City Region over the plan period, 1,073 dpa would be required. This level of future housing is needed to support the jobs-led scenario over the plan period and to help drive forward economic growth across the Borough. Indeed, paragraph 2.9 of the draft Plan states that Doncaster is reasserting itself as a major economic centre within northern England, whilst the vision advises that by 2035 Doncaster will be a more important economic hub with a stronger, more balanced and productive economy. The draft Plan’s vision is informed by the ambitions of the City Region, its Strategic Economic Plan as well as the Northern Powerhouse ambitions. To enable the Plan’s vision to be achieved, it is most important that the Council’s Plan is positively prepared and that it’s housing requirement is aspirational but deliverable, in accordance with the National Planning Policy Framework (NPPF) (February 2019, but updated June 2019) (para. 16). Furthermore, an annual housing requirement of 1,073 dwellings is more aligned with housing delivery in recent years. The annual Doncaster Residential Land Availability Reports show average net completions over the last 3 years of 1,070. It is anticipated that this could rise when the net delivery figures for 2018/19 are published. Table 1 Doncaster Past Net Housing Delivery Year - 2015/16 Net no. of Homes - 1,025 Year - 2016/17 Net no. of Homes - 1,049 Year - 2017/18 Net no. of Homes - 1,137 Year - 2018/19 Net no. of Homes - 1,327* Source: Residential Land Availability Reports *number to be confirmed but current Council estimate based on methodology used in RLA The PPG at paragraph 1D.2a-010 is clear that the government remains committed to ensuring more homes are built and support authorities who want to plan for additional growth and as such the standard method is a minimum starting point in determining the number of homes needed in an area. The PPG goes on to identify the circumstances where it may be appropriate to consider whether actual housing need is higher than the standard method. These include where: - Growth strategies are in place such as Housing Deals; - Strategic infrastructure improvements are identified; and - Previous levels of housing delivery are significantly greater than the standard method. The PPG is clear that in these situations authorities will need to take this into account when identifying future needs. Doncaster’s Publication Local Plan does identify a housing requirement as a range, of which the upper end is above the standard method, trends in past delivery and the aspiration to support an economic led future for Doncaster suggest that in order to plan positively for the future it would be more appropriate for the housing requirement in Doncaster to be set at the 1,073 dpa to ensure that the vision can be achieved. Accordingly, Theakston Estates considers that there is a need to increase the housing requirement identified in Policy 3 to state at least 1,073 dpa, in line with the Council’s own evidence, if the vision for the plan is to be achieved. The minimum housing requirement for the MUA should also be increased to reflect this update. Finally, Policy 3 should make it clear that the number of homes per annum is a net figure. The Draft Plan which was issued for informal consultation in October 2018 explicitly stated that the annual requirement was a net figure; however, it is not clear whether the annual requirement in the Publication Plan is a ‘net’ or ‘gross’ figure. Delivery in the Doncaster Main Urban Area. As discussed in response to draft Policy 2, Theakston Estates considers that the delivery of ‘at least 50% of the Borough’s Total Housing’ in the MUA is a significant dilution to the 64% of housing which was previously directed to the MUA, and endorsed by the Inspector, in the adopted Core Strategy. To ensure a sound Local Plan, Theakston Estates contends that the proportion of development in the MUA must accord with the Core Strategy which would allocate pressure on less sustainable settlements and would drive forward economic growth in the Doncaster, an important sub-regional centre. Reserve Development Sites Paragraph 4.43 discusses the approach to the “Reserve Development Sites”. The Council considers that these are potentially suitable urban sites (mainly in the Doncaster MUA and Mexborough) but where deliverability issues (mainly associated with flood risk mitigation and / or directly impact by the safeguarding route of HS2) have prevented them coming forward and where their development in the plan period cannot at this time be demonstrated. This paragraph continues by stating that if they came forward within the plan period they would be additional to the allocations. Theakston Estates has fundamental concerns regarding the approach to the “Reserve Development Sites” given their constraints, especially given that some of these sites are subject to flood risk and that alternative sites are available, such as land at Scawby Lane (ref 436), that are not at risk of flooding. As these sites are not deliverable / developable they should have no status in the Plan. Please see the response to draft Policy 6 for details of the concerns and how the approach conflicts with the NPPF. PROPOSED CHANGE To ensure a sound Plan, Theakston Estates contends that the housing requirement identified in Policy 3 must be increased to state at least 1,073 dpa, in line with the Council’s own evidence provided in the ‘Economic Forecasts and Housing Needs Assessment’ (June 2018) (prepared by PBA). Otherwise, the housing requirement would not have been underpinned by a relevant and up-to-date evidence and hence the Plan would not sound, contrary to the NPPF (February, 2019) (paragraphs 31 and 35).
Summary:
2019 - 2035 is 17 years, not 15, and therefore the plan is 2 years short. Theakston Estates consider there has been a significant change since the informal consultation. Policy 3 has gone from 920dpa minimum to stating the requirement as a range from 585 - 920. This is not considered sound or positively worded. Policy 3 should state 920 dpa is a minimum and reflect the wording of the informal consultation. It is unclear from the Economic Forecasts and Hosing Needs Assessment what evidence the 920 dpa is based on. This report states 1,073 dpa is required to support the economic ambition of Doncaster and the City Region and the jobs led scenario over the plan period, as well as driving economic growth as set out in para. 2.9 and the Vision. 1,073 is more aligned to housing delivery in recent years. The annual RLA average net completions over the last 3 years is 1,070, and is anticipated to rise when 2018/19 figures are released. PPG (paragraph ID :2a-010) is clear that the government remains committed to ensuring more homes are built and supports authorities who want to plan for additional growth, and as such the standard method is a minimum starting point. for determining housing need. It also identifies circumstances where it may be appropriate to plan for higher levels of housing. Trends in past deliver show that it would be more appropriate to plan for 1,073 dpa to ensure the vision is achieved, in line with the Council’s own evidence, and the housing requirement for the MUA should be updated to reflect this. Policy 3 should also make it clear that this is a net figure - the draft plan did but the publication plan does not. The requirement for the urban area should be 64% in line with the Core Strategy. Fundamental concerns about the Reserve Development Sites given their constraints - especially flood risk. There are alternative non-flood risk sites such as site 436 available. As the Reserve Development Sites are not deliverable / developable, they should have no status in the plan. Proposed change: the housing requirement should be a minimum of 1,073 in line with the Council’s own evidence base (PBA report). Otherwise the housing requirement would not be underpinned by relevant up to date evidence and the plan would be unsound - contrary to NPPF para. 31 & 35.

Response:
The Core Strategy is being replaced by the new Local Plan and as such the spatial strategy is changing. The Local Plan publication version covered the 20 year period 2015 - 35, with 15 years’ worth of allocations 2018 - 33 and enough supply to cover the years 2033 - 35. The submission Local Plan included a range, but still plans for enough housing to meet the requirement of 920dpa over the plan period - the use of a range does not prejudice this. 920dpa is the assessed level of housing required under the revised NPPF, 1,073 refers to the figure using the previous NPPF, which is now redundant. It should also be noted the PBA report states a mid way point between 585 and 920 could be used, which the Council elected not to do. The Local Plan is planning for 57% more housing than the Standard Methodology proposed, and in doing so the Council have taken on board national policy and guidance. This is further explained in the Housing Topic Paper, as is the approach to Reserve Development Sites.
5.1. Strata Homes is concerned that the Doncaster Local Plan Draft Policies and Proposed Sites is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 5.2. Strata Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 5.3. Strata Homes have a number of concerns in relation to the Level and Distribution of Growth. The concerns relate to the following: - The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need 5.4. Strata Homes is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. Strata Homes has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris report is attached to these representations. Regeneris conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. 5.6. Regeneris consider that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a. - Doncaster’s key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ELR’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. 5.7. Strata Homes have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Strata Homes continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. 5.8. The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. 5.9. NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure Paragraph 002 Reference ID: 2a-002-20190220. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. Paragraph 006 Reference ID: 2a-006-20190220 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum starting point in determining the number of homes needed in an area it does not predict the impact of future government policies, behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests’. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance of housing in an area is necessary for economic growth. The development of new housing can therefore
support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create sustainable local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on "the economic footprint of house building in England and Wales", which shows that house building in England and Wales is now worth £38bn a year and supports nearly 700,000 jobs. House building activity contributes in different ways including providing jobs, taxes and contributing funding for local infrastructure and communities. House building supports the economy, in a wide sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a sufficient supply of housing that is affordable for local people to enable them to move jobs freely and match up skills with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore Strata consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplist to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodology, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and note the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently published evidence in evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. Strata Homes consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%): 13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%): 15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%): 13.74 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unviable for a number of sites, including all types of sites in low value areas. Strata Homes are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. Paragraph 6.9 states that this does not take into account current needs of site completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%): 13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%): 15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%): 13.74 5.29. Strata Homes consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.30. Strata homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances Strata Homes consider the Doncaster Sustainable and Vibrant Economy (SIVE) does not consider the Doncaster in its current form to be sound. 5.31. However, Strata Homes consider that with a higher requirement, of at least 1100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1393) that the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery 5.32. Strata Homes is concerned that the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equaling to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Strata Homes consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Strata Homes are concerned that some of the policies may undermine the deliverability of sites, or lead to the need for further site specific viability testing
impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. Strata Homes have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, however data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). With regards to this and the permitted supply from permissions and allocations, a housing trajectory has been provided. Strata Homes are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Strata Homes supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Strata Homes consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. Strata Homes is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites being shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Strata Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Strata Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 Strata Homes Comment: The site has outline planning permission for 3,100 homes. No reserved matters have been submitted. The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Strata Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Strata Homes Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Strata Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. Strata Homes understands that no allowance has been made for demolitions. No evidence is apparent and Strata Homes consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. Strata Homes consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Strata Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Strata Homes Comment: The delivery rate on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 207 Site Name: Thorne No. of Dwellings: 207 Strata Homes Comment: This is a long standing allocation and there is little evidence available through the councils evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Strata Homes Comment: This site has permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Strata Homes Comment: This site is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Strata Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have leant heavily on allocating sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the resultant yields from proposed allocations, especially when considering some of the development requirements. Strata Homes therefore suggest that further sites should be identified. 5.46. The Council therefore need a wider choice of sites.
across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Strata Homes do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. Strata Homes considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Strata Homes consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. Strata Homes would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. Strata Homes considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Strata Homes would suggest a greater flexibility is incorporated into the Local Plan especially in light of Strata Homes’ conclusions on the actual housing requirement. 5.50. Strata Homes would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. Strata Homes would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 Strata Homes’s View: 910.5 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Strata Homes’s View: 22,000 Completions Council Figures: 3,400 Strata Homes’s View: 3,211 Total Commitments Council Figures: 9,488 Strata Homes’s View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Strata Homes’s View: 948.8 Total Allocations Council Figures: 6,567 Strata Homes’s View: 6567 Total Supply Council Figures: 18,506 Strata Homes’s View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Strata Homes’s View: 3,682.2 5.52. Therefore, on a best case scenario Strata Homes consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1292.5 dpa. Strata Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Strata Homes’s View: 481 hectares. Annual employment requirement Strata Homes’s View: 24 hectares. Employment land developed 2015-2018 Strata Homes’s View: 117 Sites with planning permission Tables E1 to E8 Strata Homes’s View: 284.09 New employment allocations Policy 4 Strata Homes’s View: 164.68 Total Allocations Strata Homes’s View: 565.77 Amount of land allocated over the requirement Strata Homes’s View: 83.77 Additional homes required to balance with employment land supply Strata Homes’s View: 3,850 Residual homes to be identified Strata Homes’s View: 7532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Strata Homes have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Strata Homes would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis is evident that the Council’s trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. Strata Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 234 Broad Axe, Scawthorpe, MUA. 5.60. A brief summary is provided for this site in response to Policy 6. A delivery statement will submitted shortly. The will show a masterplan and vision for the proposed scheme and illustrates the potential of the scheme. This report will be supported by significant technical information and the report will demonstrate that the sites are available, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. 5.61. Strata Homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, Strata Homes consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change To overcome the objection and address soundness matters, the Council should: - Increase housing requirements to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land, and - Allocate site at Broad Axe, Scawthorpe, Doncaster site (Site 234)
Strata Homes have a number of concerns relating to the Level and Distribution of Growth: - The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need: Strata Homes commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018) who conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. Strata consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. The Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. Strata Homes are concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assumption of the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. Strata Homes consider that there is sufficient evidence to pointing to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. Building Supply and Delivery At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Strata Homes consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Strata Homes are concerned that some of the policies may undermine the deliverability of sites. Strata Homes have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the also asked a 3,682 new depletions 47.3%). The housing trajectory demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final phases of the Plan period and sites delivering beyond the plan period. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Strata Homes supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Strata Homes consider therefore that from a commitments pot of 9,488 dwellings a discount of at least 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. Strata Homes is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review (provided) of some sites being shown as commitments shows considerable concern. - The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Strata Homes do not believe the Plan can deliver this, particularly in the middle to later years. Strata Homes considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Strata Homes consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. Strata Homes considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Strata Homes would suggest a greater flexibility is incorporated into the Local Plan especially in light of Strata Homes’ conclusions on the actual housing requirement. Strata Homes would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a house builder on board and whether there are any constraints preventing development from this. The council would also ask the Council to look at the prospective deliveries of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. Taking into account the above, on a best case scenario Strata Homes consider as a minimum there needs to be circa 3,682 new
homes to be identified in the Plan to account for net completions, and economic growth. This does not account for the uplift required to ensure affordable housing need is met in full which would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1292.5 dpa. Strata Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Strata Homes have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. With an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. Strata Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 234 Broad Axe, Scawthorpe, MUA. Proposed Change To overcome the objection and address soundness matters, the Council should: - Increase housing requirements to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land, and - Allocate site at Broad Axe, Scawthorpe, Doncaster site (Site 234)

Response:

A number of ways and means have been submitted to calculate housing and jobs figures for the Local Plan. The Peter Brett’s Report explains the approach taken and ties jobs to housing growth, which includes a significant uplift from the Standard Methodology Figure. The Housing Topic Paper explains how figures have been calculated and where deductions have been made for permissions etc., and also covers the delivery trajectory. The Site Selection Methodology explains how site delivery has been calculated and justifies the proposed build out rates. Other evidence base has been updated for submission. Where adaptations have been made to account for the extension to the plan period since this report was finalised, they have been made to both housing and employment respectively. The difference in the employment figures quoted are the result of tables showing different information. It is accepted that this is confusing and this has been amended to be more clear. The correct employment figure is 481ha and enough employment land has been found to deliver this, and enough housing too meet this arising need too. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council’s Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc. which will also assist people in being able to afford/access housing.
This policy indicates that provision is made for 18,400 dwellings to be delivered throughout the plan period (including supply since 2015 and land allocations going forward), or the equivalent of 920 dwellings each year. Gladman note that the figure of 920 dpa is derived from the June 2018 Economic Forecasts and Housing Needs Assessment (EFHNA), produced for the Council by Peter Brett Associates. The EFHNA identifies a job-led housing need, to match the aspirations of the Sheffield City region of 912 dpa. Gladman are supportive of the proposed housing requirement, particularly in the light of the much less ambitious Standardised Methodology, which sets a starting point for Doncaster of 585 dwellings per annum. However, we believe it is essential that the Council continue to give consideration to the potential for economic growth and job formation across the Borough and to find an appropriate balance between employment growth aspirations of the wider Sheffield City Region and the provision of homes. Gladman also note the lack of uplift for market signals, despite increasing affordability issues. We therefore suggest, that the Council continue to give consideration to the potential for economic growth and job formation across the Borough and to find an appropriate balance between employment growth aspirations of the wider Sheffield City Region and the provision of homes. Gladman also note the lack of uplift for market signals, despite increasing affordability issues. We therefore suggest, that the Council ensure robust evidence is provided to demonstrate deliverability and viability of site allocations, to ensure that the level of growth attributed to each settlement and each tier, can accommodate the level of growth apportioned to them by Policy 3. As stated above, Gladman do not consider it appropriate for the settlement hierarchy, set out within this policy, to cap opportunities for growth in other sustainable, albeit smaller locations. We therefore suggest that all settlement housing figures set out in the policy and its associated table are clearly identified as a minimum.

Summary:
Policy 3 indicates that provision is made for 18,400 dwellings to be delivered throughout the plan period or the equivalent of 920 dwellings each year. Gladman note that the figure of 920 dpa is derived from the June 2018 Economic Forecasts and Housing Needs Assessment (EFHNA), produced for the Council by Peter Brett Associates. The EFHNA identifies a job-led housing need, to match the aspirations of the Sheffield City region of 912 dpa. Gladman are supportive of the proposed housing requirement, particularly in the light of the much less ambitious Standardised Methodology, which sets a starting point for Doncaster of 585 dwellings per annum. However, it is essential that the Council continue to give consideration to the potential for economic growth and job formation across the Borough and to find an appropriate balance between employment growth aspirations of the wider Sheffield City Region and the provision of homes. Gladman also note the lack of uplift for market signals, despite increasing affordability issues. We therefore suggest, that the Council ensure robust evidence is provided to demonstrate deliverability and viability of site allocations, to ensure that the level of growth attributed to each settlement and each tier, can accommodate the level of growth apportioned to them by Policy 3. As stated above, Gladman do not consider it appropriate for the settlement hierarchy, set out within this policy, to cap opportunities for growth in other sustainable, albeit smaller locations. We therefore suggest that all settlement housing figures set out in the policy and its associated table are clearly identified as a minimum.

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth. The Statement of Common Ground has shown that adjacent authorities are not looking to Doncaster to meet any of their identified housing requirements. The Plan includes monitoring mechanisms which will inform the need to review the Plan at least every five years and update where necessary. The Local Plan does have to identify a requirement and targets for individual settlements - these, however, are not maximum caps on development.
3.5 The level of housing development to be delivered is set out in Policy 3, which states that the Council will seek to facilitate the delivery of at least 920 (net) new homes each year over the plan period 2015-2032 (15,640 homes in total) with sufficient land allocated to deliver at least 15 years’ supply (13,800). 3.6 Paragraph 59 of the National Planning Policy Framework (the Framework) sets out the Government’s objective of significantly boosting the supply of homes, through the identification of a sufficient amount and variety of land where it is needed and to meet the needs of groups with specific housing requirements [authors own emphasis]. 3.7 The SPRU report provided at Appendix 1 assesses the soundness of the proposed jobs-led housing requirement and the implications for the proposed spatial strategy. (SEE EMAIL FOR Appendix 1) 3.8 For the reasons outlined within the report, there are found to be substantial soundness failings with the draft Local Plan resulting from a failure to test an appropriate reasonable alternative based on meeting the strategic priorities for economic development over a full 15-year plan period. These issues are compounded based on treating the housing requirement from 2018-2033 as a ‘residual total’ to account for perceived oversupply in the period 2015-2018, which has not been adequately justified. 3.9 The Council’s approach fails to accurately reflect the strategic priorities and future economic potential of the Sheffield City Region and further assessment of the proposed requirement is recommended to reflect the requirements of the revised Strategic Economic Plan (once published) and to consider recent trends in jobs growth and housing delivery across the sub-region. This is anticipated to lead to a reassessment of current and future demographic trends in relation to future labour supply. 3.10 The report also concludes that arbitrary constraints to the requirement for additional development are applied, which will lead to an overreliance on extant planning commitments and historic allocations in previous iterations of the development plan. The implications of this in terms of prospects for maintaining a five year supply of deliverable sites and meeting the housing needs of different groups have not been fully assessed, however it is anticipated that there could be a failure to meet housing need, particularly in respect of affordable housing in the short to medium term, as the physical and viability related constraints that have prevented these sites being delivered to date may persist. 3.11 The report concludes that these issues are capable of remedy within the Council’s broad emerging approach to managing the distribution of growth across the spatial strategy. This acknowledges that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy, in-particular Main Towns at Tier 2. We endorse the Council’s position that such locations are appropriate to accommodate up to 10% of the economic-led component of the housing requirement. We further endorse that this broad approach to distribution should be treated flexibly. Recommendation 3.12 The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. Justification 3.13 For the reasons set out above and within the appended SPRU report, it is correct to accommodate growth based on meeting requirements under the full assessment of jobs-led growth (1,073 dpa) for the full plan period to 2035.

Summary:
There are substantial soundness failings with the draft Local Plan, resulting from a failure to test an appropriate reasonable alternative based on meeting the strategic priorities for economic development over the full 15 year plan period. The issue is compounded based on treating the 2018 - 33 housing requirement as a residual total to account for perceived oversupply in 2015 - 18. This fails to reflect the strategic priorities and future economic potential of the Sheffield City Region and further assessment of the requirement is recommended to reflect the requirements of the upcoming Strategic Economic Plan. This should consider recent trends in jobs growth and housing delivery across the sub-region. This is anticipated to lead to a reassessment of current and future demographic trends in relation to future labour supply. Arbitrary constraints to the requirement for additional development are applied which lead to an overreliance on extant planning commitments historic allocations from the UDP. This has impacts for 5 year supply and meeting the needs of different groups, which has not been assessed. It is anticipated that there could be a failure to meet housing need particularly in respect of affordable housing in the short to medium term, as the physical and viability related constraints that have prevented these sites being delivered to date may persist. To remedy this, significantly greater levels of suitable growth could be provided across the hierarchy, especially the Main Towns. Support that such areas are appropriate to accommodate up to 10% of the economic led component of the housing requirement. This broad approach should be flexible. The Local Plan requirement should be 1,073 dpa to 2035 - this is to accommodate growth based on meeting the requirements under the full assessment of jobs led growth.

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth. The Local Plan cannot meet in full its need for affordable housing, to do so would require an excessively large housing requirement which would be undeliverable. The Local Plan does, however, include policy requirements to deliver as much affordable housing as is economically viable.
Policy 3: Level & Distribution of Growth

Chapter 4: Strategic Approach

Tests of Soundness:

Justified

Comment:

2.12 The level of housing development to be delivered is set out in Policy 3, which states that the council will seek to facilitate the delivery of at least 920 (net) new homes each year over the plan period 2015-2032 (15,640 homes in total) with sufficient land allocated to deliver at least 15 years' supply (13,800). 2.13 Paragraph 59 of the National Planning Policy Framework (the 'Framework') sets out the Government's objective of significantly boosting the supply of homes, through the identification of a sufficient amount and variety of land where it is needed and to meet the needs of groups with specific housing requirements [authors own emphasis]. 2.14 The SPRU report provided at Appendix 2 assesses the soundness of the proposed jobs-led housing requirement and the implications for the proposed spatial strategy. (SEE EMAIL FOR Appendices) 2.15 For the reasons outlined within the report, there are found to be substantial soundness failings with the draft Local Plan resulting from a failure to test an appropriate reasonable alternative based on meeting the strategic priorities for economic development over a full 15-year plan period. These issues are compounded based on treating the housing requirement from 2018-2033 as a 'residual total' to account for perceived oversupply in the period 2015-2018, which has not been adequately justified. 2.16 The Council's approach fails to accurately reflect the strategic priorities and future economic potential of the Sheffield City Region and further assessment of the proposed requirement is recommended to reflect the requirements of the revised Strategic Economic Plan (once published) and to consider recent trends in jobs growth and housing delivery across the subregion. This is anticipated to lead to a reassessment of current and future demographic trends in relation to future labour supply. 2.17 The report also concludes that arbitrary constraints to the requirement for additional development are applied, which will lead to an overreliance on extant planning commitments and historic allocations in previous iterations of the development plan. The implications of this in terms of prospects for maintaining a five year supply of deliverable sites and meeting the housing needs of different groups have not been fully assessed, however it is anticipated that could be a failure to meet housing need, particularly in respect of affordable housing in the short to medium term, as the physical and viability related constraints that have prevented these sites being delivered to date may persist. 2.18 The report concludes that these issues are capable of remedy within the Council's broad emerging approach to managing the distribution of growth across the spatial strategy. This acknowledges that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy, in particular Main Towns at Tier 2. We endorse the Council's position that such locations are appropriate to accommodate up to 10% of the economic-led component of the housing requirement. We further endorse that this broad approach to distribution should be treated flexibly. 2.19 In particular we consider the opportunity represented by the redevelopment of this underutilised and previously developed site at Brodsworth Quarry should be identified as a specific location for mixed use development as it represents a sustainable location capable of delivering economic, social and environmental gains, while avoiding the use of agriculture and or areas at risk from flooding. Recommendation 2.20 The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. 2.21 Brodsworth Quarry should be identified as a location for mixed use development. Justification 2.22 For the reasons set out above and within the appended SPRU report, it is correct to accommodate growth based on meeting requirements under the full assessment of jobs-led growth (1,073 dpa) for the full plan period to 2035 and for a new allocation to be made at Brodsworth Quarry to assist in meeting this requirement in the most sustainable way.

Summary:

Policy 3 of the Local Plan states that the Council will seek the facilitate the delivery of at least 920 (net) new homes each year. However there are substantial soundness failings within the Plan as there has been a failure to test appropriate reasonable alternatives based on economic development strategic priorities over a full 15 year period. This is compounded by treating the housing requirement from 2018 - 2033 as a 'residual total' to account for perceived oversupply in the period 2015-2018 - this has not been adequately justified. The Council's approach fails to accurately reflect the priorities and economic potential of the Sheffield City Region and further assessment of the proposed requirement is needed to reflect the revised SCR Economic Plan (once published) and also to consider recent trends in job growth and housing delivery across the sub region. The appendix attached to the representation (summarised below) concludes that arbitrary constraints to the requirement for additional development are applied, which lead to an over reliance on extant planning commitments and historic allocations. The implications in terms of maintaining a five year supply of deliverable sites and meeting the housing needs of different groups have not been fully assessed. It is anticipated that there could be a failure to meet (affordable) housing need in the short to medium term. The appendix concludes that these issues can be remedied within the Council's broad emerging approach to managing the distribution of growth. Greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy, in particular the Main Towns. We endorse the position that such locations are appropriate for up to 10% of the economic-led component of the housing requirement. We endorse that this broad approach to distribution should be treated flexibly. Brodsworth Quarry should be identified as a specific location for mixed use development - is a sustainable location which is currently an under utilised, previously developed site. The Local Plan should be updated to reflect the housing requirement of 1,073 dpa. Summary of appendix Although the plan states it covers the period 2015 to 2035 it fails to make adequate provision for the post adoption period 2020 to 2035 because: a) Local Plan Table 5 shows that allocations are made for the period 2018 to 2033 resulting in allocations covering just 13 years from adoption of the Plan. This is contrary to NPPF paragraph 22 (a minimum of 15 years from adoption). b) the adopted approach reduces the overall level of housing requirement to be provided for following adoption by using a 'residual' calculation to
reduce the future planned requirement on the basis of higher rates of completions prior to the adoption of the plan. There is no support in either the Framework or the PPG to "discount" future levels of requirement based on past levels of "over provision". Such overprovision may only be used to offset any shortfalls against requirements from previous years (PPG Paragraph: 032 Reference ID: 68-032-20190722). c) The employment led housing requirement of 912 dpa is based upon a projection for the period 2016 to 2016 i.e. just the first 6 years after the adoption of the plan rather than the requirement for the plan period as a whole. This is contrary to the Framework paragraph 20 which requires provision be made for 15 years from the adoption of the plan. It is correct that the plan should provide for a figure above the minimum required by the application of the standard method. There is a growth strategy in place for the area which is already being delivered and as such a higher level of growth than the standard method is justified (PPG Paragraph: 010 Reference ID: 2a-010-20190220). From adoption, the Local Plan will make provision for 882 dpa but this is not an appropriate level of housing requirement for the following reasons: a) The justification for 882 dpa as a response to the planned levels of economic growth is flawed as it: i) Discounts previous high levels of completions prior to adoption from the future annual requirement which is contrary to the PPG ii) Fails to respond to the evidence of employment growth for the whole plan period: The employment led housing requirement of 882 dpa is based upon a requirement figure of 912 dpa for the period 2016 to 2026 as such it covers just the first 6 years of the plan period after adoption. The requirement for the plan period (2015 to 2032) and the correct interpretation of the council’s evidence base is that there is a requirement for 1,073 dpa iii) Fails to provide for specific allocations in accordance with the spatial strategy and distribution of development to support economic growth for the final years of the plan period. b) Past Completion Rates: Recent rates suggest a much higher demand for housing. Recent levels of completions are over 1,000 dpa and reflect the growing market demand and local economy. These rates of completions are significantly above (almost double) the outcome of the standard method which suggests 550 dpa (2019 - 2029 using the 2014 DCLG projections and the most up-to-date evidence on affordability). The PPG requires Authorities to take such evidence into account when considering whether it is appropriate to plan for a higher level of need than the standard model suggests (Paragraph: 010 Reference ID: 2a-010-20190220). Objection to the Sustainability Appraisal The Sustainability Appraisal fails to consider reasonable alternatives. The SA considers the impact of the following: a. The planned housing allocations to meet the need to 2033 not 2035 b. The planned provision of 889 dpa for the period 2018 to 2033 and not the higher requirement based on meeting future economic growth which would be 1,073 dpa for the period 2015-2032. The reasonable alternatives that the SA has failed to consider are as follows: a. The impact of making housing allocations to meet the need to 2035 b. The impact of making housing allocations to accommodate 1,073 dpa for the period 2015-2032

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth.
Objection is made to this Policy. The level of housing growth for the Plan period 2015-2035 is set at 18,400 new homes. The Plan seeks to allocation land for 15 years of 13,230 new homes having deducted the completions from the first three years of the Plan period up to 2018. The Plan should allocate land for the complete Plan Period and on the basis of the Policy as drafted only takes account of 18 of the 20 year plan period. There is no explanation of the remaining 2 years. The housing requirement is set out as a range from 920 dwellings per annum, down to 882 dwellings per annum and indicates that this will be reviewed through the plan period to reflect updated projections and the need for affordable homes. It is unclear from the Plan on what basis revised requirements would be considered and how this would affect the land allocations or future requirements. The Policy as drafted is not clear if provision is being made for the entire 18,400 new homes or for a lesser figure. There is no clear explanation of this in the supporting text. Paragraph 4.38 of the text indicates that the requirement is 912 homes per year over the Plan Period, which is 18,240 new homes net. There is no explanation of the net and gross figures in the text. The plan should clearly set out the gross requirement over the plan period, what deductions are made for completions, the residual requirement for the remainder of the plan period, and the allocations therefore made. Net and gross figures would assist the ability to understand the Plan. The range of figures in the table for the settlements in the hierarchy are difficult to match up with the overall requirements. The figures for the bottom end of the range add to 10,850 housing allocations and the top of the range add to 15,390, neither of which figures match the 13,230 in the first part of the Policy. The Plan is therefore unclear and imprecise about the housing allocation and how this is justified compared to the report relied upon which sets out the housing need. Paragraph 4.40 seeks to explain the distribution of the housing baseline figure and the economic growth housing figure. It sets out that not all of the baseline figure is allocated to the service function settlements and some 632 dwellings are then reallocated to the higher order settlements. These settlements already have the additional growth from the economic led housing. The distribution should be reapportioned as set out in our comments above to apportion the whole requirement of housing need to the sustainable settlements. The explanation in para 4.41 that 4,905 homes of the allocation requirement is directed to the urban area and main towns is misconceived for the reasons stated above. The plan does not explain how this has been worked out in exact allocations, and appears to be subject to interpretation by a future topic paper. On its face the Plan is not justified in Policy 3 about the following matters. - What is the overall requirement - What is the actual allocation - Why is there is distinction between baseline housing growth and economic growth in distribution terms - What is going to each settlement and why The proposed allocations should be listed in Policy 6 in a comprehensive table to enable a proper understanding and reading of the Plan. A plan of each site should also be included in the plan document, to ensure clarity about the site boundaries.  

Summary:

Objects to policy. The plan should not deduct completions from the first 3 years of the plan period and allocate enough land for the whole plan period as the policy as drafted only accounts for 18 of the 20 years with no explanation of the remaining 2 years. Expressing the housing requirement as a range is not clear on what basis the revised requirements would be considered and how it would affect land allocations or future requirements. Not clear if provision is being made for the entire 18,400 new homes or for a lesser figure. Para 4.38 indicates the requirement is 912dpa over the plan period which is 18,240 new homes. The plan should set out the gross requirement over the plan period with deductions for completions, the residual requirement for the remainder of the plan period and the allocations therefore made. Net and gross figures would assist the ability to understand the plan. The range of figures in the table for settlements in the hierarchy are difficult to match up with the overall requirements. The bottom end of the range add up to 10,850 and the top of the range 15,390 neither of which match the 13,230 in the first part of the policy. The remaining 632 units from the baseline (Defined Villages) should be reallocated to all settlements in the top 3 tiers of the hierarchy rather than to just the Main Urban Area and Main Towns. The explanation in para 4.41 that 4,905 homes of the allocation requirement is directed to the urban area and main towns is misconceived for the reasons stated above. The plan does not explain how this has been worked out in exact allocations, and appears to subject to interpretation by a future topic paper. On its face the Plan is not justified in Policy 3 about the following matters: What is the overall requirement; What is the actual allocation; Why is there is distinction between baseline housing growth and economic growth in distribution terms; and, What is going to each settlement and why? The proposed allocations should be listed in Policy 6 in a comprehensive table to enable a proper understanding and reading of the Plan. A plan of each site should also be included in the plan document, to ensure clarity about the site boundaries.
Sources of supply for the remaining 2 years of the plan period where allocations are not being made is identified including: supply at settlements with a housing allocation above their requirement; permissions from small sites 1-4 units as at April 2018; all permissions at the Defined Villages 5+ units as at April 2018; large sites still developing in these final 2 years; any housing in line with Policy 7 at the Airport (up to 1,200 new homes); and, any housing on Reserve Sites. Policy 6 provides further detail on the total size and sources of the allocated housing requirement which is 16,115 net dwellings with completions in addition to this for the first 3 years of the plan (3,400 net units) giving a plan period housing supply of 19,515 net dwellings against a requirement of 18,400 (+1,115 units). A further 2,085 units are allocated but estimated to deliver beyond 2035.

The ranges provide flexibility when allocating sites and each settlement is not required to allocate to the top of the range in order for the overall housing requirement to be met hence adding the bottom and/or top of the ranges do not equal the overall requirement and hence the mid point figure within these ranges will reflect the overall requirement. The leftover baseline is considered appropriate to redirect to the top 2 tiers of the hierarchy given these are the most sustainable settlements with largest populations etc. To answer the specific points made:

- What is the overall requirement? The plan period requirement (2015-2035) 18,400 net dwellings The residual plan period requirement (2018-2035) 13,235 net dwellings
- What is the actual allocation? Completions first 3 years of the plan period 3,400 net dwellings The plan period allocation 2018-2035 16,115 net dwellings Completions + plan period allocations 19,515 net dwellings (+1,115 net units compared to plan period requirement)
- Why is there is distinction between baseline housing growth and economic growth in distribution terms? See responses to Policy 2 for the distinction between the baseline and economic growth led housing distribution?
- What is going to each settlement and why? See response to Policy 2 as well as settlement figures set out in Chapter 16 which explains final housing allocations to each. Allocations should be listed in Policy 6 in a comprehensive table to enable a proper understanding and reading of the Plan.
- These are set out in Chapter 16 by settlement level as well as whether permissioned/non-permissioned already and would be unnecessary duplication. A plan of each site should also be included in the plan document, to ensure clarity about the site boundaries. The majority of non-permissioned sites have a plan included in the Appendices (Developer Requirements) and detailed boundaries shown on the Policies Map.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Consistent with national

Area: Chapter 4: Strategic Approach

Policy: Policy 3: Level & Distribution of Growth

Tests of Soundness: Positively prepared

Consistent with national

Comment:

Policy 3 is not considered to be sound as it is not positively prepared, justified or consistent with national policy for the following reasons: The Council has continued to identify a net housing requirement of 920 dwellings per annum (dpa) over the plan period 2015-2035. Paragraph 60 of the NPPF 2019 states that ‘to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify an alternative approach which also reflects current and demographic trends and market signals’. It should be noted that the Standard Method identifies a minimum annual housing need figure, it does not produce a housing requirement figure. It should also be noted that the Government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The Standard Method provides a minimum starting point, and there may be circumstances where it is appropriate to consider whether the actual housing need is higher than the Standard Method indicates. The National Planning Practice Guidance (NPPG) (ID: 2a-010) goes on to states that these circumstances can include growth strategies for the area; strategic infrastructure improvements; previous levels of delivery; or, where previous assessments of need are significantly greater than the outcome of the Standard Method. The Peter Brett Economic Forecasts and Housing Needs Assessment (2018) identifies a demographic starting point from the 2014-based household projections of 562dpa, which if adjusted to match a business as usual job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region, it identifies a jobs-led housing need of 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. The Council identify that the housing requirement will be expressed as a range with the bottom of the range being the Local Housing Need (LHN) figure and the top of the range being the 920dpa. As set out above it is not considered that the LHN produced from the Standard Method would provide an appropriate housing requirement. With the Sheffield City Region jobs growth aspirations applied a housing need of 1,073dpa is identified. It is clear that there are circumstances identified that would require a housing requirement figure which is significantly greater than the outcome of the Standard Method. Lastly, the housing requirement should not be treated as a cap because this would be inconsistent with the NPPF’s requirement to support the Government’s objective to boost the supply of homes. It is important that sufficient housing is allocated to match the proposed level of economic growth, in order to provide sufficient homes for the labour force required to service the jobs created. Not providing a sufficient number of homes to match the economic growth aspirations in the Borough can lead to consequences, such as the formation of unsustainable commuting patterns due to an insufficient number of homes for people wishing to move to Doncaster. The NPPF is clear in paragraph 9 that policies should play an active role in guiding development towards sustainable solutions and in doing so should take local circumstances into account. It DMBC wish to encourage economic growth within the Borough this should be done in a sustainable manner.

Summary:

The Standard Method identifies a minimum annual housing need figure, it does not produce a housing requirement figure. The Peter Brett Economic Forecasts and Housing Needs Assessment (2018) identifies a demographic starting point from the 2014-based household projections of 562dpa, which if adjusted to match a business as usual job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region, it identifies a jobs-led housing need of 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. It is important that sufficient housing is allocated to match the proposed level of economic growth, in order to provide sufficient homes for the labour force required to service the jobs created. Not providing a sufficient number of homes to match the economic growth aspirations in the Borough can lead to consequences, such as the formation of unsustainable commuting patterns due to an insufficient number of homes for people wishing to move to Doncaster.

Response:

As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth.
Objection is made to this Policy  The level of housing growth for the Plan period 2015-2035 is set at 18,400 new homes. The Plan seeks to allocate land for 15 years of 13,230 new homes having deducted the completions from the first three years of the Plan period up to 2018. The Plan should allocate land for the complete Plan Period and on the basis of the Policy as drafted only takes account of 18 of the 20 year plan period. There is no explanation of the remaining 2 years. The housing requirement is set out as a range from 920 dwellings per annum, down to 882 dwellings per annum and indicates that this will be reviewed through the plan period to reflect updated projections and the need for affordable homes. It is unclear from the Plan on what basis revised requirements would be considered and how this would affect the land allocations or future requirements. The Policy as drafted is not clear if provision is being made for the entire 18,400 new homes or for a lesser figure. There is no clear explanation of this in the supporting text. Paragraph 4.38 of the text indicates that the requirement is 912 homes per year over the Plan Period, which is 18,240 new homes net. There is no explanation of the net and gross figures in the text. The plan should clearly set out the gross requirement over the plan period, what deductions are made for completions, the residual requirement for the remainder of the plan period, and the allocations therefore made. Net and gross figures would assist the ability to understand the Plan. The range of figures in the table for the settlements in the hierarchy are difficult to match up with the overall requirements. The figures for the bottom end of the range add to 10,850 housing allocations and the top of the range add to 15,390, neither of which figures match the 13,230 in the first part of the Policy. The Plan is therefore unclear and imprecise about the housing allocation and how this is justified compared to the report relied upon which sets out the housing need. The proposed allocations should be listed in Policy 6 in a comprehensive table to enable a proper understanding and reading of the Plan. A plan of each site should also be included in the plan document, to ensure clarity about the site boundaries.

Summary:
Objects to Policy 3 - Should allocate land for the complete plan period as current approach only accounts for 18 of the 20 year plan period and no explanation for the remaining 2 years. The housing requirement set as a range and states will be reviewed throughout the plan period but unclear on what basis the revised requirements would be considered and how this would affect allocations for future requirements. The policy is not clear if provision is being made for the entire 18,400 new homes of a lesser amount and no clear explanation of net or gross figures. Para 4.38 indicates requirement is 912 dpa over plan period which is 18,240 new homes. The plan should clearly set out the gross requirement over the plan period, what deductions are made for completions, the residual requirement for the remainder of the plan period, and the allocations therefore made. The range of figures in the table for the settlements in the hierarchy are difficult to match up with the overall requirements. The figures for the bottom end of the range add to 10,850 and the top of the range add to 15,390, neither of which figures match the 13,230 in the first part of the Policy. All allocations should be set out in Table 6 and there needs to be a plan of each site included in the plan.

Response:
Sources of supply for the remaining 2 years of the plan period where allocations are not being made is identified including; supply at settlements with a housing allocation above their requirement; permissions from small sites 1-4 units as at April 2018; all permissions at the Defined Villages 5+ units as at April 2018; large sites still developing in these final 2 years; any housing in line with Policy 7 at the Airport (up to 1,200 new homes); and, any housing on Reserve Sites. Policy 6 provides further detail on the total size and sources of the allocated housing requirement which is 16,115 net dwellings with completions in addition to this for the first 3 years of the plan (3,400 net units) giving a plan period housing supply of 19,515 net dwellings against a requirement of 18,400 (+1,115 units). A further 2,085 units are allocated but estimated to deliver beyond 2035. The ranges provide flexibility when allocating sites and each settlement is not required to allocate to the top of the range in order for the overall housing requirement to be met hence adding the bottom and/or top of the ranges do not equal the overall requirement and hence the mid point figure within these ranges will reflect the overall requirement. The leftover baseline is considered appropriate to redirect to the top 2 tiers of the hierarchy given these are the most sustainable settlements with largest populations etc. To answer the specific points made: - What is the overall requirement  The plan period requirement (2015-2035) 18,400 net dwellings The residual plan period requirement (2018-2035) 13,235 net dwellings - What is the actual allocation? Completions first 3 years of the plan period 3,400 net dwellings The plan period allocation 2018-2035 16,115 net dwellings Completions + plan period allocations 19,515 net dwellings (+1,115 units compared to plan period requirement) - Why is there is distinction between baseline housing growth and economic growth in distribution terms? See responses to Policy 2 for the distinction between the baseline and economic growth led housing distribution? - What is going to each settlement and why? See response to Policy 2 as well as settlement figures set out in Chapter 16 which explains final housing allocations to each. Allocations should be listed in Policy 6 in a comprehensive table to enable a proper understanding and reading of the Plan. - These are set out in Chapter 16 by settlement level as well
as whether permissioned/non-permissioned already and would be unnecessary duplication. A plan of each site should also be included in the plan document, to ensure clarity about the site boundaries. The majority of non-permissioned sites have a plan included in the Appendices (Developer Requirements) and detailed boundaries shown on the Policies Map.
2.10 The proposed housing distribution within the draft plan has a strong focus on the Main Urban Area with 50% of development proposed in the Doncaster Main Urban Area, followed by 40% in second tier (Main Towns) locations, 10% in Services Towns and Larger Villages and limited development in Defined Villages. The proposed distribution is based on the Settlement Background Paper which forms a settlement hierarchy and informs the location of housing and employment sites. 2.11 The Publication Doncaster Local Plan identifies Finningley as one of 10 Service Towns/Villages which will provide about 10% of the Borough’s total housing requirement during the plan period. Specifically, Finningley is identified to deliver 55 dwellings in the plan period (50 of which are based on existing permissions) 2.12 The Sustainability Appraisal for the Public Local Plan discounts Site 189 and all other alternatives within Finningley from allocation based on the proposed housing distribution and the level of housing already committed within the settlement. We object to this approach and consider it to be unsound. 2.13 It is not considered appropriate that such limited levels of allocations have been identified in reasonably sized settlements such as Finningley. The only justification put forward for failing to allocate new sites for development is based on existing permissions within these settlements. However, these sites have yet to be delivered and may suffer from issues including viability that could impact future delivery. 2.14 Settlements including Finningley have been identified as ‘Larger Villages’ within the settlement hierarchy. There is a population of over 6,800 people in the immediate area surrounding the airport (Auckley, Blaxton and Hayfield Green) and as such it is larger than settlements such as Tickhill (over 5,200 people) and Askern (over 5,500 people) and is of a similar size to Edlington (7,500). However the draft Plan proposes to retain existing settlement boundaries in Auckley and Finningley, allowing only infill small scale affordable housing. 2.15 The proposed approach to the delivery of housing, as drafted, fundamentally fails to recognise the emphasis within the Framework on the deliverability of housing and the need to support the prosperity of settlements outside of the main urban area. 2.16 The draft Local Plan proposes a housing target based on economic growth objectives, a substantial element of which will be linked to the growth of the airport. The approach to limiting the expansion of those settlements surrounding the airport, together with the objectives of draft Policy 7, which seeks to support ‘windfall’ housing development linked to employment growth within the airport sites, risks creating an isolated community and fails to take the opportunity to ensure the future sustainability of existing communities located in close proximity to the airport. 2.17 While settlements such as Finningley may rely on towns to provide essential services, the need to sustain the existing services will require additional employment and housing. The continuing trend for a reduction in household size means downsizing will undercut the customer/user thresholds to which current amenities and facilities have become accustomed. This poses a significant threat to the current level of sustainability enjoyed by the settlement. 2.18 The housing allocations requirements should not be based purely on the hierarchy of a settlement as there are a number of considerations namely urban capacity, need and demand for housing, regeneration, environmental and social considerations which need to be taken into account to ensure the growth of settlements in a sustainable manner. In the case of Finningley, the proximity to the DSA Masterplan area is a particularly relevant consideration in order to ensure support for the proposed economic strategy. Recommendation 2.19 The distribution of housing provision within Policy 3 - Service Towns and Larger Villages should be increased to meet the updated housing requirement, and reapportioned (or alternatively flexibility introduced) to support the delivery of a higher proportion of the housing within sustainable and desirable locations close to economic growth. Justification 2.20 The Local Plan as drafted is overly reliant on a significant quantum of sites within the Main Urban Area. This approach relies on the delivery of a notable number of large sites, which will require substantial enabling infrastructure in order to deal with constraints that may include contamination and highways infrastructure upgrades as well as drainage and other matters. 2.21 The growth potential of a number of Service Towns and Larger Villages has been underplayed and that Finningley, together with neighbouring Auckley/Hayfield Green should have an increased allocation of housing land within these settlements, in order to capture the regeneration opportunities provided by the proximity to the airport and to deliver housing in sustainable locations where there is a recognised demand. 2.22 Given the size of the committed level of airport related employment on the airport itself it is also considered that the current approach fails to consider the obvious beneficial impact of concentrating further employment and residential development in close proximity to the airport, especially as there are large areas of despoiled land that are well related to public transport infrastructure and can be developed for mixed use schemes. 2.23 The limited housing target apportioned to Finningley, as well as neighbouring Auckley/Hayfield Green does not appear to be appropriate and there seems to be no justification of not meeting some level of demand and need in these locations. This approach is likely to result in not only a missed opportunity to support the projected economic growth but also lead to the decline of those settlements. 2.24 The potential for redevelopment of sustainable sites such as the Higgin’s site in these areas should be realised, where deliverable, in order to support the long term viability of these areas. By reviewing existing Countryside designations around these settlements, boundaries can be rationalised to allocate land for development to serve the purposes of these policy areas. 2.25 New housing allocations are considered to be an appropriate response to accommodating further development in these locations.
Summary:
Object to Sustainability Appraisal which discounts site 189 based on the proposed housing distribution and the level of housing already committed within the settlement. The approach is unsound. The housing delivery approach fails to recognise the emphasis within the Framework on the deliverability of housing and the need to support the prosperity of settlements outside of the main urban area. The draft Local Plan proposes a housing target based on economic growth objectives limiting the expansion of settlements surrounding the airport and a draft Policy 7, which seeks to support ‘windfall’ housing development linked to employment growth within the airport sites, risks creating an isolated community and fails to take the opportunity to ensure the future sustainability. Settlements such as Finningley rely on towns to provide essential services but need to sustain the existing services will also require additional employment and housing. Housing allocations requirements should not be based solely on the hierarchy of a settlement. The council should also consider urban capacity, need and demand for housing, regeneration, environmental and social considerations. Cites DSA masterplan as an economic example. Distribution of housing provision within Policy 3 - Service Towns and Larger Villages is underemphasised and housing target should be increased, because of over reliance of site proposals in main urban area will need additional drainage and infrastructure upgrades. Housing target for Finningley and Auckley/Hayfield Green is not appropriate and there seems to be no justification. Should realise the potential of the Higgins site and review countryside designation and rationalising settlement boundary.

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth. The Local Plan includes targets for Finningley and for Auckley-Hayfield Green which are deliberately separate to any additional housing that may be considered appropriate for Auckley-Hayfield Green should sufficient jobs be generated at the Airport.
2.1 The Doncaster "Inclusive Growth Plan" is supported. 2.2 The level of housing development to be delivered is set out in Policy 3, which states that the Council will seek to facilitate the delivery of at least 920 (net) new homes each year over the plan period 2015-2032 (15,640 homes in total) with sufficient land allocated to deliver at least 15 years’ supply (13,800). 2.3 Paragraph 59 of the National Planning Policy Framework (the 'Framework') sets out the Government’s objective of significantly boosting the supply of homes, through the identification of a sufficient amount and variety of land where it is needed and to meet the needs of groups with specific housing requirements [authors own emphasis]. 2.4 The SPRU report provided at Appendix 1 assesses the soundness of the proposed jobs-led housing requirement and the implications for the proposed spatial strategy. (SEE EMAIL FOR Appendix) 2.5 For the reasons outlined within the SPRU report, DLP objects to Policy 3 of the draft Local Plan as there are found to be substantial soundness failings with the draft Local Plan resulting from a failure to test an appropriate reasonable alternative based on meeting the strategic priorities for economic development over a full 15-year plan period. These issues are compounded based on treating the housing requirement from 2018-2033 as a 'residual total' to account for perceived oversupply in the period 2015-2018, which has not been adequately justified. 2.6 The Council’s approach fails to accurately reflect the strategic priorities and future economic potential of the Sheffield City Region and further assessment of the proposed requirement is recommended to reflect the requirements of the revised Strategic Economic Plan (once published) and to consider recent trends in jobs growth and housing delivery across the sub-region. This is anticipated to lead to a reassessment of current and future demographic trends in relation to future labour supply. 2.7 The SPRU report also concludes that arbitrary constraints to the requirement for additional development are applied, which will lead to an overreliance on extant planning commitments and historic allocations in previous iterations of the development plan. The implications of this in terms of prospects for maintaining a five year supply of deliverable sites and meeting the housing needs of different groups have not been fully assessed, however it is anticipated that there could be a failure to meet housing need, particularly in respect of affordable housing in the short to medium term, as the physical and viability related constraints that have prevented these sites being delivered to date may persist. 3.1 The SPRU report concludes that these issues are capable of remedy within the Council’s broad emerging approach to managing the distribution of growth across the spatial strategy. This acknowledges that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy, in particular Main Villages at Tier 2. We endorse the Council’s position that Main Towns are appropriate locations to accommodate up to 10% of the economic-led component of the housing requirement. However, we also recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth, where sustainable growth opportunities are identified. Recommendation 2.8 The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. Justification 2.9 For the reasons set out above and within the appended SPRU report, it is correct to accommodate growth based on meeting requirements under the full assessment of jobs-led growth (1,073 dpa) for the full plan period to 2035.

Summary:
Supports inclusive growth plan. Policy 3, Local Plan should be updated to reflect the housing requirement of 1,073. SPRU report provided at Appendix 1 assesses the soundness of the proposed jobs-led housing requirement and the implications for the proposed spatial strategy. The work fails to test an appropriate reasonable alternative based on meeting the strategic priorities. The work fails to accurately reflect the strategic priorities and future economic potential of the Sheffield City Region and further assessment of the proposed requirement is recommended to reflect the requirements of the revised Strategic Economic Plan (once published) and to consider recent trends in jobs growth and housing delivery across the sub-region. SPRU report also concludes that arbitrary constraints to the requirement for additional development are applied, which will lead to an overreliance on extant planning commitments and historic allocations. Issues can be remedied by managing the distribution of growth across the spatial strategy. Endorses Council position that Main Towns as appropriate locations but recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth.

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth.
The target delivers the minimum level of housing need for Doncaster based on the standard method 201902020. However, PBA have made unjustified and unmerited representations. Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris report is attached to these representations. Regeneris conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. Regeneris considers that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a - Doncaster’s key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ELR’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. - H. Burtwistle & Son have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. H. Burtwistle & Son continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. - The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. - NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure Paragraph 002 Reference ID: 2a-002-20190220. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. Paragraph 006 Reference ID: 2a-006-20190220. 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum starting point in determining the number of homes needed in an area?it does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance
of housing in an area is necessary for economic growth. The development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create sustainable local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on "the economic footprint of house building in England and Wales", which shows that house building in England and Wales is now worth £38bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenue and contributing funding for local infrastructure and communities. House building supports the economic in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster's housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore H. Burtwistle & Son consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period 2032-2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefitting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in Tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Council's Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodology, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. H. Burtwistle & Son consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%):13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%): 15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%): 13.74 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unavailable for a number of sites, including all types of sites in low value areas. H. Burtwistle & Son are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assumes the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. H. Burtwistle & Son consider that there is sufficient evidence to point to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. H. Burtwistle & Son consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.31. However, H. Burtwistle & Son consider that with a higher requirement, of at least 1,100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1393) that the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery. 5.32. H. Burtwistle & Son is concerned that the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and authorities need to ensure that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315). 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. H. Burtwistle & Son consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, H. Burtwistle & Son are concerned that some
of the policies may undermine the deliverability of sites, or lead to the need for further site specific viability testing impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. H. Burtwistle & Son have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). 5.38. With regards to overall supply from permissions and allocations, a housing trajectory has been provided. H. Burtwistle & Son are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. H. Burtwistle & Son supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. H. Burtwistle & Son consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. H. Burtwistle & Son is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites being shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 H. Burtwistle & Son Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 H. Burtwistle & Son Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings per annum. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 H. Burtwistle & Son Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multipleownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 H. Burtwistle & Son Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 H. Burtwistle & Son Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Manor Farm, Bessacarr No. of Dwellings: 280/920 H. Burtwistle & Son Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. H. Burtwistle & Son understands that no allowance has been made for demolitions. No evidence is apparent and H. Burtwistle & Son consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. H. Burtwistle & Son consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 H. Burtwistle & Son Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Collery Site, Rossington No. of Dwellings: 897/237 H. Burtwistle & Son Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site. Assumptions of delivery rates based on past performance at this site then it is not considered that on 307 dwellings will be deliverable remaining forward within the plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 808/343 Site Name: Thorne No. of Dwellings: 207 H. Burtwistle & Son Comment: This is a longstanding allocation and there is little evidence available through the councils evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 H. Burtwistle & Son Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 H. Burtwistle & Son Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 H. Burtwistle & Son Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have leant heavily on allocating sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the
The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and H. Burtwistle & Son do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. H. Burtwistle & Son consider the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. H. Burtwistle & Son consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. H. Burtwistle & Son would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. H. Burtwistle & Son considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks H. Burtwistle & Son would suggest a greater flexibility is incorporated into the Local Plan especially in light of H. Burtwistle & Son’s conclusions on the actual housing requirement. 5.50. H. Burtwistle & Son would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. H. Burtwistle & Son would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 H. Burtwistle & Son’s View: 1,100 Total Requirement (2015-2035) - which is 15 years post Adoption Council Figures: 18,400 H. Burtwistle & Son’s View: 22,000 Completions Council Figures: 3,400 H. Burtwistle & Son’s View: 3,211 Total Commitments Council Figures: 9,488 H. Burtwistle & Son’s View: 83.77 Total Non-Delivery (at least 10%) Council Figures: 948.8 H. Burtwistle & Son’s View: 948.8 Total Allocations Council Figures: 6,567 H. Burtwistle & Son’s View: 6,567 Total Supply Council Figures: 18,506 H. Burtwistle & Son’s View: 18,317.2 Residual homes to be identified Council Figures: -106.2 H. Burtwistle & Son’s View: 3,682.2 5.52. Therefore, on a best case scenario H. Burtwistle & Son consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.7 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. H. Burtwistle & Son consider circa 7,532 additional homes are required in order to balance the Housing with Employment requirement 2015-2035 H. Burtwistle & Son’s View: 481 hectares Annual requirement employment H. Burtwistle & Son’s View: 24 hectares Employment land developed 2015-2018 H. Burtwistle & Son’s View: 117 Sites with planning permission Tables E1 to E8 H. Burtwistle & Son’s View: 284.09 New employment allocations Policy 4 H. Burtwistle & Son’s View: 164.68 Total Allocations H. Burtwistle & Son’s View: 565.77 Amount of land allocated over the requirement H. Burtwistle & Son’s View: 83.77 Additional homes required to balance with employment land supply H. Burtwistle & Son’s View: 3,850 Residual homes to be identified H. Burtwistle & Son’s View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, H. Burtwistle & Son have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified in the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. H. Burtwistle & Son would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council’s trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. H. Burtwistle & Son consider that the appropriate areas and sites to accommodate growth would be: - Site 244/331: Coulman Road, Thorne 5.60. A brief summary is provided for these sites in response to Policy 6. An advocacy has been submitted alongside earlier representations. This report demonstrates that the sites are available, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. 5.61. H. Burtwistle & Son consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, H. Burtwistle & Son consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.63. To overcome the objection and address soundness matters, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate Site 244/331: Coulman Road, Thorne.
Summary:

Policy 3 - Level and Distribution of Growth. 1. Housing requirement not sufficient and not aligned with forecast economic growth. 2. Plan identifies more employment land than target. 3. Mismatch between employment land allocated and level of housing allocated. 4. Housing requirement - have commissioned own report by 'Regeneris Consulting' for OAN and economic forecasts (enclosed as Appendix) 5. Housing requirement should be 1,100 dpa (Regeneris) 6. Peter Brett forecast is for 2015-2032 - not clear if provision is made for 2032 to 2035. 7. There is a discrepancy in employment land allocated. Provision is 565.77 Ha against 481 requirement (para 5.21). 8. Employment allocation is 83.77 above requirement therefore need more housing. 9. Estimate circa 7,532 additional homes are required to balance emp/hsg requirement. 10. Recent high housing delivery rates and evidence from Employment land Needs Assessment (2019 update) suggest a higher housing need requirement (based on the success of the 2015-18 period) 11. Concerned that affordable housing rates are not viable. 12. 920 will not deliver sufficient affordable housing. 13. Requirement would need to be 1,393 dpa to meet 15% requirement (based on last 3 years of monitoring). 14. Housing requirement should be at least 1,100. 15. Current completions (2015-18) are gross and not net. 16. Plan will struggle with supply late in the plan period. 17. Evidence base needs updating - no HELAA or RLA for 2019. 18. Existing commitments - assumes 100% delivery - a discount should be applied for some none delivery. 19. Concerned about viability/deliverability of several sites with PP. (list the sites) 20. Some of the allocations are a deliverability risk (includes list and comments on sites) 21. Need to be more realistic on delivery rates. 22. Should review existing commitments to ensure deliverability. 23. Propose site 244 & 331 Coulman Road for allocation. Proposed Changes: 1. Increase housing requirement to 1,100-1,300 dpa. 2. Reduce the potential from current commitments. 3. Include a none delivery allowance. 4. Identify safeguarded land 5. Allocate sites 244 & 331.

Response:

A number of ways and means have been submitted to calculate housing and jobs figures for the Local Plan. The Peter Brett's Report explains the approach taken and ties jobs to housing growth, which includes a significant uplift from the Standard Methodology Figure. The Housing Topic Paper explains how figures have been calculated and where deductions have been made for permissions etc., and also covers the delivery trajectory. The Site Selection Methodology explains how site delivery has been calculated and justifies the proposed build out rates. Other evidence base has been updated for submission. Where adaptations have been made to account for the extension to the plan period since this report was finalised, they have been made to both housing and employment respectively. The difference in the employment figures quoted are the result of tables showing different information. It is accepted that this is confusing and this has been amended to be more clear. The correct employment figure is 481ha and enough employment land has been found to deliver this, and enough housing too meet this arising need too. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council's Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc. which will also assist people in being able to afford/access housing.
S. H. Burtwistle & Son is concerned that the Doncaster Local Plan Draft Policies and Proposed Sites is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 5.2. H. Burtwistle & Son considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 5.3. H. Burtwistle & Son have a number of concerns in relation to the Level and Distribution of Growth. The concerns relate to the following: - The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need 5.4. H. Burtwistle & Son is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. H. Burtwistle & Son has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris report is attached to these representations. Regeneris conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. 5.6. Regeneris consider that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a. - Doncaster's key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/workspace space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ELR’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. 5.7. H. Burtwistle & Son have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. H. Burtwistle & Son continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. 5.8. The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘ to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. 5.9. NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure Paragraph 002 Reference ID: 2a-002- 20190220. 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. ‘The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum starting point in determining the number of homes needed in an area?it does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance
of housing in an area is necessary for economic growth. The development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create local sustainable jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on "the economic footprint of house building in England and Wales", which shows that house building in England and Wales is now worth £38bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenue, and contributing funding for local infrastructure and communities. House building supports the economic in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, wellfunctioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore H. Burtwistle & Son consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period 2032-2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefitting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissioṁs identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodology, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SE jobs led scenario was 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. H. Burtwistle & Son consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%):13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%):15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%):13.74 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unavailable for a number of sites, including all types of sites in low value areas. H. Burtwistle & Son are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. H. Burtwistle & Son consider that there is sufficient evidence to pointing to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. H. Burtwistle & Son consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable policy development in accordance with the Framework in the future. In these circumstances, when not consistent with the Doncaster Local Plan in its current form to be sound. 5.31. However, H. Burtwistle & Son consider that with a higher requirement, of at least 1,100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1,393) that the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery. 5.32. H. Burtwistle & Son is concerned that the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. H. Burtwistle & Son consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, H. Burtwistle & Son are concerned that some
of the policies may undermine the deliverability of sites, or lead to the need for further site specific viability testing impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. H. Burtwistle & Son have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. This would result in a 1.3% discount to the 3400 which would reduce the deliveries required in the Plan and therefore impact on net to gross developable area and density set out in the Viability Study. 5.38. With regards to overall supply from permissions and allocations, a housing trajectory has been provided. H. Burtwistle & Son are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HLAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. H. Burtwistle & Son supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. H. Burtwistle & Son consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. H. Burtwistle & Son is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites being shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 H. Burtwistle & Son Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HLAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 H. Burtwistle & Son Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HLAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 H. Burtwistle & Son Comment: The site has outline planning permission for 2,100 homes and no reserved matters have been submitted. The site is in significant multipleownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HLAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 H. Burtwistle & Son Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tract No. of Dwellings: 600 H. Burtwistle & Son Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 H. Burtwistle & Son Comment: Site 940 is allocated in the plan for development up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. H. Burtwistle & Son understands that no allowance has been made for demolitions. No evidence is apparent and H. Burtwistle & Son consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. H. Burtwistle & Son consider that sites which are not deliverable or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 H. Burtwistle & Son Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 H. Burtwistle & Son Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of remaining forward within the plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 801/343 Site Name: Thorne No. of Dwellings: 207 H. Burtwistle & Son Comment: This is a longstanding allocation and there is little evidence available through the councils evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 H. Burtwistle & Son Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 H. Burtwistle & Son Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 H. Burtwistle & Son Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have scantily on allocating sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the
resultant yields from proposed allocations, especially when considering some of the development requirements. H. Burtwistle & Son therefore suggest that further sites should be identified. 5.46. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and H. Burtwistle & Son do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. H. Burtwistle & Son considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. H. Burtwistle & Son consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. H. Burtwistle & Son would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. H. Burtwistle & Son considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks H. Burtwistle & Son would suggest a greater flexibility is incorporated into the Local Plan especially in light of H. Burtwistle & Son’s conclusions on the actual housing requirement. 5.50. H. Burtwistle & Son would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. H. Burtwistle & Son would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 H. Burtwistle & Son’s View: 1,100 Total Requirement (2015-2035) - which is 15 years post Adoption Council Figures: 18,400 H. Burtwistle & Son’s View: 22,000 Completions Council Figures: 3,400 H. Burtwistle & Son’s View: 3,211 Total Commitments Council Figures: 9,488 H. Burtwistle & Son’s View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 H. Burtwistle & Son’s View: 948.8 Total Allocations Council Figures: 6,567 H. Burtwistle & Son’s View: 6,567 Total Supply Council Figures: 18,506 H. Burtwistle & Son’s View: 18,317 Residual homes to be identified Council Figures: -106.2 H. Burtwistle & Son’s View: 3,682.2 5.52. Therefore, on a best case scenario H. Burtwistle & Son consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to demand for a further 9,542 additional homes. 5.54. Significant, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. H. Burtwistle & Son consider circa 7,532 additional homes are required in order to balance the Housing with Employment allocations, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 H. Burtwistle & Son’s View: 481 hectares Annual requirement employment H. Burtwistle & Son’s View: 24 hectares Employment land developed 2015-2018 H. Burtwistle & Son’s View: 117 Sites with planning permission Tables E1 to E8 H. Burtwistle & Son’s View: 284.09 New employment allocations Policy 4 H. Burtwistle & Son’s View: 164.68 Total Allocations H. Burtwistle & Son’s View: 565.77 Amount of land allocated over the requirement H. Burtwistle & Son’s View: 83.77 Additional homes required to balance with employment land supply H. Burtwistle & Son’s View: 3,850 Residual homes to be identified H. Burtwistle & Son’s View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, H. Burtwistle & Son have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designate Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. H. Burtwistle & Son would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council’s trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. H. Burtwistle & Son consider that the appropriate areas and sites to accommodate growth would be: - Site 313/245: Northgate, Moorends 5.60. A brief summary is provided for these sites in response to Policy 6. An advocacy has been submitted alongside earlier representations. This report demonstrates that the sites are available, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. 5.61. H. Burtwistle & Son consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, H. Burtwistle & Son consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.63. To overcome the objection and address soundness matters, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate: Site 313/245: Northgate, Moorends
A number of concerns are raised relating to the Level and Distribution of Growth: - The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need Regeneris Consulting have been commissioned to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018) who conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support future economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. H Burtwistle & Son consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. The Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through level of planning permission and 177 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher net need for housing. H Burtwistle & Son are concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. That there is sufficient evidence to point to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. Housing Supply and Delivery At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, H Burtwistle & Son are concerned that some of the policies may undermine the deliverability of sites. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 18,719, and reduce the flexibility in the Plan to 866 dwellings (4.7%). The housing trajectory demonstrates that the Council would need to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Support the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. H Burtwistle & Son consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. Concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and do not believe the Plan can deliver this, particularly in the middle to later years. Consider the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. H Burtwistle & Son consider that with the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. Considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks a greater flexibility should be incorporated into the Local Plan especially in light of H Burtwistle & Sons conclusions on the actual housing requirement. Taking into account the above, on a best case scenario H Burtwistle & Son consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. This does not account for the uplift required to ensure affordable housing need is met in full which would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would leave the Council with an additional requirements of 4,197 dwellings. H Burtwistle & Son consider circa 7,532 additional homes are required to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. With an increased housing requirement, a reduction in the level from existing planning permissions signifies incorporation of a flexibility allowance, further land will need to be...
Response:
A number of ways and means have been submitted to calculate housing and jobs figures for the Local Plan. The Peter Brett’s Report explains the approach taken and ties jobs to housing growth, which includes a significant uplift from the Standard Methodology Figure. The Housing Topic Paper explains how figures have been calculated and where deductions have been made for permissions etc., and also covers the delivery trajectory. The Site Selection Methodology explains how site delivery has been calculated and justifies the proposed build out rates. Other evidence base has been updated for submission. Where adaptations have been made to account for the extension to the plan period since this report was finalised, they have been made to both housing and employment respectively. The difference in the employment figures quoted are the result of tables showing different information. It is accepted that this is confusing and this has been amended to be more clear. The correct employment figure is 481ha and enough employment land has been found to deliver this, and enough housing too meet this arising need too. The standard methodology already makes allowances for affordability ratios and the Local Plan has already almost doubled this figure with the 920dpa requirement so will be delivering more affordable housing which will increase supply/competition and help to bring down affordability even further. Doncaster Council has ambitious plans to deliver more affordable homes, including more council housing, as part of a wider delivery programme. During 2019/20, the first developments will include a range of general needs and more bespoke accommodation. Sites will be funded through a combination of Housing Capital Programme funds; the use of One-for-One capital receipts from Right to Buy sales; and grant funding allocated from the Homes England Shared Ownership and Affordable Housing Programme (SOAHP) 2016/21 should the future bid be successful. Other initiatives and strategies, such as the Council’s Inclusive Growth Plan, are seeking to address issues such as skills and productivity/increasing wages etc. which will also assist people in being able to afford/access housing.
6.1 Peel has commissioned Turley Economics to undertake a technical review of proposed housing provision contained within the Local Plan. 6.2 The technical report can be found in Appendix 3. (See Email for Appendix) 6.3 In summary, the report identifies that whilst Peel strongly supports the draft Local Plans intention to deliver housing need over and above the standard method in recognition of the economic potential of the borough, it is considered that the draft policies relating to the planned provision for housing require amendment to be found sound when judged against the Framework and the associated Planning Practice Guidance. This deficiency in soundness is identified in a number of specific areas including the following: - While the LP seeks to deliver housing need (note 3 - 920 dwellings per annum) above the standard method (note 4 - 550 dwellings per annum), draft policy 3 expresses the housing requirement as a range using both figures; this is not considered to be justified in the context of the Framework. - The minimum housing requirement figure as generated by the standard method is unrepresentative of actual housing need in the borough with evidence demonstrating that the population of Doncaster is already larger and growing to a much greater extent than it predicted. Moreover, recent and longer-term housing delivery in the borough has been around double the minimum figure generated through the standard method which must be taken into account in future plan making. - While the Council accepts it is more appropriate to plan for a greater level of housing need, this is at risk of being undermined by retention of the standard method at the lower end of an unjustified range. Retention of it in the policy and the practical application of such a policy could markedly and unjustifiably reduce and constrain housing delivery. Such an approach is not positively prepared or consistent with national policy. - There is evidence of still greater need for housing than that which is acknowledged by the Council at the upper end of range proposed by the draft LP. The Council's own published evidence base confirms that an average of 1,060 dwellings per annum is likely to be needed through most of the plan period to accommodate a labour force required to support targeted housing growth of 1.0% per annum but potentially still underestimating the scale of employment growth attainable in Doncaster. Peel considers that this level if need should be explicitly recognised in the explanatory text of the policy. This emphasises the importance of policy 3 identifying a single housing requirement aligned with supporting economic growth as a minimum housing requirement for the borough and the LP should be revised accordingly.

**Comment:**

Peel commissioned Turley economics to undertake a technical review of housing provision contained within the Local Plan. (Report provided). The report identifies that whilst Peel strongly support the draft Local Plans intention to deliver above the standard method in recognition of the economic potential of the borough, the policies relating to planned provision need amending to be found sound against the framework and PPG. There is a deficiency in soundness identified in a number of specific areas: - The use of the range is not considered justified in the context of the framework - The standard methodology number is unrepresentative of actual housing need in the borough. The population is already larger and growing to a much greater extent than predicted. Recent and longer term housing delivery in the borough has been around double the minimum figure generated through the standard method - Whilst the Council accepts it is appropriate to plan for more than the standard method, it is undermined by retaining the standard method at the lower end of an unjustified range. Retention of it in policy and the practical application of such a policy could markedly and unjustifiably reduce and constrain housing delivery. It is not positively prepared or consistent with national policy. - There is evidence of still greater need for housing that the upper end of the range, as accepted by the council. The Council’s own evidence confirms an average of 1,060 dpa will likely be needed throughout the plan period to accommodate the labour force required to support the housing target growth of 1% p/a, but potentially still underestimating the scale of employment growth attainable in Doncaster. This level should be explicitly recognised in the explanatory text of the policy and emphasises the importance of a single housing requirement aligned with supporting economic growth as a minimum housing requirement. The LP should be revised accordingly.

**Response:**

National guidance is clear on the use of the Standard Methodology, and the Council are planning for a 57% increase above this figure. Planning Practice Guidance also refers to using a range (Housing Supply and Delivery - Paragraph: 027 Reference ID: 68-027-20190722). Although housing delivery has been stronger in more recent years, the average net completions since 2011/12 is 837dpa, and if extended to 2004/05 is actually 679dpa. This is further explained in the Housing Topic Paper. Many ways have been put forward as to how the housing figure could be calculated, however, the Council are confident that the work by Peter Bretts provides a suitable and justified housing target for the borough which is ambitious but achievable.
Rossington Hall Investments Ltd (RHI) objects to the significant reduction on the overall housing requirement for Doncaster MBC proposed in this Draft Policy compared to the figure proposed by the Council in Policy CS10 of its Core Strategy (2012). The Policy suggests that the Local Need figure, as derived from the Standard Methodology for the Borough is 18,400 homes over the period 2015-2035 i.e. 920 dwellings per annum (dpa) compared to the figure of 20,910 dwellings (2011-2028) i.e. 1230 dpa in the adopted Core Strategy. On this basis RHI consider the Local Plan is not positively prepared as it fails to provide housing to meet a real need. 2. Whilst it is acknowledged that the plan periods are not exactly comparable the degree of variation between the two figures is very large and must therefore be questioned. Such a significant reduction in projected housing need is counter intuitive given the progress that has been made in the Borough in recent years in terms of promoting new economic growth and the continuing rise in the Borough’s population. 3. It appears that just as progress is being made on economic growth and new job creation, and house building rates are starting to accelerate, the Council is seeking to restrict the supply of housing in the Borough and damp down growth prospects. This is not sustainable and RHI would therefore object to this figure and seek the adoption of higher requirement figure in line with the more aspirational figure of 1230 dpa contained in in the Core Strategy. 4. Rossington Hall Investments Ltd would seek greater recognition of this high level of sustainability and the significant opportunities for further improvements in the future in the settlement hierarchy in a manner similar to that adopted in the Core Strategy 2012 which identified Rossington as a ‘Growth Town’. The Settlement Audit and subsequent Profile indicated that ‘Rossington is one of the best provided for settlements in the borough in terms of service provision’ and that its offer of services is ‘more akin to a District Centre’. As a result RHI consider that Rossington should be identified as a location for meeting more than just ‘local needs housing growth’ ‘on a pro-rata basis’. It should instead be the focus a for a significantly larger percentage of the economic-led housing growth as discussed below. This will allow the Local Plan to be positively prepared and effective as it currently fails to deliver a housing strategy which meets a real need. 5. Policy 3 indicates that Rossington will account for around 285-895 of the new homes in the Borough. The housing requirement to meet ‘base line growth’ over the plan period is just 385 dwellings (i.e. 25 dpa). Chapter 16/Policy 6 sets out the housing allocations for Rossington. Table H1(G) shows a total allocation of 1219 for the town, 897 of which already have planning permission, and a further 322 have been allocated that currently do not benefit from planning permission. 6. RHI also consider the number of allocations in Rossington fall short of what is required, and the Local Plan fails to recognise the growth potential of Rossington that derives from its location adjacent to the M18, improved accessibility resulting from the construction of Great Yorkshire Way, the expected 5000+ jobs at iPort and further social housing, retail and community development at Torne Park. 7. On this basis RHI consider than in order to capture the full benefit of these developments the overall housing requirement for Rossington over the plan period, to be proposed as part of the new Local Plan needs to be raised substantially from the 895 maximum currently suggest in Policy 3, sufficient to allow for the full development of the consenting dwellings and further housing development in sustainable locations in and around the town such as on our client’s land at South of Grange Road, Rossington - see the accompanying Planning Appraisal Report. RHI would suggest a figure in the region of 1500-1600 would be more appropriate. (SEE EMAIL FOR Appraisal Report) PROPOSED CHANGE 1. As set out above, RHI consider the Local Plan is not sound on all aspects. 2. In order to make the Local Plan sound a Safeguarded Land policy should be included. This would make the Local Plan effective, justified and national policy compliant. 3. Further to this, Policy 2 needs to allow more flexibility with regard to housing allocations rather than being distributed on a ‘pro-rata basis’. This would mean that the plan is positively prepared and allows for development to adapt as circumstances change across the plan period. 4. RHI consider that the site South of Grange Road, Rossington should be removed from the Green Belt as it fails to meet any of the five purposes set out in para 134 of the NPPF. 5. On this basis RHI would suggest that Rossington should be a focus for a larger proportion of housing development than currently proposed and the site South of Grange Road should be allocated or safeguarded for housing development to reflect this position/potential.

Summary:

Rossington Hall Investments (RHI) objects to the significant reduction on the overall housing requirement compared to the figure in Policy CS10 of the Core Strategy and on this basis consider the Local Plan not positively prepared as it fails to provide housing to meet the needs.  This is not sustainable and RHI object to the housing figure and seek adoption of the higher requirement (1230dpa) contained within the Core Strategy.  RHI seek greater recognition to the manner similar to that in the Core Strategy ‘Growth Town’ and the subsequent profile in the Settlement Audit and result in Rossington identified as a location for meeting for than just local housing growth. It should be the focus for a significantly larger percentage of economic-led housing growth which will allow the Local Plan to be positively prepared and effective. RHI considers the Local Plan fails to recognise the growth potential of Rossington and RHI consider that in order to capture the full benefit of the developments in and around Rossington the overall housing requirement for Rossington need to be raised substantially to 1500-1600. RHI consider that the site South of Grange Road Rossington should be removed from the Green Belt as it fails to meet any of the five purposes set out in para 134 of the NPPF and should be allocated or safeguarded for housing to reflect the potential/policy.
The Core Strategy will be replaced by the Local Plan and was a non-objectively assessed housing figure that originated from a previous Government’s national planning policy and pre dates the NPPF, having originally been identified in the Regional Spatial Strategy. The Standard Methodology figure derived a figure of 585 dwellings per annum for Doncaster which would be a 20 year plan period requirement of 11,700 and not 18,400 that the Representation quotes. This requirement is the result of a significant (nearly 40%) uplift to the Standard Methodology figure to a plan period requirement of 920 dpa or 18,400 homes in total and is therefore positively prepared. It is not clear of evidenced therefore why the Representation feels that housing supply is now being restricted and part of the reason for having to withdraw the previous Development Plan (Sites & Policies DPD) was due to it being a follow-on from the Core Strategy which, as before, was a non-objectively assessed and therefore non-NPPF compliant housing requirement which was made clear by the courts in 2012. The Local Plan’s identification of Rossington as a Main Town makes clear the settlements performance as one of the Borough’s most sustainable and larger settlements. The Policy and settlement’s housing requirement does assign economic-growth-led housing (up to 559 dwellings) to the town in addition to local housing need (285 dwellings). There has been various competing calls for different settlements to have a “bigger slice of the cake” none of which amount to a more justified or coherent strategy.
Policy 3: Level & Distribution of Growth

Tests of Soundness: Positively prepared Justified

Pegasus Group

Chapter 4: Strategic Approach

The Gascoine Group Ltd

Policy 3: Level & Distribution of Growth

4.1 The policy is not sound as it is not positively prepared, justified, consistent with national policy or effective. Housing Requirement 4.2 Policy 3 of the Publication Draft of the Local Plan sets a target for at least 920 (net) new homes each year over the plan period 2015-2035 (18,400 homes in total) with sufficient land allocated to deliver the housing requirement. 4.3 This proposed level of housing growth remains unchanged since the draft policies consultation in 2018. Therefore, Pegasus continue to question whether this approach to meeting the needs for new homes demonstrates that the Plan is positively prepared and justified. The reasons for this remain as the previous representation: a) The Borough has a clear economic growth agenda - this is evidence in the draft Local Plan’s Vision and Objectives. Doncaster forms a key part of Sheffield City Region and target metrics produced independently for SCR LEP (note 1 - 1 Source: Target Metrics Sheffield City Region: Metro Dynamics, June 2017) identify the need for jobs growth of 1.0% p.a. if the City Region is to improve its performance relative to the UK. Given that Doncaster has seen employment increase either at or above the levels experienced by SCR since 1998, and in line with its positive growth aspirations, it does not seem unreasonable to expect the Borough to align with the City Region target and for jobs growth in the District to average 1.0% in the long-term. Long-term economic aspirations should be properly planned for within this land use plan, to facilitate these aspirations becoming a reality. The impact of this would be to increase housing requirements from the current OAN of 920dpa to 1,073dpa - an additional 153 homes per annum. b) Affordability ratios in Doncaster have changed little over the past decade (4.81 - Source: 2018 Affordability Ratio Data), suggesting that the housing ladder remains out of reach for a substantial part of the local population. Build rates will therefore need to be high in the long-term to address this issue. Housing completion data for the Borough from 2004/5 and 2017/18 shows that it is capable of delivering in excess of 1,000 units per annum. c) The Office for National Statistics (ONS) published variant household projections in December 2018. These considered a range of variant projections to assist users in examining future growth scenarios. At this stage a variant which includes higher household formation rates for younger adults (those aged 25 to 44 years) has not been provided. The ONS is currently considering how to robustly evidence this variant. This variant will be critical as evidence suggests that such households were unable to form as freely as previous generations (due to high house prices, less access to finance etc.). An increase in housing numbers in Doncaster will help ensure that supply is able to meet demand - especially from younger adult who move into the area. 4.4 The PPG states the Government will be supportive of authorities who wish to plan for growth. In addition, the PPG identifies other factors which need to be considered when determining the housing requirement. These include growth strategies, planned infrastructure, previous levels of delivery and recent assessments of need such as Strategic Housing Market Assessments (SHMA) where this suggests a higher need (PPG ID 2a-010). These are all important considerations in the context of Doncaster. 4.5 Table 4.1, below, identifies net completions over the 14-year period from 2004/5 to 2017/18. During this period delivery rates have averaged 1,013 net additional dwellings. Since the start of the plan period (2015) average delivery rates have been higher at 1,140 net additional dwellings. Setting the housing requirement nearly 100 dwellings per annum (dpa) lower than average levels of delivery over the previous 14 years and 220dpa lower than the plan period average, would be contrary to the ethos of the NPPF and the Government’s continued desire to boost significantly the supply and delivery of housing. 4.6 To assist in the determination of the appropriate housing requirement, three alternatives have been considered through the SA. These are; - Option 1: 920dpa and 481ha employment land; - Option 2: 585dpa and 103ha employment land; and - Option 3: 753dpa and 242ha employment land. 4.7 The SA identifies Option 1 as the preferred option as it will "...meet local need but also enable employment-led growth in accordance with the Sheffield City Region Plan, whilst providing a degree of flexibility?" (SA, para. 5.3.5). From the options considered it is agreed that this is the most appropriate. However, the Council has failed to consider an option which promotes a higher housing requirement than 920dpa. Given previous rates of delivery, identified in table 4.1 above, it is considered a figure in excess of 1,000dpa should have been considered as a reasonable alternative. 4.8 Following setting the housing target for the Local Plan Period, draft Policy 3 progresses to state: "For the purposes of calculating 5-year housing land supply, the requirement will be based on the Local Housing Need figure, as derived from the Standard Methodology, which will be reviewed and revised throughout the plan period in line with the latest household projections and affordability ratio. As such, the housing requirement is expressed as a range with the bottom of the range being the Local Housing Need figure and the top of the range being 920 dwellings per annum; 4.9 Pegasus have concerns regarding the Council’s proposed approach to calculating 5-year supply and the overall wording of Policy 3 in this regard. 4.10 Frist, Policy 3 sets a target for at least 920 (net) new homes each year over the plan period, but then when discussing the ‘range of housing need’ states that the top range of local housing need figure is 920dpa. Clearly, these two statements are contradictory to each other. 4.11 Second, we contend that the approach of Policy 3 in applying a lower housing need figure for
the purposes of calculating 5-year housing supply is contrary to the approach of Policy 3 in setting a minimum requirement. We would question how, in the context of the need to significantly boost housing supply, seeking to meet a figure significantly below the minimum housing target and previous levels of delivery could be considered to be a pro-active or positive approach. Bawtry Housing Distribution 4.12 Bawtry is identified as being one of Doncaster’s Service Towns and will contribute to the overall 10% split of total housing development alongside Askern; Auckley-Hayfield Green; Barnburgh-Harlington; Barnby Dun; Carkcroft and Skellow; Edlington; Finningley; Sportborough; and Tickhill. I refer to our objections to Policy 2 with regards the percentage split identified. 4.13 In the Case of Bawtry itself, the Publication Draft identifies a requirement for growth of 110 dwellings across the plan period. However, the Council propose to allocate only 90 dwellings in the settlement, split between sites with and without planning permission. This means that there is a 20-dwelling shortfall between the number of units allocated and the settlement target growth. Paragraph 16.194 of the Local Plan discusses this matter stating: “As at 1st April 2018, there are permissions for 54 dwellings on sites large enough to allocate through the Local Plan (5+ units remaining). An additional two relatively small allocations are made through the plan; one being a greenfield urban site and the other a greenfield extension on land formerly designated as Green Belt. These two sites have a combined capacity of 36 new homes and bring the settlement’s housing allocation up to 90 dwellings for the plan period, which is 20 units short of its requirement. Any additional allocations would require large urban extensions on land currently designated as Green Belt where it is not considered exceptional 240 [go to Contents] circumstances exist to remove further sites for such a small shortfall in the context of additional sources of housing supply in the town. For example, at April 2018 there are permissioned small sites (1-4 units) that total 14 new homes and there will be additional windfall development within the town throughout the plan period so confidence that the town's requirement of 105 new homes will have been met.” 4.14 As stated within Paragraph 16.194, the Council believe that meeting the 20-dwelling shortfall in Bawtry would require large urban extensions not appropriate for such a shortfall in the supply. Pegasus question the scale of the shortfall within Bawtry due to our comments relating to the housing requirement and distribution. Furthermore, the site at Land West of Bawtry Hall could accommodate some of this growth without large scale changes to the Green Belt. 4.15 Paragraph 16.194 suggestion to overcome the shortfall is that the remainder of the need can be met through windfall development in the settlement across the plan period. This statement is however contrary to the subtext of Policy 6: Housing Allocations (Strategic Policy), which at policy 4.83 states: “The allocated supply has not been reduced to make allowance for windfalls and so all windfalls will be additional land supply to meet the plan period requirement.” 4.16 Despite this statement, it is clear that the Council have reduced the allocated supply to make allowance for windfalls in Bawtry. We believe this approach is flawed and additional allocations should be made to meet the required shortfall rather than relying upon windfall development. 4.17 Pegasus are concerned with any reduction or limitation on the housing target for a settlement purely on the basis that it is in a Green Belt location. The housing target for a settlement should be made to focus on the need to ensure the settlement can grow in a sustainable manner to support the local community and its population. Housing allocations, and Green Belt release, should then be made according to meeting that need.

Summary:

Policy 3: Level and Distribution of Growth Doncaster forms a key part of Sheffield City Region; its not unreasonable to expect the Borough to align with the City Region target and for jobs growth in the District to average 1.0% in the long-term. should plan for long term economic aspirations which will lead to an increase housing requirements from the current OAN of 920dpa to 1,073dpa Affordability ratios in Doncaster have changed little over the past decade, suggesting that the housing ladder remains out of reach for a substantial part of the local population. Build rates will therefore need to be high in the long-term to address this issue. Provides table of information on housing delivery 2004 to 2018. Option 1: 920dpa and 481ha employment land is preferred option in 5A to meet local need and enable employment led growth. Pegasus have concerns regarding the Council’s proposed approach to calculating 5-year supply and the overall wording of Policy 3 in this regard. Policy 3 sets a target for at least 920 (net) new homes each year over the plan period, but then when discussing the ‘range of housing need’ states that the top range of local housing need figure is 920dpa. Clearly, these two statements are contradictory to each other. Housing completion data for the Borough from 2004/5 and 2017/18 shows that it is capable of delivering in excess of 1,000 units per annum. council should not use lower housing need figure for the purposes of calculating 5-year housing supply is contrary to the approach of Policy 3 as it will not boost housing supply. using the lower housing need figure is not pro-active or positive. Paragraph 16.194 states meeting the 20-dwelling shortfall in Bawtry would require large urban extensions not appropriate for such a shortfall in the supply and remainder can be met by windfalls. statement is however contrary to the subtext of Policy 6. Pegasus question the scale of the shortfall within Bawtry due to comments relating to the housing requirement and distribution. Land West of Bawtry Hall could accommodate some of this growth without large scale changes to the Green Belt. additional allocations should be made to meet the required shortfall rather than relying upon windfall development. should focus on sustainable growth and not the reduction of a housing target figure based on greenbelt location. Housing allocations, and Green Belt release, should then be made according to meeting that need

Response:

Completions data from 2004 - 18 shows that 1,000dpa net has only been exceeded on three occasions (2015/16; 2016 - 17 & 2017 / 18). There have also been years where the figure is significantly below this. On average 2004 - 2018, 679dpa have been delivered in the borough. Although Bawtry falls short of its housing requirement, this is by a relatively small amount that could be made up by windfalls. There are no other suitable urban sites in this location, and there are not deemed to be any exceptional circumstances for further Green Belt release in this location. The Housing Topic Paper and Green Belt Topic Paper explains the approach further.
To allow participation in discussions regarding the settlement strategy, proposed housing requirement and distribution of development including site selection and allocations.

Exceptional circumstances can only be demonstrated where all other reasonable alternatives have been fully considered. No consideration appears to have been given to alternative distributions of housing growth that could reduce or eliminate the need for Green Belt to be released. It is entirely possible that, in the round, some other distribution of new homes would be more sustainable. The Sustainability Appraisal assessed four potential options for delivering the growth needs and aspirations of the Borough. This included 1. Core Strategy Approach; 2. Doncaster and Main Town Focus; 3. Greater Dispersal Strategy; and 4. Hybrid Option based on a combination of options 1 and 2. There was no option appraised of minimising the amount of Green Belt. 2.43 This matter was considered at length in the recent examination of the Cheshire East Local Plan Strategy. Like Doncaster, Cheshire East is partly constrained by Green Belt and partly not. By the end of the examination process, the number of new homes that were proposed for development in settlements surrounded by Green Belt was lower than it would have been without Green Belt being a constraint. For example, commenting specifically about Wilslow, the fourth largest settlement in the borough, the Inspector observed at paragraph 281 of his report (see Appendix 3) that: "The town does not have many potential brownfield sites and is tightly constrained by the Green Belt; the proposed amount of development is therefore less than proportionate to its size and population." (SEE EMAIL FOR Appendix) 2.44 In reaching his conclusion on the spatial distribution and Green Belt constraints, at paragraph 83 of his report the Inspector stated that: "I considered that the revised spatial distribution of development represents a realistic, rational and soundly-based starting point for the spatial distribution of development; it is justified by a proportionate evidence base and takes account of the relevant factors, including the crucial importance of the Green Belt and the outcome of other studies undertaken during the suspension period." 2.45 This sort of balancing exercise has not been carried out by Doncaster Council. Instead, conformity with the spatial distribution appears to have been used as a "trump card" which outweighs other Green Belt constraints. In his report on the Sites and Policies Development Plan Document, the Inspector observed that the Council had demonstrated "a lack of flexibility in its decision-making" when it came to site selection. This comment was aimed at the lack of consideration given to matters of flood risk - a short coming which the current Local Plan purports to have made some steps to address. However, the claimed increased focus on avoiding development in areas that are of a high risk of flooding has been replaced by an apparent disregard for the importance of protecting the Green Belt - that same "lack of flexibility" is being demonstrated again. 2.46 Exceptional circumstances can only be demonstrated where all other reasonable alternatives have been fully considered. Yet that has not been done. For example, Site 1013 in Auckley has not been assessed at all in the Local Plan process. As a site that is not in the Green Belt, that is not at risk of flooding, and that is sustainably located, it must be a reasonable alternative to releasing Green Belt. The Green Belt Background Paper includes a table of the Main Constraints of each settlement (paragraph 2.3.57). Of the 18 settlements, Auckley - Hayfield Green is the only settlement with 'no major constraints'. The other settlements all had main constraints identified, which primarily comprise of Green Belt and areas of high risk Flood Zones. 2.47 The Council refer in the Green Belt Background Paper at 3.3.42 that: "The view of the local planning authority is that flood risk is a physical constraint which can be a risk to life and property, whereas Green Belt is a planning tool, albeit an important one. Therefore, land at risk of flooding will be strictly avoided for allocations, whereas Green Belt can be considered where appropriate and ideally where the impact will be less great on the purposes of this designation." 2.48 While we do not disagree with the distinction between flood risk and Green Belt constraints, there is a lack of explanation for the Council's approach to identifying Green Belt locations within the Borough and a lack of analysis of alternative options in sustainable areas that minimise the need to release Green Belt. The Green Belt Background Paper goes on to state that the Local Plan is not overly dependent on the Green Belt to deliver its housing requirement. It states that only 1,002 dwellings or 7.6% (of the 15 year allocated requirement of 13,235), or 6.68% (of the 17 year requirement of 15,000) are proposed on land currently allocated as Green Belt. (paragraph 3.3.46). 2.49 Whilst the Local Plan may not be overly dependent on Green Belt and only allocates 1,002 dwellings on land currently in the Green Belt, there does not appear to be sufficient evidence that this is the minimal amount possible, nor is there any alternative appraisal of allocating sites on non Green Belt unconstrained sites. The Sustainability Appraisal ('SA') hasn't given consideration to an option of minimising the amount of Green Belt development. In fact the SA predicts that the appraisal of Option 4 (which is the preferred SA distribution option) "will have a greater impact on the openness of the Green Belt and countryside than Options 1 and 2" (SA Paragraph 5.2.29). 2.50 It is clear that all other reasonable options have not been considered, and the Council's exceptional circumstances have not been demonstrated. Whilst some development in the Green Belt may be required, the Council should use every effort to identify every alternative to ensure the amount of Green Belt required is minimised.
Summary:
Maintain that the council has not taken adequate account of development constraints when arriving at the distribution - particularly with the Green Belt. The council's approach is that the preferred housing distribution justifies that exceptional circumstances exist. In order to achieve distribution, Green Belt must be released. This does not constitute exceptional circumstances. No consideration has been given to alternatives which would reduce or eliminate the impact on the Green Belt. It's possible another distribution could be more sustainable. The options in the Sustainability Appraisal did not include an option for minimising the amount of Green Belt. The matter was considered in the Cheshire East Plan. Cheshire East is half Green Belt / half not. Not. By the end of the examination process, the number of new homes that were proposed for development in settlements surrounded by Green Belt was lower than it would have been without Green Belt being a constraint. Balancing such as that undertaken by Cheshire East has not been undertaken in Doncaster. The spatial strategy is a trump card which outweighs other Green Belt constraints. The council is showing the same lack of flexibility in this matter that it was criticised for doing in relation to flood risk by the previous inspector. Other reasonable alternatives have not been fully considered so exceptional circumstances cannot be demonstrated. Site 1013 has not been assessed at all in the Local Plan process. It is not Green Belt or flood risk, it is sustainably located and must be a reasonable alternative to Green Belt. The Housing Topic Paper admits the area is the only settlement with 'no major constraints', all others have either Green Belt or Flood Risk as a constraint. There is a lack of explanation of the Council's approach to identifying Green Belt locations and a lack of analysis of alternative options in sustainable areas to minimise Green Belt release. Although the Green Belt Topic Paper notes the council is not overly dependent on Green Belt, there is not sufficient evidence that the Green Belt to be allocated is the minimal amount possible and no assessment of unconstrained sites in non Green Belt areas. The SA has not considered an option of minimising Green Belt development and admits option 4 (preferred) has more impact on the Green Belt than 1 or 2. Not all reasonable options have been considered and exceptional circumstances have not been demonstrated. Some Green Belt sites may be required but every attempt should be made to find alternative sites.

Response:
The approach is explained in the Green Belt Topic Paper, which explores why the constraints the borough faces and its spatial strategy mean Green Belt release is necessary in some locations. This has only been done where exceptional circumstances exist, consideration has been given to alternative approaches, as the Topic Paper explores. Location of a site is not a sole exceptional circumstance, but forms part of the consideration with other factors. Doncaster Local Plan and its approach should be judged on its own particular local circumstances, a comparison to other area similarities does not consider the particular circumstances of each Local Plan. Site 1013 was assessed in detail (see Site Selection Methodology) and the Council produced a number of topic papers and evidence base for the publication version of the plan, covering the issues mentioned in detail. It is acknowledged balancing protecting the Green Belt with delivering a sound spatial strategy is difficult, however the alternatives to using Green Belt would effectively be large scale development in smaller and less sustainable locations to the south east of the borough, which is not in line with the preferred and consulted on approach.
2.57 The identified allocated sites in the Local Plan (Chapter 16) do not align with the proposed distribution of the housing requirement as outlined in Policy 3. Table 1 below overleaf a number of settlements where the allocations fall outside the proposed requirement ranges and service town and villages requirements. Settlement Hierarchy Tier In Local Plan: Doncaster Main Urban Area Constituent Towns: Contiguous built up area of Doncaster Town Local Plan Targets - No: 6805 - 7315 Local Plan Targets - %: Local Plan Allocations - No: 7441 Local Plan Allocations - %: TOTAL Local Plan Targets - No: Local Plan Targets - %: "At least 50%" Local Plan Allocations - No: 7441 Local Plan Allocations - %:46.2% Settlement Hierarchy Tier In Local Plan: Main Towns Constituent Towns: Adwick - Woodlands Local Plan Targets - No: 255-765 Local Plan Targets - %: Local Plan Allocations - No: 482 Local Plan Allocations - %: Constituent Towns: Armthorpe Local Plan Targets - No: 420-990 Local Plan Targets - %: Local Plan Allocations - No: 1049 Local Plan Allocations - %: Constituent Towns: Conisborough & Denaby Local Plan Targets - No: 465-975 Local Plan Targets - %: Local Plan Allocations - No: 528 Local Plan Allocations - %: Constituent Towns: Dunscliff, Dunscliffe, Hatfield & Stainforth Local Plan Targets - No: 575-1805 Local Plan Targets - %: Local Plan Allocations - No: 1968 Local Plan Allocations - %: Constituent Towns: Mexborough Local Plan Targets - No: 475-985 Local Plan Targets - %: Local Plan Allocations - No: 310 Local Plan Allocations - %: Constituent Towns: Rossington Local Plan Targets - No: 285-895 Local Plan Targets - %: Local Plan Allocations - No: 1219 Local Plan Allocations - %: Constituent Towns: Thorne & Moorsends Local Plan Targets - No: 510-1020 Local Plan Targets - %: Local Plan Allocations - No: 736 TOTAL Local Plan Targets - No: Local Plan Targets - %: "About 40%" Local Plan Allocations - No: 6292 Local Plan Allocations - %: 39.0% Settlement Hierarchy Tier In Local Plan: Service Towns and Villages Constituent Towns: Askern Local Plan Targets - No: 165 Local Plan Targets - %: Local Plan Allocations - No: 691 Local Plan Allocations - %: Constituent Towns: Auckley - Hayfield Green Local Plan Targets - No: 125 Local Plan Targets - %: Local Plan Allocations - No: 255 Local Plan Allocations - %: Constituent Towns: Barnburgh - Harlington Local Plan Targets - No: 60 Local Plan Targets - %: Local Plan Allocations - No: 66 Local Plan Allocations - %: Constituent Towns: Bamby Dun Local Plan Targets - No: Local Plan Targets - %:105 Local Plan Allocations - No: 104 Local Plan Allocations - %: Constituent Towns: Bawtry Local Plan Targets - No: 110 Local Plan Targets - %: Local Plan Allocations - No: 90 Local Plan Allocations - %: Constituent Towns: Carcroft - Skellow Local Plan Targets - No: 250 Local Plan Targets - %: Local Plan Allocations - No: 307 Local Plan Allocations - %: Constituent Towns: Edlington Local Plan Targets - No: 230 Local Plan Targets - %: Local Plan Allocations - No: 665 Local Plan Allocations - %: Constituent Towns: Finningley Local Plan Targets - No: 55 Local Plan Targets - %: Local Plan Allocations - No: 50 Local Plan Allocations - %: Constituent Towns: Sprotbrough Local Plan Targets - No: 95 Local Plan Targets - %: Local Plan Allocations - No: 80 Local Plan Allocations - %: Constituent Towns: Tickhill Local Plan Targets - No: 165 Local Plan Targets - %: Local Plan Allocations - No: 74 Local Plan Allocations - %: TOTAL Local Plan Targets - No: Local Plan Targets - %: "About 10%" Local Plan Allocations - No: 2382 Local Plan Allocations - %: 14.8% Table 1: Comparison of Publication Local Plan Housing Targets (Policy 3) and actual allocations in the Publication Draft. 2.58 The overall percentages of proposed allocations are broadly in alignment with the target (50% to Main Urban Area, 40% to Main Towns, and 10% to Service Towns and Villages). While the Service Towns and Villages proposed allocations are above the target 10%, the three Service Towns and Villages of Askern, Edlington, and Carcroft-Skellow account for 70% of the proposed allocations in this tier of the hierarchy. These three settlements were previously either Principal Towns or Renewal Towns in the Core Strategy with significant proportions of housing growth targeted for them. These three settlements receive allocations higher than the proposed Local Plan target (significantly so for the cases of Askern and Edlington). The over provision in the Service Towns and Larger Villages is directed to former Core Strategy higher order settlements that were expected to take a lot of growth. In relation to the proportion of development the Local Plan allocation distribution is not too dissimilar to the Core Strategy distribution.

Summary:
The distribution aligns with 50% MUA; 40% Main Towns and 10% Service Towns. However, in the Service Towns, Askern, Edlington and Carcroft - Skellow account for 70% of proposed allocations in this tier of the hierarchy. These were all previously principal or renewal towns in the Core Strategy with significant growth directed to them. These three receive allocations much higher than their housing growth (significantly so for Askern and Edlington). The distribution is therefore not too dissimilar from the Core Strategy where over provision is sent to the former higher order Core Strategy locations.

Response:
The settlements mentioned are the largest and most sustainable of the Service Towns and therefore have a larger allocation. Due to commitments they are able to deliver 70% of the overall amount of housing that will be delivered in this tier, but this does not prejudice other areas delivering their housing requirement, nor does it offset the requirement of other areas. By applying a cap once the number of dwellings delivered exceeds the target, it is ensured that other settlements in this tier will also largely meet their housing requirement. Of the 10% for the Service Towns, 53% of Service Town supply 2018 - 33 will be in these settlements, slightly above the collective target for the three of 47% overall based on their share of the baseline. This is explained further in the Housing Topic Paper.
2.39 We have a number of concerns regarding the distribution of the housing requirement set out in Draft Policy 3. The Settlement Background Paper 2018 was prepared in support of the previous informal Local Plan consultation and explains the distribution. It is however disappointing that an updated Topic Paper is not available until Plan Submission, which will explain "the distribution of housing to individual settlements and the issues relevant to each further, such as the influence of existing planning permission reducing the need for new allocations or impacts or impacts on constraints such as flood risk." This information should be available at Publication stage to allow representors a reasonable opportunity to comment on the Plan. 2.40 The Settlement Background Paper explains that the baseline housing requirement (minimum Standard Method) is distributed across the settlements based on their percentage of the Borough’s households. Aside from our objections to the lack of uplift above the Standard Method to the Service Towns and Larger Villages we maintain our disagreement with this rather simplistic way of distribution which does not factor in the sustainability of a settlement; or the ability of a settlement to deliver their minimum requirement quota. This distribution does not account for recent growth in an area which will then result in proportionately higher growth in the plan period, and disadvantages settlements that may not have grown in the past.

Response:

An update to the housing section was published for the 2019 consultation - Doncaster Housing Background and Strategy, and the employment section was also updated in the ELNA. The Housing Topic Paper 2020 covers the approach to housing in the Local Plan. The approach has been consulted on and was the preferred approach and method for distributing housing as equitably as possible whilst ensuring the most sustainable locations got larger shares - this has long been the established approach.
Comment:  
2.35 We object to Policy 3 only seeking to identify sufficient land to deliver 15 years’ supply of housing, when the plan period covers 20 years (2015 - 2035). Paragraph 22 of the Framework (2019) states that strategic policies: "should look ahead over a minimum 15 year period from adoption, to anticipate and respond to long-term requirements and opportunities." (our emphasis) 
2.36 There is no justification in the Framework for identifying land for only 15 years. Identifying housing for the full plan period would be in accordance with the Framework. Furthermore, Policy 3 seeks to facilitate the delivery of at least 481 hectares of employment land over the plan period, therefore the Local Plan should equally identify land to meet the housing requirement over the plan period. Policy 3 should seek to identify homes sufficient to deliver the housing requirement for the whole plan period, which would accord with all the soundness tests in the Framework. 
2.37 Paragraph 136 of the Framework is clear that where there is a need for Green Belt changes regard should be had for the intended permanence in the long term, so they can endure beyond the plan period. At present this authority is seeking Green Belt release in the Local Plan. Notwithstanding our comments on the appropriateness of the Green Belt release sites and the need to look at other suitable and sustainable sites ahead of Green Belt release, allocation of housing land for the full plan period should be identified to ensure that the any proposed Green Belt can benefit from the required degree of permanence. Identifying only 15 years’ worth of land risks a further Green Belt review ahead of the end of the plan period. 
2.38 It is considered that this approach fails the "consistent with national policy" soundness test.

Summary:  
Object to only 15 years worth of housing land being identified when the plan lasts 20 years. NPPF para. 22 states that policies should "look ahead over a minimum 15 year period from adoption, to anticipate and respond to long-term requirements and opportunities." No justification in the framework for identifying land for 15 years. Housing should be for the full plan period. 481 ha is allocated for employment over the plan period. Enough housing should be allocated to deliver the housing requirement over the plan period too to accord with soundness tests. Housing should also be identified across the whole plan period to ensure that the proposed Green Belt can benefit from the required permanence. 15 years identified risks a further Green Belt review in the plan period. The approach fails the consistent with national policy test.

Response:  
NPPF para. 67 notes that "Planning policies should identify a supply of: a) specific, deliverable sites for years one to five of the plan period; and b) specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15 of the plan." The Local Plan does that. The years 2015 - 2018 are demonstrably covered by delivered sites in that period, and the years 2033 - 35 are demonstrably covered by sites that will deliver beyond 2033, and oversupply in settlements in the years 2018 - 33. Enough housing is being provided and identified to cover the 20 year period. This is covered in the Housing Topic Paper. The Green Belt approach is covered in the Green Belt Topic Paper.
2.17 The net annual housing requirement has not altered since the September 2018 informal consultation on Draft Policies and Proposed Sites, therefore comments made on behalf of SLG remain relevant and are repeated in part in this section. Firstly, though, it is worth considering the national policy basis for establishing housing targets. 2.18 Paragraph 60 of the NPPF provides the starting point for the assessment of housing targets. It is clear in noting that the standard methodology determines the "minimum number" of homes needed in an area - not the maximum. This paragraph is also clear that "an alternative approach" to calculating the minimum number of homes can only be used in "exceptional circumstances." That is, however, distinct from stating that exceptional circumstances are required to set a housing target above the standard method-produced minimum requirement - they are not. 2.19 In fact, national policy supports Councils pursuing higher housing targets than the minimum requirement produced by the standard method, especially where that is intended to stimulate economic growth or regeneration. Some of the relevant national policies follow. 2.20 NPPF paragraph 16 is very clear in noting that Development Plans should be prepared with the objective of contributing to the achievement of sustainable development and must be prepared positively, in a way that is aspirational but deliverable. 2.21 NPPF paragraph 72 notes that in seeking to identify land for the potential delivery of homes, particularly large-scale developments, Local Planning Authorities should ‘consider the opportunities presented by existing or planned investment in infrastructure, the area’s economic potential and the scope for net environmental gains’. 2.22 NPPF paragraph 80 confirms that ‘planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development’. Paragraph: 010 Reference ID: 2a- 010-2010220 of the Planning Practice Guidance provides further detail on the use of the standard method and is worth quoting at length. It confirms that: ‘the Government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides a minimum starting point in determining the number of homes needed in an area. It does not attempt to predict the impact that future government policies, changing economic circumstances or other factors might have on demographic behaviour. Therefore, there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicates. This will need to be assessed prior to, and separate from, considering how much of the overall need can be accommodated (and then translated into a housing requirement for the strategic policies in the plan). Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: - growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth (e.g. Housing Deals); - strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; or - an authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground;’ 2.23 For the Local Plan to be sound, the economic growth strategy must be “deliverable over the plan period” - as per paragraph 35 (c) of the NPPF. If that growth strategy is deliverable, it is explicitly one of the circumstances in which the Council may seek to pursue a higher housing target. If the Council’s ‘strong ambitions for economic growth are to be realised, it is essential that a reflective housing target is pursued which in itself will create construction jobs, increase retail spending and thus employment and produce various other local economic spin off benefits, as well as providing a suitable supply, distribution and quality of homes to attract and retain workers, particularly for higher paid/skilled positions. The advent of the standard method does not change that. 2.24 Policy 3 requires at least 920 (net) new homes each year over the plan period and seeks to identify sufficient land to deliver at least 15 years supply. We have concerns with the quantum, the distribution and the reference to allocating sufficient land to deliver 15 years’ supply of housing, rather than the full plan period requirement. 2.25 The 920 per annum figure was originally calculated in the 2015 Housing Needs Assessment, and has been further justified by the Peter Brett Associates Economic Forecasts and Housing Needs Assessment, 2018 (PBA Report). 2.26 There remain a number of outstanding objections to the original 2015 Housing Needs Assessment with critics stating that the housing requirement is too low for reasons including of lack of adjustment to improve affordability, over reliance on bringing empty homes back into use and a poor record of delivery resulting in pent up demand. 2.27 The PBA Report 3 requires at least 920 (net) new homes each year over the plan period and seeks to identify sufficient land to deliver at least 15 years supply. We have concerns with the quantum, the distribution and the reference to allocating sufficient land to deliver 15 years’ supply of housing, rather than the full plan period requirement. 2.28 The 920 per annum figure was originally calculated in the 2015 Housing Needs Assessment, and has been further justified by the Peter Brett Associates Economic Forecasts and Housing Needs Assessment, 2018 (PBA Report). 2.29 Dismissing the 1,073 dpa requirement under the PBA Report at paragraph 4.37 states: “It is often asserted that the ‘future jobs’ uplift should be based on policy-led targets, and specifically on Strategic Economic Plans. In the case of Doncaster, we have estimated that this would increase housing need to 1,073 dpa. But in our view this is not the correct measure of objectively assessed need, because in line with the Framework and Guidance the OAN should be based on realistic expectation of future jobs rather than aspiration, and the Guidance specifies that the aspirations of Strategic Economic Plans should not be treated as part of the development plan.”
Local Plan which accord with the Sheffield City Region growth aspirations. That is contrary to the Framework which, at paragraph 81(a), states that planning policies should: “set out a clear economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to Local Industrial Strategies and other local policies for economic development and regeneration.” 2.30 The Council’s approach identifies a range for housing requirements in the Main Urban Area and Main Towns with the lower of the range equating to the Local Housing Need identified using the Standard Method and the top of the range being the 920 figure identified in the 2015 Housing Needs Assessment. It is not considered justified to limit the growth to the top end of the range, when there is clear evidence of a higher jobs-led housing need of 1,073 dpa. Failing to plan to deliver that higher housing target means the economic strategy in the Local Plan - on its own terms - is not deliverable and is therefore not sound. Nor can the Plan be considered positively prepared. The policy should make it clear that the 920 dpa (or the alternative 1,073 dpa) is a minimum target. Nor is it considered appropriate to fix the lower end of the range to the Standard Method figure when the Council’s own evidence justifies an uplift. The Standard Method identifies a minimum housing need figure rather than an actual housing requirement figure. The minimum Standard Method has been applied to Service Towns and Larger Villages, without any uplift. We do not consider this a sound approach, the figure is too low and accounts for no uplift when the Council’s own evidence identifies it is appropriate to increase the requirement above that identified by the Standard Method. 2.31 Concerns with the Standard Method approach to identifying housing need have been well documented ever since the Government first proposed the approach in September 2017. Indeed the RTPI commented on the Standard Method when it was first proposed, stating that: “The government’s proposals for a new method to calculate local housing need would ‘entrench’ existing housebuilding patterns and does not consider employment projections or growth aspirations, the RTPI has said, to the agreement of several organisations.” 2.32 The Standard Method results in a clear north south divide in identifying housing need, with the south seeing significant increases in housing need and the north seeing the opposite, with significant reductions in identified housing need. This is as a result of the Standard Method being calculated based on past demographic trends. Going forward, the Standard Method dampens housing markets in the north, with its simplified methodology not allowing the past trends to be reversed. 2.33 As stated, the concerns with the Standard Method are well documented, not just in relation to the north south divide, but also due to the overall output of the Standard Method not reaching the Government’s target of 300,000 new homes a year. The Governments policy objective of reaching 300,000 homes a year remains. The Government in February 2019 committed to review the Standard Method over the next 18 months, therefore a new Standard Method could be in place by Summer 2020. 2.34 The PBA Report pointed out that the Council should review the housing requirement which was suggested prior to Government’s commitment to review the Standard Method. Policy 3 makes reference to the Standard Method being the housing requirement for the purposes of calculating the 5-year housing land supply, which will be reviewed and revised over the plan period. This therefore accounts for changes in the Standard Method. Policy 3 however does not make the same point in relation to the housing requirement.

Summary:
The standard methodology determines “minimum number” not a maximum (para. 60), with an alternative only being used in “exceptional circumstances”. This is distinct from stating that exceptional circumstances are required to set a housing target above the standard method-produced minimum requirement - they are not. National policy supports the council pursuing higher housing targets than the minimum produced by the standard method (para. 16; 72 & 80). For a plan to be sound, the economic strategy must be deliverable over the plan period (para. 35c of the NPPF). If that growth strategy is deliverable, it is explicitly one of the circumstances in which the Council may seek to pursue a higher housing target. If the Council’s ‘strong ambitions’ for economic growth are to be realised, it is essential that a reflective housing target is pursued which in itself will create construction jobs, increase retail spending and thus employment and produce various other local economic spin off benefits, as well as providing a suitable supply, distribution and quality of homes to attract and retain workers, particularly for higher paid/skilled positions. The standard method does not change that. Policy 3 requires at least 920 (net) new homes each year and seeks to identify sufficient land to deliver at least 15 years supply, Concerns about the quantum, distribution and lack of supply for the whole plan period. 920 stems from the 2015 HNA and was further justified by the PBA report. There are a number of objections to the 2015 HNA with criticism that the housing requirement is too low for reasons like lack of adjustments to improve affordability, over reliance on empty home re-use and poor delivery creating pent up demand. The plan period has now changed and a more up to date standard methodology figure is available. It would be expected that the PBA report is updated to align with the publication draft. Para. 4.37 of the PBA report dismisses the 1,073 figure. This undermines the growth focussed aspirations of the Local Plan which accord with the SCR. This is contrary to NPPF para. 81(a). It is not considered that limiting growth to the top of the range (920) is justified when there is evidence of a higher jobs led need of 1,073 dpa. Failing to deliver the higher housing target means the economic strategy, in its own terms, is not deliverable and is unsustainable. The plan cannot therefore be positively prepared. 920 or 1,073 should be the minimum and the plan should make that clear. Nor should the lower end be fixed to the standard method when the councils own evidence justifies an uplift. Not sound to apply the minimum number to the service towns and villages as it is far too low and accounts for no uplift despite the council’s evidence justifying the uplift. Concerns with the standard method are well documented, and the RTPI had objections and doubts: “The government’s proposals for a new method to calculate local housing need would ‘entrench’ existing housebuilding patterns and does not consider employment projections or growth aspirations, the RTPI has said, to the agreement of several organisations.” The method creates a north south divide and dampens northern housing markets. The Standard Method would also not allow the government target of 300,000 new homes to be met, and they have committed to reviewing the standard method, and so a new one could be in place by Summer 2020. The PBA Report pointed out that the Council should review the housing requirement which was suggested prior to Government’s commitment to review the Standard Method. Policy 3 makes reference to the Standard Method being the housing requirement for the purposes of calculating the 5-year housing land supply, which will be reviewed and revised over the plan period. This therefore accounts for changes in the Standard Method. Policy 3 does not make the same point in relation to the housing requirement.

Response:
The council is planning for 920dpa, which is 57% higher than the Standard Methodology figure. Although the 2015 HNA and 2018 PBA report result in the same figure, they were arrived at independently of each other and via different methods. The Peter Brett report superseded the housing requirement of the HNA, and the 2019 Housing Needs Assessment replaces other elements of this work. It is unnecessary to further update the Peter Brett Report, but the extended plan period has been factored in to housing calculations. The report clearly states the figure of 1,073 is related to the previous NPPF and not the revised NPPF, and 912dpa is correct as per the new NPPF (para. 5.27 & 5.28). These paragraphs also explain the Council could choose an intermediate number between 585 and 912, which the Council has elected not to do, in favour of retaining the higher figure. The NPPF instructs Council’s to use the Standard Methodology Figure (para. 60) to work out the minimum requirement. The Council has done this and has met the requirements on national policy.
### Tests of Soundness

</table>
| Policy 3: Level & Distribution of Growth | Justified          | To allow participation in discussions regarding the settlement strategy, proposed housing requirement and distribution of development including site selection and allocations. | Attend Hearing | Need for Safeguarded Land, the background paper states at paragraph 3.3.10 that: "Whilst currently in its relative infancy, if the ambitions for the airport are realised, the adjacent settlement of Auckley - Hayfield Green, which is a Service Town and Village and has a modest housing target of 125 dwellings in the current local plan, may in future be viewed as a more sustainable location for growth in an area unconstrained by both Green Belt and flood risk."

### Summary:

No economic uplift is attributed to the Service Towns and Villages. This fails the justified soundness test as the Council have not considered an appropriate alternative. This means no additional housing is allowed in Service Towns and larger villages, for example those well located to Doncaster Sheffield Airport - a key driver of economic growth in the borough. Auckley is close and has no constraints. The airport will create an aerotropolis which could create 73,000 new jobs for the Sheffield City Region, which could create 73,000 new jobs for the Sheffield City Region. A new railway station is also proposed a few minutes from Auckley. Whilst it is acknowledged that the Local Plan includes a specific Airport Policy (Policy 7) it seems logical to include an element of economic uplift to Auckley, which the existing proposed distribution strategy does not allow for. This is a flaw in the settlement hierarchy which restricts the distribution of housing. Flexibility is required to allow for economic uplift not to be restricted just to the Main Urban Area and Main Towns. 2.53 The Local Plan clearly recognises the importance of the Airport in the Local Plan. The airport is a main driver for growth in the Borough and indeed the Local Plan includes a strategic policy specifically related to the Airport and Business Park (Policy 7) to assist in the achievement of its expansion goals. According to Policy 4 (Employment Allocations), of the 365 ha of overall employment land (excluding land developed between 2015 - 2018) some 23% (84.7ha) is located at the Airport. Of the identified employment allocations in the Local Plan (Table 4) 34.1% of the land available for employment use is at the Airport, and 41.8% of the employment land to be developed in the plan period is at the Airport. 2.54 Given the Airport's clear influence on the economic growth of the Borough, there is a strong and logical case for additional dwellings to be directed to this part of the Borough to support that growth. Whilst it is recognised that Policy 7 includes the provision of an additional Airport Reserve Housing Site there are suitable, sustainable sites in close proximity to the Airport that are unconstrained by Green Belt or Flood Risk that could be allocated for housing to align with the economic growth focus in this part of the Borough. The spatial distribution of the housing requirement should account for the Airport's influence and the proximity of unconstrained available development sites to the Airport. This alternative option has not been considered by the Council. 2.55 The justifiable need to identify additional land close to the Airport to align with the Airport's growth, coupled with the appropriate consideration of Auckley as a standalone Larger Village within the Service Towns and Larger Villages settlement hierarchy tier makes a strong case for the allocation of land in Auckley above even that required to meet local need. 2.56 The Green Belt Background Paper recognises the potential for Auckley - Hayfield Green as a sustainable location for growth. In the context of justifying no need for Safeguarded Land, the background paper states at paragraph 3.3.10 that: "Whilst currently in its relative infancy, if the ambitions for the airport are realised, the adjacent settlement of Auckley - Hayfield Green, which is a Service Town and Village and has a modest housing target of 125 dwellings in the current local plan, may in future be viewed as a more sustainable location for growth in an area unconstrained by both Green Belt and flood risk."
Response:
The approach has been consulted on and the position is further explained in the Housing Topic Paper. The outcome of consultation was that people did not feel employment had to be located adjacent to housing if it was still accessible. Auckley - Hayfield Green are defined as one settlement which reflects the Parish and Neighbourhood Plan boundary. With regards to the settlement specifically, the actual amount of housing that will be delivered there due to commitments, and the potential additional housing as per Policy 7 within the plan period is 255 units (130 above its allocation), with 280 additional units at site 940 (535 total), plus the potential for a further 920 units linked to the delivery of jobs (factoring in share for the aforementioned 280). This is 1,455 potential units in total, which would be on the levels of a Main Town were the settlement to qualify as a Main Town, which it does not as per the methodology.
Table 5 summary of housing requirements presented on Page 44 indicates that 920 new residential properties are required to be built in Doncaster per annum between 2015 and 2035 giving a total requirement of new homes to be built between 2018 and 2033 of 13235 homes. Based on the assumption of 3 persons/residence this means an anticipated growth in the Doncaster population between 2018 and 2033 of 39705. The Doncaster State of the Borough report produced by DMBC indicates the population of Doncaster in 2018 is 308,940 therefore based on the assumed additional housing required in the proposed Plan the population of Doncaster is set to increase by 12.85% by 2033. The DMBC State of the Borough Report states the population of Doncaster has increased by 2.5% between 2010 and 2018 and is predicted to increase by a further 2.7% between 2019 and 2041. Based on this population increase the population of Doncaster will increase to 317281 an increase of 8341 persons over a 22 year period. Assuming 3 people per property only 2780 additional properties are required between 2019 and 2041 to accommodate the increased population. This is substantially lower than the 13325 homes the Local Plan indicates are required between 2018 and 2033. In my experience there is currently no shortage of properties in Doncaster for people to buy or rent (both private and council). I have several work colleagues who have obtained council rental property within 6 months of application. The above indicate to myself that the increase in residential properties in Doncaster proposed by the plan is neither justified or effective. With regard to plots 165 and 186 at Crabgate Lane, Skellow I would comment as follows. - Current population of Skellow and Carcroft is approximately 9000. The Local plan indicates than an additional 250 residential properties are required in this Service Town/Village tier by 2033. Assuming an occupation rate of 3 persons/property this indicates the population of Skellow and Carcroft will increase by 750 by 2033 which is an 8.3% increase. This is significantly greater than the 2.7% in the DMBC 2018 State of the Borough report. - A 2.7% increases by 2041 represent an increase in the population of Skellow and Carcroft by 2041 of 243 persons. Making an adjustment or the population increase to 2033, say reduce by 7/22 (that is 7 years) the population increase by 2033 is likely to be 166 persons. Assuming 3 persons/residence then only an additional 55 houses are required in Skellow and Carcroft by 2033 of which 7 already have planning permission see Table H1m page 241. The proposal to build an additional 300 houses on plots 165 and 186 therefore cannot be justified and is an ineffective use of green belt land. The effect of 300 additional houses on the existing traffic, education, medical and community systems/facilities in the Skellow and Carcroft area have not been considered in the report, some vague reference is made to the developer contributing to the additional educational facilities required. In the current climate of concerns about global warming and concerns over food supplies following Brexit the taking of green belt agricultural land for large scale development cannot be justified and is an ineffective use of land. Surely 55 properties i estimate that will be required between 2015 and 2033 are better provided by small infill developments in batches of say 10 properties the construction of which will have minimal detrimental effect on adjacent neighbourhoods. The flood risk on other areas has also been overemphasised in the report. Buildings can be designed and constructed to take account of flood risk and small developments can be sited in areas away from high flood risk areas. It appears that the development areas have been selected to provide large areas of green belt land which will be attractive to developers and have minimal construction issues to maximise profit. Surely in these days of environmental concern and loss of habitat for wildlife this cannot be justified. Development of agricultural land also increases flood risk which with concerns over more extreme weather events due to global warming cannot be justified. When the Development Plan was developed by DMBC it seems to have been based on incorrect population increase data. It seems to have been produced using an assumption that people will be attracted to live in Doncaster from outside the area. This may be true for some areas such as the south side of Doncaster where the housing quality and general environment is if a higher standard however this in unlikely to be the case for the old pit villages around Doncaster, these are generally the Service towns and villages referred to in the Development Plan. These areas tend to be unattractive to people wishing to move into the DMBC area especially people of higher earning potential. People living in Skellow and Carcroft currently and in the future are likely to remain as people who are born and bred in the area with little increase from outside DMBC. The Development Plan assessment of 250 new properties in Skellow and Carcroft by 2033 is therefore not justified and an ineffective use of green belt land in the area. Based on the assumption of 3 people per house, 13,235 new homes over the plan period equates to population growth of 39,705 people, or an increase of 12.8% from the 308,940 residents which are reported in the 2018 State of the Borough report. The State of the Borough report actually states population will only increase by 2.7% to 2041, to 317,281 and therefore an increase of 8341 people over 22 years. Assuming 3 people per property, only 2,780 dwellings are therefore needed to accommodate the population - far lower than 13,235. Do not believe there is a shortage of properties in Doncaster to buy or rent, knows of people who have obtained council properties quickly. Regarding Site 165 / 186 specifically: applying the logic of 3 people per property, the 250 homes proposed equates to 750 people, or an 8.3% increase in the population of Carcroft - Skellow - significantly greater than the State of the Borough report (2.7%). 2.7% by 2041 is 243 persons. Making an adjustment to 2033 (7 / 22 or a reduction of 7 years) shows population increase would only be 166 people, and again if applying the 3 people per house rule then only 55 dwellings are needed, of which 7 already have permission. Proposals are not an effective use of Green Belt and unjustified. Will result in impacts on traffic congestion, schools, doctors and community facilities in the area. These are not considered and developer contributions are vague. With global warming and brexit a concern, agricultural land should not be lost and the loss is not justified. 55 units would be better delivered on small infill developments of approx 10 units each. Flood risk in other areas has been overemphasised in the report. Buildings can be
developed such land increases flood risk, which is also increased by global warming. The plan assumes that people will be attracted from outside Doncaster to live in Doncaster. This may be true in the south of the borough but is unlikely in old pit villages, especially to people with higher earning potential. People in Carcroft - Skellow are likely to remain as people who have always lived there. The site and the level of new housing proposed is therefore not justified.

Response:
The number of houses required to match and meet the requirements of the Borough’s population has been calculated and explained in the Peter Brett’s Report. As Carcroft will only deliver to meet it’s local need, it’s share of the baseline / local needs (that which would happen without policy intervention / an economic uplift) is all that is allocated here (250 dwellings over the plan period). A suitable site has been found which is not in the flood zone (as much land is in Carcroft), and which has been assessed in the Green Belt Review as having a moderately strong case for removal from the Green Belt, which also meets the settlements housing requirements. In this case, it is felt the incursion into the Green Belt is therefore justified by exceptional circumstances, as set out in the Green Belt Topic Paper.

| Comment: |
| At least 481 hectares of employment land and at least 920 (net) new homes each year are proposed over the plan period 2015-2035. That equates to 18,400 homes in total over the 20 year plan period. It is key that there is flexibility built into the Plan with regard to housing numbers and future development opportunities. This is to ensure that housing need and demand is met throughout the Plan period. It is therefore vital that the proposed housing figure is a minimum figure, rather than viewed as a cap and a restriction to new development. As required by the NPPF, the emerging Local Plan must define the overall level of growth over the Plan period (up to 2035), based on the requirement to meet the Borough’s objectively assessed needs (OAN). Determining the OAN for housing is usually assisted by the Strategic Housing Market Assessment (SHMA). We support the approach proposed by the Council to meet at least 920 dwellings per annum due to the fact that, as highlighted by the Home Builders Federation, the standard method could have implications for housing targets in some areas of the country (principally in the north of England), where economic growth strategies may not be supported by local authorities that plan for the minimum number of additional dwellings as indicated by the standard methodology. By only using the proposed methodology it could lead to the Borough not planning enough homes to support the economic growth strategy. If the Council does not seek to meet the most appropriate level of development needed it is considered that the Borough would suffer significantly from out-migration, reduced / limited employment opportunities and have a detrimental impact on the existing supply of local services and facilities. This goes against the strategic Vision, Strategy and Objectives of the Plan and would therefore be unsound as the plan would not have been planned positively. We therefore support the proposed level of growth of the Borough over the Plan period. |

Summary:

It is key that there is flexibility built into the Plan with regard to housing numbers and future development opportunities. It is therefore vital that the proposed housing figure is a minimum figure. Support the approach proposed by the Council to meet at least 920 dwellings per annum due to the fact that, as highlighted by the Home Builders Federation, the standard method could have implications for housing targets in some areas of the country (principally in the north of England), where economic growth strategies may not be supported by local authorities that plan for the minimum number of additional dwellings as indicated by the standard methodology. By only using the proposed methodology it could lead to the Borough not planning enough homes to support the economic growth strategy.

Response:

The Council has used the Standard Methodology figure of 585 and then increased its housing requirement to 920 dpa, as set out in the Economic Forecasts and Housing Needs Assessment (Peter Brett Associates, May 2018). This is a substantial increase which demonstrates positive, effective planning. No change needed.
Policy 3: Level & Distribution of Growth

2.16 The Council set out within the Housing Need Assessment that they have a programme in place which includes a team of dedicated officers focused on tackling empty homes and preventing homes becoming empty. They aim to bring these homes back into use and as a result of this the housing requirement should be reduced to reflect this. We would question the validity of this approach and given the uncertainty which surrounds the compulsory purchase of property, this shouldn’t lead to the reduction in the housing requirement. 2.17 Policy 3 explains that, using the Government’s Standard Housing Methodology as a starting point, national projections identify a housing need in the Borough for 585 homes per year (baseline growth) over the plan period (8,775 homes). In addition, to meet planned economic growth over the plan period, an additional 327 homes per year (economic growth) is identified. This gives a total objectively assessed housing need (OAHN) of 912 new homes (net) per year for the Borough once economic growth is taken into account. 2.18 Table 3 at paragraph 4.39 of the Publication Local Plan, sets out the Settlement Hierarchy and Distribution of Proposed Housing. Paragraph 4.40 explains that Local need (baseline) housing growth (approximately 8,775 homes) is distributed pro-rata to all settlements with a ‘service function’ to meet locally the housing growth needs of the existing population. The balance of the local need figure (that which relates to villages without a service function) is 632. That figure has then been added to the economic-led housing growth element for distribution to higher order settlements in the Borough rather than spread pro-rata. Our Client’s concern is that those villages that don’t have 4 or more of the 12 key services will lose out on any form of housing allocation and as a result they will stagnate over the plan period. 2.19 For example the balance of the number of dwellings that would otherwise have been allocated to these villages that don’t have a service function is proposed to be added to the economic-led housing allocation i.e. the main urban areas and 7 main towns. Our Client objects to this approach as it may require Green Belt release in settlements such as Bawtry. This figure should be distributed evenly across all levels of the settlement hierarchy. In Bawtry for example this would result in an allocation of 215 houses as opposed to the 110 listed in Policy 3. 2.20 Our Client objects to this approach which further limits the housing allocation to smaller settlements. 2.21 Our Client has serious concerns and objects to the way in which the five year housing land supply has been calculated in that it ignores the need to meet planned economic growth over the plan period as identified through the Housing Needs Assessment; there is nothing in planning policy that advocates that approach. 2.22 In summary, Policy 3 is unsound and does not meet the tests of soundness set out in paragraph 35 of the Revised Framework. The policy is not justified, effective or positively planned and should be revised.

Summary:
Policy 3 - Level and Distribution of Growth 1. Objects to reducing the housing figure by including programme to bring empty homes back into use. Question validity of this approach - this should not lead to a reduction in the housing requirement. 2. Objects to distribution of housing. Should be more evenly spread. Concerned that some villages will stagnate without a housing allocation. 3. 5 year land supply - objects to method of calculation. It ignores the need to meet planned economic growth as identified in the Housing Needs Assessment; there is nothing in planning policy that advocates that approach. 4. Policy 3 is not compliant with NPPF para 35 therefore is not justified, effective or positively planned.

Response:
See Response to Representations comments to Policy 2. PPG supports the principle of being able to set the requirement as a range. NPPF is clear that Planning decisions should be taken following a plan-led approach. The Council could have just adopted the standard methodology figure as the Local Plan housing requirement in the first instance but have resisted such an approach and instead are planning for a very significant uplift for our ambitions for growth and this is reflected in the scale of allocations proposed. That said, the vast majority of this ambition needs to be delivered by the development industry and the market which may struggle to continue to meet such a high target. The Council has relatively little role to play post Planning decisions being granted in terms of actual housing delivery. Losing control of 5YHLS in this context therefore undermines the key policy objective of having a plan-led approach rather than the presumption that would be applied if 5YHLS cannot be demonstrated.
2.15 Our Client has serious concerns regarding the Council’s methodology which has been used to calculate the housing target of 920 dwellings per annum over the plan period 2015 - 2035. 2.16 The Council set out within the Housing Need Assessment that they have a programme in place which includes a team of dedicated officers focussed on tackling empty homes and preventing homes becoming empty. They aim to bring these homes back into use and as a result of this the housing requirement should be reduced to reflect this. We would question the validity of this approach and given the uncertainty which surrounds the compulsory purchase of property, this shouldn’t lead to the reduction in the housing requirement. 2.17 Policy 3 explains that, using the Government’s Standard Housing Methodology as a starting point, national projections identify a housing need in the Borough for 585 homes per year (baseline growth) over the plan period (8,775 homes). In addition, to meet planned economic growth over the plan period, an additional 327 homes per year (economic growth) is identified. This gives a total objectively assessed housing need (OAHN) of 912 new homes (net) per year for the Borough once economic growth is taken into account. 2.18 Table 3 at paragraph 4.39 of the Publication Local Plan, sets out the Settlement Hierarchy and Distribution of Proposed Housing. Paragraph 4.40 explains that Local need (baseline) housing growth (approximately 8,775 homes) is distributed pro-rata to all settlements with a ‘service function’ to meet locally the housing growth needs of the existing population. The balance of the local need figure (that which relates to villages without a service function) is 632. That figure has then been added to the economic-led housing growth element for distribution to higher order settlements in the Borough rather than spread pro-rata. Our Client’s concern is that those villages that don’t have 4 or more of the 12 key services will lose out on any form of housing allocation and as a result they will stagnate over the plan period. 2.19 For example the balance of the number of dwellings that would otherwise have been allocated to these villages that don’t have a service function is proposed to be added to the economic-led housing allocation i.e. the main urban areas and 7 main towns. Our Client objects to this approach as it may require Green Belt release in settlements such as Bawtry. This figure should be distributed evenly across all levels of the settlement hierarchy. In Bawtry for example this would result in an allocation of 215 houses as opposed to the 110 listed in Policy 3. 2.20 Our Client objects to this approach which further limits the housing allocation to smaller settlements. 2.21 Our Client has serious concerns and objects to the way in which the five year housing land supply has been calculated in that it ignores the need to meet planned economic growth over the plan period as identified through the Housing Needs Assessment; there is nothing in planning policy that advocates that approach. 2.22 In summary, Policy 3 is unsound and does not meet the tests of soundness set out in paragraph 35 of the Revised Framework. The policy is not justified, effective or positively planned and should be revised.  

Summary:  
Policy 3 - Level and Distribution of Growth 1. Objects to reducing the housing figure by including programme to bring empty homes back into use. Question validity of this approach - this should not lead to a reduction in the housing requirement. 2. Objects to distribution of housing. Should be more evenly spread. Concerned that some villages will stagnate without a housing allocation. 3. 5 year land supply - objects to method of calculation. It ignores the need to meet planned economic growth as identified in the Housing Needs Assessment. 4. Policy 3 is not compliant with NPPF para 35 therefore is not justified, effective or positively planned.  

Response:  
See Response to Representations comments to Policy 2. PPG supports the principle of being able to set the requirement as a range. NPPF is clear that Planning decisions should be taken following a plan-led approach. The Council could have just adopted the standard methodology figure as the Local Plan housing requirement in the first instance but have resisted such an approach and instead are planning for a very significant uplift for our ambitions for growth and this is reflected in the scale of allocations proposed. That said, the vast majority of this ambition needs to be delivered by the development industry and the market which may struggle to continue to meet such a high target. The Council has relatively little role to play post Planning decisions being granted in terms of actual housing delivery. Losing control of SYHLS in this context therefore undermines the key policy objective of having a plan-led approach rather than the presumption that would be applied if SYHLS cannot be demonstrated.
Housing

Concerns with the overall requirement:

2.9 The net annual housing requirement has not altered since the September 2018 informal consultation on Draft Policies and Proposed Sites, therefore comments made on behalf of Mr and Mrs Hall remain relevant and are repeated in part in this section. 2.10 Policy 3 requires that at least 920 (net) new homes each year over the plan period and seeks to identify sufficient land to deliver at least 15 years' supply of housing, rather than the full plan period requirement. 2.11 The 920 per annum figure was originally calculated in the 2015 Housing Needs Assessment, and has been further justified by the Peter Brett Associates Economic Forecasts and Housing Needs Assessment, 2018 (PBA Report). 2.12 There remain a number of outstanding objections to the original 2015 Housing Needs Assessment with criticisms stating that the housing requirement is too low for reasons including of lack of adjustment to improve affordability, over reliance on bringing empty homes back into use and a poor record of delivery resulting in pent up demand. 2.13 The PBA Report findings conclude the need for an additional requirement of 912 dwellings per annum (dpa) based on the baseline projection in the Government's Standard Method plus an economic uplift of 1% driven by the job-led scenario in alignment with the Sheffield City Region. The economic uplift is applied for the 2016 - 2026 assessment period used in the Standard Method. Should the economic uplift be applied to the plan period (2015 - 2032) the requirement increases to 1,073 dpa. The PBA Report has not been updated since the previous Draft Policies and Proposed Sites consultation. The plan period has changed and a more up to date Standard Method figure is available. It would be expected that the PBA Report is updated to align with the Publication Draft. The Settlement Background Paper explains that the 920 dpa is retained in the Local Plan given that the 912 dpa figure in the PBA Report only differed from the original housing requirement figure by 8 dwellings per annum. 2.14 In justifying the 912 dpa requirement rather than the 1,073 figure the PBA Report at paragraph 4.37 states: "It is often asserted that the 'future jobs' uplift should be based on policy-led targets, and specifically on Strategic Economic Plans. In the case of Doncaster, we have estimated that this would increase housing need to 1,073 dpa. But in our view this is not the correct measure of objectively assessed need, because in line with the Framework and Guidance the OAN should be based on realistic expectation of future jobs rather than aspiration, and the Guidance specifies that the aspirations of Strategic Economic Plans should not be treated as part of the development plan." 2.15 Dismissing the 1,073 dpa figure undermines the growth focussed aspirations of the Local Plan which accord with the Sheffield City Region growth aspirations. That is contrary to the Framework which, at paragraph 81(a), states that planning policies should: "set out a clear economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to Local Industrial Strategies and other local policies for economic development and regeneration."

2.16 The Council's approach identifies a range of housing requirements in the Main Urban Area and Main Towns with the lower of the range equating to the Local Housing Need identified using the Standard Method and the top of the range being the 920 figure identified in the 2015 Housing Needs Assessment. It is not considered justified to limit the growth to the top end of the range, when there is clear evidence of a higher jobs-led housing need of 1,073 dpa. The policy should make it clear that the 920 dpa (or the alternative 1,073 dpa) is a minimum target. Nor is it considered appropriate to fix the lower end of the range to the Standard Method figure when the Council's own evidence justifies an uplift. The Standard Method identifies a minimum housing need figure rather than an actual housing requirement figure. The minimum Standard Method has been applied to Service Towns and Larger Villages, without any uplift. We do not consider this is a sound approach, the figure is too low and accounts for no uplift when the Council's own evidence identifies it is appropriate to increase the requirement above that identified by the Standard Method. 2.17 Concerns with the Standard Method approach to identifying housing need have been well documented ever since the Government first proposed the approach in September 2017. Indeed the RTPI commented on the Standard Method when it was first proposed, stating that: "The Government's proposals for a new method to calculate local housing need would 'entrench' existing housebuilding patterns and does not consider employment projections or growth aspirations, the RTPI has said, to the agreement of several organisations." 2.18 The Standard Method results in a clear north south divide in identifying housing need, with the south seeing significant increases in housing need and the north seeing the opposite, with significant reductions in identified housing need. This is as a result of the Standard Method being calculated based on past demographic trends. Going forward, the Standard Method dampens housing markets in the north, with its simplified methodology not allowing the past trends to be reversed. 2.19 As stated, the concerns with the Standard Method are well documented, not just in relation to the north south divide, but also due to the overall output of the Standard Method not reaching the Government's target of 300,000 new homes a year. The Governments policy objective of reaching 300,000 homes a year remains. The Government in February 2019 committed to review the Standard Method over the next 18 months, therefore a new Standard Method could be in place by Summer 2020. 2.20 The PBA Report pointed out that the Council should review the housing requirement which was suggested prior to Governments commitment to review the Standard Method. Policy 3 makes reference to the Standard Method being the housing requirement for the purposes of calculating the 5-year housing land supply, which will be reviewed and revised over the plan period. This therefore accounts for changes in the Standard Method. Policy 3 however does not make the same point in relation to the housing requirement. Identify land sufficient to deliver at least 15 years' supply: 2.21 We object to Policy 3 only seeking to identify sufficient land to deliver 15 years' supply of housing, when the plan period covers 20 years (2015 - 2035). Paragraph 22 of the Framework (2019) states that strategic policies: "should look ahead over a minimum 15 year period from adoption, to anticipate and respond to long-term requirements and opportunities." (our emphasis) 2.22 There is no justification in the Framework for...
identifying land for only 15 years. Identifying housing for the full plan period would be in accordance with the Framework. Furthermore, Policy 3 seeks to facilitate the delivery of at least 481 hectares of employment land over the plan period, therefore the Local Plan should equally identify land to meet the housing requirement over the plan period. Policy 3 should seek to identify homes sufficient to deliver the housing requirement for the whole plan period, which would accord with all the soundness tests in the Framework. 2.23 Paragraph 136 of the Framework is clear that where there is a need for Green Belt changes regard should be had for the intended permanence in the long term, so they can endure beyond the plan period. If the authority is seeking Green Belt release in the Local Plan. Allocation of housing land for the full plan period should be identified to ensure that any proposed Green Belt can benefit from the required degree of permanence. Identifying only 15 years’ worth of land risks a further Green Belt review ahead of the end of the plan period. 2.24 It is considered that this approach fails the "consistent with national policy" soundness test. Distribution of Housing: 2.25 We have a number of concerns regarding the distribution of the housing requirement set out in Draft Policy 3. The Settlement Background Paper 2018 was prepared in support of the previous informal Local Plan consultation and explains the distribution. It is however disappointing that an updated Topic Paper is not available until Plan Submission, which will explain "the distribution of housing to individual settlements and the issues relevant to each further, such as the influence of existing planning permission reducing the need for new allocations or impacts or impacts on constraints such as flood risk." This information should be available at Publication stage. 2.26 The Settlement Background Paper explains that the baseline housing requirement (minimum Standard Method) is distributed across the settlements based on their percentage of the Borough’s households. Aside from our objections to the lack of uplift above the Standard Method to the Service Towns and Larger Villages we maintain our disagreement with this rather simplistic distribution method which does not factor in the sustainability of a settlement; or the ability of a settlement to deliver their minimum requirement quota. This distribution does not account for recent growth in an area which will then result in proportionately higher growth in the plan period, and disadvantages settlements that may not have grown in the past. 2.27 Sprotbrough is a sustainable settlement within the Service Towns and Larger Villages tier of the settlement hierarchy, containing 3 out of 5 of the Primary Services outlined in the Settlement Audit (a Primary School, GP, and Pharmacy). The sustainability of the village is assisted by its close proximity to the Doncaster Main Urban Area. It is considered the housing requirement in Policy 3 of 95 dwellings in Sprotbrough is not proportionate to its sustainability status. Given the close relationship of Sprotbrough to the Main Urban Area it is considered that an alternative approach is justified, to allow an additional housing requirement above the baseline minimum in Sprotbrough. Local Plan Distribution V Actual Distribution: 2.28 The identified allocated sites in the Local Plan (Chapter 16) do not align with the proposed distribution of the housing requirement as outlined in Policy 3. Table 1 below highlights a number of settlements where the allocations fall outside the proposed requirement ranges and service town and villages requirements. Settlement Hierarchy Tier In Local Plan: Doncaster Main Urban Area: Constituent Towns: Contiguous built up area of Doncaster Town Local Plan Targets - No: 6805 - 7315 Local Plan Targets - %: Local Plan Allocations - No: 7441 Local Plan Allocations - %: TOTAL Local Plan Targets - No: Local Plan Targets - %:"At least 50%" Local Plan Allocations - No: 7441 Local Plan Allocations - %: 46.2% Settlement Hierarchy Tier In Local Plan: Main Towns Constituent Towns: Adwick - Woodlands Local Plan Targets - No: 255-765 Local Plan Targets - %: Local Plan Allocations - No: 482 Local Plan Allocations - %: Constituent Towns: Armthorpe Local Plan Targets - No: 420-990 Local Plan Targets - %: Local Plan Allocations - No: 1049 Local Plan Allocations - %: Constituent Towns: Conisborough & Denby Local Plan Targets - No: 465-975 Local Plan Targets - %: Local Plan Allocations - No: 528 Local Plan Allocations - %: Constituent Towns: Dunsforth, Dunsville, Hatfield & Stainforth Local Plan Targets - No: 575-1805 Local Plan Targets - %: Local Plan Allocations - No: 1968 Local Plan Allocations - %: Constituent Towns: Mexborough Local Plan Targets - No: 475-985 Local Plan Targets - %: Local Plan Allocations - No: 310 Local Plan Allocations - %: Constituent Towns: Rossington Local Plan Targets - No: 285-895 Local Plan Targets - %: Local Plan Allocations - No: 1219 Local Plan Allocations - %: Constituent Towns: Thorne & Moorends Local Plan Targets - No: 510-1020 Local Plan Targets - %: Local Plan Allocations - No: 736 Local Plan Allocations - %: TOTAL Local Plan Targets - No: Local Plan Targets - %:"About 40%" Local Plan Allocations - No: 6292 Local Plan Allocations - %: 39.0% Settlement Hierarchy Tier In Local Plan: Service Towns and Villages Constituent Towns: Askern Local Plan Targets - No: 165 Local Plan Targets - %: Local Plan Allocations - No: 691 Local Plan Allocations - %: Constituent Towns: Auckley - Hayfield Green Local Plan Targets - No: 125 Local Plan Targets - %: Local Plan Allocations - No: 255 Local Plan Allocations - %: Constituent Towns: Barnburgh - Harlington Local Plan Targets - No: 60 Local Plan Targets - %: Local Plan Allocations - No: 66 Local Plan Allocations - %: Constituent Towns: Barnby Dun Local Plan Targets - No: 105 Local Plan Targets - %: Local Plan Allocations - No: 104 Local Plan Allocations - %: Constituent Towns: Bawtry Local Plan Targets - No: 110 Local Plan Targets - %: Local Plan Allocations - No: 90 Local Plan Allocations - %: Constituent Towns: Carcroft - Skellow Local Plan Targets - No: 250 Local Plan Targets - %: Local Plan Allocations - No: 307 Local Plan Allocations - %: Constituent Towns: Edlington Local Plan Targets - No: 230 Local Plan Targets - %: Local Plan Allocations - No: 665 Local Plan Allocations - %: Constituent Towns: Finningley Local Plan Targets - No: 55 Local Plan Targets - %: Local Plan Allocations - No: 50 Local Plan Allocations - %: Constituent Towns: Sprotbrough Local Plan Targets - No: 95 Local Plan Targets - %: Local Plan Allocations - No: 80 Local Plan Allocations - %: Constituent Towns: Tickhill Local Plan Targets - No: 165 Local Plan Targets - %: Local Plan Allocations - No: 74 Local Plan Allocations - %: TOTAL Constituent Towns: Local Plan Targets - No: Local Plan Targets - %:"About 10%" Local Plan Allocations - No: 2382 Local Plan Allocations - %: Table 1: Comparison of Publication Local Plan Housing Targets (Policy 3) and actual allocations in the Publication Draft. 2.29 The overall percentages of proposed allocations are broadly in alignment with the target (50% to Main Urban Area, 40% to Main Towns, and 10% to Service Towns and Villages). While the Service Towns and Villages proposed allocations are above the target 10%, the three Service Towns and Villages of Askern, Edlington, and Carcroft-Skellow account for 70% of the proposed allocations in this tier of the hierarchy. These three settlements were previously either Principal Towns or Renewal Towns in the Core Strategy with significant proportions of housing growth. These three settlements receive allocations higher than the proposed Local Plan target (significantly so for the case of Askern and Edlington). The over provision in these Service Towns and Larger Villages is directed to former Core Strategy higher order settlements that were expected to take a lot of growth. In relation to the proportion of development the Local Plan allocation distribution is not too dissimilar to the Core Strategy distribution.

Summary:
Policy 3 requires at least 920 (net) new homes each year and seeks to identify sufficient land to deliver at least 15 years supply. Concerns about the quantum, distribution and lack of supply for the whole plan period. 920 stems from the 2015 HNA and was further justified by the PBA report. There are a number of objections to the 2015 HNA with criticism that the housing requirement is too low for reasons like lack of adjustments to improve affordability, over reliance on empty home re-use and poor delivery creating pent up demand. The plan period has now changed and a more up to date standard methodology figure is available. It would be expected that the PBA report is updated to align with the publication draft. Para. 4.37 of the PBA report dismisses the 1,073 figure. This undermines the growth focussed aspirations of the Local Plan which accord with the SCR. This is contrary to NPPF para. 81 (a). It is not considered that limiting growth to the top of the range (920) is justified when there is evidence of a higher jobs led need of 1,073dpa. Failing to deliver the higher housing target means the economic strategy, in its own terms, is not deliverable and is unsound. The plan cannot therefore be positively prepared. 920 or 1,073 should be the minimum and the plan should make that clear. Nor should the lower end be fixed to the standard method when the councils own evidence justifies an uplift. Not sound to apply the minimum number to the service towns and villages as it is far too low and accounts for no uplift despite the council’s evidence
justifying the uplift. Concerns with the standard method are well documented, and the RTPI had objections and doubts: "The government’s proposals for a new method to calculate local housing need would ‘entrench’ existing housebuilding patterns and does not consider employment projections or growth aspirations, the RTPI has said, to the agreement of several organisations." The method creates a north south divide and dampens northern housing markets. The Standard Method would also not allow the government target of 300,000 new homes to be met, and they have committed to reviewing the standard method, and so a new one could be in place by Summer 2020. The PBA Report pointed out that the Council should review the housing requirement which was suggested prior to Government’s commitment to review the Standard Method. Policy 3 makes reference to the Standard Method being the housing requirement for the purposes of calculating the 5-year housing land supply, which will be reviewed and revised over the plan period. This therefore accounts for changes in the Standard Method. Policy 3 does not make the same point in relation to the housing requirement. Object to only 15 years worth of housing land being identified when the plan lasts 20 years.

PPF para. 22 states that policies should "look ahead over a minimum 15 year period from adoption, to anticipate and respond to long-term requirements and opportunities." No justification in the framework for identifying land for 15 years. Housing should be for the full plan period. 481 ha is allocated for employment over the plan period. Enough housing should be allocated to deliver the housing requirement over the plan period too to accord with soundness tests. Housing should also be identified across the whole plan period to ensure that the proposed Green Belt can benefit from the required permanence. 15 years identified risks a further Green Belt review in the plan period. The approach fails the consistent with national policy test. Issues with the distribution of housing in Policy 3. The 2018 Settlement Background Paper was prepared in support of the previous informal consultation. It is disappointing that the updated paper will not be available until plan submission. This should be available now. Notwithstanding objections about the level of uplift, it is maintained that the distribution is rather simplistic and fails to factor in the sustainability of a settlement or the ability of a settlement to deliver the minimum requirement quota. This does not account for recent growth in an area which will then result in a proportionately higher growth in the plan period, and disadvantages settlements that may not have grown in the past. The distribution aligns with 50% MUA; 40% Main Towns and 10% Service Towns. However, in the Service Towns, Askern, Edlington and Carcroft - Skellow account for 70% of proposed allocations in this tier of the hierarchy. These were all previously principal or renewal towns in the Core Strategy with significant growth directed to them. These three receive allocations much higher than the sustainability of a settlement or the ability of a settlement to deliver the minimum requirement quota. This does not account for recent growth in an area which will then result in a proportionately higher growth in the plan period, and disadvantages settlements that may not have grown in the past. The distribution aligns with 50% MUA; 40% Main Towns and 10% Service Towns. However, in the Service Towns, Askern, Edlington and Carcroft - Skellow account for 70% of proposed allocations in this tier of the hierarchy. These were all previously principal or renewal towns in the Core Strategy with significant growth directed to them. These three receive allocations much higher than

Response:

The council is planning for 920dpa, which is 57% higher than the Standard Methodology figure. Although the 2015 HNA and 2018 PBA report result in the same figure, they were arrived at independently of each other and via different methods. The Peter Brett’s work supersedes the housing requirement of the HNA, and the 2019 Housing Needs Assessment replaces other elements of this work. It is unnecessary to further update the Peter Brett Report, but the extended plan period has been factored in to housing calculations. The report clearly states the figure of 1,073 is related to the previous NPPF and not the revised NPPF, and 912dpa is correct as per the new NPPF (para. 5.27 & 5.28). These paragraphs also explain the Council could choose an intermediate number between 585 and 912, which the Council has elected not to do, in favour of retaining the higher figure. The NPPF instructs Council’s to use the Standard Methodology Figure (para. 60) to work out the minimum requirement. The Council has done this. Using a range is covered in Planning Practice Guidance (Housing Supply and Delivery - Paragraph: 027 Reference ID: 68-027-20190722). NPPF para. 67 notes that "Planning policies should identify a supply of: a) specific, deliverable sites for years one to five of the plan period; and b) specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15 of the plan." The Local Plan does that. The years 2015 - 2018 are demonstrably covered by delivered sites in that period, and the years 2033 - 35 are demonstrably covered by sites that will deliver beyond 2033, and oversupply in settlements in the years 2018 - 33. Enough housing is being provided to cover the 20 year period. This is covered in the Housing Topic Paper. The settlements mentioned are the largest and most sustainable of the Service Towns and therefore have a larger allocation. Due to commitments they are able to deliver 70% of the overall amount of housing that will be delivered in this tier, but this does not prejudice other areas delivering their housing requirement, nor does it offset the requirement of other areas. By applying a cap once the number of dwellings delivered exceeds the target, it is ensured that other settlements in this tier will largely meet their housing requirement. Of the 10% for the Service Towns, 53% of Service Town supply 2018 - 33 will be in these settlements, slightly above the collective target for the three of 47%. This approach is explained further in the Housing Topic Paper. NPPF para. 67 notes that "Planning policies should identify a supply of: a) specific, deliverable sites for years one to five of the plan period; and b) specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15 of the plan."
Policy 3 sets out the Plan's targets for both housing and employment development. Employment and infrastructure. The draft Plan allocated at least 481 hectares of employment land over the plan period (2015-2035). Of this there is no specific amount focused towards the Main Towns, including Armthorpe. For the plan to be positive and effective the plan needs to ensure that sufficient land is allocated in order to meet the ambitious employment land target set for the District.

Summary:
Policy 3 - employment. There is no specific amount of employment focused towards the Main Towns and for the plan to be positive and effective it needs to ensure that sufficient land is allocated in order to meet the ambitious employment land target set for the District.

Response:
Noted. The Local Plan does not allocate specific amount of employment land to each location. It is 481 ha in line with the Employment Strategy. There are sites within the Main Urban Area which either have planning permission or are currently vacant. The rest of the available land is accessible from the Main Urban Area.
Policy 3 sets out the Plan's targets for both housing and employment development. Housing development For a Local Plan to be considered positively prepared it must provide a strategy which, as a minimum, seeks to meet the area's Local Housing Need (LHN). Draft Policy 3 sets out the amount of housing to be developed over the plan period. The new Local Plan suggests a housing figure of 18,400 new homes over the plan period 2015-2035 (920 per annum). DMBC correctly use the Government's Standard Housing Methodology as a starting point and then consider the impact of economic growth to come to a more realistic housing need figure. MHCLG are explicit that if councils want a more ambitious local plan for growth then they should incorporate positive growth and housing figures (PPG 02a-010). DMBC by their own admission state they have "ambitious plans and ideas for the future of the borough". In reviewing the evidence for the housing need, this is set out as part of the Standardised Methodology (2014 ONS projections) and the Economic Forecasts and Housing Needs Assessment (2018). This provides a range of the Standardised Methodology targets whilst also setting an upper threshold of 920 dwellings per annum. In adopting a pure Standardised Methodology approach this is overly simplistic. If continued, there is a fundamental danger that the Local Plan will be found unsound by the Inspector and DMBC asked to revise its housing targets upwards accordingly. A higher housing figure is crucial in meeting the other aims and objectives of the framework. This will ensure that Doncaster remains an attractive location of choice for those wanting to live and work in the region and will encourage economic growth by being able to accommodate the influx of people and ensure the vitality of the urban area. In particular, it will allow regeneration and sustainability objectives to be met. Recommendation 2: Ensure that a positive growth strategy is incorporated into the LHN to ensure consistency with DMBC’s economic aims and objectives and Sheffield City Region Growth Strategy. In order to achieve this DMBC should adopt a higher housing target per annum in the interests of positive, consistent and effective plan making.

Response:
The Council has used the Standard Methodology figure of 585 and then increased its housing requirement to 920 dpa, as set out in the Economic Forecasts and Housing Needs Assessment (Peter Brett Associates, May 2018). This is a substantial increase which demonstrates positive, effective planning. No change needed.
IGas notes the Plan aims to facilitate the delivery of at least 481 hectares of employment land to help grow and diversify the Sheffield City Region and which would accommodate business, light industry and manufacturing and distribution warehouses to meet future employment needs and for which some sites are allocated. It is further noted that sufficient land to accommodate 18400 new homes needs to be delivered within the Plan period. The Sheffield City Region is densely populated and has a diverse range of industry and services most of which are likely to rely on hydrocarbons as an energy supply both in the form of gas or electricity produced by gas fired power stations. It is evident, notwithstanding the objectives of the Plan that this reliance will continue throughout the Plan period.

Summary:
Policy 3. Notes housing and employment figures. Hydrocarbons will be needed for heat and power, so reliance will continue during plan period.
Response:
Comment noted.
Policy 3: Level & Distribution of Growth

Tests of Soundness:
- Positively prepared
- Justified
- Effective
- Consistent with national

5.1 The policy is not sound as it is not positively prepared, justified, consistent with national policy or effective. Housing Requirement 5.2 Policy 3 of the Publication Draft of the Local Plan sets a target for at least 920 (net) new homes each year over the plan period 2015-2035 (18,400 homes in total) with sufficient land allocated to deliver the housing requirement. 5.3 This proposed level of housing growth remains unchanged since the draft policies consultation in 2018. Therefore, Pegasus continue to question whether this approach to meeting the needs for new homes demonstrates that the Plan is positively prepared and justified. The Housing Need Evidence Appraisal appended to this document provides our detailed evidence in this regard. In summary our reasons are: a) The Borough has a clear economic growth agenda - this is evidence in the draft Local Plan’s Vision and Objectives. Doncaster forms a key part of Sheffield City Region and target metrics produced independently for SCR LEP (note 1 - Source: Target Metrics Sheffield City Region: Metro Dynamics, June 2017) identify the need for jobs growth of 1.0% p.a. if the City Region is to improve its performance relative to the UK. Given that Doncaster has seen employment increase either at or above the levels experienced by SCR since 1998, and in line with its positive growth aspirations, it does not seem unreasonable to expect the Borough to align with the City Region target and for jobs growth in the District to average 1.0% in the long-term. Long-term economic aspirations should be properly planned for within this land use plan, to facilitate these aspirations becoming a reality. The impact of this would be to increase housing requirements from the current OAN of 920dpa to 1,073dpa - an additional 153 homes per annum. b) Affordability ratios in Doncaster have changed little over the past decade (4.81 - Source: 2018 Affordability Ratio Data), suggesting that the housing ladder remains out of reach for a substantial part of the local population. Build rates will therefore need to be high in the long-term to address this issue. Housing completion data for the Borough from 2004/5 and 2017/18 shows that it is capable of delivering in excess of 1,000 units per annum. c) The Office for National Statistics (ONS) published variant household projections in December 2018. These considered a range of variant projections to assist users in examining future growth scenarios. At this stage a variant which includes higher household formation rates for younger adults (those aged 25 to 44 years) has not been provided. The ONS is currently considering how to robustly evidence this variant. This variant will be critical as evidence suggests that such households were unable to form as freely as previous generations (due to high house prices, less access to finance etc.). An increase in housing numbers in Doncaster will help ensure that supply is able to meet demand - especially from younger adult who move into the area. (SEE EMAIL For Appended documents) 5.4 The PPG states the Government will be supportive of authorities who wish to plan for growth. In addition, the PPG identifies other factors which need to be considered when determining the housing requirement. These include growth strategies, planned infrastructure, previous levels of delivery and recent assessments of need such as Strategic Housing Market Assessments (SHMA) where this suggests a higher need (PPG ID 2a-010). These are all important considerations in the context of Doncaster. 5.5 Table 5.1, below, identifies net completions over the 14-year period from 2004/5 to 2017/18. During this period delivery rates have averaged 1,013 net additional dwellings. Since the start of the plan period (2015) average delivery rates have been higher at 1,140 net additional dwellings. Setting the housing requirement nearly 100 dwellings per annum (dpa) lower than average levels of delivery over the previous 14 years and 220dpa lower than the plan period average, would be contrary to the ethos of the NPPF and the Government’s continued desire to boost supply and delivery of housing. Table 5.1: Housing delivery in Doncaster (2004 to 2018) (note 2 - The figures for the years 2011/12 to 2017/18 are provisional and subject to revisions pending the release of future census dwelling stock data. Figure highlighted red are imputed.) - CANNOT SHOW AS RED - SHOWN WITH * AFTER NUMBER. Year: 2004/5 Dwellings completed (Net): 1,426 * Year: 2005/6 Dwellings completed (Net): 1,380 * Year: 2006/7 Dwellings completed (Net): 1,285 Year: 2007/8 Dwellings completed (Net): 1,414 * Year: 2008/9 Dwellings completed (Net): 1,709 Year: 2009/10 Dwellings completed (Net): 506 Year: 2010/11 Dwellings completed (Net): 817 Year: 2011/12 Dwellings completed (Net): 457 Year: 2012/13 Dwellings completed (Net): 316 Year: 2013/14 Dwellings completed (Net): 654 Year: 2014/15 Dwellings completed (Net): 792 Year: 2015/16 Dwellings completed (Net): 1,162 Year: 2016/17 Dwellings completed (Net): 1,049 Year: 2017/18 Dwellings completed (Net): 1,208 Year: Average 2004/5 to 2017/18 Dwellings completed (Net): 1,013 Year: Average 2015/16 to 2017/18 Dwellings completed (Net): 1,140 Year: Average 2009/10 to 2013/14 Dwellings completed (Net): 550 Source: MHCLG Live Table 122 5.6 To assist in the determination of the appropriate housing requirement, three alternatives have been considered through the SA. These are: - Option 1: 920dpa and 481ha employment land; - Option 2: 585dpa and 103ha employment land; and - Option 3: 753dpa and 242ha employment land. 5.7 The SA identifies Option 1 as the preferred option as it will "...meet local need but also enable employment-led growth in accordance with the Sheffield City Region Plan, whilst providing a degree of flexibility?" (SA, para. 5.3.5). From the options considered it is agreed that this is the most appropriate. However, the Council has failed to consider an option which promotes a higher housing requirement than 920dpa. Given previous rates of delivery, identified in table 4.1 above, it is considered a figure in excess of 1,000dpa should have been considered as a reasonable alternative. 5.8 Following setting the housing target for the Local Plan Period, draft Policy 3 progresses to state: ?For the purposes of calculating 5-year housing land supply, the requirement will be based on the Local Housing Need figure, as derived from the Standard Methodology, which will be reviewed and revised throughout the plan period in line with the latest household projections and affordability ratio. As such, the housing requirement is expressed as a range with the bottom of the range being the Local Housing Need figure and the top of the range being 920 dwellings per annum; 5.9 Pegasus have concerns regarding the Council’s proposed approach to calculating 5-year supply and the overall wording of Policy 3 in this regard. 5.10 Frist, Policy 3 sets a target for at least 920 (net) new homes each year over the plan period, but then when discussing the 'range of housing need' states that the top range of local housing need figure is 920dpa. Clearly, these two statements are
contrary to each other. 5.11 Second, we contend that the approach of Policy 3 in applying a lower housing need figure for the purposes of calculating 5-year housing supply is contrary to the approach of Policy 3 in setting a minimum requirement. We would question how, in the context of the need to significantly boost housing supply, seeking to meet a figure significantly below the minimum housing target and previous levels of delivery could be considered to be a pro-active or positive approach. Bawtry Housing Distribution 5.12 Bawtry is identified as being one of Doncaster’s Service Towns and will contribute to the overall 10% split of total housing development alongside Askern; Auckley-Hayfield Green; Barnburgh-Harlington; Barnby Dun; Carcroft and Skellow; Edlington; Finningley; Sportbrough; and Tickhill. I refer to our objections to Policy 2 with regards to the percentage split identified. 5.13 In the case of Bawtry itself, the Publication Draft identifies a requirement for growth of 110 dwellings across the plan period. However, the Council propose to allocate only 90 dwellings in the settlement, split between sites with and without planning permission. This means that there is a 20-dwelling shortfall between the number of units allocated and the settlement target growth. Paragraph 16.194 of the Local Plan discusses this matter stating: “As at 1st April 2018, there are permissions for 54 dwellings on sites large enough to allocate through the Local Plan (5+ units remaining). An additional two relatively small allocations are made through the plan; one being a greenfield urban site and the other a greenfield extension on land formerly designated as Green Belt. These two sites have a combined capacity of 36 new homes and bring the settlement’s housing allocation up to 90 dwellings for the plan period, which is 20 units short of its requirement. Any additional allocations would require large urban extensions on land currently designated as Green Belt where it is not considered exceptional circumstances exist to remove further sites for such a small shortfall in the context of additional sources of housing supply in the town. For example, at April 2018 there are permissioned small sites (1-4 units) that total 14 new homes and there will be additional windfall development within the town throughout the plan period so confidence that the town’s requirement of 105 new homes will have been met.” 5.14 As stated within Paragraph 16.194, the Council believe that meeting the 20-dwelling shortfall in Bawtry would require large urban extensions not appropriate for such a shortfall in the supply. Pegasus question the scale of the shortfall within Bawtry due to our comments relating to the housing requirement and distribution. We also refer to our previous comments upon the draft policies and proposed site informal consultation in relation to Green Belt. Within these comments we note that the exceptional circumstances (NPPF, para. 137) required to remove land from the Green Belt exist (Green Belt Phase 3 Report Summary). This allied with our comments upon distribution and the scale of the housing requirement provide a compelling case to provide further Green Belt release within Bawtry. The impact of the site on the Green Belt is discussed in greater detail below. 5.15 Paragraph 16.194 of the Publication Draft Plan suggests to overcome the shortfall is that the remainder of the need can be met through windfall development in the settlement across the plan period. This statement is however contrary to the subtext of Policy 6: Housing Allocations (Strategic Policy), which at policy 4.83 states: “The allocated supply has not been reduced to make allowance for windfalls and so all windfalls will be additional land supply to meet the plan period requirement.” 5.16 Despite this statement, it is clear that the Council have reduced the allocated supply to make allowance for windfalls in Bawtry. We believe this approach is flawed and additional allocations should be made to meet the required shortfall rather than relying upon windfall development. 5.17 Pegasus are concerned with any reduction or limitation on the housing target for a settlement purely on the basis that it is in a Green Belt location. The housing target for a settlement should be focused on the need to ensure the settlement can grow in a sustainable manner to support the local community and its population. Housing allocations, and Green Belt release, should then be made according to meeting that need.

Summary:
The policy is unsound as it is not positively prepared, justified, consistent with national policy or effective. 920dpa is unchanged since the draft policies consultation in 2018. Continue to question whether this approach to meeting the needs of new homes demonstrates that the plan is positively prepared and justified, as: a) The borough has a clear economic growth agenda. In line with the SCR, 1% growth does not seem unreasonable. Long term aspirations should be planned for to make aspirations a reality and the housing requirement should therefore be 1,073dpa as suggested in the PBA report. b) Local affordability ratios have changed little over the past decade suggesting the housing ladder remains out of reach for many local people. High build rates are therefore required in the long term to address the issue. Completion data 04/05 - 17/18 shows it is capable of delivering 1,000+ dpa. c) ONS published variant household projections in December 2018. The variant for higher household formation rated for 25 - 44 year olds has not been provided and ONS are considering how to robustly evidence it. Evidence suggests that such households are unable to form as freely as previous generations. Increased housing will ensure supply can meet demand especially from young adults moving into the area. The government are supportive of authorities planning for growth. From 04/05 - 17/18 delivery rates have averaged 1,013 net additional dwellings. From 2015 the average is higher - 1,140dpa net additional. Setting the requirement almost 100 dwellings below this over the last 14 years / 220 lower than the plan period average would be contrary to the ethos of the NPPF and governmental drive to boost the supply of housing. Figures (MHCLG Live table 122): Year: 2004/5 Dwellings completed (Net): 1,426* Year: 2005/6 Dwellings completed (Net): 1,380* Year: 2006/7 Dwellings completed (Net): 1,285 Year: 2007/8 Dwellings completed (Net): 1,414* Year: 2008/9 Dwellings completed (Net): 1,709 Year: 2009/10 Dwellings completed (Net): 506 Year: 2010/11 Dwellings completed (Net): 817 Year: 2011/12 Dwellings completed (Net): 457 Year: 2012/13 Dwellings completed (Net): 316 Year: 2013/14 Dwellings completed (Net): 654 Year: 2014/15 Dwellings completed (Net): 792 Year: 2015/16 Dwellings completed (Net): 1,162 Year: 2016/17 Dwellings completed (Net): 1,208 Year: Average 2004/5 to 2017/18 Dwellings completed (Net): 1,013 Year: Average 2015/16 to 2017/18 Dwellings completed (Net): 1,140 Year: Average 2005/10 to 2013/14 Dwellings completed (Net): 550 The SA failed to consider an option to plan for a higher housing requirement than 920dpa - given the rates of delivery shown, this option should have been assessed as an alternative. Also have concerns about the approach for calculating 5 year supply and the overall wording of Policy 3 in this regard. Policy 3 sets a target for at least 920 dpa, but when discussing the range of housing need, the top of the range is stated to be 920dpa. This is contradictory. Contend that the lower need figure being applied for 5 year supply purposes is contrary to the approach of policy 3 in setting a minimum requirement. Question how, in the context of the need to significantly boost housing supply, seeking to meet a figure significantly below the minimum housing target and previous levels of delivery could be considered to be a pro-active or positive approach. Object to the percentage split for Service Towns and Villages (see Policy 2 response). The Council has only identified 90 / 110 sites so there is a 20 unit shortfall. Given comments about the housing requirement / distribution (Policy 2) the scale of the shortfall is questioned. Additionally feel that exceptional circumstances to remove the site from the Green Belt exist (see previous comments to the draft Local Plan). This, alongside comments on housing distribution and scale of housing required provide a compelling case to allocate the site. Para. 16.194 suggests the remainder of the shortfall can be met through windfall development in Bawtry. This is contrary to Policy 6 (para. 4.83) which states the allocated supply has not been reduced to make allowance for windfalls so all windfalls will be additional land supply to meet the plan period requirement. Despite this, it is clear that the approach is flawed and additional allocations should be made to meet the required shortfall rather than relying on windfalls. Concerned with any reduction or limitation on the housing target purely on the basis it is a Green Belt location. The housing target should focus on the need and ensure the settlement can grow in a sustainable manner to support the local community and its population. Allocations and Green Belt release should be made according to meeting that need.
The figure is derived from the Standard Methodology and an economic uplift in line with SCR ambitions. A number of ways of calculating the housing requirement have been put forward. Housing completion figures are available in the RLA, with this report showing that in the period stated, the housing completions average out at 659 dpa, with 1,000 dpa only being surpassed in the years 2015 - 18. As set out in the Green Belt Topic Paper, it is not deemed that exceptional circumstances exist which warrant the removal of more land from the Green Belt to make up for the 20 unit shortfall in Bawtry, and this will be made up elsewhere in the borough. Windfalls are additional as they have not been factored in to any calculations, however even without factoring these in, the borough can meet its housing requirement across the plan period.
4.1 The policy is not sound as it is not positively prepared, justified, consistent with national policy or effective. Housing Requirement 4.2 Policy 3 of the Publication Draft of the Local Plan sets a target for at least 920 (net) new homes each year over the plan period 2015-2035 (18,400 homes in total) with sufficient land allocated to deliver the housing requirement. 4.3 This proposed level of housing growth remains unchanged since the draft policies consultation in 2018. Therefore, Pegasus continue to question whether this approach to meeting the needs for new homes demonstrates that the Plan is positively prepared and justified. The reasons for this remain as the previous representation: a) The Borough has a clear economic growth agenda - this is evident in the draft Local Plan’s Vision and Objectives. Doncaster forms a key part of Sheffield City Region and target metrics produced independently for SCR LEP (note 1 - Source: Target Metrics Sheffield City Region: Metro Dynamics, June 2017) identify the need for jobs growth of 1.0% p.a. if the City Region is to improve its performance relative to the UK. Given that Doncaster has seen employment increase either at or above the levels experienced by SCR since 1998, and in line with its positive growth aspirations, it does not seem unreasonable to expect the Borough to align with the City Region target and for jobs growth in the District to average 1.0% in the long-term. Long-term economic aspirations should be properly planned for within this land use plan, to facilitate these aspirations becoming a reality. The impact of this would be to increase housing requirements from the current OAN of 920dpa to 1,073dpa - an additional 153 homes per annum, as suggested by the Council’s housing need evidence prepared by Peter Brett Associated for the Draft Local Plan. b) Affordability ratios in Doncaster have changed little over the past decade (4.31 - Source: 2018 Affordability Ratio Data), suggesting that the housing ladder remains out of reach for a substantial part of the local population. Build rates will therefore need to be high in the long-term to address this issue. Housing completion data for the Borough from 2004/5 and 2017/18 shows that it is capable of delivering in excess of 1,000 units per annum. c) The Office for National Statistics (ONS) published variant household projections in December 2018. These considered a range of variant projections to assist users in examining future growth scenarios. At this stage a variant which includes higher household formation rates for younger adults (those aged 25 to 44 years) has not been provided. The ONS is currently considering how to robustly evidence this variant. This will vary as critical evidence suggests that such households were unable to form as freely as previous generations (due to high house prices, less access to finance etc.). An increase in housing numbers in Doncaster will help ensure that supply is able to meet demand - especially from younger adult who move into the area. 4.4 The PPG states the Government will be supportive of authorities who wish to plan for growth. In addition, the PPG identifies other factors which need to be considered when determining the housing requirement. These include growth strategies, planned infrastructure, previous levels of delivery and recent assessments of need such as Strategic Housing Market Assessments (SHMA) where this suggests a higher need (PPG ID 2a-010). These are all important considerations in the context of Doncaster. 4.5 Table 4.1, below, identifies net completions over the 14-year period from 2004/5 to 2017/18. During this period delivery rates have averaged 1,013 net additional dwellings. Since the start of the plan period (2015) average delivery rates have been higher at 1,140 net additional dwellings. Setting the housing requirement nearly 100 dwellings per annum (dpa) lower than average levels of delivery over the previous 14 years and 220dpa lower than the plan period average, would be contrary to the ethos of the NPPF and the Government’s continued desire to boost significantly the supply and delivery of housing. Table 4.1: Housing delivery in Doncaster (2004 to 2018) (note 2: The figures for the years 2011/12 to 2017/18 are provisional and subject to revisions pending the release of future census dwelling stock data. Figure highlighted red are imputed.) - CANNOT SHOW AS RED - SHOWN WITH * AFTER NUMBER. Year: 2004/5 Dwellings completed (Net): 1,426* Year: 2005/6 Dwellings completed (Net): 1,380* Year: 2006/7 Dwellings completed (Net): 1,285 Year: 2007/8 Dwellings completed (Net): 1,414* Year: 2008/9 Dwellings completed (Net): 1,709 Year: 2009/10 Dwellings completed (Net): 506 Year: 2010/11 Dwellings completed (Net): 817 Year: 2011/12 Dwellings completed (Net): 457 Year: 2012/13 Dwellings completed (Net): 316 Year: 2013/14 Dwellings completed (Net): 654 Year: 2014/15 Dwellings completed (Net): 792 Year: 2015/16 Dwellings completed (Net): 1,162 Year: 2016/17 Dwellings completed (Net): 1,049 Year: 2017/18 Dwellings completed (Net): 1,208 Year: Average 2004/5 to 2017/18 Dwellings completed (Net): 1,013 Year: Average 2015/16 to 2017/18 Dwellings completed (Net): 1,140 Year: Average 2009/10 to 2013/14 Dwellings completed (Net): 550 Source: MHCLG Live Table 122 4.6 To assist in the determination of the appropriate housing requirement, three alternatives have been considered through the SA. These are: - Option 1: 920dpa and 481ha employment land; - Option 2: 585dpa and 103ha employment land; and - Option 3: 753dpa and 242ha employment land. 4.7 The SA identifies Option 1 as the preferred option as it will "...meet local need but also enable employment-led growth in accordance with the Sheffield City Regional Plan, whilst providing a degree of flexibility?" (SA, para. 5.3.5). From the options considered it is agreed that this is the most appropriate. However, the Council has failed to consider an option which promotes a higher housing requirement than 920dpa. Given previous rates of delivery, identified in table 4.1 above, it is considered a figure in excess of 1,000dpa should have been considered as a reasonable alternative. 4.8 Following setting the housing target for the Local Plan Period, draft Policy 3 progresses to state: "For the purposes of calculating 5-year housing land supply, the requirement will be based on the Local Housing Need figure, as derived from the Standard Methodology, which will be reviewed and revised throughout the plan period in line with the latest household projections and affordability ratio. As such, the housing requirement is expressed as a range with the bottom of the range being the Local Housing Need figure and the top of the range being 920 dwellings per annum; 4.4 Pegasus have concerns regarding the Council’s proposed approach to calculating 5- year supply and the overall wording of Policy 3 in this regard. 4.5 Frist, Policy 3 sets a target for at least 920 (net) new homes each year over the plan period, but then when discussing the 'range of housing need' states that the top range of local housing need figure is 920dpa. Clearly, these two statements...
are contradictory to each other. 4.6 Second, we contend that the approach of Policy 3 in applying a lower housing need figure for the purposes of calculating 5-year housing supply is contrary to the approach of Policy 3 in setting a minimum requirement. We would question how, in the context of the need to significantly boost housing supply, seeking to meet a figure significantly below the minimum housing target and previous levels of delivery could be considered to be a pro-active or positive approach.

Summary:
The policy is unsound as it is not positively prepared, justified, consistent with national policy or effective. 920dpa is unchanged since the draft policies consultation in 2018. Tests of Soundness: Positively prepared Effective Justified Consistent with national

Comment:

4.1 The policy is not sound as it is not positively prepared, justified, consistent with national policy or effective. Housing Requirement 4.2 Policy 3 of the Publication Draft of the Local Plan sets a target for at least 920 (net) new homes each year over the plan period 2015-2035 (18,400 homes in total) with sufficient land allocated to deliver the housing requirement. 4.3 This proposed level of housing growth remains unchanged since the draft policies consultation in 2018. Therefore, Pegasus continue to question whether this approach to meeting the needs for new homes demonstrates that the Plan is positively prepared and justified. The reasons for this remain as the previous representation: a) The Borough has a clear economic growth agenda - this is evident in the draft Local Plan’s Vision and Objectives. Doncaster forms a key part of Sheffield City Region and target metrics produced independently for SCR LEP (note 1 - Source: Target Metrics Sheffield City Region: Metro Dynamics, June 2017) identify the need for jobs growth of 1.0% p.a. if the City Region is to improve its performance relative to the UK. Given that Doncaster has seen employment increase either at or above the levels experienced by SCR since 1998, and in line with its positive growth aspirations, it does not seem unreasonable to expect the Borough to align with the City Region target and for jobs growth in the District to average 1.0% in the long-term. Long-term economic aspirations should be properly planned for within this land use plan, to facilitate these aspirations becoming a reality. The impact of this would be to increase housing requirements from the current OAN of 920dpa to 1,073dpa - an additional 153 homes per annum, as suggested by the Council’s housing need evidence prepared by Peter Brett Associated for the Draft Local Plan. b) Affordability ratios in Doncaster have changed little over the past decade (4.81 - Source: 2018 Affordability Ratio Data), suggesting that the housing ladder remains out of reach for a substantial part of the local population. Build rates will therefore need to be high in the long-term to address this issue. Housing completion data for the Borough from 2004/5 and 2017/18 shows that it is capable of delivering in excess of 1,000 units per annum. c) The Office for National Statistics (ONS) published variant household projections in December 2018. These considered a range of variant projections to assist users in examining future growth scenarios. At this stage a variant which includes higher household formation rates for younger adults (those aged 25 to 44 years) has not been provided. The ONS is currently considering how to robustly evidence this variant. This will vary as critical evidence suggests that such householders were unable to form as freely as previous generations (due to high house prices, less access to finance etc.). An increase in housing numbers in Doncaster will help ensure that supply is able to meet demand - especially from younger adult who move into the area. 4.4 The PPG states the Government will be supportive of authorities who wish to plan for growth. In addition, the PPG identifies other factors which need to be considered when determining the housing requirement. These include growth strategies, planned infrastructure, previous levels of delivery and recent assessments of need such as Strategic Housing Market Assessments (SHMA) where this suggests a higher need (PPG ID 2a-010). These are all important considerations in the context of Doncaster. 4.5 Table 4.1, below, identifies net completions over the 14-year period from 2004/5 to 2017/18. During this period delivery rates have averaged 1,013 net additional dwellings. Since the start of the plan period (2015) average delivery rates have been higher at 1,140 net additional dwellings. Setting the housing requirement nearly 100 dwellings per annum (dpa) lower than the plan period average, would be contrary to the ethos of the NPPF and the Government’s continued desire to boost significantly the supply and delivery of housing. Table 4.1: Housing delivery in Doncaster (2004 to 2018) (note 2 - The figures for the years 2011/12 to 2017/18 are provisional and subject to revisions pending the release of future census dwelling stock data. Figure highlighted red are imputed.) - CANNOT SHOW AS RED - SHOWN WITH * AFTER NUMBER. Year: 2004/5 Dwellings completed (Net): 1,426* Year: 2005/6 Dwellings completed (Net): 1,140

4.6 To assist in the determination of the appropriate housing requirement, three alternatives have been considered through the SA. These are: - Option 1: 920dpa and 481ha employment land; - Option 2: 858dpa and 103ha employment land; and - Option 3: 753dpa and 242ha employment land. 4.7 The SA identifies Option 1 as the preferred option as it will "...meet local need but also enable employment-led growth in accordance with the Sheffield City Regional Plan, whilst providing a degree of flexibility?" (SA, para. 5.3.5). From the options considered it is agreed that this is the most appropriate. However, the Council has failed to consider an option which promotes a higher housing requirement than 920dpa. Given previous rates of delivery, identified in table 4.1 above, it is considered a figure in excess of 1,000dpa should have been considered as a reasonable alternative. 4.8 Following setting the housing target for the Local Plan Period, draft Policy 3 progresses to state: "For the purposes of calculating 5-year housing land supply, the requirement will be based on the Local Housing Need figure, as derived from the Standard Methodology, which will be reviewed and revised throughout the plan period in line with the latest household projections and affordability ratio. As such, the housing requirement is expressed as a range with the bottom of the range being the Local Housing Need figure and the top of the range being 920 dwellings per annum; 4.4 Pegasus have concerns regarding the Council’s proposed approach to calculating 5-year supply and the overall wording of Policy 3 in this regard. 4.5 Frist, Policy 3 sets a target for at least 920 (net) new homes each year over the plan period, but then when discussing the ‘range of housing need’ states that the top range of local housing need figure is 920dpa. Clearly, these two statements
are contradictory to each other. 4.6 Second, we contend that the approach of Policy 3 in applying a lower housing need figure for the purposes of calculating 5-year housing supply is contrary to the approach of Policy 3 in setting a minimum requirement. We would question how, in the context of the need to significantly boost housing supply, seeking to meet a figure significantly below the minimum housing target and previous levels of delivery could be considered to be a pro-active or positive approach.

Summary:
The policy is unsound as it is not positively prepared, justified, consistent with national policy or effective. 920dpa is unchanged since the draft policies consultation in 2018. Continue to question whether this approach to meeting the needs of new homes demonstrates that the plan is positively prepared and justified, as: a) The borough has a clear economic growth agenda. In line with the SCR, 1% growth does not seem unreasonable. Long term aspirations should be planned for to make aspirations a reality and the housing requirement should therefore be 1,073dpa as suggested in the PBA report. b) Local affordability ratios have changed little over the past decade suggesting the housing ladder remains out of reach for many local people. High build rates are therefore required in the long term to address the issue. Completion data 04/05 - 17/18 shows it is capable of delivering 1000+ dpa. c) ONS published variant household projections in December 2018. The variant for higher household formation rated for 25 - 44 year olds has not been provided and ONS are considering how to robustly evidence it. Evidence suggests that such households are unable to form as freely as previous generations. Increased housing will ensure supply can meet demand especially from young adults moving to the area. The government are supportive of authorities planning for growth. From 04/05 - 17/18 delivery rates have averaged 1,013 net additional dwellings. From 2015 the average is higher - 1,140dpa net additional. Setting the requirement almost 100 dwellings below this over the last 14 years / 220 lower than the plan period average would be contrary to the ethos of the NP and governmental drive to boost the supply of housing. Figures (MHCLG Live table 122): Year: 2004/5 Dwellings completed (Net): 1,426* Year: 2005/6 Dwellings completed (Net): 1,380* Year: 2006/7 Dwellings completed (Net): 1,285 Year: 2007/8 Dwellings completed (Net): 1,414* Year: 2008/9 Dwellings completed (Net): 1,709 Year: 2009/10 Dwellings completed (Net): 506 Year: 2010/11 Dwellings completed (Net): 817 Year: 2011/12 Dwellings completed (Net): 457 Year: 2012/13 Dwellings completed (Net): 316 Year: 2013/14 Dwellings completed (Net): 654 Year: 2014/15 Dwellings completed (Net): 792 Year: 2015/16 Dwellings completed (Net): 1,162 Year: 2016/17 Dwellings completed (Net): 1,049 Year: 2017/18 Dwellings completed (Net): 1,208 Year: Average 2004/5 to 2017/18 Dwellings completed (Net): 1,013 Year: Average 2015/16 to 2017/18 Dwellings completed (Net): 1,140 Year: Average 2009/10 to 2013/14 Dwellings completed (Net): 550 The SA failed to consider an option to plan for a higher housing requirement than 920dpa - given the rates of delivery shown, this option should have been assessed as an alternative. Also have concerns about the approach for calculating 5 year supply and the overall wording of Policy 3 in this regard. Policy 3 sets a target for at least 920 dpa, but when discussing the range of housing need, the top of the range is stated to be 920dpa. This is contradictory. Contend that the lower need figure being applied for 5 year supply purposes is contrary to the approach of policy 3 in setting a minimum requirement. Question how, in the context of the need to significantly boost housing supply, seeking to meet a figure significantly below the minimum housing target and previous levels of delivery could be considered to be a pro-active or positive approach.

Response:
The figure is derived from the Standard Methodology and an economic uplift in line with SCR ambitions. A number of ways of calculating the housing requirement have been put forward. Housing completion figures are available in the RLA, with this report showing that in the period stated, the housing completions average out at 659 dpa, with 1,000 dpa only being surpassed in the years 2015 - 18. As set out in the Green Belt Topic Paper, it is not deemed that exceptional circumstances exist which warrant the removal of more land from the Green Belt to make up for the 20 unit shortfall in Bawtry, and this will be made up elsewhere in the borough. Windfalls are additional as they have not been factored in to any calculations, however even without factoring these in, the borough can meet its housing requirement across the plan period.
Framecourt Homes welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public.

Area: Chapter 4: Strategic Approach

Policy: Policy 3: Level & Distribution of Growth

Tests of Soundness:

Comment:

5.1. Framecourt Homes is concerned that the Doncaster Local Plan Draft Policies and Proposed Sites is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 5.2. Framecourt Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 5.3. Framecourt Homes have a number of concerns in relation to the Level and Distribution of Growth. The concerns relate to the following: - The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need 5.4. Framecourt Homes is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. Framecourt Homes has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris report is attached to these representations. Regeneris conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. (SEE EMAIL FOR Regeneris Report) 5.6. Regeneris consider that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a - Doncaster’s key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ELR’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. 5.7. Framecourt Homes have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Framecourt Homes continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. 5.8. The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boost the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. 5.9. NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure Paragraph 002 Reference ID: 2a-002-20190220. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. Paragraph 006 Reference ID :2a-006-201902020. 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum starting point in determining the number of homes needed in an area?it does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests’. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the
right quantity, quality and balance of housing in an area is necessary for economic growth. The development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create sustainable local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on “the economic footprint of house building in England and Wales”, which shows that house building in England and Wales is now worth £38bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenues and contributing funding for local infrastructure and communities. House building supports the economy in a wider sense through being drive for economic growth; delivering jobs and housing value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore Framecourt consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodolgy, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. Framecourt Homes consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23 % of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%):13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%):15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%):13.74 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unviable for a number of sites, including all types of sites in low value areas. Framecourt Homes are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. Framecourt Homes consider that there is sufficient evidence in point to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. Framecourt homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan and its proposed approach. In accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.31. However, Framecourt Homes consider that with a higher requirement, of at least 1,100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1393) that the Local Plan can be found sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery 5.32. Framecourt Homes is concerned that the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Framecourt Homes consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46,
66 and 67, Framecourt Homes are concerned that some of the policies may undermine the deliverability of sites, or lead to the need for further site specific viability testing impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. Framecourt Homes have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, however data in the Residential Land Availability Report indicates that there are net completions amount to 3211. This would increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). 5.38. With regards to overall supply from permissions and allocations, a housing trajectory has been provided. Framecourt Homes are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Framecourt Homes supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Framecourt Homes consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. Framecourt Homes is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites being shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Framecourt Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC have submitted a planning application, which the Environment Agency has objected to and recommends refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Framecourt Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 Framecourt Homes Comment: The site has outline planning permission for 3,100 homes. No reserved matters have been submitted. The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipates a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Framecourt Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Framecourt Homes Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Framecourt Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. Framecourt Homes understands that no allowance has been made for demolitions. No evidence is apparent and Framecourt Homes consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. Framecourt Homes consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Framecourt Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rostonning No. of Dwellings: 897/237 Framecourt Homes Comment: The delivery rates on the site are overly optimistic and not consistent with the planning status and constraints on site. There were only 8 dwellings delivered on site so far and it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 081/343 Site Name: Thorne No. of Dwellings: 207 Framecourt Homes Comment: This is a longstanding allocation and there is little evidence available through the councils evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Framecourt Homes Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Framecourt Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Framecourt Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have least heavily on allocating sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic
assumptions on gross to net developable site areas and on the resultant yields from proposed allocations, especially when considering some of the development requirements. Framecourt Homes therefore suggest that further sites should be identified. 5.46. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Framecourt Homes do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. Framecourt Homes considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Framecourt Homes consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. Framecourt Homes would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. Framecourt Homes considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Framecourt Homes would suggest a greater flexibility is incorporated into the Local Plan especially in light of Framecourt Homes’ conclusions on the actual housing requirement. 5.50. Framecourt Homes would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. Framecourt Homes would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 Framecourt Homes’s View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Framecourt Homes’s View: 22,000 Completions Council Figures: 3,400 Framecourt Homes’s View: 3,111 Total Commitments Council Figures: 9,488 Framecourt Homes’s View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Framecourt Homes’s View: 948.8 Total Allocations Council Figures: 6,567 Framecourt Homes’s View: 6,567 Total Supply Council Figures: 18,506 Framecourt Homes’s View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Framecourt Homes’s View: 3,682.2 5.52. Therefore, on a best case scenario Framecourt Homes consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,111 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3850 additional homes would be required, this amounts to an annual requirement of 1292.5 dpa. Framecourt Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Framecourt Homes’s View: 481 hectares Annual employment requirement Framecourt Homes’s View: 24 hectares Employment land developed 2015-2018 Framecourt Homes’s View: 117 Sites with planning permission Tables E1 to E8 Framecourt Homes’s View: 284.09 New employment allocations Policy 4 Framecourt Homes’s View: 164.68 Total Allocations Framecourt Homes’s View: 565.77 Amount of land allocated over the requirement Framecourt Homes’s View: 83.77 Additional homes required to balance with employment land supply Framecourt Homes’s View: 3,850 Residual homes to be identified Framecourt Homes’s View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Framecourt Homes have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concern about Policy 6 states that the Plan will designate Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Framecourt Homes would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council’s trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. Framecourt Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 1019: Apy Hill Lane, Tickhill 5.60. A brief summary is provided for this Site in response to Policy 6. Technical information and an advocacy report for the site was submitted alongside the previous representations. This report is supported by significant technical information and the report demonstrates that the sites are available, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. 5.61. Framecourt Homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, Framecourt Homes consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.63. To overcome the objection and address soundness matters, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate: Site 1019: Apy Hill Lane, Tickhill
Summary:
Concerned that the Local Plan is deficient in its content and evidence base and does not reflect national guidance. Consider the plan unsound. - The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Concerned with housing levels proposed (920 dpa / 13,230 over 15 years / 18,400 between 2015 - 35). Regeneris have carried out an assessment of this which concludes: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. Regeneris considered that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a. - Doncaster's key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ELR's shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. Concerned that housing requirement does not match the employment requirement once economic growth and job formation is taken into account. A balance should be struck. The framework reaffirms government commitment to boost housing supply, including setting out that exceptional circumstances may justify an uplift from the standard method. NPPG is clear that the standard method is a minimum housing need figure and not a requirement. It is also clear the standard method does not fully address affordability issues. NPPG also says there are circumstances it will be necessary to plan for a higher figure than is identified and there are circumstances where it is appropriate to consider whether need is higher than the standard method suggests. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances may be appropriate include situations where housing need may exceed past trends due to: - Growth strategies that are likely deliverable i.e. where funding is in place to facilitate extra growth; - Strategic infrastructure improvements that are likely to increase local housing need; - Taking on neighbouring authority need. - Where a SHMA indicates a need greater than the standard method, the Council need to recognised that housing brings economic benefits to the area, the right quality and balance of housing is necessary for economic growth. It can support jobs including construction and increase population and subsequently jobs through increased service demand. The HBF have proven the value of housebuilding to the economy in its report on "the economic footprint of housebuilding in England and Wales". This shows a healthy, well functioning labour market requires a good supply of housing that is affordable for local people and enables them to move jobs freely and match skills to employer demand. A dysfunctional market can inhibit mobility and stifle economic growth. Regeneris consider Doncaster's housing need to be 1,100 dpa to support future economic growth. It is clear the Council is trying to align housing and job growth, however it is not clear whether the council has considered additional jobs growth 2032 - 35. There is therefore potential for the jobs led scenario to underestimate jobs growth over the full plan periods. The associated uplift will not be sufficient to meet the full needs over the plan period. There is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. Delivery in the last 3 years are significantly above the Local Plan target (3,211 in total), which is sufficient to support a requirement above 920dpa. The PBA report noted 1,073 would be required based on SEP ambitions, and that it would be prudent to plan for between 562 - 1,073. The employment growth proposal is noted in the ELNA as being ambitious but realistic, and that there has been significant growth over the last 15 years in line with SCR growth ambitions, with 2015 - 18 on target to meet 1% jobs growth. This supports a target at the higher end of the range. There is therefore evidence for a higher need for housing. NPPG is clear this should be taken into account in determining the housing requirement. 912dpa is not based on jobs growth over the full period. Further evidence is needed to demonstrate whether affordable housing can be met based on a target of 920dpa (209dpa or 23% affordable p/a). Affordable completions in the first 3 years have fallen below the identified need even when completions are higher than the plan proposes. Some areas will only deliver 15% and it may be unviable on some sites, so there is concern the need won't be met by 920dpa. To deliver it, 1,393 dpa would be required assuming the achievement of an average of 15% affordable housing - the highest achieved in the last 3 years. There should be a further uplift to the plan housing requirement to support economic ambitions and ensure sufficient affordable housing. The policy is not justified and is not consistent with the framework. The plan is therefore not sound. The requirement should be at least 1,100 dpa with a further uplift to ensure affordable needs can be met, up to 1,393 dpa. Housing supply and delivery: The approach to delivering housing does not reflect national guidance. The council is not demonstrating flexibility to ensure needs can be met in full. The framework is clear plans should be flexible. PPG is clear attention should be given to providing an adequate supply of land and that the plan should be realistic about what can be achieved and when. Authorities need to ensure policies setting out contributions do not undermine deliverability of the plan. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18,400 completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. This is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. Concerned that policies may undermine the deliverability of sites or lead to further viability work. Concerns related to supply from completions, permissions and new allocations. The supply for completions is gross not net and should be 3,211, not 3,400. This would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). The trajectory shows supply cannot be maintained over the plan period, with only 4 sites capable of delivery later in the plan period. The RLA 2019 is also unavailable so a whole years monitoring is absent. This should be updated. The council has assumed 100% delivery, but best practice guidance shows 10% discount rate should be applied to sites with permission (but this could vary). For 9,488 completions, at least 948 should be discounted, but this could be higher given constraint history on sites. Also concerned about the reliance on existing sites with permission, especially as many are brownfield with known constraints and viability concerns in market challenging areas. Some are also constrained by flood risk. Evidence of developer interest for each site is a fundamental requirement to provide confidence of delivery.
Concerns exist about: Site Ref: 838 Site Name: Henworth No. of Dwellings: 930 Framecourt Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC have submitted a planning application, which the Environment Agency has objected to and recommends refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Framecourt Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 Framecourt Homes Comment: The site has outline planning permission for 3,100 homes. No reserved matters have been submitted. The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Framecourt Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Framecourt Homes Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplar’s Farm No. of Dwellings: 280/920 Framecourt Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. There is no allowance for demolitions, evidence is needed on this. Sites which are not available or unknown should not be included in the plan or a buffer should be provided due to uncertainty on delivery, including: Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Framecourt Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable site area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Framecourt Homes Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 081/343 Site Name: Thorne No. of Dwellings: 207 Framecourt Homes Comment: This is a longstanding allocation and there is little evidence available through the councils evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Framecourt Homes Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Framecourt Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Framecourt Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. An assessment of some allocations shows some proposals are at risk and hence why best practice suggests a buffer should be included. Also, sites with planning permission have been heavily relied on instead of identifying a sufficient supply of new allocations to meet the requirement. Consequently a number of sustainable settlements have insufficient allocations to meet their needs. There are also instances of unrealistic assumptions on gross to net developable site areas on the resultant yields from proposed allocations, especially concerning developer requirements. Further sites are required. The Council need a wider choice of sites across a number of different areas and market areas to gain market traction and increase build rates. There should be 30 - 35 building outlets operating across the borough for every year of the plan, and it is not believed the plan can deliver this, especially in the later plan years. Framecourt homes would be happy to work through specific sites in detail with the Council to reach agreement on the HELAA and building commitments. The framework notes they can only be considered deliverable when they have detailed planning permission. Outlines should only be considered with evidence that completions will begin within five years. Evidence for deliverability has tightened. The main risks to delivery are slippages in delivery of allocations, longer - lead in times, reduced housing capacity on sites and sites no longer coming forward as a result of viability from policy obligations. Greater flexibility is suggested. The Council should review existing commitments and ensure these are still deliverable - is there a house builder on board and are their constraints preventing development? Delivery rates should also be reviewed to see if they are appropriate, especially given policy obligations. Annual Housing Requirement Council Figures: 920 Framecourt Homes’s View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,417 Framecourt Homes’s View: 22,000 Framecourt Homes’s View: 23,000 Council Figures: 3,400 Framecourt Homes’s View: 3,211 Total Commitments Council Figures: 9,488 Framecourt Homes’s View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Framecourt Homes’s View: 948.8 Total Allocations Council Figures: 6,567 Framecourt Homes’s View: 6,567 Total Supply Council Figures: 18,506 Framecourt Homes’s View: 18,317.2 Residual homes to be identified Council Figures: - 106.2 Framecourt Homes’s View: 3,682.2 3,682 new homes are needed on a best case scenario. This does not account for an uplift for affordable housing deliverable, which would lead to a requirement of 1,393 dpa and a plan requirement of 27,860 - which would mean a need for an additional 9,542 homes (including completions, commitments, 10% non implementation and allocations as proposed). These do not balance housing provision with additional employment allocations which mean 3,850 additional homes are required (1,292 dpa). Framecourt consider that 7,532 additional homes are required to The additional employment allocations need housing to balance with the allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3850 additional homes would be required, this amounts to an annual requirement of 1292.5 dpa. Framecourt Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Framecourt Homes’s View: 481 hectares Annual employment requirement Framecourt Homes’s View: 24 hectares Employment land developed 2015-2018 Framecourt Homes’s View: 117 Sites with planning permission Tables E1 to E8 Framecourt Homes’s View: 284.09 New employment allocations Policy 4 Framecourt Homes’s View: 164.65
Allocations Framecourt Homes's View: 565.77  Amount of land allocated over the requirement Framecourt Homes's View: 83.77  Additional homes required to balance with employment land supply Framecourt Homes's View: 3,850  Residual homes to be identified Framecourt Homes's View: 7,532.2  These figures assume no changes to the identified sites - although significant concerns about these have been flagged. This does not account for additional economic growth at the airport. Furthermore there are no safeguarded sites or genuinely developable reserve sites in the plan. Alternate safeguarded sites are needed that are not constrained by flood risk or HS2. The airport is strictly controlled and does not thus provide the required flexibility.  It is also evident the trajectory is optimistic. With an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. Site 1019 - Apy Hill Lane - should be allocated.  Proposed change - to overcome and address soundness issues, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate: Site 1019: Apy Hill Lane, Tickhill

Response:
The Peter Brett’s report assesses the employment and housing target for the borough and ties the two together to ensure the right amount of houses are provided for the projected growth. The Council are confident that this report provides a sound and realistic figure. Many ways have been submitted to the Council about how the housing and employment figures could be derived. The submission Local Plan included a range, but still plans for enough housing to meet the requirement of 920dpa over the plan period - the use of a range does not prejudice this. 920dpa is the assessed level of housing required under the revised NPPF, 1,073 refers to the figure using the previous NPPF, which is now redundant. It should also be noted the PBA report states a mid-way point between 585 and 920 could be used, which the Council elected not to do. The Local Plan is planning for 57% more housing than the Standard Methodology proposed, and in doing so the Council have taken on board national policy and guidance. The jobs requirement covers the period 2015 - 35, and enough housing is planned for to match this - there is no reason to uplift this further, including for affordable housing. There is additional flexibility in housing delivery, as the plan does not factor in to its calculations windfalls; sites of 1-4 units; any development in Defined Villages; the proposed 280 dwellings at the airport + possible 920 further linked to job delivery; and the potential of Reserve Development Sites to deliver housing. If all these are factored in, then there is a total potential supply of 24,880 + future windfalls and potential empty homes coming into use, which is 6,480 above the 20 year requirement of 18,400, or in effect a buffer of 35%. Trajectories and other matters raised or covered in the Housing Topic Paper. The RLA has been updated for 2019 now. Consideration has been given to site constraints and delivery, and factored in where appropriate - this is discussed in the Site Selection Methodology and Housing Topic Paper. With regards to site 1019, this is constrained by access issues and Green Belt. Please see the Site Selection Methodology and Green Belt Topic Paper.
Objection is made to this Policy. The level of housing growth for the Plan period 2015-2035 is set at 18,400 new homes. The Plan seeks to allocate land for 15 years of 13,230 new homes having deducted the completions from the first three years of the Plan period up to 2018. The Plan should allocate land for the complete Plan Period and on the basis of the Policy as drafted only takes account of 18 of the 20 year plan period. There is no explanation of the remaining 2 years. The housing requirement is set out as a range from 920 dwellings per annum, down to 882 dwellings per annum and indicates that this will be reviewed through the plan period to reflect updated projections and the need for affordable homes. It is unclear from the Plan on what basis revised requirements would be considered and how this would affect the land allocations or future requirements. The Policy as drafted is not clear if provision is being made for the entire 18,400 new homes or for a lesser figure. There is no clear explanation of this in the supporting text. Paragraph 4.38 of the text indicates that the requirement is 912 homes per year over the Plan Period, which is 18,240 new homes net. There is no explanation of the net and gross figures in the text. The Plan should clearly set out the gross requirement over the plan period, what deductions are made for completions, the residual requirement for the remainder of the plan period, and the allocations therefore made. Net and gross figures would assist the ability to understand the Plan. The range of figures in the table for the settlements in the hierarchy are difficult to match up with the overall requirements. The figures for the bottom end of the range add to 10,850 housing allocations and the top of the range add to 15,390, neither of which figures match the 13,230 in the first part of the Policy. The Plan is therefore unclear and imprecise about the housing allocation and how this is justified compared to the report relied upon which sets out the housing need. Paragraph 4.40 seeks to explain the distribution of the housing baseline figure and the economic growth housing figure. It sets out that not all of the baseline figure is allocated to the service function settlements and some 632 dwellings are then reallocated to the higher order settlements. These settlements already have the additional growth from the economic led housing. The distribution should be reapportioned as set out in our comments above to apportion the whole requirement of housing need to the sustainable settlements. The explanation in para 4.41 that 4,905 homes of the allocation requirement is directed to the urban area and main towns is misconceived for the reasons stated above. The plan does not explain how this has been worked out in exact allocations, and appears to be subject to interpretation by a future topic paper.

**Reason:**
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

**Area:**
Chapter 4: Strategic Approach

**Tests of Soundness:**
- Positively prepared
- Effective
- Legally Compliant
- Justified
- Consistent with national

**Comment:**
Objects to policy. The plan should not deduct completions from the first 3 years of the plan period and allocate enough land for the whole plan period as the policy as drafted only accounts for 18 of the 20 years with no explanation of the remaining 2 years. Expressing the housing requirement as a range is not clear on what basis the revised requirements would be considered and how it would affect land allocations or future requirements. Not clear if provision is being made for the entire 18,400 new homes or for a lesser figure. Para 4.38 indicates the requirement is 912dpa over the plan period which is 18,240 new homes. The plan should set out the gross requirement over the plan period with deductions for completions, the residual requirement for the remainder of the plan period and the allocations therefore made. Net and gross figures would assist the ability to understand the plan. The range of figures in the table for settlements in the hierarchy are difficult to match up with the overall requirements. The bottom end of the range add up to 10,850 and the top of the range 15,390 neither of which match the 13,230 in the first part of the policy. The remaining 632 units from the baseline (Defined Villages) should be reallocated to all settlements in the top 3 tiers of the hierarchy rather than to just the Main Urban Area and Main Towns. The explanation in para 4.41 that 4,905 homes of the allocation requirement is directed to the urban area and main towns is misconceived for the reasons stated above. The plan does not explain how this has been worked out in exact allocations, and appears to be subject to interpretation by a future topic paper.
Sources of supply for the remaining 2 years of the plan period where allocations are not being made is identified including: supply at settlements with a housing allocation above their requirement; permissions from small sites 1-4 units as at April 2018; all permissions at the Defined Villages 5+ units as at April 2018; large sites still developing in these final 2 years; any housing in line with Policy 7 at the Airport (up to 1,200 new homes); and, any housing on Reserve Sites. Policy 6 provides further detail on the total size and sources of the allocated housing requirement which is 16,115 net dwellings with completions in addition to this for the first 3 years of the plan (3,400 net units) giving a plan period housing supply of 19,515 net dwellings against a requirement of 18,400 (+1,115 units). A further 2,085 units are allocated but estimated to deliver beyond 2035. The ranges provide flexibility when allocating sites and each settlement is not required to allocate to the top of the range in order for the overall housing requirement to be met hence adding the bottom and/r top of the ranges do not equal the overall requirement and hence the mid point figure within these ranges will reflect the overall requirement. The leftover baseline is considered appropriate to redirect to the top 2 tiers of the hierarchy given these are the most sustainable settlements with largest populations etc. To answer the specific points made:

- What is the overall requirement
  The plan period requirement (2015-2035)  18,400 net dwellings
  The residual plan period requirement (2018-2035)  13,235 net dwellings

- What is the actual allocation?
  Completions first 3 years of the plan period  3,400 net dwellings
  The plan period allocation 2018-2035  16,115 net dwellings
  Completions + plan period allocations  19,515 net dwellings (+1,115 net units compared to plan period requirement)

- Why is there a distinction between baseline housing growth and economic growth in distribution terms?
  See responses to Policy 2 for the distinction between the baseline and economic growth led housing distribution?

- What is going to each settlement and why?
  See response to Policy 2 as well as settlement figures set out in Chapter 16 which explains final housing allocations to each. Allocations should be listed in Policy 6 in a comprehensive table to enable a proper understanding and reading of the Plan.

- These are set out in Chapter 16 by settlement level as well as whether permissioned/non-permissioned already and would be unnecessary duplication. A plan of each site should also be included in the plan document, to ensure clarity about the site boundaries

- The majority of non-permissioned sites have a plan included in the Appendices (Developer Requirements) and detailed boundaries shown on the Policies Map.
Policy 3: Level & Distribution of Growth

The Employment Land Need and Demand Assessment undertaken by Knight Frank dated September is included within Appendix 3 and should be read alongside the comments set out below. We note and support the proposed delivery of at least 481 hectares of employment land over the plan period (2015-2035) at locations with good access to the M18/M180 motorways and strategic road network to help grow and diversify the Sheffield City Region economy, increase productivity and widen access to learning and training opportunities. This equates to just under 24ha (60 acres) per annum over the 20-year plan period. According to the Employment Land Need Assessment (2019 Update), the net land take collated from the 4-year period between 2015-2018 shows an average of 29.75ha (73 acres) per annum. From this, it is evident that recent demand for allocated employment land is outstripping the supply. We therefore consider that the Council should plan for additional employment land beyond this figure to enable flexibility and meet this rising need. According to the DMBC Employment Land Review 2018, since the year 2000, 483 ha (1,193 acres) of land has been developed in Doncaster and over half (56%) of this it attributable to distribution and logistics uses. Interestingly from 2016 and 2017 this figure rose to circa 63%. In line with a national trend for larger distribution units, it is considered that in order to keep up with current market occupier demand, large-scale sites need to cater for larger warehouses (grade A units of over 100,000 sq ft) on both a speculative and pre-let/sale basis to accommodate demand and the growing appetite of logistics operators and online retailers. Only 4 out of the 8 sites listed within the draft allocations could accommodate a building of this size and nature. We therefore feel that there is scope in Doncaster for a site such as Gateway 180 to be allocated as a major large-scale development option. The Peter Brett Associates (PBA) Economic Forecasts and Housing Needs Assessment June 2018 Report recommends that there should be an allowance for ‘frictional vacancy’ for example at any one time the plan provides for at least 5 year’s supply of immediately available and ‘deliverable’ employment land to mirror that for housing. According to the review contained within The Employment Land Need and Demand Assessment undertaken by Knight Frank dated September included within Appendix 3, the current allocation of large-scale employment land equates to approximately 6.26 years supply, (based on the Employment Land Review 2018 take-up figure of 70 acres (28ha) per annum), however a large proportion of this land is not immediately deliverable and will need infrastructure and further investment to allow development to proceed. Furthermore, we believe that the Riverside Park and Aero Centre developments are more suited and have historically attracted small to midbox occupiers rather than large-scale developments. With this in mind, it is our opinion that the currently available and deliverable supply will be far less. The report also suggests that it may be right for the Council to provide for land over and above the ‘job-led scenario’ if the Council aims to attract regional/national demand for strategic warehousing and to ensure that it’s ready to meet unexpected occupier requirements so that no opportunities for economic growth and job creation are missed. The suggested uplift is around 30%. We noted that the Local Plan Publication Draft (June 2019) indicates that in respect of the Unity scheme, only 33.6ha (83 acres) of the site will be developed out during the Plan period (2015-2035), leaving a residue of 22.6ha (55 acres) on a gross basis. In regard to iPort at Rossington, the Local Plan states that there is 158ha (390 acres), while our figures suggest that there is substantially less space remaining of 58ha (144 acres). The Employment Land Needs Assessment (2019 Update) concludes that the ‘Jobs-Led’ scenario has been selected for the Local Plan, which is considered “ambitious but realistic”. The Peter Brett Associates Economic Forecasts and Housing Needs Assessment (June 2018) suggests that the Local Plan must supply land to match the gross demand for new space, not only to accommodate the net growth but also to replace any existing space that will be lost. It concludes that this additional land area could be significant. According to our findings, based on the last six years of take-up concerning grade A units of above 100,000 sq ft only, we conclude that there is only 12 months of stock immediately on the market. It is important that DMBC allocate enough immediately deliverable ‘oven-ready’ land to satisfy both current and anticipated future demand. The ELNA identified of all land developed between 2005 and 2018, 73% was for B8 and B2 use with the majority of this land being developed in the areas of Balby Carr (18%), Armthorpe (9%), Redhouse (15%) Thorne (9%) and Rossington (17%) In our view this was heavily influenced by the oven ready status of these sites at the time allowing them to satisfy occupational demand swiftly along with their strategic locations being adjacent to the motorway corridors. We therefore consider that the Council need to provide new allocations which have premium motorway connections (including multi modal access), a scale and flexibility in their site layouts which are attractive to both the logistics and industrial property markets to ensure flexibility. These sites need to be ones where environmental and development constraints can either be avoided or appropriately mitigated. We also note the Thorne and Moorends Neighbourhood Plan (the TMNP) at Policy E2: Development of Non-Neighbourhood Plan Allocated Employment Sites which states: The allocation of sites along the M18 in the Doncaster Local Plan will be supported given the economic development, through the layout of proposals, to promote physical connectivity with Thorne and Moorends. (SEE SERVER FOR Appendices)
Summary:
Note and support the proposed delivery at least 481 ha of employment land over the plan period at locations along the M18/M180 motorways and strategic road network to grow and diverse the economy, increase productivity and widen access to learning and training opportunities. This equates to 24 ha per annum over 20 period while the ELNA (2019 update) states that the net land take for the 4 year period (between 2015-2018) shows an average of 29.75ha per annum. It is therefore evident that recent demand for employment land is outstripping the supply. The Council should plan for additional employment land to enable flexibility and to meet this rising demand. In order to keep up with current market occupier demand, large-scale sites are needed to cater for larger warehouses and only 4 out of the 8 allocations could accommodate a building of over 100,000 sq ft. There is scope in Doncaster for a site such as Gateway 180 to be allocated. The Employment Land Need and Demand Assessment (undertaken by Knight Frank - Appendix 3) says that the current allocation of large scale employment land equates to approx 6.26 years supply. However a large proportion of this is not immediately deliverable and needs infrastructure and further investment. Also Riverside Park and Aero Centre developments are more suited to small to mid box occupiers. Therefore the currently available and deliverable supply is far less. The Knight Frank report (Appendix 3) also suggest that the Council should provide for land over and above the ‘job led scenario’ in order to attract regional/national demand for strategic warehousing and ensure that opportunities for economic growth and job creation are not missed. The suggested uplift is around 30%. Based on the last six years of take up for grade A units (above 100,00 sq ft) there is only 12 months of stock immediately available on the market. It is important that the Council allocates enough immediately deliverable ‘oven ready’ land to satisfy both current and anticipated future demand. The Council needs to provide allocations in locations with premium motorway connections, a scale and flexibility in their site layouts which are attractive to both logistics and industrial property markets to ensure flexibility.

Response:
Noted. No change required. Section 6 of the ELNA explains how the employment land need figure has been calculated i.e. additional factors such as competition and choice have been taken into account in the final figure. There is also an Employment Land Supply Buffer Note which explains this in more detail. There is no need therefore for additional land to be provided. The Economic Forecasts and Housing Needs Assessment suggests that 193 ha is a starting point for the employment land requirement. The Council’s Employment Land Need Assessment methodology increases this to 481 ha which is considered realistic and ambitious. There is also a variety of sites across the borough which aims to meets differing needs and not just warehousing.
3.1 Whilst we support the employment land target of Policy 3, we object to the omission of an employment land supply buffer or any reserve employment sites within the Local Plan to minimise the risk that the ‘minimum’ 481 hectare target is not met, and to ensure that the plan is sufficiently flexible to adapt to unforeseen circumstances. 3.2 Para 11 of the Presumption in Favour of Sustainable Development section of the NPPF requires that plans should be sufficiently flexible to adapt to rapid change. Para 81, within the Economy section of the Framework, echoes this requirement and states that policies should be flexible enough to accommodate needs not anticipated in the plan; to allow for new and flexible working practices; and to enable a rapid response to changes in economic circumstances. 3.3 In this context we are concerned that as drafted the Local Plan is insufficiently flexible and also ill-equipped to adapt to economic change that will inevitably occur over the 20-year plan period. Our particular concerns about the flexibility and durability of the Plan are as follows: 1. As explained in our associated comments on Policy 4 of the Local Plan, there is no buffer or flexibility (other than a very small 1-hectare (0.2%) surplus) should any of the various employment sites that the Council have included in the Plan not deliver at the pace anticipated. The attached Dove Haigh Phillips assessment of employment site options (Appendix 2) demonstrates that a delivery shortfall is very likely to occur in relation to Sites 878/1032, 001, 941 and 441 - amounting to almost 80 hectares of land. Dove Haigh Phillips also advise that in respect of employment sites with planning permission, which make up 201 hectares (42%) of the employment land supply, it is advisable to allow for a modest slippage rate of 10% due to unforeseen constraints. This would amount to a further potential 20 hectare delivery shortfall. 2. The attached Hatch Regeneris report (Appendix 1) shows that Doncaster has one of the fastest growing economies in the north of England, with a significantly higher GVA than the national or regional average. Industrial space leased in Doncaster since 2009 represents 37% of demand in South Yorkshire, despite the area only accounting for 20% of the South Yorkshire population. However, in the event that there is an unforeseen requirement for an additional large employment site to be provided over the plan period, consistent with Doncaster’s success, for example to meet a requirement for a high profile investor seeking a site with good access to the motorway network, this would inevitably involve the use of either Green Belt or defined Countryside because there are no opportunities close to the motorway network that would not utilise such land. The Countryside and Green Belt policies of the Plan would not readily allow for such a need to be met on a windfall basis, which would mean that Doncaster would lose out to footloose investors seeking employment opportunities that cannot be met by the limited new allocations of the Plan. A development within the Green Belt could not take place until a plan review had taken place, by which time an investor would be likely to look for opportunities in other Local Authority Areas. Policy 26 of the Plan only permits a ‘rural’ enterprise to be developed in the defined Countryside. 3. The Local Plan presently provides for significant flexibility in the housing supply, as shown at Page 44 of the plan - a 7% buffer above the residual allocation requirement; 585 dwellings with permission not included in the allocation supply; 1,345 dwellings on reserve housing sites; and windfalls, which will be additional to the allocated supply. However, there is no such buffer or reserve site allowance made for employment land to address the deliverability and flexibility concerns we identify above. This is an inconsistent approach. 4. Although Table 9.31 of the Housing and Employment Site Selection Methodology refers to a number of unimplemented UDP Employment allocations, we do not consider that these sites represent a reserve source of employment land that can be relied on to address the concerns we identify in this objection. Firstly, any allocation that is still available now, some 21 years after allocation of the UDP, is likely to be constrained by physical or ownership issues or be located in an unattractive location for development. Secondly, most of these sites are very modest in size and therefore unsuitable for anything but localized business needs (the Local Plan acknowledges that five of the sites are within a defined Employment Policy Area and they do not contribute to the total amount of employment land). Thirdly, a number of the sites are proposed (in part or whole) to be re-allocated for housing use. 5. The Doncaster UDP provided for a number of reserve employment sites to address the very flexibility points we have identified, thus highlighting the inconsistency in not applying a similar approach in the new Local Plan. Para 4.21 of the UDP states: “4.21 The provision of land within the UDP for employment purposes is likely to be more than adequate to meet anticipated future needs. However, in order to provide additional flexibility for the future in the event that demand proved to be higher than expected, or for example, if a need was identified for an extensive site for a single large operator that could not be accommodated on existing allocated sites in the borough, then the land previously earmarked for Phases 3 and 4 of Carcroft Industrial Estate and north of Cassons Road could be released for this purpose.” The policy associated with Para 4.21 of the UDP, Policy EMP3, safeguarded two large reserve employment sites amounting to approximately 80 hectares of land, as shown below: EMP 3 THE FOLLOWING LAND WILL REMAIN IN ITS PRESENT USE DURING THE PLAN PERIOD OR UNTIL SUCH TIME AS IT MAY BE REQUIRED FOR EMPLOYMENT PURPOSES IF DEMAND FOR EMPLOYMENT LAND EXCEEDS SUPPLY OF OTHER EMPLOYMENT LAND IN THE BOROUGH OR THERE IS A NEED TO PROVIDE A SITE FOR A SINGLE LARGE OPERATOR WHICH COULD NOT BE ACCOMODATED ON OTHER EMPLOYMENT SITES IDENTIFIED IN THE PLAN: 1) PHASES 3 AND 4 OF CARCROFT INDUSTRIAL ESTATE 54.3 HA 2) LAND NORTH OF CASSONS ROAD, THORNE 26.4 HA. 3.4 In the light of the above, we do not consider that Policy 3 is positively prepared, justified, effective or consistent with national policy. 3.5 Without prejudice to our client’s associated representation to Policy 4 seeking allocation of West Moor Park East (Site 937/1031/938/1014) for employment, we consider that site should be identified as a reserve employment site in the event that the former request is not accepted to bolster the employment land supply and address the flexibility concerns we set out in this representation. (SEE SUPPORTING DOCS for Appendices)
Summary:
Object to the omission of an employment land supply buffer or any reserve employment sites to minimise the risk of the 481 ha target not being met and to ensure that the plan is sufficiently flexible to adapt to unforeseen circumstances. NPPF (para 11) states that plans should be sufficiently flexible to adapt to rapid change, this is echoed in para 81. There is concern that the Local Plan is insufficiently flexible and ill-equipped to adapt to economic change that will occur over the plan period. The particular concerns are: 1. There is no buffer or flexibility (other than 1 ha). the Dove Haigh Phillips assessment (attached as an appendix) demonstrates that a delivery shortfall is likely to occur in relation to sites 878/1032, 001, 941 and 441 amounting to almost 80 ha of land. The report also states that a modest amount of slippage should be factored in for sites with planning permission not delivering as expected. This would be a further potential of 20 hectares of shortfall. 2. The Hatch Regeneris report shows that Doncaster has one of the fastest growing economies in the north. Industrial space leased in Doncaster since 2009 represents 37% of demand in South Yorkshire. If there is an unforeseen requirement for a high profile investor seeking a site with good access to the motorway, it would involve the use of countryside or Green Belt. The relevant policies of the plan do not allow for a need to be met on a windfall basis. Policy 26 only permits a ‘rural’ enterprise to be developed in the Countryside. 3. The Local Plan provides for flexibility in the housing supply as shown on page 44 of the plan. But there is no such buffer or reserve site allowance made for employment land. This is an inconsistent approach. 4. Table 9.31 of the Site Selection Methodology refers to a number of unimplemented UDP employment allocations but it is not considered that these represent a reserve source of employment land that can be relied upon. Any allocation that is still available after 21 years is likely to have constraints and be in an unattractive location. They are also modest in size and unsuitable for anything other than localised business needs. 5. The UDP provided for a number of reserve sites to address the flexibility requirements which demonstrates inconsistency in the new Local Plan. It is considered that Policy 3 is not positively prepared, justified, effective or consistent with national policy. West Moor Park East should be identified as a reserve employment site (if it is not allocated in the first instance). This would bolster the employment land supply and address flexibility concerns.

Response:
Noted. No change required. Section 6 of the ELNA explains how the employment land need figure has been calculated i.e. additional factors such as competition and choice have been taken into account in the final figure. There is also an Employment Land Supply Buffer Note which explains this in more detail. There is no need therefore for additional land to be provided. The Economic Forecasts and Housing Needs Assessment suggests that 193 ha is a starting point for the employment land requirement. The Council’s Employment Land Need Assessment methodology increases this to 481 ha which is considered realistic and ambitious.

**Comment:**

1. This representation supports the 481 hectare employment land target set out in Policy 3 of the Local Plan. However, it objects to the absence of an employment land buffer or any reserve employment sites.

1.2 The representation should be read in conjunction with the attached review of the Council's employment land evidence by Hatch Regeneris (Appendix 1); the attached assessment of employment site options by Dove Haigh Phillips (Appendix 2) and our client's objection to Policy 4 of the Local Plan. (SEE SUPPORTING DOCS for Appendices)

**Summary:**

This representation supports the 481 ha employment land target in Policy 3 but objects to the absence of an employment land buffer or any reserve employment sites.

**Response:**

Noted. No change required. Section 6 of the ELNA explains how the employment land need figure has been calculated i.e. additional factors such as competition and choice have been taken into account in the final figure. There is also an Employment Land Supply Buffer Note which explains this in more detail. There is no need therefore for additional land to be provided.

Comment:

2.1 Blue Anchor Leisure supports the requirement of Policy 3 of the Local Plan that the plan should facilitate the delivery of at least 481 hectares of employment land over the plan period (2015-2015). 2.2 The attached assessment of the Employment Land Need Assessment Update 2019 (ELNA) that underpins the 481 hectare target by Hatch Regeneris (Appendix 1) demonstrates that: - The 481 hectares is based on jobs growth of 1% p.a. This is consistent with past trends in Doncaster and the Sheffield City Region’s growth aspirations. - The target uses the same jobs growth assumptions as the housing-based assessment and therefore represents a joined-up approach. 2.3 Hatch Regeneris also find that the breakdown between different use classes estimated in the ELNA is broadly in line with past trends and therefore found to be sound. This shows that a large share of the requirement for employment land is for strategic warehousing, as illustrated below: - 14 Ha for office development; - 125 Ha for industrial; - 73 Ha for non-strategic warehousing; and - 271 Ha for strategic warehousing. 2.4 In the light of the above we conclude that employment land requirement set out in Policy 3 is sound. There is no justification for a lower employment land target. (SEE SUPPORTING DOCS for Appendices)

Summary:

Support the requirement of Policy 3 that the plan should facilitate the delivery of at least 481 ha of employment land over the plan period. The Hatch Regeneris report (appended to the representation) demonstrates that - The 481 hectares is based on jobs growth of 1% p.a. This is consistent with past trends in Doncaster and the Sheffield City Region’s growth aspirations. - The target uses the same jobs growth assumptions as the housing-based assessment and therefore represents a joined-up approach. The report also finds that the breakdown between use classes estimated in the ELNA is broadly in line with past trends and is therefore sound. It is considered that the employment land requirement in Policy 3 is sound and there is no justification for a lower land target.

Response:

Support for Policy 3 is welcomed.
We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

Comment:

Please see attached statement which provides full explanation and justification for Harworth Group’s objection to the Publication Version Local Plan in relation to Conisbrough & Denaby, which comprises the following points:

1. Policy 3 ‘Level and Distribution of Growth’ fails to satisfactorily direct light industrial, manufacturing and small scale distribution to the Main Towns, and in particular those in the west of the borough. Given the above, it is considered that Publication Draft Local Plan does not meet the tests of soundness insofar as it must be justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. A ‘reasonable alternative’ which represents a more sustainable and preferable form of development is put forward by Harworth Group and described in the attached statement. Suggested changes to the Plan that are required to achieve this preferable ‘reasonable alternative’ are summarised below.

PROPOSED CHANGE Please see attached statement which provides full explanation and justification for Harworth Group’s suggested changes to the Publication Version Local Plan in relation to Conisbrough & Denaby which are summarised below. These changes are required to ensure that the Plan is justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns, as follows:

- Location: Employment - Light Industry & Manufacturing: Rail and transport links and road connectivity. There is also capacity on Denaby Industrial Estate.
- Policy 3 should be amended to include within the table an appropriate strategy when considered against other reasonable alternatives.
- Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns, as follows:

- Location: Employment - Light Industry & Manufacturing: Rail and transport links and road connectivity. There is also capacity on Denaby Industrial Estate.

2. Policy 3 ‘Level and Distribution of Growth’ Fails to satisfactorily direct light industrial, manufacturing and small scale distribution to the Main Towns, and in particular those in the west of the borough. Given the above, it is considered that Publication Draft Local Plan does not meet the tests of soundness insofar as it must be justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. A ‘reasonable alternative’ which represents a more sustainable and preferable form of development is put forward by Harworth Group and described in the attached statement. Suggested changes to the Plan that are required to achieve this preferable ‘reasonable alternative’ are summarised below.

PROPOSED CHANGE Please see attached statement which provides full explanation and justification for Harworth Group’s suggested changes to the Publication Version Local Plan in relation to Conisbrough & Denaby which are summarised below. These changes are required to ensure that the Plan is justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns, as follows:

- Location: Employment - Light Industry & Manufacturing: Rail and transport links and road connectivity. There is also capacity on Denaby Industrial Estate.

3. Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns (Hatfield Power Park and associated business parks) Table 4 (as referenced from Policy 4) should be amended to include the allocation of land at Conisbrough & Denaby for employment development as follows:

- Table 4: Employment Site

allocations Ref: 001 Address/Location: Junction 6 M18, Thorne North Gross site area (Ha): 73.63 Area available for employment use (ha): 73.63

Ha to be developed in plan period: 51.54 Ref: 092 Address/Location: Balby Carr Gross site area (Ha): 11.25 Area available for employment use (ha): 11.25

Ha to be developed in plan period: 8.60 Ref: 258 Address/Location: Site 1, Middle Bank, Balby Gross site area (Ha): 8.48

Area available for employment use (ha): 5.00 Ha to be developed in plan period: 5.00

Ref: 441 Address/Location: Land at Carcroft Common, Carcroft Gross site area (Ha): 49.28 Area available for employment use (ha): 24.64

Ha to be developed in plan period: 12.32 Ref: 491 Address/Location: RHADS Site 1, Phase 4 Business Park Gross site area (Ha): 68.54 Area available for employment use (ha): 68.54

Ha to be developed in plan period: 17.68 Ref: 1032 Address/Location: Bankwood Lane, Rossington Gross site area (Ha): 17.68 Area available for employment use (ha): 17.68

Ha to be developed in plan period: 17.68 Ref: 1035 Address/Location: Land at Eland Road, Denaby Main Gross site area (Ha): 4.2 Area available for employment use (ha): 4.2

Ha to be developed in plan period: 4.2 [plus other sites as appropriate] The following changes should be made to the site allocations and land designations as shown on the Policies Map: Site 1035 should be removed from Green Belt and allocated for employment (in part 4-2.2 ha) and housing development (in part 7.3 ha) with the settlement boundary adjusted to suit. Development of this site would deliver c.7,000 sqm of employment space and up to approximately 200 houses. Site 383 (in its current form) should be reallocated for housing and instead designated as Green Belt; open space, sports and recreation; and as a local wildlife site. Site 040 (in its current form) should be omitted as a housing allocation and retained as Green Belt. To fully meet local housing need, the Council should consider identifying further land at Conisbrough & Denaby for housing which may be in the form of a reduced extent of site 040 and/or 383 (i.e. that preserves the biodiversity/amenity function and limits green belt incursion) or other suitable site. Accordingly, Table H2(D) of the Publication Version Local Plan should be amended as follows:

- Table H2(D): Allocations without planning permission (as at 1st April 2018): (SITE 040 AND 383 SHOWN AS STRIKE THROUGH BUT CANNOT BE SHOWN) Site Ref: 1035 Address: Land off Hill Top Road, Denaby Main Site area (Ha): 7.3 Indicative Capacity (No of houses): 200 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 0 15-17 Yrs: 0 Beyond Plan Period: 0 Site Ref: Address: [Reduced extent of site 040 or 383 or other suitable site] Site Area (Ha): Indicative Capacity (No of houses): 125 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 0 11-15 Yrs: 125 15-17 Yrs: 0 Beyond Plan Period: 0 TOTALS: Indicative Capacity (No of houses): 325 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 125 15-17 Yrs: 0 Beyond Plan Period: 0

Summary: RRe Policies and Site 1035 (Hill Top Denaby - Rejected Housing Site) Policy 3 ‘Level and Distribution of Growth’ Fails to satisfactorily direct light industrial, manufacturing and small scale distribution to the Main Towns, and in particular those in the west of the borough. Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns (includes suggested table amendments)

Response:

The Local Plan is not allocating employment specifically to any settlement. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity. There is also capacity on Denaby Industrial Estate.
5.1. Avant Homes is concerned that the Doncaster Local Plan Draft Policies and Proposed Sites is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 5.2. Avant Homes considers that the Local Plan is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 5.3. Avant Homes have a number of concerns in relation to the Level and Distribution of Growth. The concerns relate to the following: - The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need 5.4. Avant Homes is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. Avant Homes has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regenris report is attached to these representations. Regeners conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions about commuting, double jobbing and household formation rates. (SEE EMAIL FOR Regeners Report) 5.6. Regeners consider that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a - Doncaster's key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ELR's shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. 5.7. Avant Homes have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Avant Homes continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. 5.8. The Framework (2019) reaffirms the Governments' commitment to 'significantly boosting the supply of homes' and states that 'it is that a sufficient amount and variety of land can come forward as it is needed, that the needs of groups with specific housing requirements are addressed'. It goes on to state 'to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals'. 5.9. NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure. Paragraph 002 Reference ID: 2a-002-20190220. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. Paragraph 006 Reference ID: 2a-006-201902020. 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provide the minimum starting point in determining the number of homes needed in an area?It does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests'. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance...
of housing in an area is necessary for economic growth. The development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on "the economic footprint of house building in England and Wales", which shows that house building in England and Wales is now worth #38bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenue and contributing funding for local infrastructure and communities. House building supports the economic in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore Avant consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the Plan period and the figures arising from Tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodolgy, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently updated evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. Avant Homes consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23 % of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable requirements for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%): 13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%): 15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%): 13.74 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unviable for a number of sites, including all types of sites in low value areas. Avant Homes are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. Avant Homes consider that there is sufficient evidence to point to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with the Framework the Plan do not consider the jobs led within the Local Plan in its current form to be sound. 5.31. However, Avant Homes consider that with a higher requirement, of at least 1,100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1393) that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery. 5.32. Avant Homes is concerned that the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Avant Homes consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Avant Homes are concerned that some of the policies may undermine the
delivery of sites, or lead to the need for further site specific viability testing impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. Avant Homes have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 2311. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). 5.38. With regards to overall supply from permissions and allocations, a housing trajectory has been provided. Avant Homes are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Avant Homes supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Avant Homes consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. Avant Homes is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Avant Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Avant Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/ON7 Initiative No. of Dwellings: 705 Avant Homes Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Avant Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Avant Homes Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and 2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Avant Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. Avant Homes understands that no allowance has been made for demolitions. No evidence is apparent and Avant Homes consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of deliverable there needs to be a reasonable prospect that land will be available at the point envisaged. Avant Homes consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Avant Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Avant Homes Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 050/1505 Site Name: Thorncroft No. of Dwellings: 207 Avant Homes Comment: This is a longstanding allocation and there is little evidence available through the council’s evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorncroft No. of Dwellings: 13 Avant Homes Comment: This site has permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Avant Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Council’s evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Avant Homes Comment: This site is located to the western edge of the development and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have leaked heavily on allocations that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the resultant yields from proposed allocations, especially when considering some of the development requirements. Avant Homes therefore suggest that further
sites should be identified. 5.46. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Avant Homes do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. Avant Homes considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Avant Homes consider that the sites with no planning permission will not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. Avant Homes would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. Avant Homes considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Avant Homes would suggest a greater flexibility is incorporated into the Local Plan especially in light of Avant Homes' conclusions on the actual housing requirement. 5.50. Avant Homes would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. Avant Homes would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 Avant Homes' View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Avant Homes' View: 22,000 Completions Council Figures: 3,400 Avant Homes' View: 3,211 Total Commitments Council Figures: 9,488 Avant Homes' View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Avant Homes' View: 948.8 Total Allocations Council Figures: 6,567 Avant Homes' View: 6,567 Total Supply Council Figures: 18,506 Avant Homes' View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Avant Homes' View: 3,682.2 5.52. Therefore, on a best case scenario Avant Homes consider as a minimum requirement there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This as a minimum does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the above scenario does not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. Avant Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Avant Homes' View: 481 hectares Annual employment requirement Avant Homes' View: 24 hectares Employment land developed 2015-2018 Avant Homes' View: 117 Sites with planning permission Tables E1 to E8 Avant Homes' View: 284.09 New employment allocations Policy 4 Avant Homes' View: 164.68 Total Allocations Avant Homes' View: 565.77 Amount of land allocated over the requirement Avant Homes' View: 83.77 Additional homes required to balance with employment land supply Avant Homes' View: 3,850 Residual homes to be identified Avant Homes' View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Avant Homes have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overrelance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Avant Homes would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council's trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. Avant Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wadworth Hill, Wadworth 5.60. A brief summary is provided for these sites in response to Policy 6. Technical information and an advocacy report for each site will submitted shortly. The Advocacy Report will show a masterplan and vision for the proposed development scheme and illustrates the potential of the scheme. This report will be supported by significant technical information and the report will demonstrate that the sites are available, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. 5.61. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, Avant Homes consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.63. To overcome the objection and address soundness matters, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate: o Site 494: Green Lane, Scawthorpe, Doncaster o New Site: Melton Road, Newton, Doncaster o HELAA Site (871): Wadworth Hill, Wadworth
The Local Plan housing requirement is not sufficient and not fully aligned with forecast economic growth. It identifies significantly more employment land than the target for provision established in Policy 3. There is a significant mismatch between employment land allocations and housing land allocations. The identified supply is insufficient to meet the Council’s identified requirement. Regeneris Consulting have reviewed the housing requirement of 18,400 dwellings over the plan period / 920 dpa. They found that the PBA report made unjustified and unrealistic assumptions for a number of factors which suppress the level of housing required to support future employment growth. Specifically disagree about assumptions on commuting, double jobbing and household formation (report supplied). The report considers that Doncaster has one of the fastest growing economies in Yorkshire and the Humber and has created 24,000 jobs 2000 - 2017 (1.1% pa). Its key asset is connectivity by rail, air and road which is highly attractive to investors, especially industrial and logistics occupiers. Over 1.1m sq m of industrial / warehousing land has been taken up since 2010. There has been a significant improvement in key economic indicators, including skills and level of enterprise. The business start up rate has more than doubled since 2010 and is in line with the national average, thus removing a key barrier to growth. There continues to be demand for industrial space in Doncaster and strong potential to accommodate high levels of inward investment in future, which would drive jobs growth. Given this, not enough homes are being planned for, and there needs to be a more appropriate balance between housing provision and economic ambitions. It is clear from the framework that the standard method is a starting point and a minimum, not a housing requirement figure itself. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. There may be exceptional circumstances for planning for more housing. The Council need to recognise that the development of new housing will bring economic benefits to the area. New housing can support economic growth both through direct job creation through construction and through increased population, which will create sustainable jobs and increased goods / services demand. This provides an important sustainable development opportunity. The HBF report that housebuilding is worth £38bn p/a (England and Wales) and supports 700,000 jobs. House building supports the economic in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. The report concludes that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. Regenris consider the housing need should be 1,100dpa to support economic growth. 920 dpa risks constraining the future economic growth of Doncaster. Furthermore jobs are only forecast 2015 - 32, it is unclear what consideration has been given to expected job growth to the end of the plan period and therefore it is considered possible that the jobs led target underestimates the need over the full plan period. There is a discrepancy between para. 4.61 and Tables E1 - E8 and the numbers stated (481ha vs. 565.77ha), and there is also additional employment land available according to tables E1 - E8. There is a significant mismatch between the level of planned employment provision in Policy 4 and planned housing. The housing requirement needs to be uplifted to reflect the employment land provision. Net completions 2015 - 18 amount to 3,211 and have been consistently higher than the Local Plan target. This shows there is sufficient demand to support a requirement above 920dpa. PBA calculated 1,073 in an earlier approach and advised it is prudent to plan for between 562 and 1,073. 1% employment growth would support a target at the top of this range. There is therefore evidence of higher delivery of housing and a higher need. PPG is clear this evidence should be taken into account when determining the housing requirement. 912dpa is not based on jobs growth over the full plan period. Furthermore, there is evidence the affordable housing needs in the borough cannot be met based on a target of 920. Affordable housing delivery is below 23% even against higher rates of deliver than 920dpa. Concern that 920 will not deliver the affordable housing needed. To deliver 209 affordable dwellings per annum, 1,393 dpa would be needed, assuming an average of 15% affordable housing (the highest achieved over the past 3 years). There is sufficient evidence for an uplift to the housing figure. The policy is not justified or consistent with the framework and the plan is currently unsound. The requirement should be at least 1,100 to meet economic growth ambitions and balance housing / job aspirations and ensure the needs for affordable homes can be met (up to 1,393 dpa). Concern that the Council’s approach to delivering the housing requirement does not reflect national guidance. There is insufficient flexibility in the supply of land to meet the identified needs in full. The framework is clear plans should be flexible to adapt to rapid change and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward when needed. The plan period requirement is 18,400, with 3,400 completions and maximum completions equivalent to about 16,055. This provides a flexibility of 5% (1,055 dwellings), which is insufficient given the potential for non delivery and under delivery of sites - particularly from dependency on a number of large sites. Some policies may undermine delivery (especially 8, 46, 66 and 67) or lead to the need for further site specific viability testing which impacts on the timing of delivery and therefore means greater flexibility is required. It is noted that supply attributed to completions appears to be gross not net. The plan indicates completions of 3,400 but according to the RLA reports, net completions are 3,211. This would leave the residual requirement based on 920 to at least 15,189 and reduce flexibility in the plan to 866 dwellings (4.7%). The trajectory shows the council would struggle to maintain a continuous supply over the plan period, especially later on. The RLA is also not up to date and needs updating. 100% deliverability of commitments should not be assumed, there should be at least a 10% discount, according to best practice and guidance. This is supported with higher levels of discounting for larger sites to account for unforeseen circumstances and delivery delays. Out of 9,488 plots, there should be a discount of c. 948, however it could be higher given concerns about some deliverability. Concern with reliance on commitments especially as some are historic brownfield sites with viability concerns in challenging marker areas, some of which also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. Concerning sites include: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Avant Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Avant Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DIN7 Initiative No. of Dwellings: 905 Avant Homes Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multiple ownerships and understanding that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development, which will give the site a considerable public funding, the developer/PLC has a protected timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate to start on site until years 6 to 10. However the local plan indicates a
175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Avant Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 594 Site Name: Former McCormick Tractors No. of Dwellings: 670. Avant Homes Comment: This site has significant constraints: there is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Avant Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. Sites which are unavailable or unknown should not be included, such as: Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Avant Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rostington No. of Dwellings: 897/237 Avant Homes Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1172 homes forecast within the Plan. Site Ref: 081/343 Site Name: Thorne No. of Dwellings: 207 Avant Homes Comment: This is a longstanding allocation and there is little evidence available through the council's evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Avant Homes Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 300 Avant Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Avant Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. A high level assessment shows some proposals are at risk and hence why a buffer is required. Furthermore, existing permissions are heavily relied on as an alternative to identifying a sufficient supply of new allocations. Consequentially, a number of sustainable places have insufficient allocations to meet their needs throughout the plan period. There are also unrealistic assumptions on gross to net deliverable site areas and proposed yields especially given developer requirements. Further sites are therefore needed. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan. Do not believe the plan can deliver this, especially in later years. The council should be realistic on delivery of sites, especially those which have not commenced preparations for securing relevant planning permissions, and developer interest on build rates. Sites without permission should not be providing completions until at least 2023/24. Those with permission must have clear evidence of deliverability. Flexibility must be built in and commitments reviewed check deliverability, house builders on board and what constraints exist. Delivery rates must also be reviewed to check sites are deliverable in light of policy obligations. The council should make provision for: Annual Housing Requirement Council Figures: 920 Avant Homes' View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Avant Homes' View: 22,000 Completions Council Figures: 3,211 Total Commitments Council Figures: 9,488 Avant Homes' View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Avant Homes' View: 948.8 Total Allocations Council Figures: 6,567 Avant Homes' View: 6,567 Total Supply Council Figures: 18,506 Avant Homes' View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Avant Homes' View: 3,682.2 Best case, there must be c.3682 new homes to be identified in the Plan to account for net completions, and economic growth. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. The above scenario does not balance housing and employment. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes will be required, this amounts to an annual requirement of 1,292.5 dpa. Avant Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Avant Homes' View: 481 hectares Annual employment requirement Avant Homes' View: 24 hectares Employment land developed 2015-2018 Avant Homes' View: 117 Sites with planning permission E1 to E8 Avant Homes' View: 284.09 New employment allocations Policy 4 Avant Homes' View: 164.68 Total Allocations Avant Homes' View: 565.77 Amount of land allocated over the requirement Avant Homes' View: 83.77 Additional homes required to balance with employment land supply Avant Homes' View: 3,850 Residual homes to be identified Avant Homes' View: 7,532.2 Assuming no changes to the housing supply, which are also concerns about, or airport economic growth. There should also be safeguarded land. Avant Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wathwood Hill, Wathwood - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate: o Site 494: Green Lane, Scawthorpe, Doncaster o New Site: Melton Road, Newton, Doncaster o HELAA Site (871): Wathwood Hill, Wathwood 

Response:
The Peter Brett's report assesses the employment and housing target for the borough and ties the two together to ensure the right amount of houses are provided for the projected growth. The Council are confident that this report provides a sound and realistic figure. Many ways have been submitted to the Council about how the housing and employment figures could be derived. The submission Local Plan included a range, but still plans for enough housing to meet the requirement of 920dpa over the plan period - the use of a range does not prejudice this. 920dpa is the assessed level of housing required under the revised NPPF, 1,073 refers to the figure using the previous NPPF, which is now redundant. It should also be noted the PBA report states a mid-way point between 585 and 920 could be used, which the Council elected not to do. The Local Plan is planning for 57% more housing proposed, and in doing so the Council have taken on board national policy and guidance. The jobs requirement covers the period 2015 - 35, and enough housing is planned for to match this - there is no reason to uplift this further, including for affordable housing. There is additional flexibility in housing delivery, as the plan does not factor in to its calculations windfalls; sites of 1-4 units; any development in Defined Villages; the proposed 280 dwellings at the airport + possible 920 further linked to job delivery; and the potential of Reserve Development Sites to deliver housing. If all these are factored in, then there is a total potential supply of
24,880 + future windfalls and potential empty homes coming into use, which is 6,480 above the 20 year requirement of 18,400, or in effect a buffer of 35%. Trajectories and other matters raised or covered in the Housing Topic Paper. The RLA has been updated for 2019 now. Consideration has been given to site constraints and delivery, and factored in where appropriate - this is discussed in the Site Selection Methodology and Housing Topic Paper. With regards to site 494, it is not felt that exceptional circumstances exist to justify the release of this site, as set out in the Green Belt Topic Paper. 871 is in a Defined Village where no new allocations are being made.
The strong performance is also due to a significant improvement in key economic indicators, with a growth rate of 1.1% per annum. The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period, and the identified supply is not sufficient to meet the Council’s identified requirement. Need 5.4. Avant Homes is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. Avant Homes has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris report is attached to these representations. Regeneris conclude that: The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. The upward adjustment was based on evidence produced by PBA which recommended a minimum housing need as presented by the area. The relationship between economic performance and housing is complex, but having the right quantity, quality and balance of inward investment in future which would also drive jobs growth. 5.7. Avant Homes has concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Avant Homes believe that the Local Plan will not deliver sufficient housing and does not reflect national guidance. The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ERL’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. 5.8. The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. 5.9. NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure. Paragraph 002 Reference ID: 2a-002-20190220. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. Paragraph 006 Reference ID: 2a-006-20190220. 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum starting point in determining the number of homes needed in an area? It does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests’. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance.
of housing in an area is necessary for economic growth. The development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create sustainable local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster.

5.17. Importantly the HBF released in July 2018 its report on "the economic footprint of house building in England and Wales", which shows that house building in England and Wales is now worth £38bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenue and contributing funding for local infrastructure and communities. House building supports the economic in a wider sense through being drive for economic growth, delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land.

5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore Avant consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in Tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodology, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. Avant Homes consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23% of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%): 13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%): 15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%): 13.74 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/value medium areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unviable for a number of sites, including all types of sites in low value areas. Avant Homes are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. Avant Homes consider that there is sufficient evidence to pointing to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework. In these circumstances, We do not consider the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Avant Homes consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Avant Homes are concerned that some of the policies may undermine the
deliverability of sites, or lead to the need for further site specific viability testing impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. Avant Homes have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). 5.38. With regards to overall supply from permissions and allocations, a housing trajectory has been provided. Avant Homes are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Avant Homes supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Avant Homes consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. Avant Homes is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Avant Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Avant Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated due to the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 Avant Homes Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Avant Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Avant Homes Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Avant Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. Avant Homes understands that no allowance has been made for demolitions. No evidence is apparent and Avant Homes consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. Avant Homes consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Avant Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Avant Homes Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. It is significantly less than the Plan’s projection for 1127 homes. The Plan’s forecast within the Plan period is 824. Site Name: Thorne No. of Dwellings: 207 Avant Homes Comment: This is a longstanding allocation and there is little evidence available through the Council’s evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Avant Homes Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Avant Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Avant Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have leant heavily on allocating sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the resultant yields from proposed allocations, especially when considering some of the development requirements. Avant Homes therefore suggest that further
sites should be identified. 5.46. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Avant Homes do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. Avant Homes considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Avant Homes consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. Avant Homes would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are located in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. Avant Homes considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Avant Homes would suggest a greater flexibility is incorporated into the Local Plan especially in light of Avant Homes' conclusions on the actual housing requirement. 5.50. Avant Homes would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. Avant Homes would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 Avant Homes' View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Avant Homes' View: 22,000 Completions Council Figures: 3,400 Avant Homes' View: 3,211 Total Commitments Council Figures: 9,488 Avant Homes' View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Avant Homes' View: 948.8 Total Allocations Council Figures: 6,567 Avant Homes' View: 6,567 Total Supply Council Figures: 18,506 Avant Homes' View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Avant Homes' View: 3,682.2 5.52. Therefore, on a best case scenario Avant Homes consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocation of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the above scenario does not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. Avant Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Avant Homes' View: 481 hectares Annual employment requirement Avant Homes' View: 24 hectares Employment land developed 2015-2018 Avant Homes' View: 117 Sites with planning permission Tables E1 to E8 Avant Homes' View: 284.09 New employment allocations Policy 4 Avant Homes' View: 164.68 Total Allocations Avant Homes' View: 565.77 Amount of land allocated over the requirement Avant Homes' View: 83.77 Additional homes required to balance with employment land supply Avant Homes' View: 3,850 Residual homes to be identified Avant Homes' View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Avant Homes have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Avant Homes would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council's trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. Avant Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wadworth Hill, Wadworth 5.60. A brief summary is provided for these sites in response to Policy 6. Technical information and an advocacy report for each site will submitted shortly. The Advocacy Report will show a masterplan and vision for the proposed scheme and outlines the potential of the scheme. This report will be supported by significant technical information and the report will demonstrate that the sites are available, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. 5.61. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, Avant Homes consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.63. To overcome the objection and address soundness matters, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. -Identify safeguarded land. - Allocate: o Site 494: Green Lane, Scawthorpe, Doncaster o New Site: Melton Road, Newton, Doncaster o HELAA Site (871): Wadworth Hill, Wadworth
The Local Plan housing requirement is not sufficient and not fully aligned with forecast economic growth. It identifies significantly more employment land than the target for provision established in Policy 3. There is a significant mismatch between employment land allocations and housing land allocations. The identified supply is insufficient to meet the Council’s identified requirement. Regeneris Consulting have reviewed the housing requirement of 18,400 dwellings over the plan period / 920 dpa. They found that the PBA report made unjustified and unrealistic assumptions for a number of factors which supress the level of housing required to support future employment growth. Specifically disagree about assumptions on commuting, double jobbing and household formation (report supplied). The report considers that Doncaster has one of the fastest growing economies in Yorkshire and the Humber and has created 24,000 jobs 2000 - 2017 (1.1% pa). Its key asset is connectivity by rail, air and road which is highly attractive to investors, especially industrial and logistics occupiers. Over 1.1m sq m of industrial / warehousing land has been taken up since 2010. There has been a significant improvement in key economic indicators, including skills and level of enterprise.

The business start up rate has not doubled since 2010 and is in line with the national average, thus removing a key barrier to growth. There continues to be demand for industrial space in Doncaster and strong potential to accommodate high levels of inward investment in future, which would drive jobs growth. Given this, not enough homes are being planned for, and there needs to be a more appropriate balance between housing provision and economic ambitions. It is clear from the framework that the standard method is a starting point and a minimum, not a housing requirement figure itself. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. There may be exceptional circumstances for planning for more housing. The Council need to recognise that the development of new housing will bring economic benefits to the area. New housing can support economic growth both through direct job creation through construction and through increased population, which will create sustainable jobs and increased goods / services demand. This provides an important sustainable development opportunity. The HBF report that housebuilding is worth #38bn p/a (England and Wales) and supports 700,000 jobs. House building supports the economy in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. The report concludes that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. Regeneris consider the housing need should be 1,100dpa to support economic growth. 920 dpa risks constraining the future economic growth of Doncaster. Furthermore jobs are only forecast 2015 - 32, it is unclear what consideration has been given to expected job growth to the end of the plan period and therefore it is considered possible that the jobs led target underestimates the need over the full plan period. There is a discrepancy between para. 4.61 and Tables E1 - E8 and the numbers stated (481ha vs. 565.77ha), and there is also additional employment land available according to tables E1 - E8. There is a significant mismatch between the level of planned employment provision in Policy 4 and planned housing. The housing requirement needs to be uplifted to reflect the employment land provision. Net completions 2015 - 18 amount to 3,211 and have been consistently higher than the Local Plan target. This shows there is sufficient demand to support a requirement above 920dpa. PBA calculated 1,073 in an earlier approach and advised it is prudent to plan for between 562 and 1,073. 1% employment growth would support a target at the top of this range. There is therefore evidence of higher delivery of housing and a higher need. PPG is clear this evidence should be taken into account when determining the housing requirement. 912dpa is not based on jobs growth over the full plan period. Furthermore, there is evidence the affordable housing needs in the borough cannot be met based on a target of 920. Affordable housing delivery is below 23% even against higher rates of deliver than 920dpa. Concern that 920 will not deliver the affordable housing needed. To deliver 209 affordable dwellings per annum, 1,393 dpa would be needed, assuming an average of 15% affordable housing (the highest achieved over the past 3 years). There is sufficient evidence for an uplift to the housing figure. The policy is not justified or consistent with the framework and the plan is currently unsound. The requirement should be at least 1,100 to meet economic growth ambitions and balance housing / job aspirations and ensure the needs for affordable homes can be met (up to 1,393 dpa). Concern that the Council’s approach to delivering the housing requirement does not reflect national guidance. There is insufficient flexibility in the supply of land to meet the identified needs in full. The framework is clear plans should be flexible to adapt to rapid change and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward when needed. The plan period requirement is 18,400, with 3,400 completions and allocations equating to 15,000 dwellings. This provides a flexibility of 5% (1,055 dwellings), which is insufficient given the potential for non delivery and under delivery of sites - particularly from dependency on a number of large sites. Some policies may undermine delivery (especially 8, 46, 66 and 67) or lead to the need for further site specific viability testing which impacts on the timing of delivery and therefore means greater flexibility is required. It is noted that supply attributed to commitments appears to be gross not net. The plan indicates completions of 3,400 but according to the RLA reports, net completions are 3,211. This would leave the residual requirement based on 920dpa to at least 15,189 and reduce flexibility in the plan to 866 dwellings (4.7%). The trajectory shows the council would struggle to maintain a continuous supply over the plan period, especially later on. The RLA is also not up to date and needs updating. 100% deliverability of commitments should not be assumed, there should be at least a 10% discount, according to best practice and guidance. This is supported with higher levels of discounting for larger sites to account for unforeseeable circumstances and delivery delays. Out of 9,488 plots, there should be a discount of c. 948, however it could be higher given concerns about some deliverability. Concern with reliance on commitments especially as some are historic brownfield sites with viability concerns in challenging marker areas, some of which also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. Concerning sites include: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Avant Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Avant Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DIN Initiative No. of Dwellings: 905 Avant Homes Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multiple ownershi which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery.
175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Avant Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 690 Avant Homes Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Avant Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. Sites which are unavailable or unknown should not be included, such as: Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Avant Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Avant Homes Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 081/343 Site Name: Thorne No. of Dwellings: 207 Avant Homes Comment: This is a longstanding allocation and there is little evidence available through the council's evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 33 Avant Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carrcroft No. of Dwellings: 300 Avant Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. A high level assessment shows some proposals are at risk and hence why a buffer is required. Furthermore, existing permissions are heavily relied on as an alternative to identifying a sufficient supply of new allocations. Consequently, a number of sustainable places have insufficient allocations to meet their needs throughout the plan period. There are also unrealistic assumptions on gross to net deliverable site areas and proposed yields especially given developer requirements. Further sites are therefore needed. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan. Do not believe the plan can deliver this, especially in later years. The council should be realistic on delivery of sites, especially those which have not commenced preparations for securing relevant planning permissions. and developer interest on build rates. Sites without permission should not be providing completions until at least 2023/24. Those with permission must have clear evidence of deliverability. Flexibility must be built in and commitments reviewed check deliverability, house builders on board and what constraints exist. Delivery rates must also be reviewed to check sites are deliverable in light of policy obligations. The council should make provision for: Annual Housing Requirement Council Figures: 920 Avant Homes' View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Avant Homes' View: 22,000 Completions Council Figures: 3,400 Avant Homes' View: 83.77 Additional homes required to balance with employment land supply. The Employment requirement 2015-2035 Avant Homes' View: 165/186 Site Name: Carcroft Avant Homes' View: 3,211 Total Commitments Council Figures: 9,488 Avant Homes' View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Avant Homes' View: 948.8 Total Allocations Council Figures: 6,567 Avant Homes' View: 6,567 Total Supply Council Figures: 18,506 Avant Homes' View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Avant Homes' View: 3,682.2 Best case, there must be c.3682 new homes to be identified in the Plan to account for net completions, and economic growth. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. The above scenario does not balance housing and employment. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. Avant Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Avant Homes' View: 481 hectares Annual employment requirement Avant Homes' View: 24 hectares Employment land developed 2015-2018 Avant Homes' View: 117 Sites with planning permission Tabels E1 to E8 Avant Homes' View: 284.09 New employment allocations Policy 4 Avant Homes' View: 164.68 Total Allocations Avant Homes' View: 565.77 Amount of land allocated over the requirement Avant Homes' View: 83.77 Additional homes required to balance with employment land supply. Avant Homes' View: 3,850 Residual homes to be identified Avant Homes' View: 7,532.2 Assuming no changes to the housing supply, which there are also concerns about, or airport economic growth. There should also be safeguarded land. Avant Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wadworth Hill, Wadworth - Increase housing requirement to 1,100 to 1,300 completions over the plan period. - Develop the potential from 690 to 7532.2 homes. - Develop the potential from 984 to 164.68 hectares. - Identify safeguarded land. - Allocate: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wadworth Hill, Wadworth

Response:
The Peter Brett’s report assesses the employment and housing target for the borough and ties the two together to ensure the right amount of houses are provided for the projected growth. The Council are confident that this report provides a sound and realistic figure. Many ways have been submitted to the Council about how the housing and employment figures could be derived. The submission Local Plan included a range, but still plans for enough housing to meet the requirement of 920dpa over the plan period - the use of a range does not prejudice this. 920dpa is the assessed level of housing required under the revised NPPF, 1,073 refers to the figure using the previous NPPF, which is now redundant. It should also be noted the PBA report states a mid-way point between 585 and 920 could be used, which the Council elected not to do. The Local Plan is planning for 57% more housing than the Standard Methodology proposed, and in doing so the Council have taken on board national policy and guidance. The jobs requirement covers the period 2015 - 35, and enough housing is planned for to match this - there is no reason to uplift this further, including for affordable housing. There is additional flexibility in housing deliver, as the plan does not factor in to its calculations windfalls; sites of 1-4 units; any development in Defined Villages; the proposed 280 dwellings at the airport + possible 920 further linked to job delivery; and the potential of Reserve Development Sites to deliver housing. If all these are factored in, then there is a total potential supply of
24,880 + future windfalls and potential empty homes coming into use, which is 6,480 above the 20 year requirement of 18,400, or in effect a buffer of 35%. Trajectories and other matters raised or covered in the Housing Topic Paper. The RLA has been updated for 2019 now. Consideration has been given to site constraints and delivery, and factored in where appropriate. With regards to site 494, it is not felt that exceptional circumstances exist to justify the release of this site, as set out in the Green Belt Topic Paper. 871 is in a Defined Village where no new allocations are being made.
There is a significant mismatch between the level of employment land allocated and the target for provision established in Policy 3. There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need 5.4. Avant Homes is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. Avant Homes has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris report is attached to these representations. Regeneris conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions about commuting, double jobbing and household formation rates. (See EMAIL FOR Regeneris Report) 5.6. Regeneris consider that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humbers. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a - Doncaster’s key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ERL’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. 5.7. Avant Homes have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Avant Homes continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. 5.8. The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. 5.9. NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure Paragraph 002 Reference ID: 2a-002-20190220. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. Paragraph 006 Reference ID: 2a-006-201902020. 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum starting point in determining the number of homes needed in an area?It does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This need will be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests'. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance.
of housing in an area is necessary for economic growth. The development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create sustainable local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on “the economic footprint of house building in England and Wales”, which shows that house building in England and Wales is now worth #38bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenue and contributing funding for local infrastructure and communities. House building supports the economic in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore Avant consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and2035. The explanatory text considers that this requirement is met through 117 hectares of allocated land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated hectares. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodology, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. Avant Homes consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23 % of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%): 13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%): 15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%): 13.74. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unviable for a number of sites, including all types of sites in low value areas. Avant Homes are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. Avant Homes consider that there is sufficient evidence to pointing to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance do not not consider the Council's Local Plan in its current form to be sound. 5.31. However, Avant Homes consider that with a higher requirement, of at least 1,100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1393) that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery 5.32. Avant Homes is concerned that the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Avant Homes consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Avant Homes are concerned that some of the policies may undermine the
deliberativity of sites, or lead to the need for further site specific viability testing impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. Avant Homes have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). 5.38. With regards to overall supply from permissions and allocations, a housing trajectory has been provided. Avant Homes are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Avant Homes supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delay delays. Avant Homes consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. Avant Homes is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Avant Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Avant Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated due to the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 Avant Homes Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of extensive infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askn Saw Mills No. of Dwellings: 220 Avant Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Avant Homes Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in this following year. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Avant Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. Avant Homes understands that no allowance has been made for demolitions. No evidence is apparent and Avant Homes consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. Avant Homes consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Avant Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Avant Homes Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of being completed within the Plan period. This is significantly less than the 1127 homes forecast within this Plan period. Site Ref: 031/62 Site Name: Thorne No. of Dwellings: 207 Avant Homes Comment: This is a longstanding allocation and there is little evidence available through the council’s evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Avant Homes Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Avant Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Council’s evidence base to demonstrate the scarcity of interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Avant Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have hefty allocations on sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of sites are not deliverable due to a strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the resultant yields from proposed allocations, especially when considering some of the development requirements. Avant Homes therefore suggest that further
sites should be identified. 5.46. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Avant Homes do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. Avant Homes considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Avant Homes consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. Avant Homes would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. Avant Homes considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Avant Homes would suggest a greater flexibility is incorporated into the Local Plan especially in light of Avant Homes' conclusions on the actual housing requirement. 5.50. Avant Homes would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. Avant Homes would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 Avant Homes' View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Avant Homes' View: 22,000 Completions Council Figures: 3,400 Avant Homes' View: 3,211 Total Commitments Council Figures: 9,488 Avant Homes' View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Avant Homes' View: 948.8 Total Allocations Council Figures: 6,567 Avant Homes' View: 6,567 Total Supply Council Figures: 18,506 Avant Homes' View: 18,317.2 Residual homes to be identified Council Figures: 106.2 Avant Homes' View: 106.2. Therefore, on a best case scenario Avant Homes consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the above scenario does not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. Avant Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Avant Homes' View: 481 hectares Annual employment requirement Avant Homes' View: 24 hectares Employment land developed 2015-2018 Avant Homes' View: 117 Sites with planning permission Tables E1 to E8 Avant Homes' View: 284.09 New employment allocations Policy 4 Avant Homes' View: 164.68 Total Allocations Avant Homes' View: 565.77 Amount of land allocated over the requirement Avant Homes' View: 83.77 Additional homes required to balance with employment land supply Avant Homes' View: 3,850 Residual homes to be identified Avant Homes' View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Avant Homes have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered deliverable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Avant Homes would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council's trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. Avant Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wadworth Hill, Wadworth 5.60. A brief summary is provided for these sites in response to Policy 6. Technical information and an advocacy report for each site will submitted shortly. The Advocacy Report will show a masterplan and vision for the proposed scheme and illustrates the potential of the scheme. This report will be supported by significant technical information and the report will demonstrate that the sites are available, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. 5.61. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, Avant Homes consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.63. To overcome the objection and address soundness matters, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate: o Site 494: Green Lane, Scawthorpe, Doncaster o New Site: Melton Road, Newton, Doncaster o HELAA Site (871): Wadworth Hill, Wadworth
The Local Plan housing requirement is not sufficient and not fully aligned with forecast economic growth. It identifies significantly more employment land than the target for provision established in Policy 3. There is a significant mismatch between employment land allocations and housing land allocations. The identified supply is insufficient to meet the Council's identified requirement. Regeneris Consulting have reviewed the housing requirement of 18,400 dwellings over the plan period / 920 dpa. They found that the PBA report made unjustified and unrealistic assumptions for a number of factors which suppress the level of housing required to support future employment growth. Specifically disagree about assumptions on commuting, double jobbing and household formation (report supplied). The report considers that Doncaster has one of the fastest growing economies in Yorkshire and the Humber and has created 24,000 jobs 2000 - 2017 (1.1% pa). Its key asset is connectivity by rail, air and road which is highly attractive to investors, especially industrial and logistics occupiers. Over 1.1m sq m of industrial / warehousing land has been taken up since 2010. There has been a significant improvement in key economic indicators, including skills and level of enterprise.

The business start up rate has more than doubled since 2010 and is in line with the national average, thus removing a key barrier to growth. There continues to be demand for industrial space in Doncaster and strong potential to accommodate high levels of inward investment in future, which would drive jobs growth. Given this, not enough homes are being planned for, and there needs to be a more appropriate balance between housing provision and economic ambitions. It is clear from the framework that the standard method is a starting point and a minimum, not a housing requirement figure itself. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. There may be exceptional circumstances for planning for more housing. The Council need to recognise that the development of new housing will bring economic benefits to the area. New housing can support economic growth both through direct job creation through construction and through increased population, which will create sustainable jobs and increased goods / services demand. This provides an important sustainable development opportunity. The HBF report that housebuilding is worth £38bn p/a (England and Wales) and supports 700,000 jobs. House building supports the economy in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. The report concludes that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. Regeneris consider the housing need should be 1,100dpa to support economic growth. 920 dpa risks constraining the future economic growth of Doncaster. Furthermore jobs are only forecast 2015 - 32, it is unclear what consideration has been given to expected job growth to the end of the plan period and therefore it is considered possible that the jobs led target underestimates the need over the full plan period. There is a discrepancy between para. 4.61 and Tables E1 - E8 and the numbers stated (481ha vs. 565.77ha), and there is also additional employment land available according to tables E1 - E8. There is a significant mismatch between the level of planned employment provision in Policy 4 and planned housing. The housing requirement needs to be uplifted to reflect the employment land provision. Net completions 2015 - 18 amount to 3,211 and have been consistently higher than the Local Plan target. This shows there is sufficient demand to support a requirement above 920dpa. PBA calculated 1,073 in an earlier approach and advised it is prudent to plan for between 562 and 1,073. 1% employment growth would support a target at the top of this range. There is therefore evidence of higher delivery of housing and a higher need. PPG is clear this evidence should be taken into account when determining the housing requirement. 912dpa is not based on jobs growth over the full plan period. Furthermore, there is evidence the affordable housing needs in the borough cannot be met based on a target of 920. Affordable housing delivery is below 23% even against higher rates of delivery than 920dpa. Concern that 920 will not deliver the affordable housing needed. To deliver 209 affordable dwellings per annum, 1,393 dpa would be needed, averaging an assumed 15% affordable housing (the highest achieved over the past 3 years). There is sufficient evidence for an uplift to the housing figure. The policy is not justified or consistent with the framework and the plan is currently unavailable. The requirement should be at least 1,100 to meet economic growth ambitions and balance housing / job aspirations and ensure the needs for affordable homes can be met (up to 1,393 dpa). Concern that the Council's approach to delivering the housing requirement does not reflect national guidance. There is insufficient flexibility in the supply of land to meet the identified needs in full. The framework is clear plans should be flexible to adapt to rapid change and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward when needed. The plan period requirement is 18,400, with 3,400 completions and planning permission requirements equivalent to 16,055. This provides a flexibility of 5% (1,055 dwellings), which is insufficient given the potential for non delivery and under delivery of sites - particularly from dependency on a number of large sites. Some policies may undermine delivery (especially 8, 46, 66 and 67) or lead to the need for further site specific viability testing which impacts on the timing of delivery and therefore means greater flexibility is required. It is noted that supply attributed to completions appears to be gross not net. The plan indicates completions of 3,400 but according to the RLA reports, net completions are 3,211. This would leave the residual requirement based on 920 to at least 15,189 and reduce flexibility in the plan to 866 dwellings (4.7%). The trajectory shows the council would struggle to maintain a continuous supply over the plan period, especially later on. The RLA is also not up to date and needs updating. 100% deliverability of commitments should not be assumed, there should be at least a 10% discount according to best practice and guidance. This is supported with higher levels of discounting for larger sites to account for unforeseen circumstances and delivery delays. Out of 9,488 plots, there should be a discount of c. 948, however it could be higher given concerns about some deliverability. Deliverability with reliance on commitments especially as some are historic brownfield sites with viability concerns in challenging marker areas, some of which also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. Concerning sites include: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Avant Homes Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of deliverability. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Avant Homes Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 Avant Homes Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multiple ownershi.
175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Avant Homes Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 690. Avant Homes Comment: This site has significant constraints, and there is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Avant Homes Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. Sites which are unavailable or unknown should not be included, such as: Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Avant Homes Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the council's calculations highlight that the realistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Avant Homes Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 081/343 Site Name: Thorne No. of Dwellings: 207 Avant Homes Comment: This is a longstanding allocation and there is little evidence available through the council's evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Avant Homes Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 35. Avant Homes Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Council's evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Avant Homes Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. A high level assessment shows some proposals are at risk and hence why a buffer is required. Furthermore, existing permissions are heavily relied on as an alternative to identifying a sufficient supply of new allocations. Consequently, a number of sustainable places have insufficient allocations to meet their needs throughout the plan period. There are also unrealistic assumptions on gross to net deliverable site areas and proposed yields especially given developer requirements. Further sites are therefore needed. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan. Do not believe the plan can deliver this, especially in later years. The council should be realistic on delivery of sites, especially those which have not commenced preparations for securing relevant planning permissions. and developer interest on build rates. Sites without permission should not be providing completions until at least 2023/24. Those with permission must have clear evidence of deliverability. Flexibility must be built in and commitments reviewed check deliverability, house builders on board and what constraints exist. Delivery rates must also be reviewed to check sites are deliverable in light of policy obligations. The council should make provision for: Annual Housing Requirement Council Figures: 920 Avant Homes' View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Avant Homes' View: 22,000 Completions Council Figures: 3,400 Avant Homes' View: 3,211 Total Commitments Council Figures: 9,488 Avant Homes' View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Avant Homes' View: 948.8 Total Allocations Council Figures: 6,567 Avant Homes' View: 6,567 Total Supply Council Figures: 18,506 Avant Homes' View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Avant Homes' View: 3,682.2 Best case, there must be c.3682 new homes to be identified in the Plan to account for net completions, and economic growth. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,311 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. The above scenario does not balance housing and employment. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes will be required, this amounts to an annual requirement of 1,292.5 dpa. Avant Homes consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Avant Homes' View: 481 hectares Annual employment requirement Avant Homes' View: 24 hectares Employment land developed 2015-2018 Avant Homes' View: 117 Sites with planning permission Tables E1 to E8 Avant Homes' View: 284.09 New employment allocations Policy 4 Avant Homes' View: 164.68 Total Allocations Avant Homes' View: 565.77 Amount of land allocated over the requirement Avant Homes' View: 83.77 Additional homes required to balance with employment land supply Avant Homes' View: 3,850 Residual homes to be identified Avant Homes' View: 7,532.2 Assuming no changes to the housing supply, which there are also concerns about, or airport economic growth. There should also be safeguarded land. Avant Homes consider that the appropriate areas and sites to accommodate growth would be: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wadsworth Hill, Wadsworth - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from 106.2 to 75.32.2. - Identify safeguarded land. - Allocate: - Site 494: Green Lane, Scawthorpe, Doncaster - New Site: Melton Road, Newton, Doncaster - HELAA Site (871): Wadsworth Hill, Wadsworth

Response:
The Peter Brett’s report assesses the employment and housing target for the borough and ties the two together to ensure the right amount of houses are provided for the projected growth. The Council are confident that this report provides a sound and realistic figure. Many ways have been submitted to the Council about how the housing and employment figures could be derived. The submission Local Plan included a range, but still plans for enough housing to meet the requirement of 920dpa over the plan period - the use of a range does not prejudice this. 920dpa is the assessed level of housing required under the revised NPPF, 1,073 refers to the figure using the previous NPPF, which is now redundant. It should also be noted the PBA report states a mid-way point between 585 and 920 could be used, which the Council elected not to do. The Local Plan is planning for 57% more housing than the Standard Methodology proposed, and in doing so the Council have taken on board national policy and guidance. The jobs requirement covers the period 2015 - 35, and enough housing is planned for to match this - there is no reason to uplift this further, including for affordable housing. There is additional flexibility in housing deliver, as the plan does not factor in to its calculations windfalls; sites of 1-4 units; any development in Defined Villages; the proposed 280 dwellings at the airport + possible 920 further linked to job delivery; and the potential of Reserve Development Sites to deliver housing. If all these are factored in, then there is a total potential supply of
24,880 + future windfalls and potential empty homes coming into use, which is 6,480 above the 20 year requirement of 18,400, or in effect a buffer of 35%. Trajectories and other matters raised or covered in the Housing Topic Paper. The RLA has been updated for 2019 now.

Consideration has been given to site constraints and delivery, and factored in where appropriate. With regards to site 494, it is not felt that exceptional circumstances exist to justify the release of this site, as set out in the Green Belt Topic Paper. 871 is in a Defined Village where no new allocations are being made.
Policy 3 identifies the need to deliver 18,400 new homes in the period 2015 to 2035 (920 per annum), with sufficient land allocated to deliver 15 years’ supply of housing (13,230, or 882 dpa once supply in the years 2015 to 2018 is deducted from the overall requirement). Policy 3 then goes on to states that the housing requirement is expressed as a range with the bottom of the range being the Local Housing Need figure and the top of the range being 920dpa. Policy 3 does not however state what the Local Housing Need figure, which is identified within the ‘Economic Forecasts and Housing Needs Assessment’ (June 2018) (prepared by PBA) as 585dpa. Therefore, the implication of this is that the housing requirement for Doncaster supports the delivery of between 585 and 920dpa over the plan period. Hallam Land Management consider that this is a significant change since the Draft Plan for informal consultation. Policy 3 has shifted from stating that the 920dpa is a minimum figure (‘at least’), to stating that the housing requirement is a range from the Local Housing Need (585dpa) to 920dpa. This policy is not sound as it does not support a positively prepared plan which is supportive of boosting significantly the supply of housing. We consider it important that the wording in Policy 3 should state that the 920dpa is a minimum and reflect the wording in the Draft Plan for informal consultation where the 920dpa was stated as ‘at least 920 dpa’. Policy 3 should make it clear that the number of homes per annum is a net figure, again this is a change since the Draft Plan for informal consultation which explicitly stated that the 920dpa were net homes required to be delivered over the plan period. Policy 3 should also set the housing requirement for Dunscoft, Dunsville, Hatfield and Stainforth as a net figure of a minimum of 1,085 dwellings across the plan period as opposed to the range currently set out. We also consider there is an error in the calculation of the remaining requirement as past delivery from 2015 to 2018 is a period of 4 years, which when taken away from the 20-year plan period, would result in 16 years to deliver the housing requirement over the remainder of the plan period. We suggest that the numerical value of the Local Housing Need for Doncaster (585 dpa) should be explicitly stated in Policy 3. The 920dpa identified in Policy 3 is not evidenced within the PBA report and it is unclear upon which evidence the 920dpa figure is based. The PBA report suggests that in order to support the job-led scenario which supports the economic ambition of Doncaster and the Sheffield City Region over the plan period, 1,073dpa would be required. This level of future housing need to support the jobs-led scenario over the plan period and is more aligned with housing delivery in recent years. The Doncaster Residential Land Availability Report 2018 shows average net completions over the last 3 years of 1,070. It is anticipated that this could rise when the net delivery figures for 2018/19 are published. Period: 2015/16 Net housing delivery: 1,025 Period: 2016/17 Net housing delivery: 1,049 Period: 2017/18 Net housing delivery: 1,137 Period: 2018/19 Net housing delivery: 1,327 * Source: Residential Land Availability 2017/18 *number to be confirmed but current Council estimate based on methodology used in RLA The PPG at paragraph ID :2a-010 is clear that the government remains committed to ensuring more homes are built and support authorities who want to plan for additional growth and as such the standard method is a minimum starting point in determining the number of homes needed in an area. The PPG goes on to identify the circumstances where it may be appropriate to consider whether actual housing need is higher than the standard method. These include where; - Growth strategies are in place such as Housing Deals; - Strategic infrastructure improvements are identified; and - Previous levels of housing delivery are significantly greater than the standard method. The PPG is clear that in these situations authorities will need to take this into account when identifying future needs. Doncaster’s Publication Local Plan does identify a housing requirement as a range, of which the upper end is above the standard method, trends in past delivery and the aspiration to support an economic led future for Doncaster suggest that in order to plan positively for the future it would be more appropriate for the housing requirement in Doncaster to be set at the 1,073 dpa to ensure that the vision can be achieved. Accordingly, Hallam Land Management considers that there is a need to increase the housing requirement identified in Policy 3 to at least 1,073 dpa, in line with the Council’s own evidence, if the vision for the plan is to be achieved. The minimum housing requirement for Dunscoft, Dunsville, Hatfield and Stainforth should also be increased to reflect this update.

Summary:

Policy 3 now proposes to set the housing requirement as a range which is a significant change to the last consultation where 920dpa was a minimum/at least figure. the policy is not sound and does not support a positively prepared plan seeking to boost housing supply. Policy 3 should state that 920dpa is a minimum and reflects the previous consultation policy. Should make clear this is a net figure and that the figure for Hatfield-Stainforth is 1,085 minimum and net as opposed to the current range. There is an error in the calculation of the remaining requirement as past delivery from 2015 to 2018 is a period of 4 years, which when taken away from the 20-year plan period, would result in 16 years to deliver the housing requirement over the remainder of the plan period. Suggest that the numerical value of the Local Housing Need for Doncaster (585 dpa) should be explicitly stated in Policy 3. The 920dpa identified in Policy 3 is not evidenced within the PBA report and it is unclear upon which evidence the 920dpa figure is based. The PBA report suggests that in order to support the job-led scenario which supports the economic ambition of Doncaster and the Sheffield City Region over the plan period, 1,073dpa would be required. This level of future housing need to support the jobs-led scenario over the plan period and is more aligned with housing delivery in recent years. The Doncaster Residential Land Availability Report 2018 shows average net completions over the last 3 years of 1,070. It is anticipated that this could rise when the net delivery figures for 2018/19 are published. PPG is clear that the methodology is a minimum starting point and identifies circumstances where appropriate to consider a higher requirement. There is a need to increase the housing requirement to state at least 1,073 dpa, in line with the Council’s own evidence, if the vision for the plan is to be achieved. The minimum housing requirement for Dunscoft, Dunsville, Hatfield and Stainforth should...
also be increased to reflect this update.

Response:
The Local Plan sets out a supply of housing that far exceeds the 18,400 new homes so it is clear that this is already an 'at least' figure and the explanatory text (as well as all the supporting evidence base in respect to how sites have been allocated etc) are clear that this is a net figure already. Completions for 2015-2018 are based on the annual monitoring reports and are April-March so 1st April 2015 to 31st March 2018 which is a 3-year period and leaves 17 years of the plan remaining (being 1st April 2018-31st March 2035). The Local Housing Need figure as derived via the Standard Methodology changes on an annual basis in line with new population projections and affordability ratios so the figure will date very quickly if included in the plan. The 1,073 requirement figure is taken from the PBA Report, but is based on the 2012 NPPF so the 920 figure (or 912 as per the PBA Report) is an appropriate requirement and is a significant uplift to the standard methodology. More details are set out in the PBA Report under the section Housing Numbers Under the New Planning System as well as the supporting Housing Strategy Background Paper which was published alongside the Publication stage. Current completion figures are a result of a number of sites that have been in the pipeline that are now on stream and delivering but caution should be taken when making assumptions that this can/will continue throughout the rest of the plan period. A high allocation will of course require more sites that will, by default, be either GB/FRZ/other environmentally sensitive sites.
The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need 5.4. Priority Space is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. Priority Space has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris report is attached to these representations. Regeneris conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. (SEE EMAIL FOR Regeneris Report) 5.6. Regeneris consider that: - Doncaster has been one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a - Doncaster’s key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ERL’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. 5.7. Priority Space does have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Priority Space continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. 5.8. The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. 5.9. NPPG is clear that the standard method identifies a minimum annual housing need figure and that it does not produce a housing requirement figure Paragraph 002 Reference ID: 2a-002-20190220. It is also clear that the affordability adjustment within the standard methodology is just to ensure that the minimum housing needs starts to address affordability of homes. It therefore does not fully address affordability issues. Paragraph 006 Reference ID: 2a-006-201902020. 5.10. NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. ‘The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum starting point in determining the number of homes needed in an area. It does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests’. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance
of housing in an area is necessary for economic growth. The development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create sustainable local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on "the economic footprint of house building in England and Wales", which shows that house building in England and Wales is now worth #38bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenues and contributing funding for local infrastructure and communities. House building supports the economic in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. 5.20. Further, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore Priority Space consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodology, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% jobs growth per annum. This would support a target at the higher end of the range. 5.25. There is evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. Priority Space consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 3% of the Local Plan requirement for housing. Paragraph 5.9 states that this does not take into account current completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%):13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%):15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%):15.09 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium (13.74) value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unviable for a number of sites, including all types of sites in low value areas. Priority Space are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. Priority Space consider that there is sufficient evidence to pointing to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. Priority Space consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form to support sustainable development in accordance with policies in the Framework and its supporting policies. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.31. However, Priority Space consider that with a higher requirement, of at least 1,100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1393) that the Local Plan can be found sound. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery 5.32. Priority Space is concerned that the Council's approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Priority Space consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Priority Space are concerned that some of
the policies may undermine the deliverability of sites, or lead to the need for further site specific viability testing impacting on the timing of delivery and therefore there is a need for greater flexibility in the housing supply. Specific sites are identified later in this section. 5.36. Priority Space have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 1750. It is important therefore to rigorously assess housing land supply and planning assumptions. 5.38. With regard to overall supply from permissions and allocations, a housing trajectory has been provided. Priority Space are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Councils’ HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Priority Space supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Priority Space consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. Priority Space is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites being shown as commitments shows considerable concern: Site Ref: 838 Site Name: Hexthorpe No. of Dwellings: 930 Priority Space Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant flooding constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Priority Space Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and the HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/ON7 Initiative No. of Dwellings: 905 Priority Space Comment: The site has outline planning permission for 3,100 homes and no reserved matters have been submitted. The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Priority Space Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Priority Space Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Priority Space Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. Priority Space understands that no allowance has been made for demolitions. No evidence is apparent and Priority Space consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the land needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. Priority Space consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Priority Space Comment: This site does not have access, therefore it cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Priority Space Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only approx 325 dwellings are to be delivered within the Plan period. This is significantly less than the 1272 home forecast within the Plan. Site Ref: 081/343 Site Name: Thorne No. of Dwellings: 207 Priority Space Comment: This is a longstanding allocation and there is little evidence available through the councils evidence base to demonstrate that there is developer interest or that the site will come forward in the short term. Site Ref: 795 Site Name: Thorne No. of Dwellings: 13 Priority Space Comment: This site had permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Priority Space Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Priority Space Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have leant heavily on allocating sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the resultant yields from proposed allocations, especially when considering some of the development.
requirements. Priority Space therefore suggest that further sites should be identified. 5.46. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Priority Space do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. Priority Space considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Priority Space consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence house building. This process can take around 2 years. 5.48. Priority Space would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission. If they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. Priority Space considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Priority Space would suggest a greater flexibility is incorporated into the Local Plan especially in light of Priority Space' conclusions on the actual housing requirement. 5.50. Priority Space would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. Priority Space would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. 5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 Priority Space's View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Priority Space's View: 22,000 Completions Council Figures: 3,400 Priority Space's View: 3,211 Total Commitments Council Figures: 9,488 Priority Space's View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Priority Space's View: 948.8 Total Allocations Council Figures: 6,567 Priority Space's View: 6,567 Total Supply Council Figures: 18,506 Priority Space's View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Priority Space's View: 3,682.2 5.52. Therefore, on a best case scenario Priority Space consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. Priority Space consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Priority Space's View: Employment requirement 2015-2035 Priority Space's View: 481 hectares Annual employment requirement Priority Space's View: 24 hectares Employment land developed 2015-2018 Priority Space's View: 117 Sites with planning permission Tables E1 to E8 Priority Space's View: 284.09 New employment allocations Policy 4 Priority Space's View: 164.68 Total Allocations Priority Space’s View: 565.77 Amount of land allocated over the requirement Priority Space's View: 83.77 Additional homes required to balance with employment land supply Priority Space's View: 3,850 Residual homes to be identified Priority Space's View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Priority Space have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport. 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Priority Space would suggest, in order to insist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council's trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. Priority Space consider that the appropriate areas and sites to accommodate growth would be: - Site 273: Askern Road, Carcroft 5.60. A brief summary is provided for this site in response to Policy 6. Technical information and an advocacy report has been submitted previously. An updated flood risk assessment will be submitted shortly. This report will be supported by significant technical information and the report will demonstrate that the sites are viable, suitable and achievable and therefore deliverable in accordance with the Framework and PPG. (SEE EMAIL FOR Flood Risk Assessment) 5.61. Priority Space consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.62. However, Priority Space consider that with an appropriate uplift to the housing requirement, consideration of net completions, non-implementation rates and the allocation of additional land and safeguarded sites that the Local Plan can be found sound. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 5.63. To overcome the objection and address soundness matters, the Council should: - Increase housing requirement to 1,100 to 1,300 dwellings over the plan period. - Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate Site 273: Askern Road, Carcroft
Summary:

1. Housing requirement not sufficient and not aligned with forecast economic growth. 2. Plan identifies more employment land than target. 3. Mismatch between employment land allocated and level of housing allocated. 4. Housing requirement - have commissioned own report by 'Regeneris Consulting' for OAN and economic forecasts (enclosed as Appendix). 5. Housing requirement should be 1,100 dpa (Regeneris). 6. Peter Brett forecast is for 2015-2032 - not clear if provision is made for 2032 to 2035. 7. There is a discrepancy in employment land allocated. Provision is 565.77 Ha against 481 requirement (para 5.21). 8. Employment allocation is 83.77 above requirement therefore need more housing. 9. Estimate circa 7,532 additional homes are required to balance emp/hsg requirement. 10. Recent high housing delivery rates and evidence from Employment land Needs Assessment (2019 update) suggest a higher housing need requirement (based on the success of the 2015-18 period). 11. Concerned that affordable housing rates are not viable. 920 will not deliver sufficient affordable housing. 12. Requirement would need to be 1,393 dpa to meet 15% requirement (based on last 3 years of monitoring). 13. Provision is 565.77 Ha against 481 requirement (para 5.21). 14. Housing requirement should be at least 1,100. 15. Current completions (2015-18) are gross and not net. 16. Plan will struggle with supply late in the plan period. 17. Evidence base needs updating - no HELAA or RLA for 2019. 18. Existing commitments - assumes 100% delivery - a discount should be applied for some none delivery. 19. Concerned about viability/deliverability of several sites with PP. (list the sites) 20. Concerned about viability/deliverability of several sites with PP. (list the sites) 21. Need to be more realistic on delivery rates. 22. Should review existing commitments to ensure deliverability. 23. Propose site 244 & 331 Coulman Road for allocation. Proposed Changes: 1. Increase housing requirement to 1,100 - 1,300 dpa. 2. Reduce the potential from current commitments. 3. Include a none delivery allowance. 4. Identify safeguarded land. 5. Allocate sites 244 & 331.

Response:

The Peter Brett’s report assesses the employment and housing target for the borough and ties the two together to ensure the right amount of houses are provided for the projected growth. The Council are confident that this report provides a sound and realistic figure. Many ways have been submitted to the Council about how the housing and employment figures could be derived. The submission Local Plan included a range, but still plans for enough housing to meet the requirement of 920dpa over the plan period - the use of a range does not prejudice this. 920dpa is the assessed level of housing required under the revised NPPF, 1,073 refers to the figure using the previous NPPF, which is now redundant. It should also be noted the PBA report states a mid-way point between 585 and 920 could be used, which the Council elected not to do. The Local Plan is planning for 57% more housing than the Standard Methodology proposed, and in doing so the Council have taken on board national policy and guidance. The jobs requirement covers the period 2015 - 35, and enough housing is planned for to match this - there is no reason to uplift this further, including for affordable housing. There is additional flexibility in housing delivery, as the plan does not factor in to its calculations windfalls; sites of 1-4 units; any development in Defined Villages; the proposed 280 dwellings at the airport + possible 920 further linked to job delivery; and the potential of Reserve Development Sites to deliver housing. If all these are factored in, then there is a total potential supply of 24,880 + future windfalls and potential empty homes coming into use, which is 6,480 above the 20 year requirement of 18,400, or in effect a buffer of 35%. Trajectories and other matters raised or covered in the Housing Topic Paper. The RLA has been updated for 2019 now. Consideration has been given to site constraints and delivery, and factored in where appropriate - this is discussed in the Site Selection Methodology and Housing Topic Paper. With regards to sites 244 and 331, both sites are in Flood Zone 3, where no new allocations are being made.
3.10 The proposed housing distribution within the draft plan has a strong focus on the Main Urban Area with 50% of development proposed in the Doncaster Main Urban Area, followed by 40% in second tier (Main Towns) locations, 10% in Services Towns and Larger Villages and limited development in Defined Villages. The proposed distribution is based on the Settlement Background Paper which forms a settlement hierarchy and informs the location of housing and employment sites. 3.11 The Publication Doncaster Local Plan identifies Auckley-Hayfield Green as one of 10 Service Towns/Villages which will provide about 10% of the Borough’s total housing requirement during the plan period. Specifically, Auckley-Hayfield Green is identified to deliver 125 dwellings. 3.12 Based on existing permission (115 units) and new allocations (140 units), the settlement is identified to deliver 255 new units in the plan period, above its proposed requirement by 130 units, or double the settlement’s housing target. This oversupply is intended to form supply at the end of the plan period. 3.13 The Sustainability Appraisal for the Publication Local Plan forms discounts Site 446 and all other alternatives within Auckley/Hayfield Green from allocation based on the proposed housing distribution and the level of housing already committed within the settlement. We object to this approach and consider it to be unsound. 3.14 It is not considered appropriate that such limited levels of allocations have been identified in reasonably sized settlements such as Auckley. The only justification put forward for failing to allocate new sites for development is based on existing permissions within these settlements. However, these sites have yet to be delivered and may suffer from issues including viability that could impact future delivery. 3.15 Settlements including Auckley/Hayfield Green have been identified as ‘Larger Villages’ within the settlement hierarchy. There is a population of over 6,800 people in the immediate area surrounding the airport (Finningley, Blaxton and Hayfield Green) and as such it is larger than the Tickhill (over 5,200 people) and Askern (over 5,500 people) and is of a similar size to Edlington (7,500). As at 2011, the immediate Auckley Area had a total of 3,100 people between the ages of 15 and 75 of which some 2,000 were economically active. However the draft plan proposes to retain existing settlement boundaries in Auckley and Finningley, allowing only infill small scale affordable housing. 3.16 The proposed approach to the delivery of housing, as drafted, fundamentally fails to recognise the emphasis within the Framework on the deliverability of housing and the need to support the prosperity of settlements outside of the main urban area. 3.17 The draft plan proposes a housing target based on economic growth objectives, a substantial element of which will be linked to the growth of the airport. The approach to limiting the expansion of those settlements surrounding the airport, together with the objectives of draft Policy 7, which seeks to support ‘windfall’ housing development linked to employment growth within the airport sites, risks creating an isolated community and fails to take the opportunity to ensure the future sustainability of existing communities located in close proximity to the airport. 3.18 While settlements such as Auckley may rely on towns to provide essential services, the need to maintain the existing services will require additional employment and housing. The continuing trend for a reduction in household size means downsizing will undercut the customer / user thresholds to which current amenities and facilities have become accustomed. This poses a significant threat to the current level of sustainability enjoyed by the settlement. 3.19 The housing allocations requirements should not be based purely on the hierarchy of a settlement as there are a number of considerations namely urban capacity, need and demand for housing, regeneration, environmental and social considerations, prioritising brownfield land which need to be taken into account to ensure the growth of settlements in a sustainable manner. Recommendation 3.20 The distribution of housing provision within Policy 3 - Service Towns and Larger Villages should be increased to meet the updated housing requirement, and reapportioned (or alternatively flexibility introduced) to support the delivery of a higher proportion of the housing within sustainable and desirable locations close to economic growth. Justification 3.21 The Local Plan as drafted was overly reliant on a significant quantum of sites within the Main Urban Area. This approach relies on the delivery of a notable number of large sites, which will require substantial enabling infrastructure in order to deal with constraints that may include contamination and highways infrastructure upgrades as well as drainage and other matters. 3.22 The growth potential of a number of Service Towns and Larger Villages has been underplayed and that Auckley/Hayfield Green, together with neighbouring Finningley should have an increased allocation of housing land within these settlements, in order to capture the regeneration opportunities provided by the proximity to the airport and to deliver housing in sustainable locations where there is recognised demand. 3.23 Given the size of the committed level of airport related employment on the airport itself it is also considered that the current approach fails to consider the obvious beneficial impact of concentrating further employment and residential development in close proximity to the airport, especially as there are large areas of despoiled land that are well related to public transport infrastructure and can be developed for mixed use schemes. 3.24 The limited housing target apportioned to Auckley/Hayfield Green, as well as neighbouring Finningley does not appear to be appropriate and there seems to be no justification of not meeting some level of demand and need in these locations. This approach is likely to result in not only a missed opportunity to support the projected economic growth but also lead to the decline of those settlements. 3.25 The potential for sustainable land in these areas should be realised where deliverable in order to support the long term viability of these areas. A proportionate increase in housing provision for the settlement at Auckley is consistent with the Plan’s strategic priorities, including ensuring future support for economic growth, and would assist in ensuring the Local Plan meets needs for a full 15 year period following adoption. By reviewing existing Countryside designations around these settlements, boundaries can be rationalised to allocate land for development to serve the purposes of these policy areas. 3.26 New housing allocations and mixed use schemes are considered to be an appropriate response to accommodating further development in these locations.
Summary:
Distribution of growth. 1. Objects to limited level of growth in a reasonably sized settlement such as Auckley. 2. Fails to meet the needs of settlements outside the main urban area. 3. Settlements close to the Airport (an economic growth priority) should have more houses. 4. Underestimates the potential growth of the Airport. 5. Policy should have flexibility to have a higher proportion of housing in locations close to economic growth area.

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth. The Local Plan includes targets for Finningley and for Auckley-Hayfield Green which are deliberately separate to any additional housing that may be considered appropriate for Auckley-Hayfield Green should sufficient jobs be generated at the Airport.
3.1 The level of housing development to be delivered is set out in Policy 3, which states that the council will seek to facilitate the delivery of at least 920 (net) new homes each year over the plan period 2015-2032 (15,640 homes in total) with sufficient land allocated to deliver at least 15 years’ supply (13,800). 3.2 Paragraph 59 of the National Planning Policy Framework (the ‘Framework’) sets out the Government’s objective of significantly boosting the supply of homes, through the identification of a sufficient amount and variety of land where it is needed and to meet the needs of groups with specific housing requirements [authors own emphasis]. 3.3 The SPRU report provided at Appendix 2 assesses the soundness of the proposed jobs-led housing requirement and the implications for the proposed spatial strategy. (SEE EMAIL FOR Appendices) 3.4 For the reasons outlined within the report, DLP objects to policy 3 of the draft Local Plan as there are found to be substantial soundness failings with the draft Local Plan resulting from a failure to test an appropriate reasonable alternative based on meeting the strategic priorities for economic development over a full 15-year plan period. These issues are compounded based on treating the housing requirement from 2018-2033 as a ‘residual total’ to account for perceived oversupply in the period 2015-2018, which has not been adequately justified. 3.5 The Council’s approach fails to accurately reflect the strategic priorities and future economic potential of the Sheffield City Region and further assessment of the proposed requirement is recommended to reflect the requirements of the revised Strategic Economic Plan (once published) and to consider recent trends in jobs growth and housing delivery across the subregion. This is anticipated to lead to a reassessment of current and future demographic trends in relation to future labour supply. 3.6 The SPRU report also concludes that arbitrary constraints to the requirement for additional development are applied, which will lead to an overreliance on extant planning commitments and historic allocations in previous iterations of the development plan. The implications of this in terms of prospects for maintaining a five year supply of deliverable sites and meeting the housing needs of different groups have not been fully assessed, however it is anticipated that there could be a failure to meet housing need, particularly in respect of affordable housing in the short to medium term, as the physical and viability related constraints that have prevented these sites being delivered to date may persist. 3.7 The report concludes that these issues are capable of remedy within the Council’s broad emerging approach to managing the distribution of growth across the spatial strategy. This acknowledges that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy. We endorse the Council’s position that Main Towns are appropriate locations to accommodate up to 10% of the economic-led component of the housing requirement. However we also recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth, where sustainable growth opportunities are identified. Recommendation 3.8 The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. Justification 3.9 For the reasons set out above and within the appended SPRU report, it is correct to accommodate growth based on meeting requirements under the full assessment of jobs-led growth (1,073 dpa) for the full plan period to 2035. Summary: Policy 3. Level and Distribution of Growth 1. Have own report from the ‘Strategic Planning Resource Unit’ (SPRU) to justify a higher housing figure. 2. Fails to meet the priorities for economic development over a full 15 year period. 3. Has issue with the ‘residual total’ for 2018-2033 to account for the oversupply 15-18 - does not think this approach is justified. 4. Fails to meet the priorities of the SCR. 5. Recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth. 6. The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per 7. Annun for the plan period to 2035. Distribution of growth. 1. Objects to limited level of growth in a reasonably sized settlement such as Auckley. 2. Fails to meet the needs of settlements outside the main urban area. 3. Settlements close to the Airport (an economic growth priority) should have more houses 4. Underestimates the potential growth of the Airport. 5. Policy should have flexibility to have a higher proportion of housing in locations close to economic growth area. Response: As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth. The Local Plan includes targets for Finningley and for Auckley-Hayfield Green which are deliberately separate to any additional housing that may be considered appropriate for Auckley-Hayfield Green should sufficient jobs be generated at the Airport.
There is a significant mismatch between the level of employment land allocated and the level of housing land.

The Local Plan identifies significantly more employment land than the target for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. (SEE EMAIL FOR Regeneris Report)

5. Regeneris consider that: - Doncaster has one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a. - Doncaster’s key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ERL’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. - Firsure have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Firsure continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. - The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. - NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum start point in determining the number of homes needed in an area?

5.1 Firsure is concerned that the Doncaster Local Plan Draft Policies and Proposed Sites is deficient in its content and evidence base and does not reflect national guidance. Test of Soundness 5.2. Firsure considers that the Local Plan is unsound. Which test of soundness are comments about?

X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

5.3. Firsure have a number of concerns in relation to the Level and Distribution of Growth. The concerns relate to the following:

- The Local Plan housing requirement is not sufficient and is not fully aligned with forecast economic growth. - The Local Plan identifies significantly more employment land than the target for provision established in Policy 3. - There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need 5.4. Firsure is concerned with the proposed level of new housing being planned for in the Local Plan. Policy 3 makes provision for 18,400 dwellings to be delivered between 2015 and 2035, equivalent to 920 net new homes each year. Policy 3 states that there should be sufficient allocations for 15 years supply, which is 13,230 new homes. 5.5. Firsure has commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018). The Regeneris's report is attached to these representations. Regeneris conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The impact of the adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. - However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. (SEE EMAIL FOR Regeneris Report) 5.6. Regeneris consider that: - Doncaster has one of the fastest growing economies in Yorkshire and Humber. The district has created around 24,000 jobs between 2000 and 2017, representing a growth rate of 1.1% p.a. - Doncaster’s key asset is its connectivity by road, rail and air which has made it a highly attractive location for inward investment, particularly for industrial and logistics occupiers, with over 1.1m sq m of industrial/warehouse space taken up since 2010. - The strong performance is also due to a significant improvement in key economic indicators, including skills and levels of enterprise. The business start-up rate has more than doubled since 2010 and is now in line with the national average. These improvements have removed a key barrier to growth and mean that Doncaster is well placed to continue its high rate of growth. - The Local Plan has set a target of delivering 481 hectares of employment land between 2015 and 2035 and a number of ERL’s shows there continues to be very strong market demand for industrial space in Doncaster. There is therefore strong potential for Doncaster to accommodate high levels of inward investment in future which would also drive jobs growth. - Firsure have concerns that the proposed housing requirement does not represent an appropriate figure once consideration is given to the potential for economic growth and job formation. Firsure continue to consider that an appropriate balance should be sought between employment growth aspirations and the provision of homes. - The Framework (2019) reaffirms the Governments’ commitment to ‘significantly boosting the supply of homes’ and states that ‘it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed’. It goes on to state ‘to determine the minimum number of homes need, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify and alternative approach which also reflects current and future demographic trends and market signals’. - NPPG goes on to identify the circumstances when it is appropriate to plan for a higher housing need figure than the standard methodology identifies. The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The standard method for assessing local housing need provides the minimum start point in determining the number of homes needed in an area?

It does not predict the impact of future government policies, changing economic circumstances or other factors that might have an impact on demographic behaviour. Therefore there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicate. 5.11. This will need to be assessed prior to and separate from, considering how much of the overall need can be accommodated. Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: 5.12. Growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth. 5.13. Strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; 5.14. An authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground. 5.15. There may, occasionally be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently produced SHMA) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need that the standard model suggests'. Paragraph 010 Reference ID: 2a-010-20190220. 5.16. The Council need to recognise that the development of new housing will bring forward additional economic benefits to the area. The relationship between economic performance in an area and housing is complex, but having the right quantity, quality and balance of housing in an area is necessary for economic growth. The
development of new housing can therefore support local economic growth, both through direct job creation through the construction phase of the scheme, but also through the increased population which will create sustainable local jobs from the increased demand for goods and services. This provides an important sustainable development opportunity for Doncaster. 5.17. Importantly the HBF released in July 2018 its report on “the economic footprint of house building in England and Wales”, which shows that house building in England and Wales is now worth £36bn a year and supports nearly 700,000 jobs. House building activity contributes economically in different ways including providing jobs, tax revenues and contributing funding for local infrastructure and communities. House building supports the economy in a wider sense through being drive for economic growth; delivering jobs and economic value; supporting labour market mobility; creating skills and employability; enhancing place competitiveness; creating quality of place and reusing brownfield land. 5.18. An important conclusion of the report and the wider economic benefits is that a healthy, well-functioning labour market requires a good supply of housing that is affordable for local people to enable them to move jobs freely and match up skills supply with employer demand. A dysfunctional housing market can inhibit labour market mobility, in turn stifling economic growth. 5.19. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dap to support future economic growth. Regeneris consider that the target of 920 dap would risk constraining the future economic growth of Doncaster. 5.20. Furthermore, it is evident that the council are seeking to align economic growth with housing growth and have identified provision above the local housing need figure to which the council considers accounts for Job Led growth. However, the jobs led growth figure is based on jobs growth forecast between 2015-2032. It is not clear whether consideration has been given to the additional job growth expected to the end of the plan period. Therefore Firsure consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. 5.21. Additionally, the Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounts for the extended plan period 2032-2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permission, and 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the potential supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 8 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. 5.22. As stated above NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. Net completions amount to 3211 dwellings, with annual completions as follows: Year: 2015-16 Net Completions: 1,025 Year: 2016/17 Net Completions: 1,049 Year: 2017/18 Net Completions: 1,137 Year: Total Net Completions: 3,211 5.23. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. 5.24. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers the housing requirement prior against both the standard methodology, standard methodology with an uplift for economic growth and previous approach for identifying housing need. Following the earlier approach, PBA consider that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. To ensure that the requirement was realistic. It is worthy of note that the Employment Land Needs Assessment (2019). Considers that the Job led scenario was ambitious but realistic and notes the significant growth in Doncaster within the previous 15 years in line with SCR growth aspirations. And further the evidence of land take up and jobs growth for the period 2015-2018 was on target to meet 1% growth per annum. This would support a target at the higher end of the range. 5.25. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. As stated above NPPG is clear that this evidence should be taken into account when determining the housing requirement. 5.26. When using the standard method the housing need figure was 585, applying a job led figure to match the SEP led to a requirement of 912 (PBA, 2018). However this is not based on the Jobs growth over the full plan period. 5.27. Firsure consider further evidence is required to demonstrate whether the affordable housing needs of Doncaster can be met based on a target of 920. The explanatory text states that the current need for affordable housing, 209 affordable units, represents 23 % of the Local Plan requirement for housing. Paragraph 6.9 states that this does not take into account current completions or viability. The completions affordable completions for the last three years (first three years of the Local Plan) are as follows: Year: 15/16 Affordable Completions: 151 Total Completions: 1,088 Affordable completions (%): 13.88 Year: 16/17 Affordable Completions: 161 Total Completions: 1,067 Affordable completions (%): 15.09 Year: 17/18 Affordable Completions: 166 Total Completions: 1,208 Affordable completions (%): 13.74 5.28. The total affordable completions falling below the identified affordable need, even when total completions are higher than the proposed Local Plan requirement of 920. Further, Policy 8 identifies a requirement for 23% affordable housing in high/medium value areas and 15% in low value areas. An as indicated in response to Policy 8 and Policy 67, this is demonstrated to be unviable for a number of sites, including all types of sites in low value areas. Firsure are therefore concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified needs for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. 5.29. Firsure consider that there is sufficient evidence to pointing to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. 5.30. Firsure consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 5.31. However, Firsure consider that with a higher requirement, or at least 1,100 to meet the economic growth aspirations, and further uplifts to balance housing allocations with the employment land allocations, and to ensure that the needs for affordable homes can be met (up to 1393) that the Local Plan can be found sound. Firsure will continue to work with the Council to develop appropriate modifications to the Local Plan Housing Supply and Delivery 5.32. Firsure is concerned that the Council’s approach to delivering the housing requirement does not appear to reflect national guidance. 5.33. The Council is not demonstrating sufficient flexibility in the supply of housing land to ensure that the Plan can meet identified needs in full. The Framework is clear that plans should be sufficiently flexible to adapt to rapid change, and emphasises the importance of ensuring that a sufficient amount and variety of land can come forward where it is needed. 5.34. PPG is clear that careful attention should be given to providing an adequate supply of land, and the Plan needs to be realistic about what can be achieved and when. Authorities need to ensure that policies setting out contributions expected from development do not undermine the deliverability of the Plan. (Paragraph 59 Reference ID: 61-059-20190315. 5.35. At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Firsure consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Firsure are concerned that some of the policies may undermine the deliverability of sites, or lead to the need for further specific site viability testing impacting on the timing of delivery and therefore there is a need for greater
flexibility in the housing supply. Specific sites are identified later in this section. 5.36. Firsure have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. 5.37. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility in the Plan to 866 dwellings (4.7%). 5.38. With regards to overall supply from permissions and allocations, a housing trajectory has been provided. Firsure are concerned that this demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. 5.39. Furthermore, the Council’s HELAA and Residential Land Availability Report have a base date of March 2018, thus a whole monitoring year is presently absent. This evidence base should therefore be updated. 5.40. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Firsure supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Firsure consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. 5.41. Firsure is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review of some sites being shown as commitments shows considerable concern: Site Ref: 838 Site Name: Henxthorpe No. of Dwellings: 930 Firsure Comment: There have been a number of planning applications and proposed schemes over the years, but there has been no delivery on site. Countryside PLC has submitted a planning application which the Environment Agency has objected to and recommended refusal. There is conflicting evidence in terms of delivery rates, with the Local Plan and the HELAA. There are significant financial constraints affecting the site. No further deliverability evidence has been produced in the Doncaster 5 Year Deliverable Housing Land Supply Statement. The Residential Land Availability Study notes that at 31/03/2018 there were no completions and the site is not currently being developed. Site Ref: 843 Site Name: Manor Farm, Bessacarr No. of Dwellings: 1,009 Firsure Comment: This is a Persimmon / Charles Church scheme. However, delivery has become frustrated by the need to deliver infrastructure to complete development. Since there is only one developer on the site the development trajectory is likely to be modest and development of the site is unlikely to be achieved during the plan period. The Residential Land Availability Report indicates 39 completed in 17/18 which is below the rates expected in the Local Plan and HELAA. Which assumes delivery rates of around 70 dwellings a year. This is not realistic based on current delivery. Site Ref: 418 Site Name: Unity/DN7 Initiative No. of Dwellings: 905 Firsure Comment: The site has outline planning permission for 3,100 homes. No reserved matters have been submitted The site is in significant multiple ownership and understand that CPO procedures will be employed to facilitate the delivery of requisite infrastructure. Homes England is also assigning public funding to support the development. Given the presence of multiple landowners, the need for considerable public funding, the likelihood of a protracted timeframe to open up the site for development and the absence of confirmed market interest, the site is unlikely to deliver the Council’s prediction of 1015 homes in the plan period. The HELAA does not anticipate a start on site until years 6 to 10. However the local plan indicates a 175 completions in the first five years. Higher rates of delivery are expected in the following years (70 dwellings per annum). These rates are overly optimistic especially when compared to annual completions for individual sites recorded in the residential land availability report. Site Ref: 569 Site Name: Askern Saw Mills No. of Dwellings: 220 Firsure Comment: This is a long standing, unimplemented planning permission that has been available but has remained undeveloped. There is no developer interest and consequently the assumed delivery of 220 new homes is optimistic. Indicated in the Residential Land Availability Report that the outline permission has lapsed. Site Ref: 984 Site Name: Former McCormick Tractors No. of Dwellings: 600 Firsure Comment: This site has significant constraints. There is an outline permission relating to the development of the site. The Local Plan assumes a delivery rate of 56 dwellings per in the first five years and 64 dwellings per annum in the following years. This is overly optimistic and not consistent with the planning status and constraints on site. Site Ref: 940 E1 and E2 Site Name: Land east of Poplars Farm No. of Dwellings: 280/920 Firsure Comment: Site 940 is allocated in the plan for development of up to 280 dwellings (Part E1), Part E2 is identified as a reserved housing site for up to 920 dwellings. This site does not form a true reserve site. The council have identified a release mechanism which restricts the release of housing to net additional jobs delivered at the airport. 5.42. Firsure understands that no allowance has been made for demolitions. No evidence is apparent and Firsure consider it would be appropriate for this evidence to be forthcoming. 5.43. The availability of land is crucial. To be considered deliverable the site needs to be available now and in terms of developable there needs to be a reasonable prospect that land will be available at the point envisaged. Firsure consider that sites which are not available or are unknown should not be included in the Plan or a buffer should be provided due to the uncertainty on delivery. Site Ref: 1028 Site Name: Tickhill No. of Dwellings: 74 Firsure Comment: This site does not have access, therefore cannot be considered to be deliverable. Further, the capacity of the site is unrealistic. This is a 1.5 hectare site, a capacity of 44 dwellings would reflect the assumptions on net to gross developable area and density set out in the Viability Study. Site Ref: 662/247 Site Name: Colliery Site, Rossington No. of Dwellings: 897/237 Firsure Comment: The delivery rates on the site are overly optimistic. In 2017/18 there were only 49 completions on site 662. Assuming delivery rates based on past performance at this site then it is considered that only 600 dwellings will be capable of coming forward within the Plan period. This is significantly less than the 1127 homes forecast within the Plan. Site Ref: 081/343 Site Name: Thorne No. of Dwellings: 207 Firsure Comment: This is a longstanding allocation and there is little evidence available through the council’s evidence base to demonstrate that the site will come to market in the short to medium term. Site Ref: Thorne No. of Dwellings: 13 Firsure Comment: This site has permission which has since lapsed. There appears to be little developer interest in this site. The site is not considered to be deliverable. Site Ref: 510 Site Name: Thorne No. of Dwellings: 25 Firsure Comment: This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evident available through the Councils evidence base to indicate any developer interest in the site. Site Ref: 165/186 Site Name: Carcroft No. of Dwellings: 300 Firsure Comment: This site is located to the western edge of the settlement and is relatively distant from the key services and facilities such as the train station, and employment opportunities. Other sites are located nearer to key services. 5.44. A high level assessment of some of the proposed allocations shows that some proposals are at risk and hence one of the reasons why Best Practice suggests a buffer to the housing requirement should be included in the Plan. Furthermore, would appear to have lent heavily on allocating sites that already have planning permission as an alternative to identifying a sufficient supply of new allocation sites to meet its requirement for the plan period. Consequently, a number of settlements with strong sustainability credentials would appear to have insufficient allocations to meet their needs through the life of the plan. 5.45. It would appear in some instances that there are unrealistic assumptions on gross to net developable site areas and on the resultant yields from proposed allocations, especially when considering some of the development requirements. Firsure therefore suggest that further sites should be identified. 5.46. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the
Plan and Firsure do not believe the Plan can deliver this, particularly in the middle to later years. 5.47. Firsure considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Firsure consider that the sites with no planning permission should not be providing completions until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and construction of the housing/employment building. This process can take around 2 years. 5.48. Firsure would be happy to work through the specific sites in detail with the Council to seek to reach agreement on the HELAA and current housing commitments. Interestingly, in line with the general direction of travel for this Local Plan the new Framework (2019) defines the term Deliverable in the glossary stating that sites can only be considered deliverable where they have detailed planning permission if they have outline planning permission or are allocated in a plan a site can only be considered if there is clear evidence that housing completions will begin on site within five years. The level of evidence that must be provided to demonstrate that sites are deliverable has therefore been tightened. 5.49. Firsure considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Firsure would suggest a greater flexibility is incorporated into the Local Plan especially in light of Firsure' conclusions on the actual housing requirement. 5.50. Firsure would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a housebuilder on board and whether there are any constraints preventing development from coming forward. Firsure would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan.

5.51. Taking into account the above, the Council should be making provision for: Annual Housing Requirement Council Figures: 920 Firsure’s View: 1,100 Total Requirement (2015-2035) - which is 15 years post adoption Council Figures: 18,400 Firsure’s View: 22,000 Completions Council Figures: 3,400 Firsure's View: 3,211 Total Commitments Council Figures: 9,488 Firsure’s View: 9,488 Non-Delivery Allowance (at least 10%) Council Figures: 948.8 Firsure’s View: 948.8 Total Allocations Council Figures: 6,567 Firsure’s View: 6,567 Total Supply Council Figures: 18,506 Firsure's View: 18,317.2 Residual homes to be identified Council Figures: -106.2 Firsure’s View: 3,682.2. 5.52. Therefore, on a best case scenario Firsure consider as a minimum there needs to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. 5.53. This does not account for the uplift required to ensure affordable housing need is met in full, which as indicated in paragraph 5.28, would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. Firsure consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Firsure’s View: 481 hectares Annual employment requirement Firsure’s View: 24 hectares Employment land developed 2015-2018 Firsure’s View: 117 Sites with planning permission Tables E1 to E8 Firsure’s View: 284.09 New employment allocations Policy 4 Firsure’s View: 164.6 Total Allocations Firsure’s View: 565.77 Amount of land allocated over the requirement Firsure’s View: 83.77 Additional homes required to balance with employment land supply Firsure’s View: 3,850 Residual homes to be identified Firsure’s View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Firsure have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Firsure would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and associated with HS2 preventing them from coming forward. Firsure would also ask the Council to look at the proposed delivery of site allocations, and to review the allocations, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. 5.54. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3850 additional homes would be required, this amounts to an annual requirement of 1,292.5 dpa. Firsure consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. Employment requirement 2015-2035 Firsure’s View: 481 hectares Annual employment requirement Firsure’s View: 24 hectares Employment land developed 2015-2018 Firsure’s View: 117 Sites with planning permission Tables E1 to E8 Firsure’s View: 284.09 New employment allocations Policy 4 Firsure’s View: 164.6 Total Allocations Firsure’s View: 565.77 Amount of land allocated over the requirement Firsure’s View: 83.77 Additional homes required to balance with employment land supply Firsure’s View: 3,850 Residual homes to be identified Firsure’s View: 7,532.2 5.55. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Firsure have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. This does not account for additional economic growth associated with the airport 5.56. Furthermore, there does not appear to be any safeguarded sites or genuinely deliverable reserve sites identified within the Draft Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites. However, it states that the reserves sites identified are not considered developable in the plan period. Paragraph 4.43 of the Plan indicates that the reserve sites have flood risk mitigation issues or safeguarding issues associated with HS2 preventing them from coming forward. Firsure would suggest, in order to assist with flexibility, that safeguarded sites be proposed in accordance with national guidance. The only other reserve site is related to direct job growth at the Airport and is strictly controlled, thus does not provide flexibility for the Plan as a whole. 5.57. The above scenarios do not include a detailed analysis of existing commitments and proposed allocations, however from a high level analysis it is evident that the Council’s trajectory and analysis of sites is optimistic. 5.58. Therefore, with an increased housing requirement, reduced potential from existing planning permissions sites and incorporation of a flexibility allowance, further land will need to be identified. 5.59. Firsure consider that the appropriate areas and sites to accommodate growth would be: - Site 302 and 305: Stripe Road, Rossington 5.60. A brief summary is provided for this site in response to Policy 3. Technical There is a significant mismatch between the level of employment land allocated and the level of housing land allocated in the Plan period; and - The identified supply is not sufficient to meet the Councils identified requirement. Need Firsure commissioned Regeneris Consulting to review the OAN and the Economic Forecasts and Housing Needs Assessment (2018) who conclude that: - The target delivers the minimum level of housing need for Doncaster based on the standard method (585 dpa) and makes an upward adjustment to support economic growth. - The upward adjustment was based on evidence produced by PBA which recommended housing need is presented as a range between 585 dpa (the minimum) and 912 dpa. The upper limit was based on matching Jobs growth aspirations of the Sheffield City Region LEP (1,420) over the period 2016 to 2026. However, PBA have made unjustified and unrealistic assumptions for a number of factors which all suppress the level of housing required to support future employment growth. In particular, we disagree with their assumptions about commuting, double jobbing and household formation rates. Regeneris consider that Doncaster’s housing need over the plan period should be 1,100 dpa to support future
economic growth. Regeneris consider that the target of 920 dpa would risk constraining the future economic growth of Doncaster. Firsure consider there is potential for the jobs led scenario to underestimate the jobs growth over the full plan period. The associated uplift to the housing requirement will therefore not be sufficient to meet the full needs over the plan period. The Council have identified a requirement for 481 hectares of employment land based on the Job Led scenario, and accounting for the extended plan period between 2032 and 2035. The explanatory text considers that this requirement is met through 117 hectares of land developed between 2015-2018, 201 hectares of land benefiting from planning permissions granted 164 hectares of allocated sites. However, there is a discrepancy between the totals in paragraph 4.61 of the Plan and the figures arising from Tables E1 to E8. The sites that benefit from planning permission in tables E1 to E8 equate to 284.09 ha of employment land available within the Plan period. This leads to a total provision of 565.77 hectares of employment land against a requirement of 481 hectares. It should be noted that within the permissions identified in tables E1 to E8 that additional employment land is available, adding to the supply. There is therefore a significant mismatch between the level of planned employment provision in Policy 4 and the planned housing provision. Therefore, the housing requirement needs to be uplifted to reflect the identified level of employment land provision. NPPG indicates that consideration can be given to delivery rates, for the last three years completions have been consistently higher than the proposed local plan target. This demonstrates that there is sufficient demand to support a requirement above 920 dwellings per annum. The Councils Economic Forecasts and Housing Needs Assessment (PBA, 2018) considers that an aspirational job led figure, based on the SEP ambitions, would equate to a requirement of 1,073. PBA considered that it would be prudent to plan for between 562 and 1073. There is therefore evidence of both delivery at a higher rate and recently published evidence that indicates a higher need for housing. Firsure are concerned that a target of 920 dwellings will not deliver sufficient number and range of affordable homes to meet the identified need for affordable homes in the Borough. In order to deliver 209 affordable dwellings per year, a requirement of at least 1,393 would be required. This assuming the achievement of an average of 15% affordable housing, which represents the highest achieved over the last three years of monitoring. Firsure consider that there is sufficient evidence to pointing to the need for further uplift in the Local Plan housing requirement, based on the significant mismatch between housing and employment land allocations, the need to support the local plans economic ambitions, evidence of delivery and the need to ensure sufficient delivery of affordable housing. Housing Supply and Delivery: At present based on the Councils figures presented in the Local Plan, a Plan requirement of 18,400, completions equating to 3400 and allocations equating to 16,055, there is a flexibility of around 1055 dwellings which equates to 5% of the Local Plan Requirement. Firsure consider that this is insufficient given the potential for non-delivery and under delivery of sites, particularly from the dependency on a number of large sites. As set out in our response to a number of policies within the plan and specifically Policies 8, 46, 66 and 67, Firsure are concerned that some of the policies may undermine the deliverability of sites. Firsure have a number of concerns relating to the supply in the Plan in terms of completions, the allocations from permissions and the new allocations. It is noted that the supply attributed to completions appears to be resultant from gross completions rather than net completions. The Plan indicates that completions between 2015 and 2018 equate to 3400, However data in the Residential Land Availability Report indicates that net completions amount to 3211. Which would serve to increase the residual requirement based on an OAN of 920 to at least 15,189, and reduce the flexibility to 284.09 ha of employment land available within the Plan period. The housing trajectory demonstrates that the Council will struggle to maintain a continuous supply of housing particularly in the later phases of the Plan period. Only four sites are identified as being capable of delivery in the final years of the plan period and two sites delivering beyond the plan period. In terms of existing commitments it appears that the Council assumes 100% delivery and no discount has been applied. Best Practice and Guidance suggests that at least a 10% discount should be applied on sites with extant planning permission but this could vary depending on site specific constraints and complexity. Firsure supports the discounting of sites with planning permission but consider it may be beneficial to include a higher level of discount for large sites to take into account unforeseen circumstances and delivery delays. Firsure consider therefore that from a commitments pot of 9,488 dwellings a discount of at least circa 948 should be applied, however this could feasibly be higher given the history and constraints of a number of sites. Firsure is concerned with the reliance on some existing housing sites with planning permission and their potential delivery, particularly as some are fairly historic brownfield sites with viability concerns in market challenging areas. There are a considerable number of outstanding planning permissions in poor market areas, some of which are also constrained by flood risk. Evidence of developer interest in such sites should be a fundamental requirement to provide confidence on delivery. For example, a brief review (provided) of some sites being shown as commitments shows considerable concern. The Council therefore need a wider choice of sites across a number of different areas and market areas to gain traction and increase build rates. To achieve the housing requirement the Council need at least 30-35 housing outlets operating across the Borough for every year of the Plan and Firsure do not believe the Plan can deliver this, particularly in the middle to later years. Firsure considers the Council should be more realistic on the potential delivery on sites, particularly on sites which have not commenced preparations of securing the relevant planning permission and developer interest and on build rates. Firsure consider that the sites with no planning permission should not be providing commitments until 2023/24 (which is two years post adoption) as there is significant work and preparations to commence on site, including time to prepare and submit the planning application, gain planning permission, discharge conditions, legal agreements, site preparations, and commence housing development. This process can take around 2 years. Firsure considers that the main risks to the delivery of the housing requirement are slippages in the delivery of allocations, longer lead-in times, reduced housing capacity on sites, sites no longer coming forward as result of viability from policy obligations set out in the Local Plan. Given these risks Firsure would suggest a greater flexibility is incorporated into the Local Plan especially in light of Firsure’s conclusions on the actual housing requirement. Firsure would encourage the Council to review the existing commitments to ensure this is still deliverable, whether there is a house builder on board and whether there are any constraints preventing development from coming forward. Firsure would also ask the Council to look at the proposed delivery of site allocations to determine whether the delivery rates are appropriate and the sites are deliverable in light of the policy obligations proposed in the Local Plan. Taking into account the above, on a best case scenario Firsure considers as a minimum requirement to be circa 3,682 new homes to be identified in the Plan to account for net completions, and economic growth. This does not account for the uplift required to ensure affordable housing need is met in full which would lead to a requirement of 1,393 dpa and a plan requirement of 27,860. Based on the current supply of 3,211 completions, 9,488 commitments, an allowance for 10% non-implementation, and the currently proposed allocations of 6,567 homes, this would lead to need for a further 9,542 additional homes. Significantly, the scenarios above do not balance housing provision with the additional employment allocations. The additional employment allocations amount to 83.77 hectares above the requirement, this is the equivalent of an additional 3.5 years supply of land. As a result in order to balance the housing provision with the additional employment supply circa 3,850 additional homes would be required, this amounts to an annual requirement of 1292.5 dpa. Firsure consider circa 7,532 additional homes are required in order to balance the Housing with Employment supply, account for net completions and appropriate non-implementation rates. These figures assume no changes to the currently identified housing sites, which, in response to policy 3 and policy 6, Firsure have raised significant concerns, particularly with regards the deliverability, capacity, and delivery rates of some sites and the overreliance on existing permissions or longstanding allocations. These does not account for additional economic growth associated with the airport. With an increased housing requirement, reduced potential from existing planning permissions and incorporation of a flexibility allowance, further land will need to be identified. Firsure consider that the appropriate areas and sites to accommodate growth would be: - Site 302 and 305: Stripe Road, Rossington Proposed Change To overcome the objection and address soundness matters, the Council should: - Increase housing requirements to 1,100 to 1,300 dwellings over the plan period.
Reduce the potential from current commitments and include a non-delivery allowance. - Identify safeguarded land. - Allocate 302 and 305: Stripe Road, Rossington

Response:

The Peter Brett’s report assesses the employment and housing target for the borough and ties the two together to ensure the right amount of houses are provided for the projected growth. The Council are confident that this report provides a sound and realistic figure. Many ways have been submitted to the Council about how the housing and employment figures could be derived. The submission Local Plan included a range, but still plans for enough housing to meet the requirement of 920dpa over the plan period - the use of a range does not prejudice this. 920dpa is the assessed level of housing required under the revised NPPF, 1,073 refers to the figure using the previous NPPF, which is now redundant. It should also be noted the PBA report states a mid-way point between 585 and 920 could be used, which the Council elected not to do. The Local Plan is planning for 57% more housing than the Standard Methodology proposed, and in doing so the Council have taken on board national policy and guidance. The jobs requirement covers the period 2015 - 35, and enough housing is planned for to match this - there is no reason to uplift this further, including for affordable housing. There is additional flexibility in housing delivery, as the plan does not factor in to its calculations windfalls; sites of 1-4 units; any development in Defined Villages; the proposed 280 dwellings at the airport + possible 920 further linked to job delivery; and the potential of Reserve Development Sites to deliver housing. If all these are factored in, then there is a total potential supply of 24,880 + future windfalls and potential empty homes coming into use, which is 6,480 above the 20 year requirement of 18,400, or in effect a buffer of 35%. Trajectories and other matters raised or covered in the Housing Topic Paper. The RLA has been updated for 2019 now. Consideration has been given to site constraints and delivery, and factored in where appropriate - this is discussed in the Site Selection Methodology and Housing Topic Paper. With regards to sites 302 and 305, these sites are in the Green Belt and as set out in the Green Belt Topic Paper, there are no exceptional circumstances which justify the release of these sites in this location, nor is there justification to safeguard sites.
Comment Ref: C/Policy 3: Site 139/05256/1/005

Attend Examination: Attend Hearing

Reason: Housing delivery in Mexborough

Area: Chapter 4: Strategic Approach

Policy: Policy 3: Level & Distribution of Growth

Tests of Soundness: Positively prepared

Consistent with national

Comment:
The distribution of housing throughout the district is set out initially in Core Strategy Policy CS2 (adopted 2012) Table 1: Settlement Hierarchy. Mexborough was identified as a principle town that should accommodate between 646 to 923 dwellings. This was then amended in the Draft Local plan in 2018, when a range of 475 to 1140 was proposed in Mexborough. This has been further amended within the Doncaster Local Plan Publication Version, which states a housing delivery target of 475 - 985 during the Plan period. “Housing allocations and mixed-use allocations to accommodate economic-led housing growth are directed to the most sustainable and deliverable urban and urban extension sites in the Doncaster Main Urban Area and Main Towns in accordance with the growth ranges set out in Policy 3 and in accordance with a sequential approach to flood risk.” Settlement: Mexborough Local Plan target (Publication Version): 475-985 Allocations with planning permission (as at 1st April 2018): 268 Allocations without planning permission (as at 1st April 2018): 202 Allocated Total: 470 Shortfall/Surplus: A shortfall of between 5 and 515. With Mexborough being one of the most sustainable settlements in Doncaster, it should be positively planned to deliver a high quantum of housing. The council’s allocations to aim for the lower quantum of housing in Mexborough is strongly objected to, as this would not meet the requirements of the settlement given its sustainability and role to deliver housing in Doncaster and for the Council to meet their aims and objectives. Site 139 will assist in driving economic led housing growth in Mexborough, which the Council identifies as one of the most sustainable urban areas within the district. As stated in the site Doncaster Draft Policies & Proposed Sites (2018), paragraph 9.1.23 ‘Permissions and the above additional allocations provides a settlement allocation of 532 dwellings against a target of 475 - 1,040 which, although provides for the full local need target, goes little towards providing the economic-growth led housing for one of the largest Main Towns outside of Doncaster.’ The Site allows for an urban extension in a highly sustainable area which is in Flood Zone 1. As per the NPPF, paragraph 11, The Presumption in favour of sustainable development, for Plan Making means that: a) plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change; It is considered that the Plan, in relation to Mexborough, does not positively seek opportunities to meet the development needs of their area, and is therefore not consistent with National Policy, and thus not sound.

Summary:
Policy 3 Level and distribution of growth 1. Object to lowering of housing figure for Mexborough (down from Core Strategy and 2018 draft Policies and site allocation consultation). 2. LP proposed allocation will not meet the needs of the settlement. 3. Plan fails to meet the development needs of Mexborough and therefore is not consistent with NPPF (para 11 (a))

Response:
The Local Plan will replace the Core Strategy in due course. That development plan was prepared under a previous Government’s national planning policy that pre-dated NPPF and was based on a (higher) non-objectively assessed housing need requirement and contained a less dispersed spatial strategy compared to the emerging Local Plan and hence the difference in the settlement’s housing target. Such matters have been consulted on and considered afresh through Reg 18 stages (e.g. Issues & Options/ Homes & Settlements) and the associated Sustainability Appraisal. It was not the Council’s aim to allocate a relatively low level of housing to the settlement of Mexborough, and this is reflected in the subsequent Policy 3 range of 475-985 new homes and is comparable to the other Main Towns’ targets. The fact more housing has not been subsequently allocated to the Town is a result of the findings of the Site Selection Methodology process which is compounded by the constraints to growth at Mexborough - not least the proposed route of HS2 to the east of the settlement which is safeguarded under Direction of the Secretary of State. In line with previous Local Plan consultations, where a settlement’s housing target (or within the range in the case of the Main Towns) has not been met (identified) through allocations, the requirement is redistributed and made good by allocations elsewhere at the Main Urban Area and/or Main Towns.
Avison Young has been instructed by Taylor Wimpey (Yorkshire) to prepare and submit representations to the Doncaster Local Plan Publication Draft (August-September 2019) Consultation (hereafter referred to as the 'Draft Local Plan'). Taylor Wimpey is the freehold landowner of a site located to the south of Balby which is identified in the Draft Local Plan as an Open Space Policy Area (Policy RL1). An extract of the site (with the site outlined in red) from the Draft Local Plan Proposals Map is provided below.  (SEE EMAIL FOR Plan) Site Context The site is located to the south west of the centre of Balby, adjacent to the A1(M) and in between extensive existing residential development on Woburn Close to the west, Cedar Road to the north and Croft Road to the east. The site is accessed from Cedar Road to the north and is approximately 4.1ha in size. The site is located in Flood Zone 1 and there are no listed buildings or heritage assets on or in close proximity to the site. It is located outside of the defined Green Belt boundary and as mentioned above, within existing residential development. Within the Council’s Green Space Audit (2013) which forms part of the Draft Local Plan evidence base, the site is identified as 'Informal' Open Space located in the Balby Community Profile Area. Site analysis and Draft Local Plan Consultation The purpose of this consultation is to establish whether the Draft Local Plan is legally compliant and sound. In order to determine if the Draft Local Plan is sound, it needs to meet the following four tests of soundness: - Positively prepared - so it meets the required objectively assessed needs for housing and other development - Justified - the plan should be based on evidence and be an appropriate strategy for the Borough - Effective - the plan should enable sustainable development and be consistent with the NPPF. The Draft Local Plan identifies at Policy 3, that the Local Plan's strategic aim is to facilitate the delivery of 18,400 new homes in the period 2015-2035, which equates to 920 dwellings per annum (dpa), with sufficient land allocated to deliver 15 years' supply of housing (13,230, or 882 dpa between 2018 and 2033). It goes onto identify the housing requirement as a range, within the top of the range being the 920 dpa and the bottom of the range being the local housing need. In order to meet this housing aim, at least 50% of new homes will be directed to the 'Main Urban Area' (of which Balby is included), approximately 40% to the 'Main Towns' and about 10% to the 'Service Towns and Villages'. One of the key elements of the NPPF is the provision of sufficient homes of the right type and quality in the most appropriate places. In order for the Council to deliver their strategic aims and the needs for housing, a number of housing allocations are identified, some of which are located within Balby and in close proximity of the site. We consider that the housing need set out in the Draft Local Plan does not provide sufficient homes of the right type and quality to meet the needs of Doncaster for three reasons - 1) the housing need identified is insufficient; 2) the land allocated for housing does not provide sufficient homes against the identified need; and 3) viability appraisals of the Local Plan suggest the draft allocations cannot deliver the proportion of affordable housing sought. Firstly, the proposed housing need of up to 920 dpa is considered insufficient when taking into account the Draft Local Plan's evidence base and other material information. For example, Doncaster's housing need is evidenced in the Economic Forecasts and Housing Needs Assessment (2018). The report identified that the demographic starting point from the 2014-based household projections of 562 dpa, which when adjusted to match a 'business as usual' job forecast equates to 579 dpa. However, the report identifies that a figure of 1,073 dpa is required to match the jobs growth aspiration of the Sheffield City Region. This figure is much closer to the housing need identified in Doncaster's adopted Core Strategy of 1,230 dpa for the period 2011-2018. Whilst it is recognised that the Standard Housing Methodology suggests lower figures, Paragraph 010 ref 2a-010-20190220 of the Planning Practice Guidance (PPG) identifies that “the standard method for assessing local housing need provides a minimum starting point in determining the number of homes needed in an area? therefore, there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicates". It goes onto state that circumstances where this may be appropriate includes growth strategies for the area, strategic infrastructure improvements, previous levels of housing delivery or where previous assessment of housing need are significantly higher than the standard model suggests. We therefore consider that a housing need figure of 1,073 dpa is established to reflect local circumstances, specifically the growth strategy of the Sheffield City Region and the previous assessments of housing need. Secondly, and notwithstanding our previous comments on housing need, there seems to be a discrepancy in the plan around the housing requirement of 920 dpa and the housing supply of 882 dpa as identified in Policy 3. As written, it does not appear that the Draft Local Plan is meeting its housing requirement over the plan period. As such, we consider that there is a need to plan for additional deliverable and developable housing sites to ensure a sufficient and continuous supply of housing over the lifetime of the plan, providing an element of flexibility for instances when sites do not come forward as planned. Therefore, the Draft Local Plan should allocate more sites than required to meet its housing requirement in order to maintain a buffer to deal with any under delivery. This approach is consistent with the NPPF requirements for Local Plans to be positively prepared and flexible in order to adapt to rapid change. In light of these matters, we do not consider that the Draft Local Plan is positively prepared, justified or consistent with national policy. In order for it to be sound, we believe the housing requirement identified in the Draft Local Plan should be increased and in doing so we propose that our client’s site should be allocated for housing either in whole or in part. The site is available for development, being owned by a willing landowner who is a national housebuilder and has constructed a significant number of new homes in Doncaster and the wider region, including current developments at Rossington and Finningley. It is suitable, given its sustainable location within walking and cycling distances to nearby local amenities and within the Borough's Main Urban Area which is the principal focus for new housing. It is located close to a number of shops, services and open space and is in walking distance of Mallard Primary School and Saint Peter’s Church, and various GP surgeries, a dentist, other necessary community services and public transport connections to Doncaster, Sheffield, Barnsley and Rotherham. Finally, the site is viable,
being a largely flat site with good existing access to the highway network off Cedar Road and no known impediments to its development. It is recognised that the site is allocated as ‘informal’ open space but given the level of need to allocate further deliverable and viable sites, we consider that the allocation of the site should be given serious consideration in order to ensure the Discount Local Plan is able to deliver sufficient homes in the right place. Furthermore, residential development of part of the land could maintain an element of the open space to ensure a better quality of space is provided for existing and future residents in this locality. Finally, it should also be noted that Policy 8 requires housing sites of 15+ homes or sites of 0.5ha+ in the Borough’s high value housing market areas to include 23% affordable homes. For elsewhere in the Borough, this figure drops to 15%. The Council’s Whole Plan Viability Testing - Update (2019) which provides an update to the 2016 viability assessment, identifies viability issues with a number of the draft allocations for housing. It concludes that allocations within medium and low value areas could not deliver the required levels of affordable housing and other contributions to physical and social infrastructure in accordance with the Draft Local Plan. Given the viability requirements set out in the updated PPG, which requires viability matters to be dealt with at the Local Plan stage, it is vital that the Draft Local Plan seeks to allocate land which can meet all policy requirements. In this regard, our client’s site is considered a viable proposal which can positively contribute to the Borough’s affordable housing requirements by providing a number of well needed affordable homes in the area. I hope the above response is clear and helpful. Should you have any questions or wish to discuss the representation further please do not hesitate to contact me.

Summary:

Issue. 1 Housing requirement figure and site at cedar Road Balby allocated as ‘open space. Sport &recreation’ in the Local Plan. Main arguments: 1. Housing requirement should be increased it is insufficient. 2. Proposing that the cedar Road site should be allocated for Housing to meet the increased need. 3. Housing figure (920 dpa) does not provide sufficient homes of the right type and quality to meet Doncaster’s needs. 4. Housing figure should be 1,073 not 920 dpa as per the ‘needs assessment’ this figure is closer to the Core Strategy figure of 1,230. 5. LP does not met the housing requirement over the plan period - there is a discrepancy in the figures in Policy 3 re the requirement being 920 and the supply being 882 dpa. 6. Sites allocated do not provide enough homes against the identified need. 7. Viability appraisal of the sites suggest the draft allocations cannot deliver the proportion of affordable housing sought. 8. There is a need to plan for more deliverable/develable sites to ensure a continuous supply. The Cedar Road site: 1. Suitable/deliverable/viable. 2. Has good access to services. 3. Can positively contribute to the affordable housing required.

Response:

The 1,073 requirement figure is taken from the PBA Report, but it is based on the 2012 NPPF so the 920 figure (or 912 as per the PBA Report) is an appropriate requirement and is a significant uplift to the standard methodology. More details are set out in the PBA Report under the section Housing Numbers Under the New Planning System as well as the supporting Housing & Strategy Background Paper which was published alongside the Publication stage. The Core Strategy was prepared under previous Government’s national planning policy and was a non-objectively assessed housing target that was derived via the Regional Spatial Strategy where subsequent Court decisions made clear were not compliant with the 2012 NPPF. The plan period requirement is 920 net dpa. Completions first 3 years (3,400) result in the residual requirement of 882dpa - see Policy 6 for detailed breakdown on this. Allocations have been made that far exceed the actual housing requirement and there are additional sources of supply identified in addition to this so a buffer is built into the allocations already. A buffer on top therefore would be buffering a supply that has already been buffered. Further detail is provided at Policy 6 and the Site Selection Methodology. The viability testing considers a number of different viability scenarios. This includes the ‘base’ appraisals, plus 11 different sensitivity tests. For example, one test considers a higher density rate of 40 dwellings per net Ha (Sensitivity Test 3 Pg 112), with the results showing that all medium value areas return a viable outcome. Also, there is a specific ‘low-cost’ developer model (Sensitivity Test 10 Pg 119) where urban extension schemes in low value areas return a viable outcome. There are therefore scenarios where schemes in both low and medium areas return viable outcomes. In forming conclusions rather than considering the results of one test instead a holistic approach has been adopted where all the different scenarios have been factored in. Comments in respect to the availability and deliverability of the Representation’s site in Balby are noted; the site has not so far been promoted through the Local Plan process as being available for housing.
HLM/HBD OBJECTS to Policy 3. There are a number of issues with this policy that we consider fail the tests of soundness. Level of Housing Growth Policy 3 explains that the strategic aim of the Plan is to deliver 18,400 new homes for the period 2015-2035 (920 per annum). The rationale for this approach is set out in the Economic Forecasts and Housing Needs Assessment (Peter Brett Associates - June 2018). At the time of the publication of the PBA report, they set out two possible scenarios given the then impending publication of the revised NPPF, one based on the 'old' NPPF (2012) and an alternative projection on the draft policies of the new NPPF. Since the revised NPPF is now published and the transition arrangement deadline has past, it is against the new NPPF that the housing requirement will be judged. Paragraph 60 of the NPPF (2019) states “strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for.” The PPG (Paragraph: 010 Reference ID: 2a-010-20190220) sets out circumstances where it might be appropriate to plan for a higher housing need figure than the standard method derives. It states: “Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: - growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth (e.g. Housing Deals); - strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; or - an authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground There may, occasionally, also be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently-produced Strategic Housing Market Assessment) are significantly greater than the outcome from the standard method. Authorities will need to take this into account when considering whether it is appropriate to plan for a higher level of need than the standard model suggests.” Firstly, it is recognised that Doncaster is not limiting its housing requirement to the base level derived by the standard methodology and has applied a job growth adjustment to arrive at a development range that is significantly higher than Adwick & Woodlands. Ultimately, what the settlement audit demonstrates is that each town is sustainable on its own; or, in the words of PPG: “the housing audit scores should not be the exclusive tool for attributing development, particularly given that scores are largely similar between all seven towns with each scoring very similarly.”

Tests of Soundness:

Policy: Policy 3: Level & Distribution of Growth

Positively prepared
Effective
Justified
Consistent with national

Comment: Full representations are made against Policy 3, note the approach to assessing the test of soundness.
Table 5 on P44 confirms that the intention is to use the bottom range figure (LHN). HLM/HBD objects to this position. It will suppress the effectiveness of the strategy of seeking to achieve levels of growth aligned with the Sheffield City Region and remove a barometer of performance in delivering housing in line with a job led strategy. It is acknowledged that the PPG contains advice stating "Where strategic policy-makers have successfully argued through plan-making and examination for a requirement set out as a range, the 5 year land supply will be measured against the lower end of the range." Whilst on face value the Doncaster approach accords with the principles of this guidance, the range difference between the levels of development are so significant, whether this be 585 vs 920; 585 vs 1073 or 585 vs a higher figure; that adopting 585 as the annual requirement would fatally undermine the objectives of significantly boosting housing supply to aid the job-led scenario. The Council’s 5 Year Housing Land Supply Statement projects a supply of 12.88 years based on the standard methodology being used to calculate requirement. At this stage HLM/HBD does not make any detailed assessment of the supply as the figures could change significantly but would make the following observations; (1) It is our view that given the differences between the range, the top level figure should be adopted as a the requirement for the reasons explained above. (2) The start of the assessment period should be April 2019, as by the time the Plan is at examination, it is likely that the five year period will already be two years old. (3) The information on supply is fragmented with some contained in the Housing Land Supply Statement and other information in the Plan itself, but further separated by settlements over numerous pages (4) The level of evidence to support the assumptions is in many cases insufficient to meet the tests of 'deliverable'.

**Proposed Change**

To remedy the issues raised in respect of Policy 3 we suggest the following: - The housing requirement should take account of growth over the entire Plan period and not just 10 years. This will increase the requirement significantly and additional allocations will be necessary. We set out the case for land promoted by HLM/HBD for housing under our recommendations for Policy 6. - The current distribution between main town settlements is unjustified. This should be more based on sustainability credentials rather than a division based on pro rata increase in household numbers. A more even spread of housing requirement across the main towns is likely. This does not necessarily equate to even allocation of numbers and factors such as Green Belt, flood risk and other constraints continue to be factors in decisions on the location of development. - The baseline housing requirement for five year supply should not be the standard methodology figure but the revised annualised requirement figure that takes account of growth for the whole of the plan period.

**Summary:**

Object to Policy 3. Number of issues mean it fails the test of soundness. Recognise that Doncaster is planning above the standard methodology and has applied a jobs led uplift. This is supported in principle. However, the 912dpa does not take into account the growth strategy for the whole of the plan period, as set out in para. 4.29 in the PBA report, which advises the requirement 1,073 dpa is needed over the plan period. Whilst this report sets this in the context of the previous NPPF, but there is nothing in the latest PPG to suggest that the calculation of other scenarios, such as the growth led strategy, has to align with the initial ten year period used for calculation the base requirement. Economic growth and housing need will continue beyond the ten year period. The job factor should logically be applied for the duration of the plan period. 1,073 better aligns with housing delivery records over the past couple of years. Delivery in the first 3 years is 3,400 homes, or 1,133 dpa. The report also covers 2015 - 32, but there are now 3 additional years (32 - 35) that should be factored in. 920dpa is therefore too low and not sufficiently aligned with the growth strategy. The market has shown it can deliver a higher requirement. The proposed requirement fails the ‘justified’ test of the NPPF (para. 35) as it is not an appropriate strategy. The requirement is not positively prepared as having taken the decision to increase requirement beyond the base level, the Council has not employed a clear and justified method in reaching an alternative target.

**Distribution and range of the Main Towns:**

No objections to the broad distribution between settlement categories. However, the Main Towns is based on household split percentages, which is in contrast to the Core Strategy in which the principal towns were all attributed the same range of dwellings. Do not disagree that different settlements should have different ranges, but this should be based on sustainability, not a pro - rata distribution exercise. Consequently, Adwick - Woodlands has the lowest range of the Main Towns, despite scoring higher than three other Main Town settlements within the Settlemens Profiles. It is recognised this shouldn’t be an exclusive tool for attributing development as the scores are largely similar, however for example, Armthorpe has no train station but a higher requirement. The Settlement Audit ultimately shows that each town is sustainable but the distribution does not appear justified against the sustainability criteria and more on existing size. Policy 3 therefore fails the justified test as it is not an appropriate strategy based on the evidence. 5 years supply: Object to the use of the standard methodology figure for 5 year supply purposes. It will suppress the effectiveness of the strategy of seeking to achieve levels of growth aligned with SCR. and remove the barometer of performance in delivering housing in line with a job led strategy. It is acknowledged that PPG states that "Where strategic policy-makers have successfully argued through plan-making and examination for a requirement set out as a range, the 5 year land supply will be measured against the lower end of the range." On face value the approach accords with the principals of the guidance, however the ranges from 585 - 920 or 1,073, or a higher figure is so significant that adopting 585 as the annual requirement would fatally undermine the objectives of significantly boosting housing

**Response:**

The council is planning for 920dpa, which is 57% higher than the Standard Methodology figure. Although the 2015 HNA and 2018 PBA report result in the same figure, they were arrived at independently of each other and via different methods. The Peter Brett’s work supersedes the housing requirement of the HNA, and the 2019 Housing Needs Assessment replaces other elements of this work. It is unnecessary to further update the Peter Brett Report, but the extended plan period has been factored in to housing calculations. The report clearly states the figure of 1,073 is related to the previous NPPF and not the revised NPPF, and 912dpa is correct as per the new NPPF (para. 5.27 & 5.28). These paragraphs also explain the Council could choose an intermediate number between 585 and 912, which the Council has elected not to do, in favour of retaining the higher figure. The NPPF instructs Council’s to use the Standard Methodology Figure (para. 60) to work out the minimum requirement. The Council has done this. Using a range is covered in Planning Practice Guidance (Housing Supply and Delivery - Paragraph: 027 Reference ID: 68-027-20190722). The additional 3 years have been factored in and housing supply can be demonstrated for these years. The Core Strategy has been replaced by the new Local Plan strategy, and the approach is set out in the Housing Topic Paper.
Summary of Policy 3 Level and Distribution of Growth 4.39 The Policy sets out the strategic aim to deliver at least 481 hectares of employment land over the plan period (2015-2035) to help grow and diversify the economy, increase productivity and widen access to learning and training opportunities. 4.40 In addition the policy seeks to deliver 18,400 new homes with land allocated for a 15 year supply of housing. 4.41 The policy sets out the distribution of growth in a number of tables relating to the settlement hierarchy. At least 50% of the total Housing is to be delivered in the main urban area. In terms of employment sites, logistic and light industry and manufacturing are directed to locations with good access to the M18 ad M180 motorways and strategic road network. 4.42 The Main Towns are identified to deliver 40% of housing growth. Employment is directed towards the same areas as the main urban area, M18/M180. 4.43 The Service Towns and Larger Villages which includes Edlington are identified to deliver 10% of the total housing growth for the Borough. New logistics employment is directed to the main urban area, ie the M18/M180 and Airport locations. Light Industry and Manufacturing is directed to the A1(M) - A19 corridor. Employment 4.44 Paragraphs 4.25 to 4.35 of the Plan provide an explanation of the policy in relation to Employment. The plan sets a land requirement of 481 hectares which factors in a 1% jobs growth rate. Whilst ambitious, the policy states the requirement and growth is based on evidence in the Employment Land Review and Employment Land Need Assessment and will boost productivity for existing and new sectors to grow by providing choice, flexibility and churn. 4.45 Paragraph 4.27 states that the distribution of employment areas is required in locations that are both attractive to the market and in locations where there is strong accessibility and connectivity with where people live. 4.46 The main location for large scale investment and growth is Doncaster Sheffield Airport and the iport is justified in paragraph 4.28 which states that many people do not with to live close to where they work and businesses often have locational needs meaning that they need to be located away from settlements. It continues to state that employment sites immediately next to residential areas can often lead to amenity issues. 4.47 The Plan states that existing established employment locations reflect previous development patterns but that these are often poorly located for modern business and have come under pressure for housing and other commercial uses. 4.48 Paragraph 4.33 continues to state that in the west of the Borough, areas such as Mexborough and Conisbrough are constrained by a lack of sites and that any existing sites have been under pressure for other uses. It is noted that the only site allocation in the west of the Borough is site 743 at Broomhouse Lane Industrial Estate which is a small site (0.75ha) with planning permission for B2 use. Housing 4.49 In terms of housing, this is directed to the main urban area in accordance with the Plans Settlement hierarchy with the main towns, including Mexborough and Conisbrough receiving about 40% of the total housing figure. The table in the policy states that Conisbrough and Denaby should provide approximately 465-975 new homes, Mexborough has a target to provide between 475-985 new homes. 4.50 This provision meets baseline growth and up to 10% of economic housing growth. The economic element of housing growth is directed to the most sustainable and deliverable sites in the main urban area and main towns 4.51 It is relevant to note that in Mexborough the allocated sites fall short of the lower end of the target by 165 dwellings. This is therefore directed to other main towns and urban areas. However, three reserve sites are identified which are likely to be progressed for housing during the plan period subject to the progress of HS2. 4.52 At Conisbrough and Denaby, the target is 465-975 with an allocated supply of 528 dwellings. A reserve site with the potential to provide 325 dwellings is identified. 4.53 The ten service towns and villages are identified to provide about 10% of the Boroughs total housing. The policy sets a target of 230 new homes to be provided in Edlington. 4.54 However, the settlement profile (para 16.206) states that the supply of housing provided through allocations with and without permission far exceeds the plan period requirement. The allocations provide for 665 new dwellings in Edlington. Soundness of Policy 3 to deliver the level and distribution of growth. 4.55 Whilst we generally support the thrust of the policies towards strategic sites to deliver growth and support the distribution, we object to the lack of new employment allocations in the west of the borough in preference for new employment allocations to the south and east. 4.56 It is considered that the Policy is unsound and is not justified and is not the most appropriate strategy when assessed against the reasonable alternatives. Reasoning 4.57 The Spatial Strategy and settlement Hierarchy seek to deliver sustainable growth that is appropriate to the size of individual settlements to meet the needs for new homes and jobs and to help to maintain strong sustainable communities, a strategy which we support. 4.58 Policy 3 which distributes growth in the borough conflicts with this strategy. The lack of new employment allocations in the west of the borough fails to recognise the existing functions within the communities in the west of the borough which include a number of existing employment locations/sites. 4.59 The settlements of Mexborough, Conisbrough, Denaby and Edlington (the west of the Borough) provide 5 identified existing employment sites. These sites provide some of the boroughs largest employers, including Polypipe at Edlington. 4.60 Paragraph 2.22 of the Plan, Policy 2, paragraph 4.27 all refer to the importance of communities and accessibility to the local employment opportunities which reflects the relatively self contained economy with approximately 80% of workers travelling to work in the Borough and a fifth travelling to work in the same electoral ward in which they live. 4.61 The vision of the Plan seeks to help encourage existing business to expand as well as attracting new businesses to the Borough. 4.62 The plan recognises current live/ work patterns and the importance of existing businesses. There is a conflict between the Plans strategy which seeks to create and maintain strong, sustainable, cohesive and inclusive communities and Policy 3, the distribution of the employment sites which fails to maintain existing communities by failing to provide sufficient flexibility and choice to existing businesses. 4.63 The lack of any new employment sites (with the exception of a small site 743 at Edlington) clearly conflicts with the evidence and is not justified. 4.64 Whilst the strategic vision for employment growth on the M1/M18 corridor and Doncaster Sheffield Airport, together with infrastructure improvements is understood and supported, there is clearly a need to support existing businesses and residents, particularly those in the west of the borough
The rep summarises and discusses policy 3. The only site allocation in the west of the Borough is site 743 at Broomhouse Lane Industrial Estate, which is a small site (0.75ha) with planning permission for B2 use. Generally support the thrust of the policies towards strategic sites to deliver growth and support the distribution of employment. Object to the lack of new employment allocations in the west of the borough in preference for new employment allocations to the south and east. The Policy is unsound and is not justified and is not the most appropriate strategy when assessed against the reasonable alternatives. Proposed changes to the plan to make it Sound additional new employment allocations and extensions to existing employment sites in the west of the Borough should be delivered. This will ensure that sustainable new communities are created in the west of the borough through the delivery and growth of new homes and opportunities for existing businesses to grow and remain in the area. Additional new employment site allocations are required in Edlington, Mexborough, Conisbrough and Denaby. These representations are written with specific regard to and support for an expansion to Broomhouse Lane Industrial Estate, Edlington to enable the existing occupier Polypipe to expand so that they are able to continue to operate efficiently from their location. Section 5 of this report provides details of the two proposed expansion sites.

Summary:
The rep summarises and discusses policy 3. The only site allocation in the west of the Borough is site 743 at Broomhouse Lane Industrial Estate, which is a small site (0.75ha) with planning permission for B2 use. Generally support the thrust of the policies towards strategic sites to deliver growth and support the distribution of employment. Object to the lack of new employment allocations in the west of the Borough in preference for new employment allocations to the south and east. The Policy is unsound and is not justified and is not the most appropriate strategy when assessed against the reasonable alternatives. Proposed changes to the plan to make it Sound additional new employment allocations and extensions to existing employment sites in the west of the Borough should be delivered. This will ensure that sustainable new communities are created in the west of the borough through the delivery and growth of new homes and opportunities for existing businesses to grow and remain in the area. Additional new employment site allocations are required in Edlington, Mexborough, Conisbrough and Denaby. The representation are written with specific regard to and support for an expansion to Broomhouse Lane Industrial Estate.

Response:
Noted. Support welcomed. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.
Alignment with Economic Growth 3.12. Draft Policy 3 sets out the amount of housing to be developed over the plan period. The new Local Plan suggests a housing figure of 18,400 new homes over the plan period 2015-2035 (920 per annum). DMBC correctly use the Government’s Standard Housing Methodology as a starting point and then considers the impact of economic growth to come to a more realistic housing need figure. 3.13. However, it should be emphasised that Doncaster is well situated with key spatial links to the motorways (A1(m) and M18), close to Humber Ports, Sheffield and Leeds and as such provides a fundamental opportunity to deliver job growth to support the ‘Northern Powerhouse’. 3.14. Its position is crystallised within the Sheffield City Region Strategic Economic Plan (2015-2025). The plan sets out an ambitious growth strategy for the City Region in the context of duty to cooperate. James Newman, Sheffield City Region LEP Chairman has stated: "Our Strategic Economic Plan is a ten-year strategy to grow the Sheffield City Region’s economy. It is based on creating more private sector jobs by ensuring our businesses are encouraged and incentivised to grow. Our ambitions to deliver 70,000 net additional jobs, increase GVA by 10% or # billion and create 6,000 new businesses will enable its transformation” (Our emphasis) 3.15. This is accompanied by a #10 million transport fund overseen by the Transforming Cities Fund in the context of improved travel and to help facilitate the ambitious Doncaster Sheffield Airport expansion plan. In respect of Doncaster, page 16 (figure 4) sets out Doncaster’s role as: “A high quality urban centre, attractive retail opportunities and excellent rail links that contribute to its multimodal logistics and advanced engineering offer.” 3.16. MHCLG are explicit that if councils want a more ambitious local plan for growth then they should incorporate positive growth and housing figures (PPG 02a-010). DMBC by their own admission state they have “ambitious plans and ideas for the future of the borough”. 3.17. In reviewing the evidence for the housing need, this is set out as part of the Standardised Methodology (2014 ONS projections) and the Economic Forecasts and Housing Needs Assessment (2018). This provides a range of the Standardised Methodology targets whilst also setting an upper threshold of 920 dwellings per annum. 3.18. At paragraph 5.21 it states how a job-led housing need to match the job growth aspiration of the SCR would be 1,073 dpa. Written a year later, the Employment Land Need Assessment (2019 update) states at paragraph 1.6 how it is aware of the SCR Growth Plan and Northern Powerhouse implications but again this is only applied to calculating employment land targets. It states at paragraph 6.26 that: "The 'Job Led' scenario has been selected for the Local Plan which is considered ambitious but realistic." It follows that if the employment needs are 'policy on' housing growth should be 'policy on' otherwise the strategy fails. 3.19. In adopting a pure Standardised Methodology approach this is overly simplistic. If continued, there is a fundamental danger that the Local Plan will be found unsound by the Inspector and DMBC asked to revise its housing targets upwards accordingly. 3.20. This issue has recently been raised at the Calderdale Local Plan Examination. A copy of the Inspector’s post-hearing letter is included at Appendix 3. Whilst submitted under transitional arrangements the provisions of more recent policy apply. Within this it references the NPPF paragraph 60 which confirms the approach to using the Standardised Methodology: "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals." (Our emphasis) (SEE EMAIL FOR Appendices) 3.21. Planning Policy Guidance provides further guidance on this interpretation, stating: "The government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth?. It does not attempt to predict the impact that future government policies, changing economic circumstances or other factors might have on demographic behaviour. Therefore, there will be circumstances where it is appropriate to consider whether actual housing need is higher than the standard method indicates…Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of: - growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth (e.g. Housing Deals); - strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; or - an authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground;" 3.22. The Inspector then discusses the areas of inconsistency in turn. These being: - The commitment to a major (Leeds) City Region Economic Growth deal, having knock on 'policy on' implications for growth and employment land distribution; - The Employment land distribution which at 73 Ha is ‘policy on’, requiring commensurate housing growth to support and house the increase in jobs, prosperity and inward investment; and, - As a result the need to increase the growth by c. 20% over and above the standard method derived housing target of 820 dpa. 3.23. All of the above points apply to DMBC. Doncaster is clearly committed to the Sheffield City Region Growth Strategy and from it similar key 'policy on' implications should flow in respect of housing growth. 3.24. A higher housing figure is also crucial in meeting the other aims and objectives of the framework. This will ensure that Doncaster remains an attractive location of choice for those wanting to live and work in the region and will encourage economic growth by being able to accommodate the influx of people and ensure the vitality of the urban area. In particular, it will allow regeneration and sustainability objectives to be met. Standard Method 3.25. Further, it must be highlighted that Standard Method is still subject to review and likely to be revised in the next 12 months and should therefore not be relied upon without testing. 3.26. In conjunction the 2018 consultation document for the government’s proposed approach states in the short term the 2014-based data should provide the demographic baseline rather than the 2016 version due to significant drops in housing need. It therefore highlights that this is still a new method and still not finalised, with new calculations expected for release later on in 2019. Yet in taking the 2014 based figures the current standardised methodology is not perfect. 3.27. Taken nationally it delivers 265,936 homes per annum, a clear shortfall on the 300,000 homes per annum widely asserted by MHCLG and on the 7th February 2019 the National Audit Commission published its report.
on housing in the UK, writing: "The Department understands the shortfalls in the planning system and its new planning policy framework aims to address some of these, such as the system for contributions from developers. However, it is too early to say how effective the new framework and proposed reforms will be in bringing about the level of change needed. The Department and government more widely need to take this much more seriously and bring about improvement if they are to meet their ambition of 300,000 new homes per year by the mid-2020s."

(Our emphasis) Recommendation 3: Ensure that a positive growth strategy is incorporated into the LHN to ensure consistency with DMBC's economic aims and objectives and Sheffield City Region Growth Strategy. In order to achieve this DMBC should adopt a housing target of at least 1,073 dwellings per annum in the interests of positive, consistent and effective plan making. The Shortfall position 3.28. Further, the 920 dwellings per annum figure does not reflect on the consequences of past under delivery of housing. This is set out below: Doncaster Net Additional Dwellings (NAD) 2010-11: 817 2011-12: 457 2012-13: 316 2013-14P: 654 2014-15: 792 2015-16: 1162 2016-17: 1049 2017-18: 1208

Table 1 - Net Additional Dwellings (Source: ONS, 2019). 3.29. Setting this against the 2012 Core Strategy OAN of 1,230 per annum, there is a danger that DMBC would be accused of 'resetting' the shortfall in supply at Examination if the 3,195 unit shortfall from 2011 to 2018 is not accounted for within the new housing need figure. It is essential that this figure is added onto the Economic Forecasts and Housing Needs Assessment target of 1,073 dwellings per annum to give a new minimum target of 1,233 dwellings per annum (Liverpool method) or 1,712 dwellings per annum for years 0-5 if it is to be made up over the first five years of the plan period (Sedgefield Method). Recommendation 4: Ensure that the shortfall of 3,195 units from the previous plan period is accounted for within the new housing target. In the interests of justified and effective plan making.

Focus on Growth within the Main Urban Area 3.30. In conjunction with the settlement hierarchy outlined in Draft Policy 2, Draft Policy 3 goes on to state the specific distribution of development. With specific consideration to the Main Urban Area of Doncaster, it states at least 50% of the Borough’s total housing should be focused within it. We must reiterate that the policy clearly states 50% as a minimum figure and even when this figure is met the council should still look to support housing in the Main Urban Area. 3.31. Further, given the unique characteristics of DMBC Doncaster is by far the dominant settlement and largest in this part of the SCR with a population of 302,402 (2011 Census) - the next largest settlement being Thorne at 17,295 (2011 Census) with the remainder involving a number of smaller dispersed settlements beyond. It can even be argued that sustainable growth could be more focussed on the town, recognising the key characteristics of the district. For example, in the region of 60-70%. This would allow development where possible to be located within sustainable locations and in line with the aims of the NPPF. To this end we believe the minimum target for the MUA should be 17,262 ((1,233x20)x70%) dwellings over the plan period. 3.32. Given this reason we would like to recap the merits of the Grange Farm site in that the site is located adjoining the Main Urban Area of Doncaster, directly south of Edenthorpe. As such would represent a Sustainable Urban Extension and support its role. Recommendation 5: DMBC should heighten the role of Doncaster within its growth distribution, planning for at least 17,262 dwellings over the plan period within or adjacent to the Main Urban Area in line with Recommendations 3 and 4 and in the interests of effective, justified and positive planning.

Summary:
Doncaster is well located in relation to the motorway, ports and Sheffield / Leeds. It provides a fundamental opportunity to deliver jobs to support the northern powerhouse, and the airport has ambitions to expand. DMBC state they have ambitious plans for the future of the borough. Para. 5.21 of the PBA report states that job led housing to match job growth aspirations for the SCR would be 1,073dpa. The ELNA states that a job led scenario has been selected for the local plan, and it follows that if employment is policy on, housing should also be. Adopting a pure standardised methodology approach is overly simplistic, if continued there is a fundamental danger the plan will be found unsound and the Council have to revise its figure upwards. This is covered in the NPPF (para. 60) and PPG. The issue has currently been raised at Calderdale Local Plan examination, where the inspector decided there should be an increase of 20% above the standard method figure of 820 dpa given the local economic ambitions. The same argument applies to Doncaster and it’s commitment to the SCR growth strategy. From this, similar policy on implications should flow in respect of housing growth. A higher figure is also crucial in meeting other framework objectives, ensuring Doncaster is an attractive location of choice and to encourage economic growth by being able to accommodate the influx of people and support urban vitality - as well as allowing regeneration and sustainability objectives to be met. The Standard Method is still subject to review and likely to be revised in the next 12 months and therefore should not be relied upon without further testing. It uses 2014 based figures so is not perfect, and new calculations are expected. Nationally, it results in a shortfall against the government targets of 300,000 new homes by the mid 2020s.

Recommendation 3: to ensure a positive growth strategy, DMBC should adopt a target of 1,073 dpa in the interests of positive, consistent and effective plan making. 920 dpa does not reflect under delivery against the Core Strategy target in the years 2010 - 2018 of 3,195 units. This should be added to 1,073 to create a shortfall of 1,233 dpa (Liverpool method), or 1,712 dpa 0 - 5 if being made up over the first 5 years (Sedgefield method). Recommendation 4 - ensure that 3,195 unit shortfall from previous plan period is accounted for within the housing target, in the interests of justified and effective plan making. Furthermore, 50% of the housing requirement should be delivered in the Main Urban Area, as per policy 3. However, this is the most sustainable location (302,402 residents in the 2011 census, Thorne next with 17, 295 and the rest in dispersed settlements beyond). It could be argued sustainable growth could be more focused on the town, e.g. in the region of 60 - 70%, allowing all development to be in sustainable locations. The target for the MUA should be 17,262 ((1,233x20)x70%). Grange Farm would represent a sustainable urban extension and support the role of the MUA. Recommendation 5: the role of the urban area should be heightened and 17,262 dwellings planned for over the plan period in or adjacent to it.

Response:
The Council has used the Standard Methodology figure of 585 and then increased its housing requirement to 920 dpa, as set out in the Economic Forecasts and Housing Needs Assessment (Peter Brett Associates, May 2018). This is a substantial increase which demonstrates positive, effective planning. No change needed.
C/Policy 3/05289/1/003

Chapter 4: Strategic Approach

Policy 3: Level & Distribution of Growth

**Tests of Soundness:**

- Positively prepared
- Consistent with national
- Justified

**Comment:**

Policy 3 is not considered to be sound as it is not positively prepared, justified or consistent with national policy for the following reasons: The Council has continued to identify a net housing requirement of 920 dwellings per annum (dpa) over the plan period 2015-2035. Paragraph 60 of the NPPF 2019 states that ‘to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify an alternative approach which also reflects current and demographic trends and market signals’. It should be noted that the Standard Method identifies a minimum annual housing need figure, it does not produce a housing requirement figure. It should also be noted that the Government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The Standard Method provides a minimum starting point, and there may be circumstances where it is appropriate to consider whether the actual housing need is higher than the Standard Method indicates. The National Planning Practice Guidance (NPPG) (ID: 2a-010) goes on to states that these circumstances can include growth strategies for the area; strategic infrastructure improvements; previous levels of delivery; or, where previous assessments of need are significantly greater than the outcome of the Standard Method. The Peter Brett Economic Forecasts and Housing Needs Assessment (2018) identifies a demographic starting point from the 2014-based household projections of 562dpa, which if adjusted to match a business as usual job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region, it identifies a jobs-led housing need pf 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. The Peter Brett Economic Forecasts and Housing Needs Assessment (2018) identifies a demographic starting point from the 2014-based household projections of 562dpa, which if adjusted to match a business as usual job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region, it identifies a jobs-led housing need pf 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. Lastly, the housing requirement should not be treated as a cap because this would be inconsistent with the NPPF’s requirement to support the Government’s objective to boost the supply of homes. It is important that sufficient housing is allocated to match the proposed level of economic growth, in order to provide sufficient homes for the labour force required to service the jobs created. Not providing a sufficient number of homes to match the economic growth aspirations in the Borough can lead to consequences, such as the formation of unsustainable commuting patterns due to an insufficient number of homes for people wishing to move to Doncaster. The NPPF is clear in paragraph 9 that policies should play an active role in guiding development towards sustainable solutions and in doing so should take local circumstances into account. It DMBC wish to encourage economic growth within the Borough this should be done in a sustainable manner.

**Summary:**

The Standard Method identifies a minimum annual housing need figure, it does not produce a housing requirement figure. The Peter Brett Economic Forecasts and Housing Needs Assessment (2018) identifies a demographic starting point from the 2014-based household projections of 562dpa, which if adjusted to match a business as usual job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region, it identifies a jobs-led housing need pf 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. It is important that sufficient housing is allocated to match the proposed level of economic growth, in order to provide sufficient homes for the labour force required to service the jobs created. Not providing a sufficient number of homes to match the economic growth aspirations in the Borough can lead to consequences, such as the formation of unsustainable commuting patterns due to an insufficient number of homes for people wishing to move to Doncaster.

**Response:**

As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Tests of Soundness: Positively prepared  Justified  Consistent with national

Policy: Policy 3: Level & Distribution of Growth

Comment:
Policy 3 is not considered to be sound as it is not positively prepared, justified or consistent with national policy for the following reasons: The Council has continued to identify a net housing requirement of 920 dwellings per annum (dpa) over the plan period 2015-2035. Paragraph 60 of the NPPF 2019 states that ‘to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify an alternative approach which also reflects current and demographic trends and market signals’. It should be noted that the Standard Method identifies a minimum annual housing need figure, it does not produce a housing requirement figure. It should also be noted that the Government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The Standard Method provides a minimum starting point, and there may be circumstances where it is appropriate to consider whether the actual housing need is higher than the Standard Method indicates. The National Planning Practice Guidance (NPPG) (ID: 2a-010) goes on to states that these circumstances can include growth strategies for the area; strategic infrastructure improvements; previous levels of delivery; or, where previous assessments of need are significantly greater than the outcome of the Standard Method. The Peter Brett Economic Forecasts and Housing Needs Assessment (2018) identifies a demographic starting point from the 2014-based household projections of 562dpa, which if adjusted to match a business as usual job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region, it identifies a jobs-led housing need of 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. The Council identify that the housing requirement will be expressed as a range with the bottom of the range being the Local Housing Need (LHN) figure and the top of the range being the 920dpa. As set out above it is not considered that the LHN produced from the Standard Method would provide an appropriate housing requirement. With the Sheffield City Region jobs growth aspirations applied a housing need of 1,073dpa is identified. It is clear that there are circumstances identified that would require a housing requirement figure which is significantly greater than the outcome of the Standard Method. Lastly, the housing requirement should not be treated as a cap because this would be inconsistent with the NPPF’s requirement to support the Government’s objective to boost the supply of homes. It is important that sufficient housing is allocated to match the proposed level of economic growth, in order to provide sufficient homes for the labour force required to service the jobs created. Not providing a sufficient number of homes to match the economic growth aspirations in the Borough can lead to consequences, such as the formation of unsustainable commuting patterns due to an insufficient number of homes for people wishing to move to Doncaster. The NPPF is clear in paragraph 9 that policies should play an active role in guiding development towards sustainable solutions and in doing so should take local circumstances into account. DMBC wish to encourage economic growth within the Borough this should be done in a sustainable manner.

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth.
Policy 3 identifies the need to deliver 18,400 new homes in the period 2015 to 2035 (920 per annum), with sufficient land allocated to deliver 15 years’ supply of housing (13,230, or 882 dpa once supply in the years 2015 to 2018 is deducted from the overall requirement). Policy 3 then goes on to state that the housing requirement is expressed as a range with the bottom of the range being the Local Housing Need figure and the top of the range being 920 dpa. Policy 3 does not however state what the Local Housing Need figure, which is identified within the ‘Economic Forecasts and Housing Needs Assessment’ (June 2018) (prepared by PBA) as 585 dpa. Therefore the implication of this is that the housing requirement for Doncaster supports the delivery of between 585 and 920 dpa over the plan period. Swan Homes Ltd consider that this is a significant change since the Draft Plan for informal consultation. Policy 3 has shifted from stating that the 920 dpa is a minimum figure (‘at least’), to stating that the housing requirement is a range from the Local Housing Need (585 dpa) to 920 dpa. Swan Homes Ltd does not feel that this policy is sound as it does not support a positively prepared plan which is supportive of boosting significantly the supply of housing. We consider it important that the wording in Policy 3 should state that the 920 dpa is a minimum and reflect the wording in the Draft Plan for informal consultation where the 920 dpa was stated as ‘at least 920 dpa’. We also consider that Policy 3 should make it clear that the number of homes per annum is a net figure, again this is a change since the Draft Plan for informal consultation which explicitly stated that the 920 dpa were net homes required to be delivered over the plan period. We would also suggest that the numerical value of the Local Housing Need for Doncaster (585 dpa) should be explicitly stated in Policy 3. The 920 dpa identified in Policy 3 is not evidenced within the PBA report and it is unclear upon which evidence the 920 dpa figure is based. The PBA report suggests that in order to support the jobs-led scenario which supports the economic ambition of Doncaster and the Sheffield City Region over the plan period, 1,073 dpa would be required. This level of future housing need to support the jobs-led scenario over the plan period and is more aligned with housing delivery in recent years. The Doncaster Residential Land Availability Report 2018 shows average net completions over the last 3 years of 1,070. It is anticipated that this could rise when the net delivery figures for 2018/19 are published. Table 1 Doncaster Past Net Housing Delivery Year: 2015/16 Net housing delivery: 1,025 Year: 2016/17 Net housing delivery: 1,049 Year: 2017/18 Net housing delivery: 1,137 Year: 2018/19 Net housing delivery: 1,327 * Source: Residential Land Availability 2017/18 *number to be confirmed but current Council estimate based on methodology used in RLA The PPG at paragraph ID :2a-010 is clear that the government remains committed to ensuring more homes are built and support authorities who want to plan for additional growth and as such the standard method is a minimum starting point in determining the number of homes needed in an area. The PPG goes on to identify the circumstances where it may be appropriate to consider whether actual housing need is higher than the standard method. These include where; - Growth strategies are in place such as Housing Deals; - Strategic infrastructure improvements are identified; and - Previous levels of housing delivery are significantly greater than the standard method. The PPG is clear that in these situations authorities will need to take this into account when identifying future needs. Doncaster’s Publication Local Plan does identify a housing requirement as a range, of which the upper end is above the standard method, trends in past delivery and the aspiration to support an economic led future for Doncaster suggest that in order to plan positively for the future it would be more appropriate for the housing requirement in Doncaster to be set at the 1,073 dpa to ensure that the vision can be achieved. Accordingly, Swan Homes Ltd considers that there is a need to increase the housing requirement identified in Policy 3 to state at least 1,073 dpa, in line with the Council’s own evidence, if the vision for the plan is to be achieved.

Summary:

Policy 3 - Level and Distribution of Growth. 1. The range figure for housing is not sound. 2. 920 dpa should be a minimum. 3. Policy should say ‘at least 920 dpa’. 4. Should be made clear that this is a net figure. 5. Lower figure of range (585) should be stated in the policy. 6. Evidence for the 930 figure is not clear. It is not in the Peter Brett Report. 7. Housing figure should be 1073 in line with Sheffield City Region ambitions.

Response:

The Local Plan sets out a supply of housing that far exceeds the 18,400 new homes so it is clear that this is already an ‘at least’ figure and the explanatory text (as well as all the supporting evidence base in respect to how sites have been allocated etc) are clear that this is a net figure already. The Local Housing Need figure as derived via the Standard Methodology changes on an annual basis in line with new population projections and affordability ratios so the figure will date very quickly if included in the plan. The 1,073 requirement figure is taken from the PBA Report, but is based on the 2012 NPPF so the 920 figure (or 912 as per the PBA Report) is an appropriate requirement and is a significant uplift to the standard methodology. More details are set out in the PBA Report under the section Housing Numbers Under the New Planning System as well as the supporting Housing Strategy Background Paper which was published alongside the Publication stage. Current completion figures are a result of a number of sites that have been in the pipeline that are now on stream and delivering but caution should be taken when making assumptions that this can/ will continue throughout the rest of the plan period. A high allocation will of course require more sites that will, by default, be either GB/FRZ/other environmentally sensitive sites.
Comment: 2.1 This section refers to relevant strategic policies in the Publication Draft Plan, notably Policy 2: Spatial Strategy and Settlement Hierarchy and Policy 3: Level and Distribution of Growth. 2.7 We note the requirement set out in Policy 3 to deliver at least 481 hectares of employment land within Doncaster over the plan period (2015-2035) to help grow and diversify the Sheffield City Region economy, and do not seek to comment on this requirement. 2.8 The approach set out within the policy, which seeks to distribute growth to the Main Towns, including Thorne and Moorends, alongside the Doncaster main urban area is supported, as is the approach to focusing logistics, light industry and manufacturing in locations that can accommodate large buildings with good access to the M18/M180 motorways and strategic road network. These are the areas where commercial advice, including that set out within the accompanying Delivery Statement, confirms that market demand lies. 2.9 In common with the comments made on Policy 2, Site 001: Thorne North constitutes such a location, providing a large scale site which can accommodate buildings of significant footprints in close proximity to the local population of Thorne and Moorends and with excellent access to the motorway network, and again demonstrates that the strategic approach set out within Policy 3 is justified and capable of being delivered. 2.10 The policy is therefore considered to be positively prepared, justified and effective, and is therefore sound.

Summary:
Policy 2: Spatial Strategy and Settlement Hierarchy and Policy 3: Level and Distribution of Growth. Note the requirement in Policy 3 to deliver at least 481 ha of employment land to help grow and diversify the Sheffield City Region economy. Support the Policy approach to distribute growth to the Main Towns, including Thorne and Moorends as well as the Main Urban Area. The approach to focusing logistics, light industry and manufacturing in locations that can accommodate large buildings with good access to the motorways is also supported. These are the areas where the Delivery Statement confirms there is market demand.

Response:
Noted. Support welcomed.

**Area:** Chapter 4: Strategic Approach

**Policy:** Policy 3: Level & Distribution of Growth

**Tests of Soundness:**

| Summary: | 3.9 Draft Policy 3 states that the Council will apply the proposed housing requirement of 920 dpa when considering allocations during the plan period (2015 - 2035), however for the purposes of calculating five year housing land supply the Council will rely on the Standard Methodology figure. It is considered that this approach does not meet national policy and guidance. The PPG (Note 1 - 1 Paragraph: 005 Reference ID: 68-005-20190722) states that: "Housing requirement figures identified in adopted strategic housing policies should be used for calculating the 5 year housing land supply figure where: - the plan was adopted in the last 5 years, or - the strategic housing policies have been reviewed within the last 5 years and found not to need updating. In other circumstances the 5 year housing land supply will be measured against the area’s local housing need calculated using the standard method. 3.10 Therefore, once the local plan is adopted the Council should be applying the housing requirement which was adopted and not the standard methodology. The Council should revisit this policy to ensure it is in compliance with national planning policy (paragraph 73 of the NPPF). |
| Response: | PPG supports the principle of being able to set the requirement as a range. NPPF is clear that Planning decisions should be taken following a plan-led approach. The Council could have just adopted the standard methodology figure as the Local Plan housing requirement in the first instance but have resisted such an approach and instead are planning for a very significant uplift for our ambitions for growth and this is reflected in the scale of allocations proposed. That said, the vast majority of this ambition needs to be delivered by the development industry and the market which may struggle to continue to meet such a high target. The Council has relatively little role to play post Planning decisions being granted in terms of actual housing delivery. Losing control of 5YHLS in this context therefore undermines the key policy objective of having a plan-led approach rather than the presumption that would be applied if 5YHLS cannot be demonstrated. |
Comment:

3.6 Paragraph 11 of the NPPF states that: plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change. This flexibility can be achieved by identifying housing land which exceeds the housing requirement to provide market choice and to act as a buffer should allocations not become available in the time or manner expected, or should circumstances prevent the expected site yields being fulfilled. 3.8 The Plan should therefore seek to allocate land which will meet the minimum requirement and then apply an appropriate buffer on top of this residual requirement. The Council should also be looking to allocate sites across the whole plan period and it is unclear why the Council choose to apply different plan periods when calculating its five year housing land supply and considering allocations to meet its housing need. It is noted that the draft Local Plan currently proposes to allocate sites which will have a combined capacity significantly in excess of the residual requirement of 15,000 dwellings. However, there is scope for this to be further increased to deliver housing within sustainable settlements such as Thorne/Moorends to meet housing needs across a full NPPF-compliant plan period.

Summary:

NPPF Paragraph states that plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change. This flexibility can be achieved by identifying housing land which exceeds the housing requirement to provide market choice and act as a buffer if allocations do not become available. The Council seek to allocate land which will meet the minimum requirement and then apply an appropriate buffer. Sites should be allocated across the whole plan period and it is unclear why different plan periods have been applied when calculating the five year housing land supply and then considering allocations. Although the Plan proposes sites which have a combined capacity in excess of 15,000 dwellings, there is scope for this to be further increased for sustainable settlements such as Thorne and Moorends.

Response:

As the Representation acknowledges, allocations have been made that far exceed the actual housing requirement and there are additional sources of supply identified in addition to this so a buffer is built into the allocations already. A buffer on top therefore would be buffering a supply that has already been buffered. Further detail is provided at Policy 6 and the Site Selection Methodology.
3.1 Draft Policy 3 states that the plan period in which to meet the Council’s aspirations for Doncaster is 2015 - 2035. 3.2 Paragraph 22 of National Planning Policy Framework (NPPF) states that strategic policies should look ahead over a minimum 15 year period from adoption. This is to ensure that the plan responds to long-term requirements and opportunities. It is important that the Council makes robust assumptions within their evidence base in respect of expected adoption of the Local Plan. 3.3 The Council’s latest Local Development Scheme (LDS) (March 2019) states that the plan will not be adopted until Summer 2020. It is considered that the LDS is optimistic in its timeframes from submission of the Local Plan up to adoption. It is unclear if the Council has made an allowance for Main Modifications to be drawn up, consulted on and considered within the estimated examination period. 3.4 From Lichfields’ experience of Local Plan examinations within the Yorkshire area, it is considered that the timeframes within the LDS should be amended, particularly in respect of timeframes between submission and examination. As an example, the Kirklees Local Plan took 6 months from submission to the Secretary of State to the start of the examination, the examination (including main modifications) lasted 12 months, and the Inspector’s report was received three months following the close of the main modifications consultation. These timeframes are considered to be a more realistic indication of the likely time which will be needed at Doncaster and would suggest an estimated date of adoption of September 2021, as shown in Table 3.1. Table 3.1 Estimated timeframe for Local Plan examination Stage: Submission to the Secretary of State DC Estimate: Late Autumn 2019 Lichfields Estimate: November 2019 Stage: Estimated examination period (assumed this period includes Main Modifications) DC Estimate: Winter 2019/20 Lichfields Estimate: May 2020 - May 2021 Stage: Receipt of inspector’s report DC Estimate: Spring 2020 Lichfields Estimate: August 2021 Stage: Estimated date of adoption DC Estimate: Summer 2020 Lichfields Estimate: September 2021 Source: Lichfield Analysis 3.5 It is considered that the plan period should be extended to account for the estimated adoption based on Lichfields timeframes and to ensure that a minimum 15 year time period from adoption is achieved. Based on the Council’s housing requirement (920 dpa) this would result in at least 19,320 dwellings to be delivered during the plan period up to 31st March 2036.

Summary:

NPPF Paragraph 22 states that strategic policies should look ahead over a minimum 15 year period from adoption. It is important that the Council makes robust assumptions within their evidence base in respect of expected adoption of the Local Plan. It is considered that the LDS timescale is optimistic and it is unclear if the Council has made an allowance for Main Modifications to be drawn up, consulted on and considered within the estimated examination period. The LDS should be amended particularly in respect of timeframes between submission and examination. The Kirklees Local Plan took 6 months from submission to the Secretary of State to the start of the examination, the examination (including main modifications) lasted 12 months, and the Inspector’s report was received three months following the close of the main modifications consultation. These timeframes are considered to be a more realistic indication of the likely time which will be needed at Doncaster and would suggest an estimated date of adoption of September 2021, as shown below: Stage: Submission to the Secretary of State Council Estimate: Late Autumn 2019 Lichfields Estimate: November 2019 Stage: Estimated examination period (assumed this period includes Main Modifications) Council Estimate: Winter 2019/20 Lichfields Estimate: May 2020 - May 2021 Stage: Receipt of inspector’s report Council Estimate: Spring 2020 Lichfields Estimate: August 2021 Stage: Estimated date of adoption Council Estimate: Summer 2020 Lichfields Estimate: September 2021. The plan period should be extended to account for the estimated adoption based on Lichfields timeframes and to ensure that a minimum 15 year time period from adoption is achieved. Based on the Council’s housing requirement (920 dpa) this would result in at least 19,320 dwellings to be delivered during the plan period up to 31st March 2036.

Response:

The Local Plan is due to be Submitted early 2020 and plans containing strategic policies have Inspector’s appointed within 1-3 weeks and the subsequent timescales for Hearings and adoption are considered achievable within 2020 meaning there would be 15 years from the date of adoption still i.e. 2035. Notwithstanding this, Policy 6/Chapter 16 identifies a number of allocations that will still be delivering post 2035 given the size of the sites and there is now a statutory requirement to review a Local Plan at least every 5 years anyhow meaning such matters will be looked at several times well before the end of the plan period whether that’s 2035 or a year or two later.
Tests of Soundness: Positively prepared Effective Legally Compliant

Comment:

4.1 Draft Policy 3 as drafted is considered to be unsound and should be amended to state that the Council will seek to deliver a minimum of 18,400 new homes during the plan period in accordance with paragraph 60 of the NPPF. 4.2 It is considered that there is scope to allocate additional housing over and above what is currently proposed, to provide a buffer and ensure delivery throughout the plan period. The Council should look at distributing additional housing sites in accordance with the settlement hierarchy, such as Thorne. From a review of the current distribution of allocations it is considered that the Council should revisit the current strategy and seek to focus further housing to the Main Town settlements rather than Service Towns and Villages as shown on the table below. Table 4.1 Distribution of proposed allocations Settlemet: Doncaster MUA Proposed distribution (Policy 3): 6,805 - 7,315 Proposed Allocation Up to 2035 (Table H1 and H2)**: 7,441 Percentage of Total Allocations (Table H1 and H2): 46% Settlement: Main Towns Proposed distribution (Policy 3): 2,985 - 6,715 Proposed Allocation Up to 2035 (Table H1 and H2)**: 6,292 Percentage of Total Allocations (Table H1 and H2): 39% Settlement: Service Towns and Villages Proposed distribution (Policy 3): 1,360 Proposed Allocation Up to 2035 (Table H1 and H2)**: 2,382 Percentage of Total Allocations (Table H1 and H2): 15% Settlement: Total Proposed distribution (Policy 3): 11,150 - 15,390 Proposed Allocation Up to 2035 (Table H1 and H2)**: 16,115 Percentage of Total Allocations (Table H1 and H2): 100% Source: Lichfields Analysis Excludes delivery beyond plan period* Uses units remaining in respect of Table H1** 4.3 The plan in its current form is neither adequate nor proportionate and fails to take account of local market signals within the Thorne/Moorends settlement. The current strategy should seek to focus further housing to Thorne over and above its current allocation in order to fully meet the proportion of housing distributed to the settlement.

Summary:

Policy 3 is unsound and should be amended to state that the Council will seek to deliver a minimum of 18,400 new homes during the plan period in accordance with paragraph 60 of the NPPF. There is scope to allocate additional housing over and above what is currently proposed so to provide a buffer and ensure delivery throughout the plan period. Additional housing sites should be distributed in accordance with the settlement hierarchy, such as Thorne. The current strategy should seek to focus further housing to the Main Town settlements rather than Service Towns and Villages as shown on the table below. Table 4.1 Distribution of proposed allocations Settlemet: Doncaster MUA Proposed distribution (Policy 3): 6,805 - 7,315 Proposed Allocation Up to 2035 (Table H1 and H2)**: 7,441 Percentage of Total Allocations (Table H1 and H2): 46% Settlement: Main Towns Proposed distribution (Policy 3): 2,985 - 6,715 Proposed Allocation Up to 2035 (Table H1 and H2)**: 6,292 Percentage of Total Allocations (Table H1 and H2): 39% Settlement: Service Towns and Villages Proposed distribution (Policy 3): 1,360 Proposed Allocation Up to 2035 (Table H1 and H2)**: 2,382 Percentage of Total Allocations (Table H1 and H2): 15% Settlement: Total Proposed distribution (Policy 3): 11,150 - 15,390 Proposed Allocation Up to 2035 (Table H1 and H2)**: 16,115 Percentage of Total Allocations (Table H1 and H2): 100% Source: Lichfields Analysis Excludes delivery beyond plan period* Uses units remaining in respect of Table H1** 4.3 The plan in its current form is neither adequate nor proportionate and fails to take account of local market signals within the Thorne/Moorends settlement. The current strategy should seek to focus further housing to Thorne over and above its current allocation in order to fully meet the proportion of housing distributed to the settlement.

Response:

The Local Plan sets out a supply of housing that far exceeds the 18,400 new homes so it is clear that this is already an ‘at least’ figure and there are also many other sources of additional housing land supply in addition to the allocations themselves. There are additional sources of supply identified in addition to this so a buffer is built into the allocations already. A buffer on top therefore would be buffering a supply that has already been buffered. Further detail is provided at Policy 6 and the Site Selection Methodology. The approach to the settlement hierarchy requires consideration of sequential testing so that avoidance of flood risk, where possible, has been taken. The economic growth-led component of the housing requirement is considered as being more footloose and, in accordance with previous Reg 18 consultation, has followed a sequential avoidance of flood risk approach where possible. An allocation to Thorne higher that that identified in the Local Plan and would require land in flood zone 3.
3.9 Draft Policy 3 states that the Council will apply the proposed housing requirement of 920 dpa when considering allocations during the plan period (2015 - 2035), however for the purposes of calculating five year housing land supply the Council will rely on the Standard Methodology figure. It is considered that this approach does not meet national policy and guidance. The PPG (Note 1 - 1 Paragraph: 005 Reference ID: 68-005-20190722) states that: Housing requirement figures identified in adopted strategic housing policies should be used for calculating the 5 year housing land supply figure where: - the plan was adopted in the last 5 years, or - the strategic housing policies have been reviewed within the last 5 years and found not to need updating. In other circumstances the 5 year housing land supply will be measured against the area’s local housing need calculated using the standard method.  3.10 Therefore, once the local plan is adopted the Council should be applying the housing requirement which was adopted and not the standard methodology. The Council should revisit this policy to ensure it is in compliance with national planning policy (paragraph 73 of the NPPF).

Summary:
Local Plan Policy 3 states that the Council will apply the proposed housing requirement of 920 dpa during the plan period, but for the purposes of calculating a five year housing land supply it will rely on the Standard Methodology figure. This approach does not meet national policy and guidance. PPG Note 1 - 1 Paragraph: 005 (Reference ID: 68-005-20190722) states that "Housing requirement figures identified in adopted strategic housing policies should be used for calculating the 5 year housing land supply figure where: - the plan was adopted in the last 5 years, or - the strategic housing policies have been reviewed within the last 5 years and found not to need updating. In other circumstances the 5 year housing land supply will be measured against the area’s local housing need calculated using the standard method." Once the Local Plan is adopted the Council should be applying the housing requirement which was adopted and not the standard methodology. This Policy should be revisited to ensure it is in compliance with national planning policy (paragraph 73 of the NPPF).

Response:
PPG supports the principle of being able to set the requirement as a range. NPPF is clear that Planning decisions should be taken following a plan-led approach. The Council could have just adopted the standard methodology figure as the Local Plan housing requirement in the first instance but have resisted such an approach and instead are planning for a very significant uplift for our ambitions for growth and this is reflected in the scale of allocations proposed. That said, the vast majority of this ambition needs to be delivered by the development industry and the market which may struggle to continue to meet such a high target. The Council has relatively little role to play post Planning decisions being granted in terms of actual housing delivery. Losing control of 5YHLS in this context therefore undermines the key policy objective of having a plan-led approach rather than the presumption that would be applied if 5YHLS cannot be demonstrated.
Comment:

3.6 Paragraph 11 of the NPPF states that: plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change. 3.7 This flexibility can be achieved by identifying land as housing allocations which appropriately exceeds the housing requirement to provide market choice and to act as a buffer should allocations not become available in the time or manner expected, or should circumstances prevent the expected site yields being fulfilled. 3.8 The Plan should therefore seek to allocate land which will meet the minimum requirement and then apply an appropriate buffer on top of this residual requirement. The Council should also be looking to allocate sites across the whole plan period and it is unclear why the Council choose to apply different plan periods when calculating its five year housing land supply and considering allocations to meet its housing need. It is noted that the draft Local Plan currently proposes to allocate sites which will have a combined capacity significantly in excess of the residual requirement of 15,000 dwellings. However, there is scope for this to be further increased to deliver housing within sustainable settlements such as Thorne/Moorends to meet housing needs across a full NPPF-compliant plan period.

Summary:

NPPF Paragraph 11 states that plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change. This flexibility can be achieved by identifying housing land which exceeds the housing requirement to provide market choice and act as a buffer if allocations do not become available. The Council seek to allocate land which will meet the minimum requirement and then apply an appropriate buffer. Sites should be allocated across the whole plan period and it is unclear why different plan periods have been applied when calculating the five year housing land supply and then considering allocations. Although the Plan proposes sites which have a combined capacity in excess of 15,000 dwellings, there is scope for this to be further increased for sustainable settlements such as Thorne and Moorends.

Response:

As the Representation acknowledges, allocations have been made that far exceed the actual housing requirement and there are additional sources of supply identified in addition to this so a buffer is built into the allocations already. A buffer on top therefore would be buffering a supply that has already been buffered. Further detail is provided at Policy 6 and the Site Selection Methodology.
Policy 3 states that the plan period in which to meet the Council’s aspirations for Doncaster is 2015 - 2035. NPPF Paragraph 22 states that strategic policies should look ahead over a minimum 15 year period from adoption. This is to ensure that the plan responds to long-term requirements and opportunities. It is important that the Council makes robust assumptions within their evidence base in respect of expected adoption of the Local Plan. 3.3 The Council’s latest Local Development Scheme (LDS) (March 2019) states that the plan will not be adopted until Summer 2020. It is considered that the LDS is optimistic in its timeframes from submission of the Local Plan up to adoption. It is unclear if the Council has made an allowance for Main Modifications to be drawn up, consulted on and considered within the estimated examination period. 3.4 From Lichfields’ experience of Local Plan examinations within the Yorkshire area, it is considered that the timeframes within the LDS should be amended, particularly in respect of timeframes between submission and examination. As an example, the Kirklees Local Plan took 6 months from submission to the Secretary of State to the start of the examination, the examination (including main modifications) lasted 12 months, and the Inspector’s report was received three months following the close of the main modifications consultation. These timeframes are considered to be a more realistic indication of the likely time which will be needed at Doncaster and would suggest an estimated date of adoption of September 2021, as shown in Table 3.1. Table 3.1 Estimated timeframe for Local Plan examination Stage: Submission to the Secretary of State DC Estimate: Late Autumn 2019 Lichfields Estimate: November 2019 Stage: Estimated examination period (assumed this period includes Main Modifications) DC Estimate: Winter 2019/20 Lichfields Estimate: May 2020 - May 2021 Stage: Receipt of inspector’s report DC Estimate: Spring 2020 Lichfields Estimate: August 2021 Stage: Estimated date of adoption DC Estimate: Summer 2020 Lichfields Estimate: September 2021 Source: Lichfield Analysis 3.5 It is considered that the plan period should be extended to account for the estimated adoption based on Lichfields timeframes and to ensure that a minimum 15 year time period from adoption is achieved. Based on the Council’s housing requirement (920 dpa) this would result in at least 19,320 dwellings to be delivered during the plan period up to 31st March 2036.

Summary:
Policy 3 states that the plan period in which to meet the Council’s aspirations for Doncaster is 2015 - 2035. NPPF Paragraph 22 states that strategic policies should look ahead over a minimum 15 year period from adoption. It is important that the Council makes robust assumptions within their evidence base in respect of expected adoption of the Local Plan. It is considered that the LDS timescale is optimistic and it is unclear if the Council has made an allowance for Main Modifications to be drawn up, consulted on and considered within the estimated examination period. The LDS should be amended particularly in respect of timeframes between submission and examination. The Kirklees Local Plan took 6 months from submission to the Secretary of State to the start of the examination, the examination (including main modifications) lasted 12 months, and the Inspector’s report was received three months following the close of the main modifications consultation. Table 3.1 Estimated timeframe for Local Plan examination. Stage: Submission to the Secretary of State DC Estimate: Late Autumn 2019 Lichfields Estimate: November 2019 Stage: Estimated examination period (assumed this period includes Main Modifications) DC Estimate: Winter 2019/20 Lichfields Estimate: May 2020 - May 2021 Stage: Receipt of inspector’s report DC Estimate: Spring 2020 Lichfields Estimate: August 2021 Stage: Estimated date of adoption DC Estimate: Summer 2020 Lichfields Estimate: September 2021 Source: Lichfield Analysis 3.5 It is considered that the plan period should be extended to account for the estimated adoption based on Lichfields timeframes and to ensure that a minimum 15 year time period from adoption is achieved. Based on the Council’s housing requirement (920 dpa) this would result in at least 19,320 dwellings to be delivered during the plan period up to 31st March 2036.

**Summary:**

NPPF Paragraph 22 states that strategic policies should look ahead over a minimum 15 year period from adoption. It is important that the Council makes robust assumptions within their evidence base in respect of expected adoption of the Local Plan. It is considered that the LDS timescale is optimistic and it is unclear if the Council has made an allowance for Main Modifications to be drawn up, consulted on and considered within the estimated examination period. The LDS should be amended particularly in respect of timeframes between submission and examination. The Kirklees Local Plan took 6 months from submission to the Secretary of State to the start of the examination, the examination (including main modifications) lasted 12 months, and the Inspector’s report was received three months following the close of the main modifications consultation. These timeframes are considered to be a more realistic indication of the likely time which will be needed at Doncaster and would suggest an estimated date of adoption of September 2021, as shown below: Stage: Submission to the Secretary of State DC Estimate: Late Autumn 2019 Lichfields Estimate: November 2019 Stage: Estimated examination period (assumed this period includes Main Modifications) Council Estimate: Winter 2019/20 Lichfields Estimate: May 2020 - May 2021 Stage: Receipt of inspector’s report Council Estimate: Spring 2020 Lichfields Estimate: August 2021 Stage: Estimated date of adoption Council Estimate: Summer 2020 Lichfields Estimate: September 2021. The plan period should be extended to account for the estimated adoption based on Lichfields timeframes and to ensure that a minimum 15 year time period from adoption is achieved. Based on the Council’s housing requirement (920 dpa) this would result in at least 19,320 dwellings to be delivered during the plan period up to 31st March 2036.

**Response:**

The Local Plan is due to be Submitted early 2020 and plans containing strategic policies have Inspector’s appointed within 1-3 weeks and the subsequent timescales for Hearings and adoption are considered achievable within 2020 meaning there would be 15 years from the date of adoption still i.e. 2035. Notwithstanding this, Policy 6/Chapter 16 identifies a number of allocations that will still be delivering post 2035 given the size of the sites and there is now a statutory requirement to review a Local Plan at least every 5 years anyhow meaning such matters will be looked at several times well before the end of the plan period whether that’s 2035 or a year or two later.
4.1 Draft Policy 3 as drafted is considered to be unsound and should be amended to state that the Council will seek to deliver a minimum of 18,400 new homes during the plan period in accordance with paragraph 60 of the NPPF. 4.2 It is considered that there is scope to allocate additional housing over and above what is currently proposed, to provide a buffer and ensure delivery throughout the plan period. The Council should look at distributing additional housing sites in accordance with the settlement hierarchy, such as Thorne. From a review of the current distribution of allocations it is considered that the Council should revisit the current strategy and seek to focus further housing to the Main Town settlements rather than Service Towns and Villages as shown on the table below. Table 4.1 Distribution of proposed allocations Settlement: Doncaster MUA Proposed distribution (Policy 3): 6,805 - 7,315 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 7,441 Percentage of Total Allocations (Table H1 and H2): 46% Settlement: Main Towns Proposed distribution (Policy 3): 2,985 - 6,715 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 6,292 Percentage of Total Allocations (Table H1 and H2): 39% Settlement: Service Towns and Villages Proposed distribution (Policy 3): 1,360 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 2,382 Percentage of Total Allocations (Table H1 and H2): 15% Settlement: Total Proposed distribution (Policy 3): 11,150 - 15,390 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 16,115 Percentage of Total Allocations (Table H1 and H2): 100% 4.3 The plan in its current form is neither adequate nor proportionate and fails to take account of local market signals within the Thorne/Moorends settlement, and if allowed to continue will both stifle market conditions and cause additional affordability concerns for local residents. The Council should seek to distribute additional housing to Thorne over and above its current allocation in order to fully meet the proportion of housing distributed to the settlement.

Summary:
Policy 3 is unsound and should be amended to state that the Council will seek to deliver a minimum of 18,400 new homes during the plan period in accordance with paragraph 60 of the NPPF. There is scope to allocate additional housing over and above what is currently proposed so to provide a buffer and ensure delivery throughout the plan period. Additional housing sites should be distributed in accordance with the settlement hierarchy, such as Thorne. The current strategy should seek to focus further housing to the Main Town settlements rather than Service Towns and Villages as shown on the table below. Table 4.1 Distribution of proposed allocations Settlement: Doncaster MUA Proposed distribution (Policy 3): 6,805 - 7,315 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 7,441 Percentage of Total Allocations (Table H1 and H2): 46% Settlement: Main Towns Proposed distribution (Policy 3): 2,985 - 6,715 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 6,292 Percentage of Total Allocations (Table H1 and H2): 39% Settlement: Service Towns and Villages Proposed distribution (Policy 3): 1,360 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 2,382 Percentage of Total Allocations (Table H1 and H2): 15% Settlement: Total Proposed distribution (Policy 3): 11,150 - 15,390 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 16,115 Percentage of Total Allocations (Table H1 and H2): 100% Source: Lichfields Analysis Excludes delivery beyond plan period* Uses units remaining in respect of Table H1** 4.3 The plan in its current form is neither adequate nor proportionate and fails to take account of local market signals within the Thorne/Moorends settlement. Additional housing should be distributed to Thorne over and above its current allocation.

Response:
The Local Plan sets out a supply of housing that far exceeds the 18,400 new homes so it is clear that this is already an ‘at least’ figure and there are also many other sources of additional housing land supply in addition to the allocations themselves. There are additional sources of supply identified in addition to this so a buffer is built into the allocations already. A buffer on top thereforere would be buffering a supply that has already been buffered. Further detail is provided at Policy 6 and the Site Selection Methodology. The approach to the settlement hierarchy requires consideration of sequential testing so that avoidance of flood risk, where possible, has been taken. The economic growth-led component of the housing requirement is considered as being more footloose and, in accordance with previous Reg 18 consultation, has followed a sequential avoidance of flood risk approach where possible. An allocation to Thorne higher that that identified in the Local Plan and would require land in flood zone 3.
3.9 Draft Policy 3 states that the Council will apply the proposed housing requirement of 920 dpa when considering allocations during the plan period (2015 - 2035), however for the purposes of calculating five year housing land supply the Council will rely on the Standard Methodology figure. It is considered that this approach does not meet national policy and guidance. The PPG (Note 1 - 1 Paragraph: 005 Reference ID: 68-005-20190722) states that: "Housing requirement figures identified in adopted strategic housing policies should be used for calculating the 5 year housing land supply figure where: - the plan was adopted in the last 5 years, or - the strategic housing policies have been reviewed within the last 5 years and found not to need updating. In other circumstances the 5 year housing land supply will be measured against the area’s local housing need calculated using the standard method. 3.10 Therefore, once the local plan is adopted the Council should be applying the housing requirement which was adopted and not the standard methodology. The Council should revisit this policy to ensure it is in compliance with national planning policy (paragraph 73 of the NPPF).

Response:
PPG supports the principle of being able to set the requirement as a range. NPPF is clear that Planning decisions should be taken following a plan-led approach. The Council could have just adopted the standard methodology figure as the Local Plan housing requirement in the first instance but have resisted such an approach and instead are planning for a very significant uplift for our ambitions for growth and this is reflected in the scale of allocations proposed. That said, the vast majority of this ambition needs to be delivered by the development industry and the market which may struggle to continue to meet such a high target. The Council has relatively little role to play post Planning decisions being granted in terms of actual housing delivery. Losing control of 5YHLS in this context therefore undermines the key policy objective of having a plan-led approach rather than the presumption that would be applied if 5YHLS cannot be demonstrated.
Tests of Soundness:

Comment:

3.6 Paragraph 11 of the NPPF states that: plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change. 3.7 This flexibility can be achieved by identifying land as housing allocations which appropriately exceeds the housing requirement to provide market choice and act as a buffer should allocations not become available in the time or manner expected, or should circumstances prevent the expected site yields being fulfilled. 3.8 The Plan should therefore seek to allocate land which will meet the minimum requirement and then apply an appropriate buffer on top of this residual requirement. The Council should also be looking to allocate sites across the whole plan period and it is unclear why the Council choose to apply different plan periods when calculating its five year housing land supply and considering allocations to meet its housing need. It is noted that the draft Local Plan currently proposes to allocate sites which will have a combined capacity significantly in excess of the residual requirement of 15,000 dwellings. However, there is scope for this to be further increased to deliver housing within sustainable settlements such as Thorne/Moorends to meet housing needs across a full NPPF-compliant plan period.

Summary:

NPPF Paragraph 11 states that plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change. This flexibility can be achieved by identifying housing land which exceeds the housing requirement to provide market choice and act as a buffer if allocations do not become available. The Council seek to allocate land which will meet the minimum requirement and then apply an appropriate buffer. Sites should be allocated across the whole plan period and it is unclear why different plan periods have been applied when calculating the five year housing land supply and then considering allocations. Although the Plan proposes sites which have a combined capacity in excess of 15,000 dwellings, there is scope for this to be further increased for sustainable settlements such as Thorne and Moorends.

Response:

As the Representation acknowledges, allocations have been made that far exceed the actual housing requirement and there are additional sources of supply identified in addition to this so a buffer is built into the allocations already. A buffer on top therefore would be buffering a supply that has already been buffered. Further detail is provided at Policy 6 and the Site Selection Methodology.
3.1 Draft Policy 3 states that the plan period in which to meet the Council’s aspirations for Doncaster is 2015 - 2035. 3.2 Paragraph 22 of National Planning Policy Framework (NPPF) states that strategic policies should look ahead over a minimum 15 year period from adoption. This is to ensure that the plan responds to long-term requirements and opportunities. It is important that the Council makes robust assumptions within their evidence base in respect of expected adoption of the Local Plan. 3.3 The Council’s latest Local Development Scheme (LDS) (March 2019) states that the plan will not be adopted until Summer 2020. It is considered that the LDS is optimistic in its timeframes from submission of the Local Plan up to adoption. It is unclear if the Council has made an allowance for Main Modifications to be drawn up, consulted on and considered within the estimated examination period. 3.4 From Lichfields’ experience of Local Plan examinations within the Yorkshire area, it is considered that the timeframes within the LDS should be amended, particularly in respect of timeframes between submission and examination. As an example, the Kirklees Local Plan took 6 months from submission to the Secretary of State to the start of the examination, the examination (including main modifications) lasted 12 months, and the Inspector’s report was received three months following the close of the main modifications consultation. These timeframes are considered to be a more realistic indication of the likely time which will be needed at Doncaster and would suggest an estimated date of adoption of September 2021, as shown in Table 3.1. Table 3.1 Estimated timeframe for Local Plan examination Stage: Submission to the Secretary of State DC Estimate: Late Autumn 2019 Lichfields Estimate: November 2019 Stage: Estimated examination period (assumed this period includes Main Modifications) DC Estimate: Winter 2019/20 Lichfields Estimate: May 2020 - May 2021 Stage: Receipt of inspector’s report DC Estimate: Spring 2020 Lichfields Estimate: August 2021 Stage: Estimated date of adoption DC Estimate: Summer 2020 Lichfields Estimate: September 2021 Source: Lichfield Analysis 3.5 It is considered that the plan period should be extended to account for the estimated adoption based on Lichfields timeframes and to ensure that a minimum 15 year time period from adoption is achieved. Based on the Council’s housing requirement (920 dpa) this would result in at least 19,320 dwellings to be delivered during the plan period up to 31st March 2036.

Summary: NPPF Paragraph 22 states that strategic policies should look ahead over a minimum 15 year period from adoption. It is important that the Council makes robust assumptions within their evidence base in respect of expected adoption of the Local Plan. It is considered that the LDS timescale is optimistic and it is unclear if the Council has made an allowance for Main Modifications to be drawn up, consulted on and considered within the estimated examination period. The LDS should be amended particularly in respect of timeframes between submission and examination. The Kirklees Local Plan took 6 months from submission to the Secretary of State to the start of the examination, the examination (including main modifications) lasted 12 months, and the Inspector’s report was received three months following the close of the main modifications consultation. These timeframes are considered to be a more realistic indication of the likely time which will be needed at Doncaster and would suggest an estimated date of adoption of September 2021, as shown below: Stage: Submission to the Secretary of State DC Estimate: Late Autumn 2019 Lichfields Estimate: November 2019 Stage: Estimated examination period (assumed this period includes Main Modifications) Council Estimate: Winter 2019/20 Lichfields Estimate: May 2020 - May 2021 Stage: Receipt of inspector’s report Council Estimate: Spring 2020 Lichfields Estimate: August 2021 Stage: Estimated date of adoption Council Estimate: Summer 2020 Lichfields Estimate: September 2021 The plan period should be extended to account for the estimated adoption based on Lichfields timeframes and to ensure that a minimum 15 year time period from adoption is achieved. Based on the Council’s housing requirement (920 dpa) this would result in at least 19,320 dwellings to be delivered during the plan period up to 31st March 2036.

Response: The Local Plan is due to be Submitted early 2020 and plans containing strategic policies have Inspector’s appointed within 1-3 weeks and the subsequent timescales for Hearings and adoption are considered achievable within 2020 meaning there would be 15 years from the date of adoption still i.e. 2035. Notwithstanding this, Policy 6/Chapter 16 identifies a number of allocations that will still be delivering post 2035 given the size of the sites and there is now a statutory requirement to review a Local Plan at least every 5 years anyhow meaning such matters will be looked at several times well before the end of the plan period whether that’s 2035 or a year or two later.
4.1 Draft Policy 3 as drafted is considered to be unsound and should be amended to state that the Council will seek to deliver a minimum of 18,400 new homes during the plan period in accordance with paragraph 60 of the NPPF. The current strategy should seek to focus further housing to the Main Town settlements rather than Service Towns and Villages as shown on the table below. Table 4.1 Distribution of proposed allocations Settlement: Doncaster MUA Proposed distribution (Policy 3): 6,805 - 7,315 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 7,441 Percentage of Total Allocations (Table H1 and H2): 46% Settlement: Main Towns Proposed distribution (Policy 3): 2,985 - 6,715 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 6,292 Percentage of Total Allocations (Table H1 and H2): 39% Settlement: Service Towns and Villages Proposed distribution (Policy 3): 1,360 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 2,382 Percentage of Total Allocations (Table H1 and H2): 15% Settlement: Total Proposed distribution (Policy 3): 11,150 - 15,390 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 16,115 Percentage of Total Allocations (Table H1 and H2): 100% Source: Lichfields Analysis Excludes delivery beyond plan period* Uses units remaining in respect of Table H1** 4.3 The plan in its current form is neither adequate nor proportionate and fails to take account of local market signals within the Thorne/Moorends settlement, and if allowed to continue will both stifle market conditions and cause additional affordability concerns for local residents. The Council should seek to distribute additional housing to Thorne over and above its current allocation in order to fully meet the proportion of housing distributed to the settlement.

Summary:

Policy 3 is unsound and should be amended to state that the Council will seek to deliver a minimum of 18,400 new homes during the plan period in accordance with paragraph 60 of the NPPF. There is scope to allocate additional housing over and above what is currently proposed to provide a buffer and ensure delivery throughout the plan period. The current strategy should seek to focus further housing to the Main Town settlements rather than Service Towns and Villages as shown on the table below. Table 4.1 Distribution of proposed allocations Settlement: Doncaster MUA Proposed distribution (Policy 3): 6,805 - 7,315 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 7,441 Percentage of Total Allocations (Table H1 and H2): 46% Settlement: Main Towns Proposed distribution (Policy 3): 2,985 - 6,715 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 6,292 Percentage of Total Allocations (Table H1 and H2): 39% Settlement: Service Towns and Villages Proposed distribution (Policy 3): 1,360 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 2,382 Percentage of Total Allocations (Table H1 and H2): 15% Settlement: Total Proposed distribution (Policy 3): 11,150 - 15,390 Proposed Allocation Up to 2035 (Table H1 and H2)* **: 16,115 Percentage of Total Allocations (Table H1 and H2): 100% Source: Lichfields Analysis Excludes delivery beyond plan period* Uses units remaining in respect of Table H1** The Plan not adequate or proportionate and fails to take account of local market signals within the Thorne/Moorends settlement. Additional housing should be distributed to Thorne over and above its current allocation.

Response:

The Local Plan sets out a supply of housing that far exceeds the 18,400 new homes so it is clear that this is already an ‘at least’ figure and there are also many other sources of additional housing land supply in addition to the allocations themselves. There are additional sources of supply identified in addition to this so a buffer is built into the allocations already. A buffer on top therefore would be buffering a supply that has already been buffered. Further detail is provided at Policy 6 and the Site Selection Methodology. The approach to the settlement hierarchy requires consideration of sequential testing so that avoidance of flood risk, where possible, has been taken. The economic growth-led component of the housing requirement is considered as being more footloose and, in accordance with previous Reg 18 consultation, has followed a sequential avoidance of flood risk approach where possible. An allocation to Thorne higher that that identified in the Local Plan and would require land in flood zone 3.
Policy 3 'Level and Distribution of Growth', sets out that the Local Plan's strategic aim is to facilitate the delivery of 18,400 homes in the period of 2015 - 2035 (920 annum), with sufficient land allocated to deliver 15 years' supply of housing. To meet the Local Plan's Spatial Strategy and Settlement Hierarchy, at least 40% of the Borough’s Total Housing will be located within the Main Towns which includes Hatfield & Stainforth. For Hatfield this equates to a provision of 575 - 1,085 dwellings over the plan period. The site is identified to have an indicative provision of 72 dwellings, which will make a significant contribution to the delivery of housing in Hatfield and Stainforth over the plan period. This site is therefore essential to meet the overall strategic aim for the Borough to deliver 18,400 homes during the plan period.

Summary:
Policy 3 'Level and Distribution of Growth Supportive of Policy and contribution that Site 170 can make to objectives.

Response:
Support noted.
Policy 3 'Level and Distribution of Growth', sets out that the Local Plan's strategic aim is to facilitate the delivery of 18,400 homes in the period of 2015 - 2035 (920 annum), with sufficient land allocated to deliver 15 years' supply of housing. To meet the Local Plan's Spatial Strategy and Settlement Hierarchy, 40% of the Borough's Total Housing need is earmarked to be delivered within Main Towns. Mexborough is identified within this classification and it is proposed that the settlement will deliver 475 - 985 dwellings over the plan period. The allocations of the site will make a significant contribution to the delivery of housing in Mexborough over the plan period. This site is therefore essential to meet the overall strategic aim for the Borough to deliver 18,400 homes during the plan period.

Summary:
Policy 3 'Level and Distribution of Growth Supports allocation of Pastures Road sites and contribution they can make to Policy objectives.

Response:
Support noted.
Policy 3 'Level and Distribution of Growth', sets out that the Local Plan's strategic aim is to facilitate the delivery of 18,400 homes in the period of 2015 - 2035 (920 annum), with sufficient land allocated to deliver 15 years' supply of housing. To meet the Local Plan's Spatial Strategy and Settlement Hierarchy, 40% of the Borough's Total Housing need is earmarked to be delivered within Main Towns. Mexborough is identified within this classification and it is proposed that the settlement will deliver 475 - 985 dwellings over the plan period. The allocations of the site will make a significant contribution to the delivery of housing in Mexborough over the plan period. This site is therefore essential to meet the overall strategic aim for the Borough to deliver 18,400 homes during the plan period.
Policy 3 'Level and Distribution of Growth', sets out that the Local Plan's strategic aim is to facilitate the delivery of 18,400 homes in the period of 2015 - 2035 (920 annum), with sufficient land allocated to deliver 15 years' supply of housing. To meet the Local Plan's Spatial Strategy and Settlement Hierarchy, at least 50% of the Borough’s Total Housing will be located within the Doncaster Main Urban Area, which equates to at least 6,805 - 7,315 dwellings. The site is proposed to be located within the development boundary for Doncaster and is therefore included within the Doncaster Main Urban Area, this policy is supported. The site will deliver 671 dwellings over the plan period which is a significant amount and it is therefore essential to meet the strategic aim of the Borough to deliver 18,400 homes during the plan period. The allocation of this site for housing meets the objective of paragraph 117 of the NPPF, which sets out that planning policies should promote the effective use of land in meeting the need for homes and that strategic policies should make use of previously developed land as much as possible.

Summary:
Policy 3 'Level and Distribution of Growth' Supportive of allocation of site 838 and contribution towards objectives of the Policy.

Response:
Support noted.
Policy 3: Level and Distribution of Growth 1. The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. 2. Have own report from the 'Strategic Planning Resource Unit (SPRU) to justify the higher housing figure. 3. Conclude that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy. 4. Policy fails to meet requirements of revised SCR economic plan (as yet not published) 5. Over reliance on sites with PP and previously allocated sites. 6. Recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth. Distribution of Growth 1. The distribution of housing provision within Policy 3 - Service Towns and Larger Villages should be reapportioned (or alternatively flexibility introduced) to support the delivery of a higher proportion of the housing within sustainable and desirable locations close to economic growth. 2. Local Plan as drafted is overly reliant on a significant quantum of sites within the Main Urban Area. This approach relies on the delivery of a notable number of large-scale sites, which will require substantial enabling infrastructure in order to deal with constraints that may include contamination and highways infrastructure upgrades as well as drainage and other matters. 3. The growth potential of a number of Service Towns and Larger Villages has been underestimated and that Askern should have an increased allocation of housing land within these settlements in order to capture the regeneration opportunities available and to deliver housing in sustainable locations where there is recognised demand. 4. The limited housing target identified. We object to this approach and consider it to be unsound. 5. The proposed approach to the delivery of housing, as drafted, fundamentally fails to recognise the emphasis within the Framework on the deliverability of housing and the need to support the prosperity of settlements outside of the main urban area. 6. The proposed housing distribution within the draft plan has a strong focus on the Main Urban Area with 50% of development proposed in the Doncaster Main Urban Area, followed by 40% in second tier (Main Towns) locations, 10% in Services Towns and Larger Villages and limited development in Defined Villages. The proposed distribution is based on the Settlement Background Paper which forms a settlement hierarchy and informs the location of housing and employment sites. 2.21 The Publication Doncaster Local Plan identifies Askern as one of 10 Service Towns/Villages which will provide about 10% of the Borough’s total housing requirement during the plan period. Specifically, Askern is identified to deliver 165 dwellings. 2.22 Based on existing permission (648 units), new allocations (127 units) and reserved development sites (29 units), the settlement is identified to deliver 804 new units in the plan period, above its proposed requirement by 639 units. 2.23 The Sustainability Appraisal for the Publication Local Plan discounts sites from allocation based on sufficient desirable sites already being identified. We object to this approach and consider it to be unsound. 2.24 It is not considered appropriate that such limited levels of allocations have been identified in large settlements such as Askern. The only justification put forward for failing to allocate alternative sites for development is based on existing permissions and limited proposed allocations within these settlements. These sites have yet to be delivered and particularly in the case of UDP allocations carried forward, may suffer from issues including viability that could impact future delivery. 2.25 The proposed approach to the delivery of housing, as drafted, fundamentally fails to recognise the emphasis within the Framework on the deliverability of housing and the need to support the prosperity of settlements outside of the main urban area. 2.26 While settlements such as Askern may rely on towns to provide essential services, the need to sustain the existing services will require additional employment and housing. The continuing trend for a reduction in household size means downsizing will undercut the customer/user thresholds to which current amenities and facilities have become accustomed. This poses a significant threat to the current level of sustainability enjoyed by the settlement. 2.27 The housing allocations requirements should not be based purely on the hierarchy of a settlement as there are a number of considerations namely urban capacity, need and demand for housing, regeneration, environmental and social considerations, prioritising brownfield land which need to be taken into account to ensure the growth of settlements in a sustainable manner. Recommendation 2.28 The distribution of housing provision within Policy 3 - Service Towns and Larger Villages should be reapportioned (or alternatively flexibility introduced) to support the delivery of a higher proportion of the housing within sustainable and desirable locations close to economic growth. Justification 2.29 The Local Plan as drafted is overly reliant on a significant quantum of sites within the Main Urban Area. This approach relies on the delivery of a notable number of large sites, which will require substantial enabling infrastructure in order to deal with constraints that may include contamination and highways infrastructure upgrades as well as drainage and other matters. 3.0 The growth potential of a number of Service Towns and Larger Villages has been underestimated and that Askern should have an increased allocation of housing land within these settlements in order to capture the regeneration opportunities available and to deliver housing in sustainable locations where there is recognised demand. 2.31 The limited housing target apportioned to Askern does not appear to be proportionate to the size and character of the settlement and there seems to be no justification for not meeting some level of demand and need in these locations. This approach is likely to result in not only a missed opportunity to support the projected economic growth, but also lead to the decline of the settlement. 2.32 The potential for sustainable development in these areas should be realised, where deliverable, in order to support the long term viability of these settlements. A proportionate increase in housing provision for the settlement at Askern is consistent with the Plan's strategic priorities, including ensuring future support for economic growth, and would assist in ensuring the Local Plan meets needs for a full 15 year period following adoption. By reviewing existing Green Belt designations around these settlements, boundaries can be rationalised to allocate land for development to serve the purposes of these policy areas. 2.33 New housing allocations and mixed use schemes are considered to be an appropriate response to accommodating further development in these locations.
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth. Askern in particular has a very significant number of existing planning permissions which do not justify an increased housing target for the settlement.

2.11 The level of housing development to be delivered is set out in Policy 3, which states that the Council will seek to facilitate the delivery of at least 920 (net) new homes each year over the plan period 2015-2032 (15,640 homes in total) with sufficient land allocated to deliver at least 15 years’ supply (13,800). 2.12 Paragraph 59 of the National Planning Policy Framework (the ‘Framework’) sets out the Government’s objective of significantly boosting the supply of homes, through the identification of a sufficient amount and variety of land where it is needed and to meet the needs of groups with specific housing requirements [authors own emphasis]. 2.13 The SPRU report provided at Appendix 2 assesses the soundness of the proposed jobs-led housing requirement and the implications for the proposed spatial strategy. 2.14 For the reasons outlined within the report, there are found to be substantial soundness failings with the draft Local Plan resulting from a failure to test an appropriate reasonable alternative based on meeting the strategic priorities for economic development over a full 15-year plan period. These issues are compounded based on treating the housing requirement from 2018-2033 as a ‘residual total’ to account for perceived oversupply in the period 2015-2018, which has not been adequately justified. 2.15 The Council’s approach fails to accurately reflect the strategic priorities and future economic potential of the Sheffield City Region and further assessment of the proposed requirement is recommended to reflect the requirements of the revised Strategic Economic Plan (once published) and to consider recent trends in job growth and housing delivery across the subregion. This is anticipated to lead to a reassessment of current and future demographic trends in relation to future labour supply. 2.16 The report also concludes that arbitrary constraints to the requirement for additional development are applied, which will lead to an overreliance on extant planning commitments and historic allocations in previous iterations of the development plan. The implications of this in terms of prospects for maintaining a five year supply of deliverable sites and meeting the housing needs of different groups have not been fully assessed, however it is anticipated that there could be a failure to meet housing need, particularly in respect of affordable housing in the short to medium term, as the physical and viability related constraints that have prevented these sites being delivered to date may persist. 2.17 The report concludes that these issues are capable of remedy within the Council’s broad emerging approach to managing the distribution of growth across the spatial strategy. This acknowledges that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy. We endorse the Council’s position that Main Towns are appropriate locations to accommodate up to 10% of the economically-led component of the housing requirement. However, we also recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth, where sustainable growth opportunities are identified. Recommendation 2.18 The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. Justification 2.19 For the reasons set out above and within the appended SPRU report, it is correct to accommodate growth based on meeting requirements under the full assessment of jobs-led growth (1,073 dpa) for the full plan period to 2035.

Summary:
Policy 3: Level and Distribution of Growth 1. The Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per Annum for the plan period to 2035. 2. Have own report from the ‘Strategic Planning Resource Unit (SPRU) to justify the higher housing figure. 3. Concludes that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy. 4. Policy fails to meet requirements of revised SCR economic plan (as yet not published) 5. over reliance on sites with PP and previously allocated sites. 6. Recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth. Distribution of Growth 1. The distribution of housing provision within Policy 3 - Service Towns and Larger Villages should be reapportioned (or alternatively flexibility introduced) to support the delivery of a higher proportion of the housing within sustainable and desirable locations close to economic growth. 2. Local Plan as drafted is overly reliant on a significant quantum of sites within the Main Urban Area 4. Askern should have an increased allocation of housing land in order to capture the regeneration opportunities. 5. The limited housing target apportioned to Askern does not appear to be proportionate to the size and character of the settlement

Response:
As demonstrated in the Housing Topic Paper, the Local Plan is proposing an appropriate housing requirement that will meet the needs of Doncaster and its aspirations for growth. Askern in particular has a very significant number of existing planning permissions which do not justify an increased housing target for the settlement.
4.1 The policy is not sound as it is not positively prepared, justified, consistent with national policy or effective. 4.2 Policy 3 of the Publication Draft of the Local Plan sets a target for at least 920 (net) new homes each year over the plan period 2015-2035 (18,400 homes in total) with sufficient land allocated to deliver the housing requirement. 4.3 The proposed level of housing growth remains unchanged since the draft policies consultation in 2018. Therefore, Pegasus continue to question whether this approach to meeting the needs for new homes demonstrates that the Plan is positively prepared and justified. 4.4 The PPG states the Government will be supportive of authorities who wish to plan for growth. In addition, the PPG identifies other factors which need to be considered when determining the housing requirement. These include growth strategies, planned infrastructure, previous levels of delivery and recent assessments of need such as Strategic Housing Market Assessments (SHMA) where this suggests a higher need (PPG ID 2a-010). These are all important considerations in the context of Doncaster. It is not considered that the housing requirement within Doncaster adequately meets the economic aspirations of the area. 4.4 It should also be noted that between 2004/5 and 2017/18 housing delivery averaged in excess of 1,000 net additional dwellings. Since the start of the plan period (2015) average delivery rates have been higher at 1,140 net additional dwellings. Setting the housing requirement lower than average levels of delivery over the previous 14 years and 220dpa lower than the plan period average, would be contrary to the ethos of the NPPF and the Government’s continued desire to boost significantly the supply and delivery of housing.

Summary:
The policy is not sound as it is not positively prepared, justified, consistent with national policy or effective. Policy 3 proposes the same level of housing growth since the draft policies in October 2018 consultation. Therefore, continue to question this approach is meeting the needs for new homes to demonstrate the Plan is positively prepared and justified. PPG identifies other factors which need to be considered when determining housing requirements it is not considered that the requirement within Doncaster adequately meets the economic aspirations of the area. Between 2004/05 and 2017/18 housing delivery averaged in excess of 1000 net additional dwellings. Since the start of the plan period average delivery rates have been higher. Therefore setting the housing requirement lower than the average levels of delivery over previous years would be contrary to the ethos of the NPPF and Governments desire to boost supply and delivery of housing.

Response:
The figure is derived from the Standard Methodology and an economic uplift in line with SCR ambitions. A number of ways of calculating the housing requirement have been put forward. Housing completion figures are available in the RLA, with this report showing that in the period stated, the housing completions average out at 659 dpa, with 1,000 dpa only being surpassed in the years 2015 - 18. As set out in the Green Belt Topic Paper, it is not deemed that exceptional circumstances exist which warrant the removal of more land from the Green Belt to make up for the 20 unit shortfall in Bawtry, and this will be made up elsewhere in the borough. Windfalls are additional as they have not been factored in to any calculations, however even without factoring these in, the borough can meet its housing requirement across the plan period.
Chapter 4: Strategic Approach

Policy 3: Level & Distribution of Growth

Soundness of Policy 3 to deliver the level and distribution of growth. 4.55 Whilst we get a sense that the supply of housing provided through allocations with and without permission far exceeds the plan period requirement. The allocations provide for 665 new dwellings in Edlington. Soundness of Policy 3 to deliver the level and distribution of growth. 4.55 Whilst we generally support the thrust of the policies towards strategic sites to deliver growth and support the distribution, we object to the lack of new employment allocations in the west of the borough in preference for new employment allocations to the south and east. 4.56 It is considered that the Policy is unsound and is not justified and is not the most appropriate strategy when assessed against the reasonable alternatives. Reasoning 4.57 The Spatial Strategy and settlement Hierarchy seek to deliver sustainable growth that is appropriate to the size of individual settlements to meet the needs for new homes and jobs and to help to maintain strong sustainable communities, a strategy which we support. 4.58 Policy 3 which distributes growth in the borough conflicts with this strategy. The lack of new employment allocations in the west of the borough fails to recognise the existing functions within the communities in the west of the borough which include a number of existing employment locations/sites. 4.59 The settlements of Mexborough, Conisbrough, Denaby and Edlington (the west of the Borough) provide 5 identified existing employment sites. These sites provide some of the boroughs largest employers, including Polypipe at Edlington. 4.60 Paragraph 2.22 of the Plan, Policy 2, paragraph 4.27 all refer to the importance of communities and accessibility to the local employment opportunities which reflects the relatively self contained economy with approximately 80% of workers travelling to work in the Borough and a fifth travelling to work in the same electoral ward in which they live. 4.61 The vision of the Plan seeks to help encourage existing business to expand as well as attracting new businesses to the Borough. 4.62 The plan recognises current live/work patterns and the importance of existing businesses. There is a conflict between the Plans strategy which seeks to create and maintain strong, sustainable, cohesive and inclusive communities and Policy 3, the distribution of the employment sites which fails to maintain existing communities by failing to provide sufficient flexibility and choice to existing businesses. 4.63 The lack of any new employment sites (with the exception of a small site 743 at Edlington) clearly conflicts with the evidence and is not justified. 4.64 Whilst the strategic vision for employment growth on the M1/M18 corridor and Doncaster Sheffield Airport, together with infrastructure improvements is understood and supported, there is clearly a need to support existing businesses and residents, particularly those in the west of the borough.
through the provision of employment allocations providing the opportunity for existing businesses to expand. 4.65 The need for additional employment allocations in the west of the borough is further supported by the housing growth allocated and proposed in the area. Between 1,170 and 2,190 new homes are expected to delivered in the settlements to the west of the Borough (Mexborough, Conisbrough, Denaby and Edlington). The lack of additional employment allocations to support new residential growth is unsustainable and is not based on the evidence which clearly identifies the self contained and sustainable live work patterns. 4.66 Should the distribution of the sites set out in Policy 3 be adopted, this would not provide a choice and flexibility to existing and new employment opportunities. It will constrain existing employment occupiers who are seeking to expand in existing locations. The lack of sites in existing locations may lead to relocations and the loss of businesses from the Borough. Summary of objection to Policy 3 Level and Distribution of Growth (Strategic Policy). 4.67 To summarise, we object to policy 3 of the Plan and do not consider the plan is sound. It is not considered that the current distribution is effective in delivering the vision or justified by the evidence base. 4.68 The lack of new employment allocations in the west of the Borough does not provide an appropriate solution to support the 5 existing employment sites and occupiers when the taking into account the level of housing growth identified. 4.69 The evidence base clearly shows the borough is a self contained economy with people living and working locally. Whilst we support the growth aspirations and vision of the Plan, there is also a need to recognise and support existing businesses and patterns of live/ work particularly in deprived locations in the west of the Borough where employment needs are high. Proposed changes to the plan to make it Sound 4.70 It is considered that additional new employment allocations and extensions to existing employment sites in the west of the Borough should be delivered. This will ensure that sustainable new communities are created in the west of the borough through the delivery and growth of new homes and opportunities for existing businesses to grow and remain in the area. 4.71 Additional new employment site allocations are required in Edlington, Mexborough, Conisbrough and Denaby. 4.72 These representations are written with specific regard to and support for an expansion to Broomhouse Lane Industrial Estate, Edlington to enable the existing occupier Polypipe to expand so that they are able to continue to operate efficiently from their location. Section 5 of this report provides details of the two proposed expansion sites.

Summary:
The rep summarises and discusses policy 3 for information. the only site allocation in the west of the Borough is site 743 at Broomhouse Lane Industrial Estate which is a small site (0.75ha)with planning permission for B2 use. generally support the thrust of the policies towards strategic sites to deliver growth and support the distribution Object to the lack of new employment allocations in the west of the borough in preference for new employment allocations to the south and east. the Policy is unsound and is not justified and is not the most appropriate strategy when assessed against the reasonable alternatives. Proposed changes to the plan to make it Sound additional new employment allocations and extensions to existing employment sites in the west of the Borough should be delivered. This will ensure sustainable new communities are created in the west of the borough through the delivery and growth of new homes and opportunities for existing businesses to grow and remain in the area. Additional new employment site allocations are required in Edlington, Mexborough, Conisbrough and Denaby. The representation are written with specific regard to and support for an expansion to Broomhouse Lane Industrial Estate.

Response:
Noted. Support welcomed. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.

**Area:** Chapter 4: Strategic Approach

**Policy:** Policy 3: Level & Distribution of Growth

**Tests of Soundness:**
- Positively prepared
- Effective
- Justified
- Consistent with national

**Comment:**

2.1 This section of the representation statement provides comment on the Local Plan Publication Version Consultation Document. 2.20 Policy 3 distributes the Plan’s employment and housing requirements. As previously highlighted, the proposed distribution to the Defined Villages only lists 14 of the Villages and no reference is made to the remaining 26 Villages. The footnote to the Defined Villages part of the distribution table suggests that development may be permissible in the 14 listed Villages yet this conflicts with the supporting policy text (paragraph 4.46) which states that there will be limited development opportunities in the 40 Defined Villages. Clarity is therefore sought as to whether development adjacent to the settlement limits of all 40 Defined Villages will be supported or just the 14 settlements listed in the distribution table. 2.21 If our understanding is correct that development will only potentially be supported adjacent to the 14 listed settlements, then Policy 2 and the supporting text to Policy 3 is misleading. 2.22 It remains our case that Clayton is a settlement where growth should be supported. There are limited opportunities for infill development, yet this is not an isolated rural settlement. It is situated less than 3km from Thurnscoe which has a wide range of services and a train station providing easy access to Doncaster. There is no justification or explanation provided as to why only 14 Defined Villages have been identified in the distribution table or what criteria has been used to choose the Villages where some level of growth may be supported. The proposed approach is therefore unjustified and not an appropriate approach as Clayton is excluded from the opportunity for small scale settlement extensions provided by Policy 2 despite being in a sustainable location.

**Summary:**

Policy 3 distributes the Plan’s employment and housing requirements. The proposed distribution to the Defined Villages only lists 14 of the Villages and no reference is made to the remaining 26 Villages, which includes Clayton. There is no justification or explanation provided as to why only 14 Defined Villages have been identified in the distribution table or what criteria has been used to choose the Villages where some level of growth may be supported. The proposed approach is therefore unjustified and not an appropriate approach as Clayton is excluded from the opportunity for small scale settlement extensions provided by Policy 2 despite being in a sustainable location.

**Response:**

Policy 2 supports the extension of villages in the Countryside in certain circumstances. However for settlements in the Green Belt national policy will be applied and this is explained in the Policy and explanatory text.
Consultation on the Local Plan during October 2018 suggested the plan period would comprise 2015 to 2032, a seventeen year plan period. The current draft plan suggests an extension of the plan period for the period 2015 to 2035, it is welcomed that the Council has moved the Plan period forward as this acknowledges the particular issue we raise. Nevertheless, such an approach is unsound as it is not consistent with policies in the Framework and is not planning positively. To address this point, we consider that the Council should review the plan period bearing in mind the requirements of with paragraph 22 of the Framework which requires that “strategic policies should look ahead over a minimum period of 15 years from adoption”. This requirement is set out in the Framework specifically to identify and respond to long term development requirements and opportunities (in particular improvements to infrastructure). A similar consideration also applies where a review of the Green Belt is required, as is the case to deliver the Doncaster Local Plan. The Framework suggests at paragraph 139 that longer term requirements should be identified for beyond the plan period in the form of safeguarded land. In light of our comments on the LDS above, we consider that the Council should extend the plan period to 2037 to take into account the Framework requirements and as a prudent approach should there be further slippage to the progress of the DLP.

Summary:
Plan period. Should be a minimum 15 years from adoption. The Council should extend the plan period to 2037 to take into account the Framework requirements and as a prudent approach should there be further slippage to the progress of the Plan.

Response:
The Council are planning to cover the 20 year period 2015 - 35 with allocations for the 15 year period 2018 - 33. Additionally, it is expected the plan will be reviewed within the plan period.

Comment noted
Tests of Soundness:

Comment:

Turning to the housing numbers we note the Council continues to identify a net housing requirement of 920 dwellings per annum (dpa) over the plan period 2015-2035. Paragraph 60 of the Framework states that ‘to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance - unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals’. It is considered that the housing requirement is not consistent with the level of local housing need (LHN) using the Standard Methodology as set out in PPG. There is also a disjoint between the economic growth aspirations and the housing provisions in the Local Plan requirement. In effect the employment land requirement is expressed as a minimum whereas the housing requirement is a target; as a consequence limiting the housing numbers will act as a brake on the economic growth aspirations. Such as an approach does not represent positive planning, so is unsound: Reflecting on the Standard Method, it should be noted that it identifies a minimum annual housing need figure, it does not produce a housing requirement figure. This requires consideration of a range of adjustment factors including annual average household growth, affordability and economic growth factors. Noting the comment above on Local Plan housing figures acting as a brake on economic growth the Government is committed to ensuring that more homes are built and supports ambitious authorities who want to plan for growth. The Standard Method provides a minimum starting point, and there may be circumstances where it is appropriate to consider whether the actual housing need is higher than the Standard Method indicates. PPG (ID: 2a-010) goes on to state that these circumstances can include growth strategies for the area; strategic infrastructure improvements; previous levels of delivery; or where previous assessments of need are significantly greater than the outcome from the Standard Method.

Doncaster Council commissioned Peter Brett Associates to produce the Economic Forecasts and Housing Needs Assessment 2018 which identifies a demographic starting point from the 2014-based household projections of 562dpa. If adjusted to match a “business as usual” job forecast would equate to 579dpa. However, to match the jobs growth aspiration of the Sheffield City Region it identifies a jobsled housing need of 1,073dpa. Therefore, it is clearly apparent that there are circumstances identified that would require a housing figure significantly greater than the outcome of the Standard Method. From the above we do not consider that the local housing need produced from the Standard Method would provide an appropriate housing requirement, it is evident that the actual housing requirement should be higher. Also it would not be appropriate to limit the housing requirement at the top end of the range either. We do not consider that this would be consistent with the Framework’s requirement to support the Government’s objective to boost the supply of homes. Taking these matters into consideration we would suggest that the Local Plan should provide for a minimum net requirement of 1,100 dwellings per annum. This translates to a minimum requirement to 2037 of 24,200 dwellings; around 6,000 units more than the Publication draft Policy. Furthermore in considering the allocation of housing and mixed use sites we suggest that the Plan seeks to identify sufficient land for 29,400 dwellings, minus any supply from the years 2015 to 2019/20. Turning to the second part of the Policy which distributes development across the settlement hierarchy, for the Service Towns and (Larger) Villages, the policy suggests these accommodate “about 10% of the Borough’s requirement”. We have no comment upon this as an indicative approach, but would suggest that the requirement for each settlement is not prescriptive as set out in the current policy wording. It is important that a strategy is put in place which provides a sufficient range of sites to provide enough sales outlets to enable delivery to be maintained at the required levels.

Summary:

Suggest that the Local Plan should provide for a minimum net requirement of 1,100 dwellings per annum. This translates to a minimum requirement to 2037 of 24,200 dwellings; around 6,000 units more than the Publication draft Policy. Suggest that the Plan seeks to identify sufficient land for 29,400 dwellings, minus any supply from the years 2015 to 2019/20.

Response:

A number of ways and means have been submitted to calculate housing and jobs figures for the Local Plan. The Peter Brett’s Report explains the approach taken and ties jobs to housing growth, which includes a significant uplift from the Standard Methodology. As set out in the Housing Topic Paper, ample sites have been identified to meet the housing requirement for the entire plan period, and there are a number of sources of potential additional supply.
For housing the policy seeks to deliver 18,400 dwellings for the period 2015 to 2035, based on a need of 920 dwellings per annum. In the first instance, we would suggest that the policy should be set out to be similar in vein to the employment policy to suggest a level of provision. As currently stated the requirement seems to suggest that this is a target (maximum) rather than a starting point. To address this, we would suggest the policy wording starts: "at least **** new homes". Also in line with our comments above regarding the plan period we would suggest the plan period is phrased as: "2015 - 2037". Furthermore it is not clear how the housing and allocation proposals take into consideration non-delivery, where sites do not come forward, or do not deliver the quantum of housing anticipated through the indicative yields set out in the individual allocations. Officers at the Council may wish to have regard to recent events in Kirklees where a number of allocated sites are not delivering the housing numbers indicated in the adopted Local Plan; particularly once detailed site investigations have been carried out in support of formal planning applications. To reflect these matters the Local Plan Expert Group and the housebuilding industry (through the HBF et al) recommend, that when allocating sites, a buffer is built in amounting to an additional 20% over the identified housing requirement. It would be appropriate for this policy to reflect on this matter to set an appropriate policy hook for the draft housing allocations at Policy 6. Policy 3 could state that: "Site allocations in Policy 6 will seek to identify a 20% buffer above the net housing requirement in order to achieve a level of flexibility over the plan period."

Although the Local Plan does not specify a buffer, one has been created in effect by not counting within the total housing commitments for the plan period: any capacity remaining beyond 2035; windfalls; sites of 1-4 units; any development in Defined Villages; the proposed 280 dwellings at the airport + possible 920 further linked to job delivery; and the potential of Reserve Development Sites to deliver housing. If all these are factored in, then total far exceeds the planned 18,400 houses over 20 years.
Comment:

Within the DLP the evidence base for Carcroft-Skellow identifies the town as one of the most sustainable settlements within this tier of the settlement hierarchy. We agree with this analysis. It follows therefore that any increase in the housing requirement or the need to identify buffer sites that first consideration is given to Carcroft-Skellow. Based on the analysis above we consider Service Towns and Villages should accommodate between 2,420 and 2,940 dwellings over the plan period. Accordingly the requirement for Carcroft-Skellow that the housing requirement is increased proportionately should be increased. When considered against the provisions of Policy 2 which allows for windfall development in and on the edge of the selected settlements this would provide a sound policy approach.

Summary:

Settlement distribution. Service Towns and Villages should accommodate between 2,420 and 2,940 dwellings over the plan period. Accordingly the requirement for Carcroft-Skellow that the housing requirement is increased proportionately should be increased. If new 'buffer' sites are identified (see previous comments re suggested requirement buffer) Carcroft/Skellow should be a priority.

Response:

This relies on the overall housing figure being increased. As per the methodology and settlement split set out in the Housing Topic Paper, Carcroft - Skellow's requirement is correctly calculated.
Marr Parish note that DMBC have increased their new job target from 20,000 to 27,100 in the Local Plan, for the next 15 years. We consider another 7,100 is quite a significant increase and represents an uplift of 35% in new jobs projected against a background of economic uncertainty. We consider such an increase is optimistic and agree (as previously stated) with DMBC that an annual review should be carried out, to ensure that the borough’s new job creation meets with its new homes targets.

**Response:**

The Council remains focussed on delivering jobs growth and economic enhancement for Doncaster. The Council monitors and will continue to monitor employment and housing development via the ELA and RLA.
Policy 4: Employment Allocations

Tests of Soundness: Positively prepared

Summary:
The employment requirement is largely made up of Site 001 and 941 (M18 J6 & RHADS Site 1) (Table 4). It is unclear how these spatially concentrated employment sites in peripheral areas away from town centres will meet future employment needs. It is disingenuous to say they are accessible via a range of transport modes when it will mainly be car. Allocating such road reliant sites is counter to the opportunities needed to combat climate change. Para 4.31 compounds this by associating the potential for employment growth in the north of the Borough to a putative A1-A19 link road, for which no proposals are actually shown, but if these proposals do emerge towards the end of the plan period then clearly that employment land would not come on-stream until much nearer to the 2050 date for the UK to achieve net zero carbon. In short, this is a 20th century economic vision based on Doncaster’s continuing obsession with building roads and peripheral employment sites, and it has no place in preparing the Borough for the realities of the mid 21st century that will be defined by how places respond to the challenges of climate change. PROPOSED CHANGE As we have consistently argued, Doncaster needs to provide evidence of how its economic growth ambitions are compatible with meeting future employment needs in a genuinely sustainable way. We are wholly unconvinced that a growth strategy focusing on road-based distribution and logistics is compatible with this, but if it is then the evidence must be provided to demonstrate it. Otherwise, the Plan is enabling a flawed growth strategy, and both must be revised. Specifically, we consider that the focus on a small number of very large, peripheral sites needs to be replaced with a much finer-grain approach addressing the skills and needs of different communities across the Borough, accompanied by a plan to de-carbonise the employment patterns of the Borough.

Response:
The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The responses to the Issues and Options Consultation highlighted that jobs/sites do not need to be located next to the people they serve. Also the market analysis of the sites/jobs requirements shows that there is a strong continued demand for large sites for logistics with the M18 corridor being the preferred location. The Employment Land Review (Colliers 2019) and Employment Land Need Assessment demonstrate this. The Local and its policies should be read as a whole as it considers the issue of climate change and resilience. It has also been subject to Sustainability Appraisal. For example, Policy 13 sets out improvements to the Strategic Transport Network (including public transport) which will ensure that employment sites can be accessed by all modes of transport.
Proposed Employment Allocations Site Ref: 001 Location: Junction 6 M18, Thorne Objection: Along with the other two employment allocations we object to below, these three sites comprise the bulk of the new employment allocation in the Plan. Not only is the largest of the three, it is also the most peripheral, and its motorway location maximizes the risk that new jobs at this location will not be focused on local need in Thorne & Moorends, and indeed may also detract from take-up of employment sites within the Unity regeneration scheme. The site represents a wholly outmoded, unsustainable approach of road-dependent employment growth to which we object in principle. PROPOSED CHANGE Delete the proposed allocations for the reasons shown in our table above.

Summary:
Site 001 - object - the largest and most peripheral of the employment allocations. Location next to motorway means there is more chance new jobs will not utilise local need and may also detract from the job take up at unity. Site represents outmoded and unsustainable approach of road dependent employment growth which CPRE object to in principle. Proposed change: delete the allocation

Response:
Noted. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The responses to the Issues and Options Consultation highlighted that jobs/sites do not need to be located next to the people they serve. Also the market analysis of the sites/jobs requirements shows that there is a strong continued demand for large sites for logistics with the M18 corridor being the preferred location. The Employment Land Review (Colliers 2019) and Employment Land Need Assessment demonstrate this.

**Response:**

Noted.
Comment:

4.1 The M18 motorway has been recognised for some time by Doncaster Council as an important location for distribution warehousing uses. The Council’s Core Strategy (adopted May 2012) identifies the need for new strategic warehousing allocations in the M18/M180 Corridor at junctions close to Armthorpe, Stainforth/Hatfield and Thorne. 4.2 The West Moor Park North Site has previously been assessed and allocated for a distribution employment site in earlier versions of the development plan for a number of years. 4.3 During the preparation of the Doncaster Sites and Policies DPD the Council consulted on, inter alia, new major distribution warehousing sites. In particular, further views were specifically sought on the Thorne North Site and the West Moor Park North Site for employment. 4.4 The Council advised that only one of these sites was required to be allocated in order to make up the then 290 hectares requirement for distribution warehousing set out in the Core Strategy. 4.5 However, when the Publication Version of the Sites and Policies DPD was issued the Council had decided to allocate both the Thorne North Site and the West Moor Park North Site for distribution warehousing. 4.6 A Report to Full Council on 7 March 2013 regarding the Sites and Policies DPD set out key changes to the housing and employment sites. In relation to the allocation of the Thorne North Site and the West Moor Park North Site the Report states: “To ensure that we have sufficient employment land, make the best of Doncaster’s assets and provide some flexibility, it is proposed to allocate both Thorne North and North of West Moor Park, alongside DN7 (but not Bradholme). This would provide additional light industry and manufacturing, and additional distribution warehousing, compared with just allocating North of West Moor Park...” 4.7 It is therefore clear from this statement that the West Moor Park North Site would have been the Council’s preferred site in the event that only one site was to be allocated in the Sites and Policies DPD. 4.8 However, notwithstanding the above, the Sites and Policies DPD was subsequently withdrawn because the Inspector had fundamental concerns with the Plan relating primarily to housing issues. The Inspector did briefly address distribution warehousing issues in his report and although he noted an over-allocation of employment sites, he was not persuaded that the approach was inherently unsound. In other words, a plan with both sites allocated for employment would be sound.

Summary:

The M18 has been recognised for a while as an important location for distribution warehousing and this is reflected in the Core Strategy. West Moor Park North was previously assessed and allocated for a distribution employment site in earlier versions of the plan. During the preparation of the Sites and Policies DPD both Thorne North and West Moor Park North were allocated. Although the Site and Policies DPD was withdrawn, the Inspector noted that there was an over-allocation of employment sites but did not consider the approach unsound.

5.7 The Thorne North Site (73 ha) has now been allocated for employment in the Publication Draft Local Plan but we do not consider that this represents the most appropriate strategy when taking into account the reasonable alternatives. 5.8 The Thorne North Site was not allocated in the previous consultation document (Draft Policies and Proposed Sites) in October 2018 and it has been the subject of a pending planning application for the last 3 years which has still not been resolved (see paragraphs 6.14 to 6.20 below). 5.9 The Thorne North Site was previously rejected as an employment site in the Draft Policies and Proposed Sites document for the following reason: “Although there are successful existing industrial estates to the north of Thorne which this site could complement and there is an outline planning application pending, there are concerns over the site’s deliverability as there are more deliverable sites elsewhere.” 5.10 Furthermore, the Thorne North Site scores similarly to other sites through the Sustainability Process and it is not therefore clear why this site has now suddenly been chosen for allocation in the Publication Draft over the other potential sites (and in particular over the West Moor Park North Site). Further details regarding the deliverability and attractiveness of the Thorne North Site to the market are therefore set out in section 6 below. 5.11 In addition, land at Carcroft Common (site reference 441) (49 ha) is also allocated for employment in the Publication Draft Local Plan. We acknowledge that this site was previously suggested as an employment allocation in the Draft Policies and Proposed Sites document in October 2018 but we consider that it is not attractive to the market, has infrastructure constraints and is not deliverable. Further details regarding the Carcroft Common site are therefore set out in section 7 below.

Summary:
The Thorne North site does not represent the most appropriate strategy. It was not allocated in the Draft Policies and Proposed Sites and it has been the subject of a pending planning application for the last 3 years. It was also rejected in the Draft Policies and Proposed Sites document. The site scores similarly to the other sites through the Sustainability process and it is not clear why this site has now been chosen for allocation. In addition, land at Carcroft Common (ref 441) is also allocated for employment in the Publication Draft Local Plan. It was suggested as an allocation in the Draft Policies and Proposed Sites document but we consider that it is not attractive to the market, it has infrastructure constraints and is not deliverable.

Response:
Noted. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.

### Summary:

**Thorne North Site (Site Reference 001) - Flood Risk**  
6.6 The issue of flood risk is of fundamental importance to the Council in terms of allocating the Thorne North Site in the Local Plan.  
6.7 The 'Housing & Employment Site Selection Methodology & Results Report’ makes it clear that the Thorne North Site fails the sequential test because it is located within Flood Zone 3 but that this is the same as all the potential employment sites within the M18 corridor.  
6.8 West Moor Holdings has previously commissioned a report by Weetwood to provide a preliminary assessment on flood risk on both the Thorne North Site and the West Moor Park North Site and this was submitted to the Council at an earlier stage of the development plan process.  
6.9 The Weetwood report demonstrates that in flooding terms the West Moor Park North Site would be the preferred site for distribution warehousing. It is clear that the likelihood and consequence of flooding is significantly higher for the Thorne North Site than the West Moor Park North Site. In particular, the River Don (which runs adjacent to the Thorne North Site) has a long history of flooding (as detailed in the Council's Strategic Flood Risk Assessment) and the Thorne North Site itself has previously flooded. However, the West Moor Park North Site has no history of flooding.  
6.10 In relation to the West Moor Park North Site the Weetwood report advises that according to the Environment Agency (EA) flood map the majority of the West Moor Park North Site is within Flood Zone 3. The EA flood map was updated with new outlines in 2012 which resulted in the reclassification of the West Moor Park North Site from Flood Zone 2 to Flood Zone 3.  
6.11 Mr Philip Sale (EA Modelling and Hydrology, EA Nottingham) advised that the current flood outlines in the vicinity of Armthorpe are based on an EA modelling study completed in March 2011 as part of the Isle of Axholme Flood Risk Management Strategy. By way of an email dated 8 February 2012, Mr Sale states: "Armthorpe lies well outside the current 1 in 1000 year breach extent from the Tidal Trent Strategy Modelling (Black and Veatch, 2005). However, the strategy scale modelling done as part of the Isle of Axholme study shows the 1 in 100 (fluvial) and 1 in 200 year (tidal) outlines without the presence of defences for the Tidal Trent, Torne and Idle, inundate the south-eastern portion of Armthorpe."  
6.12 The Weetwood report therefore advises that on this basis the site would only be at risk of flooding should an extreme flood occur and no flood defences were present (which they are). The flood outline can therefore be regarded as very precautionary.  
6.13 In addition, the Weetwood report advises that the West Moor Park North Site has no history of flooding, despite being located within Flood Zone 3. The nearest flooding that occurred in the worst flooding in recent history (June 2007) was 4 km north-west of the site.

### Response:

**Site 001 (Thorne North) is flood zone 3 (High Risk)** as is Site 013 (West Moor Park North) 001 'benefits from flood defences' (EA data) site 013 does not (see table 7.27 SA Report, Wood 2019). For potential development in flood risk areas see Policy 58 'Flood Risk Management’. In the site assessment and selection process all of the remaining options for sites without planning permission in the M18 corridor (and part M180) are in Flood Zone 3.
Comment:
Thorne North Site (Site Reference 001) - Attractiveness to the Market 6.1 Paragraph 4.27 of the Publication Draft Local Plan states that the distribution of employment sites is required in market attractive locations but also ensuring that there is strong accessibility and connectivity between where people live and the employment opportunities. 6.2 The Thorne North Site is located off Junction 6 of the M18, to the north east of Doncaster. Whilst the site is well located for immediate access to the motorway network the majority of demand, from large scale occupiers, is for sites to the south and east of Doncaster, at Junctions 3 and 4 of the M18 with easier communications to the A1(M) and to the M1 motorways. 6.3 Sites at Junctions 3 and 4 of the M18 are ideally located for companies looking to import goods via the ports of Immingham and Grimsby, through the M180 corridor and onto the M18 corridor. These Junctions are preferred as they are ideal for the bulk break of goods for onward distribution to other UK locations. From Junction 3 of the M18 some 80% of the UK population can be reached in a 4-hour HGV journey. The additional distance, along the M18 to Junction 6, clearly reduces the percentage of population within a 4-hour HGV journey. 6.4 It is acknowledged that there are already two large scale units at Junction 6. These are Omega Kitchens and The Range. However, Omega Kitchens is a locally owned business and the original factory has been expanded over a period of years. With regard to The Range, this business occupies a unit of 750,000 sq ft at this Junction. However, this unit was speculatively developed in the mid 2000s and at that time there were few other options for large scale development in the Doncaster area. The unit was originally let to MFI and the lease was guaranteed by DHL. When MFI went into administration the lease passed to DHL and they stored goods for a range of customers in the unit. However, most of the space (some 400,000 sq ft) was used for goods on behalf of The Range. Therefore, when DHL exercised their break clause The Range was unable to identify suitable space to relocate their goods to and took a new lease direct from the Landlord. 6.5 In view of the fact that there are now more established developments with existing public transport links and wider access to labour located at Junctions 3 and 4 of the M18 motorway, the Thorne North Site will always be considered by most occupiers as being in a secondary location.

Summary:
Thorne North - attractiveness to the market Paragraph 4.27 of the Publication Draft Local Plan says that sites are required in market attractive locations with strong accessibility and connectivity between where people live and the employment opportunities. Thorne North is located off Junction 6 of the M18 to the north east of Doncaster and whilst it is located for immediate access to the motorway, the majority of demand is for sites to the south and east of Doncaster (Junctions 3 and 4 of the M18). These junctions are preferred as they are ideal for the bulk break of goods for onward distribution to other UK locations from the ports of Immingham and Grimsby. It is acknowledged that there are two large scale units at Junction 6. However one is a local business and the other was speculatively developed in the mid 2000s. Thorne North will always be considered by most occupiers as being in a secondary location.

Response:
Please see the Colliers Report site assessment (Doncaster Employment Land Review Oct 2018) for the latest independent analysis. As at November 2019 a major developer is involved in and is promoting the site.
Tests of Soundness:

**Comment:**

Thorne North Site (Site Reference 001) - Planning Application  6.14 An outline application for proposed employment development consisting of warehousing, distribution and light manufacturing units and associated service roads, parking areas, landscaping and pedestrian and cycle ways was submitted to the Council in August 2016 (ref: 16/02136/OUTM) in relation to the Thorne North Site. This replaced a previous planning application (ref: 15/02252/OUTM) which was withdrawn.  6.15 The current application is therefore still pending some 3 years after its submission.  6.16 There have been numerous objections to the scheme from both local residents and statutory consultees but still the application has not been refused.  6.17 Highways England originally objected to the application on 27 September 2016 and recommended that planning permission not be granted for a period of 6 months in order to allow for the outstanding issues to be resolved. These various issues were listed in the consultation response. We understand that the developer had already addressed a number of comments in relation to the previous application relating to the sustainable credentials of the site but nevertheless there remained a long list of highway issues to be resolved.  6.18 Since Highway England's original consultation response in September 2016 a number of other 'holding directions' have been issued by Highways England on 24 March 2017, 19 September 2017, 15 March 2018, 3 September 2018, 27 February 2019 and most recently on 22 August 2019. All these responses recommend that planning permission is not granted for a further period of 6 months as the applicant is still trying to resolve outstanding matters and agree appropriate solutions for the strategic road network.  6.19 It is unclear what the outstanding issues are but Highways England has still not confirmed that it has no objection to the proposed development. The deliverability of the site in terms of highways and its impact on the strategic road network is therefore not confirmed and cannot be regarded as a sound basis for an allocation.  6.20 We do not therefore consider that the allocation of the Thorne North Site for employment is justified when taking account of the reasonable alternatives. Consequently, the allocation of the Thorne North Site is unsound and should be deleted from the Local Plan.

**Summary:**

Thorne North - planning application  An outline planning application was submitted to the Council in August 2016. It is still pending consideration. There have been numerous objections to the scheme from residents and statutory consultees. Highways England originally objected in September 2016 and recommended that permission should not be granted for 6 months for outstanding issues to be resolved. Some issues have been resolved but others have not. Six other holding objections have been issued by Highways England since 2017. Highways England has still not confirmed that it has no objection to the proposed development. The deliverability of the site in terms of highways and its impact on the strategic road network is not confirmed and cannot be regarded as a sound basis for an allocation. The allocation of Thorne North is unsound and should be deleted from the Local Plan.

**Response:**

Planning Application ref 16/02136/OUTM is currently pending decision. Highways England are a statutory consultee for major planning applications and any comments they make are considered and addressed through the decision making process.

Comment:
Changes required to the Publication Draft Local Plan - 013 - the allocation of the West Moor Park North Site (site reference 013) for employment under Policy E4 of the Local Plan

Summary:
West Moor Park North (ref 013) should be allocated for employment.

Response:
The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
Omission of West Moor Park North Site (Site Reference 013)  5.12 As stated above, the West Moor Park North Site was previously allocated as a distribution employment site in earlier versions of the development plan but the Publication Draft does not include this Site as an employment allocation.  5.13 The 'Housing & Employment Site Selection Methodology & Results Report' (June 2019) acknowledges that it is recognised that the West Moor Park North Site could build upon the success of the existing West Moor Park to the south. However, the reason stated for the site being rejected is: "The allocation of the site would exceed the supply of employment land for this plan period. Sites other than this one have been chosen for allocation in order to provide a balanced distribution of employment land across the Borough."  5.14 The West Moor Park North Site has excellent, direct access to Junction 4 of the M18 and lies immediately to the west of the motorway. The site also benefits from an existing spur from a roundabout on the A630 West Moor Link Road which provides direct access to the site. Access into the West Moor Park North Site from the motorway is much quicker and direct than access into the Thorne North Site.  5.15 The West Moor Park North Site also occupies a high-profile location being situated immediately to the north of the existing West Moor Park employment site. West Moor Park is a very successful employment area (with occupiers such as Ikea, Next and Fellowes) which had a very quick take-up rate. The location is clearly attractive to occupiers and the allocation of the West Moor Park North Site for employment would provide an opportunity to build on this success.  5.16 The West Moor Park North Site is also much better related to a larger population of Doncaster than the Thorne North Site and should be afforded greater weight on this basis. Furthermore, the Thorne North Site is actually separated from the Principal Town of Thorne by the M18 motorway and such an employment allocation would be better placed to the east of the M18 so that it would be better related to the existing town of Thorne and the existing employment sites.  5.17 The West Moor Park North Site is deliverable and considerably more attractive to the market than any of the alternative sites. Accordingly, we consider that the West Moor Park North Site should be allocated for employment in the Local Plan in preference to the Thorne North Site and/or the Carcroft Common Site.

Summary:
The West Moor Park site (ref 013) was previously allocated in earlier versions of the development plan but not in the Publication Draft. The Housing & Employment Site Selection Methodology & Results Report acknowledges that the site could build on the success of the existing West Moor Park to the south but the reason for rejecting the site is: "The allocation of the site would exceed the supply of employment land for this plan period. Sites other than this one have been chosen for allocation in order to provide a balanced distribution of employment land across the Borough." West Moor Park North has excellent direct access to Junction 4 of the M18 and lies immediately to the west of the M18. It benefits from an existing spur from the roundabout on the A630 West Moor Link Road. Access onto the site from the motorway is much quicker and direct than access into the Thorne North site. West Moor Park North also occupies a high-profile location to the north of the existing, very successful West Moor Park employment site. The location is attractive to occupiers and West Moor Park North would build upon this success. It is also much better related to a larger population than Thorne North and should be afforded greater weight on this basis. Thorne North is separated from Thorne by the motorway and an employment allocation would be better placed to the east of the M18 so it is better related to Thorne. West Moor Park North is deliverable and more attractive to the market than any of the alternative sites. It should be allocated in preference to Thorne North and/or Carcroft Common.

Comment:
Changes required to the Publication Draft Local Plan - 441 - the deletion of the employment allocation for the Carcroft Common Site (site reference 441) from the Local Plan

Summary:
Carcroft Common (ref 441) should be deleted from the Plan

Response:
The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
Land at Carcroft Common, Carcroft (Site Reference 441)  

7.1 The 'Housing & Employment Site Selection Methodology & Results Report' states that land at Carcroft Common (referred to in previous local plan documents as the Bentley Moor Lane Site) is proposed for allocation for the following reasons: "As with all the potential sites, this site fails the flood risk sequential test as it is within Flood Zone 3. It scores similarly to the other sites through the Sustainability Appraisal process. It is a reserve employment site within the Unitary Development Plan and is therefore not within the Green Belt. There is a requirement for the development to incorporate flood mitigation measures. There is a wider aspiration for the construction of a Trans-Pennine link from Manchester to Hull which this site will benefit from. The construction of the A1M to A19 link road will also form part of that new link. The site is within an area of high deprivation and job opportunities on this site would be greatly beneficial to the north of the borough. It will also help to re-address the balance of private sector investment which has been spent in the south of the borough. Due to the current infrastructure constraints it is considered that approximately 25% of the site (12 ha) would come forward before the end of the plan period. The majority of development will be for B8 and some for B2 (70/30% split)."  

7.2 The Carcroft Common Site is therefore comparable to the West Moor Park North Site in terms of flood risk and scoring through the Sustainability Process. However, it is very unattractive to the market and significantly less attractive than the West Moor Park North Site.  

7.3 The Publication Draft Local Plan recognises that this site clearly has significant infrastructure constraints. Whilst it is located on the A19 there is no obvious route across the A1(M). The Publication Draft Local Plan suggests that there is a wider aspiration for the construction of a Trans-Pennine link from Manchester to Hull and the development of this site would benefit from and support the construction of the A1(M) to A19 link road which will form part of that new link.  

7.4 The Carcroft Common Site is therefore dependent upon the A1/A19 Link Road and the Publication Draft Local Plan recognises this constraint on infrastructure by only envisaging 12 hectares (25% of the site) coming forward during the plan period. Given the type and nature of the large-scale users in the Borough, a site of this size would not be sufficient or attractive. The Council has clearly had an obligation to try and promote sites in the north of the Borough and that is the reason why this site (and the Thorne North Site) has been put forward. However, the Carcroft Common Site is far removed from the motorway and would be more attractive to local companies rather than large users.  

7.5 Notwithstanding the above, the Publication Draft Local Plan suggests that the majority of development will be for B8 with some for B2 (70/30% split). In comparison with West Moor Park North Site this seems a completely inappropriate area for B8 development.  

7.6 We do not therefore consider that the Carcroft Common Site is deliverable and consequently its allocation in the Local Plan is unsound and should be deleted.

Summary:  

Land at Carcroft Common  

The Carcroft Common site is comparable to West Moor Park North in terms of flood risk and scoring through the Sustainability Process. However it is very unattractive to the market and significantly less attractive than West Moor Park North. The Publication Draft Plan recognises that Carcroft Common has significant infrastructure constraints. It is located in the A19 but there is no obvious route across the A1(M). Carcroft Common is dependent upon the A1/A19 Link Road and the Publication Draft Plan recognises this constraint by envisaging 12 ha (25% of the site) coming forward during the plan period. A site of this size is not sufficient or attractive for large scale uses. The Council clearly has an obligation to try and promote sites in the north. However the Carcroft Common site is far removed from the motorway and would be more attractive to local companies. Carcroft Common is deliverable and its allocation is unsound.

Response:  

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
Test of Soundness:

Comment:

2. Thorne Moorends Town Council is aware that there are local residents fiercely opposed to development on Selby Road, Thorne on the site now included as site 001. The Council asks that Doncaster Council ensure that they have given due regard for the views and opinions of those local residents. 3. The Selby Road site is a large site and must be carefully developed with a range of appropriate mitigation measures incorporated to minimise the negative impacts of such a development on the surrounding area. The Council does however support and welcome economic growth in the area.

Summary:

Site 001 - Thorne North. 1. The Town Council asks that “Doncaster Council ensure that they have given due regard for the views and opinions of those local residents” 2. Site 001 should be carefully developed to minimize and negative impacts on the surrounding area.

Response:

Noted. Consultation is undertaken at various stages in the Local Plan process and responses play an important role in the decisions made. Site allocations have been made following extensive site assessment and consultation. The sites proposed for allocation have been identified as the most appropriate to meet the job requirement.

I object very strongly to the proposed allocation of Site 001 Thorne North Junction 6 M18 for employment land following the rejection of Thorne South Urban Extension 160 Bradholme and there is no evidence that the residents of Thorne and Moorends desire that that further housing and warehouses are developed here in high risk flood zone land and it is myth to presume otherwise so I have included comments re the Thorne Moorsends Town Council and Thorne Moorsends Neighbourhood Plan, both of which suggest local residents want developments in this high flood zone area. Today 30th September 2019 Thorne is again on a Flood Alert as the Environment Agency have issued 'Flood Alert : Be prepared'. This is due to the high tide effecting the River Don. The river Don has water levels reaching level with the top of its flood defence banks nowadays although this used to be a rare occurrence it is happening more frequently due to climate change. I am very concerned that the allocation of Site 001 Thorne North Junction 6 M18 will lead to the allocation of housing sites west of Moorsends and west of Thorne adjacent to the railway line. This land is also high risk flood zone 3. I believe it is not the wishes of Thorne and Moorsends residents to have further new housing development here or to have additional huge ugly storage warehouses where employment jobs in this industry are very low due to the automated nature of this particular type of employment. Thorne Moorsends Neighbourhood Development Plan : Location Justification of new housing sites and location of new employment site 'Thorne North Site 001 Junction 6 M18' can be found perhaps in the Thorne Moorsends Neighbourhood Plan Policy E2 : Development of Non-Neighbourhood Plan Allocated Employment Sites. This Policy states that it will support the Local Plan in new Employment Sites along the M18. NP Policy E2 Justification 3.26 Layout of the development must be central to Moorsends and Thorne. The Thorne Moorsends Neighbourhood Plan Group undertook two formal Public Consultations in 2014 by use of Questionnaire but there was no evidence of public support for the development of Thorne North Site 001 Junction 6 M18 according to the Consultation Summaries that were analysed from them and sent to me by Jeremy Sherlock Town Clerk at that time, now retired. Housing sites in Thorne Moorsends Neighbourhood Plan Policy H2 : Development of Non-Neighbourhood Plan Allocated Housing Sites. This Policy states that the allocation of the sites is the responsibility of DMBC but the location of the sites is Policy H2 : Justification 3.9 new housing sites to be west of Thorne and Moorsends adjacent to the railway line. The Thorne Moorsends Neighbourhood Plan Group undertook two formal Public Consultations in 2014 by use of Questionnaire which consultation summaries show evidence that as many local residents object to new housing development west of Thorne and west of Moorsends adjacent to the railway line as those who support it. Thorne Moorsends Town Council : Doncaster Local Plans Consultation Response Doncaster Local Plan Homes and Settlements March 2016 The above named Consultation ran from 7th March to 18th April 2106 and set out the proposed number of new houses that the Council were planning and where they were to be distributed around the boroughs townships and villages. The Homes and Settlements Document March 2016 included paragraph 43 which related to new housing in the Thorne and Moorsends area. See following taken from the document:- 43. Thorne and Moorsends are heavily constrained by flood risk and the Neighbourhood Plan being prepared is not including urban extension allocations because of the stringent tests necessary to justify development in flood risk areas. Not withstanding an otherwise strong case for more housing it is difficult to justify allocating any of the economic-led housing growth here consistent with the national policy requirement for applying a sequential test approach to flood risk. Allocations are therefore likely to deliver Thorne and Moorsends local housing needs only. The Doncaster Local Plan Home and Settlements Document March 2016 and its Consultation was discussed by Cllrs at the Thorne Moorsends Town Council meeting of the 12th April 2016 and recorded in the Minutes. DMBC Local Plans Manager attended and gave a presentation on the Homes and Settlements Consultation. The Clerk Jeremy Sherlock, made comments in respect of Paragraph 43 of the document as below:- "The Town Council are deeply concerned that comments in para 43 if followed through will lead to a much lower level of allocation and act as a brake to the growth and development of Thorne and Moorsends" Cllrs recorded in the Minutes of this meeting as being present were:- [Redacted Text] Cllrs Joe and Carol Blackham, Susan Durant and Annie Jones. Cllr Mark Houlbrook, Janet Philips, R Porter, R Turner and M Henessy. The Doncaster Local Plans Homes and Settlements Consultation 7th March-18th April 2016 resulted in 157 letters of response being received making 268 specific points. 14 of these were from Town and Parish Councils, 29 from agents representing landowners and developers and 67 from individuals/residents and 5 from neighbouring authorities. Of interest out of the 67 letters from individuals/residents 43 of them concerned only one area of the Borough which was the Thorne Moorsends area and their concern was that the flood risk to Thorne Moorsends area as portrayed in para 43 of the document would inhibit growth in Thorne and Moorsends, that the sequential test was not applied throughout the borough and a solution must be found so development could go ahead despite high flood risk. The 43 individuals names and comments that were concerned with the Thorne Moorsends area were recorded in the following Document and are named as below:- Summary of Responses to the Consultation on the Homes and Settlements Strategy Paper held 7th March-18th April 2016 [Redacted Text - SUMMARY: The Objector believes that 38 of the respondents were connected and that some names were misspelt.] This is therefore not a true representation of the views of local residents of Thorne and Moorsends and is unfair. Mr Allen, the Chief Executive of Doncaster Council has been made aware of this and has told me historical issues will not be dealt with. Doncaster Local Plan Draft Plan and Proposed Policies Consultation Consultation 2018. Summary of responses received and Dmbc responses. Page 3 Housing Growth at Thorne and Moorsends -43 x individual responses (including Thorne Moorsends Neighbourhood Plan Group) to the Consultation objecting to the emerging Local Plan and its Policy approach to future housing development at Thorne and Moorsends. In summary the comments were that avoidance of flood risk was not a reason to curtail future growth and much needed regeneration in the area as flood risk is something that can be mitigated rather than avoided. Again the number of individuals in the above reference is '43' who also appear to be objecting similarly to para
**Agenda item Number 18:** Local Plan Consultation, update on Consultation and Consideration of implications. 20 members of the public were recorded as being present at this meeting and the following was recorded in the minutes:

3297  A brief outline of the stages of the Neighbourhood Plan was given. One Cllr said he knew how detrimental to the environment the Bradholme development would be and that a letter of objection would be sent by the Neighbourhood Plan Steering Group. Cllrs said objections had been listened to and that TMTC would not hesitate in objecting to the development. Members of the public were urged to put their complaints into writing and send them on to Doncaster MBC. It is notable that only a brief outline of the stages of the NP was given to the public. The Cllrs did not inform the members of the public present that if Site 160 Bradholme was rejected as a result of the Local Plan Consultation then Site 001 Thorne North Junction 6 M18, the potential employment reserve site, would automatically be allocated in place of the Bradholme Site 160. The development of Site 001 with its large greenfield site of 183 acres in Countryside Policy area would also be very detrimental to the environment for the same reasons as the Bradholme site 160. Cllrs did not inform members of the public present that the development of Site 001 Thorne North Junction 6 M18 would be of much greater benefit to landowners in Thorne and Moorends who own land west of Thorne and west of Moorends adjacent to the railway line because this site was much nearer to their land than the Bradholme Site 160 which is South of Thorne. Among the landowners with housing sites west of Thorne and west of Moorends adjacent to the railway line include the following: Cllrs Joe and Carol Blackham housing Site 469 ie major planning application 18/02496/OUTM which Doncaster Council Planning authority acknowledged receipt of on the 8th Oct 2018, Donald Parkinson (also applicant and landowner of Site 001 Junction 6 M18 pending major planning application 16/02136/OUTM) for Housing Sites 002,003,004 and 005. Mark Blackham for Housing Site 009, and the William Brookes Trust Foundation Site 343 DMB. Cllrs did not inform the public present that there is no reference anywhere in the Thorne Moorends Neighbourhood Plan to Site 160 Bradholme (Thorne South Urban Extension Site 160) or Policy even that names this site or objects to it. Andrew Wood CPRE comment in the Doncaster Local Plan Consultation stated the following:- 160 Bradholme Thorne Moorends Neighbourhood Plan make no reference to a major urban extension. What is envisaged? The day after the Thorne Moorends Town Council Meeting the Thorne Times dated October 10th 2018 had the front page banner catching headline as being a report of the meeting:- Cllrs Vote Unanimously to Oppose Proposals …..following discussions by Thorne Moorends Town Cllrs at their October meeting Members voted unanimously to oppose the Proposals for the Doncaster Local Plan with the Town Mayor Susan Durant urging residents to respond to the consultation and submit objections. Cllr Joe Blackham said he supported a “total rejection” of the Bradholme Proposals for the Doncaster Local Plan adding “it was imperative that people put in objections” Cllr Blackham said “that the Proposals bore no resemblance to the Thorne Moorends neighbourhood Plan” saying it was “exactly the opposite”. Following the Doncaster Local Plan Consultation 2018 the Bradholme Site 160 was rejected and Site 001 Thorne North Junction 6 M18 has been proposed for employment allocation in its place. Cllrs Joe Blackham [Redacted Text] Cllr Susan Durant had been very effective in their urging of residents to object to Site 160 Bradholme, by using their positions as Cllrs and members of the Thorne Moorends Neighbourhood Plan Working Group and by use of the Thorne Times. Some Doncaster Local Plan Consultation responses 2018 seem confused see below for example :- ref 04953 Andrew Mattholie Objection to Site 160 .Proposal does not fit with the wishes of the residents of Thorne and Moorends as expressed in the Thorne Moors Neighbourhood Plan. ”No justification for development on greenfield sites” There is nothing in the Thorne Moorends Neighbourhood Plan that supports no justification for development on greenfield sites. Thorne Moorends Town Council Meeting held on the 10th September 2019 also had on its Agenda the Doncaster Local Plan as below Agenda item : Local Plan , to consider and respond to Local Plan Consultation. I was a member of the public present at that meeting and heard Cllr Joe Blackham make a verbal declaration of interest in the Doncaster Local Plan item without giving reason and I saw Cllr Joe Blackham leave the room when the Doncaster Local Plan was discussed by the Cllrs present at the meeting. Of note the Doncaster Council Minutes of the meeting of its council dated 25th September 2019 recorded the following:- 22.Declarations of Interest Cllr Joe Blackham declared a Discloseable Pecuniary Interest in Agenda item No 11/Publication (Reg 19) of the Doncaster Local Plan 2015-35 by virtue of a live planning application for planning permission in respect of land he owned in the Borough and took no part in the discussion at the meeting and vacated the Chamber during consideration thereof. I have asked Mr Allen Chief Executive of Doncaster Council why Cllr Joe and Carol Blackham did not have to make any declarations of interest at the Thorne Moorends Town Council meeting of the 9th October 2018 when the following was recorded in the Agenda:- Agenda Number 18 : Local Plan Consultation .Update on Consultation and Consideration of implications. Both Cllrs participated in the discussions on the Local Plan Consultation and both Cllrs voted to object strongly to the Local Plan which included opposition to Site 160. I have received no response from Mr Allen to my email date 19th Sep 19 concerning this. The Thorne Moorends Neighbourhood Plan Group Response to the Doncaster Local Plan Consultation was dated 26th October 2018. It included the following:- Furthermore the Working Group wishes to add that the proposed Bradholme Site for employment would represent a real loss to the ecological heritage of the area We refer Doncaster Council to the book by Martin Taylor entitled ‘Thorne Mere’ which describes the important historical heritage of the area (see image below) (the image is the book cover.) The Thorne Moorends Neighbourhood Plan Working Group Minutes of meeting dated 22nd October 2018 Members recorded as being present at this meeting are named as below:- Cllrs Joe Blackham, Susan Durant, Mark Houlbrook and Janet Philips. Rachel Durant, Caroline Robinson, Ann Pennington and the Town Clarke Matthew Gleadell. The following is recorded in the minutes of this meeting:- 4. DMB Local Plan : Bradford Farm The Group reviewed the response to the Local Plan Consultation submitted by the Town Council The Group was happy to adopt the Council’s response and support it but also add that as a Group it is intending to investigate Housing need with a view to Flood Zone 3 allocations as well as adding additional weight based on environmental impact on Thorne Mere and the loss of environmental history due to the site being the former River Don. (Of note Cllr Joe Blackham’s major planning application 18/02496/OUTM is in Flood Zone 3.) Kim Parkinson, landowner of Site 001 Thorne North Junction 6 M18 also made a similar comment to the Thorne Moorends Neighbourhood Plan Working Group in relation to Site 160 and the Thorne Mere in his response to the Doncaster Local Plan Consultation 2018 in respect of Site 160 See below:- Ref 0204 Kim Parkinson …Could be significant archaeology on site -Thorne Mere is a very important site. Thorne Moorends Town Clerk Matthew Gleadell sent my neighbour and I an email stating that the Hatfield Chase and Landscape Partnership had asked for Thorne MoorMoornds Town Council’s support in trying to oppose the Bradholme Site in the Local Plan. Paul Schofield when consulted stated that this was untrue. It appeared that the Clerk had been confused and misled by the bold print of Kim Parkinsons official looking email after being copied into Susan Durants email as below:- From Susan Durant 13th Oct 2018 To Kim Parkinson cc info@ywft.org.uk
Options of sustainable travel are hugely desirable in new Moorends Town Travel Lodge hotel on Omega Boulevard Capitol Park (both had extant planning applications so did not require Air Quality Assessments). Planning application 15/03006/OUTM (for Aldi Supermarket, H&M Supermarket and Garden Centre, MacDonalds Drive Thru restaurant Development for Doncaster Council stated in his email dated 4th Jan’18 that major planning application 16/00126/OUTM and also quite low. There remains some limited potential for cycle access. Unfortunately even the cycle access is poor as DMBC Transport does not possess the characteristics that make it accessible by sustainable modes and access other than by private transport developments to reduce their impact on the road network and reduce pollution. It is apparent from the Transport Statement that No Air Quality Assessment was undertaken by the developers. Where did the money go that was intended for footway and rail crossing improvements? No Air Quality Assessment was undertaken by the developers. There are no sustainable modes of transport to this site and 1. Rail connection investigation to transport by rail rather than on road network abandoned by Helios as there is attention in CPRE, Yorkshire Wildlife Trust, English Heritage, Historic England and Country Park area land comprising of 183 acres of undisturbed prime agricultural land closely alongside the tidal lower River Don in high risk flood zone 3 and is therefore not an appropriate site for development. This large greenfield site should continue to act as a flood plain in event of flood defence bank breach or pump failure. The dry drains that transit this area to the much endangered water vole and the site itself is within 3km of Thorne Moors which is the foraging site of the nightjar. It is also excellent soil for growing wide variety of crops and I am neighbour to this site with land of Agricultural Land Classification Grade 2 which is classed as the best and most versatile reason likely being that silt has been deposited on the land close to the river Don as it flooded over the centuries when the land acted as a flood plain prior to the bank being put in place, and it has resulted in enriching the soil. It would be unforgivable to sink huge warehouses on it and cover it with tarmac so forever polluted. The applicant has ‘evaded undertaking a required soil survey’ on this land. Site 001 is listed in the Priority Habitats Inventory as Low Floodplain Grazing Marsh which encompasses most of the 183 acre site. Sustainable modes of travel to Site 001 are poor. The route from Thorne is along the A614 a dangerous road with blind bends and national speed level of 60 mph. Pedestrians from Thorne would have to cross over motorway slip roads and there is no traffic free shared cycle/pedestrian route from the site to Thorne or to Thorne North Rail Station. The bus routes do not run near the site. From Moorends the route to the site is unsustainable as North Common Road has no footways, has national speed level of 60 mph, is a dangerous road with speeding issues, has deep drains at either side. To access sites from Mount Pleasant Road from Moorends then unmanned public rail crossing is involved and this Road beyond Nimbus Park 1 has a national speed limit of 60mph no footways or cycle paths and a dangerous blind bend. Thorne already has enough of Storage Distribution Warehousing which is totally dependent on highly polluting Heavy Goods Vehicles. North of Thorne has an established area of poor air quality which has to be monitored frequently and any added warehousing development in this area will worsen air quality and likely tip Thorne into another of Doncaster’s Air Quality Management Areas. Warehousing located north of Thorne Most of the large warehouses in this area are at Capitol Park Omega Boulevard. This substantial area of warehousing north of Thorne is well established and out of the way and close to the M18 Junction 6. Local residents of Thorne and Moorends selected Capitol Park as a suitable site for employment along with Coulman Road and the pit at Moorends in the Thorne Moorends Neighbourhood Plan 2 Formal Consultations undertaken in 2014 by use of Questionnaire and not Site 001 Thorne Noth Junction 6 M18. 3 further distribution and storage warehouses north of Thorne are along Mount Pleasant Road built on a 60 acre greenfield site and named as Nimbus Park 1 and 2. Nimbus Park 1 was the first development completed and has the huge ugly out of place giant warehouse currently rented out to the Range Company. I have learnt it has vast unused Office space. Nimbus Park 2 has two huge warehouses recently completed by developer for rent but are not yet in 24/7 operation. Doncaster Council’s lack of concern for the local residents of Thorne and Moorends in respect of poor air quality and unsustainable modes of travel see below:- Planning history of Nimbus Park 1 and 2: Case Officer for both 1. Nimbus Park 1 (06/03149/REMM 03/5695/P) This is the giant warehouse speculative development currently rented by the Range Company for Storage/Distribution. It was granted planning permission with a Section 106 Agreement between Doncaster Council, developer Helios landowners including Donald Parkinson, provided it was rail linked so that it would be sustainable and not use the road network, that the Paddock Road footway would be widened to 3.0 m and Selby Road footway also widened to provide a traffic free cycle/pedestrian shared footway from Nimbus Park 1 to Thorne North Railway Station and that Lands End Road Rail Crossing was improved for cyclist and pedestrian use. See 106 Agreement /3/5695/P Monies: Helios to explore rail connection #750,000, DMBC #1,500,000, Thorne Town Council #100,000 ,#25,000 first commuted sum,#45,000 second commuted sum? Failure to complete the promises made in the above planning obligation. 1. Rail connection investigation to transport by rail rather than on road network abandoned by Helios as grant unavailable after warehouse constructed accepted by DMBC without question. 2. Paddock Lane/ Road never widened to 3.0 m to provide traffic free shared cycle route for cyclists and pedestrians never done. Sue Higham DMBC Transport planner confirmed that there is no such route even though indicated as such in the Interactive Doncaster Cycle Map. 3. Improvements to Lands End Rail Crossing for cyclists and pedestrians never done according to FOI request to network rail. 4. Travel plan records were not requested by DMBC so there are no records of them. It seems both Councils received substantial payments from sustainable modes but this site has no sustainable modes of transport. The bus service is hopeless. No Air Quality Assessment was undertaken by the developers. Where did the money go that was intended for footway and rail crossing improvements? Nimbus Park 2 16/00126/OUTM Two huge Warehouses constructed here alongside the giant warehouse and again to be rented out for Storage /Distribution by developer. No Air Quality Assessment was undertaken by the developers. There are no sustainable modes of transport to this site and will be reliant on private car. The Transport Assessment submitted on this major planning application states that the site is well positioned to be accessed by sustainable modes of travel. This is patently untrue .Elisa Atkinson: Highways England Consultee Response for 16/00126/OUTM and dated 7th July ’16 made the following comment:- “Options of sustainable travel are hugely desirable in new developments to reduce their impact on the road network and reduce pollution. It is apparent from the Transport Statement that the present development does not possess the characteristics that make it accessible by sustainable modes and access other than by private car is likely to be quite low. There remains some limited potential for cycle access”. Unfortunately even the cycle access is poor as DMBC Transport Planner has confirmed that the traffic free cycle route from the site to Thorne North Railway Station is unsignposted. Mr Scott Cardwell, Assistant Director for Development for Doncaster Council stated in his email dated 4th Jan’18 that major planning application 16/00126/OUTM and also major planning application 15/0306/OUTM (for Aldi Supermarket, H&M Supermarket and Garden Centre, MacDonalds Drive Thru restaurant and Travel Lodge hotel on Omega Boulevard Capitol Park) both had extant planning applications so did not require Air Quality Assessments. I checked both extant planning applications 06/03174/REMM and 10/03149/OUTM and neither of them had ever had Air Quality Assessments
undertaken by their developers. Local people who live north of Thorne have been considerably let down by Doncaster Council in that neither Case Officer has ensured that fully updated Air Quality Assessments have been undertaken for both major developments and used in the decision making process. The Thorne Moorsend Neighbourhood Plan has no information whatsoever concerning the area of poor air quality north of Thorne even though its Working Group have been made aware of this issue by members of the public attending Thorne Moorsend Town Council Meetings. Thorne has become a dumping ground for Doncaster Council with the aid of Thorne Moorsend Town Council and its twin the Thorne Moorsend Neighbourhood Plan Working Group all self-serving. The previous Doncaster Local Plan was named as the Local Development Framework Sites and Policies Development Plan Document. This was withdrawn in September 2014 following the Inspector's Report. Some responses to the Doncaster Local Plan Consultation 2018 have made reference to it in their comments see examples below:-

04757 Anthea Lugton Objection to Site 160; The proposal ignores the last Local Plan of 2014 05015 Barbara Pike The development should be on the west side of Thorne by Junction 6 of the M18 as was planned in 2014. 05140 Don Turner its a departure from the original Local Plan I asked Local Plans Manager for details of the evidence of public support for Site 1 [001 Thorne North Junction 6 M18 from the Local Development Framework Sites and Policies Development Plan that had been withdrawn in 2014 and she could not give me any. Thorne Moorsend Neighbourhood Plan Consultation on Policy Areas October 2014 was a very expensive formal public consultation with large Document containing an inset Questionnaire. The Document contained information relating to the NP policies for guidance and had a large A4 Sized map named as the THORNE&MOOREENDS SITE MAP. The map itself on page 2 of the document had information relating to its code .Purple indicated Employment Allocations Proposed by Doncaster Council and the lighter orange colour indicated Housing Allocations Proposed by Doncaster Council. On page 3 of the document under the headline Housing it stated that both Thorne and Moorsend Communities were supportive of the housing allocations put forward in the Doncaster Local Plan and the plan will not look to amend those allocations. Yet there is no evidence of public support for these sites. Employment Site 1 [001 Thorne North Junction 6 M18] is coloured purple on the map and housing sites west of Thorne and west of Moorsend are coloured orange on the map. In October 2014 there were no Employment allocations Proposed by Doncaster Council and there were no Housing allocations proposed by Doncaster Council. The map therefore was false and misleading for any local resident accessing it for guidance in completing its questionnaire. Local Plans Manager, and Planning advisor to Thorne Moorsend Neighbourhood Plan Group stated in her email dated 21st March 2019 that a number of NP documents were sent to the Local Planning Authority by the then Clerk (Jeremy Sherlock) to the TMTC in 2017. Not all the documents needed for formal submission were completed and there were also some outstanding queries. The Thorne Moorsend Neighbourhood Plan was therefore not publicised under Regulation 16. Recently and very oddly, the Thorne Moorsend Neighbourhood Plan has been upgraded from limited weight to moderate weight for major planning applications 18/0249/OUTM...and therefore can be now considered as a material planning consideration. Major planning application 18/02496/OUTM was brought to the Planning Committee on the 20th August by its applicant Cllr Joe Blackham, landowner of the site. [Officer for] Local Plans Policy,[Consultee Response on planning application], [Planning] Case Officer [Planning Committee report] and Scott Fawcuc (in email to me) have all given the Thorne Moorsend Neighbourhood Plan added weight. This then can be used in the Doncaster Local Plan to influence the location of employment and housing sites in Thorne Moorsend area. In my view this is unjust.

Summary:

Objects to allocation of site 001 Reasons: Flood risk: 1. High risk flood zone (3) 2. Should be kept as a floodplain Support 1. No evidence of support in neighbourhood Plan 2. Unjust to give NP for weight that it deserves. 3. NP is being used to influence decisions on planning applications. 4. No evidence that local residents want development/ no evidence of support Environment: 1. Loss of countryside 2. Loss of prime agricultural land. 3. Impact on already bad air quality. 4. Home to water voles. 5. Close to Nightjar foraging area of Thorne Moors. Access: 1. No sustainable modes of transport to access site. 2. A614 is a dangerous road. 3. Dangerous access for pedestrians General: 1. Too much warehousing already. 2. Won't produce enough jobs because of automation. 3. Allocation of site will lead to housing allocations in flood zone 3 west of Moorsend and Thorne. Other issues raised: 1. The views of the Blackham family and associates do not fairly represent the views of all local people. 2. Conspiracy between several people and Council members.

Response:

The site is in flood zone 3 but benefits from flood defences. All available sites in the M18 are in Flood Zone 3. None are within the Functional Floodplain. The Thorne Moorsend Neighbourhood Plan does not allocate support, reject or specifically mention any employment sites although it does support the allocation of sites in the M18 corridor. Any decisions regarding site allocations have also had regard to public consultation and the results of that consultation. The site is greenfield and the Sustainability appraisal (SA) records criteria 12b (Landscape) as 'negative impact' (shown as '-' in the scoring matrix). The SA as records the criteria 14b (agricultural land score) as 'uncertain' (shown as '?'. In scoring matrix) this is Grade 3 Agricultural land but it has not been possible to ascertain whether it is 'best or most versatile (3a)' without further survey work on site. Development could result in an increase of traffic movements, which may affect air pollution. The Sustainability appraisal (SA) records criteria 14a (Air quality) as 'neutral' (shown as '0' in scoring matrix). Water voles and nightjar foraging areas are considered as part of the SA process and also in detail at the planning application process. Any planning application would need to provide sustainable transport access to the site. The SA process also looks at this through criteria 3a (i) (neutral impact), 3a(ii) (negative impact), 3a(iii) (positive impact) 3b(i) (negative impact). Highway safety including for pedestrians, would be considered as part of a planning application. Doncaster is an attractive place for warehousing due to it's road network, however the allocated employment sites will also be able to accommodate uses such as manufacturing.
Comment:

I object to Site 001 proposed as allocation to Employment Land. The local plan publication states: "Improved understanding of residual flood risk to the Borough, especially at the Main Town of Thorne-Moorends, following completion of Hydraulic Modelling being finalised by the Environment Agency at time of Plan preparation. The lack of detailed modelling available prior to adoption of this version of the Local Plan limited the Plan’s local flood risk evidence base at that point."

The above statement is wrong, it is very misleading to any interested parties reading the document, the modelling is not complete it is still in production as it states below. Through an FOI an email was received from the Environment Agency which states: "RE EMAIL RECEIVED FROM ENVIRONMENT AGENCY DATED 17 September 2019 "The hydraulic modelling mentioned in paragraph 1.11 on pages 2 and 3 of the current local plan (version) is still in production. Once finalised and published it will provide a better understanding of flood risk in the borough, particularly around Thorne and Moorends, however, as it is still in production it couldn’t be used by the council to provide the evidence base. The reference to the modelling is highlighted as one of a number of emerging issues and opportunities that may inform a review of the Local Plan. All planning applications are reviewed on their own merits, and developers will still have to undertake a detailed site-specific flood risk assessment on all sites in flood zones 2 and 3 (as shown on our flood map for planning). Once it is available, the new modelling data should be used by the developers as part of their assessment which in turn should identify appropriate ground and floor levels and any further mitigation that will be necessary to make a development safe for its lifetime, without increasing risk to others. Effectively, the process for determining applications in flood risk areas will be no different to what it is now, it will just be the evidence base that will change - by that we mean the extent and depths of modelled flooding. The risk could either increase or decrease as a result of this modelling, at this point in time we don’t know what the outcome will be. We will continue to object to development proposals where we are not satisfied that the assessment adequately addresses flood risk". Reading the above information from the EA states the modelling is not complete and the council cannot use it to provide evidence with regard flood risk in the Thorne and Moorends area. By you the council stating it is complete and that it’s given you a better understanding of this area is totally unacceptable. The site is in flood zone 3 but benefits from flood defences. All available sites in the M18 are in Flood Zone 3. None are within the Functional Floodplain. Hydraulic modelling is not yet complete and this is confirmed by the Environment Agency. The potential impacts of flooding would be examined as part of any planning application process and appropriate mitigation measures would be required. Any development should not worsen the risk of flooding. The Environment agency are consulted on planning applications. Regarding warehousing, Doncaster is an attractive place for warehousing due to its road network, however the allocated employment sites will also be able to accommodate uses such as manufacturing.
I object to Site 001 Thorne North Junction 6 proposed as Employment Land I strongly object to comments made October 2018 by Andrew Moorhouse, agent for landowner promoting Site 001 with incorrect information. "Site 1 is preferred by Town Council, Neighbourhood Plan and townsfolk - TC wrote to DMBC after its meeting on 9.10.18 to object to Local Plan. Local Objections from public now being made" Thorne & Moorends Town Council wrote to the local plan but they did not state they supported Site 001 for Employment Land, many of the Local objections submitted by residents of Thorne &Moorends objecting to Site 160 proposed / developed could quite easily apply to Site 001 the reasons given apply to both of these sites. Minutes of Thorne and Moorends Town Council 11th September 2012. Extract: "7 In terms of major employment sites site 1 is considered the most suitable as it is in the vicinity of existing warehousing / business development, and relatively accessible from both Thorne and Moorends. '8. Sites 2 and 35 should not be allocated for any use as they are open countryside sites which relate poorly to established developments’ The consultation meetings September 2012 (Sites & Policies) he refers to, a total of approximately 114 people attended two meetings in Thorne & Moorends, six votes for Site 001 as Employment Land, The agent and the landowner attended these meetings and cast their votes for Site 001, surely this can not be considered as preferred by the townsfolk? Thorne Colliery received four votes but this area has been disregarded. Site 001 is separate from other warehousing and is also in the countryside. The TMNP Questionnaires (2014) asks are there specific sites you think should be identified for employment land in Thorne/ Moorends? A total of 199 completed questions ( out of approximately twenty thousand residents ) stated in their responses preferred sites for employment:- Capitol Park, Coulman Road, Thorne Colliery, the local community are not stating Site 001 as a specific site to be developed and they are not stating they want more warehousing in this area, they are saying they want development on established locations including Thorne Colliery. "Current planning application 16/02136/ OUTMThere - a full range of studies has been submitted with the application and not one raises any reason for refusal" The planning application has been ongoing for over four years although not refused it has not been granted. "Site 1 provisionally allocated in Thorne and Moorends Neighbourhood Plan - see TMNP Site Map at Appendix Neighbourhood Plan for Thorne and Moorends 22 The Neighbourhood Plan was first published in October 2014. It proposed the allocation of Site 1 for Employment development, in accordance, at that time with the allocation by Doncaster in its Sites and Policies DPD. See its Site Plan at Appendix 2. POLICY E2: DEVELOPMENT OF NONNEIGHBOURHOOD PLAN ALLOCATED EMPLOYMENT SITES The allocation of sites along the M18 in the Doncaster Local Plan will be supported given the economic and logistical significance of this strategic transport route. Provision is expected to be made within development, through the layout of proposals, to promote physical connectivity with Thorne and Moorends. Development will also be expected to incorporate safe walking routes, cycle facilities and routes, and local public transport routes into the development at the planning stage to maximise the opportunity for local people to access jobs by ensure accessibility is prioritised" All new / proposed employment sites including Site 001 are not included in the Thorne & Moorends Neighbourhood Draft Plan, due to the area being Flood Zone 3 / high risk of flooding, they were not in the position at the time of publication to afford to pay out with regard gathering further information to examine the flood risk issues in Thorne & Moorends. The M18 and the M180 can equally be classed as it states in the TMNP publication "It is recognised that the M18 forms a strategic corridor through the District which is attractive to economic activity that in turn creates jobs. The Doncaster Local Plan, and its predecessors, has identified the corridor as a focus for employment allocations. The Neighbourhood Plan supports this strategy”. So why is it that they are just focusing it on the M18 and not M180 ? The Policy E2 applies the same reasons for both Site 001 and Site 160 "In allocating Bradholme, DMBC has disregarded the wishes of Thorne and Moorends as a community, as a Town Council and as Neighbourhood Development Plan authority. “ In allocating Site 001 DMBC have also disregarded the wishes of Thorne and Moorends as a community. "The Appearance and Character of the Settlement 7 The development of Site 1 would do no harm whatsoever to the appearance and character of the settlement. It is insulated from all residential parts of Thorne and Moorends by existing commercial development, namely the warehouse of The Range and the BMW distribution depot, which forms a belt 300-400 metres wide against the railway. Its development would be entirely compatible with, and complementary to, those establishments."

The appearance and character would change totally and would do enormous harm to the character of the settlement, I and some other residential properties neighbour this land we would most definitely not be insulated from this if developed , the agent seems not to care about us at all, does he seriously think that some residents in parts of Thorne and Moorends will not see these buildings. “The Character and Appearance of the Surrounding Countryside or Rural Setting 8 It would not significantly harm the character and appearance of the surrounding countryside or the rural setting to the settlement. Site 1 falls within the Countryside Policy Area of the UDP; and within the Thorne and Hatfield Peat Moorlands. Site 1 consists however of a featureless tract of arable land with vestigial hedgerows and few trees. It is not valued for recreation or views. A full arboricultural survey was submitted with the planning application (ref.16/02136/OUTM). Whilst it would bring signif? cant change, its landscape is of such low sensitivity that no significant harm would be done to the surrounding countryside or rural setting of Thorne” Of course it will significantly harm the character and appearance of the surrounding countryside, it may be flat but it is good quality agricultural land, it serves a purpose, it feeds us, it is far better with regards recreation views as it is now than it would ever be if developed, if developed it would be of significant harm on the surrounding countryside and the approach to the market town of Thorne. "Landscape and Visual Impact Assessment: Conclusion ‘7.2 The existing landscape of the site has no variations or complexities within its boundaries. It has no sense of place, and its character is that of industrialised agriculture” Really !!! What a load of rubbish this man states , it is a very well kept tidy flat field used for the purpose to grow food of course it has a sense of place. "Whilst there would be loss of countryside there would be no loss
of landscape which might contain the aspirations of the European Landscape Convention of 2000. There is little attachment to it by people."

From the residents that neighbour this land we are very much attached to it's appearance we most certainly would prefer it to stay as is and not have huge ugly buildings in its place and I would think the people that travel in and out of Thorne would agree. "7.3 The proposed development would consist of large-scale distribution warehouses and manufacturing units. Its purpose would be to take advantage of the location of the site next to Junction 6 of the M18. But for the motorway, it would immediately adjoin the existing large-scale commercial development on the west side of Thorne where The Range and BMW are established. "No it would not adjoin the existing large-scale commercial development, it would be totally separate, it is the other side of the motorway and further up the A614 than the existing development." 7.4 The development would result in an entirely new landscape, radically different from the existing one. Whilst there would be some effects that could be described as adverse, it would bring many beneficial ones, including with the right approach to design across the site, the creation of a ‘place’ for the first time. "7.5 Visually the site is remarkably well contained by existing features such as main roads on three sides and degraded land on the fourth. The new development would be briefly experienced by travellers passing along these roads, from which its identity as an employment park set within a landscaped framework would be readily apparent and apparently modern in character and appearance in keeping with its close relationship with the motorway." 7.6 There are dwellings scattered around the site which would undoubtedly be affected by the proposed development. However the access to the site is limited to a single point and advance works of earth moving and landscaping would minimise visual effects in the short and long term. Beyond these areas the new presence in the landscape of the development would not be discordant in the scale of the wide and spacious rural area which would be its setting. "Yes it would be an entirely new landscape but certainly not one for the better !! What absolute rubbish this man talks ! what beneficial effects do these ugly distribution units bring to an area ? A place for the first time, it has a sense of place now, visitors / residents travelling along Selby Road and the other roads bordering this land as I said earlier would surely prefer to see agricultural land than enormous ugly sheds ? Now he decides to give the residents here a mention and how he is going to minimise visual effects for us !!! There is no way on Gods earth that can be achieved. "Site 1 Thorne North Does not depend on other land being developed to create viability. It would however unlock land at Site 101 and bring urban regeneration, environmental improvement, and new footpath and cycle ways to Site 1. " At present no safe cycle route / footpath can be identified, even if Site 101 was “unlocked” any route presented will not make it “safe” motorways slip roads and unnamed railway crossing will have to be crossed whichever way they try to do it. "Residential parts of Thorne protected will be protected from effects of new commercial/industrial development by existing belt of similar development on west side of Thorne" What about thinking about the residents of Thorne that will be greatly effected who live directly opposite this land what about our protection ? Again this man cares not about us. " Site definitely not preferred by Town Council or tounsfolk - see objections to 2009 application at Bradholme in separate dossier with this objection” The objections that he has submitted from 2009 should be disregarded it would be totally wrong to use them as a material consideration in this process and he should not have included them in his response, only residents who submitting comments in the October 2018 consultation should be considered. "38 The Transportation Assessment contains detailed plans for the improvement of pedestrian routes be provided under the northern over-bridge, enabling the improvement of pedestrian route continuity. This would improve safety for pedestrians travelling to the site from all parts of Thorne along Fieldside (the A614 leading from the town centre). There is then a continuous footway across the western boundary of the unallocated Site 101 and the sewage farm. If Site 101 were to be developed it would perhaps enable the upgrade of the footway and the provision of a cycleway through to the south-west corner of Site 1. Here the Transportation Assessment provides a plan for a new footway leading from this point into the site; and an uncontrolled crossing point (that is without traffic light control) to enable pedestrians to cross to the west side of Selby Road. All this information, including detailed plans, has been included with the Transportation Assessment accompanying the application" As I stated after four years in planning a safe cycle / pedestrian route can still not be identified, even with the inclusion of site 101 "employees” would still have to cross two busy slip roads of the M18 or unmanned railway crossings which Network Rail have stated in a consultation reply on 16/02136/OUTM dated 4 April 2019 "We would appreciate clarity and assurance from the developer that there is no intention to establish pedestrian links between the site and this area that may lead to increase in usage of these crossings “ The local community is now beginning to respond to the publication of the draft Local Plan. Below are attached two letters which capture the reaction of at least two members of the public to the proposed development at Bradholme. The two objections letters he includes are John Pinda Walker and Ann Walker, these two people are both landowners of Site 001 which he omits to say. " Extracts from Ann Walkers letter below Site 1 Within single ownerships site 160 No, according to HELAA Site 001 is owned by five people , Don Parkinson, Doreen Parkinson, Kim Parkinson , John Pindar Walker and Ann Pinda Walker “Site 1 Moorends and Thorne north estate within walking distance, people already walk to work in the existing work places. Site 160 Within walking distance for people living in Thorne South. People from Mooreords would need to use car or bus” Again I will state for Site 001 no safe cycle/pedestrian route can be identified after four years ! Site 160 is within easy walking distance from Mooreords / Thorne although Mooreords is further away a safe cycle pedestrian route can be identified and implemented very easily so any “employees” from Mooreords / Thorne can get to work safely. "My conclusion is based on the fact that the J6 north site was chosen as the area for development in the HELAA, it is contradictory to change to the J5 South site especially considering that no new evidence has been provided to support this change. The author/s of the LDP have stated for the J5 south site where there is “clear developer intention to develop the site”, although they haven’t provided any evidence to support this claim. While the author/s fail to make the same comment for the J6 north site, there is clear evidence of the developers’ intention because they submitted plans to develop the site over 2 years ago and they have been working with DMBC planning department ever since to ensure that their plans meet all of the planners’ specifications. There is also very little local opposition against the submitted plans which suggest that local people are in favour of these proposals which was a different matter in 2009 when plans were rejected for the Bradholme development at J5 south. Local people didn’t want the J5 Thorne south/Bradholme site developing and my understanding from locals is that the feelings haven’t changed, the council is no longer interested and they want this site to be restored to farmland. No it would not adjoin the existing large-scale commercial development, it would be totally separate, it is the other side of the motorway and further up the A614 than the existing development.” The inconsistency between the findings of the proposed LDP and those of the HELAA raises serious questions about the capabilities of the author/s of the LDP. I recommend that a different team of planners should reconsider the evidence to ensure that the conclusion which have been drawn are valid. Yours sincerely, Ann Dr Ann Walker “ I can not find the information which states Junction 6 north Site was chosen as the area for development I would very much like to know where can I access this information? There is a very clear developer intention for Site 160 Bradholme it is owned by Haworth Group who I understand are very much ready to develop it Scoping Opinion now on the planning portal 19/02324/SCOP, local people actually are opposed to anymore warehouses in any area of Thorne, where is the clear developer intention for Site 001 ? There may be some interest but nothing set in stone from any interested parties. Very little local opposition, well there aren’t many local residents that neighbour site 001 but that does not give anyone the authority to disregard our views and I have to say with information which is starting to surface there is actually quite a lot of opposition to Site 001 being developed, see objection letters and petition submitted. The local plan is supposed to be what and where
Employment/ housing for Sites are preferable for allocation, although there are fewer residents around this land as members of the community that will be directly affected with regards a development on this site does not give you the authority to disregard our views and concerns, there are also many local residents who do not want development in this area, Site 001 is not a preferred site for employment, there is absolutely no evidence that can be identified that indicates there is considerable public support for Site 001, we have enough in fact more than our fair share of warehousing. This information should not be ignored. The local plan asks us the community to - helping to decide what is developed - helping to decide where the developments are - guiding the right developments to the right places - protecting and improving the environment - enhancing people’s quality of life If the local plan allocate Site 001 as employment land then you are not complying with the above, you would be doing the opposite of what you are asking from the community, that would make the plan not justified, the plan would not be based on evidence, the plan would not be sound. I strongly object to Site 001 proposed for allocation to Employment Land

Summary:
Objects to allocation of site 001 Reasons: 1. Views of Town Council/NP/Townsfolk have been misrepresented 2. TC shown no support for this site. 3. Disregards the wishes of the Thorne and Moorends community 4. No evidence that local residents want development/ no evidence of support 5. Loss of prime agricultural land. 6. It is a rural setting 7. Harm to character of settlement 8. Dangerous access for pedestrians 9. No safe cycle access 10. Site not connected to other development (Capitol Park/Nimbus Park) 11. Too much warehousing already. 12. M180 is equally as strategic as M18, why focus on M18? 13. Site is not in single ownership 14. No clear developer/owner intention or interest in site 15. Planning application on-going for 4 years but not been decided.

Response:
Comments noted. The Thorne Neighbourhood Plan does not allocate, support, reject or specifically mention any employment sites although it does support the allocation of sites in the M18 corridor. Any decisions regarding site allocations have also had regard to public consultation and the results of that consultation. The SA as records the criteria 14b (agricultural land score) as ‘uncertain’ (shown as? in scoring matrix) this is Grade 3 Agricultural land but it has not been possible to ascertain whether it is ‘best or most versatile (3a)’ without further survey work on site. Highway safety including for pedestrians, would be considered as part of a planning application. Any planning application would need to provide sustainable transport access to the site. The SA process also looks at this through criteria 3a (i) (neutral impact) , 3a(ii) (negative impact), 3a(iii) (positive impact) 3b(i) (negative impact). The setting of the site and its connections are addressed through the developer requirements section in the Local Plan as well as through any planning application. Doncaster is an attractive place for warehousing due to it’s road network, however the allocated employment sites will also be able to accommodate uses such as manufacturing. The M18 corridor was identified as a preferred location for development sites in Local Plan marketing analysis. The Doncaster section of the M180 is also taken into consideration as being within the same corridor. There is developer interest in the site and the owners are acting as a single entity.
I object to Site 001 now being proposed for allocation to Employment Land  What justification can you give as to why you are now proposing Site 001 for Employment allocation and not Site 160 as was previously planned October 2018 ? I would really appreciate an answer to this question. Why did you propose Site 160 when you are very aware that a planning application in 2008 attracted many residents to object to it, tactical reason ? Propose Bradholme , certain Thorne Moorends Town Councillors will do everything in their power (which they did do ) to rally the community to object ( which they did do) so you can then change your mind and propose Selby Road , i believe there is some kind of hidden agenda here. I understand you had a number of objections with regards Bradholme, my understanding is this is the only difference in the two sites, is this the only reason you changed your mind and now propose Site 001 ? Woods Environment and Infrastructure Re Site 001 states in green writing " The Site has support through the local Plan Sep - Oct 2018 ( see Draft Policies and proposed Sites Consultation Summary further information ) " Information online from - Local Development Framework Sites and Policies Development Plan Document  Agenda item 7 March 7th 2013 meeting Appendix 2 Consultation Summary Stage 2 ;Public Consultation "A2.3 Following this second round of consultation there was considerable public support for Site 001 " re a report by [a Planning Officer] . A request was sent for the evidence of this " public support " A email reply from [a Planning Officer] 8 September 2019 states " I am sorry but as I was not the report author I do not know what evidence [a Planning Officer] was relying on to make the statement that you quote. In preparing the Local Plan that is currently out to Publication we did not rely on evidence from the Sites and Policies document. " So no evidence can be produced to back up [a Planning Officer']s comments [Redacted Text] Obviously the Sites and Policies document is being relied on as Woods Environment tell us to refer to for further information, why are they still referring to it ? Where is this support they are saying Site 001 has ? The evidence based information on sites in the local plan to date states :- Site 001 Support - D Parkinson landowner A Moorhouse Agent Thorne Moorends Ward Members ( doesn't say how Many ? ) Why are you saying Site 001 has support ? Doncaster Employment Land Review Amendments to be made states "In light of the local plan informal consultation in Sep - Oct 2018 page 22 J6 M18 Thorne (Ref Site 001) Albeit slightly more remote from the main urban area of Doncaster than some of the other LP review site. Why does this now have a red line through it ? Site 001 has not moved since the review was done so why are you saying it's not actually more remote now ? They go on to say This site would represent a new large scale distribution location closer to the Humber Ports than most of the other sites under construction The above text is in red, the above is also true of Site 160 location. Also There is a water treatment works on land to the south which does produce some unpleasant odour The "which does produce some unpleasant odour " is crossed out, take it from someone who does actually live here it can at times produce unpleasant odour , so many incorrect facts ! [Redacted Text] With regards Site 160 Bradholme, and please document the fact that between the two sites because of how the owners of Site 160 have thought about the layout, out of the two if we have to be a dumping ground for more warehouses I support Site 160 for development. Site 160 , Owned by The Harworth Group who are ready to develop it. DMBC Council committee report describes the surrounding area to Site 160 as "relatively featureless open countryside ". Access to the town centre would be suitable for pedestrians and cyclists , the route is lightly trafficked with excellent highway connection, the onsite flood mitigation would be large linked detention basins with controlled discharge to the local land drainage system which have been approved and agreed with the Environment Agency. Also agreed by Highways Agency traffic impact assessment proposals and supported the development on the basis of limited site improvements to the local highway network. Highways Agency existing highway layout in the vicinity of the site could be relatively minor improvements to local junctions to accommodate additional traffic." Site 160 Bradholme if developed would be an urban extension of Thorne / Moorends , a safe cycle / pedestrian route can be achieved from Moorends / Thorne to it this is now documented in the screening opinion on the planning portal 19/02324/SCOP. A bus route is already in place from Moorends/Thorne to accommodate employees to Site 160. The accessibility to the proximity of the M180 is very good , better access to the motorway than Site 001 to the M18 . Traffic would leave Site 160 and head to Junction J1 where they then could then very quickly access M18 North and South extra traffic generated by development would not have to or wouldn't need to go through Thorne / Moorends, as suggested by the agent / landowner of Site 001 that traffic generated from Site 160 would cut through Thorne centre to get to Junction 6 M18 but why would they when it would be much easier and quicker to get onto the M180 at Junction 1 travel junction 5 then north on the M18. The illustrated plan on the portal looks well thought out with balancing ponds which will obviously aid issues flooding and encourage wildlife it also shows areas of open space, the larger buildings look like they are placed further away from residential properties, Site 001 illustrated plan shows the whole area filled with warehouses, no balancing ponds ( underground tanks proposed to take surface water which will be pumped into the river at some point ) At this present time 29 September 2019 I have received a text from Floodline informing me of a Flood Alert Issue, no open spaces on the plan no care with regards flood issues , nothing to keep and attract wildlife and certainly no thought for the residents around Site 001. Site 160 is not classified as Coastal and floodplain Grazing Marsh so is lower in ecological value than Site 001. It has been said by the owner Kim Parkinson of Site 001 that Bradholme is part of Thorne Mere, I also have the book that TMTC refer to in their Thorne &Moorends Neighbourhood Plan response October 2018 where they state this, they were actually informed of this fact by Kim Parkinson in an email this is the reason they included it in their response, but the book does not actually state 100% that Bradholme is part of Thorne Mere, I questioned this with the clerk after the response had been submitted and I have an email from TMTC clerk confirming this. Thorne and Moorends Town Council submitted a response to the Local Plan dated (11 October 2018) this is a misrepresentation and should be disregarded , they state : 1 " We speak on behalf of the majority of the community in Thorne - Moorends when we say that for as long as there
remains an intention to include site 160 Bradholme Farm for employment land that we will simply be unable to express any support whatsoever for the Local Plan. 2 "Extensive consultation has been carried out in support of the development of the Neighbourhood Plan. The Town Council therefore has developed a clear understanding of the views of local people. It is very clear from that consultation and indeed the extent of representations that have been made recently that there is an overwhelming feeling of opposition to any development on the Bradholme." At the time of writing the response to the Local Plan from the Clerk on behalf of TMTC he did not have the correct facts or any concrete evidence to support these statements. 1 I attended the TMTC meeting 9 October 2018 approx twenty members of the public also attended, not all spoke and gave comments / objections the twenty members of the public can not be all combined as objecting to Site 160 Bradholme , this amount can not be interpreted as "we speak on behalf of the majority of the community of Thorne and Moorends." There is no evidence to support this comment , approx twenty members of the public are certainly not the majority of the community. I do of course understand that quite a number of objections were submitted in October but many of the reasons given for objection can also apply for the development of Site 001 the same reasons for objections apply for both sites. With regards this meeting when the Local Plan was discussed Councillor Joe Blackham spoke and said he did not want Bradholme developed he urged all Thorne and Moorends residents to object to the proposal, Council Susan Durrant also reiterated his comments, Members of the public were urged to put their complaints in writing and send them off to DMBC. Thorn Times October 2018 reporting on the meeting and quoted "Following discussions by Thorne Moorends town councillors at the October meeting, members voted unanimously to oppose the proposals for the Doncaster local plan with Town Mayor Susan Durant urging residents to respond to the consultation and submit objections. Cllr Joe Blackham said he supported a "total rejection" of the Bradholme proposals for the Doncaster local plan, adding it was "imperative that people put in objections". Cllr Blackham said the proposals bore no resemblance to the Thorne and Moorends neighbourhood plan, saying it was "exactly the opposite". Councillor Joe Blackham has land in the west of Moornds two planning applications for housing on this land have now been refused he actually lives and so does Councillor Mark Houlbrook south of Thorne near Site 160 Bradholme, understandable why they do not want warehouses there then and are pushing for them as far away as possible from where they live. Since having his say at the meeting and getting everyone to object, at meetings after this any local plan on the agenda Councillor Blackham has declared an interest and not taken part in discussions including the TMTC September 2019 meeting, Local Plan was on the agenda he declared an interest did not give a reason, Site 001 was discussed at this meeting which concluded that certain councillors mainly Councillor Susan Durrant [Redacted Text] support Site 001 for Employment Land, I asked for justification for supporting Site 001 and not Site 160 but I did not get an answer. Why did he declare an interest in this meeting yet not in October 2018 I understand nothing has changed , he was a landowner with a pending planning application then as he was at the September 2019 meeting ? [Redacted Text - Supposition] 2 From research I have carried out with regard to the Thorne and Moorends Neighbourhood Plan the consultation meetings attracted very little support from the local community , at the Sites and Policies Engagement Event at Thorne OAP Centre 10 September 2012 a total of 14 people attended which included 2 DMBC Ward Councillors, 2 individuals from TMTC, a landowner and his agent 2 local builders and 6 residents from Thorne who live on the Southern edge opposed to Bradholme, the summaries show a total of just six people voted for Site 001 for Employment and one against. If myself and residents near had been informed about the meeting voting would have been very different. I have visited the council offices and read the 199 completed NP questionnaires received, I also have the summaries for these questionnaires, 199 out of a population of over twenty thousand is not "extensive consultation " TMNP Questionnaires 2014 asks are there specific sites you think should be identified for employment in Moores / Thorne ? The very few members of the community compared to the size of Thorne & Moorends who respondents stated preferred sites Capitol Park Coulman Road Thorne Colliery They are not saying they want warehousing and they are not stating Site 1 as a specific site to be developed, the community want development on established locations as listed above, The Town Council has not developed a clear understanding of the local community , they did not receive extensive representations in the NP Consultation period opposing Bradholme as an Employment Site and certainly on the 9 October there were only around twenty members of the public attended to air their views and I stated above not all attended were objecting to Bradholme, that is in no way shape or form the majority of the community of Thorne and Moorends. There is no evidence from the public consultations to support Site 001 as Employment land, Thorne and Moorends Town Council have misrepresented the actual findings of the public consultations carried out in 2012 and 2014 this is totally unacceptable and should not be taken into consideration with regard to the final decision on the classification of Site 001, the Classification of Site 001 should stay as it " Countryside Policy Area " the Local community that put their comments forward do not support employment land at Site 001. With regards to the compiling of a Neighbourhood Plan, Planning Aid state - Your policies should be based on robust evidence, facts and figures, e.g.: opinions given in consultation responses, evidence is extremely important as it ensures that the choices made in the Neighbourhood Plan are backed up by facts. Thorne & Moores Neighbourhood Plan have not adhered to the above , the steering group [Redacted Text] have simply disregarded the local communities opinions which is simply unacceptable and makes a mockery of a document that cost a huge amount to be prepare. At present we have two empty distribution centres at Nimbus Park, there is a distribution centre at Arthorpe still waiting to be occupied. Doncaster and the surrounding is becoming an unsightly depressing place to live and visit. From talking to people in this area and getting feed back from a post put on facebook residents here do not want anymore warehouses, the feeling is we have enough. Submitted this morning 30 September 2019 to DMBC offices 239 signed objection letters objecting to Site 001 proposed for Employment Land, also a Petition with 390 signatures, please respect the wishes and views of the local community this is a local plan evidence has been submitted to you of what the local people want, these are the views of local people, do not allocate Site 001 to Employment Land. Please note I would like to attend the inspectors meeting at council offices to make comments please. I strongly object to Site 001 proposed as Employment Land.

Summary:

Objects to allocation of site 001 Reasons: 1. There is a petition with 239 sgs objecting to allocation. 2. No evidence that local residents want development/ no evidence of support 3. Detrimental to the environment 4. Too much warehousing already. 5. Is the switch to 001 from 160 purely because of objections to 160? 6. Site 160 should be allocated. 7. No evidence of opposition to 160 being allocated. 8. Lack of local consultation 9. Local councillors have a hidden agendas 10. Hidden agenda for originally proposing 160 then switching to 001.

Response:

Comments noted. The petition has been received and is acknowledged. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. Regard is also had to the results from public consultation. There is also developer interest in the site. The Sustainability Appraisal (SA) assesses the sites for the impact on the environment. This includes a range of criteria including 12a Biodiversity and 12b landscape (both negative impact). Any development proposal would be subject to assessment of the impact on the environment. Doncaster is an attractive place for warehousing due to it's road network, however the allocated employment sites will also be able to accommodate uses such as manufacturing. Consultation is an important part of the Local Plan process. The methods used are set out in the Council's 'Statement of Community Involvement (SCI)' The SCI itself was subject to consultation. The 'Local Development Scheme' sets out the Local Plan process and progress and includes all stages where consultation
has been undertaken. The Regulation 22 Statement of Consultation also shows when consultation was undertaken and the responses received and how it influenced the Local Plan process. All efforts have been made to inform and consult at various stages of the plan process. All consultation responses have an important role in formation of the Local Plan. Site 160 was originally proposed for allocation in the 2018 consultation. Based on responses to that consultation Site 160 was removed and Site 001 subsequently proposed for allocation.

| Comment: I object to Site 001 proposed as Employment Land  Wit regard to comments made by Kim Parkinson consultation period October 2019, my concerns are with regards to Kim Parkinson the land owner promoting his site with incorrect information. "Deliverability of Site 160 Bradholme may well be however. No planning application is in and (we find) that takes time. It is the site of the historic Thorne Mere" Scoping opinion now live for Site 160, he was the one too tell TMTC that it was part of Thorne Mere but there is nothing that 100% proves that so that statement should be disregarded unless he has concrete evidence that says different. "Colliers say that the J6 M18, Thorne Site (ref 001) is next to a water treatment plant producing unpleasant odours. I live near this facility and I have not experienced any odour issues at all that I can remember. "I live near the water treatment plant and at times it does give off odour, he lives too far away to smell it [Redacted Text]. "2.3 Colliers state the Bradholme site is "closer to the Humber Ports than most of the other sites under consideration" (p23). "It is not right next door to Thorne and Moorends. It is not right next door to Thorne just across the road from Moorends Site 1 J6 M18 Thorne North site is in reasonable walking distance of most of Thorne and all Moorends. Moorends needs high value jobs to pull it up by the bootstraps. "Bradholme is also within reasonable walking distance to Thorne / Moorends and to walk and cycle that route would be the safer option of the two but obviously safety is not a priority with Mr Parkinson. As for high value jobs this type of employment creates very few jobs because of the automated systems for high value!!'

"2.11 Colliers’ report does not refer to flows of people - how people would get to work at Bradholme (Site 160). Many workers walk to work in this locality. Bradholme is a long walk from Moorends and most of Thorne. Site 1 J6 M18 is ideally situated in this regard." Bradholme is situated ideally for local people as I said it is a much safer already in place route for pedestrians and cyclists, for any individual who wants a job, wants to work then travelling by foot or bike from Moorends to Bradholme would not cause any issues, it also benefits from a bus route already in place from Moorends which passes the Bradholme Site. There are other comments that I feel need addressed but to be quite honest its making me angry reading them and in other letters of objection I have submitted I feel I have covered the issues , just one last comment I would like to address is "To the West is an EA facility (commonly known locally as 'The Cake Mill') where excavation equipment etc is stored, the banks of the River Don, Fishlake Commercial (a 24/7 Commercial Vehicle maintenance facility), a commercial Dog Kennels and a small arable field wedged between the A614 and the Don bank. There is also what I believe used to be a coal yard that is now in residential use" The “commercial dog kennels” he refers to is our business which we built nineteen years ago, at the side of the kennels is our family home which stands in three acres of garden and land not commercial at all but very residential which he omits to say in his comments, there are a number of other residential properties around but he fails to mention them but seems to want to paint a picture that the area around is very commercial, when that’s not the case, just goes to show what kind of person this man is. Statements submitted by the agent and landowner should be verified to be truthful before taken into consideration with regards very important matters as this is. I strongly object to Site 001 proposed for allocation to Employment Land.

**Summary:**

Objects to allocation of site 001 Reasons: 1. Disputes Colliers statement re being unpleasant odours from water treatment works - there are no odour issues 2. Disputes Colliers statement that site is remote 3. Site will create few jobs 4. Colliers site assessment fails to mention residential properties in the vicinity of the site. 5. Re statement from Parkinson that Bradholme site (160) is part of 'Thorne Mere' - there is no evidence to support this. 6. Bradholme (160) is more accessible for pedestrians/cyclists/public transport

**Response:**

The Employment Land Review written by Colliers has an amendment which now states that there are no odour issues from the water treatment works. The amendment has also removed the reference to the site being remote. Regarding the amount of jobs, a fully developed site of this size should deliver a significant number of jobs. In comparison to similar sized sites this would be expected to be 3,000 plus. It is agreed that in terms of ‘Access’ site 160 does score better in the Sustainability Assessment. However there is very little difference overall between the two sites.
Comment:

I object to Site 001 proposed as Employment Land. From information gathered with regards the preparation of the local plan I believe it hasn’t been advertised nearly enough, not enough of the community know about it and about the proposed housing and employment sites that could potentially affect them in their day to day life. The previous consultation in October 2018 attracted 1200 responses out of a population of around 310,000 you have to agree that is a really poor response, if you were to ask people randomly what is the Local Plan they wouldn’t have a clue what your talking about. The council should have sent out flyers to households yes I understand it is a lot but that way it lets everyone know about the local plan it gives everyone the chance, they have a choice, they can make comments on issues that affect them or choose not to but that way you have given them a choice, but you really seem to have kept the whole thing under raps, not everyone is on social media, having said that I noticed very few posts regarding the local plan, not everyone buys a newspaper you cannot rely on these things alone to inform members of the community what’s going to happen in the areas they live and work. The other important point I would like to make is how difficult it is to navigate around the website, it’s certainly not for the faint hearted and I can clearly understand how someone who maybe wants to make comments, that’s on the assumption they have found in the publication what they are looking for / that is of interest to them, actually give up! The comments form can not be filled in on some computers / tablets, it should be much clearer that people can email or post comments, again to me it’s like you don’t really want the feed back from the community. Not nearly enough responses were received in October compared to the size of the Borough is that because the community didn’t know about it? Not interested in it? Found it too difficult to respond so gave up trying? For the above reasons I do not believe the local plan is “sound” the experience I have had with the process of the local plan is inadequate, far to much emphasis has been put on the very few responses / comments received, these have been accepted and deemed as what the majority of the community want in order to shape the plan and its decision to now propose Site 001 for Employment Land, the most important factor in this is that the people who would be directly involved in this Site being developed were not informed from the very start of the process, myself and I firmly believe other neighbours to Site 001 would have had no clue about the local plan it’s only because of the pending planning application that we are aware of if, which is astonishing and inexcusable, the community that it will affect the most not informed of what’s happening right on our doorsteps! absolutely unbelievable process! just so very very wrong of DMBC to treat us this way. I strongly object to Site 001 proposed as Employment Land.

Summary:

Objects to allocation of site 001 Reasons: 1. lack of local consultation 2. People do not know about this site being allocated. 3. Too much weight given to too few consultation responses 4. People living near the site have not been informed. 5. Website is difficult to navigate

Response:

Comments noted. Consultation is an important part of the Local Plan process. The methods used are set out in the Council’s ‘Statement of Community Involvement (SCI) The SCI itself was subject to consultation. The ‘Local Development Scheme’ sets out the Local Plan process and progress and includes all stages where consultation has been undertaken. The Regulation 22 Statement of Consultation also shows when consultation was undertaken and the responses received and how it influenced the Local Plan process. All efforts have been made to inform and consult at various stages of the plan process. All consultation responses have an important role in formation of the Local Plan. Various consultation methods have been used during the Local Plan preparation process including the website, local press, site notices, social media, libraries, Parish Council meetings and Councillor meetings. The website includes a lot of information, evidence base and data involved with the Local Plan and we try to make this available via the website in this best way possible.
I object to your decision to now propose Site 001 Thorne North for allocation to Employment Land. The statements I make are based on accurate researched information which I believe to be correct. Site 001 is not in single ownership, the land is owned by five individuals there has been no evidence submitted on the planning portal from the owners with proof regarding expressions of interest to purchase/develop it, I have now seen some emails to the agent enquiring about the land but there is nothing to say that any of them want to or are in a position to develop it. Constraints include power lines, Drainage, it fails the flood risk sequential test as it is in Flood zone 3, there are more deliverable sites in other areas. It is not in the vicinity of other existing warehousing it would not adjoin Nimbus Park or Capitol Park. Site 001 is separated from urban areas of Thorne/Moorends by a railway and more significantly the M18 motorway. It is isolated from Thorne and Moorends, Site 001 in the draft plan states it lies outside the urban framework and it is significant that the council when first assessing this site stated that it is the wrong side of the motorway on the assessment form, it is not a sustainable urban extension. DMBC senior pollution control officer, 9 September 2016 states "If development goes ahead it will worsen further the already poor air quality in this part of Thorne " She states she does not support the planning application pending, increased traffic this major development will generate will increase the nitrogen dioxide in the air we breathe. A major development in this area of Thorne will not fit into the criteria of DMBC air quality action plan which is to clean up its air and reduce the number of pollution rated deaths. Doncaster Air Quality Plan (DMBC 2013) states "The Doncaster Local Plan will need to take into account of Air Quality Management Area and attempt to reduce vehicle traffic in general, it will help implement many of the targets and objectives" developing Site 001 would be contrary to your policy, DMBC have a duty of care to the community in this area of Thorne to help clean up our air. Since [the Senior Pollution Control Officer] report Thorne now has an Aldi, B&M, McDonalds, a new Public House and Restaurant plus two B8 industrial units at Nimbus Park none of the planning applications for these developments appear to have air quality responses submitted, all these new developments are contributing emissions from cars/wagons adding to the already poor air quality in this area. Site 001 does not have the benefit of extensive flood basins it is further away from the motorway than the proposed site for allocation Site 160 Bradholme. No safe cycle/pedestrian routes to Site 001 can yet be identified, cycle/pedestrian routes that have been suggested are not safe. Employees from Thorne/Moorends would have to cross the slips roads of the M18 motorway, the A614 is not wide enough in places to accommodate a safe cycle/pedestrian route, this road is an extremely busy road. An alternative route suggested would expect cyclists/pedestrians to cross one of three unmanned rail crossings (Data provided by Network Rail on the Thorne and Moorends unmanned crossings state sixty nine trains per day travelling at 70mph.) the route would then run along North Common Road, a very narrow road, not light trafficked, it is frequently used by car transports / hauliers / deliveries to a chicken factory in Thorne, the road is not wide enough for two wagons travelling at speed to pass on either side of the road without slowing down considerably, again there is not enough width in places to accommodate a safe cycle/pedestrian route. There has been seven separate traffic accidents in the past approximately twenty months on Selby Road / North Common Road. Highways England recommend planning not be granted until outstanding issues are solved this has been ongoing for over four years now. It would destroy a vast area of open countryside which is home to and valuable hunting ground to many species of wildlife e.g. Water Vole, Nightjar, Barn Owls, Tawney Owl, Lapwing, Yellow Hammer, Kestrels, Marsh Harrier, Buzzards, Deer etc. Natural England's Agricultural Land Classification Map shows this area of land as Grade 3 - very good. I have asked numerous times for a soil survey to be carried out but my request has been ignored. Development would result in a loss of high quality agricultural land as such the proposal is contrary to Policy CS18 of Doncaster Core Strategy 2011 - 2028 plus paragraph 112 of the National Planning Policy Framework "CS18 " avoid developments on Best and most Versatile Agricultural Land" Paragraph 112 " local planning authorities should take into account the economic and other benefits of the best and most versatile agricultural land. Where significant development of agricultural land is demonstrated to be necessary, local planning authorities should seek to use poorer quality land in preference to that of a higher quality” The whole area is part of The Humberhead Levels, a vast area of this 182 acres of Land is classified as Coastal and Floodplain Grazing Marsh - Priority Habitat Inventory:- Coastal grazing marshes and their associated dyke systems are an important brackish habitat for many estuarine species. They lie at or below sea level, and are almost all enclosed by seawalls, having originally been reclaimed from saltmarsh. These brackish water dykes are an important habitat nationally and locally. Yorkshire Wildlife state: "Due to the developments site's location within the Humberhead Levels Character Area we therefore advise that the application is refused. Critically there is an area of Lowland Fen habitat adjacent to the proposed development site at SE 67442 15197. Fen is a priority habitat for the Humberhead Levels partnership and is particularly sensitive to changes in the hydrological regime thus any development in this area could be potentially damaging to this rare habitat." Major employment development on this land would encroach massively into the countryside that would prove disruptive and harmful to the character and wider landscape, it would not enhance the character landscape or nature conservation value of the local environment therefore contrary to Policies CS1 CS2 CS14 Core Strategy and ENV2 ENV4 Doncaster Unitary Development Plan. There is no evidence from the public consultations to support Site 001 as Employment land, Thorne and Moorends Town Council have misrepresented the actual findings of the public consultations carried out in 2012 and 2014 this is totally unacceptable and should not be taken into consideration with regard to the final decision on the classification of Site 001, the Classification of Site 001 should stay as it " Countryside Policy Area “ the Local community that put their comments forward do not support employment land at Site 001. With regards to the compiling of a Neighbourhood Plan, Planning Aid state - Your policies should be based on robust evidence, facts and figures, e.g.: opinions given in consultation responses, evidence is extremely important as it ensures that the choices made in the Neighbourhood Plan are backed up by facts.
Thorne & Moorends Neighbourhood Plan have not adhered to the above, the steering group which included three closely related members of the same family have simply disregarded the local communities opinions which is simply unacceptable and makes a mockery of a document that cost a huge amount to be prepare. I strongly object Site 001 proposed for allocation to Employment Land

Summary:
Objects to allocation of site 001 Reasons: Flood-risk: 1. High risk flood zone (3) 2. Site is classified as 'Coastal Floodplain' as part of Humber head Levels. 3. Site does not benefit from flood basins Support: 1. NP does not represent the views of the community. 2. No evidence that local residents want development/ no evidence of support Environment 1. Loss of countryside 2. Site should stay as Countryside PA. 3. Loss of prime agricultural land. 4. No soil survey carried out. 5. Site is part of Humber head levels. 6. Potential damage to adjacent 'Fen Habitat' (SE 67442,15197). 7. Site is classified as 'Grazing Marsh - priority habitat' as part of Humber head levels. 8. Impact on already bad air quality. 9. Negative impact on air quality (backed by Lisa Croft (DMBC pollution control) 10. Not consistent with DMBC air quality action plan. 11. Impact on ecology (multiple species) 12. Yorkshire Wildlife recommend planning app should be refused. 13. Harm to character of settlement Access: 1. Dangerous access for pedestrians 2. No safe cycle access 3. Highways England do not support planning permission until 'issues' resolved. Constraints: 1. Power lines on site 2. Drainage is a constraint Location: 1. Site not connected to other development (Capitol Park/Nimbus Park) 2. Separated from Urban areas of Thorne and Moorends 3. Not a suitable urban extension 4. Not close to M18 Mway. 5. Council own original assessment says site is on the wrong side of the Motorway. General 1. Site is not in single ownership 2. No clear developer/owner intention or interest in site 3. Other sites are more deliverable 4. The NP steering group membership is weighted by one family.

Response:
The site is in flood zone 3 but benefits from flood defences. All available sites in the M18 are in Flood Zone 3. None are within the Functional Floodplain. Consultation is an important part of the Local Plan process. The methods used are set out in the Council’s ‘Statement of Community Involvement (SCI)’ The SCI itself was subject to consultation. The ‘Local Development Scheme’ sets out the Local Plan process and progress and includes all stages where consultation has been undertaken. The Regulation 22 Statement of Consultation also shows when consultation was undertaken and the responses received and how it influenced the Local Plan process. All efforts have been made to inform and consult at various stages of the plan process. All consultation responses have an important role in formation of the Local Plan. The Thorne Neighbourhood Plan does not allocate, support, reject or specifically mention any employment sites although it does support the allocation of sites in the M18 corridor. Any decisions regarding site allocations have also had regard to public consultation and the results of that consultation. The site is a greenfield (as are the other employment allocation options along the M18). The Sustainability appraisal (SA) records criteria 12b (Landscape) as ‘negative impact’ (shown as ‘-’ in the scoring matrix). The SA also records criteria 14b (agricultural land score) as ‘uncertain’ (shown as ? In scoring matrix) This is Grade 3 Agricultural land but it has not been possible to ascertain whether it is ‘best or most versatile (3a)’ without further survey work on site. Any further issues regarding biodiversity would be examined as part of the planning application process. Development could result in an increase of traffic movements, which may affect air pollution. The Sustainability appraisal (SA) records criteria 14e (Air quality) as ‘neutral’ (shown as ‘0’ in scoring matrix). Further work on air quality would be required as part of any planning application and regard would be had any Air Quality Action Plan. Regarding ecology, the SA records criteria 12a (Biodiversity impact) as ‘negative effect’ (shown as ‘-’ in scoring matrix) and it is noted that the Yorkshire Wildlife Trust raised several important issues regarding various species to the 2106 planning application. They also state that they would be happy to advise on how the site can be ‘master planned and managed to benefit biodiversity’. (Yorkshire wildlife Trust October 2016 in response to planning application 16/02136/OUTM). Any planning application would need to provide sustainable transport access to the site. The SA process also looks at this through criteria 3a (i) (neutral impact) , 3a(ii) (negative impact), 3a(iii) (positive impact) 3b(i) (negative impact). Highway safety including for pedestrians, would be considered as part of a planning application. For issues regarding the strategic road network, Highways England are a statutory consultee for major planning applications. Any comments they make would be considered in the decision process. The planning application process (including master planning) would also take power lines into consideration as well as drainage. It would also look at the site’s setting and connections to Thorne. The site is now being promoted by a developer and has owners who are acting as a single entity. The site is deliverable and was considered so in the Housing and Economic Land Availability Assessment (HELAA). Any sites which were not assessed as being Available, Suitable or Deliverable where excluded from the site selection process. .
I object to Site 001 Thorne North Junction 6 proposed as Employment Land. I question the comments made by TMTC submitted to the local plan in October 2018. “Please accept this letter as the formal response to the informal consultation in relation to the draft Doncaster Local Plan from Thorne-Moorends Town Council as a Town Council representing one of the principal communities of the Doncaster borough we regret to say that words simply do not do enough to express just how vehemently opposed we are as a Town Council to the draft Local Plan in its current form.” What I do understand is why they are so vehemently opposed to Site 160 but seem quite happy to support Site 001 as Employment Land? “We speak on behalf of the majority of the community in Thorne - Moorends when we say that for as long as there remains an intention to include site 160 Bradholme Farm for employment land that we will simply be unable to express any support whatsoever for the Local Plan.” They can not say they speak on behalf of the majority of the community, at the time of writing this response they did not know how many objections would be submitted. The basis of our objection is as outlined below. 1. The proposal is in direct contravention of National Planning Policy Framework (‘NPPF’) National Planning Policy Framework confirms that the planning system should ‘contribute to and enhance the natural local environment by protecting and enhancing valued landscapes’ Paragraph 170. Plans must recognise the intrinsic character and beauty of the countryside and the wider benefits from natural capital and ecosystem services. The Local Plan by including site 160 fails to adhere to NPPF. 2. The proposal will have catastrophic environmental consequences for an area that forms an integral part of National Character Area 39 being the Humberhead Levels. This site is in extremely close proximity to the Thorne and Hatfield Moors. The site itself forms part of internationally important habitat which contributes to landscape character, helps combat climate change and reduce flood risks. The area is within a Nightjar Foraging Area. The nightjar is a species on the Amber List for conservation purposes and is ‘at risk’. Destruction of its habitat should be fiercely opposed. 3. The area consists of land of high agricultural value. NPPF places an onus on taking account of the benefits of the best and most versatile agricultural land. This land is regarded as some of the best agricultural land in the country. 4. The development of the site will be in direct conflict with the Councils own Countryside Protection Policy. It is determined by Doncaster Council that the Countryside Protection Policy has been sufficient to afford large swathes of land east of Doncaster similar levels of protection to Green Belt. The very existence of the policy and the rationale behind it demonstrates that this land has been clearly been given high regard as ‘countryside’. To now include such a large area of this land for employment allocation serves as a complete and utter disregard for the Councils own policy.” All the above reasons also apply to Site 001 so why are TMTC not going tooobject to Site 001 now proposed as Employment Land the same as they did for Site 160. “The proposal will be in direct conflict with the emerging and advanced Thorne - Moorends Neighbourhood Plan. Extensive consultation has been carried out in support of the development of the Neighbourhood Plan. The Town Council therefore has developed a clear understanding of the views of local people. It is very clear from that consultation and indeed the extent of representations that have been made recently that there is an overwhelming feeling of opposition to any development on the Bradholme site. “The Bradholme Site was never mentioned in any Neighbourhood Plan consultations, the Town Council have no clue never mind understanding of the views of local people and they are wrong to say they do. “This will be reflected in the final Neighbourhood Plan. 6. The nearby road infrastructure is insufficient to accommodate the increased traffic levels that a development on the scale of the site proposed would generate. A development of the size and scale envisaged would generate significant levels of vehicle movements. Whilst we appreciate the final details of any development are yet to submitted for planning permission, the sheer size of the land proposed for employment allocation is such that it is not difficult to imagine the traffic it will generate. The roads that border the site have not been designed with such a large scale development adjacent to them in mind.” The above reasons also apply to Site 001 so why do they still not vehemently oppose Site 001 as they did Site 160? Thorne & Moorends Town Council can not produce any evidence that proves Site 001 is the preferred site for development, for some reason they are objecting to Site 160 and supporting Site 001, I have asked for Justification but I get no response from the councillors. I have received a draft copy to be submitted to the local plan consultation September 2019 from TMTC clerk it reads “In principle the Council has resolved to support the Local Plan. The Council recognised the need for Doncaster to introduce a planning framework through the Local Plan to help shape the growth and development of the district.” So they support the allocation to Employment Land for Site 001, by supporting the allocation of Employment Land for Site 160 would also help to shape the growth and development of the district. “Notwithstanding the Councils general position of support, the Council would like to make the following comments 1. The Council notes that Bradholme Farm as a site for employment allocation has now been excluded from the draft Local Plan. Thorne Moorends Town Council stands by its position set out in it’s October 2018 consultation response in relation to Bradholme Farm.” So again reiterating that don’t want Bradholme to be developed but it’s fine to develop Site 001. 2. Thorne Moorends Town Council is aware that there are local residents fiercely opposed to development on Selby Road, Thorne on the site now included as site 001. The Council asks that Doncaster Council ensure that they have given due regard for the views and opinions of those local residents. 3. The Selby Road site is a large site and must be carefully developed with a range of appropriate mitigation measures incorporated to minimise the negative impacts of such a development on the surrounding area. The Council does however support and welcome economic growth in the area.” How very good of them to recognise and actually give the objectors of Selby Road (Site 001) a mention in their response and to ask for us to be considered when it’s developed, yet Site 160 is a flat total rejection but here they are now stating the developers of Selby Road will need to plant a few trees for the residents so we won’t see the warehouses !!!! I believe if I had not been at that Parish Council council meeting in September 2019 and made comments to the council members with objections as I have done on numerous occasion in the past four years regarding this...
land the response from them would have just been of support and no mention of residents fiercely opposing it. “7. The Local Plan does not adequately provide positive growth allocation for Moorends. The absence of planned growth in Moorends may only serve to see this settlement become further isolated than it may already be considered by some to be, and excluded from future investment. To this end the Plan has not been positively prepared in so far as Moorends is concerned.” The above reiterates support for Selby Road, it would be the nearest development to Moorends why should myself and other residents have to suffer having warehousing and distribution centres and all the heartache and negative affect it will have on our homes, families, outlook and general day to day lives just in the hope it will create a minimal amount of jobs for actually anyone who can do the work and get there on time, it’s certainly not guaranteed that local people from Thorne and Moorends will be employed, it’s so very wrong when it’s us that live here and we chose to live here for the reasons of being secluded, nice countryside views, the wildlife, the quiet, we are the ones that will suffer the most from it, how the hell is that fair, we are local to this area, this is a local Plan our views and concerns are important especially on a development of this scale, we don’t want Selby Road developed. “8. The Council is particularly concerned that the Thorne and Moorends Neighbourhood Plan was not actioned by DMBC when it was submitted for examination and referendum. The Neighbourhood Plan should have been adopted long before now and the Local Plan drafted with regard to it. Unfortunately long delays and omissions on the part of DMBC has meant that the Neighbourhood Plan has not gone forward and through the passage of time now requires modification before being formally submitted again. To this end it is believed that the plan has not been as positively prepared as it can be in taking account of local considerations. Please do not hesitate to contact Clerk to the Council Mr. Matthew Gleadell if you have any queries.” The Thorne and Moorends Neighbourhood Plan should not be passed it should be checked by an independent inspector, the questionnaires, summaries need to be looked at, it does not reflect the views of the local community I believe it has been done very tactical and it needs to be checked and certainly not actioned / accepted by DMBC.

Summary:
Object to allocation of site 001 Reasons: 1. NP does not represent the views of the community. 2. Can't understand why Town Council oppose Site 160 when all same reasons apply to site 001 which they support.

Response:
Consultation is an important part of the Local Plan process. The methods used are set out in the Council’s ‘Statement of Community Involvement (SCI)’. The SCI itself was subject to consultation. The ‘Local Development Scheme’ sets out the Local Plan process and progress and includes all stages where consultation has been undertaken. The Regulation 22 Statement of Consultation also shows when consultation was undertaken and the responses received and how it influenced the Local Plan process. All efforts have been made to inform and consult at various stages of the plan process. All consultation responses have an important role in the formation of the Local Plan. The Thorne Neighbourhood Plan does not allocate, support, reject or specifically mention any employment sites although it does support the allocation of sites in the M18 corridor. Any decisions regarding site allocations have also had regard to public consultation and the results of that consultation. Site 160 was originally proposed for allocation in the 2018 consultation. Based on responses to that consultation Site 160 was removed and Site 001 subsequently proposed for allocation.

**Comment:**

Proposed sites crossed or in close proximity to National Grid infrastructure: Following a review of the above development plan, the following sites have been identified as being crossed or in close proximity to National Grid infrastructure. Further details are provided in the table overleaf. Electricity Transmission Site Ref: Site 001 Junction 6, M18 Throne North (Employment site) Asset Details: ZDA Route - 400Kv two circuit route from Keadby substation in North Lincolnshire to 4VH042 tower in Doncaster Appendix Ref: ET374 Please see enclosed plan referenced ET374, & ET375 at Appendix 2. The proposed sites are crossed by a National Grid high voltage electricity transmission overhead line. (SEE EMAIL FOR Appendix 2) The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site. You can find National Grid’s guidelines for developing near Over Head Lines here: https://www.nationalgrid.com/sites/default/files/documents/Development%20near%20overhead%20lines_0.pdf Electricity Distribution Northern Powergrid owns and operates the local electricity distribution network in Doncaster Council. Contact details can be found at www.energynetworks.org.uk.

**Summary:**

Site 001 is crossed by a National Grid high voltage electricity transmission overhead line (ZDA Route - 400Kv two circuit route from Keadby substation in North Lincolnshire to 4VH042 tower in Doncaster). The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed.

**Response:**

Comments noted. Any Planning Application would deal with site specific issues such as this.
Proposed sites crossed or in close proximity to National Grid infrastructure: Following a review of the above development plan, the following sites have been identified as being crossed or in close proximity to National Grid infrastructure. Further details are provided in the table overleaf.

Electricity Transmission Site Ref: Site 441 Land at Carcroft Common, Carcroft, Skellow (Employment site) Asset Details: ZZG Route - 275kv two circuit route from Thorpe Marsh substation in Doncaster to West Melton substation in Rotherham Appendix Ref: ET375 Please see enclosed plan referenced ET374, & ET375 at Appendix 2. The proposed sites are crossed by a National Grid high voltage electricity transmission overhead line. (SEE EMAIL FOR Appendix 2) The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site. You can find National Grid’s guidelines for developing near Over Head Lines here: https://www.nationalgrid.com/sites/default/files/documents/Development%20near%20overhead%20lines_OH.pdf Electricity Distribution Northern Powergrid owns and operates the local electricity distribution network in Doncaster Council. Contact details can be found at www.energynetworks.org.uk.

Summary:
Site 441 is crossed by a National Grid high voltage electricity transmission overhead line (ZZG Route - 275kv two circuit route from Thorpe Marsh substation in Doncaster to West Melton substation in Rotherham). The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed.

Response:
The published evidence base behind the site selection (see Site Selection Methodology) details the reasons why sites have been proposed for allocation or rejected. See also the Sustainability Assessment (Wood 2018) which details the independent SA analysis, and Employment Land Review (Colliers) in the evidence base.

<td>Comment: We already have more than enough large warehouses in this area of Thorne and do not need more as they are enormous ugly buildings which spoil the countryside, and create numerous problems due to the excessive increase in heavy goods vehicles travelling along local roads. There are surely more suitable places within the borough with even better motorway access for them to be built and well away from residential properties. Already the area surrounding Junction 6 of the M18 motorway is causing traffic problems due to congestion, noise and particularly poor air quality. No doubt you are already aware of the extremely hot spells we have experienced during the last two summers, and with climate change these are more likely to be the 'norm' The residents in this area have suffered a great deal during the hot summers as we are now unable to keep windows and doors open to let in fresh air and cool our homes, or even spend time in our gardens due to the dust, dirt/grit and air pollution and noise already passing through the A614 and along the M18 motorway. Also the exhaust fumes and noise from large vehicles is exacerbated even further when these vehicles have to wait at the traffic lights now installed on Selby Road. My home is very close to the M18 roundabout where we have vehicles producing noise and vibrations inside my home. There are already residents living in this vicinity suffering from asthma and respiratory problems, and an increase in air pollution will only serve to exacerbate this. There will be a loss of high quality agricultural land needed to grow food, and it will also have a very serious impact on the wildlife as the area is part of the Humberhead Levels. Site 001 is Flood zone 3, with 183 acres of floodplain and approximately 80 metres from the River Don. With climate change more areas are flooding and there is a need for these flood plains in Thorne and Moorends. There are no safe pedestrian/cycle routes identified to Site 001 and is definitely not a specific site identified for employment by the local community in the Neighbourhood Plan. The Government keep informing us that the air quality and pollution in the environment in which we all live is a very serious matter, it should be top most in our minds with regard to the health of our nation and future generations, and should not be dealt with lightly.</td>
<td></td>
</tr>
<tr>
<td>Summary: Legally compliant - no comment Sound - no comment Too many large warehouses in Thorne. Will increase HGV traffic. Better places with better access to motorway elsewhere away from residential area. Traffic problems M18 J6 cause to congestion, noise, poor air quality vibration to homes. Climate change will bring hot weather and can’t open windows and doors to cool homes, or spend time in gardens due to the dust and air pollution. Air pollution causes asthma. Loss of high quality agricultural land. Impact on Humber levels wildlife. Site 001 is in flood zone 3 and floodplain. No safe pedestrian/cycle routes identified to Site 001</td>

Policy 4: Employment Allocations

Tests of Soundness:
- Positively prepared
- Effective
- Justified
- Consistent with national

Comment:

These two policies are considered collectively for the avoidance of repetition. The employment allocations with permission as at 1st April 2018 (included in Policy 4) are contained within Table E2 of the Local Plan 2019 Publication Draft. (SEE EMAIL FOR Figure 1: Emerging plan Extract) The existing employment areas (covered by Policy 5) are set out at paragraph 16.58 and include: There are a number of existing employment sites including: - West Moor Park - an expanding employment area which a range of businesses including nationally significant distribution warehousing and retail companies - Rands Lane - adjacent to West Moor Park, established area with a mix of business uses. Policy 5: Employment Policy Areas (Strategic Policy) states: Employment Policy Areas, as defined on the Policies Map, will continue to be supported primarily for employment uses. Other uses will be supported provided the following criteria are satisfied: A) it can be clearly demonstrated they support the existing or permitted employment uses on the site; or B) they are a specialist use appropriate to the site; or C) are a mix of commercial and/or community uses that provide clear additional benefits to the community. (Savills emphasis) In terms of the policy we are encouraged that the policy allows for mixed and/or additional uses to traditional employment uses. (SEE EMAIL FOR Figure 2 Emerging Local Plan Policies Map Extract) The Policies map extract above clearly shows the existing employment area and two employment allocations, denoted by the blue striped and cross hatched areas. The landowner has presented, on multiple occasions to the Council, evidence to demonstrate that the land to the south of Nutwell Lane is available and deliverable to bring forward a mixed use, employment led development. Within Armthorpe and the wider Borough, there is a clear, identified need for SME’s in the locality. The site at Nutwell South (149) is ideally located in this respect. However, it should also be emphasised that Site 149 also has the ability to unlock vital infrastructure in the form of the much-needed bypass for the village of Armthorpe, particularly given the first phase of the adjacent West Moor Park development is now built out. Further, the A630 West Moor Link improvement scheme was approved to include a new bridge, improve the width of the A18 carriageway and junction improvements. In addition to this, the work on the A18/A630 regeneration scheme started in July 2019. The proposed employment provision is to accommodate small and medium enterprises (SMEs) which is a different offer to the more traditional employment land uses, notably B2 and B8 uses, contained within the adopted and emerging Development Plan documents. Neither the Local Plan nor the Armthorpe Neighbourhood Plan make an allowance for SMEs. On this basis, it is considered that the Plan as drafted is not currently positive or effective. No revisions have been made since the Informal Consultation in October 2018 irrespective of previous representations requesting further consideration in this respect. As set out in previous representations, the increase in SMEs should be encouraged in order to accommodate and boost the number of new and growing industries and Government funding has been made available specifically for ‘Enhancing the Competitiveness of Small and Medium Sized Enterprises in the Sheffield City Region’. In summary, this mixed-use site could provide much needed sustainable development opportunities as is required within Armthorpe and the wider Borough, given the site sits within a highly sought after, sustainable location. Having established the above, DMBC should consider the site to be a highly sustainable, deliverable and developable allocation which should be supported for mixed use development within the emerging DMBC Local Plan, which provides a much-needed alternative offer for Doncaster. In order to satisfy the four tests of soundness as is required in the Plan making process, the plan should be based on evidence and be an appropriate strategy for the Borough when considered against other reasonable alternatives. It is concerning that there is no reasonable evidence to discount the site, particularly when compared to the sites which have been allocated in the draft Plan. The Site Assessment Methodology (SAM) was published in August 2019 and followed a six-stage process in order to provide a summary of the main evidence base and its conclusion, stating why sites have either fallen out of the process or progressed to the next stage. We consider that the evidence presented to support this assessment is flawed and clearly lacking detail. On this basis the evidence base cannot be deemed to be ‘sound’. Further, the evidence presented to support growth to the north of the village is also flawed, for the reasons set out below: - Site 149 has only been assessed as an employment site, as opposed to a mixed-use site. This is concerning given it has always been promoted in past representations as a mixed-use site. Further it was identified by the Council as a mixed use site in its HELAA. - There are a number of sites which have been allocated, which have scored similarly to Nutwell South within the SAM. - There are sites with severe constraints, which the Council have accepted can be overcome, but the constraints in site 149 are deemed to be too severe to overcome, a stance that we strongly reject as discussed below. Within the SAM, Site 149 was found to have significant negative effects in terms of pollution to surface water bodies and groundwater sources, however there is no definitive evidence which supports the Councils justification in this respect. Notwithstanding this, these are simply technical constraints which can easily be overcome through an agreed surface water drainage strategy and other technical work in due course. In line with the above methodology, the following allocated sites should be reassessed along with Site 149, in order to ensure that the Local Plan and its evidence base is justified and consistent in the site selection methodology. - Site 941 (Land East of Poplars Farm) - HELAA identified it as not suitable for housing, the site was similarly assessed to Site 149 as having Surface Water Pollution Issues. - Site 155 (Leach Land Industrial Estate) - significant negative effects in relation to unstable land. It is profoundly clear that the above sites which were also found to have significant negative effects in the SAM, yet were still allocated, should be re-considered until the DMBC can provide the evidence as to why they were allocated but others discounted on the same basis. The above sites are identified as having constraints which could also impact on their deliverability in the short- medium term given the likely challenges of obtaining planning consent for development in this respect. The evidence base to support draft allocation of Site 941 is considered to be unjustified given this site was assessed on a similar basis to Site 149 within both the HELAA and SAM. A further concern is the
allocation of site 1032 (Land at Bankwood Lane) which was allocated on the basis that the site is located within a successful employment area, however, Site 1032 also has identified issues with pollution to surface water bodies and biodiversity issues. This is a confused stance, given that the Nutwell Lane site is also within a proven successful employment location, as evidenced within the Local Plan at paragraph 16.54. There appears to be a lack of consistency in the site selection and assessment approach in this respect. On review of the Sustainability Appraisal (June 2019) it appears that Site 149 has not been progressed based on national policy grounds and on other sustainability criteria, including distances of the site to schools, infrastructure and bus stops. This is a very simplistic approach to measuring the sustainability of a site’s location. Planning obligations can be attached to proposed developments to ensure additional bus stops, pedestrian and cycle routes etc are included as part of any prospective development proposal. The newly completed development of the road adjacent to the site at West Moor Park may also assist in reducing travel time and through additional bus stop provision in this respect. A mixed use site also provides the opportunity to increase this shops and services (infrastructure) offer within the local area. The principle of employment uses on sites within Flood Zones 2 & 3 is not considered to be contrary to national policy, albeit it is accepted that residential development is deemed a more vulnerable use in this context. Notwithstanding this, should any residential development be proposed within Flood Zone 2, such a vulnerable use can be considered to be appropriate providing the sequential test can be satisfied. In any event, it is considered that appropriate technical solutions can be achieved to mitigate against any risk of flooding on site, in the form of attenuation tanks and balancing ponds should a detailed development proposal be progressed in due course. As demonstrated on the indicative masterplan appended, the western part of the site is proposed to come forward for residential development in the medium-long term. This would fall primarily on land allocated as flood zone 1 and therefore land which is considered to be entirely appropriate for such a use. It's strongly considered that there has been a degree of inconsistency in assessing the sites and within the overall conclusions made as part of the emerging Plan and as discussed above, the SAM. Figure 2, which is outlined below, is taken from the Housing and Employment Site Selection Methodology and Results Report (September 2018). This shows Nutwell South site as being a ‘rejected’ whilst the sites to the north of Armthorpe as ‘Remaining Options post HELAA but not proposed for allocation’ and therefore, such sites are shown as still having potential for development. This is despite them also being allocated within Flood Zone 3. As such, we see no reason why Site 149 has been discounted for employment use on such merits. Figure 3 as set out overhead is taken from the Local Plan Informal Consultation 2018: Proposed Employment land allocations. This plan identifies the land to the north of Armthorpe designated within Flood Zone (SEE EMAIL FOR Figure 3: extract from Housing and Employment Site Selection Methodology and Results Report Figure 4: extract from Local Plan Informal Consultation 2018. Proposed Employment land allocations. Area: Armthorpe) Figure 4, which forms part of the Council’s evidence base, corroborates our interpretation of flood risk on the site. On this basis, it is considered that Site 149 should be given further assessment in light of the flood risk evidence put forward in these representations and those submitted in previous years, which, much to the disappointment and frustration of our client, appear to have been completely ignored. The Council’s evidence base does not support the justification for discounting Site 149 in this respect.

Summary:

Policies 4 and 5 - a summary of these policies is included. We are encouraged that the policy allows for mixed and/or additional uses to traditional employment uses. There is a clear, identified need for SMEs within the borough/Armthorpe and site 149 is ideally located for this. It also has the ability to unlock vital infrastructure i.e. a much needed Armthorpe bypass. The proposed SME provision for this site is a different offer as the Local Plan and the Neighbourhood Plan do not currently make an allowance for SMEs. The Publication Local Plan is not positive or effective. An increase in SMEs should be encouraged to accommodate and boost the number of new and growing industries. Government funding has been made available specifically for 'Enhancing the Competitiveness of Small and Medium Sized Enterprises in the Sheffield City Region'. The Council should consider Site 149 as highly sustainable, deliverable and developable and support it as a mixed use development. The Plan should be based on evidence and an appropriate strategy as there is no reasonable evidence to discount the site. The Site Assessment Methodology is flawed and lacking detail for this site. The evidence base cannot be found sound and the evidence to support growth to the north of the village is also flawed. The reasons are: - Site 149 has only been assessed as an employment site and not a mixed use site. Although has been identified as a mixed-use site in HELAA. - There are a number of allocated sites which has scored similarly to Nutwell South (site 149). - Some sites have constraints which the Council say can be overcome, but constraints for site 149 are deemed to be too severe. We object to this. The Site Selection Methodology finds site 149 has having significant negative effects in terms of pollution to surface water bodies and groundwater sources. There is no definitive evidence for this and they are simply technical constraints which can easily be overcome. The following sites also have constraints which could impact on their deliverability in the short term and they should be reassessed along with Site 149 to ensure the evidence base is justified and consistent: - Site 941 (Land East of Poplars Farm) - HELAA identified it as not suitable for housing, the site was similarly assessed to Site 149 as having Surface Water Pollution Issues - Site 155 (Leach Land Industrial Estate) - significant negative effects in relation to unstable land The evidence base to support draft allocation of Site 941 is considered to be unjustified given this site was assessed on a similar basis to Site 149 within both the HELAA and Site Selection Methodology. It is also concerning that site 1032 (Bankwood Lane) has been allocated on the basis that the site is within successful employment area, however it also has issues with pollution to surface water bodies and biodiversity issues. This is confused given that Nutwell Lane is also within a successful employment location. There is a lack of consistency in approach. After reviewing the Sustainability Appraisal it appears that site 149 has not been progressed based on national policy grounds and other sustainability criteria including distances to schools, infrastructure and bus stops. This is a very simplistic approach. Planning obligations can be attached to developments to ensure additional bus stops, cycles routes etc are included as part of development proposals. The principle of employment uses in sites in Flood Zones 2 & 3 is not considered to be contrary to national policy. It is accepted that residential development is deemed more vulnerable in this context. The indicative masterplan appended to the representation, shows residential development in the medium-long term on the western part of the site. This is primarily within flood zone 1 and therefore appropriate. The Site Selection Methodology (Nov 2018) shows Nutwell Lane (ref 149) as being 'rejected' whilst sites to the north of Armthorpe as 'Remaining options post HELAA but not proposed for allocation'. Therefore these sites are still shown as having potential for development although they are in Flood Zone 3. Why has site 149 been discounted for employment on such merits? The Local Plan Informal Consultation proposed allocations identifies land to the north of Armthorpe as flood zone 3 and corroborates our interpretation of flood risk on the site. It is considered that Site 149 assessed further in light of the flood risk evidence put forward in these and previous representations. The Council’s evidence base does not support the justification for discounting Site 149.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.
Comment Ref: C/Policy 5/05008/1/008
Attend Examination: Attend Hearing
Reason: Please See Cover Letter - We would welcome the opportunity to attend and participate at the EiP on behalf of our client in due course.
Area: Chapter 4: Strategic Approach
Policy: Policy 4: Employment Allocations
Tests of Soundness: Positively prepared
Comment: These two policies are considered collectively for the avoidance of repetition. The employment allocations with permission as at 1st April 2018 (included in Policy 4) are contained within Table E2 of the Local Plan 2019 Publication Draft. (SEE EMAIL FOR Figure 1 : Emerging plan Extract)

The existing employment areas (covered by Policy 5) are set out at paragraph 16.58 and include: There are a number of existing employment sites including: - West Moor Park - an expanding employment area which a range of businesses including nationally significant distribution warehousing and retail companies - Rands Lane - adjacent to West Moor Park, established area with a mix of business uses. Policy 5: Employment Policy Areas (Strategic Policy) states: Employment Policy Areas, as defined on the Policies Map, will continue to be supported primarily for employment uses. Other uses will be supported provided the following criteria are satisfied: A) it can be clearly demonstrated they support the existing or permitted employment uses on the site; or B) they are a specialist use appropriate to the site; or C) are a mix of commercial and/or community uses that provide clear additional benefits to the community. [Savills emphasis] In terms of the policy we are encouraged that the policy allows for mixed and/or additional uses to traditional employment uses. (SEE EMAIL FOR Figure 2 Emerging Local Plan Policies Map Extract) The Policies map extract above clearly shows the existing employment area and two employment allocations, denoted by the blue striped and hatched areas. The landowner has presented, on multiple occasions to the Council, evidence to demonstrate that the land to the south of Nutwell Lane is available and deliverable to bring forward a mixed use, employment led development. Within Armthorpe and the wider Borough, there is a clear, identified need for SME’s in the locality. The site at Nutwell South (149) is ideally located in this respect. However, it should also be emphasised that Site 149 also has the ability to unlock vital infrastructure in the form of the much-needed bypass for the village of Armthorpe, particularly given the first phase of the adjacent West Moor Park development is now built out. Further, the A630 West Moor Link improvement scheme was approved to include a new bridge, improve the width of the A18 carriageway and junction improvements. In addition to this, the work on the A18/A630 regeneration scheme started in July 2019. The proposed employment provision is to accommodate small and medium enterprises (SMEs) which is a different offer to the more traditional employment land uses, notably B2 and B8 uses, contained within the adopted and emerging Development Plan documents. Neither the Local Plan nor the Armthorpe Neighbourhood Plan make an allowance for SMEs. On this basis, it is considered that the Plan as drafted is not currently positive or effective. No revisions have been made since the Informal Consultation in October 2018 irrespective of previous representations requesting further consideration in this respect. As set out in previous representations, the increase in SMEs should be encouraged in order to accommodate and boost the number of new and growing industries and Government funding has been made available specifically for ‘Enhancing the Competitiveness of Small and Medium Sized Enterprises in the Sheffield City Region’. In summary, this mixed-use site could provide much needed sustainable development opportunities as is required within Armthorpe and the wider Borough, given the site sits within a highly sought after, sustainable location. Having established the above, DMBC should consider the site to be a highly sustainable, deliverable and developable allocation which should be supported for mixed use development within the emerging DMBC Local Plan, which provides a much-needed alternative offer for Doncaster. In order to satisfy the four tests of soundness as is required in the Plan making process, the plan should be based on evidence and be an appropriate strategy for the Borough when considered against other reasonable alternatives. It is concerning that there is no reasonable evidence to discount the site, particularly when compared to the sites which have been allocated in the draft Plan. The Site Assessment Methodology (SAM) was published in August 2019 and followed a six-stage process in order to provide a summary of the main evidence base and its conclusion, stating why sites have either fallen out of the process or progressed to the next stage. We consider that the evidence presented to support this assessment is flawed and clearly lacking detail. On this basis the evidence base cannot be deemed to be ‘sound’. Further, the evidence presented to support growth to the north of the village is also flawed, for the reasons set out below: - Site 149 has only been assessed as an employment site, as opposed to a mixed-use site. This is concerning given it has always been promoted in past representations as a mixed-use site. Further it was identified by the Council as a mixed use site in its HELAA. - There are a number of sites which have been allocated, which have scored similarly to Nutwell South within the SAM. - There are sites with severe constraints, which the Council have accepted can be overcome, but the constraints in site 149 are deemed to be too severe to overcome, a stance that we strongly reject as discussed below. Within the SAM, Site 149 was found to have significant negative effects in terms of pollution to surface water bodies and groundwater sources, however there is no definitive evidence which supports the Councils justification in this respect. Notwithstanding this, these are simply technical constraints which can easily be overcome through an agreed surface water drainage strategy and other technical work in due course. In line with the above methodology, the following allocated sites should be reassessed along with Site 149, in order to ensure that the Local Plan and its evidence base is justified and consistent in the site selection methodology. - Site 941 (Land East of Poplars Farm) - HELAA identified it as not suitable for housing, the site was similarly assessed to Site 149 as having Surface Water Pollution Issues. - Site 155 (Leach Land industrial Estate) - significant negative effects in relation to unstable land. It is profoundly clear that the above sites which were also found to have significant negative effects in the SAM, yet were still allocated, should be re-considered until the DMBC can provide the evidence as to why they were allocated but others discounted on the same basis. The above sites are identified as having constraints which could also impact on their deliverability in the short - medium term given the likely challenges of obtaining planning consent for development in this respect. The evidence base to support draft allocation of Site 941 is considered to be unjustified given this site was assessed on a similar basis to Site 149 within both the HELAA and SAM. A further concern is the
allocation of site 1032 (Land at Bankwood Lane) which was allocated on the basis that the site is located within a successful employment area, however, Site 1032 also has identified issues with pollution to surface water bodies and biodiversity issues. This is a confused stance, given that the Nutwell Lane site is also within a proven successful employment location, as evidenced within the Local Plan at paragraph 16.54. There appears to be a lack of consistency in the site selection and assessment approach in this respect. On review of the Sustainability Appraisal (June 2019) it appears that Site 149 has not been progressed based on national policy grounds and on other sustainability criteria, including distances of the site to schools, infrastructure and bus stops. This is a very simplistic approach to measuring the sustainability of a site's location. Planning obligations can be attached to proposed developments to ensure additional bus stops, pedestrian and cycle routes etc are included as part of any prospective development proposal. The newly completed development of the road adjacent to the site at West Moor Park may also assist in reducing travel time and through additional bus stop provision in this respect. A mixed use site also provides the opportunity to increase this shops and services (infrastructure) offer within the local area. The principle of employment uses on sites within Flood Zones 2 & 3 is not considered to be contrary to national policy, albeit it is accepted that residential development is deemed a more vulnerable use in this context. Notwithstanding this, should any residential development be proposed within Flood Zone 2, such a vulnerable use can be considered to be appropriate providing the sequential test can be satisfied. In any event, it is considered that appropriate technical solutions can be achieved to mitigate against any risk of flooding on site, in the form of attenuation tanks and balancing ponds should a detailed development proposal be progressed in due course. As demonstrated on the indicative masterplan appended, the western part of the site is proposed to come forward for residential development in the medium-long term. This would fall primarily on land allocated as flood zone 1 and therefore land which is considered to be entirely appropriate for such a use. It's strongly considered that there has been a degree of inconsistency in assessing the sites and within the overall conclusions made as part of the emerging Plan and as discussed above, the SAM. Figure 2, which is outlined below, is taken from the Housing and Employment Site Selection Methodology and Results Report (September 2018). This shows Nutwell South site as being a 'rejected' whilst the sites to the north of Armithorpe as 'Remaining Options post HELAA but not proposed for allocation' and therefore, such sites are shown as still having potential for development. This is despite them also being allocated within Flood Zone 3. As such, we see no reason why Site 149 has been discounted for employment use on such merits. Figure 3 as set out overhead is taken from the Local Plan Informal Consultation 2018: Proposed Employment land allocations. This plan identifies the land to the north of Armithorpe designated within Flood Zone (SEE EMAIL FOR Figure 3: extract from Housing and Employment Site Selection Methodology and Results Report Figure 4: extract from Local Plan Informal Consultation 2018. Proposed Employment land allocations. Area: Armithorpe) Figure 4, which forms part of the Council's evidence base, corroborates our interpretation of flood risk on the site. On this basis, it is considered that Site 149 should be given further assessment in light of the flood risk evidence put forward in these representations and those submitted in previous years, which, much to the disappointment and frustration of our client, appear to have been completely ignored. The Council’s evidence base does not support the justification for discounting Site 149 in this respect.

Summary:

Policies 4 and 5 - a summary of these policies is included. We are encouraged that the policy allows for mixed and/or additional uses to traditional employment uses. There is a clear, identified need for SMEs within the borough/Armithorpe and site 149 is ideally located for this. It also has the ability to unlock vital infrastructure i.e. a much needed Armithorpe bypass. The proposed SME provision for this site is a different offer as the Local Plan and the Neighbourhood Plan do not currently make an allowance for SMEs. The Publication Local Plan is not positive or effective. An increase in SMEs should be encouraged to accommodate and boost the number of new and growing industries. Government funding has been made available specifically for ‘Enhancing the Competitiveness of Small and Medium Sized Enterprises in the Sheffield City Region’. The Council should consider Site 149 as highly sustainable, deliverable and developable and support it as a mixed use development. The Plan should be based on evidence and an appropriate strategy as there is no reasonable evidence to discount the site. The Site Assessment Methodology is flawed and lacking detail for this site. The evidence base cannot be found sound and the evidence to support growth to the north of the village is also flawed. The reasons are: - Site 149 has only been assessed as an employment site and not a mixed use site. Although has been identified as a mixed-use site in HELAA. - There are a number of allocated sites which has scored similarly to Nutwell South (site 149). - Some sites have constraints which the Council say can be overcome, but constraints for site 149 are deemed to be too severe. We object to this. The Site Selection Methodology finds site 149 has having significant negative effects in terms of pollution to surface water bodies and groundwater sources. There is no definitive evidence for this and they are simply technical constraints which can easily be overcome. The following sites also have constraints which could impact on their deliverability in the short term and they should be reassessed along with Site 149 to ensure the evidence base is justified and consistent: - Site 941 (Land East of Poplars Farm) - HELAA identified it as not suitable for housing, the site was similarly assessed to Site 149 as having Surface Water Pollution Issues - Site 155 (Leach Land Industrial Estate) - significant negative effects in relation to unstable land. The evidence base to support draft allocation of Site 941 is considered to be unjustified given this site was assessed on a similar basis to Site 149 within both the HELAA and Site Selection Methodology. It is also concerning that site 1032 (Bankwood Lane) has been allocated on the basis that the site is within successful employment area, however it also has issues with pollution to surface water bodies and biodiversity issues. This is confused given that Nutwell Lane is also within a successful employment location. There is a lack of consistency in approach. After reviewing the Sustainability Appraisal it appears that site 149 has not been progressed based on national policy grounds and other sustainability criteria including distances to schools, infrastructure and bus stops. This is a very simplistic approach. Planning obligations can be attached to developments to ensure additional bus stops, cycles routes etc are included as part of development proposals.

The principle of employment uses in sites in Flood Zones 2 & 3 is not considered to be contrary to national policy. It is accepted that residential development is deemed a more vulnerable use in this context. The indicative masterplan appended to the representation, shows residential development in the medium-long term on the western part of the site. This is primarily within flood zone 1 and therefore appropriate. The Site Selection Methodology (Nov 2018) shows Nutwell Lane (ref 149) as being 'rejected' whilst sites to the north of Armithorpe as 'Remaining options post HELAA but not proposed for allocation'. Therefore these sites are still shown as having potential for development although they are in Flood Zone 3. Why has site 149 been discounted for employment on such merits? The Local Plan Informal Consultation proposed allocations identifies land to the north of Armithorpe as flood zone 3 and corroborates our interpretation of flood risk on the site. It is considered that Site 149 assessed further in light of the flood risk evidence put forward in these and previous representations. The Council’s evidence base does not support the justification for discounting Site 149.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. It should also be noted that the employment allocation of 481 ha is for the borough and caters for a range in size and type of units and businesses including SMEs.
Policy 4 identifies sites for employment uses and specifies the employment use types that would be supported. Policy 5 supports employment policy areas for employment uses. Minerals can only be worked where they occur. However, it is acknowledged that hydrocarbons can be won using alternative techniques such as directional drilling where conditions allow. Opposition to hydrocarbon developments often orientates around locational factors such as proximity to residential properties and in countryside areas access and landscape impact. As a consequence, the industry is often encouraged or redirected to industrial areas. It is therefore important that the Policies are flexible to allow other uses on the land allocations that may not fall within the identified use classes and particularly which may be temporary in nature, small in footprint and would not prejudice the longer term intention for development.

Summary:
Policy 4 identifies sites for employment uses and specifies the employment use types that would be supported. Policy 5 supports employment policy. Hydrocarbons can be won using directional drilling and industry is redirected to industrial areas. The policy needs to be flexible to allow for other use classes, especially if they are temporary.

Response:
Comment noted. It is important to note the local plan should be read as a whole and other uses will be permitted where relevant considerations have been addressed.
I object to Site 001 Thorne North Junction 6 M18 proposed as Employment Land. Site 001 is Flood Zone 3, it is 182 acres of floodplain, it is approximately 80m from the River Don, with climate change more areas are flooding, we need our floodplains. The DMBC Air Pollution Control Officer does not support development on this land, and increased traffic will worsen already poor air pollution in this area if developed. Traffic through the centre of Thorne is already shocking and the inevitable HGVs and other industrial traffic that elect to go through the centre of town will make things even worse. The whole area is part of The Humberhead Levels, it will have a devastating impact on all wildlife including protected species that live and hunt on it. Loss of high quality Grade 3 - "very good" agricultural land, we need this land to grow food. A vast area of countryside would be lost, replaced by gigantic ugly sheds on the approach to Thorne. There are deer on the fields and they would lose some of their environment if this development went ahead. The land lies outside the urban frame, it is the wrong side of the motorway, it is not a sustainable urban extension. No safe pedestrian/cycle routes can be identified to Site 001. We have enough warehouses in Thorne and we do not need anymore. It is most definitely not a specific site identified for employment by the local community in the Neighbourhood Plan. My family and I have lived on Waterside by Junction 6 for almost 3 years and even in that time the volume of traffic (in both senses) has grown enormously. It is very difficult and dangerous to cross the slip roads already if we want to walk to Aldi or in to Thorne and allowing this development will only make that worse. Isn't it time that the planning office accepted that Thorne and the surrounding areas are full and cannot sustain any more development?!
2.1 Policy 4: “Employment Allocations” (Strategic Policy) states that the sites shown on the Policies Map, will be allocated for employment uses in accordance with three set principles. It is considered that the "principle" element of policy 4 to be sound and legally compliant. 2.2 However, the Local Plan’s designation of employment sites as shown on the Policies Map, is considered to be un-sound. This judgment has been made on the basis that in its current form the scale of designated employment sites is not justified within the Local Plan document and the Local Plan cannot be effective in delivering those sites in a sustainable manner. 2.3 Policy 3 “Level and Distribution of Growth (Strategic Policy)” states that it is the Local Plan’s strategic aim to facilitate the delivery of at least 481 hectares of employment land over the plan period (2015- 2035). 2.4 In the 2018 version of the draft local plan, DMBC had previously justified their figure of 407 hectares by stating that it was derived within the Economic Forecasts and Housing Needs Assessment (Peter Brett Associates, May 2018). Within the Employment Land Needs Assessment (ELNA) Update 2019 this number has now risen to 481 hectares of employment land. It is argued that this is required because the plan period has now been extended by 3 years from 2032 to 2035, and is based on the following calculation: - Land requirement for 17 years (2015-2032) = 409 ha. - Three additional years (pro-rata) = (409/17) X 3 = 72 ha. - Revised land requirement (2015-2035) = (409 + 72) = 481 ha. 2.5 The assumption that 72 ha will be needed for those three years has not been based on clear evidence of need. It is simply a basic calculation that utilises present circumstances to determine what will be needed years in to the future. 2.6 Within DMBC’s Employment Land Needs Assessment (ELNA) Update 2019 it is stated: Whilst it is accepted that warehousing/logistics has helped boost the economy over the last few years, there is now a recognition at the regional and local level that there is a need to diversify the economic offer in the borough such as ensuring that high value jobs are created in areas such as engineering, digital and creative, and advanced materials. This will require other employment uses being provided in the borough, so the right sites need to be delivered at the right time as stated in national guidance. (7.2) 2.7 It is also stated (on page 11) within the Local Plan (2019) that there are a number of weaknesses facing the borough, including: - Relatively low proportion of jobs in creative industries and the knowledge economy - The town centre has lost ‘critical mass’ as investments across the Borough draw people and jobs away from the centre. - Relatively low job/business density - The borough has a higher than average carbon footprint, mainly due to transport uses. 2.8 We consider that this aim of diversifying the local economy is not followed through in the draft policies and allocations, and an issue with the Local Plan’s approach to employment is its designation of too many sites for warehousing and logistics. 2.9 As RPS previously noted in their 2018 representations to DMBC, the land allocated for employment uses in the current draft of the Local Plan may be unviable for Doncaster’s long-term economic growth. Peter Brett’s economic forecast (2018) also outlined potential issues with an oversupply of employment land: 3.22 - If land is to be over-allocated over and above the expected demand, the quantum of overallocation is a matter of judgment. A typical choice seems to be an uplift of around 30%. But the right answer will depend on local circumstances. It is important to avoid excessive oversupply, because if supply is too far above demand individual sites may not have a reasonable prospect of being taken up, which would go against para 22 of the NPPF. Also, if the land concerned is in demand for alternative uses or requires infrastructure investment, then it will be inefficient to reserve it for employment uses which may not materialise. 2.10 In contrast to the above statements, many of the employment sites that are identified in the Polices Map (2019) are in locations that would be primarily appropriate for warehousing/logistics (Use class B8); a use that is already dominant in the borough. A number of sites have been granted planning permission outside the town centre and are likely to be marketed for B8 uses. The sites below have been allocated as employment allocations but do not have planning permission and are located far from the centre: - 441 - Land at Cask Common, Carkcross: Employment Allocation. - 001 - Junction 6 M18, Thorne North: Employment Allocation. - 941 - Site 2, Land East of Poplars Farm, Hurst Lane, Auckley: Employment Allocation. (SEE EMAIL FOR plan of sites) 2.11 Furthermore, if DMBC do manage to diversify the local economy (as set out in ELNA 2019 para 7.2) then presumably smaller sites will be needed to be allocated for employment need than is currently required to meet the needs of the warehousing and logistics sector. 2.12 Within Doncaster’s publication Local Plan (2019), large, well-located brownfield land in urban areas and empty buildings are noted as an opportunity, as well as the re-development opportunities in and around Doncaster, including the town centre (page 12). 2.13 There is minimal evidence that Doncaster’s aspirations for a diverse economy has guided the employment land allocations. At present the designated employment allocations follow a pattern of development that is based on the site requirements of the logistics and warehousing industry. 2.14 An annual review of new job creations (looking at sector, location and required floor space) could be utilised by DMBC in order to effectively guide and justify the Local Plan. 2.15 In conclusion there is a disparity between DMBC’s vision for the borough as an economically diverse and balanced economy and the allocations the plan makes. DMBC should remove some of the employment allocated sites and allocate employment sites within, or closer to the existing town centres for employment use, and/or adopt a phased approach to the release of land suitable for B8 development (see below). This will promote a mix of uses in the borough and will assist potential developers and businesses in finding locations for B1 and B2 uses. 2.16 Overall RPS support the ambitions of Doncaster to become a “more important economic hub with a stronger, more balanced and productive economy”, however this balance can only be achieved through a deliverable and sustainable plan that allocates employment land appropriately.
Summary:

Policy 4  The principle element of Policy 4 is sound and legally compliant. However the Local Plan?s designation of employment sites is considered unsound. The scale of designated employment sites is not justified and the Local Plan cannot be effective in delivering those sites in a sustainable manner.  

Policy 3  The Council has increased its employment land requirement to 481 ha from 407 ha due to the plan period being extended. The assumption that 72 ha will be needed for those three years is not based on a clear evidence of need. It is a basic calculation that utilises present circumstances to determine what will be needed in the future. Paragraph 7.2 of the ELNA states there is a need to diversify the economic offer in the borough and that the right sites need to be delivered at the right time. The aim of diversifying the local economy is not followed through in the draft policies and allocations. The Local Plan designates too many sites for warehousing and logistics.  

The Peter Brett Report states it is ? important to avoid excessive oversupply, because if supply is too far above demand individual sites may not have a reasonable prospect of being taken up,?? Many of the locations identified on the Policies Map are primarily appropriate for warehousing/logistics; a use that is already dominant in the borough. Smaller sites are needed to diversify the economy. There is minimal evidence that Doncaster?s aspirations for a diverse economy has guided the employment allocations. The Council should remove some of the employment sites and allocate sites within or close to the existing town centres for employment use, and/or adopt a phased approach to the release of land suitable for B8 development. This will promote a mix of uses and assist in businesses finding locations for B1 and B2 uses.  

Response:

The 'Housing and Employment Site Selection Methodology and Results Report' states why the sites have been allocated to meet the forecast need to support jobs growth and economic ambitions. The forecast land requirement is based on work undertaken by Peter Brett Associates (PBA) (Economic Forecasts and Housing Needs Assessment) that looked at potential jobs growth across the Borough (detailed to 38 employment type sectors) up to 2032. A land requirement calculation (409 ha) was made based on the PBA forecasts. When extending the plan period by 3 years to 2035 it is not unreasonable to use the calculated annual rate for the years 2015 to 2032 (409/17 = 24ha) and multiply by 3 (24 x 3 = 72ha) to give the requirement for those 3 additional years.
5.1 RPS welcome iPort’s designation as a key proposal in the Local Plan, however the Local Plan will be most effective, and therefore sound, if it incorporates a site-specific policy for iPort. 5.2 Chapter 5 of the Local plan is focused on Doncaster Sheffield Airport. The airport is noted as an economic priority both for Doncaster and for the Sheffield City Region as a whole. Likewise, the economic importance of iPort has been recognised by DMBC and Sheffield City Region as one of the UK’s largest logistics developments. Doncaster iPort was developed following a long and productive working relationship with Doncaster Metropolitan Borough Council and Sheffield City Region, subsequently it has created jobs and contributed significantly to the local and regional economy. The long-term benefits of iPort are recognised in paragraph 16.119. of the Local Plan: When complete, it will provide 6 million square feet of warehousing and is expected to provide up to 5,000 new jobs, as well as local training opportunities. 5.3 Growth and investment at iPort should be supported more coherently through the Local Plan in order to enable its development and expansion. In order to sustain the regeneration gains already made within the Borough, iPort should be prioritised within the Local Plan in a similar way to the Airport. This policy should emphasise that logistics and warehousing development should be directed towards iPort, enshrining iPort as the preferable location for these uses.

**Summary:**
The Local Plan will be most effective and sound if it includes an iPort site-specific policy. Doncaster Sheffield Airport is recognised as a regional priority and has a separate Chapter/policy in the Local Plan. iPort is also a recognised as having economic importance to the local and regional economy. In order to sustain the regeneration gains already made in the borough, iPort should be prioritised in the Local Plan in a similar way to the Airport. The policy should emphasise that B8 uses should be directed towards iPort.

**Response:**
Noted. However its is not considered that iPort requires a separate Local Plan policy as it already benefits from planning permission which sets out the acceptable uses for the site.
3.1 DMBC should approach Employment Land supply through a rational and sustainable approach. At present the Local Plan is not sound in its approach towards managing Employment Land. Within policy 5: "Employment Policy Areas" the Local Plan should contain a section which invokes a scheme of phasing. Sites should be released gradually, in order to meet demand, avoiding excess supply of employment land. Overallocation of land is unsustainable in the long term, as land in Doncaster is a finite resource. A Local Plan that designates employment sites in a hierarchal fashion, applying practicality alongside regional vision will promote sustainable development, whilst guarding against the locality becoming dependent on one type of industry or business. 

3.2 In a letter (dated 29th December 2018) submitted to DMBC as a representation on a planning application (18/02759/OUTA), RPS concluded that the need for B8 warehousing cannot be assumed as a constant; in the longer-term the market has previously seen slowdowns and is ultimately directed by wider, regional/national economic forces. 

3.3 At the time of submission of the letter, there was evidence of limited demand for units from 100,000 to 200,000 sq.ft within the Borough of Doncaster. Since 2018 demand has continued to be limited; the IP2E unit has now been vacant for 28 months and the IP2G unit has been vacant for 12 months. 

3.4 With this in mind, DMBC should do their upmost to ensure development is directed towards existing logistics and warehousing centres. 

3.5 Within Policy 7: "Doncaster Sheffield Airport and Business Park" it is stated that phasing will be utilised in order to regulate the development of a mixed-use urban extension on land to the southwest of Hayfield Green. 

3.6 RPS urge DMBC to take the same approach towards all the Borough’s employment allocations. Echoing paragraph 5.15 of the Local Plan, DMBC must ensure economic growth is achieved in a considered and balanced manner, in order that any growth is delivered in a sustainable way, and with potential negative impacts suitably mitigated.

Summary:

Policy 5 The Local Plan is not sound in managing its approach to Employment Land. Policy 5 should include phasing where sites will be released gradually so to meet demand and avoid an excess supply. A phasing approach would promote sustainable development and guard against Doncaster becoming dependant on one type of industry or business. Development should be directed towards existing logistics and warehousing centres. The Airport policy is a phasing policy and the Council should take the same approach towards all the borough’s employment allocations.

Response:

Noted. There is no requirement for a phased approach as this would hinder the market and would not be supported by national planning policy which states that planning policies should help create the conditions in which businesses can invest, expand and adapt.
Tests of Soundness:

Comment:
Each of the technical papers appended in support of this representation letter include a summary comparison of Thorne North (Site 001) and Gateway 180 (Site 160). It is clear from these summaries and the above commentary that the draft allocation of Site 001 does not represent the best option in planning terms and is consequently unsound. Site 160 should be reconsidered as it provides a deliverable option which is significantly more sustainable. The site is now in the control of Harworth Group Plc which has significant experience and track record of delivering large strategic employment sites, including state-of-the-art logistics and advanced manufacturing parks. We trust that the detail contained within these representations will be taken into account moving forward. Given the level of information presented we would like to arrange a meeting with Officers as soon as possible to discuss Site 160 in more detail. We look forward to hearing from you in relation to possible meeting dates.

Summary:
It is clear that the draft allocation of Site 001 does not represent the best option in planning terms and is consequently unsound. Site 160 should be reconsidered as it provides a deliverable option which is significantly more sustainable. The site is now in the control of Harworth Group Plc which has significant experience and track record of delivering large strategic employment sites, including state-of-the-art logistics and advanced manufacturing parks.

Response:
Noted. The published evidence base behind the site selection (see Site Selection Methodology) details the reasons why sites have been proposed for allocation or rejected. See also the Sustainability Assessment (Wood 2018) which details the independent SA analysis, and Employment Land Review (Colliers) in the evidence base.
We note the concerns of town residents, Thorne Moorends Ward Members, Thorne Moorends Town Council and Thorne Moorends Neighbourhood Plan Working Group in response to the proposed allocation of the site at the Draft Policies and Proposed Site consultation in October 2018 and that they strongly object. In summary their concerns comments relate to: - Loss of countryside; - Flood risk and surface run off; - Increase in traffic and congestion particularly through Thorne Town Centre; - Current road infrastructure is inadequate./ A614 junction is already congested; - Impact on wildife and habitats, including nightjar foraging habitats/proximity of site to Thorne & Hatfield Moors SAC; - Air quality issues; - Noise and light pollution; - Lack of pedestrian access and public transport services; - Too much warehousing already in Thorne/ existing industrial area already so no need for a further one; - Will create low skilled jobs that do not benefit the community; - Does not comply with the Neighbourhood Plan; - Site would be better suited as a golf course and attract tourism into the area; - Potential historical/archaeological importance as the site of 'Thorne Mere'; - Segregated from Thorne by railway line and canal/ site is isolated from the Town of Thorne and even more so than Moorends; - Loss of views/public amenity (walking/countryside); - Negative impact on house prices; - Permission has previously been refused on the site; - Any development should retain the existing hedgerow between the canal and the site; and - Development may compete with demand for Unity at Hatfield-Stainforth; A large majority of these are not material considerations. Those that are material planning considerations can be addressed through a range of measures. The Council is in receipt of various pieces of technical information submitted by Harworth during the emerging Local Plan consultation process and also within their own technical reports which demonstrate that the comments raised above can be addressed and therefore there are no technical constraints to the development of the site. We also note the comments from technical/statutory consultees; DMBC Pollution Control, Campaign to Protect Rural England and Natural England. Consultee: DMBC Pollution Control Comment: Thorne is at risk of being declared an Air Quality Management Area; Technical Information to address concern: This will be assessed within the ES which will be submitted as part of the forthcoming planning application. Consultee: Campaign to Protect Rural England Comment: Thorne & Moorends Neighbourhood Plan makes no reference to a major urban extension: what is envisaged? Large greenfield site here may draw development away from Unity site and therefore be inconsistent with NPPF 2018. Sustainability case not presented. Technical Information to address concern: See earlier section in relation to Policy 3 and also the Employment Land Need and Demand Assessment undertaken by Knight Frank dated September included within Appendix 3. Consultee: Natural England Comment: Recommend that potential hydrological impacts, traffic and industrial emissions and loss of foraging habitat for nightjar are considered in the Habitats Regulations Assessment for the plan. Advise that an ALC survey is undertaken to assess the sustainability of site 160 in relation to loss of productive agricultural land. Technical Information to address concern: See earlier section on Agricultural Land and also the Agricultural Land Assessment by Agricultural Systems Analysis Limited in Appendix 11. (SEE SERVER FOR Appendices)

Area: Chapter 4: Strategic Approach
Policy: Policy 4: Employment Allocations

Tests of Soundness:

Comment:

With regards to the most suitable locations for employment uses which align with the criteria of Strategic Policy 3 we understand that a range of sites have been assessed since the Call for Sites in December 2014, the HELAA 2018 and Sustainability Appraisal. It is therefore clear from these sources that there are a number of sites which are unsuitable for development due to flood risk and location. It also highlights that there are inconsistencies with the Sustainability Appraisal Site Assessments in relation to the way in which sites were assessed and subsequently discounted or identified for allocation. This reinforces the concerns that we have in relation to the Council’s Site Selection Methodology which at the late stages of the Plan have been used to select Site 001 over Site 160. We therefore consider that the selection of Site 001 is unsound and unjustified. It is clear from a review of the Sustainability Appraisal and available technical information that the originally preferred Site 160, Bradholme Farm is the most suitable site for employment within the M18/M180 corridor near to Thorne as set out within our assessment below.

Summary:

Understand that a range of sites have been assessed and that a number of sites are unsuitable due to flood risk and location. There are inconsistencies with the Sustainability Appraisal Site Assessment in the way that sites have been assessed and subsequently discounted or identified for allocation. Consider the selection of Site 001 is unsound and unjustified.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.
We welcome the acknowledgement of the need for an employment site near to Thorne and the M18/M180 Corridor. However, we have significant concerns in relation to the location and characteristics of this site which forms the draft allocation at Site 001, Junction 6 M18, Thorne North, which are set out in detail below. While the currently selected site at Thorne North (site 001) lies within the general M18/M180 motorway corridor zone it is generally disconnected from the Main settlement of Thorne/Moorends in terms of lack of connectivity by all sustainable travel modes. It does not possess the full locational advantages of the Gateway 180 site at junction 1 of the M180 which has unique characteristics in the context of Doncaster MD in that it is the site which best serves the Humber ports while also possessing all of the other market catchment advantages of the M18 sites. We question draft employment allocation Site 001, Thorne North for the following reasons:

- Rationale for the selection of the Site 001;
- Deliverability;
- Highways;
- Accessibility - Ecology;
- Flood Risk and Drainage;
- Earthworks;
- Landscape;
- Deliverability; and
- Comparison with other options

We welcome the acknowledgement of the need for an employment site near to Thorne and the M18/M180 Corridor but have significant concerns in relation to the location and characteristics of draft allocation Site 001. Although Site 001 is within the general M18/M180 motorway corridor, it is generally disconnected from Thorne/Moorends in terms of lack of connectivity by all sustainable travel modes. It does not have the locational advantages of Gateway 180. Gateway 180 has unique characteristics in that it best serves the Humber Ports while also possessing all the other market catchment advantages of the M18 sites. Site 001 is questioned for the following reasons:

Response:

Noted. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
A pre-application enquiry was submitted in May 2019 in relation to this for a new scheme for up to 3,000,000 sq ft (278,709.12 sq m) of employment space (a mix of B1(c), B2 and B8 uses) with ancillary office space and associated servicing and infrastructure including car parking, vehicular and pedestrian circulation, construction of access roads, earthworks to create development platforms, public open space, landscaping and creation of drainage features, electrical substation and ecological works. Consultation responses were received from the following consultees, none of which raised any objections to the proposals: - Highways - Ecology - Heritage - Flood Risk - Contamination - Air Quality - Trees - PROW - Design A copy of the pre-application response letter is attached in Appendix 1 for reference. We note that the Council has not acknowledged the comments raised by the Inspector (identified above) in relation to the Countryside Policy Protection Area when considering the recent pre-application enquiry. (SEE SERVER FOR Appendices)

Summary:
A pre-application enquiry was submitted in May 2019 for a new scheme for up to 3,000,000 sq ft (278,709.12 sq m) of employment space (a mix of B1(c), B2 and B8 uses) with ancillary office space and associated servicing and infrastructure including car parking, vehicular and pedestrian circulation, construction of access roads, earthworks to create development platforms, public open space, landscaping and creation of drainage features, electrical substation and ecological works. Consultation responses were received from the following consultees, none of which raised any objections to the proposals: - Highways - Ecology - Heritage - Flood Risk - Contamination - Air Quality - Trees - PROW - Design It is noted that the Council has not acknowledged the comments raised by the Sites and Policies DPD Inspector in relation to Countryside Policy Protection Area when considering the recent pre-application enquiry.

Response:
Noted. It should be noted that this is a new plan with a new and revised evidence base in line with national guidance.
Comment:

Previous Planning Application Ref: 08/03189/FULM There is a detailed planning history in relation to the site and a significant number of studies were undertaken as part of the 2008 applications (Ref 08/00359/FULM and 08/03189/FULM) for the 'erection of strategic distribution centre (Class B8) with ancillary offices (Class B1), car parking, highway infrastructure, vehicle maintenance unit, vehicle wash and fuelling, drainage infrastructure including 2 no balancing ponds and landscaping'. The first application (Ref 08/00359/FULM) was withdrawn following adverse comments from a range of statutory consultees including the Environment Agency, Highways England and the Yorkshire and Humber Assembly. Additional technical work was undertaken in support of the revised application (08/03189/FULM) which was supported by the Highways Agency, the Environment Agency and Natural England and was recommended for approval by Officers (see Officers Report included within Appendix 9). At committee the application was overturned by Members and refused on the following grounds: "01. The application site is within the Countryside Policy Area (CPA) as designated in the adopted Doncaster Unitary Development Plan (UDP). The proposed development would conflict with the objectives of Policies ENV2 and ENV4 of the UDP since it would be a form of development which will not normally be permitted within the CPA. It would encroach upon open countryside and by reason of its nature, scale, siting and design it would, in the opinion of the Local Planning Authority, harm the character and appearance of the locality and prejudice the purposes of the CPA. The stated economic and social benefits of the local employment which could potentially be generated by the proposed development are considered insufficient to outweigh the harm referred to." It is therefore evident that there are no technical constraints to the development of this site and that the application was recommended for approval by Officers and refused by Planning Committee on policy grounds due to the status of the site in the existing Local Plan. However the Inspector’s comments in relation to the withdrawn Sites and Policies Development Plan document dated 3 June 2014 (see Appendix 12) should be noted and given weight going forward. The Letter identifies in paragraph 38 that: "Within the borough 'countryside' falls into 2 parts; Green Belt land to the west of Doncaster and 'Countryside Policy Protection Area' to the east of Doncaster. I was informed at the Hearings that there is no other 'countryside' which falls outside of these 2 designations. The use of the term 'Countryside Policy Protection Area' is misleading. The area so designated has not been assessed for its special qualities and there is no policy either in the Core Strategy or the DPD which gives it any special status. The land is simply countryside. Referring to it as anything else implies a status which it does not possess". It goes on to identify that "in the Council’s 'strategic sieve', countryside does not carry the same weight as Green Belt. This is proper in my view. However, it does carry the same weight as a Flood Zone 2 designation". (SEE SERVER FOR Appendices)

Summary:

Previous Planning Application Ref: 08/03189/FULM There is a detailed planning history in relation to the site and a significant number of studies were undertaken as part of the 2008 applications (Ref 08/00359/FULM and 08/03189/FULM) for the 'erection of strategic distribution centre (Class B8) with ancillary offices (Class B1), car parking, highway infrastructure, vehicle maintenance unit, vehicle wash and fuelling, drainage infrastructure including 2 no balancing ponds and landscaping'. The first application was withdrawn following adverse comments from a range of statutory consultees. Additional technical work was undertaken in support of the revised application (08/03189/FULM) which was supported by the Highways Agency, the Environment Agency and Natural England and was recommended for approval by Officers. At committee, the application was overturned by Members and refused due to the status of the site in the existing Local Plan. The Inspector’s comments in relation to the withdrawn Sites and Policies Development Plan document dated 3 June 2014 should be noted and given weight going forward. Paragraph 38 states that: "Within the borough 'countryside' falls into 2 parts; Green Belt land to the west of Doncaster and 'Countryside Policy Protection Area' to the east of Doncaster. I was informed at the Hearings that there is no other 'countryside' which falls outside of these 2 designations. The use of the term 'Countryside Policy Protection Area' is misleading. The area so designated has not been assessed for its special qualities and there is no policy either in the Core Strategy or the DPD which gives it any special status. The land is simply countryside. Referring to it as anything else implies a status which it does not possess". It goes on to identify that "in the Council’s 'strategic sieve', countryside does not carry the same weight as Green Belt. This is proper in my view. However, it does carry the same weight as a Flood Zone 2 designation".

Response:

Noted.
Overall we consider that the draft allocation of Site 001 has a range of significant technical and environmental concerns. The proposed allocation of this site is unsound as it is 'unjustified' and is considered to be an inappropriate option when considered against other reasonable and more sustainable alternatives (Site 160, Bradholme Farm) which aligns with draft Policies 1, 2 and 3, as demonstrated below. It is also unsound as it is not consistent with national policy contained within the NPPF which seeks plans to "be prepared with the objective of contributing to the achievement of sustainable development" and positively prepared, "in a way that is aspirational but deliverable".

**Summary:**
Site 001 has a range of significant technical and environmental concerns. This allocation is unsound as it is 'unjustified' and is inappropriate option when considered against other reasonable and more sustainable alternatives (Site 160) which aligns with draft Policies 1, 2, and 3. It is also unsound as it is not consistent with national policy

**Response:**
Noted. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
An Accessibility Review has been prepared by Development Planning Limited (DPL) in support of these representations and is contained within Appendix 4. It should be read alongside the comments set out below. The Sustainability Appraisal of the Doncaster Local Plan 2015 - 2035: Publication Version identifies a neutral effect for criterion 3A ii) (accessibility to public transport - train) for Site 001, Thorne North. However, the DPL review has identified that the walking route to Thorne's railway stations is via a substandard footway which cannot accommodate pedestrians and has no provision for people with a disability. The nearest railway station, Thorne North at 1.2km south east of the site is unlikely to be attractive to users, not least because Site 001 is wholly separated from the town and Thorne North station by the M18 motorway. It is therefore considered that this criterion should be identified as negative in any site selection assessment. In relation to criterion 3Aiii) the Sustainability Appraisal states that the site will promote cycling as it is within 100m of an identified cycle network however the Accessibility Review included within Appendix 4 provides information contrary to this identifying that cycle users will have to negotiate 40mph traffic-dominated Selby Road, to the high speed motorway interchange and along the unlit high speed, heavy vehicle carrying route along Selby Road to site. We therefore question the validity of this claim and accessibility of Site 001, Thorne North via bike. It is therefore considered that the Site 001 assessment should be negative in this respect. The NPPF clearly promotes sustainable development. With regards to transport paragraph 103 acknowledges that "opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making". Paragraph 108 goes on to state that "in assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that opportunities to promote sustainable transport modes can be - or have been - taken up, given the type of development and its location". Overall it is considered that Site 001, Thorne North is not within an accessible location and therefore, in line with the NPPF, it is not considered to be sustainable in terms of accessibility and connectivity. This review highlights flaws within the Sustainability Appraisal of Doncaster Local Plan Publication Version (August 2019) and the methodology used to select sites. (SEE SERVER FOR Appendices)

Summary:
An Accessibility Review has been prepared by Development Planning Ltd (DLP) (Appendix 4). Site 001 - the Sustainability Appraisal for the Plan identifies a neutral effect for criterion 3A ii) (accessibility to public transport - train). However the DLP report identifies that the walking route to Thorne's railway station is via a substandard footway. The nearest railway station (Thorne North) is unlikely to be attractive to users - site 001 is wholly separated from Thorne and the station by the motorway. This criterion should be identified as negative. Criterion 3A iii) states that the site will promote cycling as it is within 100m of an identified cycle network. However, the DLP report identifies that cycle users will have to negotiate the 40 mph traffic dominated Selby Road to the high speed motorway interchange and then along the unlit high speed, heavy vehicle carrying route along Selby Road to the site. The validity of the claim and the accessibility of Site 001, via bike is questioned. This criterion should be identified as negative. The NPPF clearly promotes sustainable development and overall it is considered that Site 001 is not within an accessible location and therefore in line with national guidance, it is not considered to be sustainable in terms of accessibility and connectivity.

Response:
Noted. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.
We note that the outline application for proposed employment development at Thorne North (Ref. 16/02136/OUTM) has been pending determination since 2016. A review of the application has identified that there are a significant number of objections from statutory consultees and also requests for additional information. These are identified below: Objections from technical and Statutory Consultees: - Regeneration and Environment - Air Quality - Built and Natural Environment Team (Ecology) - CPRE (Campaign to Protect Rural England South Yorkshire) - Highways England - Yorkshire Wildlife Trust The latest correspondence from Highways England dated 22nd August 2019 gives notice that they recommend that planning permission not be granted for a further 6 months in order for any outstanding issues to be resolved and that they content that there are appropriate solutions in place to ensure the continued safe and efficient operation of the SRN. Additional work has also been requested by: - Network Rail - South Yorkshire Archaeology Service - Shire Group of IDBs - Barn Owl Trust - Environment Agency - Natural England - Planning Policy - Highways Development & Control Given that a large majority of these objections and requests for additional information have been outstanding for a significant length of time (some since 2016) with very little, if any, additional information being submitted to resolve them we question the ability of the applicant to resolve the identified issues/outstanding information and therefore the deliverability of the site. When allocating sites Council's should be mindful that plans should be "prepared positively, in a way that is aspirational but deliverable" as set out in paragraph 16 of the NPPF. There is also an objection from the Town Council as this application was considered at its meeting on 8th November 2016 and the following comments were made: 1. There were concern (sic) about the location of the access roundabout on Selby Road, and its relationship with the nearby road towards Fishlake. 2. The Council consider that a secondary access is needed for a development of this scale. 3. The Council would wish to be satisfied that the mitigation measures to deal with flooding and drainage issues that will be required in a detailed application adequately deal with the potential problems. 4. The impact of the development and proposed accesses onto North Common Road is not adequately addressed. North Common Road and its access with Selby Road would need improving should this proposal go ahead. 5. The proposals for connectivity between this site and Thorne and Moorends are poor as there would not be safe pedestrian and cycle routes created. Aside from these specific points, some of which we consider are not able to be resolved, we would also question the robustness of key parts of the application supporting information as either being wholly flawed or With regards to deliverability we also note that the application ref: 16/02136/OUTM is being promoted by the landowner and that there is no clear indication of a developer. We therefore question whether the site and the proposed scheme is deliverable if it has not been tested by a developer with a known track record of delivery.

Response:
As with any applications, any technical issues will resolved at the planning application stage. Planning Application ref 16/02136/OUTM is currently 'pending decision’. As at November 2019 a major developer is involved in and is promoting the site. The evidence base supporting the application is being updated.
A review of the ecological information contained within the Environmental Statement and standalone documents for planning application ref. 16/02136/OUTM at Thorne North undertaken by AES-LTD dated 23 August 2019 has identified that the surveys submitted as part of the application are now out of date and that there are survey elements missing. A copy of the note is attached in Appendix 5. In summary, there are the following deficiencies with the application from an ecological perspective: Bats: Bat surveys are out of date with roost surveys being undertaken in June 2015 and activity surveys being undertaken in May, July and September 2016. Tree Climbing surveys were undertaken in August 2016. Activity surveys have not been undertaken in line with standard methodology or current guidelines (Collins, 2016). The site has been assessed by the consultant as being of low habitat suitability, however x6 transect surveys per survey occasion were completed. Note no static (automated) detectors were deployed. For low suitability habitat the guidelines state that x1 detector should be deployed for x5 consecutive nights per transect. Water Vole: The single survey visit was reported as being undertaken in 2016, but no date is given for the survey visit. The visit is out of date and inadequate. The survey has not been undertaken using current guidance (Dean et al. 2016). Amphibians: Both presence / absence surveys (2015) and eDNA surveys (ponds only, 2016) are out of date and will need to be repeated to identify if great crested newt are present within and around the site. Breeding Bird Survey: Survey has been reported from just one survey occasion (24th June 2016). The breeding status of birds or their territories cannot be adequately assessed or mapped from a single visit. The surveys have not been undertaken using standard methodology or current guidelines and is out of date. Winter Bird Survey: No survey undertaken for winter birds. Reptile Survey: No survey undertaken for reptiles; there are records for reptiles - both grass snake and common lizard within 1km of the site however, no surveys have been undertaken to confirm their presence or likely absence despite there being suitable habitat present on site (semi-improved rough grassland field margins, dykes with southern facing banks, scrub, small groups of trees, hedgerows. The surveys as reported are incomplete and now out of date; they have not been undertaken in line with standard methods and current guidance. All protected / notable species and habitat surveys will need to be updated and extended to reflect the current situation on site. The Ecological Appraisal (Smeedon Forman Limited, 2016) does not adequately assess the impacts on protected / notable and priority species. There are also objections to the application from the Built and Natural Environment Team in relation to Ecology and also the Yorkshire Wildlife Trust. Given that there are significant ecological flaws within the planning application and accompanying Environmental Statement it is concerning that the applicant has made no attempt to address these deficiencies, especially given the length of time the application has been pending determination. This shows a lack of commitment to the proposal and, along with wider technical and environmental concerns, brings doubts in relation to the potential to actually develop the site. (SEE SERVER FOR Appendices)

Summary:
The surveys submitted as part of the Thorne North application are put of date and there are survey elements missing. The application has the following ecological deficiencies: Bats ? the surveys are out of date (undertaken in 2015 and 2016 and not undertaken correctly. Water Vole ? the single survey visit was undertaken in 2016, but no date is given for the survey visit. Survey is out of date and inadequate. Amphibians ? surveys are out of date and need to be repeated to identify if great crested newts are present within and around the site. Breeding Bird Survey ? only one survey occasion in June 2016 so it is out of date. It was not undertaken using standard methodology or current guidelines. Winter Bird Survey ? no survey undertaken. Reptile Survey ? no survey undertaken even though there are grass snakes and common lizards within 1km of the site. In summary, the surveys are incomplete and out of date. They not been undertaken in line with standard methods and current guidance. They need to be updated and extended to reflect the current situation on site. The Ecological Appraisal (2016) does not adequately assess the impacts on protected / notable and priority species. There are objections to the application from the Built and Natural Environment Team in relation to Ecology and also the Yorkshire Wildlife Trust. It is concerning that the applicant has made no attempt to address these deficiencies, especially given the length of time the application has been pending determination. This shows a lack of commitment to the proposal and, along with wider technical and environmental concerns, brings doubts in relation to the potential to actually develop the site.

Response:
As with any application, any technical issues will resolved at the Planning application stage. Planning Application ref 16/02136/OUTM is currently ‘pending decision’. As at November 2019 a major developer is involved in and is promoting the site. The evidence base supporting the application has been updated.
A review of planning application ref. 16/02136/OUTM by BWB Consulting Ltd on behalf of Harworth has identified a number of issues in relation to flood risk. A copy of the Flood Risk Technical Note prepared by BWB Consulting dated September 2019 is included within Appendix 6 and should be read alongside this representation. Thorne North is located in Environment Agency (EA) Flood Zone 3 (High Probability), defined as land having a 1 in 100 or greater annual probability of river flooding (>1% Annual Event Probability); or land having a 1 in 200 or greater annual probability of flooding from the sea (>0.5% AEP). This is represented by "Flood Zone 3" on the Flood Map for Planning and not distinguished from Flood Zone 3b (The Functional Floodplain) which is defined as land where water has to flow or be stored in times of flood. Of note is the fact that the flood risk to Thorne North is likely to be a combination of fluvial (river) and tidal risk because of the effects of the River Trent within the vicinity. However there is an apparent lack of assessment of the impact of failure of pumping stations trapping surface water behind defences which is likely to be a significant contributing factor at this location, exacerbated by its relative low lying topography. The Flood Map for Planning does not take into account the presence of flood defences, which provide the site with a degree of protection (i.e. it is within the defended floodplain). The nearest Main River is the River Don to the west. Cooper Consulting Engineers (CCE) produced a Flood Risk Assessment (FRA) to support the current planning application (Ref: 16/02136/OUTM0) in July 2015 which discusses the standard of defence provided to the site based on EA data and a topographical survey. Crest levels of relevant defences are believed to offer a standard of protection against a 1:200 (0.5% AEP) year flood albeit the EA's stated design standard is 1:75 (1.3% AEP). The site is recognised to have flooded historically as recently as 2007 but no information has been provided to explain the mechanism behind this (i.e. overtopping, breach, pumping station failure etc) which would be expected in any FRA. Although the flood defences offer a level of protection, there remains a risk to the site from a breach event, and this is an appropriate consideration in respect of finished levels, access and egress. The EA is generally keen to stress that flood defences are provided to reduce risk, not to facilitate development. The site is noted to experience flood depths (in a 1:100 breach event) of up to 1.0m, which equates to 4.0m AOD. Flood levels could be higher when the effects of recent climate change allowances are taken into account (which they are not), and where a conservative approach may have been taken (such as using the 1:1,000 flood event), this has not been made. EA advice within the Isle of Axholme is that floor levels, in the absence of further evidence, should be set at 4.1m AOD plus an allowance of 300mm for freeboard, i.e. 4.4m AOD and this is proposed within the FRA. Agreement with local stakeholders as to the FFL of 4.4m AOD has been reached. However, given the apparent risk it would not be appropriate to set the levels any lower and still maintain a compliant approach. The requirement to raise the site to achieve 4.4m AOD necessitates an increase in ground level, particularly under buildings, where the difference from existing ground level to proposed level is 1.2 - 2.0m across the site. A topographical survey was not available so LiDAR data was obtained from the EA and used to create a ground model of the existing site. In order to provide further context as to the deliverability of the site, a ground model was created of finished material which would approximate volumes of material could be understood. This was based on the following assumptions; - FFL of 4.4m AOD - External areas set at an average FFL of 1.2m (to accommodate loading docks and minimise requirements to import fill) - Access road at 2.9m AOD - Average construction depths of 300mm - Average topsoil depth of 300mm - All excavated material (except topsoil) is suitable for reuse as a geotechnically suitable fill. The table below summarises the outputs of the modelling that has been undertaken Action: Bulk Cut/Fill Cut (m3): 50,000 Fill (m3): 624,800 Comment: Bulky cut/fill to achieve formation level from existing levels following topsoil removal Action: Fill arising from construction of foundations and drainage Cut (m3): 73,700 Fill (m3): - Net (m3): 501,100 Comment: Based on typical rate of 0.15m3/m2 Based on the assumptions noted, there is a requirement to import over half a million cubic metres of fill material in order to achieve the finished formation level. This requirement has not been considered within the currently pending planning application ref.16/02136/OUTM which throws into doubt the deliverability of the proposal and the site. In particular, the net import of 500,000m3 of fill material could represent: - a total of up to 1m tonnes of material - 50,000 HGV loads (20 tonne wagon) - 100,000 total HGV movements

Summary:
Flood risk - BWB Consulting has identified a number of issues. A Technical Note has been prepared. Thorne North is located in EA Flood Zone 3. The flood risk to Thorne North is likely to be a combination of fluvial (river) and tidal risk because of the effects of the River Trent within the vicinity. There is a lack of assessment of the impact of failure of pumping stations trapping surface water behind defences which is likely to be a significant contributing factor at this location, exacerbated by its relative low lying topography. The Flood Map for Planning does not take into account the presence of flood defences, which provide the site with a degree of protection. The nearest Main River is the River Don to the west. Cooper Consulting Engineers (CCE) produced a Flood Risk Assessment (FRA) to support the current planning application. The site is recognised to have flooded historically as recently as 2007 but no information has been provided to explain the mechanism behind this (i.e. overtopping, breach, pumping station failure etc) which would be expected in any FRA. Although flood defences offer a level of protection, there is a risk to the site from a breach event, and this is an appropriate consideration in respect of finished levels, access and egress. The EA is generally keen to stress that flood defences are provided to reduce risk, not to facilitate development. The site is noted to experience flood depths (in a 1:100...
breach event) of up to 1.0m, which equates to 4.0m AOD. Flood levels could be higher when the effects of recent climate change allowances are taken into account (which they are not), and where a conservative approach may have been taken (such as using the 1:1,000 flood event), this has not been made. EA advice within the Isle of Axholme is that floor levels, in the absence of further evidence, should be set at 4.1m AOD plus an allowance of 300mm for freeboard, i.e. 4.4m AOD and this is proposed within the FRA. Agreement with local stakeholders as to the FFL of 4.4m AOD has been reached. However, given the apparent risk it would not be appropriate to set the levels any lower and still maintain a compliant approach. The requirement to raise the site to achieve 4.4m AOD necessitates an increase in ground level, particularly under buildings, where the difference from existing ground level to proposed level is 1.2 - 2.0m across the site. A topographical survey was not available so LiDAR data was obtained from the EA and used to create a ground model of the existing site. In order to provide further context as to the deliverability of the site, a ground model was created of finished levels so that approximate volumes of material could be understood. This was based on the following assumptions; - FFL of 4.4m AOD - External areas set at an average FFL of 1.2m (to accommodate loading docks and minimise requirements to import fill) - Access road at 2.9m AOD - Average construction depths of 300mm - Average topsoil depth of 300mm - All excavated material (except topsoil) is suitable for reuse as a geotechnically suitable fill. The table below summarises the outputs of the modelling that has been undertaken. Action: Bulk Cut/Fill Cut (m3): 50,000 Fill (m3): 624,800 Net (m3): 574,800 Comment: Bulk cut/fill to achieve formation level from existing levels following to topsoil removal. Action: Fill arising from construction of foundations and drainage Cut (m3): 73,700 Fill (m3): - Net (m3): 501,100 Comment: Based on typical rate of 0.15m3/m2. Based on the assumptions noted, there is a requirement to import over half a million cubic metres of fill material in order to achieve the finished formation level. This requirement has not been considered within the currently pending planning application ref.16/02136/OUTM which throws into doubt the deliverability of the proposal and the site. In particular, the net import of 500,000m3 of fill material could represent: - a total of up to 1m tonnes of material - 50,000 HGV loads (20 tonne wagon) - 100,000 total HGV movements. It is anticipated that development of Site 001 would be very much phased it is obvious that the scale of fill material to be imported, the associated groundworks and the off-site haulage operations would have a very significant impact in themselves and over significant period of time.

Response:
Site is flood zone 3 (High Risk) and ‘benefits from flood defences’ (EA data). For potential development in flood risk areas see Policy 58 ‘Flood Risk Management’. All technical issues including flood risk will be resolved at the planning application stage. As at November 2019 Site 001 has major developer support and the evidence base for the planning application has been updated.
We note that the latest correspondence from Highways England dated 22 August 2019 in relation to the currently pending application (ref: 16/02136/OUTM) at Thorne North recommends that planning permission is not granted for a further 6 months in order for outstanding issues in relation to the Strategic Road Network to be resolved. This follows numerous earlier requests for additional information in relation to the impact on the Strategic Road Network. We understand that Highways England have proposed that trigger points are used to determine when highway interventions are delivered, however to date this information remains outstanding. This information has been outstanding for a significant period of time now and every 6 month Highways England have refreshed their request for the application to not be granted. It appears from a review of public access and also through discussions with Highways England that no progress has been made in resolving this request. We therefore question the deliverability of the proposals from a highways perspective given the length of time that the application has had to resolve this matter.

Summary:
The deliverability of the proposals from a highways perspective is questioned. This is because Highways England have recommended that planning permission is not granted for a further 6 months for outstanding issues to be resolved. This follows numerous other requests for additional information. The information requested from Highways England has been outstanding for a significant period of time.

Response:
Highways England are working with the Council and the applicant to address the issues raised.
Appendix 1 Housing and Employment Sites Detail that there was some local support for Site 001 was selected for the following reasons:

Carter Jonas
Policy 4: Employment Allocations
Chapter 4: Strategic Approach

The Doncaster Local Plan Housing and Employment Site Selection Methodology and Results Report Publication Version (June 2019) and the Sustainability Appraisal of the Doncaster Local Plan 2015 - 2035: Publication Version identify that Site 001 was selected for the following reasons: "As with all the potential sites in the M18 Corridor, this site fails the flood risk sequential test as it is within Flood Zone 3. It also scores similarly to the other sites through the Sustainability Appraisal process. It is currently designated as Countryside Policy Area by the UDP Proposals Map. Core Strategy Policy CS3: Countryside also applies as it continues to protect the countryside to the east of the borough through Countryside Protection Policy Area. It provides an excellent job creation opportunity in the north of the borough and it will complement the successful existing industrial estates to the north of Thorne. There is an outline planning application pending for employment uses. The site has support through the Informal Consultation on the Local Plan which took place in September - October 2018 (see Draft Policies and Proposed Sites Consultation Summary for further information). The Doncaster Employment Land Review suggests that if allocated 50% of the site could be developed in the plan period (36.8ha). Due to the extension of the plan period this would now equate to 70% of the site could be developed in the plan period. The majority of development could be for B8 and some for B2 (85/25% split)". It is clear from the above that there is no substantive planning and environmental evidence available to support the rationale for the selection of Site 001 as an allocation. This is a fundamental shift from the Council’s previous position at the informal consultation stage in September 2018 of the Draft Policies and Proposed Sites where Site 001 was not selected for allocation for the following reasons: "As with all the potential sites in the M18 Corridor, this site fails the flood risk sequential test as it is within Flood Zone 3. It also scores similar to the other sites through the Sustainability Appraisal process. It is currently within Countryside Policy Area as designated by the UDP. Although there are successful existing industrial estates to the north of Thorne which this site could complement and there is an outline planning application pending, there are concerns over the site’s deliverability as there are more deliverable sites elsewhere. The Doncaster Employment Land Review suggests that if allocated 50% of the site could be developed in the plan period (36.8ha). The majority of development could be for B8 and some for B2 (85/25% split). The allocation of this site would exceed the supply of employment land". While Thorne Moors Town Council are now supporting Site 001 they have in the recent past expressed their own concerns with regard to the accessibility and connectivity of this site. It is clear that the many planning, sustainability, delivery and technical issues surrounding the proposed development of this site have not been properly assessed/considered. There has been no further evidence provided as to why the site is now considered a more deliverable site than Site 160, which was the draft allocation in September 2018. We note however from the Local Plan 2018 Draft Policies and Proposed Sites Consultation Summary - Appendix 1 Housing and Employment Sites Detail that there was some local support for Site 001 and it appears to be for this reason alone that the land has been selected for allocation above other more deliverable sites. Whilst there is some local support for the allocation of Site 001, we are concerned that the sustainability and technical issues of this site in comparison to other sites such as Site 160, Bradholme Farm have not been properly assessed/considered during the preparation of the Publication Draft Local Plan. As a result we consider that a significantly less deliverable and less sustainable site has been selected as a draft allocation. The challenges to the deliverability of Thorne North are further evidenced by the ongoing consideration of a planning application, which was submitted in August 2016 (ref.16/02136/OUTM) and is still pending determination, largely due to unresolved technical issues. This application has received a significant number of objections from technical and statutory consultees, along with requests for additional information which are detailed below. To date these have not been resolved. It is evident that there are serious questions over the technical and environmental material considerations as well as overall site deliverability.

Summary:
The Council’s explanation of the reasoning behind the allocation Site 001 (as stated in the Site Selection and Methodology and Results Report) gives no substantial planning and environmental evidence to support the rationale. It is a fundamental shift from the Council’s previous position at the informal consultation stage where Site 001 was not selected for allocation. Although Thorne-Moorends Town Council are now supporting Site 001, they have previously expressed concerns with accessibility and connectivity of the site. It is clear that many planning, sustainability, delivery and technical issues surrounding Site 001 have not been properly assessed/considered. There has been no further evidence proposed as to why the site is now considered a more deliverable site than Site 160. We note that there is some local support for Site 001 and it appears that for this reason alone that the site has been selected for allocation. Whilst there is some local support for the allocation of site 001, there are concerns that the sustainability and technical issues of the site, in comparison to other sites such as 160, have not been properly assessed/considered during the preparation of the Publication version of the Local Plan. It is considered that a significantly less deliverable and less sustainable site has been selected as a draft allocation. The challenges of deliverability of Thorne North are further evidenced by the ongoing consideration of a planning application. This was submitted in August 2016 and is still pending determination. It has received significant objections and has unresolved issues.
The sustainability appraisal (SA) for sites in the M18 corridor (those without planning permission) showed little evidence to support one site over another in terms of SA (see evidence base for SA data). The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood and has used a consistent approach for all sites. Site 160 was originally proposed for allocation in the 2018 consultation. Based on responses to that consultation Site 160 was removed and Site 001 subsequently proposed for allocation. The 2016 planning application is currently pending decision. As at November 2019 a major developer is now promoting the site and the technical evidence base in support of the application has been updated.

Policy 4 - Site 001 - Doubts about the Deliverability of Site 001 Within the Plan Period

2.1 Site 001 was rejected as an allocation during the October 2018 Local Plan consultation. The Council’s stated reasons for rejection of the site within the September 2018 Site Selection Methodology and Results Report provided at that stage were as follows: “Although there are successful existing industrial estates to the north of Thorne which this site could complement, and there is an outline planning application pending, there are concerns over the site’s deliverability as there are more deliverable sites elsewhere.” (our emphasis) 2.2 The Site Selection Report for the Publication Draft Local Plan does not provide any new information to demonstrate why the previous concerns about the deliverability of Site 001 have now been overcome. Whilst a planning application has been submitted for the site, this was lodged some 2 years ago and is still pending - which suggests that there are some issues regarding the suitability of the site for employment that still need to be resolved. 2.3 The attached report by Dove Haigh Phillips (Appendix 3) comments that Thorne is not an established hub for warehousing development and existing employment development has taken place over a much long period of time than the pace achieved at iPort and West Moor Park. 2.4 Dove Haigh Phillips also note that Site 001 is not well related to the main urban area of Doncaster (as recognised by the Colliers Employment Land Review 2018) and there is a limited catchment population to provide a local labour force to support a large scale development at Thorne North. This is demonstrated in the extract from the Sanderson Associates report (Appendix 1), which shows that within a 5mile/8km travel distance from Thorne North there would be approximately a third of the population that would be available within the same distance from rejected site option West Moor Park East (Site 937/1031/938/1014). Population within 8km Travel Distance Site Ref: 937 Location: West Moor Park East Existing Population: 77,500 Existing Households: 33,500 Proposed Population: 9,405 Proposed Households: 4,089 Total Population: 86,905 Total Households: 37,589 Site Ref: 001 Location: Thorne North Existing Population: 29,000 Existing Households: 12,200 Proposed Population: 2,493 Proposed Households: 1,084 Total Population: 31,493 Total Households: 13,284 Site Ref: 441 Location: Carcroft Existing Population: 83,000 Existing Households: 36,200 Proposed Population: 7,390 Proposed Households: 3,213 Total Population: 90,390 Total Households: 39,413 Site Ref: 878/1032 Location: Rossington Existing Population: 70,300 Existing Households: 30,800 Proposed Population: 14,472 Proposed Households: 6,292 Total Population: 84,772 Total Households: 37,092 Site Ref: 941 Location: Poplar Farm Existing Population: 55,200 Existing Households: 23,900 Proposed Population: 14,472 Proposed Households: 5,335 Total Population: 67,471 Total Households: 29,235 2.5 In light of the above, Dove Haigh Phillips consider that it is more likely that the site would deliver 36.8 hectares, as estimated by the Colliers Employment Land Review 2018 (and also confirmed in the subsequent amendments to the Colliers Employment Land Review, made as recently as June 2019). We also note that the Site Selection Report reasons project this lower employment contribution to the Local Plan, 36.8 hectares, than is assumed by the actual figure stated within the Site Selection table, 51.54 hectares. This indicates that there is a 14.74 hectares shortfall in the likely delivery from Site 001. 2.16 In summary, the Council’s previous assessment of Site 001 at the October 2018 Local Plan consultation stage indicates that there are delivery concerns about this option, and no new evidence has been provided at Publication stage to justify its change in status from a rejected allocation to a draft allocation. 2.17 At best, we agree with the conclusion of Colliers and the Site Selection Report that Site 001 would be only likely to deliver up to 36.8 hectares of land over the plan period. This leaves a 14.74 hectare shortfall in the Council’s assumed delivery from this site. (SEE SUPPORTING DOCS for Appendices)

### Summary

Policy 4 - Site 001 - Doubts about the Deliverability of Site 001 Within the Plan Period

Site 001 was rejected as an allocation during October 2018. The Council’s reasons were: “Although there are successful existing industrial estates to the north of Thorne which this site could complement, and there is an outline planning application pending, there are concerns over the site’s deliverability as there are more deliverable sites elsewhere.” The Site Selection Report for the Publication version does not provide any new information to demonstrate why these concerns have been overcome. The planning application was submitted 2 years ago and is still pending. Thorne is not an established hub for warehousing. Site 001 is not well related to the main urban area of Doncaster and there is a limited labour force catchment. Within a 5mile/8km travel distance from Thorne North there is approximately a third of the population that would be available within the same distance from rejected site option West Moor Park East (Site 937/1031/938/1014). Population within 8km travel distance Site Ref: 937 Location: West Moor Park East Existing Population: 77,500 Existing Households: 33,500 Proposed Population: 9,405 Proposed Households: 4,089 Total Population: 86,905 Total Households: 37,589 Site Ref: 001 Location: Thorne North Existing Population: 29,000 Existing Households: 12,200 Proposed Population: 2,493 Proposed Households: 1,084 Total Population: 31,493 Total Households: 13,284 Site Ref: 441 Location: Carcroft Existing Population: 83,000 Existing Households: 36,200 Proposed Population: 7,390 Proposed Households: 3,213 Total Population: 90,390 Total Households: 39,413 Site Ref: 878/1032 Location: Rossington Existing Population: 70,300 Existing Households: 30,800 Proposed Population: 14,472 Proposed Households: 6,292 Total Population: 84,772 Total Households: 37,092 Site Ref: 941 Location: Poplar Farm Existing Population: 55,200 Existing Households: 23,900 Proposed Population: 14,472 Proposed Households: 5,335 Total Population: 67,471 Total Households: 29,235 It is questioned whether Site 001 could deliver the amount of land anticipated by the Local Plan - 51.54 ha. It is more likely to deliver 36.8 ha (as estimated by Colliers). The Site Selection Report reasons project this lower employment contribution to the local plan, 36.8 hectares, than is assumed by the actual
figure stated within the Site Selection table, 51.54 hectares. This indicates that there is a 14.74 hectares shortfall in the likely delivery from Site 001. In summary the Council’s previous assessment of Site 001 at the Informal consultation stage indicates there are delivery concerns about this site option. No new evidence has been provided to justify its change in status from a rejected to draft allocation. Agree with the conclusion of Colliers and the Site Selection Report that Site 001 would be only likely to deliver up to 36.8 hectares of land over the plan period. This leaves a 14.74 ha in the Council’s assumed delivery from this site.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.

Comment:

Policy 4 - Site 001- Allocation of Site 001 Does not Comply with Flood Risk Sequential Test 3.1 Para 158 of the NPPF states that development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. This is a fundamental purpose of the sequential test for flooding. Para 159 indicates that the exception test should only be applied if it is not possible for development to be located in zones with a lower risk of flooding (taking into account wider sustainable development objectives). 3.2 As explained in the attached report by Fairhurst (Appendix 2) all of Site 001 is located within FZ3a, in an area of known ponds and ditch drains, including the presence of shallow groundwater and poor surface water drainage. It is therefore necessary to consider whether the site can be accommodated on a suitable site in a lower zone of flood risk. 3.3 Section 4.4 of the Fairhurst report shows that the developable area of West Moor Park East (Site 937/1031/938/1014) in FZ1 is 48.6 hectares. This quantum of land could replace all of the expected Local Plan contribution of Site 001 we refer to within Section 2 of this objection - 36.8 hectares. It could effectively also replace the greater contribution assumed by the Local Plan - 51.54 hectares. Fairhurst therefore conclude that the application of the sequential test would preferentially select West Moor Park East to Site 001. 3.4 As explained in our client’s general comments on Policy 4, there is no evidence to suggest that West Moor Park East is not a suitable site for employment. It is a site that accords with the spatial strategy of the Local Plan and the sequential test requires that it is considered prior to allocation of land in FZ3a. We therefore consider that the Local Plan does not properly apply the sequential test to Site 001. Allocation of this site in the context of the rejection of allocation of West Moor Park East is contrary to national policy. (SEE SUPPORTING DOCS for Appendices)

Summary:

Policy 4 - Site 001- Allocation of Site 001 Does not Comply with Flood Risk Sequential Test

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
1.1 Blue Anchor Leisure objects to the proposed allocation of Site 441 for employment. 1.2 It is considered that Site 441 is not deliverable for employment within the plan period; allocation of the site fails the sequential approach; and the Sustainability Appraisal (SA) scores set out in the Council’s Site Selection Report are incorrect. 1.3 In this objection we refer to a number of other documents. These include the attached Accessibility Technical Note by Sanderson Associates (Appendix 1); the attached A1M/A19 Technical Note by Sanderson Associates (Appendix 2) and the attached Flood Risk report by Fairhurst (Appendix 3). 1.4 This representation should be read in conjunction with our client’s associated objections to Policies 3 and 4 and the Site Selection process of the Local Plan. (SEE SUPPORTING DOCS for Appendices)

Summary:
Object to the proposed allocation of Site 441 for employment. This site is not deliverable within the plan period; it fails the sequential approach; and the Sustainability Appraisal (SA) scores set out in the Council’s Site Selection Report are incorrect.

Response:
The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.
We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

Area: Chapter 4: Strategic Approach
Policy: Policy 4: Employment Allocations

Tests of Soundness: Positively prepared Effective
Justified Consistent with national

Comment:
Policy 4 - Site 441 - Suggested Change 5.1 Site 441 should be deleted as an employment allocation. The primary concern is that the site is not deliverable due to the high level of uncertainty associated with delivery of the A1M/A19 link. 5.2 In addition, the Local Plan does not properly apply the sequential test to Site 441. Allocation of this site in the context of the rejection of allocation of West Moor Park East is contrary to national policy.

Summary:
Policy 4 - Site 441 - Suggested Change Site 441 should be deleted as an employment allocation. The site is not deliverable due to the high level of uncertainty associated with delivery of the A1M/A19 link and the Local Plan does not properly apply the sequential test to Site 441. Allocation of this site in the context of the rejection of allocation of West Moor Park East is contrary to national policy.

Response:
The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
Policy 4 - Site 441 is not Deliverable Within the Plan Period 2.1 All of Site 441 was identified as land to be safeguarded for employment use in the adopted UDP, but it has not been developed for new employment uses despite the passage of 21 years, which indicates that there are some significant constraints to its development. Para 4.22 of the UDP acknowledges that the site has significant issues, particularly in relation to access and drainage. The Local Plan and evidence base does not provide evidence that these constraints have been overcome. 2.2 In relation to access, Paras 4.31/4.58 of the Local Plan and the Site Selection Report indicate that development of Site 441 is dependent on construction of a new A1M to A19 link road. However, whilst there is reference to this road in Policy 13 of the plan, it is no more than an aspiration. The attached Technical Note by Sanderson Associates (Appendix 2) indicates that: - There is no information available about the precise route of the link road. It is simply an indicative line; - The Southern Pennines Strategic Development Corridor - Strategic Outline Case (SOC) March 2019 explains that the link road is at a very early stage of assessment, with no positive funding available. The SOC states that delivery of this transport intervention "should not be relied upon for planning and development purposes "; - Whether any road is ever built and if so the timescale for the delivery of it is a significant unknown. There will be a need for decisions to be taken about priorities and funding, other schemes will be competing for funding, and even when high level decisions are taken, they are susceptible to being reviewed; and - Beyond this there will be a need for technical work and compulsory purchase of land. This is likely to take implementation beyond the Local Plan period, if the link road happens at all. 2.3 In the absence of certainty about the delivery of the A1M to A19 link road there is no certainty about the delivery of Site 441. It is not a justified or effective allocation. (SEE SUPPORTING DOCS for Appendices)

Summary:
Policy 4 - Site 441 is not Deliverable Within the Plan Period Site 441 was identified as a reserve site UDP and has not been developed which indicates that there are some significant constraints. The UDP acknowledges that the site has significant issues, particularly in relation to access and drainage. The Local Plan and evidence base does not provide evidence that these constraints have been overcome. Paras 4.31/4.58 of the Local Plan and the Site Selection Report say that development of Site 441 is dependent on construction of a new A1M to A19 link road this is no more than an aspiration (Policy 13). The Technical Note by Sanderson Associates (Appendix 2) indicates that: - There is no information available about the precise route of the link road. It is simply an indicative line; - The Southern Pennines Strategic Development Corridor - Strategic Outline Case (SOC) March 2019 explains that the link road is at a very early stage of assessment, with no positive funding available; - Whether any road is ever built and if so the timescale for the delivery of it is a significant unknown. There will be a need for decisions to be taken about priorities and funding, other schemes will be competing for funding, and even when high level decisions are taken, they are susceptible to being reviewed; and - Beyond this there will be a need for technical work and compulsory purchase of land. This is likely to take implementation beyond the Local Plan period, if the link road happens at all. In the absence of certainty about the delivery of the A1M to A19 link road there is no certainty about the delivery of Site 441. It is not a justified or effective allocation.

Response:
The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions.
Policy 4 - Site 441 - Allocation of Site 441 Does not Comply with Flood Risk Sequential Test

3.1 Para 158 of the NPPF states that development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. This is a fundamental purpose of the sequential test for flooding. Para 159 indicates that the exception test should only be applied if it is not possible for development to be located in zones with a lower risk of flooding (taking into account wider sustainable development objectives). 3.2 As explained in the attached report by Fairhurst (Appendix 3) all of Site 441 is located within FZ3a, in an area of known ponds and ditch drains, including the presence of shallow groundwater and poor surface water drainage. It is therefore necessary to consider whether the development proposed can be accommodated on a suitable site in a lower zone of flood risk. 3.3 Section 4.4 of the Fairhurst Report shows that the developable area of West Moor Park East (Site 937/1031/938/1014) in FZ1 is 48.6 hectares. This quantum of land could replace all of the Council’s expected Local plan contribution of Site 441 (12.32 hectares) that is located in FZ3a, and twice the total area of the site available for employment use. Fairhurst therefore conclude that the objectives of the sequential test would preferentially select West Moor Park East to Site 441. 3.4 As explained in our client’s general comments on Policy 4, there is no evidence to suggest that West Moor Park East is not a suitable site for employment. It is a site that accords with the spatial strategy of the Local Plan and the sequential test requires that site is considered prior to allocation of land in FZ3a. We therefore consider that the Local Plan does not properly apply the sequential test to Site 441. Allocation of this site in the context of the rejection of allocation of West Moor Park East is contrary to national policy. (SEE SUPPORTING DOCS for Appendices)

Summary:

Policy 4 - Site 441 - Does not Comply with Flood Risk Sequential Test - Para 158 of the NPPF states that development should not be allocated or permitted if there are reasonably available sites in areas with a lower risk of flooding. Para 159 says that the exception test should only be applied if it is not possible for development to be located in zones with a lower risk of flooding. Site 441 is located within FZ3a, in an area of known ponds and ditch drains, including the presence of shallow groundwater and poor surface water drainage. It is therefore necessary to consider whether the development proposed can be accommodated on a suitable site in a lower zone of flood risk. The developable area of West Moor Park East in FZ1 is 48.6 hectares. This could replace all of the Council’s expected Local plan contribution of Site 441 (12.32 hectares) that is located in FZ3a, and twice the total area of the site available for employment use. A sequential test would preferentially select West Moor Park East to Site 441. There is no evidence to suggest that West Moor Park East is not a suitable site for employment. It accords with the spatial strategy and the sequential test requires that site is considered prior to allocation of land in FZ3a. The Local Plan does not properly apply the sequential test to Site 441. Allocation of this site in the context of the rejection of allocation of West Moor Park East is contrary to national policy.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. This includes reference to flood risk. Site 441 is in flood zone 3 as is Site 013. For potential development in flood risk areas see Policy 58 ‘Flood Risk Management’.
We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

Tests of Soundness: Positively prepared, Effective, Justified, Consistent with national

Summary: Have concerns about the amount and choice of employment land proposed for allocation in Policy 4. West Moor Park East is the most logical and sustainable option to remedy the problems with the employment land supply proposed by Policy 4. We also demonstrate that the Council’s reasons for non-allocation of West Moor Park East are either inaccurate or they are not sound reasons for rejection of the site. In this objection we refer to a number of other documents. These include the attached Accessibility Technical Note by Sanderson Associates (Appendix 1); the attached A1M/A19 Technical Note by Sanderson Associates (Appendix 1A); the attached Technical Note by Fore Consulting (Appendix 2); the attached Flood Risk report by Fairhurst (Appendix 3); the attached assessment of employment site options by Dove Haigh Phillips (Appendix 4); the attached Vision document (Appendix 5) submitted in support of West Moor Park East in response to the October 2018 Local Plan consultation; and an attached updated Masterplan for West Moor Park East (Appendix 6). This representation should be read in conjunction with our client’s associated objections to Policy 3 and the Site Selection process of the Local Plan. (SEE SUPPORTING DOCS for Appendices)

Response: Noted. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.
Comment Ref: C/Policy 4: Sug Change/05197/1/020

Attend Examination: Attend Hearing

Reason: We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

Area: Chapter 4: Strategic Approach

Policy: Policy 4: Employment Allocations

Tests of Soundness: Positively prepared  Effective
Justified  Consistent with national

Comment:

6.1 Land at West Moor Park East (Sites 1031/937, 1014 and 938) should be included as an additional employment allocation. 6.2 Without prejudice, if West Moor Park East is not included as an additional employment allocation, then it should be identified as a ‘reserve’ employment allocation to provide an additional buffer to, and flexibility in, the employment land supply. This request is consistent with our client’s associated objection to Policy 3.

Summary:

Land at West Moor Park East (Sites 1031/937, 1014 and 938) should be included as an additional employment allocation. If it is not included as an additional employment allocation, then it should be identified as a ‘reserve’ employment allocation to provide an additional buffer to, and flexibility in, the employment land supply.

Response:

Noted. No change required. Section 6 of the ELNA explains how the employment land need figure has been calculated i.e. additional factors such as competition and choice have been taken into account in the final figure. There is also an Employment Land Supply Buffer Note which explains this in more detail. There is no need therefore for additional land to be provided.
Policy 4: Employment Allocations

Response to Council's Reasons for Rejection of West Moor Park East as an Allocation

5.1 The Council's formal reasons for not allocating West Moor Park East are set out at Page 216 of the June 2019 Housing and Employment Site Selection Methodology and Results Report. We summarise each reason and provide a response as follows. As with all the potential sites, this site fails the sequential test as it is within Flood Zone 3. 5.2 Whilst part of West Moor Park East is within FZ3, 54% (48.6 hectares) of the site is located in FZ1, with the remainder being located in FZ3a and FZ2. This quantum of land could replace almost all of the Council's expected Local Plan contribution of Site 001 (51.54 hectares) that is located in FZ3a. It could replace all of the Council's expected Local plan contribution of Site 441 (12.32 hectares) that is located in FZ3a. The attached report by Fairhurst (Appendix 3) therefore concludes that the application of the sequential test would preferentially select West Moor Park East to these two sites. It scores similarly to the other sites through the Sustainability Appraisal Process. 5.3 Our client's associated objection to the Site Selection process of the Local Plan shows that West Moor Park East is more accessible by bus than most of the other proposed employment allocations. Our objection also includes a revised SA that demonstrates that development of West Moor Park East would have material advantages in socio-economic terms over Site 001, a draft allocation. It is currently within Countryside Policy Area as designated by the UDP Proposals Map. 5.4 The extent of the UDP-defined Countryside Policy Area is not up to date. The UDP was adopted in 1998, and was only intended to provide for employment needs up to 2006. 5.5 The Core Strategy post-dates the UDP and Policy CS2 identifies a number of Countryside Policy Areas as broad areas of growth including land around Junction 4 of the M180. This demonstrates that the principle of use of Countryside Policy Area at West Moor Park East to help meet employment needs reflects current policy, and should not be at issue. The Council has proposed allocation of Site 001 for employment and all of this is within a defined Countryside Policy Area, as is all of Site 941. The majority of the site is within the Armthorpe Neighbourhood Plan as Countryside Policy Area (as included in the Core Strategy in Policy CS3). 5.6 Only part of West Moor Park East is located within FZ3. The remainder being located in FZ1 and FZ2. This quantum of land could replace all of the Council's expected Local plan contribution of Site 441 (12.32 hectares) that is located in FZ3a. 5.7 All of the employment land referred to within the Neighbourhood Plan was not required to consider the need for such land to meet the employment needs of Doncaster on a strategic basis. (See EMAIL FOR Amrthorpe Neighbourhood Plan (2018) Proposals Map Extract) 5.8 West Moor Park East is located within Armthorpe Neighbourhood Plan. The majority of the site is within the Armthorpe Neighbourhood Plan as Countryside Policy Area (as included in the Core Strategy in Policy CS3). The site is to the east of the M18 and more isolated than other options that are available across the Borough. The site accords with the spatial strategy of the Local Plan (and also the Core Strategy), as indicated above. West Moor Park East has good links with both the built-up area of Armthorpe and the main urban area of Doncaster. The site is well related to the main residential areas of Armthorpe for large employment uses to cause adverse amenity impacts in respect of HGV movements, noise and light pollution. 5.10 We note that Site 001, a draft employment allocation, is located on the western side of the M18 to the main built up area of Thorne. That site has a similar relationship with Thorne to how West Moor Park East relates to Armthorpe, but it does not receive similar comments in the Site Selection Report. We do not therefore consider that the Council has been consistent in its approach. There are other options directly adjacent to the main urban area and main towns which offer better opportunities for securing sustainable development.
such as long-term public transport access. 5.11 In terms of the draft allocations in the Local Plan, neither Site 941 or Site 001 is located adjacent to the main urban area or a main town. 5.12 The attached report by Sanderson Associates (Appendix 1) shows that the Council has not taken account of the proposals to improve bus accessibility to West Moor Park East that were provided to the Council at October 2018 Local Plan stage. These would provide for a high frequency service to the site on a long-term basis, as First Bus has confirmed that the service would be selffunding after five years. Sanderson Associates also show that compared to a number of the other proposed employment allocations within the Local Plan West Moor Park East would have superior accessibility, and it would also score well in terms of its ability to minimise travel to work distances. This is demonstrated in the extract from the Sandersons report overleaf. Site: 937/1031 West Moor Park East Train Accessibility: N/A Bus Accessibility: 0/Cycle Accessibility: 0 Road Access: + Ability to minimise travel to work distances: + Site: 001 Thorne North Train Accessibility: - Bus Accessibility: - Cycle Accessibility: 0 Road Access: + Ability to minimise travel to work distances: - Site: 092 Balby Carr Bank Train Accessibility: - Bus Accessibility: 0/Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: + Site: 441 Carcroft Common Train Accessibility: 0 Bus Accessibility: 0/Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: + Site: 878/1032 Rossington Train Accessibility: N/A Bus Accessibility: + Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: + Site: 941 Poplars Farm Train Accessibility: - Bus Accessibility: 0/Cycle Accessibility: 0 Road Access: 0/Ability to minimise travel to work distances: 0 Extract from Sandersons Associates Report There are also concerns over vehicular access from Junction 4 of 5.13 Section 3 of the attached report by Fore Consulting (Appendix 2) explains that access arrangements were identified within the Transport and Access Appraisal submitted to the Council as part of our client's response to the October 2018 Local Plan consultation. The works comprise the widening of Holme Wood Lane, which is an adopted public highway to 7.3m between Junction 4 of the M18 and the proposed access point. 5.14 The works that are likely to be necessary would be accommodated within land that is either adopted public highway or on land that is controlled by the promoter. As such, works anticipated to be required on Holme Wood Lane are readily deliverable by the promoter and the details of this can be secured by DMBC through a future planning process. 5.15 The report by Fore Consulting also includes a capacity study that demonstrates that development of West Moor Park East for employment use would give rise to traffic that can be satisfactorily accommodated at Junction 4 of the M18. The main operation issues on the local highway network relate to traffic queuing back from roundabouts on the A630 West Moor Link at certain times. However, it is anticipated that the West Moor Link improvement scheme (the first phase of which is under construction) will resolve the existing queuing issues on the A630 and further improve the capacity and operation of key junctions along the A630 corridor. The allocation of this site would exceed the supply of employment land for this plan period 5.16 Policy 3 of the Local Plan indicates that the 481 hectare employment land requirement is a minimum target. The allocation of West Moor Park East for employment would be in accordance with Policy 3. In any event, in this objection to Policy 4 we have identified issues with the employment land supply in quantitative and choice terms. West Moor Park East is the logical option to address these issues. Sites other than this one have been chosen for allocation in order to provide a balanced distribution of employment land across the Borough. 5.17 Allocation of West Moor Park East would accord with the spatial strategy of the Local Plan, as explained at Para 5.7 above. 5.18 The employment land strategy of the Local Plan has to be deliverable to be effective. The ELNA Update confirms that the majority of the need for employment is for warehousing development, and operators have specific requirements, such as good access to the motorway network, proximity to a labour pool and a high profile location. West Moor Park East is a good fit with these needs. 5.19 Allocation of employment sites such as Site 441 (Carcroft) to provide a ‘balanced distribution’ will not be effective if they do not meet the needs of the market. This objection has demonstrated that this site is unlikely to be brought forward during the plan period due to its dependency on the A1M/A19 link road, the delivery of which is highly uncertain. 5.20 Given all of the above, we do not consider that the Council’s stated reasons for rejection of West Moor Park East are justified, credible or sound overall. (SEE SUPPORTING DOCS for Appendices) Summary: Policy 4 - Response to Council’s Reasons for Rejection of West Moor Park East as an Allocation The Council’s reason for not allocating the site and the response given to this is written below: Council reason: As with all the potential sites, this site fails the sequential test as it is within Flood Zone 3 Response: Part of the site is within FZ3, 54% (48.6 hectares) of the site is located in FZ1, with the remainder being located in FZ3a and FZ2. This amount of land could replace almost all of the Council’s expected Local Plan contribution of Site 001 (51.54 hectares) that is located in FZ3a. It could replace all of the Council’s expected Local plan contribution of Site 441 (12.32 hectares) that is located in FZ3a. The Fairhurst report concludes that the application of the sequential test would preferentially select West Moor Park East to these two sites. Council reason: It scores similarly to the other sites through the Sustainability Appraisal Process Response: The site is more accessible by bus than most of the other proposed employment allocations. The revised SA demonstrates that development of the site could have material advantages on socio-economic terms over site 001 Council reason: It is currently within Countryside Policy Area as designated by the UDP Proposals Map Response: The extent of the UDP-defined Countryside Policy Area is not up to date. The UDP was adopted in 1998, and was only intended to provide for employment needs up to 2006. The Core Strategy post-dates the UDP and Policy CS2 identifies a number of Countryside Policy Areas as broad areas of growth including land around Junction 4 of the M180. This demonstrates that the principle of use of Countryside Policy Area at West Moor Park East to help meet employment needs reflects current policy, and should not be at issue. The Council has proposed allocation of Site 001 for employment and all of this is within a defined Countryside Policy Area, as is all of Site 941. Council reason: The majority of the site is within the Armthorpe Neighbourhood Plan as Countryside Policy Area (as included in the Core Strategy in Policy CS3). Response: Para 30 of the NPPF says that once the Local Plan is adopted the policies will take precedence over the Neighbourhood Plan. The Neighbourhood Plan and the Local Plan are dealing with different issues and at different scales of geography. The Neighbourhood Plan was not bound to the Local Plan, as the spatial strategy of the Local Plan are dealing with different issues and at different scales of geography. The Neighbourhood Plan was not bound to deal with employment needs up to 2006. The Core Strategy post-dates the UDP and Policy CS2 identifies a number of Countryside Policy Areas as broad areas of growth including land around Junction 4 of the M180. This demonstrates that the principle of use of Countryside Policy Area at West Moor Park East to help meet employment needs reflects current policy, and should not be at issue. The Council has proposed allocation of Site 001 for employment and all of this is within a defined Countryside Policy Area, as is all of Site 941. Council reason: The majority of the site is within the Armthorpe Neighbourhood Plan as Countryside Policy Area (as included in the Core Strategy in Policy CS3). Response: Para 30 of the NPPF says that once the Local Plan is adopted the policies will take precedence over the Neighbourhood Plan. The Neighbourhood Plan and the Local Plan are dealing with different issues and at different scales of geography. The Neighbourhood Plan was not bound to designate the employment needed by Doncaster on a Borough wide basis in the most appropriate place. Council reason: The Parish Council were given the opportunity to consider potential employment sites during the preparation of the Neighbourhood Plan, and as a result of that process there is already a substantial amount of employment land within the Parish boundary. Response: Only part of the site is located within the Neighbourhood Plan area. It is an area of land at the periphery of the Plan. The Neighbourhood Plan was not required to consider the need for such land to meet the employment needs of Doncaster on a strategic basis. All of the employment land in the Neighbourhood Plan is either developed or under construction. The new Local Plan looks to provide for employment land needs up to 2035 including within Main Towns. West Moor Park East clearly confirms to the spatial strategy of the Local Plan. Council reason: The site is to the east of the M18 and more isolated than other options that are available across the Borough. Response: The location of the site accords with the spatial strategy of the Local Plan and the Core Strategy. It has good links with both the built-up area of Armthorpe and the main urban area of Doncaster. There is a large available labour pool nearby, thus fostering sustainable travel patterns to work opportunities and minimising in-commuting. The existing and proposed population within a 5 miles/8km would be approximately 86,000 persons, the second highest level compared to the proposed employment allocations of the Local Plan. Population within 8km Travel Distance Site Ref: 937 Location: West Moor Park East Existing Population: 77,500 Existing Households: 33,500 Proposed Population: 9,405 Proposed Households: 4,089 Total Population: 86,905 Total Households: 37,589 Site Ref: 001 Location: Thorne North Existing Population: 29,000 Existing Households: 12,200 Proposed Population: 2,493 Proposed Households: 1,084 Total Population: 31,493 Total Households: 13,284 Site Ref: 441 Location: Carcroft Existing Population: 83,000 Existing Households: 36,200 Proposed Population: 7,390 Proposed Households: 3,213 Total Population: 90,390 Total Households: 39,413 Site Ref: 878/1032 Location: Rossington Existing

The site is not isolated and is well related to a large population. It would benefit from a high frequency bus service. It is not close to residential areas to cause adverse amenity impacts regarding HGV movements, noise and light pollution. Site 001 is located to the west of the M18 and it has a similar relationship with Thorne to how West Moor Park East relates to Armthorpe, yet it does not receive similar comments. The Council has not been consistent in its approach. Council reason: There are other options directly adjacent to the main urban area and main towns which offer better opportunities for securing sustainable development such as long-term public transport access. Response: Neither Site 941 and Site 001 are adjacent to the main urban area or a main town. The Council has not considered the proposals to improve bus accessibility to West Moor Park East. The site would have superior accessibility and would minimise travel to work distances. This is shown below:

Council reason: There are other options directly adjacent to the main urban area and main towns which offer better opportunities for securing sustainable development such as long-term public transport access. Response: Neither Site 941 and Site 001 are adjacent to the main urban area or a main town. The Council has not considered the proposals to improve bus accessibility to West Moor Park East. The site would have superior accessibility and would minimise travel to work distances. This is shown below:
We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

Policy 4: Employment Allocations

Tests of Soundness: Positively prepared

Effective

Justified

Consistent with national

Comment:

Policy 4 - Insufficient Land Allocated to Meet Employment Land Requirement in respect of Choice 3. The table of the employment land portfolio proposed at Page 38 of the Local Plan indicates that 25% (118 hectares) has already been developed. A further 42% (201 hectares) of the supply already has planning permission, leaving a balance of 34% (162 hectares) to be provided in new allocations to meet the Policy 3 minimum requirement of 481 hectares. 3.2 Given that only a third of the employment land supply up to 2035 is therefore uncommitted, we are concerned about the ‘choice’ of new employment land that will be available over the plan period for large users, particularly those with needs of a strategic scale. The reasons for this concern are as follows: - A) our associated objection to Policy 3 shows that Doncaster has one of the fastest growing economies in the North of England, with a significantly higher GVA than the national or regional average. It is a high demand location - if Doncaster does not provide a sufficient choice of large sites to meet the demands of the market it will lose potential investment and employment to other Local Authority areas that offer such land; - B) the ELNA Update 2019 indicates that almost three quarters of the employment land need over the plan period is of a specific type i.e. non-strategic and strategic warehousing. The attached report by Dow Haigh Phillips (Appendix 4) states that such employment requires scale, proximity to high profile locations which are really accessible from the major transport networks and proximity to a labour pool; and - C) in relation to sites that already have planning permission, there are only 3 that would be considered suitable for warehousing, the largest component of the employment land need - Site 418 (Unity/DN7), Site 747 (iPort) and Site 1099 (West Moor Park Extension). 3.3. Having regard to the above, in this context the Local Plan only allocates 6 new sites that will contribute to the employment land supply. Two of these, Sites 092 (Balby Carr Bank) and 258 (Plot 1 Lakeside) are less than 10 hectares in size, more suited to localised business needs and not geared to address the considerable warehousing requirement identified by the ELNA. 3.4 Site 441 (Land at Carcroft Common) has poor access to the motorway network, and we explain above why we do not consider that this side will contribute to the Local Plan employment land requirement, due to the high level of uncertainty associated with the A1M/A19 link. 3.5 This leaves two other sites allocated for development, Site 001 (Thornton North) and Site 941 (Site 2, Land east of Poppers Farm). Site 001 is, in our view, the only large site that is allocated within the plan that has good access to the motorway network, albeit the labour pool is limited for this opportunity, as stated above. As explained within the attached report by Dow Haigh Phillips (Appendix 4), Site 941 is remote from the motorway network and its success will be connected with the success of the airport. 3.6 In summary, we consider that Policy 4 does not provide a sufficient range and choice of sites available for large scale users during the plan period up to 2035 and it is therefore not positively prepared, justified or effective. The number of sites allocated is modest relative to the acknowledged success of the Doncaster economy, and only a single site is well-suited to meet the key warehousing requirement identified by the ELNA. (SEE SUPPORTING DOCS for Appendices)

Summary:

Policy 4 - Insufficient Land Allocated to Meet Employment Land Requirement in respect of Choice 3. The table proposed on page 38 of the Plan indicates that 25% (162 ha) has already been developed. 42% (201 ha) already has planning permission which leaves 34% (162 ha) to be provided as new allocations. Concerned about the ‘choice’ of new sites employment land that will be available over the plan period for large scale users. The reasons for this are: 1. Doncaster has one of the fastest growing economies in the north and it will lose potential investment and employment if it does not provide a sufficient choice of large sites. 2. The ELNA update 2019 indicates that almost three quarters of employment land need is of a specific type (non-strategic and strategic warehousing). The evidence base submitted with this representation states that this type of employment requires scale, proximity to high profile locations which are accessible from major transport networks, and proximity to a labour pool. 3. There are only 3 sites with planning permission which are considered suitable for warehousing - Site 418 (Unity), Site 747 (iPort) and Site 1099 (West Moor Park Extension). The Local Plan only allocates 6 new sites and 2 of these are less than 10 ha in size and more suited to local business needs. Site 441 (Carcroft Common) has poor access to the motorway which leaves 2 other sites for development: Thorne North (001) and Site 2, land east of Poppers Farm (941). Thorne North has good access to the motorway but the labour pool is limited and site 941 is remote from the motorway and its success is connected with the airport. In summary Policy 4 does not provide a sufficient range and choice of sites available for large scale users during the plan period, therefore it is not positively prepared, justified or effective. The number of sites is modest relative to the acknowledged success of the Doncaster economy and only one site is well suited to meet the warehousing needs identified in the ELNA.

Response:

Comments noted. The Employment land Supply Figure as explained in the ELNA is ambitious and realistic. Section 6 of the ELNA explains how the employment land need figure has been calculated i.e. additional factors such as competition and choice have been taken into account in the final figure. There is also an Employment Land Supply Buffer Note which explains this in more detail. There is no need therefore for additional land to be provided.
Policy 4: Employment Allocations

The site comprises a significant amount of land promoted by two willing landowners which can make a valuable contribution to the employment land requirement; West Moor Park East has good links with both the built development extending to in excess of 55% (48.6 hectares) of West Moor Park East is in FZ1, the lowest zone of flood risk. As explained in the attached report by Fairhurst (Appendix 3), our client has held discussions with the Environment Agency to agree in principle that the remainder of the site can be developed for employment, subject to mitigation; Written agreement has been reached with First Bus to extend the existing 15 Service into the site to provide high frequency bus services, as explained in the attached reports by Fore Consulting and Sanderson Associates (Appendices 1 and 2). First Bus have confirmed that they anticipate that this service would be self-funding after five years; West Moor Park East has good links with both the built-up area of Armthorpe and the main urban area of Doncaster. These links will be improved by the proposed dualling and other improvements to the A630 (West Moor Link), which are funded and under construction. Table 7 of the Local Plan confirms that the West Moor Link is intended to facilitate the unlocking of employment development along the route - which West Moor Park East would be consistent with; - Given the proximity of West Moor Park East to Armthorpe and the main urban area of Doncaster, there would be a large available labour pool nearby, thus fostering sustainable travel patterns to work opportunities and minimising in-commuting. The attached report by Sanderson Associates (Appendix 1) shows that within 5 miles/8km the existing and proposed population would be approximately 86,000 persons, the second highest potential labour force compared to the proposed employment allocations of the Local Plan. (ii) Commercial Factors 4.9 There are presently six well known commercial developers that have expressed serious interest in the development of West Moor Park East for employment. This is a good barometer of the commercial suitability of the site. The attached report by Dove Haigh Phillips (Appendix 4) identifies other relevant factors as follows: - West Moor Park East is part-previously-developed, with an extant planning permission for major motorsport and leisure uses, as explained in the attached Vision Document; - 55% (48.6 hectares) of West Moor Park East is in FZ1, the lowest zone of flood risk. As explained in the attached report by Fairhurst (Appendix 3), our client has held discussions with the Environment Agency to agree in principle that the remainder of the site can be developed for employment, subject to mitigation; - Written agreement has been reached with First Bus to extend the existing 15 Service into the site to provide high frequency bus services, as explained in the attached reports by Fore Consulting and Sanderson Associates (Appendices 1 and 2). First Bus have confirmed that they anticipate that this service would be self-funding after five years; - West Moor Park East has good links with both the built-up area of Armthorpe and the main urban area of Doncaster. These links will be improved by the proposed dualling and other improvements to the A630 (West Moor Link), which are funded and under construction. Table 7 of the Local Plan confirms that the West Moor Link is intended to facilitate the unlocking of employment development along the route - which West Moor Park East would be consistent with; - Given the proximity of West Moor Park East to Armthorpe and the main urban area of Doncaster, there would be a large available labour pool nearby, thus fostering sustainable travel patterns to work opportunities and minimising in-commuting. The attached report by Sanderson Associates (Appendix 1) shows that within 5 miles/8km the existing and proposed population would be approximately 86,000 persons, the second highest potential labour force compared to the proposed employment allocations of the Local Plan. - Major motorsport and leisure developments are proposed on the opposite side of the motorway from West Moor Park which is a proven and established employment location. None of the other sites with a draft allocation can demonstrate these fundamental characteristics; - The site has direct frontage to the M18 including the south bound exit slip road and frontage from the Junction 4 roundabout into the site; - The site is located close to existing built development extending to in excess of 2,500,000 sq ft of large format buildings and several other smaller units. Occupiers, developers and investors are attracted to sites and locations which have a proven track record of delivering sustainable development over may economic cycles; - The site has close proximity to the labour pool of Armthorpe. This will allow development at the site to contribute to minimising travel to work distances (irrespective of any bus improvements which would also provide access to a significant workforce via extension of the No.15 service) Achievability 4.10 The attached report by Dove Haigh Phillips (Appendix 4) concludes that due to a combination of the key characteristics above, high quality development at...
West Moor Park East is eminently achievable. Dove Haigh Phillips find that the site satisfies all of the six key occupier requirements as set out in Section 6 of their report. 4.11 In the light of the above, we conclude that West Moor Park East is an extremely good fit to address the employment land supply deficiencies we have identified, in both planning and commercial terms. At Issue 4 below we respond the Council’s stated reasons for rejection of the site as an allocation. (SEE SUPPORTING DOCS for Appendices)

Summary:

Policy 4 - Most Appropriate Option to Address Deficiencies in Employment Land Supply - West Moor Park East (Site 937/1031/938/1014  Policy 4 can be made more sound by including West Moor Park East as an additional allocation. The site has been intensively promoted by the client to the Council (in 2018/2019) and numerous meetings haven taken place as well as a public exhibition in 2019. Since October 2018, engagement has taken place with the adjacent landowner of site 938/1014 and they have confirmed their willingness to promote their land in collaboration. This potential development area has not increased from 79 ha to 88.54 ha and a revised masterplan has been prepared. West Moor Park East is the most appropriate option to address deficiencies in the employment land supply for the following reasons: Availability The entire site is in two ownerships who are collaborating to promote the land. Vacant possession can be delivered at short notice. Land necessary to deliver access is within the public highway and within ownership of existing land owners. Suitability The development of the site is consistent with the plan’s spatial strategy. Policy 3 indicates that B1, B2 and B8 classes in main towns will be met in locations with good access to the M18/M180 network. Junction 4 is an established location for large scale employment. The Core Strategy identifies this junction as an area for growth. Other relevant planning factors include: - West Moor Park East is part-previously-developed, with an extant planning permission for major motorsport and leisure uses; - West Moor Park East comprises land of a low landscape quality, as explained in the attached Vision Document; - 55% (48.6 hectares) of West Moor Park East is in FZ1, the lowest zone of flood risk and discussions have taken place with the Environment Agency to agree in principle that the remainder of the site can be developed for employment, subject to mitigation; - Written agreement has been reached with First Bus to extend the existing 15 Service into the site to provide high frequency bus services; - West Moor Park East has good links with both the built-up area of Armthorpe and the main urban area of Doncaster. These links will be improved by the proposed dualling and other improvements to the A630 (West Moor Link), which are funded and under construction. There is a large available labour pool nearby. There are six well known commercial developers that have expressed serious interest in the development of the site.

Response:

Noted. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.
Chapter 4: Strategic Approach

Policy 4: Employment Allocations

We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

Policy Tests of Soundness:
- Positively prepared
- Effective
- Justified
- Consistent with national

Reason:
There is no information available about the precise route of the link road. It is simply an indicative line; the Southern Pennines Strategic Development Corridor - Strategic Outline Case (SOC) March 2019 explains that the link road is at a very early stage of assessment, with no positive funding available. The SOC states that delivery of this transport intervention "should not be relied upon for planning and development purposes". The timescale for the delivery of the link road is a significant unknown if it happens at all. There will be need for decisions to be taken about priorities and funding, other schemes will be competing for funding, and even when high level decisions are taken, they are susceptible to being reviewed; and - Beyond this there will be a need for technical work and compulsory purchase of land. This is likely to take implementation beyond the Local Plan period, if the link road happens at all. Concerns about the delivery of the A1M to A19 link road there is no certainty about the delivery of Site 441. It is not a justifiable or effective allocation. 2.11 Regarding drainage, the attached report by Fairhurst (Appendix 3) shows that Site 441 is not only in Flood Zone 3, but it is located in an area of known ponds and ditch drains, including the presence of shallow groundwater and poor surface water drainage. This may impact on the suitability and viability of the site for employment and no evidence has been provided by the Council to demonstrate otherwise.

Concerns about Site 878/1032 relates to land that was allocated in the Doncaster UDP for employment/as an employment policy. This site has been occupied by an existing tanker supplier business for almost 40 years. It is not considered to be a suitable site for employment purposes, and does not meet the quantum of land required by the Local Plan. This site is an example of a site that has been developed for new employment uses despite the passage of 21 years, which indicates that there are some significant constraints to its development. The UDP acknowledges that the site has significant issues, particularly in relation to access and drainage. The Local Plan and evidence base does not provide evidence that these constraints have been overcome.

Concerns about Site 441 Land at Carcroft Common. All of this site was identified as land to be safeguarded for employment use in the adopted UDP, but it has not been developed for new employment uses despite the passage of 21 years, which indicates that there are some significant constraints to its development. The UDP acknowledges that the site has significant issues, particularly in relation to access and drainage. The Local Plan and evidence base does not provide evidence that these constraints have been overcome. 2.9 In relation to access, Paras 4.31 and 4.58 of the Local Plan and the Site Selection Report indicate that development of Site 441 is dependent on construction of a new A1M to A19 link road. However, whilst there is reference to this road in Policy 13 of the plan, it is no more than an aspiration at this stage. The attached Technical Note by Sanderson Associates (Appendix 1A) indicates that: - There is no information available about the precise route of the link road. It is simply an indicative line; - The Southern Pennines Strategic Development Corridor - Strategic Outline Case (SOC) March 2019 explains that the link road is at a very early stage of assessment, with no positive funding available. The SOC states that delivery of this transport intervention "should not be relied upon for planning and development purposes"; - The timescale for the delivery of the link road is a significant unknown if it happens at all. There will be a need for decisions to be taken about priorities and funding, other schemes will be competing for funding, and even when high level decisions are taken, they are susceptible to being reviewed; and - Beyond this there will be a need for technical work and compulsory purchase of land. This is likely to take implementation beyond the Local Plan period, if the link road happens at all. 2.10 In the absence of certainty about the delivery of the A1M to A19 link road there is no certainty about the delivery of Site 441. It is not a justifiable or effective allocation. 2.11 Regarding drainage, the attached report by Fairhurst (Appendix 3) shows that Site 441 is not only in Flood Zone 3, but it is located in an area of known ponds and ditch drains, including the presence of shallow groundwater and poor surface water drainage. This may impact on the suitability and viability of the site for employment and no evidence has been provided by the Council to demonstrate otherwise.

Concerns about Site 001 Thorne North. The attached report by Dove Haigh Phillips (Appendix 4) comments that Thorne is not an established hub for warehousing development and existing employment development has taken place over a much longer period of time than the pace achieved at iPort and West Moor Park. 2.14 Dove Haigh Phillips also note that Site 001 is not well related to the main urban area of Doncaster (as recognised by the Colliers Employment Land Review 2018) and there is a limited catchment population to provide a local labour force to support a large scale development at Thorne North (as demonstrated at Section 3 of the attached report by Sanderson Associates (Appendix 1)). 2.15 In light of the above Dove Haigh Phillips question whether Site 001 could deliver the quantum of land anticipated by the Local Plan (51.54 hectares) over the plan period. Dove Haigh Phillips consider that it is more likely that the site would deliver 36.8 hectares, as estimated by the Colliers Employment Land Review 2018 (and subsequent amendments). 2.16 This leaves a 14.74 hectares shortfall in the contribution that Site 001 would make towards the employment land target. Concerns about Site 941 Land at Bankwood Lane, Rossington. 2.5 Site 878/1032 relates to land that was allocated in the Doncaster UDP for employment/as an employment policy area. However, this site has been occupied by an existing tanker supplier business for almost 40 years. 2.6 We consider that it is inappropriate to rely on Site 878/1032 as an employment option that will count towards the minimum 481 hectare target. As explained in the attached report by Dove Haigh Phillips (Appendix 4), the reality is that this site is an 'existing' employment site that has been in employment use well before the base date of the new Local Plan. If it is taken up by a new business(es) that would not represent a net addition to Doncaster's employment land supply; rather it would be a change in the occupier of the land. 2.7 This leaves a 17.68 hectare shortfall in land needed to meet the target. Concerns about Site 441 Land at Carcroft Common. All of this site was identified as land to be safeguarded for employment use in the adopted UDP, but it has not been developed for new employment uses despite the passage of 21 years, which indicates that there are some significant constraints to its development. The UDP acknowledges that the site has significant issues, particularly in relation to access and drainage. The Local Plan and evidence base does not provide evidence that these constraints have been overcome.
Employment Land Requirement in Quantitative Terms: Conclusion

2.20 Given that Site 878/1032 is already in employment use it does not provide a net contribution to the employment land supply of Doncaster through allocation under Policy 4. The 17.68 hectare employment land supply contribution from this site should be deleted. 2.21 There is considerable risk about the delivery of Site 441. In the absence of certainty about the delivery of the A1M to A19 link road there is no certainty about the Local Plan contribution of this site. The assumed contribution that Site 441 will make towards the employment land supply, 12.32 hectares, is not sound. 2.22 Based on the professional commercial judgements of Colliers and Dove Haigh Phillips, there is also concern about the Local Plan contribution of Sites 001 and 941. Doubt has been cast on delivery of 49 hectares of land from these two sites during the plan period. 2.23 We therefore conclude that the total quantitative shortfall of land from allocated sources needed to meet the minimum employment land requirement could be as high as 78 hectares. The plan is not positively prepared, justified or effective in that regard. 2.24 This also assumes that there is no slippage of delivery from sites with planning permission.

However, as explained in our objection to Policy 3, Dove Haigh Phillips also advise that in respect of employment sites with planning permission, which make up 201 hectares (42%) of the employment land supply, it is advisable to allow for a modest slippage rate of 10% due to unforeseen constraints. This would amount to a further potential 20-hectare delivery shortfall in the employment land supply of the Local Plan. (SEE SUPPORTING DOCS for Appendices)

Summary:

Policy 4 - Insufficient Land Allocated to Meet Employment Land Requirement in Quantitative Terms

Policy 4 (like Policy 3) does not provide a buffer of land over and above the 481 ha requirement. This is a high risk strategy, bearing in mind it is difficult to accurately predict delivery of sites over a 20 year period. The plan is therefore not positively prepared or justified. There is a very strong likelihood that the employment land allocations will not deliver 481 ha of land: Concerns about Site 878/1032 East of Bankwood Lane, Rossington This site was allocated in the UDP for employment uses and has been occupied by an existing tanker supplier for 40 years. It is inappropriate to rely on this site to count towards supply. This is an existing site which if taken up by a new business would not represent a net addition to supply. It would be a change of occupier. This leaves a 17.68 hectare shortfall in land needed to meet the target. Concerns about Site 441 Land at Carkcroft Common The whole site was identified for employment use in the adopted UDP, but it has not been developed. This indicates that there are significant constraints. The UDP acknowledges that there are issues, particularly in relation to access and drainage. The Local Plan and evidence base do not show that these constraints have been overcome. Paras 4.31 and 4.58 of the Local Plan and the Site Selection Report indicate that development is dependent on the construction of a A1M to A19 link road. Policy 13 references this as an aspiration at this stage. The Technical Note by Sanderson Associates (attached as Appendix 1A) states that: - There is no information available about the precise route of the link road. - The Southern Pennines Strategic Development Corridor - Strategic Outline Case (SOC) March 2019 explains that the link road is at a very early stage of assessment, with no positive funding available. - The timescale for the delivery of the road is a significant unknown if it happens at all. Decisions need to be taken about priorities and funding, other schemes will be competing for funding, and even when high level decisions are taken, they are susceptible to being reviewed; and - There is a need for technical work and compulsory purchase of land. A report by Fairhurst (attached as an appendix) shows that Site 441 is in Flood Zone 3, and is also located in an area of ponds and ditch drains, including the presence of shallow groundwater and poor surface water drainage. There is no evidence from the Council to demonstrate how these will not impact on the suitability and viability of the site. The delivery of Site 441 is not justified, it is not an effective allocation and is not sound. Concerns about Site 001 Thorne North The Dove Haigh Phillips (attached as an Appendix) comments that Thorne is not an established area for warehousing and that existing development has taken place over a long period of time. It is also not well related to the main urban area of Doncaster and there is a limited catchment population to provide a local labour force. It is questioned that site 001 could deliver the amount of anticipated land over the plan period (51.54 ha). It is more likely to deliver 36.8 hectares, as estimated by the Colliers Employment Land Review. This leaves a 14.74 hectares shortfall in the contribution that Site 001 would make towards the employment land target. Concerns about Site 941 Site 2, Land East of Poplars Farm, Hurst Lane, Auckley The Dove Haigh Phillips report explains that development of Site 941 will be contingent on the growth of the airport and airport-related businesses. The aggregate of the adjacent Site 517 and Site 941 is 112.59 hectares. Given the scale of land available and the remoteness from the motorway network, it is questioned whether Site 941 could deliver the amount of land anticipated by the Local Plan (68.54 ha). It is considered that it is more likely that the site would deliver 50%, which amounts to 34.27 hectares. In summary, as Site 878/1032 is already in employment use, it does not provide a net contribution to the employment land supply and this contribution should be deleted. There is risk about the delivery of Site 441 particularly in the absence of certainty about the delivery of the A1M to A19 link road so this assumed contribution is not sound. There is also concern about the Local Plan contribution of Sites 001 and 941. Doubt has been cast on delivery of 49 hectares of land from these two sites during the plan period. It is concluded that the total quantitative shortfall of land from allocated sources needed to meet the minimum employment land requirement could be as high as 78 hectares. Therefore the plan is not positively prepared, justified or effective. Allowance should also be given for a modest slippage rate of 10% for sites with planning permission. Sites with permission make up 201 hectares (42%) of the employment land supply. A 10% slippage would result in a potential 20-hectare delivery shortfall in the employment land supply of the Local Plan.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. Noted. No change required. Section 6 of the ELNA explains how the employment land need figure has been calculated i.e. additional factors such as competition and choice have been taken into account in the final figure. There is also an Employment Land Supply Buffer Note which explains this in more detail. There is no need therefore for additional land to be provided.
We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

**Tests of Soundness:**
- Positively prepared
- Effective
- Justified
- Consistent with national

**Comment:**
Inaccurate Sustainability Appraisal Scores for West Moor Park East (Site 937/1031) 3A(ii) Distance to Bus Stop

3.1 In addition to the concerns regarding the SA appraisal approach relating to public transport accessibility, which are detailed in the attached Sandersons Associates report (Appendix 1), there is a clear inaccuracy regarding the scoring of SA 3A(ii). 3.2 As explained above, at the 2018 Informal Draft Local Plan consultation stage Blue Anchor Leisure submitted a package of information specific to West Moor Park East (Site 937/1031/938/1014), including written confirmation with costs from First Bus that an existing frequent bus route (Service 15) can be extended into the site; and that this service could become viable after five years without subsidy. 3.3 The extension of the 15 Service frequent bus route into the site should result in a light green score in relation to ‘distance to bus stop (3A(ii))’ as this would result in a stop within the proposed development, but West Moor Park East is currently awarded a pink (negative) score. 8A(i) Encourage the Re-use of Land and Buildings 3.4 In the SA West Moor Park East (Site 937/1031/938/1014) is awarded an orange (neutral) score in relation to the re-use of land and buildings (8A(i)) which indicates that it is wholly a greenfield site that has not been previously-developed. 3.5 However, the land occupied by West Moor Park East accommodates numerous roads, tracks, car parking areas and structures associated with the existing motorsport uses on the site; and abandoned buildings associated with the former Holme Wood Farm - as demonstrated by the pictures and site description provided to the Council in the Vision document that was submitted at the 2018 Informal Draft Local Plan consultation stage (Appendix 5). It is inaccurate to refer to it as a wholly greenfield site. The site should be awarded a light green score (site is located on brownfield land and would bring back into effective use previously-developed land and/or buildings (gross area up to 4 ha). 13B(i) Archaeology 3.6 The SA identifies that there would be significant negative effects (red score) on archaeology (13B(i)) with the development of West Moor Park East (Site 937/1031/938/1014) that may not be possible to mitigate. However, the part of the site identified as having a constraint already has a part implemented and extant planning permission for major motorsport and leisure uses (LPA refs: 09/00728/OUTA and 10/01593/REMM) - which is a clear indication that development is acceptable. The proposed development of the site for employment would give rise to no greater impact on archaeology than this fallback position and therefore it should be awarded an orange (no adverse impact) score. At worse the score should be pink (adverse impact which may be possible to mitigate). (SEE SUPPORTING DOCS for Appendices)

**Summary:**
Inaccurate Sustainability Appraisal Scores for West Moor Park East (Site 937/1031)

**Response:**
Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum. The SA scoring process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The Housing and Employment Site Selection and Result Report provides further information.
Concerned about a number of aspects regarding the Site Selection Methodology for employment sites. This particularly concerns:

- the soundness of the Sustainability Appraisal methodology and scoring points that the Council has used to assess the sites - inaccurate SA scores for the rejected employment option at West Moor Park East (Site 937/1031) - and inaccurate and inconsistent SA scores for proposed employment allocations 001, 092, 441 and 941. We also have concerns about the application of the flood risk sequential test to employment site options. We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

The SA scoring process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The Housing and Employment Site Selection and Result Report provides further information.

**Comment:**
Site Selection - Failure to Apply Sequential Test  Para 158 of the NPPF states that development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. This is a fundamental purpose of the sequential test for flooding.  
6.2 However, Section 4.4 of the attached report by Fairhurst (Appendix 3) shows that the developable area of West Moor Park East Site 937/1031/938/1014 in FZ1 is 48.6 hectares. This quantum of land could replace almost all of the Council's expected Local Plan contribution of Site 001 (51.54 hectares) that is located in FZ3a. It could replace all of the Council's expected Local Plan contribution of Site 441 (12.32 hectares) that is located in FZ3a. Fairhurst therefore conclude that the application of the objectives of the sequential test would preferentially select West Moor Park East to these two sites.  
6.3 In the light of the above we consider that the application of the sequential test to employment site options is flawed. This is an issue of considerable concern given that the sequential test was identified by the Inspector for the withdrawn Doncaster Sites and Policies DPD in a letter dated 3 June 2014 (Appendix 7). At Para 42 of that letter the Inspector concluded: "42. I am not persuaded that the Council has applied these tests as stringently as the NPPF requires. I do not consider that the Council's starting point has been to seek to steer development away from areas with the highest probability of flood risk. I have seen no evidence that this objective has been properly weighed against wider sustainability objectives or that such an exercise has demonstrated that it is 'not possible' to locate development in areas of lower probability of flooding. It is only when these matters have been fully assessed that the Exceptions Test should be applied. As its name suggests the test should involve only exceptional cases. Again I have seen no clear evidence that the Council has weighed the risk from flooding against the wider sustainability benefits to the community which would accrue. Site-specific flood risk assessments have not been carried out in all cases."  
6.4 Until the sequential test is correctly applied for employment site options (which would inevitably require land to be allocated at West Moor Park East in preference to Sites 001 and 441) we consider that there is a considerable risk that the Local Plan will be found unsound for similar flood risk reasons as identified in respect of the Sites and Policies DPD.  
(SEE SUPPORTING DOCS for Appendices)

**Summary:**
Site Selection - Failure to Apply Sequential Test  Para 158 of the NPPF states that development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. This is a fundamental purpose of the sequential test for flooding. However the evidence submitted as part of the representation shows that the developable area of West Moor Park East in FZ1 is 48.6 ha. This amount of land should replace almost all of the Council's expected Local Plan contribution of Site 001 (51.4 ha) that is located in FZ3a. It could replace all of the Council's expected contribution of Site 441 (12.32 ha) that is located in FZ3a. The sequential test applied to employment sites is flawed and this is an issue for concern when considering the Inspector's findings on the Sites and Policies DPD. Until the sequential test is correctly applied for the employment site options (which would inevitably required West Moor Park East to be allocated in preference to Sites 001 and 441) there is considerable risk that the Local Plan will be found unsound for similar flood risk reasons as per the Sites and Policies DPD.

**Response:**
The SA scoring process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites including flood risk. The Housing and Employment Site Selection and Result Report provides further information.
Our full response is provided by supporting letter dated 26th September 2019 (L017) and associated Plan 1. The response should therefore be read in the wider context of that letter. Policy 4 - Employment Allocations (Strategic Policy) Policy 4 'Employment Allocations (Strategic Policy)' allocates land for employment uses in accordance with those sites identified by Table 4 of the Publication Draft Plan and the accompanying Proposals Map. On those sites allocated for employment uses, emerging Policy 4 sets out that: a) Only business (B1 b/c), general industry (B2) and storage and distribution (B8) uses will be permitted on these sites unless the proposal is ancillary to the employment use. b) The employment sites will be developed in accordance with the development requirements set out in Appendix 2 and other relevant Local Plan policies. c) For employment or other developments that propose 20+ direct jobs, the Council will seek to enter into a local labour agreement with the developer/applicant to provide an agreed percentage target for local labour, a training and recruitment plan and a commitment to an agreed target for the proportion of local procurement of services and supplies. Whilst TVI support identification of their land for employment uses (Site Ref: 1032) it is considered that in order for emerging Policy 4 to be considered fully effective, justified, in line with national policy and therefore "sound", a degree of flexibility should be afforded in the policy for consideration of other uses that are not ancillary. This would allow the plan to adapt to any changes in the market. The National Planning Policy Framework (2019) makes clear at paragraph 11 a) that "plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change". Again, at paragraph 81, planning policies should "be flexible enough to accommodate needs not anticipated in the plan, allow for new and flexible working practices [...] and to enable a rapid response to changes in economic circumstances". Flexibility should be built into the wording of Policy 4 to enable other uses to be considered should circumstances change and to allow the plan to be able to provide a rapid response to changes in economic circumstances or other rapid change in an area not envisaged in the plan. Policy 4 (A) On this basis, the inclusion of a criteria-based approach in Policy 4, such as that proposed for Employment Policy Areas under emerging Policy 5, would be supported. It is noted that in 'employment policy areas' other uses are 'supported' provided a number of criteria are met. Policy 4 (A) allocates the employment sites 'only' for B1(b/c), B2 and B8. Other uses are allowed but 'only' where they are ancillary. In order to accord with national policy and provide some flexibility in approach, we consider Policy 4 (A) could be reworded as follows with proposed new policy wording underlined. "A) Only business (B1 b/c), general industry (B2) and storage and distribution (B8) uses will be permitted on these sites unless the proposal is ancillary to the employment uses where an alternative use would accord with the Policy 5 criteria and other relevant policies in the Plan." This would ensure the emphasis is on such sites being brought forward for B1(b/c), B2/B8 uses but allows consideration of other non ancillary uses in particular circumstances in line with national planning policy. Policy 4 (C) Policy 4 (C) seeks to enter into local labour agreements to agree target percentages for use of local labour, establish a training and recruitment plan and provide a commitment for an agreed target for local procurement of services and supplies. Whilst our client supports use of local businesses and suppliers in new developments, such a policy requirement could prevent a full and proper competitive tendering process for new developments and limit the use of certain contractors resulting in them not being able to tender for projects related to the site. This could have adverse consequences on the ability of our client to deliver economic investment on the site in the most cost effective manner. This relates to both the construction and operation phase of any development brought forward. Consequently, we consider such a policy should not be included within the development plan and whilst discussions can take place on individual sites, inclusion of the Policy 4(C) criteria could hamper delivery of some projects in a very competitive market and the uncertain economic climate. On this basis we request that Criteria (C) in Policy 4 be deleted from the policy wording.
Summary:
The representation includes an additional document providing information on land in the control of Tanks and Vessels Industries. It includes information on site description, previous applications, references the Local Plan policies 2, 4 and 5 and comments further on policies 4 and 5. TVI support identification of their land for employment uses (Site Ref: 1032). Policy 4 needs more flexibility (like policy 5) to include other uses that are not ancillary. This would allow the plan to adapt to any changes in the market. (quotes NPPF paragraph 11 ("plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change") and Paragraph 81 (be flexible enough to accommodate needs not anticipated in the plan, allow for new and flexible working practices […] and to enable a rapid response to changes in economic circumstances") Policy 4A - include a criteria based approach in policy 4 (as in Policy 5)? it is noted that in 'employment policy areas' other uses are 'supported' provided a number of criteria are met. Policy 4 (A) 'only' allocates B1(b/c), B2 and B8 where ancillary. Suggest rewording (shown in capitals)- “A) Only business (B1 b/c), general industry (B2) and storage and distribution (B8) uses will be permitted on these sites unless the proposal is ancillary to the employment use OR WHERE AN ALTERNATIVE USE WOULD ACCORD WITH THE POLICY 5 CRITERIA AND OTHER RELEVANT POLICIES IN THE PLAN.” Policy 4 C) seeks to enter into local labour agreements and agree percentages of local labour use? this could prevent a full and proper competitive tendering for new developments, limit the use of certain contractors and have adverse economic investment consequences. Policy 4 C) should be deleted from the policy wording.

Response:
No change proposed to Criteria A. These sites are allocated for employment use in order to meet the job need for the borough and are protected for that purpose. No change proposed to Criteria C. The aim of local labour agreements is to ensure that local people benefit from development in the borough. The Council works closely with employers and local training providers to ensure that this happens.
Bankwood Lane, Rossington

tables 4 confirms that the allocated site at Bankwood Lane comprises a
Site Ref. 1032

criteria could hamper delivery of some projects in a very competitive market and the uncertain economic climate. On this bas-

manner. This relates to both the construction and operation phase of any development brought forward. Consequently, we consi-

the site. This could have adverse consequences on the ability of our client to deliver economic investment on the site in the

training and recruitment plan and provide a commitment for an agreed target for local procurement of services and supplies. Under Table 4, sites to be allocated for employment uses include: - Site Ref. 1032 - Bankwood Lane, Rossington Table 4 confirms that the allocated site at Bankwood Lane comprises a
gross site area of 17.84ha which is identified as available for employment uses and is to be developed in the plan period. The Policies Map

TVI support the identification of land within their ownership at Bankwood Lane, Rossington as an employment site for
B1(b/c), B2 and B8 uses under emerging Policy 4 of the Local Plan Publication Draft. The allocation of Site Ref. 1032 will contribute towards the

employment development needs of TVI and the Doncaster Borough, with Rossington identified under emerging Policy 2 as a Main Town where
appropriate levels of employment growth are to be located. The site is considered to be suitable for employment uses given its location within
the existing Bankwood Lane Industrial Estate and that it benefits from excellent connectivity with the strategic road network (SRN) including the
recently completed Great Yorkshire Way to the north. Further connectivity between the site and the SRN would be supported by the Link Road
proposed under applications 18/00548/FULM & 18/02114/FULM which would connect the industrial estate to the West End Lane Roundabout to
the west and the SRN beyond, boosting the productivity and efficiency of the industrial estate. However, in line with representations submitted to
the Local Plan Draft Policies consultation in October 2018, while TVI support the identification of their land for employment uses (Site Ref:
1032) it is considered that in order for emerging Policy 4 to be considered fully effective, in line with national policy and therefore 'sound', a
degree of flexibility should be afforded in the policy for consideration of other uses that are not ancillary. This would allow the plan to adapt to
any changes in the market. The National Planning Policy Framework (2019) makes clear at paragraph 11 a) that "plans should positively seek
opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change". Again, at paragraph B1, planning policies should "be flexible enough to accommodate needs not anticipated in the plan, allow for new and flexible working practices [...] and to enable a rapid response to changes in economic circumstances". Flexibility should be built into the wording of Policy 4 to enable other uses to be considered should circumstances change and to allow the plan to be able to provide a rapid response to changes in economic circumstances or other rapid change in an area not envisaged in the plan. On this basis, the inclusion of a criteria-based approach in Policy 4, such as that proposed for Employment Policy Areas under emerging Policy 5, would be supported. It is noted that in employment policy areas' other uses are 'supported' provided a number of criteria are met. Policy 4 (A) allocates the employment sites 'only' for B1(b/c), B2 and B8. Other uses are allowed but 'only' where they are ancillary. In order to accord with national policy and provide some flexibility in approach, we consider Policy 4 (A) could be re-worded as follows with proposed new policy wording underlined. "A) Only business (B1 b/c), general industry (B2) and storage and distribution (B8) uses will be permitted on these sites unless the proposal is ancillary to the employment use. b) The employment sites will be developed in accordance with the development requirements set out in Appendix 2 and other relevant Local Plan policies. c) For employment or other developments that propose 20+ direct jobs, the Council will seek to enter into a local labour agreement with the developer/ applicant to provide an agreed percentage target for local labour, a training and recruitment plan and a commitment to an agreed target for the proportion of local procurement of services and supplies. Under Table 4, sites to be allocated for employment uses include: - Site Ref. 1032 - Bankwood Lane, Rossington Table 4 confirms that the allocated site at Bankwood Lane comprises a
gross site area of 17.84ha which is identified as available for employment uses and is to be developed in the plan period. The Policies Map

TVI support the identification of land within their ownership at Bankwood Lane, Rossington as an 'Employment Allocation' identified below as Site Ref. 1032. (See EMAIL FOR Export of Plan) TVI support the identification of land within their ownership at Bankwood Lane, Rossington as an employment site for
B1(b/c), B2 and B8 uses under emerging Policy 4 of the Local Plan Publication Draft. The allocation of Site Ref. 1032 will contribute towards the
employment development needs of TVI and the Doncaster Borough, with Rossington identified under emerging Policy 2 as a Main Town where

Percentage criteria could hamper delivery of some projects in a very competitive market and the uncertain economic climate. On this basis we request that Criteria (C) in Policy 4 be deleted from the policy wording.
Policy 4 'Employment Allocations (Strategic Policy) Table 4 confirms that the allocated site at Bankwood Lane TVI support the identification of land within their ownership at Bankwood Lane, Rossington as an employment site for B1(b/c), B2 and B8 uses under emerging Policy 4 of the Local Plan Publication Draft. Policy 4 (A) allocates the employment sites 'only' only for B1(b/c), B2 and B8. Other uses are allowed but 'only' where they are ancillary. Flexibility should be built in to policy 4 to enable consideration of other uses. In order to accord with national policy and provide some flexibility in approach, we consider Policy 4 (A) could be re-worded as follows with proposed new policy wording underlined. "A) Only business (B1 b/c), general industry (B2) and storage and distribution (B8) uses will be permitted on these sites unless the proposal is ancillary to the employment uses (**or where an alternative use would accord with the Policy 5 criteria and other relevant policies in the Plan.**) new policy wording shown as (***) Policy 4 (C) seeks to enter into local labour agreements and agree percentages of local labour use? this could prevent a full and proper competitive tendering for new developments, limit the use of certain contractors and have adverse economic investment consequences. Policy 4 (C) should be deleted from the policy wording.

Response:
Support noted and welcomed. No change proposed to Criteria A. These sites are allocated for employment use in order to meet the job need for the borough and are protected for that purpose. No change proposed to Criteria C. The aim of local labour agreements is to ensure that local people benefit from development in the borough. The Council works closely with employers and local training providers to ensure that this happens.

Reason:
Area: Chapter 4: Strategic Approach
Policy: Policy 4: Employment Allocations

Tests of Soundness:

Comment:
The identification of land at Bankwood Lane shown as ‘Area A’ on Plan 1 for employment uses in the emerging Policy 4 of the Local Publication Draft is supported and the site is considered to comprise a sustainable employment location within an existing employment area which benefits from excellent connectivity with the wider road network. However, in order for Policy 4 to be considered sound, it is TVIs view that an element of flexibility should be afforded in Policy 4 to account for alternate uses and allow the policy to adapt to rapid change or needs not anticipated in the plan, as required by the NPPF (2019). Therefore, the Policy 4 allocation is supported subject to the proposed policy wording changes set out in our representations. This would ensure that Policy 4 is both effective and consistent with national policy and would therefore be ‘sound’. TVI consider the identification of their land identified as ‘Area B’ on the Proposals Map as an Employment Policy Area to be sound, with Policy 5 allowing for suitable flexibility in the type of uses which could be accommodated on the site. This is considered to be in line with the general thrust of the Publication Draft Policies & Site Allocations Plan and emerging Policy 2 which seeks to focus substantial housing and employment growth in Main Towns such as Rossington. We trust the above representations will be taken on board. In the meantime, should you require any further information at this stage, please do not hesitate to contact me.

Summary:
For Policy 4 to be considered sound an element of flexibility should be afforded in Policy 4 to account for alternate uses and allow the policy to adapt to rapid change or needs not anticipated in the plan, as required by the NPPF (2019). Policy 4 allocation is supported subject to the proposed policy wording changes set out in our representations. TVI consider the identification of their land on the Proposals Map as an Employment Policy Area to be sound. Policy 5 allows for flexibility in the type of uses which could be accommodated on the site

Response:
Noted. No changes are proposed to Policy 4. Employment sites are allocated for employment use in order to meet the job need for the borough and are protected for that purpose.
The following representation relates to land in our client’s ownership, the extent of which is shown on the attached plan (Plan 1). Two areas are shown including Area A to the east of Bankwood Lane and Area B at the northern end of Bankwood Lane. The site forms part of the wider Bankwood Lane Industrial Estate. Bankwood Lane forms the western edge of Area A whilst Area B is located at the northern end of Bankwood Lane. Allotment land is to the north west of Area A, while the Rossington Drain forms the northern boundary of both areas. The Great Yorkshire Way, which opened in 2016, runs approximately 590m north of the site area and the industrial estate, providing access to the M18 and providing a gateway to the wider Sheffield City Region. Land to the north of the site is within the Green Belt. The site is bound to the east by woodland and to the south by further allotments and existing residential development. The site is currently in use by TVI for existing operations including employment and distribution uses. Part of the employment area is intended for future redevelopment with the potential for further provision of jobs, economic investment and housing in this location. An outline permission (12/01107/OUTA) was granted in October 2013 for 1,200 residential dwellings and associated development on colliery land to the west of Bankwood Lane Industrial Estate. It is estimated that approximately 300 dwellings associated with the development have been delivered at present. In the vicinity of the TVI land there have been two planning applications submitted that relate to proposals for a Link Road which would connect the West End Lane Roundabout to the west with Bankwood Lane and the wider industrial estate. Full application 18/00548/FULM was submitted on behalf of Attero Developments and relates to Phase 1 of the Link Road along with proposals seeking to expand their existing on-site waste recycling operations at the industrial estate. The application was approved in November 2018. The second application (18/02114/FULM) was submitted by ID Planning on behalf of TVI and relates to the full extent of the Link Road from the West End Lane Roundabout up to the western edge of Attero’s land and the wider industrial estate. The application is pending consideration and if approved, will result in improved vehicular access to Bankwood Lane Industrial Estate from the Great Yorkshire Way and the strategic road network beyond, whilst also resulting in residential amenity benefits as it would provide an alternate route for HGV traffic which currently passes through residential development to the south and west of the industrial estate and along the southern end of Bankwood Lane. The proposal would therefore support the continued use of Bankwood Lane Industrial Estate for employment purposes while also protecting existing and future residential amenity.
Chapter 4: Strategic Approach

Policy 3 ‘Level and Distribution of Growth’ Fails to satisfactorily direct light to allow participation in discussion regarding distribution of development, site selection and allocations.

Policy 4: Employment Allocations

Harworth Group Plc

Response:

Denaby Main (site ref 1035) should be allocated for employment development and Table 4 of the Plan be amended.

Tests of Soundness:

Comment:

7. Policy 3 distributes growth for employment development to the Main Towns according to the same criteria as the Doncaster Main Urban Area. For 'light industry and manufacturing' which is stated to include 'local employment (including small scale distribution)'. the criterion is 'locations with good access to the M18/M180 motorways and strategic road network'. As the sole criterion (save for specific inclusion of the Unity site), this is not considered able to achieve development that provides for 'local employment' as intended across the Main Towns and other settlements. 9. Policy 3 should therefore be amended to include within the table (row: Main Towns, column: Light Industry & Manufacturing) a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area (i.e. accessible to local communities) of the Main Towns as suggested below (underlined). Policy 3 table extract: Location - Light Industry & Manufacturing: Rail and manufacturing, particularly advanced manufacturing Local employment (including small scale distribution). Low carbon and "green industries" (including renewable energy) Location: Main Towns Employment - Light Industry & Manufacturing: As Doncaster Main Urban Area. Locations within and accessible to the existing town Unity (Hatfield Power Park and associated business parks). 10. Without this amendment, the draft Plan is unsound as it does not represent an appropriate strategy to achieve the Spatial Strategy as set out in Policy 2 which seeks to focus employment development to locations accessible to the Main Towns, and support housing growth in the Main Towns by appropriate levels of employment growth. Furthermore, the Council’s site selection report (p214 see below) recognises there are 'limited employment sites in the west of the borough' which this would help remedy. 11. Accordingly, Table 4 (as referenced from Policy 4) should be amended to include the allocation of land at Conisbrough & Denaby for employment development. In particular, this is required to attract investment to the town and to create jobs additional to those already accommodated within the existing Denaby Industrial Estate (Employment Policy Area). 12. Harworth Group’s site ref 1035 which is proposed for employment development (in part) is located directly adjacent to the existing industrial estate, is readily accessible from nearby residential areas, and is accessible to the main road network (A6023 and A630). 13. Within the Council's assessment of this site (p214 of the Housing and Employment Sites Selection Methodology and Results Report June 2019), the adjacent Denaby Lane Industrial Estate is described as 'successful', yet in the same section reference is made to the Employment Land Review to state that 'the site is not particularly attractive for industrial development and that viability is an issue'. This is disputed by Harworth Group which is itself an experienced developer of industrial sites and specialist in the remediation of former coalfield sites. 14. The Council's assessment also considers the matter of Green Belt, concluding that 'there is a lack of exceptional circumstances for the allocation of this site at this time due to the availability of other sites across the borough which are not within the Green Belt'. This approach is contrary to the Spatial Strategy (Policy 2) to focus employment development to locations accessible to the Main Towns, and support housing growth in the Main Towns by appropriate levels of employment growth. 15. To achieve the spatial strategy, it is essential that land is allocated for employment development at Main Towns in the west of the borough, and if this requires the reallocation of land in the Green Belt, then that needs to be done by this Plan. 16. The Council’s assessment of the site makes reference to the Green Belt Review and indicates that the site has 'boundaries of mixed strength' and is "Moderately Performing against Green Belt purposes'. The relative assessment of sites in the Green Belt at Conisbrough & Denaby is discussed further below, but our conclusion is that Harworth Group’s site ref 1035 presents a stronger case for removal from the Green Belt than the site proposed to be removed (and that currently allocated but functioning as Green Belt). 17. Accordingly, to accommodate such an allocation, the settlement boundary on the proposals map must be changed with a corresponding removal of land from the Green Belt. 4.2 ha of land at Eland Road, Denaby Main (site ref 1035) should be allocated for employment development and Table 4 of the Plan be amended as set out at the conclusion of these representations.

Summary:

Re Policies and Site 1035 (Hill Top Denaby - Rejected Housing Site) Policy 3 ‘Level and Distribution of Growth’. Fails to satisfactorily direct light industrial, manufacturing and small scale distribution to the Main Towns, and in particular those in the west of the borough. The settlement boundary on the proposals map must be changed with a corresponding removal of land from the Green Belt. 4.2 ha of land at Eland Road, Denaby Main (site ref 1035) should be allocated for employment development and Table 4 of the Plan be amended.

Response:

The Housing and Employment Site Selection and Result Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.
Please see attached statement which provides full explanation and justification for Harworth Group’s objection to the Publication Version Local Plan in relation to Conisbrough & Denaby, which comprises the following points: 2. Policy 4 and the associated Table 4 fail to allocate any land for employment development in the Main Town of Conisbrough & Denaby. Given the above, it is considered that Publication Draft Local Plan does not meet the tests of soundness insofar as it must be justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. A ‘reasonable alternative’ which represents a more sustainable and preferable form of development is put forward by Harworth Group and described in the attached statement. Suggested changes to the Plan that are required to achieve this preferable ‘reasonable alternative’ are summarised below. PROPOSED CHANGE Please see attached statement which provides full explanation and justification for Harworth Group’s suggested changes to the Publication Version Local Plan in relation to Conisbrough & Denaby which are summarised below. These changes are required to ensure that the Plan is justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns, as follows: Location: Employment - Light Industry & Manufacturing; Rail and manufacturing, particularly advanced manufacturing Local employment (including small scale distribution). Low carbon and "green industries" (including renewable energy). Location: Main Towns Employment - Light Industry & Manufacturing: As Doncaster Main Urban Area. Locations within and accessible to the existing town Unity (Hatfield Power Park and associated business parks) Table 4 (as referenced from Policy 4) should be amended to include the allocation of land at Conisbrough & Denaby for employment development as follows: Table 4: Employment Site Allocations Ref: 001 Address/ Location: Junction 6 M18, Thorne North Gross site area (Ha): 73.63 Area available for employment use (ha): 73.63 Ha to be developed in plan period: 51.54 Ref: 092 Address/ Location: Balby Carr Gross site area (Ha): 11.25 Area available for employment use (ha): 11.25 Ha to be developed in plan period: 8.60 Ref: 258 Address/ Location: Site 1, Middle Bank, Balby Gross site area (Ha): 8.48 Area available for employment use (ha): 5.00 Ha to be developed in plan period: 5.00 Ref: 441 Address/ Location: Land at Carcroft Common, Carcroft Gross site area (Ha): 49.28 Area available for employment use (ha): 24.64 Ha to be developed in plan period: 12.32 Ref: 941 Address/ Location: RHADS Site 1, Phase 4 Business Park Gross site area (Ha): 68.54 Area available for employment use (ha): 68.54 Ha to be developed in plan period: 68.54 Ref: 1032 Address/ Location: Bankwood Lane, Rossington Gross site area (Ha): 17.68 Area available for employment use (ha): 17.68 Ha to be developed in plan period: 17.68 Ref: 1035 Address/ Location: Land at Eland Road, Denaby Main Gross site area (Ha): 4.2 Area available for employment use (ha): 4.2 Ha to be developed in plan period: 4.2 [Plus other sites as appropriate] The following changes should be made to the site allocations and land designations as shown on the Policies Map: Site 1035 should be removed from Green Belt and allocated for employment (in part - 4.2 ha) and housing development (in part - 7.3 ha) with the settlement boundary adjusted to suit. Development of this site would deliver c.7,000 sqm of employment space and up to approximately 200 houses. Site 383 (in its current form) should be deallocated for housing and instead designated as Green Belt; open space, sports and recreation; and as a local wildlife site. Site 040 (in its current form) should be omitted as a housing allocation of land at Conisbrough & Denaby. To fully meet local housing need, the Council should consider identifying further land at Conisbrough & Denaby for housing which may be in the form of a reduced extent of site 040 and/or 383 (i.e. that preserves the biodiversity/amenity function and limits green belt incursion) or other suitable site. Accordingly, Table H2(D) of the Publication Version Local Plan should be amended as follows: Table H2(D): Allocations without planning permission (as at 1st April 2018): (SITE 040 AND 383 SHOWN AS STRIKE THROUGH BUT CANNOT BE SHOWN) Site Ref: 1035 Address: Land off Hill Top Road, Denaby Main Site Area (Ha): 7.3 Indicative Capacity (No of houses): 200 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 0 15-17 Yrs: 0 Beyond Plan Period: 0 Site Ref: Address: [Reduced extent of site 040 or 383 or other suitable site] Site Area (Ha): Indicative Capacity (No of houses): 125 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 0 11-15 Yrs: 125 15-17 Yrs: 0 Beyond Plan Period: 0 TOTALS: Indicative Capacity (No of houses): 325 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 125 15-17 Yrs: 0 Beyond Plan Period: 0

Summary:

Policy 4 and the associated Table 4  1. Fails to allocate any land for employment development in the Main Town of Conisbrough & Denaby. 2. Site 1035 should be included as an Employment allocation (part and Housing (part) 3. Site 383 (allocated site) - should be Green Belt/Open space/Sports and recreation/local wildlife site. 4. Site 040 (allocated site)-should be retained as Green Belt. 5. To meet housing need further sites should be allocated at Conisbrough and Denaby.
As set out in the ELNA, Colliers report and Green Belt Topic Paper, there is no requirement to locate new employment in this location, and no exceptional circumstances for removing land from the Green Belt here to facilitate employment sites. 1035 is not as preferable as 040 in Green Belt terms (see Green Belt Review), and there are access reservations. Site 383 is not currently Green Belt, there is no reason or exceptional circumstances to amend the Green Belt to incorporate this site, which is available and deliverable for housing. The Green Belt Topic Paper looks at Green Belt in this location more thoroughly. Based on the sites allocated, Conisbrough can get within its housing range without allocating further sites.

Policy: Policy 4: Employment Allocations
Tests of Soundness: 

I wish to object to the proposed building of warehouses at Junction 6 of the M18 motorway known as Site 001. As a resident of Lyndhurst Close, over the years I have watched more and more fields in this once quiet and peaceful area be slowly consumed by developers building warehousing, industrial units and retail parks, bringing vehicle noise, pollution and airborne dirt. The size of the proposed area to be dug up and concreted over for speculative warehousing is obscene. I understand the area to be technically a floodplain, is currently productive agricultural land and will no doubt be home to wildlife already displaced by the building of Capitol Park and the "inappropriate-to-the-area-sized" warehousing for The Range stores. There are plenty of sites next to the M18 motorway further towards the M1 with seemingly superior vehicular access and importantly away from residential areas. I implore the planning decision makers at Doncaster Council not to bow to the opportunistic developers and their carefully crafted sales pitch and side with the poor residents that have to live with the fallout of these decisions to allow building to take place.

Summary:
Object to warehousing. Area consumed by developers building warehousing, industrial units and retail parks, bringing vehicle noise, pollution and airborne dirt. Area is floodplain and agricultural land. Other sites near M18 with better access away from residential area

Response:
Noted. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.
Comment: I object to Site 001 Thorne North Junction 6 M18 proposed as Employment Land. Site 001 is Flood Zone 3, it is 182 acres of floodplain, it is approximately 80m from the River Don, with climate change more areas are flooding, we need our floodplains. DMBC Air Pollution Control Officer does not support development on this land, increased traffic will worsen already poor air pollution in this area if developed. The whole area is part of the Humberhead Levels, it will have a devastating impact on all wildlife including protected species that live and hunt on it. Loss of high quality Grade 3 - "very good" agricultural land, we need this land to grow food. A vast area of countryside would be lost, replaced by gigantic ugly sheds on the approach to Thorne. The land lies outside the urban frame, it is the wrong side of the motorway, it is not a sustainable urban extension. No safe pedestrian/ cycle routes can be identified to Site 001. We have enough warehouses in Thorne we do not need anymore. It is most definitely not a specific site identified for employment by the local community in the Neighbourhood Plan.

Summary: Object to site 001: Development is in Flood Zone 3 and on a floodplain, close to the River Don. Climate change means flood plains are needed. DMBC pollution control officer does not support development here and increased traffic will worsen air quality. The site is part of the Humberhead Levels and will have a devastating impact on wildlife which use the site. Site is Grade 3 agricultural land needed to grow food on. A vast area of countryside would be lost and replaced by ugly sheds. The site is outside of the urban frame and on the wrong side of the motorway, and is not a sustainable extension. There are no safe pedestrian or cycle routes. Thorne does not need anymore warehouses. The site is not identified as employment land in the Neighbourhood Plan.

Response: The comments against the allocation of Site 001 are noted.
I write as landowner as part of the allocation for employment land in the Doncaster Local Plan, which is currently subject to public consultation. I am aware that the Publication Draft of the Local Plan is proposing to allocate the site for employment use (under site reference 001) and am in full support of the allocation. I am in active discussions with the other landholders of the site and Barmston Thorne Limited regarding the delivery of the site and am a willing seller of my land for its development for employment use under the proposed allocation.

Summary:
I am a landowner of part of the allocation for Site 001 (Thorne North) and am aware it is proposed for employment. I am in full support of the allocation and am in active discussions with other landowners and Barmston Thorne Ltd regarding the delivery of the site. I am a willing seller of my land for its development for employment use.

Response:
Comments in support of the proposed allocation of Site 001 (Thorne North) are noted. The willingness to sell is also noted.
Test of Soundness:

Comment:

This letter comprises a response to the Doncaster Local Plan: Publication Draft (June 2019). I own and control part of the site that is allocated for employment use as site 001: Junction 6 M18, Thorne North within the Publication Draft of the Doncaster Local Plan. I fully support this allocation and the associated development of 73.63 ha of employment land and are actively engaged with Barmston Thorne Limited regarding the delivery of the site for employment uses. I am not aware of any technical or land ownership issues that would prevent delivery of the site for employment use. I welcome Barmston's involvement in the development of this site, for which they have a strong track record of delivery in the local area. I would be grateful if my comments could be passed to the Inspector and my support for employment allocation 001 as a key controller of the land taken into consideration in the progression of the plan.

Summary:

I own and control part of Thorne North (ref 001) and fully support this allocation and the associated development. I am actively engaged with Barmston Thorne Ltd regarding the delivery of the site. I am not aware of any technical or land ownership issues that would prevent the delivery of the site. I welcome the involvement of Barmston and they have a strong track record of delivery.

Response:

Comments in support of the proposed allocation of Site 001 (Thorne North) are noted.
3.1. The site has no specific planning history but there are applications on the adjoining site which are relevant in respect of the link between the two elements. 3.2. The following list of applications relates to the site immediately to the south and west of the subject site. - 87/0886/P - Change of use of land including the erection of single storey steel framed building 33.0m x 11.7m) for shot blasting and paint spraying business on approx. 1.0 ha of land (granted) - 91/2489/P - Outline application for industrial development on approx 1.1 ha of land (Allowed on appeal) - 94/0101/P - Use of land for motor cycle training on approx 1.9 ha of land (Approved) - 97/0112/P - Use of approx 2.2 ha of land as scrapyard (Allowed on appeal) - 97/3510/P - Change of use of premises to waste transfer station (Approved) - 99/3311/P - Excavation, screening and removal of ash for recycling (Approved) - 06/01956/FUL - Erection of industrial unit 36.5m x 13.7m and formation of new access road (Approved) - 09/00190/OUTA - Construction of an inland port (Strategic Rail Freight Interchange) together with ancillary infrastructure and operational development (Approved and implemented) - 16/02386/COUM - Temporary change of use from former factory and factory outlet to HGV parking for a period of 18 months - 18/00548/FULM - Provision of new link road, change of use of land to waste recycling area, erection of waste management buildings and provision of rail loading and HGV parking area.

Site planning history. Comments noted.

Response:
Noted.
The Site

2.1 The site is located at the north end of the Bankwood Lane Industrial Estate (Bankwood Estate). The Bankwood Estate lies to the north of New Rossington, approximately 5km to the southeast of Doncaster. To the west of the site, the former Colliery site is currently undergoing a significant, mixed-use redevelopment of housing, employment and leisure uses linked from Great Yorkshire Way (A6162), which in turn allows access to Junction 3 of the M18. 2.2 To the north and east is a railway line, allotments, the A6182 and agricultural land. 2.3 ECO POWER ENVIRONMENTAL LTD operates a waste transfer station in part of the application site. Waste materials are imported to the site by HGV and undergo a range of processes including sorting, separation, screening, bailing, shredding, crushing, blending and compaction, prior to being exported from the site by road and rail. In addition, Attero have been processing historical waste material on the site. 2.4 Directly to the south of the Site is a small brook (Rossington Drain). Two sets of pylons run through the site; a small 11kv running north/south and a much larger 132kv line running east/west. South of the Rossington Drain are a number of allotments and the Bankwood Lane Industrial Estate. The Estate is principally made up of industrial and small waste related uses. Further south is the large residential area of Rossington.

Summary:

Sets out the site location and local context. Comments noted.

Response:

Noted.
Comment: It is important to be able to present to the Inspector the significant operational and environmental benefits that the proposed allocation would create.

Area: Chapter 4: Strategic Approach

Policy: Policy 4: Employment Allocations

8.1. The location of this site, with a direct link to the ECML and the strategic road network lends itself to providing a multi modal rail terminal. 8.2. The Green Belt Assessment undertaken by the Council as part of the Local Plan evidence base demonstrates that the site does not meet the requirements of Green Belt as set out in NPPF and performs poorly. 8.3. The application site is in a perfect location for a multi modal rail terminal as set out in the representations meets all of the criteria that would be looked at for such an important strategic 8.4. There is demand for 400,000 tonnes of material per year to move between Rossington and Roxby. 8.5. There is demand for 100,000 tonnes of aggregates from Doncaster to various rail connected locations. Eco-Railfreight has been established to support the Waste and Aggregates industry to access Rail Freight logistics at competitive prices and is Doncaster based. 8.6. The expansion of Rossington to a Multi-Modal Railfreight Terminal has the potential to remove 26,000 truck moves from Doncaster’s roads as well as 1047 tonnes of CO2 emissions 8.7. The project will create additional employment opportunities for Doncaster and surrounding areas 8.8. It is therefore requested that the current Local Plan Proposals Map is amended to include the allocation of the site for use as a multi modal rail terminal.

Response: The proposed sites allocations are set out in the Local Plan and shown on the proposals map. The reasons for sites being allocated or not are detailed in the 'Site Selection Methodology' in the evidence base. The site in question is in the Green belt and the Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances.
5.1 The site is currently proposed to remain in the Green Belt. The owner has made previous representations to remove the site from the Green Belt for alternative uses. As part of the Local Plan Evidence Base, the Council undertook a Green Belt Review, the findings of which were published in February 2016. 5.2 The first stage of the review was to identify 'general areas' for assessment. These areas were defined based on permanent and defensible 'strategic' boundary features, such as motorways and A roads, operational railway lines, strategic waterbodies etc. Each of the general areas were assessed against the Local Interpretation of the five purposes of the Green Belt. 5.3 For each purpose of the Green Belt, a number of criteria were developed against which to appraise the areas. A score out of five was offered to each purpose, 5 represented a general area that was strongly fulfilling the purposes of the Green Belt and 1 represented a general area that was weakly fulfilling the purpose of the Green Belt. 5.4 The five purposes are set out below: 1. To check the unrestricted sprawl of large built-up areas; 2. To prevent neighbouring towns from merging into one another; 3. To assist in safeguarding the countryside from encroachment; 4. To preserve the setting and special character of historic towns; and 5. To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. 5.5 Stage 2 of the Green Belt assessment applied site selection criteria to promoted Green Belt sites to determine which are considered to otherwise be unconstrained or developable. 5.6 The Stage 3 Green Belt Review looks at the implications of removing specific sites form the Green Belt to accommodate residential or employment development. As the Nomination Site was not put forward for potential allocation previously, the Site has not been assessed at Stages 2 or 3 of the Review. 5.7 The Site forms part of the wider general area 'South 7'. The wider site scores generally very low against the majority of Green Belt purposes. It scores 1 for purposes one, two and four, 2 for purposes three and it scores 4 for purposes five. 5.8 Based on this assessment it is clear that the site does not fulfil the purposes of Green Belt as set out in Paragraph 134 of the NPPF.

Comment:

1.1. This Statement has been prepared by Broadgrove Planning and Development Limited on behalf of ECO POWER ENVIRONMENTAL LTD in response to the Doncaster Local Plan Publication Draft 2019. 1.2. The representations relate to the promotion of land owned by ECO POWER ENVIRONMENTAL LTD which is adjacent to their existing operations on the established Bankwood Lane employment area. 1.3. A copy of the location plan is attached at Appendix 1. (SEE EMAIL FOR Appendix 1) Structure of the Representations 1.4. These representations set out the context of the site, outline the proposals and the benefits of the proposed allocation. 1.5. This statement comprise; - Chapter 2, Site and Surrounding Area: explains the site composition and its context; - Chapter 3, Planning History: discusses any relevant planning history; - Chapter 4, Proposal: provides details of the proposals; - Chapter 5, Planning Policy: provides the planning policy context and justification for the proposals; - Chapter 6, Material Considerations: discusses relevant material considerations to be weighed in the balance of the allocation; - Chapter 7, Planning Considerations: provides an assessment of the proposals compliance with planning policy balanced against the relevant material considerations; - Chapter 8, Conclusions: summarises the contents of this statement and confirms the acceptability and significant merits of the proposed development and its allocation.

Summary:

Site ref 1016 North of Bankwood Lane Rossington (rejected Employment site). Promoting site North of Bankwood Lane Industrial Estate for a 'rail head and loading facility'. Wants local plan amended to include this site as a 'multi modal rail terminal'. Site is currently in the Green Belt and disputes Green Belt review findings. Site is part of 'South 7' in the GB review that generally scores very low against purposes of GB. Sets out a case for the benefits of allocating the site. o Perfect Location o Demand o Sustainable transport o Jobs

Response:

The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.
6.1. The use of the site for a rail head would meet a number of objectives of the National Planning Policy Framework (NPPF) and need to be considered against any potential impact on the Green Belt. National Planning Policy Framework. 6.2. The National Planning Policy Framework (NPPF) 2019 provides national policy to guide development plan preparation and planning application decision making. The most relevant elements of the NPPF for the proposed development are briefly summarised below. 6.3. Paragraph 8 states that there are three dimensions to sustainable development: economic, social and environmental and, as set out in paragraph 9, these provide broad objectives to be delivered through planning decisions. 6.4. At the heart of the NPPF is a presumption in favour of sustainable development as set out in paragraph 11. This means that local planning authorities should “approve development proposals that accord with the development plan without delay and where the development plan is absent, silent or relevant policies are out-of-date, grant permission unless the adverse impacts of doing so would significantly and demonstrably outweigh the benefits”. 6.5. Paragraph 102 states that Transport issues should be considered from the earliest stages of plan-making and development proposals, so that: a) the potential impacts of development on transport networks can be addressed; b) opportunities from existing or proposed transport infrastructure, and changing transport technology and usage, are realised - for example in relation to the scale, location or density of development that can be accommodated; c) opportunities to promote walking, cycling and public transport use are identified and pursued; d) the environmental impacts of traffic and transport infrastructure can be identified, assessed and taken into account - including appropriate opportunities for avoiding and mitigating any adverse effects, and for net environmental gains; and e) patterns of movement, streets, parking and other transport considerations are integral to the design of schemes and contribute to making high quality places. 6.6. Paragraph 103 of the NPPF continues, that the planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions and improve air quality and public health.

Summary:
The proposal and the NPPF. The use of the site for a rail head would meet a number of objectives of the National Planning Policy Framework (NPPF) and need to be considered against any potential impact on the Green Belt.

Response:
Comments noted. Any Planning Application would deal with site specific issues such as this.
7.1. The use of this land for a rail head has a number of benefits that should be considered as part of the evidence base in positively preparing the Doncaster Local Plan. This section of the representations set out the benefits of rail freight generally, as well as the specific benefits of the Rossington proposals. Design / Layout / Character and Appearance 7.2. The site, albeit in the Green Belt is within an established industrial area and other large scale allocations. The Site currently comprises 5.3ha of presently unused and vacant land, is located at the northern end of Bankwood Lane adjacent to, and directly to the east of, a large waste recycling and bulking facility operated and owned by Attero. 7.3. It has been demonstrated that the site does not contribute to the 5 purposes of Green Belt and the following will set out the further benefits that should be considered in allocating this site for a new multi modal rail terminal. 7.4. Previous representations on this site were for employment purposes and involved built development which would have resulted in more substantial buildings than the current proposals for a multi modal rail terminal. 7.5. It is important that the site is reassessed in this context to ensure that the Local Plan is considered sound having considered the most up to date information and evidence. In respect of this site this position has changed and this fundamentally shifts the way that the Council would have assessed this site in earlier versions of the Local Plan. Benefits of Railfreight 7.6. Rail freight has a number of benefits that should be considered and add weight to the allocation of this site. 7.7. Given the sites proximity to the East Coast Main Line (ECML) and the strategic road network the opportunity to create a multi modal rail terminal should be explored. The fact that the landowner has specific requirements and there are substantial demands for large volumes of material to be moved locally by rail enhances the weight that should be attached to such a proposal. 7.8. In addition to the traditional bulk cargoes, rail is well placed to provide long-haul consumer services; this sector has seen a steady 30% growth in the past 10 years with an increase of 5% last year. The industry predicts that rail freight will have doubled by 2030 with consumer traffic growing fourfold. 7.9. There have been numerous studies which have analysed the benefits of transferring freight from road to rail. These benefits are assessed below and include; - Environmental - Economic - Safety and Road congestion Environmental benefits Air Quality 7.10. Transport is the only sector which grew between 2012 and 2017 and is responsible for 28 per cent of overall UK carbon dioxide emissions. In 2017, HGVs were responsible for 17 per cent of emissions whilst only accounting for five per cent of miles driven. The CCC stated that the Department for Transport (DFT) Freight Carbon Review identified 'little concrete action' and that the Government should reduce emissions from freight by shifting freight from road to road. 7.11. Transferring more freight from road to rail, where there is pent-up demand on certain key routes, should be part of the solution as every tonne carried by rail instead of HGVs, reduces carbon dioxide emissions by 76 per cent. HGV engine efficiency has not improved in recent years; CO2 intensity increased by 2.2 per cent due entirely to decreased fleet efficiency in 2017. It is also reduce rail freight's effect on congestion, and rail is well placed to offer a safer, cleaner long-distance alternative which reduces road congestion for both consumer traffic as well as the traditional bulk cargoes. 7.12. Rail is well placed to carry out the longer distance alternative which reduces road congestion for both consumer traffic as well as the traditional bulk cargoes. 7.13. The expansion of Rossington to a multi modal railfreight terminal has the potential to remove 26,000 truck movements from Doncaster's roads as well as 1047 tonnes of CO2 emissions. Economic benefits 7.13. The geographic pattern of rail freight benefits is supporting a more balanced economy for Britain. More than 60% of its activity is focussed in former industrial heartlands in Yorkshire and Humber, the North West, Scotland and the Midlands and overall, more than 87% is outside of London and the South East. 7.14 A 2018 report by KPMG "Rail freight in GB : Productivity and other economic benefits" set out the aggregate productivity and economic benefits to the UK. This demonstrated that in 2016 rail freight secured over #1.7 billion of economic benefits for Britain. 7.15 The KPMG report broke the economic benefits down by region and showed an estimate of #324 million of total economic benefits. Safety and Road congestion 7.16 Supporting rail freight growth will tackle rising levels of congestion on the UK's roads, particularly important in areas of acute congestion like the Midlands. Each freight train removes up to 76 heavy goods vehicles (HGVs) from Britain's roads. The rail freight operators transport goods that would otherwise require 7.79 million HGV journeys each year, resulting in 1.66 billion fewer HGV kilometres every year. 7.17 The accruing externality benefits, largely through lower road congestion, were worth over #0.5bn in 2016. Rail freight could play a greater part in tackling congestion across many of the key road corridors, helping to boost local economies and improve quality of life. Research by consultants from MTRU on behalf of the Campaign for Better Transport and the Department for Transport, identifies opportunities for targeted upgrades of existing rail lines to enable large numbers of lorry loads to be transferred to rail. 7.18 The resulting modal shift would have a considerable, positive impact on congestion on these key road corridors. The study highlights the need to holistically consider cross-modal interventions on a corridor-by-corridor basis when evaluating options to reduce congestion. 7.19 These specific proposals would remove 26,000 truck movements from Doncaster's roads. Limited site opportunities 7.20 There are specific requirements for a site to meet all of the relevant criteria to ensure that they are effective multi modal rail terminals. This makes finding an appropriate site extremely difficult and limits the types of locations that should be allocated for such a use. 7.20 To be effective, interchange terminals must be capable of meeting the following criteria: - Be on or close to an existing railway line - Have good road access suitable for HGVs - full-size lorries need to be able to serve railheads safely and with minimal impact on other road users. - Be of sufficient size - today's freight trains are often over 500 metres in length, modern handling methods safe working areas and value-adding activity (storage, processing, re-packing) need space. - Be capable of 24 hour operation - a requirement of many customers, which often means that activity at railheads must be able to take place outside these times. Residential property in the vicinity should be designed so that sleep is not disturbed.
7.21 While some of the above seem obvious, it is very difficult to find sites that meet all of the above criteria without some form of constraint.

This site meets all of the above with no detrimental impacts or constraints to development. 7.22 As such, the site should be allocated as a multi modal rail terminal in the Local Plan to ensure that there is sufficient comfort to invest in such a proposal and enable the significant benefits of the proposal to be brought forward.

Summary:
Sets out the benefits of rail freight generally, as well as the specific benefits of the Rossington proposals.

Response:
Noted.

4.1. The owner is seeking the allocation of the site for a new rail head and loading facility. 4.2 The site has the potential to create additional employment opportunities and the plan attached at Appendix 2 demonstrates how the site could be brought forward as a multi modal rail terminal. (SEE EMAIL FOR Appendix 2) 4.3 Doncaster is a logistics hub for many flows of traffic heading North or South for consumers or East toward the Humber Ports. Much of this traffic could be converted to rail freight services but lacks the access to a Bulk loading facility or modal shift interchange. 4.4 In Doncaster there are two existing rail terminals:
- Doncaster Rail Port (Intermodal Containers)
- Doncaster iPort (Intermodal Containers) None of the existing sites cater for Bulk products such as Aggregates, Waste products such as RDF and SRF (using in energy production), Timber and Ash. The plan at Rossington is to develop a terminal capable of handling all these 'bulk' products and transferring from road to rail. 4.5 The proposals are responding to site characteristics and local demand for such a facility. There is demand for 400,000 tonnes of material per year to move between Rossington and Roxby and there is demand for 100,000 tonnes of aggregates from Doncaster to various rail connected locations. 4.6 Eco-Railfreight has been established to support the Waste and Aggregates industry to access Rail Freight logistics at competitive prices and is Doncaster based. The expansion of Rossington to a Multi-Modal Railfreight Terminal has the potential to remove 26,000 truck moves from Doncaster’s roads as well as 1047 tonnes of CO2 emissions. 4.7 The project will create up to 400 additional good paying jobs for Doncaster and surrounding areas.

Summary:
Summary of potential new jobs the site could bring forward.

Response:
Noted.
HLM/HBD object to Policy 4 on the basis that it fails to allocate sufficient land to achieve the overall employment target of at least 481ha. A significant concern is the effectiveness of the policy to deliver at least 481ha of employment land. The Plan proposes a total of 482ha of land which comprises Land developed 2015-2018 (117ha); Sites with Planning Permission (201ha); and Allocated Sites (164ha). There appears no buffer of supply to ensure that the minimum target is met and therefore the Plan is reliant on every site being developed to achieve the requirement of Policy 3. This is unrealistic and the Plan should be providing a buffer to provide choice and competition for the market. Policy 4 is therefore not justified as an appropriate strategy, nor is it effective. PROPOSED CHANGE We have identified that there is an inadequate number of employment sites to deliver the minimum requirement of 481ha set out in the Plan. To help address this matter HLM/HBD promotes site P2-S on the enclosed masterplan, which sits to the north of Adwick and Woodlands and close to the A1 junction. The predominant parcel of land within this promotion is site P4 which is identified as Ref: 461 ‘Redhouse Lane (a) North in the Council’s evidence base. This total land of P2-S comprises 18.2ha and based on a formula of 40% of the gross site area, is anticipated to be capable of delivering in the region of 73,000m² (58,000m² on P4) of gross external area floor space. The sites are within the Green Belt. It is noted that the Green Belt Topic Paper has identified (paragraph 2.6.13) that there are not exceptional circumstances to warrant the release of land (p4/Ref: 461) in the Green Belt for employment purposes. This is on the basis that the Council considers that the Plan delivers a good spread of sites including non-Green Belt allocations in the north. However, the Plan fails to provide any level of buffer for the delivery of the Plan’s requirement and as such further allocations are required and justified. Site 461 is identified within the Green Belt Topic Paper as having a ‘moderately weak’ case for inclusion in further site selection work. However, this is very much a conclusion informed by taking the site in isolation (P2, Appendix 1: Assessment Summary, Green Belt Review Stage 3 Part 1), whereby it would be divorced from the main urban area of Adwick & Woodlands and separated by the land to the south of the A638. However, Site S13 also forms part of HLM/HBDs promotion, largely for residential purposes but also a proportion of employment land as shown on the sketch capacity plan (Parcel P5) appended to these representations. The merits of the residential allocation are discussed under our suggested amendments to Policy 6 but the key principle is that a wider allocation encompassing P2-P6 (P6 would also be housing) would represent a logical sustainable urban extension to Adwick and Woodlands and if treated as a whole would leave a clear, defensible future Green Belt boundary in the form of the railway line to the north and the A1 to the west. As identified by the enclosed Plan some of the peripheral northern areas of the P2-P6 are within Flood Zones and these would be exempt from development, forming part of a northern green buffer that would provide an attractive edge to development. The site is strategically located immediately adjacent to junction 38 of the A1 and with established employment development, largely warehouse and distribution, to the south of the site and to the east of the A1. It is recognised that the Plan has raised concerns regarding capacity issues of the A1 but equally there is clearly longer term ambition to assist with the regeneration of the north of the Borough (paragraph 4.58 of the Plan), including through the strategic linking of the A1 and the A19. Paragraph 4.58 identifies that a mixture of private and public investment will be needed in the long term to improve accessibility to new potential employment areas and to mitigate flood risks and HLM/HBD’s land, particularly Parcel 4 is well placed to assist with this and delivering regeneration in this part of the Borough. In short, site P2-S is the exact opportunity to kickstart delivery of employment land in the north of the Borough. The delivery constraints of Carcroft are well known and identified in the Plan and whilst the Plan makes positive noises about growth opportunities and regeneration in the northern communities, the Plan does not provide a vehicle for delivering these ambitions. The appointment of HBD as development partner for the employment element of the land promotion is significant, possessing a wide and varied portfolio and with an extensive track record of delivering innovative high quality development and assisting regeneration. Allied to an extremely attractive position adjacent to the A1, the site is highly marketable and HBD bring the expertise to realise the ambitions for the north of the Borough. We would recommend Parcel P4 and the northern tip of Parcel P5 is allocated for employment development to assist in increasing the total amount of employment allocation in the Borough to enable the Council to meet its employment delivery target (ie: assist in providing a suitable buffer). Parcels P2 and P3 are much smaller areas of land but would logically also be removed from the Green Belt and form part of any allocation.

Summary:

Object to Policy 4 as it fails to allocate sufficient land to achieve the employment target of 481ha. Significant concern about the effectiveness of the policy to deliver 481ha of employment land. There is no buffer to ensure the minimum target is met, and therefore the plan relies on every site being developed to achieve the requirement of Policy 3. This is unrealistic, and a buffer should be planned for to provide more choice and market competition. Policy 4 is not justified as an appropriate strategy, nor is it effective. Proposed change: There are not enough sites to deliver 481ha. To address this, a site is proposed close to Adwick - Woodlands (Generally site 461). Site is 18.2ha and can deliver 73,000m² (58,000m² on P4) of gross external area floor space. The Council have not allocated 461 on the basis of no exceptional circumstances and sufficient land, however no buffer has been identified and further sites are required. Green Belt Review assesses the site in isolation, however if the residential site to the south (513) is also allocated for housing and some employment (which this rep also promotes), it would represent a logical sustainable urban extension, and if treated as a whole would leave a clear defensible Green Belt boundary (railway line and A1). The areas which are in flood zone would be exempt from development and form a green buffer. The site is strategically located next to J38 of the A1 and with existing employment development to the south of the site and east of the A1. Accept there are capacity issues on the A1 but there is also a
The site adjoins the main Broomhouse Lane Industrial Estate site but is excluded from the allocation. The southern boundary is formed by Broomhouse Lane, Lords Head Lane form the eastern boundary. The existing Broomhouse Lane industrial estate forms the northern and western boundaries. 5.18 The land to the east of Lords Head Lane was allocated for employment use in the Doncaster UDP. The site, reference 646, comprises 17.6 ha and has outline permission for housing development. The site is included as a housing allocation with planning permission in the emerging plan. 5.19 Th site is referred to as Warmsworth Plantation on the emerging proposals map and is allocated as a candidate wildlife site. The area is wooded and a Tree Preservation Order covers the site (1986). 5.20 Policies 31, 32 and 33 of the emerging plan refer to Biodiversity and Geodiversity, Local Wildlife Sites and Woodland and hedgerows. The policies seek to protect existing features and avoid significant adverse impact. Paragraph 10.47 of the Plan states that proposals that result in the loss of woodland will not be supported unless the need for and benefits of the development at that location clearly outweigh the loss. 5.21 Paragraph 174 of NPPF states that plans should protect and enhance biodiversity and geodiversity through the identification of local wildlife rich habitats. Paragraph 175 refers to determining planning applications and states that harm to biodiversity should be adequately mitigated. 5.22 Whilst the biodiversity of the site is recognised it is considered the need for additional land for employment use provides a number of benefits to the local community and wider area that outweigh the loss of the biodiversity. 5.23 It is considered that the site should be allocated for employment to enable the expansion of the existing occupier of Broomhouse Lane Industrial Estate (Polypipe) to expand and modernise to ensure the industry remains in the area where it provides significant local employment opportunities. 5.24 The allocation of the site would make the plan sound by providing an employment allocation in the west of the Borough to provide flexibility to a main employer of the Borough in accordance with the vision for the Plan. (THIS REP IS FOR ONE SITE - FOR OTHER SITE SEE REP 05311)

Site 1 - Land to the north east of the existing Broomhouse Lane Employment Site. Site adjoins the main Broomhouse Lane Industrial Estate site but is excluded from the allocation. Land to the east of Lords Head Lane was allocated for employment use in the Doncaster UDP. The site is referred to as Warmsworth Plantation on the emerging proposals map and is allocated as a candidate wildlife site. The area is wooded and a Tree Preservation Order covers the site (1986). Paragraph 174 of NPPF states that plans should protect and enhance biodiversity and geodiversity through the identification of local wildlife rich habitats and land is allocated as a local wildlife site. Recognise biodiversity need but the need for additional employment land provides a number of benefits to the local community and wider area that outweigh the loss of the biodiversity. The site should be allocated for employment for the occupier to expand. Allocating the site would make the plan sound by providing an employment allocation in the west of the Borough to provide flexibility to a main employer of the Borough in accordance with the vision for the Plan.

Response:

The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.
Summary of Policy 4 Employment Allocations 4.73 Policy 4 allocates land for employment uses in accordance with those sites identified in Table 4 of the Publication Draft Plan and the accompanying Proposals Map. 4.74 In the west of the Borough, one site is allocated for employment. The site is ref 743, in Broomhouse Lane, Edlington and comprise 0.74 ha for B2 use. The site has full planning permission and has been built out. 4.75 There are no employment allocations proposed in the service towns of Mexborough, Conisbrough or Denaby. Soundness of the Policy 4 Employment Allocations 4.76 We object to the proposed Employment Allocations set out in Policy 4. As set out in our comments to Policy 3. We do not consider the policy will achieve the vision of Plan as it does not support existing business locations sufficiently. 4.77 The policy is not justified as the most appropriate strategy to support sustainable growth and communities based on the evidence base. Reasoning 4.78 Policy 3 includes a target for at least 481 hectares of employment land to be developed in the borough. The majority of this requirement comprises sites with planning permission (201 hectares) (para 4.61). New allocated sites comprise 164 hectares to support sectors such as distribution and warehousing in locations with good infrastructure and motorway access. 4.79 The allocation of these sites is supported in order to grow the economy and attract new businesses to the Borough. 4.80 Paragraph 4.59 of the Plan states that some smaller sites are allocated for light industry and manufacturing. The policy states that together with existing sites, the proposed new sites will be able to cater for new demand and replacement sites if a business decides to relocate or expand for investment reasons. 4.81 As we have remarked in our reasoning to policy 3, whilst the strategy for new growth in the south of the Borough is supported (import and airport), the existing economic businesses are not considered sufficiently. 4.82 Paragraph 4.33 states that the west of the Borough is constrained by lack of sites and that existing sites have been under pressure for alternative uses. The justification for not seeking alternative new sites in this location is not sufficient based on the evidence within the Plan that acknowledges the constrained economy and the existing work patterns of the population. 4.83 It is considered that additional sites should be allocated in the west of the borough, particularly in areas adjoining existing employment policy areas to enable the expansion of existing businesses. 4.84 A greater number of alternative sites in the west of the Borough will provide greater choice and flexibility over the plan period to protect existing employment in these locations. The proximity and provision of employment sites and opportunities in the deprived settlements of Mexborough, Conisbrough, Denaby and Edlington supports their regeneration and the sustainability of these settlements as a whole in accordance with NPPF. Proposed changes to the plan to make it Sound 4.85 It is considered that additional sites in the west of the Borough should be allocated to provide additional choice and flexibility for existing and new employers in the west of the Borough over the plan period. 4.86 The allocation of additional sites may require a further Green Belt review to enable existing sites to expand, as referred to in our comments to Policy 2. 4.87 Two sites at Broomhouse Lane Industrial Area could provide suitable employment allocations and provide expansion opportunities to existing employment areas for existing occupiers, namely Polypipe a large national company providing 800 local jobs in the area. 4.88 Details of the sites are provided in Section 5 of this representation.

Summary: Policy 4 allocates land for employment. One site (site is ref 743, in Broomhouse Lane) is allocated for employment in the west of the Borough reasons include: There are no employment allocations proposed in the service towns of Mexborough, Conisbrough or Denaby object to the proposed Employment Allocations set out in Policy 4 (policy is not justified as the most appropriate strategy to support sustainable growth) Support growth in the south but existing economic businesses are not considered sufficiently. Paragraph 4.33 states that the west of the Borough is constrained by lack of sites and that existing sites have been under pressure for alternative uses. The justification for not seeking alternative new sites in this location is not sufficient based on the evidence within the Plan that acknowledges the constrained economy and the existing work patterns of the population additional sites should be allocated in the west of the borough, particularly in areas adjoining existing employment policy areas to support expansion of existing businesses. To make the plan sound, additional sites should be allocated in the west of the Borough. Allocate additional site in the greenbelt (see response to policy 2) Two sites at Broomhouse Lane Industrial Area could provide suitable employment allocations and provide expansion opportunities to existing employment areas for existing occupiers, namely Polypipe a large national company providing 800 local jobs in the area.

Response: The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.
Comment:

2.1 The site is located on the north side of Broomhouse Lane on the eastern side of Edlington. The site is bounded to the west and north by the existing Polypipe site operations. Lord Heads Lane forms the eastern boundary of the site, beyond which is a former employment allocation EMP2 5, now Housing Allocation 646 with planning permission for 375 residential dwellings being brought forward by Harworth Estates. Broomhouse Lane forms the southern site boundary, beyond which is open space comprising Edlington Pit Wood. 2.2 The site comprises a square shape and is wooded. The site is covered by a Tree Preservation Order (TPO) No30, 1987 Edlington and referred to in some documents as Warmsworth Plantation. 2.3 The current UDP allocation is unclear but it is possibly a buffer zone. The site falls within the settlement boundary. 2.4 Discussions with the authority have stated the site is a candidate Local Wildlife Site - a site designated for its conservation interest but on its last assessment (2013) did not meet the Local Wildlife Site selection criteria. Proposed Allocation 2.5 The Regulation 19 Policies Map allocates the site as a Candidate Local Wildlife Site, policies 31 and 32 apply. The site is included within the settlement boundary, Policies 2 and 3 relating to Development Limits and Policy 11 relating to the Residential Policy Area apply. Additional designations and policies relating to biodiversity opportunity area, PEDL licence Area and Minerals Safeguarding Area also apply. (THIS REP IS FOR ONE SITE - FOR OTHER SITE SEE REP 05311)

Summary:

Description of site 1. woodland site is bounded to the west and north by the existing Polypipe site operations Covered by Tree Preservation Order (TPO) No30, 1987 the authority have stated the site is a candidate Local Wildlife Site - a site designated for its conservation interest but on its last assessment (2013) did not meet the Local Wildlife Site selection criteria. Regulation 19 Policies Map allocates the site as a Candidate Local Wildlife Site, policies 31 and 32 apply.

Response:

Noted
Chapter 4: Strategic Approach

Policy 4: Employment Allocations

The Plan acknowledges that Mexborough and Conisbrough are constrained by a lack of sites. The plan should allocate additional employment areas for employment use, but in accordance with NPPF Paragraph 4.33 recognises that existing employment sites in the area have been under pressure for other uses in the past, or do not meet the needs of modern business.

5.10 Paragraph 4.33 recognises that existing employment sites in the area have been under pressure for other uses in the past, or do not meet the needs of modern business. 5.11 The Plan acknowledges that Mexborough and Conisbrough are constrained by a lack of sites.

Therefore, it is appropriate to consider the allocation of employment sites adjoining Broomhouse Lane Industrial Site which will enable the existing occupier, Polypipe to expand and continue to operate efficiently from this location. 5.12 Two additional site allocations detailed below will provide additional choice and flexibility to the existing national occupier on Broomhouse Lane Industrial Estate, Polypipe. 5.13 Polypipe Building Products are one of the largest employers in the Doncaster area manufacturing above and below ground plastic building products in housebuilding and the DIY markets. 5.14 The company Head Quarters are located at their site on Broomhouse Lane Industrial Estate where they employ around 850 staff, many of whom come from the local area. 5.15 Polypipe have another site in Doncaster, but Broomhouse Lane is the spiritual home and Head Quarters of the group where they operated from for almost 40 years.

5.16 The site is constrained because it is the spiritual home and Head Quarters of the group where they operated from for almost 40 years. The two sites detail the spatial home and headquarters of the group where they operated from for almost 40 years. 5.13 Polypipe Building Products are one of the largest employers in the Doncaster area manufacturing above and below ground plastic building products in housebuilding and the DIY markets. 5.14 The company Head Quarters are located at their site on Broomhouse Lane Industrial Estate where they employ around 850 staff, many of whom come from the local area. 5.15 Polypipe have another site in Doncaster, but Broomhouse Lane is the spiritual home and Head Quarters of the group where they operated from for almost 40 years.

5.16 The site is constrained because it is the spiritual home and headquarters of the group where they operated from for almost 40 years. Comment:

3.1 This section of the response provides support for the allocation of Site 001: Junction 6 M18, Thorne North for employment use as under Policy 4: Employment Allocations, and provides further comment on the detail of this policy. 3.2 The allocation of Site 001: Junction 6 M18, Thorne North to provide 73.63 hectares of employment use including business (B1b/c), general industry (B2) and storage and distribution (B8) alongside ancillary employment uses is supported, as is the identification of Site 001 as a Major Employment Site on the Key Diagram, and as an Employment Allocation on the accompanying Policies Map. 3.3 As demonstrated in Section 2.0, the allocation of Site 001 clearly accords with the wider spatial strategy set by strategic policies 2 and 3 in proposing major employment development suitable for logistics, manufacturing and light industrial uses outside Doncaster’s main urban area, albeit adjoining the Main Town of Thorne and Moorends and its resident population, in an area which is attractive to the market, can accommodate large buildings, and has good access to the strategic transport/motorway network. The site therefore provides the opportunity to deliver the strategic requirements established by Policy 3, and in particular the sustainability and regeneration benefits of locating strategic employment land accessible to the available workforce within the north of the Borough. 3.4 Indeed, the site has been selected for allocation following comprehensive assessment in a number of evidence base documents including the Employment Land Review and Update, Sustainability Appraisal, and Site Selection Methodology which accompany the Local Plan: Publication Draft, and none of these documents identify a more suitable site to be allocated for the delivery of strategic employment needs within the north of the Borough. 3.5 The Council is therefore justified in allocating this site on the basis of the strategic spatial strategy (Policy 2) and identified priorities for the location and distribution of growth (Policy 3). 3.6 Furthermore, as demonstrated below, the site is deliverable and therefore comprises an effective allocation and policy approach in accordance with paragraph 35 of the NPPF.

Tests of Soundness:

Summary:

The allocation of Site 001 is supported together with the identification of the site as a Major Employment Site on the Key Diagram and as an employment allocation on the Policies Map. Site 001 clearly accords with the wider spatial strategy set by strategic policies 2 and 3 in proposing major employment development suitable for logistics, manufacturing and light industry uses outside Doncaster’s main urban areas, albeit adjoining the Main Town of Thorne and Moorends and its resident population. It is in an area which is attractive to the market, can accommodate large buildings and has good access to the strategic transport/motorway network. The site provides the opportunity to deliver the strategic requirements established by Policy 3. Site 001 has been selected following comprehensive assessment in a number of evidence base documents including the Employment Land Need Assessment, Sustainability Appraisal and Site Section methodology. None of these identify a more suitable site in the north of the borough. The Council is justified in allocating this site on the basis of Policy 2 and 3. The site is deliverable and comprises an effective allocation and policy approach in accordance with NPPF para 35.

Response:

Comments in support of the proposed allocation of Site 001 (Thorne North) are noted.
3.7 This response to the Local Plan is supported by a detailed Delivery Statement which demonstrates that Site 001 is available for immediate development; is suitable for the development of employment uses as proposed by the allocation; and comprises a viable development site for which there is evident commercial interest and market demand. The Delivery Statement is included at Appendix 1 and its content is summarised below. (SEE EMAIL FOR Appendices) Availability and Land Ownership Considerations 3.8 The site is within the ownership of three parties which actively support the proposed allocation and future development of the site as set out in Section 2.0 and Appendix 2 of the accompanying Delivery Statement. The entirety of Site 001 is therefore immediately available for development, and there are no ownership issues which would prevent development of the site. 3.9 Barmston (Thorne) Ltd, as the selected delivery partner for the site, comprises a reputable developer with an established track record in the delivery of large scale employment sites within Doncaster and elsewhere in the Yorkshire region and beyond, and is committed to bringing forward development of the site at the earliest opportunity. Suitability and Market Demand 3.10 The illustrative masterplan included at Appendix 2 of these representations, shows how a mix of B1c, B2 and B8 uses can be accommodated on the full extent of the allocation alongside known site constraints and required mitigation measures. These uses are supported and indeed deemed necessary to maximise the development and employment opportunities presented by the site. 3.11 Section 6.0 of the Delivery Statement demonstrates that there are no technical constraints to prevent the site coming forward for development. A significant amount of technical assessment work has been undertaken as part of the current planning application on the site, and the vast majority of technical issues are now agreed with DMBC and other relevant statutory consultees. Significantly, agreement has been reached with Highways England which has confirmed that the proposed development can be accommodated as part of the existing highway network, and the Environment Agency and DMBC Drainage Officers are supportive of the development in flood risk terms subject to the inclusion of mitigation measures. All other technical matters are in the process of being resolved. 3.12 Advice from commercial agents CPP contained within Section 4.0 and Appendix 3 of the Delivery Statement confirms that there is demand for the type and scale of development proposed, and indeed that the site provides a number of significant and site-specific advantages, specifically the level nature of the site and its direct access to and visibility from the M18, that will help to ensure the timely delivery of Site 001 and the associated investment, job creation and regeneration. 3.13 Section 8.0 and Appendix 7 of the Delivery Statement demonstrate that development of Site 001 for employment uses as proposed by the allocation comprises sustainable development in social, economic and environmental terms, and will deliver a number of significant and site-specific benefits, not least in terms of job creation, local training opportunities and associated regeneration. As such development of the site will clearly stimulate employment opportunities and regeneration in the Thorne area of the District as identified by the Local Plan. Viability and Deliverability 3.14 Sections 6.0 and 7.0 and Appendix 6 of the Delivery Statement confirm that the site is straightforward to develop, and that there are no technical difficulties which would make development of the site excessively expensive, and no significant abnormal costs which would impact on the viability or deliverability of the proposals, and the absence of any major upfront infrastructure costs or reliance upon third party investment prevents any potential uncertainty or delay to delivery. 3.15 Section 4.0 of the Delivery Statement and the accompanying Commercial Report (included at Appendix 3 of the Delivery Statement) confirms that the site is attractive to commercial occupiers and, importantly, can accommodate the majority of market requirements, including those for increasingly large floorplates and cross-located facilities, as well as UK-wide footloose requirements. 3.16 The site is sufficiently served by existing utilities infrastructure, or these can be reinforced, in order to serve the development with power, telecommunications and other services. 3.17 The site is subject to a live outline planning application which is currently under consideration by DMBC, and Barmston is committed to working with DMBC to progress to determination of the application as quickly as possible, following which Barmston hope to commence site preparation work and site infrastructure within a period of six to 12 months, and to deliver the site on a phased basis in line with market demand over a 10 year period. Conclusions on Delivery 3.18 Overall, therefore, the Delivery Statement demonstrates that Site 001: Thorne North is available for development and that the introduction of employment uses (B1c, B2 and B8) on the site is suitable, achievable and deliverable within the plan period in line with allocation of the site as proposed by the Doncaster Local Plan: Publication Version (June 2019). 3.19 Barmston is therefore confident that the Council’s estimate that at least 51.54 hectares of the site can be brought forward over the plan period (as indicated in Table 4: Employment Site Allocations of the Local Plan Publication Version) and, subject to the level of commercial inquiries and site take up following the grant of planning permission, consider is likely that the entirety of the site would be developed before 2035. 3.20 It is therefore demonstrated that Policy 4 of the Doncaster Local Plan 2015-2035: Publication Version, and specifically the allocation of Site 001, comprises an effective and deliverable policy in accordance with the tests of soundness set out at paragraph 35 of the NPPF.
Summary:
The representation is supported by a detailed Delivery Statement which demonstrates that Site 001 is available for immediate development; is suitable for the development of employment uses as proposed by the allocation; and comprises a viable development site which has evident commercial interest and market demand. The Delivery Statement states the following: Availability and Land Ownership Considerations The site has three owners who actively support the allocation and development of the site. The whole site is immediately available for development with no ownership issues. Barmston (Thorne) Ltd are the selected delivery partner and comprise of a reputable developer with an established track record in the delivery of large scale employment sites. Suitability and Market Demand The illustrative masterplan shows how a mix of B1c, B2 and B8 uses can be accommodated alongside known site constraints and required mitigation measures. These uses are supported and deemed necessary to maximise the site’s opportunities. There are no technical constraints to prevent the site being developed. A significant amount of technical assessments have been undertaken for the planning application and the vast majority of technical issues are now agreed with DMBC and other relevant statutory consultees. Agreement has been reached with Highways England who have confirmed that the proposed development can be accommodated on the existing highway network. The Environment Agency and DMBC Drainage Officers are supportive in terms of flood risk and mitigation measures. Other technical matters are being resolved. Advice from commercial agents confirms there is demand for the type and scale of development proposed. The site provides a number of significant and site-specific advantages, specifically the level of the site and its direct access to and visibility from the M18. The development of the site is sustainable in social, economic and environmental terms and will deliver a number significant benefits not least in terms of job creation, local training opportunities and associated regeneration. Viability and Deliverability The site is straightforward to develop, there are no technical difficulties and there are no significant abnormal costs. There is an absence of any major up front infrastructure costs or reliance upon third party investment. The site is attractive to commercial occupiers and can accommodate the majority of market requirements including large floorplates and cross docked facilities. It is sufficiently served by existing utilities infrastructure, or these can be reinforced. The site is subject to a live planning application and Barnston is committed to working with DMBC to progress the application is quickly as possible. Barnston hope to commence site preparation work and site infrastructure within a period of six to 12 months. It will be on a phased basis over a 10 period. Conclusions Site 001 is available for development. It is suitable, achievable and deliverable within the plan period. Barnston is confident that the Council’s estimate of 51.54 ha can be brought forward over the plan period and consider that the entirety of the site can be developed before 2035. Policy 4 is an effective and deliverable policy and is in accordance with the tests of soundness.

Response:
Comments in support of the proposed allocation of Site 001 (Thorne North) are noted.
Comment:
3.38 As set out above, part C of Policy 4 requires major developments (defined as employment or other developments that propose 20 or more direct jobs) to agree local labour agreements which secure labour, services and supplies and training and recruitment opportunities. 3.39 Such an approach is supported and will assist in maximising Site 001’s contribution to widening access to learning and training opportunities for communities within North Doncaster and beyond (as set out in Section 8 of the accompanying Delivery Statement) and further assist in meeting the regeneration objectives for the north of Doncaster as set out within the Doncaster Local Plan: Publication Version.

Summary:
Support the approach in Part C of Policy 4 which requires major developments to agree local labour agreements. This will assist in maximising Site 001’s contribution to widening access to learning and training opportunities for communities within North Doncaster and beyond.

Response:
Noted. Support welcomed.
3.21 As set out above, Policy 4 of the Local Plan: Publication Version requires employment sites to be developed in accordance with the development requirements set out in Appendix 2 of the Local Plan: Publication Version, alongside other relevant Local Plan policies. 3.22 Appendix 2 details the following site specific development requirements in respect of Site 001: 1 Archaeology - The potential for the survival of buried archaeology below the zone impacted by ploughing is considered to be moderate to high. Further archaeological investigation is likely to be required if the site is brought forward for development. 2 Biodiversity - New habitat creation landscaping should be provided along the eastern boundary of the site to enhance the ecological corridor along the nearby River Don. Given the proximity of Thorne Moors habitats attractive to foraging nightjar would be beneficial. 3 Design - A masterplan and design guide will need to be developed with the Council prior to submission of a planning application. The existing Public Right of Way from North Common Road should be extended westward from its southern end to link with Selby Road. The site layout should be led by a robust landscape and visual impact assessment of the surrounding environment (views and viewpoints to be agreed with the Council). There is a requirement for significant landscape buffering around the edges of the site and/or the location of smaller buildings adjacent the open countryside. Likewise green corridors through the site are desirable to create a ‘green grid’ GI framework utilising existing drains where possible. Buildings should front onto public roads and create a high quality appearance from the motorway. Any large floor plate/large volume buildings should include quality architectural detailing which seeks to either break down the scale of the building or celebrate its prominence as a landmark building. Highest quality materials and detailing should be focused on the active, publicly viewable building elements, particularly those elevations that are visible from the motorway. 4 Transport - A Transport Assessment will be required. Previous comments have been made to the planning application on this site. Depending on whether this iteration of the scheme comes forward, these either need to be taken account of, or revised comments will be given as part of any future application. 5 Trees and Hedgerows - The vast majority of 1825 Enclosure hedgerows have been removed. Site layout should be informed by a tree survey. 3.23 As set out above and in the accompanying Delivery Statement, Site 001 is subject to a live outline planning application (application reference 16/02136/OUTM) for employment uses (all matters other than access reserved for future consideration) ("the planning application") which is in the process of being considered by DMBC. 3.24 The planning application is supported by a suite of technical information, including an Environmental Statement (ES), which assesses the impacts of the development on various aspects of the environment. Consultation responses have also been provided in respect of the majority of technical matters and as a result a number of site-specific issues have already been successfully addressed, and all other technical matters are in the process of being resolved. 3.25 Whilst such matters are assessed in the accompanying Delivery Statement, a response to the site specific matters outlined in Appendix 2 of the Local Plan: Publication Draft is provided below. Archaeology 3.26 As set out in Section 6.0 of the accompanying Delivery Statement, the desk based archaeological assessment submitted with the planning application has established that there is a low potential for archaeological remains within the proposed development site. Neither are there any above ground designated heritage assets located within the site or within 250m of the site boundary. 3.27 Given the outcome of this assessment and the low potential for adverse impacts on above or below ground heritage assets arising from development of the site, it is not considered that explicit reference needs to be made to matters of archaeology within the Development Requirements for Site 001. Adequate protection is afforded to below (and above) ground assets by way of wider Local Plan policies, notably Policy 36: Understanding and Recording the Historic Environment and Policy 40: Development Affecting Archaeology, both of which provide sufficient protection to below ground heritage assets and will ensure the inclusion of appropriate mitigation measures should these be required. 3.28 It is therefore recommended that reference to archaeological considerations from the Development Requirements for Site 001 be removed in order to provide a more justified and appropriate approach based on the evidence available and consistent with national planning policy. Biodiversity 3.29 The illustrative masterplan enclosed at Appendix 2 of these representations shows how Site 001 can be developed alongside new structural landscaping to the site’s boundaries, which offers the opportunity for habitat creation and ecological habitat in accordance with this principle. 3.30 Importantly, however, survey work undertaken in respect of the planning application demonstrates that the Thorne North site is not suitable foraging habitat for nightjar. As such reference to the provision of habitats attractive to foraging nightjar should be removed from the Development Requirements for Site 001 in order to ensure a proportionate and justified approach consistent with national planning policy and the requirements of other relevant environmental legislation. Indeed, it is not recommended that habitat attractive to nightjar be included on this site due to the close proximity of the M18 motorway and high risk of collision. The River Don is located to the west of Site 001, rather than the east as stated in Appendix 2 of the Local Plan (Publication Version). Design 3.31 As drafted, reference to design matters in Appendix 2 fails to reflect the current planning application which is already in the process of being considered by DMBC, and which Barmston is committed to progressing to determination at the earliest opportunity, and potentially undermines the introduction of alternative, but equally acceptable, approaches to the site’s development. 3.32 That said, the Illustrative Masterplan included at Appendix 2 broadly reflects the design principles set out above, including: 1 An appropriate approach to public rights of way within the site and pedestrian links to and through the site; 2 the provision of landscape buffers around the development’s edge; 3 retention of the existing drains and associated ecological stand-off areas; 4 the
creation of a high quality development when viewed from the motorway and from within the development itself; and 5 the provision of a range of building sizes. 3.33 The illustrative Masterplan is indicative only and shows one way in which the site could be developed to accommodate known site opportunities and mitigate constraints, as well as current market demands. 3.34 Crucially, and as set out within the accompanying Delivery Statement, one of the key benefits of Site 001 is that it provides flexibility to cater for a wide range of occupier requirements, including those with significant floorplates which are relatively scarce across the UK and will therefore generate potentially significant inward investment opportunities. It is therefore critical that the Local Plan avoids an overly prescriptive approach to site layout and design in order for the development and employment opportunities presented by the site to be maximised in line with the regeneration objectives established by the Doncaster Local Plan. 3.35 It is therefore suggested that reference is made to future development of the site as being required to be informed by LVIA and those overarching design principles 1-5 referred to above, whilst allowing the site specific layout and design to be assessed as part of determination of the planning application (at outline and reserved matters stage) with reference to occupier requirements and wider Local Plan Policies, notably those within Chapter 12, which seek to secure high quality, inclusive and well-landscaped design. Transport 3.36 Reference to transport matters as drafted within Appendix 2 of the Local Plan: Publication Version is supported. The wording appropriately reflects the agreed highways position to date and rightly refers to the requirement for any subsequent scheme revisions to take account of this advice, and/or to seek further agreement of highways matters in a revised or updated Transport Assessment work should this be required. Trees and Hedgerows 3.37 As set out in the Delivery Statement, there are limited existing trees on site, which are generally in poor condition or compromised by overhead electricity wires, and there is no objection to redevelopment of the site by DMBC’s Tree Officer. As such, and on the basis that the majority of hedgerows on the site have been removed, whilst the requirement for a tree survey to inform the site masterplan is reasonable, it is questionable whether explicit reference to trees and hedgerows is required for Site 001. (SEE EMAIL FOR Representation Appendices)

Summary:

Appendix 2 of the Local Pan sets out the following site specific requirements for Site 001. 1. Archaeology - The potential for the survival of buried archaeology below the zone impacted by ploughing is considered to be moderate to high. Further archaeological investigation is likely to be required if the site is brought forward for development. 2. Biodiversity - New habitat creation landscaping should be provided along the eastern boundary of the site to enhance the ecological corridor along the nearby River Don. Given the proximity of Thorne Moors habitats attractive to foraging nightjar would be beneficial. 3. Design - A masterplan and design guide will need to be developed prior to submission of a planning application. The existing Public Right of Way from North Common Road should be extended westward. The site layout should be led by a robust landscape and visual impact assessment of the surrounding environment. There is a requirement for significant landscape buffering around the edges of the site and/or the location of smaller buildings adjacent the open countryside. Green corridors through the site are desirable to create a ‘green grid’ framework utilising existing drains where possible. Buildings should front onto public roads and create a high quality appearance from the motorway. Any large floor plate/large volume buildings should include quality architectural detailing. Highest quality materials and detailing should be focused on the active, publicly viewable building elements. 4. Transport - A Transport Assessment will be required. Previous comments have been made to the planning application on this site. Depending on whether this iteration of the scheme comes forward, these either need to be taken account of, or revised comments will be given as part of any future application. 5. Trees and Hedgerows - The vast majority of 1825 Enclosure hedgerows have been removed. Site layout should be informed by a tree survey. There is a live outline planning application (application reference 16/02136/OUTM) which is being considered by DMBC. It is supported by a suite of technical information, including an Environmental Statement (ES). Consultation responses have also been provided for the majority of technical matters, a number of site-specific issues have been successfully addressed, and all other matters are being resolved. A response to the site specific matters outlined in Appendix 2 of the Local Plan is provided below: Archaeology - A desk based archaeological assessment submitted with the planning application has established that there is a low potential for archaeological remains within the proposed development site. Neither are there any above ground designated heritage assets located within the site or within 250m of the site boundary. Therefore it is not considered that explicit reference needs to be made to archaeology within the Development Requirements. Adequate protection is afforded to below (and above) ground assets by way Local Plan policies Policy 36 and Policy 40. Reference to archaeological considerations in Appendix 2 should be removed in order to provide a more justified and appropriate approach based on the evidence available and consistent with national planning policy. Biodiversity - The indicative illustrative masterplan shows how the site can be developed alongside new structural landscaping which will offer the opportunity for habitat creation and ecological habitat. The survey work for the planning application demonstrates that the site is not suitable for foraging habitat for nightjar. Reference to the provision of habitats attractive to foraging nightjar should be removed from the Development Requirements. It is not recommended that habitat attractive to nightjar be included on this site due to the close proximity of the M18 motorway and high risk of collision. The River Don is located to the west of Site 001, rather than the east as stated in Appendix 2 of the Local Plan (Publication Version). Design - Reference to design matters in Appendix 2 fails to reflect the current planning application. The site's Illustrative Masterplan broadly reflects the design principles set out including: 1. An appropriate approach to public rights of way within the site and pedestrian links to and through the site; 2. the provision of landscape buffers around the development's edge; 3. retention of the existing drains and associated ecological stand-off areas; 4. the creation of a high quality development when viewed from the motorway and from within the development itself; and 5. the provision of a range of building sizes. One of the key benefits of the site is that it provides flexibility to cater for a wide range of occupier requirements, including those with significant floorplates. The Local Plan should avoid an overly prescriptive approach to site layout and design so that development and employment opportunities can be maximised. Reference should be made to future development of the site as being required to be informed by LVIA and those overarching design principles 1-5 referred to above, whilst allowing the site specific layout and design to be assessed as part of determination of the planning application (at outline and reserved matters stage) with reference to occupier requirements and wider Local Plan Policies, notably those within Chapter 12, which seek to secure high quality, inclusive and well-landscaped design. Transport 3.36 Reference to transport matters as drafted within Appendix 2 of the Local Plan: Publication Version is supported. The wording appropriately reflects the agreed highways position to date and rightly refers to the requirement for any subsequent scheme revisions to take account of this advice, and/or to seek further agreement of highways matters in a revised or updated Transport Assessment work should this be required. Trees and Hedgerows 3.37 As set out in the Delivery Statement, there are limited existing trees on site, which are generally in poor condition or compromised by overhead electricity wires, and there is no objection to redevelopment of the site by DMBC’s Tree Officer. As such, and on the basis that the majority of hedgerows on the site have been removed, whilst the requirement for a tree survey to inform the site masterplan is reasonable, it is questionable whether explicit reference to trees and hedgerows is required for Site 001. (SEE EMAIL FOR Representation Appendices)

Response:

Support for the allocation of site 001 (Thorne North) and the provision of technical assessments for the planning application are noted.
In order to provide further information and/or clarification regarding the support for Policy 2 / 3 / 31. In order to provide further information and/or clarification on any of the points raised within the accompanying Representations Report and/or Delivery Statement in respect of Policy 4 and the allocation of Site 001: J6, M18, Thorne North for employment use and to directly address any comments that may be raised by objectors to the allocation.

Area: Chapter 4: Strategic Approach

Policy: Policy 4: Employment Allocations

Tests of Soundness:

1.1 This document has been prepared by Lichfields on behalf of Mr Donald Parkinson and Barmston (Thorne) Ltd and comprises a formal consultation response to the Doncaster Local Plan 2015-2035: Publication Version (June 2019). 1.2 The response focuses mainly on providing support for the allocation of land at Junction 6 of the M18 to the north of Thorne for employment uses. This site is identified under site reference 001: Thorne North and comprises an Employment Allocation to provide 73.63 ha of land for employment use including business (B1 b/c), general industry (B2) and storage and distribution (B8) uses in accordance with draft Policy 4: Employment Allocations (Strategic Policy). 1.3 Barmston (Thorne) Ltd comprise the delivery partner for the site, the vast majority of which is owned by the Parkinson family. Both the Parkinson family and Barmston (Thorne) Ltd welcome the opportunity to engage in consultation on the Local Plan: Publication Version and to present their full support for the allocation of Site 001, and look forward to engaging further with the Local Plan process at Examination stage. 1.4 Officers will be aware that the Parkinson family has actively engaged in previous versions of the Local Plan in respect of Site 001, and that the site is subject to an outline planning application for the development of employment uses which is in the process of being considered by Doncaster Metropolitan Borough Council (DMBC). 1.5 A separate Delivery Statement has been prepared, and is appended to this report (see Appendix 1), which considers such matters as land ownership, commercial requirements and market demand, deliverability and viability, and a consideration of the sustainability credentials of the site. The report demonstrates that Site 001 is available for immediate development; is suitable for the development of employment uses as proposed by the allocation; and comprises a viable development site for which there is evident commercial interest and market demand. The site is therefore wholly deliverable in order to meet Doncaster's objectively assessed employment needs in the forthcoming plan period in accordance with the requirements of national planning policy. 1.6 The Delivery Statement is supported by an indicative masterplan which shows how a mix of B8, B2 and B1c uses can be delivered on the site, and which is also referred to in this response. 1.7 The response also provides support for other strategic policies associated with the delivery and location of employment land across the Borough, and comments on a limited number of wider thematic policies. Soundness 1.8 Since the Local Plan is at Publication Draft stage, comments are invited on the basis of whether the plan is considered to be legally compliant and meets the tests of soundness, as set out within paragraph 35 of the National Planning Policy Framework (NPPF), and is: - Positively prepared - Justified - Effective; and - Consistent with national policy. 1.9 Specific reference is made to the tests of soundness as relevant throughout this response. 1.10 We respectfully request the opportunity to expand on the comments made within these representations at the forthcoming Examination in Public. Response Structure 1.11 The remainder of the response to the Doncaster Local Plan 2015-2035: Publication Version (June 2019) is structured as follows: 1 Section 2.0 refers to relevant strategic policies within the plan, including the amount and location of strategic employment land across the Borough; 2 Section 3.0 provides detailed support for the allocation of Site 001, including information regarding the site’s availability, suitability and viability with reference to the accompanying Delivery Statement and site masterplan, and other requirements of policy 4, and considers the development requirements for the site (as set out in Appendix 2 of the Local Plan); 3 Section 4.0 provides comment on a limited number of thematic policies within the Local Plan Publication Version; and 4 Section 5.0 provides a summary and conclusions. 1.12 As referenced above, the represented are supported by the following appendices: 1 Appendix 1 - Site 001 - J6 M18, Thorne North: Delivery Statement 2 Appendix 2 - Site 001 - J6 M18, Thorne North: Illustrative Masterplan (SEE EMAIL FOR Appendices)

Summary:

Support for the allocation of Site 001 Thorne North. The site provides 73.63 ha of land for employment uses in accordance with draft Policy 4: Employment Allocations. The site has a delivery partner and is mainly owned by a single landowner. The site is subject to an outline planning application. The documentation demonstrates that the site is available for immediate development; is suitable for the development of employment uses; and comprises a viable development site for which there is commercial interest and market demand. The site is wholly deliverable to meet Doncaster’s objectively assessed employment needs in the plan period. There is also support for other strategic policies associated with the delivery and location of employment land across the borough.

Response:

Support for Policy 4 and the allocation of site 001 (Thorne North) is noted.
2.34 Policy 4 sets out employment allocations that will help deliver the spatial strategy and meet the level and distribution of employment growth in order to deliver the spatial strategy. 2.35 The site has not been included as an Employment allocation and is shown to be retained in the Green Belt. DLP objects to this approach, which is considered to be unsound. Although if the site is removed from the Green Belt, housing delivery would be sought, due to the proximity of the site to neighbouring employment uses, the site could also support local employment opportunities. 2.36 Section 4 of this representation sets out a detailed assessment of the site including reference to the site context, deliverability and capacity of the site, and an assessment of alternative sites promoted for development within Askern, in order to demonstrate that the site is appropriate and deliverable for a range of uses.

**Summary:**
Policy 4: Employment Allocation (Strategic Policy). Proposes new site for allocation. o the site could support local employment opportunities. o Objects to Green Belt designation (have presented detailed GB review to justify removal)

**Response:**
Noted
The proposed employment allocation is situated to the south of Broomhouse Lane and would form an extension to the existing employment policy area on the south of Broomhouse Lane. The proposed allocation comprises land that currently forms part of a large area of public open space. The specific area is to be determined but it is considered that approximately 50% of the area of open space could be allocated for employment use with the remaining 50% retained and enhanced as open space. The northern part of the open space, adjoining the existing employment policy area currently comprises an area of play equipment on hardstanding and areas of grass. The southern area of open space is laid to grass with a number of paths and desire lines crossing the space between the residential areas to the west and Edlington Wood to the south and east. The northern boundary of the proposed site is formed by the Broomhouse Lane Employment Area. The area is currently occupied by buildings, hardstanding and car park currently used by Polypipe staff. As referred to above, the eastern and southern boundary of the open space area (proposed site) is formed by Edlington Wood. To the west are residential areas, site reference 638 runs close to the eastern boundary. Development of the site for 387 new dwellings has started. It is considered that the site should be allocated for employment use to provide additional sustainable land for existing businesses on the Broomhouse Lane Industrial Estate. The site would provide deliverable land to ensure Polypipe could grow and expand their business to continue operating viably and efficiently from their current location in accordance with the plans vision. The company is a main employer in the local area and wider borough and provides sustainable employment to the area. The economic activity in the area provides a number of social benefits which ensure the sustainability and vibrancy of sustainable communities. (THIS REP IS FOR ONE SITE - FOR OTHER SITE SEE REP 05285)
### Summary of Policy 4 Employment Allocations

<table>
<thead>
<tr>
<th>Policy 4 allocates land for employment in accordance with those sites identified in Table 4 of the Publication Draft Plan and the accompanying Proposals Map.</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.74 In the west of the Borough, one site is allocated for employment. The site is ref 743, in Broomhouse Lane, Edlington and comprise 0.74 ha for B2 use. The site has full planning permission and has been built out.</td>
</tr>
<tr>
<td>4.75 There are no employment allocations proposed in the service towns of Mexborough, Conisborough or Denaby. Soundness of the Policy 4 Employment Allocations 4.76 We object to the proposed Employment Allocations set out in Policy 4. As set out in our comments to Policy 3. We do not consider the policy will achieve the vision of Plan as it does not support existing business locations sufficiently.</td>
</tr>
<tr>
<td>4.77 The policy is not justified as the most appropriate strategy to support sustainable growth and communities based on the evidence base. Reasoning 4.78 Policy 3 includes a target for at least 481 hectares of employment land to be developed in the borough. The majority of this requirement comprises sites</td>
</tr>
<tr>
<td>with planning permission (201 hectares) (para 4.61). New allocated sites comprise 164 hectares to support sectors such as distribution and warehousing in locations with good infrastructure and motorway access.</td>
</tr>
<tr>
<td>4.79 The allocation of these sites is supported in order to grow the economy and attract new businesses to the Borough. 4.80 Paragraph 4.59 of the Plan states that some smaller sites are allocated for light industry and manufacturing. The policy states that together with existing sites, the proposed new sites will be able to cater for new demand and replacement sites if a business decides to relocate or expand for investment reasons. 4.81 As we have remarked in our reasoning to policy 3, whilst the strategy for new growth in the south of the Borough is supported (port and airport), the existing economic businesses are not considered sufficiently.</td>
</tr>
<tr>
<td>4.82 Paragraph 4.33 states that the west of the Borough is constrained by lack of sites and that existing sites have been under pressure for alternative uses. The justification for not seeking alternative new sites in this location is not sufficient based on the evidence within the Plan that acknowledges the constrained economy and the existing work patterns of the population.</td>
</tr>
<tr>
<td>4.83 It is considered that additional sites should be allocated in the west of the borough, particularly in areas adjoining existing employment policy areas to enable the expansion of existing businesses. 4.84 A greater number of alternative sites in the west of the Borough will provide greater choice and flexibility over the plan period to protect existing employment in these locations. The proximity and provision of employment sites and opportunities in the deprived settlements of Mexborough, Conisborough, Denaby and Edlington supports their regeneration and the sustainability of these settlements as a whole in accordance with NPPF.</td>
</tr>
<tr>
<td>Proposed changes to the plan to make it Sound 4.85 It is considered that additional sites in the west of the Borough should be allocated to provide additional choice and flexibility for existing and new employers in the west of the Borough over the plan period. 4.86 The allocation of additional sites may require a further Green Belt review to enable existing sites to expand, as referred to in our comments to Policy 2.</td>
</tr>
<tr>
<td>4.87 Two sites at Broomhouse Lane Industrial Area could provide suitable employment allocations and provide expansion opportunities to existing employment areas for existing occupiers, namely Polypipe a large national company providing 800 local jobs in the area. 4.88 Details of the sites are provided in Section 5 of this representation.</td>
</tr>
</tbody>
</table>

### Summary:

Policy 4 allocates land for employment. one site (site is ref 743, in Broomhouse Lane) is allocated for employment in the west of the Borough. The site is located in the west of the Borough, particularly in areas adjoining existing employment policy areas to enable the expansion of existing businesses. A greater number of alternative sites in the west of the Borough will provide greater choice and flexibility over the plan period to protect existing employment in these locations. The proximity and provision of employment sites and opportunities in the deprived settlements of Mexborough, Conisborough, Denaby and Edlington supports their regeneration and the sustainability of these settlements as a whole in accordance with NPPF. Proposed changes to the plan to make it Sound It is considered that additional sites in the west of the Borough should be allocated to provide additional choice and flexibility for existing and new employers in the west of the Borough over the plan period. The allocation of additional sites may require a further Green Belt review to enable existing sites to expand, as referred to in our comments to Policy 2. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time. It is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.

### Response:

The land allocation is based on the forecast requirement. The requirement is based on independent job number forecasts undertaken by Peter Brett Associates (Economic Forecasts and Housing Needs Assessment). Sufficient land has been proposed for allocation to meet the requirement. The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time. It is considered that there are currently no exceptional circumstances. The explanatory text of Local Plan Policy 3 also explains that there is access to business parks across the border in Rotherham. These can be accessed using strong public transport links and road connectivity.

2.6 The site is situated to the south of Broomhouse Lane which forms the northern boundary of the site. To the east of the site is an area of hardstanding used as vehicle/trailer parking for Polypipe and a wooded area. Residential development is located to the west and open space to the south. 2.7 The site itself comprises two specific parts. Part 1 is situated to the front of the site adjoining Broomhouse Lane and comprises a roughly rectangular area and is employment use. Half of this area is currently used as car parking for Polypipe staff, the remaining area is occupied by two residential bungalows and Summerfield Industrial Park. 2.8 Part 2 of the site lies to the rear and comprises an area of open space, including a play area (Broomhouse Lane Playground). The play area sits on the northern edge of the larger area of open space which has a number of footpaths running to the south and west providing access into pit wood. 2.9 The front part of the site (part 1) is allocated as an existing employment site, reference EMP2 4 in the adopted UDP. The area to the south, part 2, falls within the defined Green Belt and is allocated as an open Space policy Area. Proposed Allocation 2.10 In the Publication Plan Policies Map, the employment allocation remains on the front part of the site, policy 5 Employment Policy Area therefore applies. Together with designations and policies associated with the development limits, minerals safeguarding, heat opportunity area and biodiversity opportunity area. 2.11 The second part of the site to the rear remains in the defined green belt and is allocated as open space, sport and recreation. Policies 2, 27 and 28 are relevant along with more general policies relating to minerals safeguarding, heat opportunity area and Biodiversity opportunities. (THIS REP IS FOR ONE SITE - FOR OTHER SITE SEE REP 05285)

Summary:

- Site 2 - Land to the south of Broomhouse Lane. Site comprises the existing car park and land immediately to the south. Notes provide a description of the site and location off Broomhouse Lane. The area is in 2 distinct halves. one part is a car park for staff and the other is an area of open space, including a play area (Broomhouse Lane Playground). The play area sits on the northern edge of the larger area of open space. The front part of the site (part 1) is allocated as an existing employment site, reference EMP2 4 in the adopted UDP. The area to the south, part 2, falls within the defined Green Belt and is allocated as an open Space policy Area. Publication Plan Policies Map, the employment allocation remains on the front part of the site, policy 5 Employment Policy Area therefore applies. Together with designations and policies associated with the development limits, minerals safeguarding, heat opportunity area and biodiversity opportunity area.

Response:

Noted.
Publication Local Plan Section two of this representation refers to two sites located at Edlington, adjoining Broomhouse Lane Industrial Estates. 5.2 As detailed in section 4 of this representation, ID Planning do not consider the Plan is its current form to be sound. The plan strategy seeks to protect existing business and provide opportunities for their growth and yet do not provide any new site allocations or expansion opportunities for existing businesses in the west of the borough, specifically Edlington to grow. 5.3 The majority of employment allocations are provided as strategic allocations at the iport and airport. Whilst we do not object to the principal of the strategy seeking to grow these strategic areas and attract new businesses and investment. The plan is unjustified in not providing new sites and opportunities in other areas (particularly in the west of the borough). 5.4 The evidence in the Plan recognises that the economy is relatively self contained and states that with the majority of workers travelling to work within the area and a fifth travel to work within the same electoral ward in which they live. It is these patterns that make the Main towns and service towns and villages such sustainable locations alongside the main urban area. 5.5 The plan includes a target for 230 new homes to be allocated in Edlington but the supply includes a number of existing permissions which together with two allocations will provide for 665 new dwellings in the town over the plan period. 5.6 In addition, between 940 and 1,960 new homes are to be provided in Mexborough, Conisbrough and Denaby. 5.7 In order to for the plan to maintain sustainable communities it is necessary to respond to the planned population growth in this part of the Borough and recognise the existing work patterns. As a result it is necessary to ensure there is choice and flexibility for existing businesses to remain in the local area particularly if they wish to expand. 5.8 In its current form the plan identifies the existing employment policy areas on the Proposals Map. There are currently five existing employment sites identified in Mexborough, Conisbrough, Denaby and Edlington. 5.9 Policy 5 of the plan seeks to protect existing employment areas for employment use, but in accordance with NPPF, subject to a number of criteria being met, alternative uses can be assessed on their merits and permitted in these areas. 5.10 Paragraph 4.33 recognises that existing employment sites in the area have been under pressure for other uses in the past, or do not meet the needs of modern business. 5.11 The Plan acknowledges that Mexborough and Conisbrough are constrained by a lack of sites. Therefore, it is appropriate to consider the allocation of employment sites adjoining Broomhouse Lane Industrial Site which will enable the existing occupier, Polypipe to expand and continue to operate efficiently from this location. 5.12 Two additional site allocations detailed below will provide additional choice and flexibility to the existing national occupier on Broomhouse Lane Industrial Estate, Polypipe. 5.13 Polypipe Building Products are one of the largest employers in the Doncaster area manufacturing above and below ground plastic building products used in housebuilding and the DIY markets. 5.14 The company Head Quarters are located at their site on Broomhouse Lane Industrial Estate where they employ around 850 staff, many of whom come from the local area. 5.15 Polypipe have another site in Doncaster, but Broomhouse Lane is the spiritual home and Head Quarters of the group where they operated from for almost 40 years. 5.16 The site is constrained and additional expansion areas are required to ensure the efficient and viable operation of the business in the future. The two sites detailed below provide suitable expansion potential.

Summary:
Publication Local Plan Section two of this representation refers to two sites located at Edlington. The Plan protects existing businesses and provides opportunities for their growth and yet does not provide new site allocations or expansion opportunities for existing businesses in the WEST of the borough, specifically Edlington. Majority of employment allocations are provided as strategic allocations at the iport and airport. Evidence in the Plan recognises that the economy is relatively self-contained. Majority of workers travel to work within the area and a fifth travel to work within the same electoral ward in which they live. These patterns that make the Main towns and service towns and villages such sustainable locations alongside the main urban area. To maintain sustainable communities it is necessary to respond to the planned population growth in this part of the Borough and recognise the existing work patterns. Policy 5 of the plan seeks to protect existing employment areas for employment use, but in accordance with NPPF, Paragraph 4.33 recognises that existing employment sites in the area are under pressure for other uses. The Plan acknowledges that Mexborough and Conisbrough are constrained by a lack of sites. The plan should allocate additional employment sites adjoining Broomhouse Lane Industrial Site which will enable the existing occupier, Polypipe to expand and continue to operate efficiently from this location site is constrained and additional expansion areas are required to ensure the efficient and viable operation of the business in the future.

Response:
The Green Belt Topic Paper explains why there are no employment allocations within the Green Belt at this time i.e. it is considered that there are currently no exceptional circumstances. There are employment opportunities in the west of the borough and in the wider Dearne Valley which is accessible to local residents via good transport links.

Summary:

281 Signatures  PETITION TO STOP SITE 001 THORNE NORTH M18 JUNCTION 6 NOT TO BE PROPOSED FOR ALLOCATION AS EMPLOYMENT LAND IN DONCASTER LOCAL PLAN (2019)

Response:
The letters and petition in objection to the proposed allocation of Site 001 is acknowledged and noted.
Comment:

289 Signatures I Object to Site 001 Thorne North Junction 6 M18 proposed as Employment Land. Site 001 is Flood Zone 3, it is 183 acres of floodplain, it is approximately 80m from the River Don, with climate change more areas are flooding, Thorne and Moorends need these floodplains. DMBC Air Pollution Control Officer does not support development on this land, increased traffic will worsen already poor air pollution in this area if developed. The whole area is part of The Humberhead Levels, it will have a devastating impact on all wildlife including protected species that live and hunt on it. Loss of high quality Grade 3 - “very good” agricultural land, we need this land to grow food. A vast area of countryside would be lost, replaced by gigantic ugly sheds on the approach to Thorne. The land lies outside the urban frame, it is the wrong side of the motorway, it is not a sustainable urban extension. No safe pedestrian/cycle routes can be identified to Site 001. We have enough warehouses in Thorne we do not need anymore. It is most definitely not a specific site identified for employment by the local community in the Neighbourhood Plan.

Summary:

Standard Letter submitted by 289 people in opposition to proposed allocation of site 001 Thorne North. Also lists the following issues: Flood risk. Air Pollution increase. Impact on wildlife. Loss of agricultural land. Loss of countryside. Not a suitable urban extension - outside urban frame. No safe pedestrian or cycle access. Site not identified in the Neighbourhood Plan.

Response:

The comments against the allocation of Site 001 are noted.
**Comment Ref:** C/North Common, Thorne/0951/5/001  
**Attend Examination:** Written Representation  
**Reason:** Chapter 4: Strategic Approach  
**Policy:** Policy 4: Employment Allocations  
**Tests of Soundness:** Justified  Consistent with national  

**Comment:**

Inclusion of the North Common, Thorne employment site is not sound or sustainable. Development would create an obtrusive, industrial character in a countryside location. This is dumping warehouse units in fields with no sense of place or ecology. The site is an important green connection between the lowland pasture of Fishlake and Thorne and Hatfield moors. This site would be degraded and destroyed. Development would be in conflict with Govt. legislation, regulations and the aspirations of the Habitats Directive, Biodiversity Action Plan, Humberhead Levels Partnership, Living Landscapes, Thorne and Hatfield Moors SSSI and DMBC policies in the local plan. The site is in a high risk flood zone and is only 2 metres above sea level. The plan relies on existing drainage systems but both Govt. and the Env. Agency admit present drainage systems are out of date and inadequate to deal with predicted climate change heavier rainfalls. The plan states that vulnerable development in flood zone areas would be avoided. Why is this vulnerable site allocated for development? The local plan claims to protect high grade agricultural land but includes this site which is high grade quality 2 land. Junction 6, M18 already fails air quality legislation and regulations. Development of this site would increase levels of pollution and congestion, harming public health and the environment. This plan creates toxic air zones. There is an over allocation of land for employment sites. With thousands of square feet lying empty throughout the borough it is evident that there is no great demand for speculative industrial units. It is worrying the sheer scale of green fields that this plan allocates for employment and housing sites. In a period of climate change and overpopulation, it is irresponsible to blight agricultural land, reducing the possibility of future generations to feed themselves. The plan weakens protection of countryside on the east of the borough. Countryside policy treats countryside on the east as less worthy than green belt on the west. Rare lowland pasture landscape in the east is very sensitive to development. Countryside policy should be changed to green belt so all citizens are treated equal. PROPOSED CHANGE Reduce the amount of agricultural land allocated for employment sites and housing. Instead of generic housing estates design more housing around communal gardens. Restore the 3,500+ empty and derelict homes in the borough and thus reduce the demand to build new homes. The DN7/Unity project site would be more appropriately developed as the site for a new Doncaster hospital. The Doncaster hospital site could then be recycled for housing. Countryside land on the east of the borough to be reclassified as green belt.

**Summary:**

Objects to allocation of Employment site at 'North Common, Thorne' (ref 001) Reasons: 1. Incursion into Countryside. 2. Loss of Green filed site. 3. Weakens the protection of the countryside in the East of the Borough making it 'less worthy' then Greenbelt to the West. 4. Impact on character of countryside. 5. Countryside Policy Area should be re-classified as Greenbelt. 6. Site is an important green connection between lowland pasture of Fishlake and Thorne and Hatfield Moors. 7. Conflicts with Governments habitats directive, Biodiversity action plan, Humberhead levels partnership, living landscapes, Thorne and Hatfield Moors SSSI and DMBC policies in the local plan. 8. High risk flood zone. 9. Current drainage systems inadequate to deal with climate change. 10. Why is a vulnerable site being proposed for allocation (contrary to Local Plan that says flood risk sites should be avoided) 11. Is high grade agricultural land 12. Impact on air quality - J6 M18 already fails legislation and regulations. 13. There is an over allocation of employment sites 14. There are other units lying empty in the Borough which shows evidence of lack of demand. Other issues: 1. Reduce the amount of agricultural land allocated for development. 2. Improve the design of housing sites - make less generic. 3. Restore the 3,500 plus empty properties in the borough - reduce the need for new homes. 4. The DN7/Unity site would be the most appropriate site for a new hospital. 5. The current Hospital site could be used for housing.

**Response:**

Comments against Site 001 are noted.
