As set out in the Housing Topic Paper, a buffer of additional sites is unnecessary as the housing calculations do not factor in a number of additional sources of supply, such as windfalls, small sites of 1 - 4 units, housing delivering beyond the plan period and the prospect of additional housing at the airport (amongst other sources). These thus create a buffer. Aside from Mexborough, the Main Urban Area and all the Main Towns mentioned are only short against the top of their ranges. As the Housing Topic Paper explains, not all of these settlements need to meet the top of their range, as long as the overall number balances out at approx. 90% of housing in these two areas, which it does. In Bawtry and Sprotbrough the shortfall against the target is relatively small and in Tickhill there are no other suitable sites. Policy 2 and 3 allow for some potential development in the defined villages, but no allocations are to be made in the Defined Villages. However, overall the borough is delivering enough housing across the plan period, and shortfalls are made up for in other areas. There is focus on the Main Urban Area, with over 50% of housing being delivered here between 2018 - 33. The Housing Topic Paper and Site Selection Methodology justify the approach to housing distribution and assess why sites have been omitted or included. Figures are related to allocations and not the total plan period supply, and in this case the Main Urban Area is delivering above 50% of the boroughs total allocations. The Council demonstrate three years of completions 2015 - 18 and supply for the final two years 2033 - 35. Matters of build outs and any relevant delivery amendments are covered in the Site Selection Methodology.

**Comment:**

We welcome the requirement to retain views of the Grade II Listed Church of St Peter over this site from Cedar Road.

**Summary:**

'Sound'. We welcome the requirement to retain views of the Grade II Listed Church of St Peter over this site from Cedar Road.

**Response:**

Support welcomed
Comment:

Description 6.1 Cropmarks recorded within Site 436 and surrounding areas by the Historic England Magnesian Limestone Aerial Photographic Mapping Project are shown on Figure 3. These record a probable Iron Age to Roman settlement enclosure, trackway and fragmentary field boundaries within the northern field of Site 436 to the south of the Roman Ridge Roman Road. The trackway appears to extend southwards into the middle field. 6.2 Given the extensive nature of the Iron Age to Roman cropmark landscapes recorded elsewhere across the Magnesian Limestone, there is potential that similar remains could be present throughout Site 436, including underlying the medieval village earthworks and possibly westwards into Scawsby Leys. However, evaluation undertaken in advance of the new development on land adjacent to Emley Drive, immediately adjacent to the south side of the Roman Ridge and the north-east corner of the site (Plate 9), did not identify any archaeological remains (ArcHeritage Archaeological Scoping Assessment Event ESY 525). This suggests that, as indicated by the cropmark evidence, density will be variable. 6.3 Modern cultivation will have caused some truncation of sub-surface deposits but, as stated within the Archaeological Scoping Assessment (ArcHeritage 2017), the potential for survival of buried archaeology below the plough zone is likely to be moderate to high. Settlement, burial and industrial remains are likely to be considered of regional importance, whilst most sections of trackways and field boundaries would probably be of local importance. Potential impact 6.4 Development within the north and middle fields will impact on the below ground archaeological remains relating to this Iron Age to Roman landscape and result in their damage or destruction. Mitigation 6.5 It is considered that the presence of the cropmarks in Site 436 should not represent an absolute constraint on development. As can be seen from Figure 3, similar cropmark features have been recorded across much of the Magnesian Limestone and, as with many similar sites on the Magnesian Limestone, this impact could be effectively dealt with through a staged programme of archaeological investigation. 6.6 This would comprise a pre-determination evaluation (geophysical survey and possible trial trenching) to determine the density, nature and significance of remains (NPPF, para. 189). The results of this work would be taken into account during development design to enable the opportunity to design out sensitive or significant impacts where feasible, and to agree a programme of investigation in advance of, or during, development where impact is unavoidable. If appropriate, these proposals could be set out in a Heritage Design Brief submitted as part of a planning application and secured through condition. 6.7 This approach would be in compliance with NPPF paras 189, 197, 199, 54.

1.1 Doncaster Council is consulting on an emerging Local Plan. This report has been prepared in support of a submission by Lichfields, on behalf of Theakston Estates, that requests Doncaster Council to reconsider their position in relation to Site 436 Land at Scawsby Lane (Map 10) and allocate the site for residential development. Archaeological constraints related to both designated and non-designated sites have been cited as being one of the key considerations for not allocating the site. 1.2 A detailed assessment of the archaeological constraints relating to this site is set out in the sustainability appraisal report Archaeology Scoping Study of Site Allocations for Doncaster Local Plan, Appendix Part 6 (ArcHeritage 2017). This appraisal has identified Site 436 as having a major archaeological constraint on allocation due to potential for impact on the following three sites: - Roman Ridge Roman Road, a Scheduled Monument (ID 1003672; SMR 03039/01); - earthwork remains of Scawsby deserted medieval village (DMV) (SMR 00452/01); and - cropmark features relating to a probable Iron Age to Roman enclosure, trackway and field system (SMR 04935). 1.3 Northern Archaeological Associates Ltd (NAA) has been engaged to review the evidence base for rejection on archaeological grounds and to advise Lichfields whether it would be possible to effectively mitigate the archaeological impacts of developing the site, such that any harm can be avoided or reduced to less than substantial. As part of this review, a site visit was undertaken on 11 October 2018. 1.4 This report sets out the results of the review findings and recommendations for potential mitigation. The Council is requested to take these into account when balancing the impact on both designated and non-designated archaeology sites against the public benefit of residential development (NPPF para. 196 and 197; MHCLG 2018).

Summary:
Representations by Lichfields on behalf of Theakston Estates and Site Ref 436 - Scawsby Lane requesting DMBC reconsiders its position and allocates the site for housing. Archaeology report has been prepared to support the site submitted by Theakston Estates by Northern Archaeological Associates to review the evidence for rejection and advise the applicant on any mitigation possibilities. It is requested the Council take the findings of this report into account.

Response:
Request noted. The Council has carefully considered site options in this location, including this site and other adjacent sites, but is not proposing to allocate any.
Comment:

3.1 Allocation Site 436 lies on the north side of the busy Barnsley Road and to the east of Scawsby Lane. It comprises three fields each with different archaeological constraints (Figs 2 and 3): North and middle fields: under arable cultivation - Roman Ridge Roman Road (ID 1003672). The Roman road is demarcated by the bridleway that runs along the northern boundary of Site 436. This section of the road is designated as a Scheduled Monument; therefore, impact on setting and potential for physical impact on the road or associated remains will be a significant consideration. - Cropmarks record enclosure, trackway and field boundaries (SMR 04935). These are indicative of Iron Age to Roman settlement and agricultural remains being present throughout both the north and middle fields. These remains are unscheduled and according to the Archaeological Scoping Assessment, are of local to regional importance, depending on nature and state of survival. South field: under pasture - This field contains the earthwork remains of Scawsby deserted medieval village (SMR 00452/01), which may have historic associations with the 17th-century Grade II listed Scawsby Hall on the south side of Barnsley Road. 3.2 Scawsby Leys is a large arable field (blue boundary) to the west of Scawsby Lane and opposite Allocation Site 436. If Site 436 were to be developed, it is proposed that this area could provide an area of Community Parkland. There are no recorded archaeological constraints, but the area has potential for unrecorded Iron Age to Roman remains, and possibly medieval remains associated with Scawsby DMV.

See response to comment ref 01937/8/008
2.1 The legal and main planning context relevant to the allocation of this site for residential development within the emerging Local Plan comprise: - the Ancient Monument and Archaeological Areas Act 1979; and - the National Planning Policy Framework (NPPF) (MHCLG 2018). Ancient Monument and Archaeological Areas Act 1979. 2.2 The Ancient Monument and Archaeological Areas Act 1979 sets out the statutory regime for the protection of scheduled monuments. Once a monument is scheduled, any works to it, and flooding and tipping operations that might affect it, require scheduled monument consent from the Secretary of State. 2.3 The Act makes no provision to protect the setting of a scheduled monument. National Planning Policy Framework (NPPF). 2.4 The NPPF sets out the Government’s planning policies for England and how these are expected to be applied. At the heart of the National Planning Policy Framework is a presumption in favour of sustainable development (para. 11). Achieving sustainable development means that the planning system has three overarching objectives (economic, social and environmental). These objectives are interdependent and need to be pursued in mutually supportive ways (so that opportunities can be taken to secure net gains across each of the different objectives) (para. 8). The environmental objective is to contribute to protecting and enhancing our natural, built and historic environment (para. 8c). 2.5 Paragraph 9 states that the three objectives should be delivered through the preparation and implementation of plans and the application of the policies in the NPPF; they are not criteria against which every decision can or should be judged. Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances in account, to reflect the character, needs and opportunities of each area. 2.6 The preparation and review of all Plan policies should be underpinned by relevant and up-to-date evidence. This should be adequate and proportionate, focused tightly on supporting and justifying the policies concerned, and take into account relevant market signals (para. 31). 2.7 Local plans and spatial development strategies should be informed throughout their preparation by a sustainability appraisal that meets the relevant legal requirements. This should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options that reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be considered (or, where this is not possible, compensatory measures should be considered). 2.8 Paragraph 54 states that local planning authorities should consider whether otherwise unacceptable development could be made acceptable through the use of conditions or planning obligations. Planning obligations should only be used where it is not possible to address unacceptable impacts through a planning condition. 2.9 Policy 12 addresses the importance of good design of new structures and features in relation to the pre-existing environment. Paragraph 127 requires that any development be ‘sympathetic to local character and history, including the surrounding built environment and landscape setting, while not preventing or discouraging appropriate innovation or change’. 2.10 Policy 16: Conserving and enhancing the historic environment sets out the framework for local planning authorities to make informed decisions on developments that affect heritage assets. Paragraphs 184-202 set out the information requirements and policy principles in relation to heritage assets. The following are of particular relevance to consideration of the allocation of Site 436. 2.11 Paragraph 185 states that Plans should set out a positive strategy for the conservation and enjoyment of the historic environment, including heritage assets most at risk at time through neglect, decay or other threats. This strategy should take into account: a) the desirability of sustaining and enhancing the significance of heritage assets, and putting them to viable uses consistent with their conservation; b) the wider social, cultural, economic and environmental benefits that conservation of the historic environment can bring; c) the desirability of new development making a positive contribution to local character and distinctiveness; and d) opportunities to draw on the contribution made by the historic environment to the character of a place. 2.12 Local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset), taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset’s conservation and any aspect of the proposal (para. 190). 2.13 Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation (para. 189). 2.14 When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset’s conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance (para. 193). 2.15 Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification (para. 194). Substantial harm to or loss of: a) grade II listed buildings, or grade II registered parks or gardens, should be exceptional; and b) assets of the highest significance, notably scheduled monuments, protected wreck sites, registered battlefields, Grade I and II* listed buildings, Grade I and II* registered parks and gardens, and World Heritage Sites, should be wholly exceptional. 2.16 Where a proposed development will lead to substantial harm to (or total loss of significance of) a designated heritage asset, local planning authorities should refuse consent unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss (para. 195). 2.17 Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use (para. 196). 2.18 The effect of an application on the significance of a non-designated heritage asset should be taken into account in
determining the application. In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset (para. 197). 2.19 Local planning authorities should require developers to record and advance understanding of the significance of any heritage assets to be lost (wholly or in part) in a manner proportionate to their importance and the impact, and to make this evidence (and any archive generated) publicly accessible. However, the ability to record evidence of our past should not be a factor in deciding whether such loss should be permitted (para. 199). 2.20 Local planning authorities should look for opportunities for new development within Conservation Areas and World Heritage Sites, and within the setting of heritage assets, to enhance or better reveal their significance. Proposals that preserve those elements of the setting that make a positive contribution to the asset (or which better reveal its significance) should be treated favourably (para. 200).

Summary:
Report submitted on the archaeological impact of Site 436. This report explains that: - Residential development will impact on Roman Ridge (scheduled monument); Scawsby deserted medieval village (non-designated site of regional importance), and; the probable remains of iron age to roman enclosure, trackway and field system (non designated cropmark features of probable regional or local importance). - The physical impact on Roman Ridge can be avoided through sufficient buffers of undeveloped land along the entire length of the monument within Site 436. - Development may cause some harm to the setting of the Roman Road through housing, need for access roads and reduction of rural setting, but this would be less than substantial harm to the significance of the monument. It is acknowledged that development would provide opportunities for the public to better engage with and access the monument - The degree of harm could be reduced to offset by: 1 - incorporation of a sufficient buffer of undeveloped land alongside the edge of the monument both to avoid any physical impact on the monument and to protect its immediate setting. It is suggested that a minimum 10m corridor may be sufficient and would be consistent with the development to the south; 2 - reinforcement of hedgerow planting along the Roman Ridge corridor to create a continuous enclosed route and thus restrict views of the new built environment from the bridleway; 3 - through incorporation of the Roman road as a key feature into areas of open space, and the creation of new access routes both onto the bridleway and alongside the monument, development would offer opportunities to embrace the monument by using it to help shape design, contribute towards creating a sense of place and to reinforce its role as a significant route way and boundary within the landscape; and 4 - improving public access to the monument and incorporating the new links with other heritage assets within the vicinity would help better reveal the significance of these assets and offer opportunities for improved public engagement, awareness and understanding. - With such mitigation the degree of harm would be less than substantial in terms of the NPPF and harm should be weighed against public benefits of embracing this monument as a key feature within the design and improving access too it. - The remains of Scawsby deserted medieval village can be retained as green space with links to other heritage assets in the vicinity to constitute a positive public benefit. - Impact on any non-designated sub-surface Iron Age to Roman remains or medieval settlement remains within the two arable fields and Scawsby Leys, can be satisfactorily mitigated through a staged programme of archaeological investigation, recording and publication and secured through condition. The results of such investigations would contribute to an improved understanding of settlement and landscape development over the last 2,000 years, and thus be of public benefit in terms of making a positive contribution to the developing research framework for South Yorkshire Archaeology. Overall it is considered that the development would cause less than substantial harm to the three heritage assets affected by the allocation, and that it offers the potential to deliver significant public benefits by better revealing their significance. With appropriate design and mitigation, development would be able to meet the requirements of statutory duty and comply with NPPF, paras 127, 193, 196, 197, 199 and 200.

Response:
Please see response in the SA Addendum published alongside Submission.
Description 4.1 The Roman Ridge Roman Road runs along the northern boundary of Site 436 and is currently used as a bridleway. The road formed part of the major military route from Lincoln (Lindum) to York (Eboracum) via Doncaster (Danum) and Castleford (Lagenium) and is detailed in the Antonine itinerary. 4.2 This affected section is therefore a single, relatively short section of a much larger monument with variability of survival and several different scheduled sections along its route. The extent of the Scheduled Monument, of which this section forms a part, is shown on Figure 2. It is approximately 2.5km in length and runs south from Highfields across Green Lane to the southern edge of Broad Axe field. The potential continuation of the route south-east towards Doncaster is shown on Figure 2 (Site 1165931). 4.3 Development within Site 436 has potential to impact on a 465m section of the 1.2km length of Roman Road that runs south from Green Lane to Broad Axe field. This section is a well-defined ‘green lane’ and is used as a bridleway, although there is no signage to indicate its Roman origins. 4.4 In landscape terms, the Roman Ridge forms a significant containment feature (Enplan 2016) and will have formed a key boundary and communication route through the area for at least the last 1600 years. Form 4.5 Throughout the length of the section south from Green Lane, the Roman road survives as a very distinct agger (embankment) 1-2m in height and approximately 10m in width (Plate 1). The bridleway runs along the top of the agger and is demarcated by a central tarmac strip with rough grass verge to either side that is bordered by a mixed shrub and tree hedgerow, which forms a vegetative lined corridor (Plate 2). (SEE EMAIL FOR Plate 1: Vulcan Court bridleway access point, showing height of agger. Plate 2: view north-west along the top of the Roman Ridge bridleway from Vulcan Court access point.) 4.6 For the majority of its length alongside Site 436, the upper part of the agger embankment is covered by trees or shrubs, while the lower slope is under grass, forming a distinct sharp edge between the Roman road and the ploughed field (Plates 3 and 4). (SEE EMAIL FOR Plate 3: view south-east along the boundary between the Scheduled Monument and Site 436. Plate 4: view north-west along the boundary between the Scheduled Monument and Site 436.) 4.7 South-east from Site 436, the Roman Ridge runs alongside modern housing estates? Layden Drive and Vulcan Court?and school grounds. The agger continues throughout this section and the vegetation covers the majority of the embankment slopes. Along the Layden Drive section, the southwestern edge of the agger borders a fence that encloses rear gardens (Plate 5). Through the Vulcan Court section, it borders public open space (Plate 6), which then transitions into school playing fields (Fig. 5). (SEE EMAIL FOR Plate 5: Layden Drive. View north along the line of the Roman Ridge where buffer zone has been enclosed into rear garden areas. Plate 6: Vulcan Court development. View south along the line of the Roman Ridge with open views and access.) 4.8 There is agricultural land alongside the north-east side of the road corridor with views of Scawthorpe settlement in the background (Fig. 2). 4.9 There does not appear to be any visible signs of flanking roadside ditches, although they could survive below-ground and be infilled either as a result of ploughing or vegetative growth. Character and setting 4.10 This scheduled section of Roman road is well-preserved and forms a key feature within the landscape. It retains its intended use as a communication route and its consequential role as a significant boundary feature. 4.11 The main character of the section of Roman road running south from Green Lane is that of a raised, straight-sectioned, vegetative embankment running across the landscape. When walking along the top of the agger, its character is that of an enclosed ‘green lane’ corridor, with the eye contained by the hedgerows and carried along the tarmac bridleway. The tarmac strip gives a slightly modern, rather than historic, feel to the route, although it makes the lane very accessible. 4.12 This hedge-lined corridor prevents or limits views of both the surrounding agricultural land and the built environment, including the adjacent housing estates at the southeast end of the bridleway (Plates 7, 8 and 9) and of the bungalow at its junction with Green Lane (Plate 10). It helps create a sense of rural character and enclosure, which contributes to the setting of the Roman Ridge and the creation of a tranquil context for users of the bridleway. (SEE EMAIL FOR Plate 7: view north along Roman Road, with houses along Layden Drive on the left. Plate 8: view south along Roman Ridge, with Vulcan Court to the right. Plate 9: view north along Roman Ridge, with new development off Emley Drive on the left and Site 436 beyond. Plate 10: view south along the Roman Ridge at its junction with Green Lane. The modern bungalow is shielded from view along the road corridor by a combination of hedgerow and trees.) 4.13 There are several intermittent sections of missing or low hedgerow on both sides of the Roman Ridge corridor, examples of which are shown on Plates 11 and 12. These mainly occur beyond the built-up areas. Where they occur along the boundary with Site 436, they have resulted in opening up elevated views across the north and middle fields of Site 436, south-west towards Scawby Hall, Tudor Cottage and other built development along the Barnsley Road corridor. Along the north-east boundary, these breaks allow views across agricultural land to the built development at Scawthorpe. These are, however, dynamic open views that quickly close again as walkers progress along the bridleway and hedgerow height and density are restored. (SEE EMAIL FOR Plate 11: view west from the Roman Ridge across Site 436 towards Tudor Cottage and Scawsby Hall. Plate 12: panoramic view south along Roman Ridge, with Site 436 on the right.) 4.14 Whilst these intermittent open views contribute to the sense of walking out from a built environment into the countryside and thus reinforce the rural setting of the monument and enjoyment of the walk along the Roman Ridge, they are not critical to how the heritage asset its experienced and our understanding and appreciation of its significance. Physical Impact 4.15 Development within Site 436 should have no physical impact on the Scheduled Monument. The scheduled area is tightly contained and appears to broadly reflect the agger corridor (Fig. 2). Within Site 436, the bottom edge of the agger slope is clearly defined by the grass strip, which slopes down to the ploughed edge of the field (Plates 3 and 4). Geophysical survey would determine if there are any associated features extending beyond the scheduled area that should be avoided, such as flanking side ditches. Impact on Setting 4.16 Development would occupy agricultural land immediately adjacent to the scheduled Roman road and will alter the setting of this section of monument from a rural landscape character to a built environment. This change in contextual setting of the monument will potentially...
affect its prominence in the landscape and, in visual terms, potentially reduce its role as a significant landscape boundary and containment feature. 4.17 As there is no public access across Site 436, the effects of this impact would mainly be apparent for users of the bridleway and in distant views of the monument from Scawsby Lane and Barnsley Road. 4.18 This extension of existing built environment alongside the Roman Ridge corridor would mean that users would lose that sense of emerging out from built environment into rural countryside. This would have less of an impact on those sections of the route where dense hedgerows contain views out across the landscape. It would, however, result in a change in view along those intermittent sections of the Roman Ridge with missing or low hedgerows. 4.19 The way in which we experience an asset in its setting is also influenced by other environmental factors, such as noise from other land uses in the vicinity, and therefore the proximity of new development to the monument will be a consideration. Potential mitigation 4.20 A scheduled monument is considered by the NPPF to be a heritage asset of the highest significance (para. 194b). When considering the impact of a proposed development on the significance of a designated heritage asset, the NPPF requires the local authority to give great weight to the asset’s conservation, irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance (para 193). The more important the asset, the greater the weight should be, and any harm should require clear and convincing justification (para. 194). 4.21 The degree of harm to the setting of the monument and people’s enjoyment of the bridleway along the Roman Ridge depends on the extent to which the effects of this change in contextual setting could be reduced through design and mitigation. 4.22 Measures to consider that could help reduce the effects of this change include: - Geophysical survey along the corridor adjacent to the monument to determine whether there is any sub-surface archaeological remains which should be protected from development. If appropriate, trial trenching may also be required to fully determine the nature, extent and significance of survey anomalies (NPPF para. 189). - Reinforce planting along those sections of the Roman Ridge along the boundary with Site 436 where hedgerows are either missing or low. This would help contain views to along the line of the Roman Road, which would be in keeping with the overall character of the monument along this section of road (Scheduled Monument Consent would be required). - Build in a buffer zone along the length of the Roman Ridge, within which no development would take place. The width of this zone would need some consideration but at a minimum it should be 10m from the edge of the scheduled area as shown on Figures 4 and 5. This would be similar to the stand-off width between the Roman Ridge and the housing at the south-east end of the scheduled area. This buffer zone would ensure that there are no physical impacts on the scheduled monument and help retain a green context for the immediate setting of the monument and its prominence as a key feature within the landscape. - Incorporating this buffer zone into accessible public space would enable access along the south-west edge of the Roman Ridge and better appreciation of the monument, than incorporating it into rear gardens (Plates 5 and 6). This would provide a new public benefit, as along this section, the monument is not currently publicly accessible, other than along the bridleway and it is difficult to fully appreciate the form and height of the agger embankment from this angle. - Consider incorporating a new pedestrian access point onto the Roman Ridge bridleway from within the development and look at how this access point could be incorporated into an attractive and accessible open public space. - Consider how a new access point onto the Roman Ridge bridleway could be incorporated into a new footpath network linking Scawsby DMV, the new Community Parkland, Scawsby Mill public house and Scawsby Hall Nurseries (see section on Scawsby DMV below). - Consider alignment of roads and properties within vicinity of Roman Ridge and how they relate to the monument. Significance of impact 4.23 Any physical impact to the scheduled Roman road can be avoided through a combination of evaluation and the incorporation of a buffer zone along the edge of the monument. 4.24 It is acknowledged that the development would cause some harm to the setting of the Roman road through the development of housing, the need for access roads and reduction of its rural setting. 4.25 Development would also have the potential to deliver some positive benefits by improving public access to the monument and new links to the Roman road and other heritage assets within the vicinity, and thus would provide an opportunity to better reveal the significance of both the Road road and these other assets (NPPF, para 200). 4.26 By use of appropriate design and mitigation (10m buffer zone, landscaping, sensitive design layout, open public space and links), it is considered that the degree of harm to the significance of the monument would be less than substantial in terms of the NPPF. 4.27 Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, the NPPF states that this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use (para. 196).

Response:
See response to comment ref 01937/8/008
7.1 Scawsby Leys is a large, open field to the west of Scawsby Lane and is under arable cultivation (Plate 19). (SEE EMAIL FOR Plate 19: panoramic view of Scawsby Leys taken from southern end of Scawsby Lane.) 7.2 Although there are no recorded cropmarks within Scawsby Leys, given the density of Iron Age to Roman settlement across the Magnesian Limestone, there is likely to be concern that the area has the potential for unrecorded remains of this period (Figure 2). 7.3 There is also potential that remains associated with Scawsby deserted medieval village could extend into the south-eastern corner of the site. There are, however, no visible survival of any earthworks on LiDAR imagery, so if remains do extend into this area, they are likely to have been subject to plough damage. 7.4 If development of this area as Community Parkland will result in ground disturbance below the depth of existing plough zone through landscaping, drainage, tree planting, infrastructure, etc., then it is likely that pre-determination evaluation through geophysical survey, and possibly trial trenching, would be required. As with the arable fields to the east of Scawsby Lane, the aim will be to better determine potential impact and appropriate mitigation through design or investigation. 7.5 If Iron Age to Roman remains or medieval village remains are present within this field, they are likely to be of regional or local importance depending on their state of preservation and whether or not they are settlement related. In a worst-case scenario, impact could be effectively mitigated through a combination of avoidance of impact and archaeological investigation. The potential for the presence of archaeology should therefore not constitute an absolute constraint on development of this area as Community Parkland. 7.6 There are no other recorded archaeological constraints associated with Scawsby Leys.
Description 5.1 The southern field is under pasture and contains the earthwork remains of the deserted medieval village (DMV) of Scawsby. LiDAR imagery indicates that these remains are likely to be a combination of crofts and tofts, road and ridge and furrow (Fig. 6). From ground level, the earthworks are visible within the field as a slightly undulating landscape but are not particularly well defined (Plate 13). (SEE EMAIL FOR Plate 13: view west from Ryedale Walk across the eastern extent of the DMV earthworks in the southern pasture field.) 5.2 The area has not been cultivated in recent years and the earthworks suggest that below-ground preservation of archaeological remains is likely to be high. According to the Archaeological Scoping Assessment Report, the site is considered of regional importance (ArcHeritage 2017). 5.3 LiDAR imagery suggests that the associated remains are likely to extend north into the middle arable field, possibly west into the south-east corner of Scawsby Leys, and to the south of Barnsley Road. Remains in these arable fields will have been truncated by ploughing and are unlikely to be as well preserved as those in the southern pasture field. 5.4 The field is set in a slight dell below the level of Barnsley Road. It is contained by mature hedgerow along its northern boundary with the middle arable field and along its southern boundary with Barnsley Road as far as Tudor Cottage, where it changes to stone wall. To the east, a green metal fence separates the field from Ryedale Walk public footpath and the 20th-century housing estate beyond (Plate 14). Along its western boundary, the field is bounded by buildings and Scawsby Lane. Scawsby Leys, the area proposed for Community Parkland, lies immediately opposite on the west side of Scawsby Lane. (SEE EMAIL FOR Plate 14: View north along eastern boundary of southern pasture field with Ryedale Walk and modern housing to the east) 5.5 Tudor Cottage, a Grade II listed building, is inset into the field towards the western end (Plate 15). Scawsby Mill and the 17th-century Grade II listed Scawsby Hall, lie on the south side of Barnsley Road and opposite the western end of the field (Fig. 2; Plate 16). (SEE EMAIL FOR Plate 15: panoramic view east along Barnsley Road, with Tudor Cottage and southern pasture field on the left and Scawsby Mill and Scawsby Hall on the right. Plate 16: panoramic view east along Barnsley Road, with Scawsby Hall and Scawsby Mill on south side of road.) Recommended mitigation 5.6 Given the reasonable survival of the DMV earthworks and the high potential for wellpreserved below ground remains, it is recommended that the southern field as shown on Figures 4 and 5 should be excluded from development and retained as an area of green open space within any development proposals. 5.7 Any ground disturbance (landscaping, tree planting, drainage, infrastructure, etc.) that would cause damage to below ground archaeological remains should be avoided where possible. Where limited, localised ground disturbance is unavoidable, then a programme of evaluation (geophysical survey and, if appropriate, trial trenching) should be undertaken. This should aim to ensure that impact on the most significant remains is avoided and to provide the basis for agreeing an appropriate programme of investigation to mitigate any harm or loss to the medieval remains (NPPF, paras. 189 and 199). 5.8 The area offers opportunities to create an attractive green corridor along the northern edge of the Barnsley Road corridor. Pedestrian access through this corridor could create a link between the existing footpath network through the 20th-century housing estate to the east (Plate 17) and the proposed community parkland at Scawsby Leys, as well as footpath links to Scawsby Mill public house and Scawsby Hall Nurseries to the south of Barnsley Road; there is an existing gateway from the field on to Barnsley Road just west of Tudor Cottage (Plate 18). It would also offer opportunities to link into paths through the new development to the north and onto the Roman Ridge bridleway. This would improve permeability and access along this busy road corridor zone and create new opportunities for connectivity into existing public footpaths and links between the various heritage assets within this area. (SEE EMAIL FOR Plate 17: views east and west showing parts of footpath network through 20th-century housing estate lying to east (top) and the DMV earthworks beyond metal fence to the west (bottom). Plate 18: existing gateway from the southern field onto Barnsley Road.) 5.9 The DMV earthworks are unlikely to meet criteria for scheduling. Therefore, there would be a strong argument that, by designating the area as green space, development of Site 436 would offer the potential beneficial impact of providing for the long-term protection of these remains from ploughing. It could also contribute to protecting and enhancing the setting of the listed buildings to the south. 5.10 Further beneficial impacts could be achieved through improving public awareness and understanding of the heritage assets within this area. This would partly be achieved through any improved physical connectivity between Scawsby DMV, Scawsby Hall, Scawsby Mill, Tudor Cottage and the Roman Ridge Roman Road. It could be further enhanced by building in some level of community involvement during the investigations of the Iron Age to Roman remains within fields to the north and dissemination of information about the heritage assets within the area through a combination of on-site interpretation boards, footpath leaflets, parish website, community talks on heritage work being undertaken in support of the development, visits to local schools, etc. (NPPF, para. 200).

| Tests of Soundness: | | | | |
| Comment: |

8.1 Residential development of land to the east of Scawsby Lane will impact on: - Roman Ridge Roman Road, a Scheduled Monument; - Scawsby deserted medieval village earthworks, a non-designated site of regional importance; and - the probable remains of Iron Age to Roman enclosure, trackway and fieldsystem, which are non-designated cropmark features of probable regional or local importance. 8.2 Physical impact on the Roman Road can be avoided through use of a sufficient buffer of undeveloped land along the entire length of the monument within Site 436. 8.3 It is acknowledged that the development would cause some harm to the setting of the Roman road through the development of housing, the need for access roads and reduction of its rural setting but that this would constitute less than substantial harm to the significance of the monument. It is also considered that development would offer opportunities for public benefit through enabling improved public engagement with, and access to, the monument. 8.4 It is considered that the degree of harm to the setting of the Roman road could be reduced and offset by adoption of the following types of mitigation: - incorporation of a sufficient buffer of undeveloped land alongside the edge of the monument both to avoid any physical impact on the monument and to protect its immediate setting. It is suggested that a minimum 10m corridor may be sufficient and would be consistent with the development to the south; - reinforcement of hedgerow planting along the Roman Ridge corridor to create a continuous enclosed route and thus restrict views of the new built environment from the bridleway; - through incorporation of the Roman road as a key feature into areas of open space, and the creation of new access routes both onto the bridleway and alongside the monument, development would offer opportunities to embrace the monument by using it to help shape design, contribute towards creating a sense of place and to reinforce its role as a significant routeway and boundary within the landscape; and - improving public access to the monument and incorporating new links with other heritage assets within the vicinity would help better reveal the significance of these assets and offer opportunities for improved public engagement, awareness and understanding. 8.5 Taking into account the proposed mitigation it is considered that the degree of harm to the significance of the monument would be less than substantial in terms of the NPPF and that this harm should be weighed against the public benefits that would arise as a result of embracing the monument as a key feature within the development design and improving public access. 8.6 It is considered that retention of the earthwork remains of Scawsby deserted medieval village as green open space with links to other heritage assets in the vicinity would constitute a positive public benefit. 8.7 Impact on any non-designated subsurface Iron Age to Roman remains or medieval settlement remains within the two arable fields and Scawsby Leys, can be satisfactorily mitigated through a staged programme of archaeological investigation, recording and publication and secured through condition. The results of such investigations would contribute to an improved understanding of settlement and landscape development over the last 2,000 years, and thus be of public benefit in terms of making a positive contribution to the developing research framework for South Yorkshire Archaeology. 8.8 Overall it is considered that development would cause less than substantial harm to the three heritage assets affected by the allocation and that it offers potential for significant public benefit in terms of opportunities to better reveal their significance. With appropriate design and mitigation, development would be able to meet the requirements of statutory duty and comply with NPPF, paras 127, 193, 196, 197, 199 and 200.

Response:
See response to comment ref 01937/8/008
6.1. Strata Homes object to Policy 6 and the proposed distribution and that the site at Broad Axe, Scawthorpe, Doncaster site (Site 234) is not allocated. 6.2. This site is summarised below and detailed representations including an Advocacy Report and Masterplan Framework have previously been submitted in support of this site demonstrating its deliverability. A delivery statement has been prepared and will be submitted shortly. This work has in part led to identification of the site as an allocation in the draft Local Plan. Test of Soundness 6.3. Strata Homes considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.4. Strata Homes is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 Strata Homes recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. Strata Homes is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. 6.6. The proposed distribution against the Council’s own targets shows a deficiency and a significant under provision in: - Doncaster - Adwick - Conisbrough - Denaby - Mexborough - Thorne - Moorside - Sprotbrough - Tickhill - Bawtry 6.7. Strata Homes, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. 6.8. Strata Homes, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focuses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorside, and a regeneration focus in Carcroft-Skefflow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in villages to address the rural economy. 6.9. Strata Homes is particularly concerned that there is an under provision of housing in Doncaster, which the spatial distribution, established in policy 2, suggests should be accommodating at least 50% of new homes. This would equate to 9200 Homes based on the requirement of 18,400. The total permissions and allocations in Doncaster equate to 7,441 homes (not accounting for completions). This is significantly short of that requirement for Doncaster, further the main urban area is identified as the focus for economic and housing growth and should be accommodating more housing. 6.10. Further Strata Homes are concerned about the deliverability of a number of allocations within the main urban areas. These include but are not limited to the following sites: 6.11. Strata Homes object to the allocation of site 838, which whilst benefiting from an extant permission the Residential Land Availability Report 2018 indicates that there are no completions on site and the site is not currently being developed. Further the council have been unable to produce any further deliverability information to support its inclusion within the Doncaster 5 Year Deliverable Housing Land Supply Statement. As a minimum the forecast contribution to the local plan should be reduced. 6.12. Strata Homes object to the allocation of site 843. Strata Homes consider that the delivery rates for this site are unrealistic based on performance at the site. The Residential Land Availability Report states that completions for the last year amounted to 39 dwellings. The local plan is suggesting a delivery rate of 70 dwellings per year. This is significantly over what has been achieved at this site or indeed other sites in Doncaster according to data in the residential land availability report. 6.13. Strata Homes object to the allocation of Site 984. Strata Homes consider that the delivery rates for this site are unrealistic. The Local Plan indicates that this is an outline permission. There are significant constraints, it is a brownfield site that is entirely within Flood Zone 3. However, the Local Plan is assuming a delivery rate of 56 dwellings per annum in the first five years and 64 dwellings per annum in year 6-10. This is overly optimistic, and not consistent with the planning status, constraints and likely viability issues associated with site. 6.14. Based on the above it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Doncaster to ensure that the Plans strategy can be delivered. 6.15. As indicated in response to Policy 2 Strata Homes are also concerned that the Plan does not provide sufficient support for development in Defined Villages. Strata Homes consider that in line with the provision of the Framework, paragraph 78, which is clear that to promote sustainable development in rural areas, ‘Housing should be located where it will enhance or maintain the vitality of rural communities. Planning Policies should identify opportunities for villages to grow and thrive, especially where this will support local services’. 6.16. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be developable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 Strata Homes suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.17. Strata Homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 6.18. However, Strata Homes consider that with the proposed allocations and the deletion or adjustment in anticipated delivery within the plan period of sites 838, 843, and 984 that the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.19. To overcome the objection and address
soundness matters, the Council should: 6.20. Delete or reduce the expected yield of the following allocations: - Site 838 - Site 843 - Site 984 6.21. To address the identified deficiencies in the Plan the following sites should be allocated: - Site 234: Broad Axe, Scawthorpe, MUA 6.22. A short summary of this site is in the following sub-section and a Delivery Statement and Masterplan will be submitted shortly which explains in detail the site's deliverability. Strata Homes Object to their site at Broad Axe, Scawthorpe not being allocated for housing. 6.23. The Council previously identified the site as a proposed housing allocation and concluded that the site is required to meet the housing needs of Doncaster and is a sustainable site to meet the housing growth of the area. This reflects the Council's earlier conclusions that the site is a sustainable and appropriate site to meet the housing needs of the Borough. The Council have now indicated that the site is no longer required as there have been two significant permissions in the settlement which have reduced the need to rely on urban extensions in order to meet the authority's housing needs. However as identified above, Strata Homes maintain that there are insufficient housing allocations in Doncaster MUA to meet the spatial strategy set out in Policy 2, and that of those allocated there are significant concerns regarding deliverability and the rates of delivery. Thus more sites are required. The Council have noted objections on the grounds of loss of Green Belt, but also note that site performs similarly in the Sustainability Appraisal and Green Belt review to other allocated sites. 6.24. Strata Homes maintains that the proposed housing site at Broad Axe is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 6.25. The deliverability and benefits of the Broad Axe, Scawthorpe site is as follows: Overview of Proposals. 6.26. The site is located on the edge of Scawthorpe with established residential areas on three sides. The allocation is being promoted in an area that is already well served and has easy access to a full range of services and facilities located within Scawthorpe/ Skawbs/ Bentley Rise, as well as in Doncaster itself. The site lies adjacent to the A638 York Road. The site is approximately 21.21ha gross and could accommodate in the region of 550 new homes. Availability. 6.27. The land is being promoted by Strata Homes Ltd who control the land. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 6.28. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and associated development. This site allows housing to be delivered within an appropriate and sustainable location within Doncaster. Suitability 6.29. The site is located in a highly sustainable location and has residential development to the south, east and west, as well as the Don Valley Academy on the opposite side of the A638. The site is within easy walking distance to shops (Aldi/Tesco Express) to the south and schools and leisure facilities in the vicinity. The Danum Retail Park is just under a mile to the south-east and beyond that facilities within Doncaster Town Centre, a short bus ride away. 6.30. The site is well served by buses with stops on the site frontage on the A638, providing opportunities for sustainable travel to work in Doncaster and beyond with access to Doncaster Railway Station. Bentley Railway station is just under a mile to the east. 6.31. The development will provide additional quality development that will benefit the Doncaster and wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Green Belt 6.32. It is evident from the site location plans and analysis within the Masterplan Framework and the Council's own site assessment, that development of the site would neither detract from the purposes nor function of the Green Belt in this location. The Council's own site assessment summary notes that in relation to Green Belt it performs the same as other allocated sites. 6.33. As set out within the Framework, the 'fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.' 6.34. In summary, the allocation of this site for subsequent residential development will: - Strengthen the Green Belt boundary in this location by 'rounding off' the urban area with the strong defensible boundary; - It will neither encroach in to the open countryside, affect openness nor set a precedence for further incursions in the open countryside; - Its development would not have any significant impact on the openness of the wider Green Belt to the north of the site. 6.35. In terms of the Framework and Green Belt purposes, the site does not achieve any of the five purposes for including land in the Green Belt and its development would create a logical rounding off of the urban area. This means that: - The site at present does not check unrestricted sprawl of large built-up areas, - It does not prevent neighbouring towns from merging - It does not assist in safeguarding the countryside from encroachment. - The current site does not preserve the setting or special character of a historic town - The site does not assist in urban regeneration 6.36. In terms of the use of land in the Green Belt, the site does not fulfil any of the objectives set out in the Framework. The site is currently in agricultural use and as such does not provide any opportunities for access to the open countryside or for outdoor sport or recreation. As identified through the technical assessments that have been undertaken (within the Masterplan Framework) the site does not have any particular landscape benefit or secure any significant natural conservation interests. 6.37. The site is predominantly Grade 3b agricultural land and hence does not constitute the best and most versatile farm land. Therefore it does not serve any productive beneficial purpose. In addition, the site does not have any role in improving damaged and derelict buildings or structures worthy of retention. 6.38. The Framework states that Green Belt boundaries should be drawn so as not to include land which it is unnecessary to keep permanently open. 6.39. The Broad Axe site does not stop the coalescence of neighbouring towns, encroach on the countryside nor affect the setting and special character of an historic town and as such serves no Green Belt purpose. Therefore, a change in the Green Belt boundary, particularly given the housing need, would be appropriate and would not undermine its principle purpose. 6.40. The new Green Belt boundary, as identified in the Masterplan Framework, has been designed to respect both the topography of the site and the wider landscape and will define and enclose the urban area with a strong and defensible boundary, with the land beyond being retained within Green Belt. An existing hedge line runs along the north western boundary of the site, and is a defensible boundary over the coming plan period and beyond. 6.41. It is clear from the evidence above and the consideration of the site in the context of national and local policy, the removal of this site from the Green Belt at this time would be inappropriate and would not undermine any of the key objectives and aims of Green Belt policy. Sustainability. 6.42. The site is clearly a highly sustainable site, well connected to the main urban area and one which the Council itself has considered to be one of the most sustainable housing sites adjoining the main urban area. 6.43. It is evident from that the site, and the proposed development would clearly constitute sustainable development which would afford a strong presumption in favour of allocation and future development, in accordance with the Framework and the development plan. Achievable. 6.44. The technical work undertaken to date in respect of highways, ecology, flood risk and drainage, heritage and agricultural land has influenced the indicative masterplan. It has also shown that there are no known constraints, that could not be suitably mitigated, that would prevent this site coming forward within the plan period. As such, the development of the site, as shown within the indicative masterplan, is considered achievable. 6.45. The indicative masterplan shows how a mix of housing can be accommodated within the site, alongside Public Open Space, landscaping and drainage features. The scheme would be attractive to the market and meet the need and demand for housing in the area. 6.46. The highway work confirms the suitability of the site access and highway network to accommodate the proposed development. The highway work has concluded that the development proposals are acceptable and can be supported from a transport perspective. 6.47. The site is not in an area at risk of flooding. The drainage work has identified a drainage strategy for the site. It has confirmed the attenuation required on site and demonstrated the suitability of the area identified on the masterplan for this purpose. 6.48. Ecological survey work has confirmed there are no ecological constraints to the development of the site and recommended how habitats can be enhanced and created. 6.49. The heritage assessment has not identified any insurmountable constraints and the agricultural land classification report has shown the site as grade 3b and is therefore not best and most versatile land. Deliverability. The site at Broad Axe, Scawthorpe provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by Strata Homes Ltd and is deliverable within the plan period. Effective Use of Land. 6.50. Although the site is greenfield, the proposed scheme will utilise
and enhance existing infrastructure. Whilst not previously developed it is currently under-utilised. The site is easily accessible and the proposed main access is off The A638 York Road. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing. 6.51. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. Strata Homes considers that the site at Broad Axe, Scawthorpe is deliverable in the short term and will reinforce the housing supply and address the Borough’s housing needs in the early periods of the Local Plan. Development of the site is backed by a major housebuilder and is fully capable of being delivered in the next 5 years. A Positive Response to the Key Objectives of the Framework 6.52. The Framework sets out that the Governments key housing policy goal of significantly boosting the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to jobs, key services and infrastructure. Sites should also make effective use of land and existing infrastructure. 6.53. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion (rounding off) of an existing settlement with existing built up areas on three sites. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed as being available, suitable and achievable for development. Benefits of Broad Axe, Scawthorpe 6.54. The development of the site would provide significant economic, social and environmental benefits. The site would provide housing that would meet the needs of the Doncaster housing market. Therefore this site provides a unique opportunity in a sustainable location and without compromising the Green Belt function and purpose. 6.55. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 550 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The proposal will deliver public open space. - The scheme represents an opportunity to achieve gains for biodiversity through environmental and ecological enhancement. - The scheme will create direct and indirect job opportunities both during and after construction. 6.56. The proposal is an appropriate site to provide for the housing needs of Doncaster in the short term. Confirmation of the allocation will contribute positively to a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing as part of a sustainable community. Development of the site would deliver affordable housing. Doncaster needs to have a robust housing trajectory with a sufficient supply of deliverable sites. The site at Broad Axe, Scawthorpe will assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in an effective and efficient manner. Development of the site would not harm or undermine the area's wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 6.57. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. Proposed Change 6.58. To overcome the objection and address soundness matters, the Council should: 6.59. Strata Homes consider that the following sites should be deleted or the yield within the plan period should be significantly reduced: - Site 838 - Site 843 - Site 984. 6.60. To address the identified deficiencies in the Plan Strata Homes therefore suggest that the following sites be allocated: - Site 234: Broad Axe, Scawthorpe, MUA

Summary:
Strata Homes object to Policy 6 and the proposed distribution and that the site at Broad Axe, Scawthorpe, Doncaster site (Site 234) is not allocated. Strata Homes is concerned that the Local Plan is not producing sufficient homes across the Borough. The proposed distribution of new homes does not reflect the strategic policy and does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. The proposed distribution against the Council's own targets shows a deficiency and a significant under provision in - Doncaster; - Adwick; - Conisbrough - Denaby; - Mexborough; - Thorne - Moorends; - Sprotborough; - Tickhill; and - Bawtry The spatial strategy considers that the spatial strategy is incorrect, does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. As explained in response to Policy 2 and 3, there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focuses growth towards Doncaster. Strata Homes consider that with the proposed allocations and the deletion or adjustment in anticipated delivery within the plan period of sites 838, 843, and 984 that the Local Plan can be found sound. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. To address the identified deficiencies in the Plan Site 234: Broad Axe, Scawthorpe, MUA, should be allocated: The Council previously identified the site as a proposed housing allocation and concluded that the site is required to meet the housing needs of Doncaster and is a sustainable site to meet the housing growth of the area. This reflects the Councils earlier conclusions that the site is a sustainable and appropriate site to meet the housing needs of the Borough. The Council have now indicated that the site is no longer required as there have been two significant permissions in the settlement which have reduced the need to rely on urban extensions in order to meet the authority's housing needs. However, Strata Homes maintain that there are insufficient housing allocations in Doncaster MUA to meet the spatial strategy set out in Policy 2, and that of those allocated there are significant concerns regarding deliverability and the rates of delivery. Thus more sites are required. The Council have noted objections on the grounds of loss of Green Belt, but also note that site performs similarly in the Sustainability Appraisal and Green Belt review to other allocated sites. The proposed housing site at Broad Axe is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. Availability: the land is being promoted by Strata Homes Ltd who control the land. Suitability: the site is located in a highly sustainable location and has residential development to the south, east and west, as well as the DonValley Academy on the opposite side of the A638. The site is within easy walking distance to shops (Aldi/ Tesco Express) to the south and schools and leisure facilities in the vicinity. The Danum Retail Park is just under a mile to the south-east and beyond that facilities within Doncaster Town Centre, a short bus ride away. The site is well served by buses with stops on the site frontage on the A638, providing opportunities for sustainable travel to work in Doncaster and beyond with access to Doncaster Railway Station. Bentley Railway station is just under a mile to the east. The development will provide additional quality development that will benefit the Doncaster and wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Green Belt: development of the site would neither detract from the purposes nor function of the Green Belt in this location. The Councils own site assessment summary notes that in relation to Green Belt it performs the same as other allocated sites. The allocation of this site for subsequent residential development will:- Strengthen the Green Belt boundary in this location by ‘rounding off’ the urban area with the strong defensible boundary; - neither encroach into the open countryside, affect openness nor set a precedent for further incursions in the open countryside; - not have any significant impact on the openness of the wider Green Belt to the north of the site. Sustainability: the site is a highly sustainable site, well connected to the main urban area and one which the Council itself has considered to be one of the most sustainable housing sites adjoining the main urban area. Achievable: technical work undertaken to date in respect of highways, ecology, flood risk and drainage, heritage and agricultural land has influenced the indicative masterplan. It has also shown that there are no known constraints, that could not be suitably mitigated, that would prevent this site coming forward within the plan period. As such, the development of the site, as shown within the indicative masterplan, is
The site provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable. Effective Use of Land: Although the site is greenfield, the proposed scheme will utilise and enhance existing infrastructure. And is currently under-utilised. The site is easily accessible. Delivering a Flexible Supply of Housing: the site is deliverable in the short term and will reinforce the housing supply and address the Borough's housing needs in the early periods of the Local Plan. - The site is suitable for housing and can deliver circa 550 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The proposal will deliver public open space. - The scheme represents an opportunity to achieve gains for biodiversity through environmental and ecological enhancement. - The scheme will create direct and indirect job opportunities both during and after construction.

Aside from Mexborough, the Main Urban Area and all the Main Towns mentioned are only short against the top of their ranges. As the Housing Topic Paper explains, not all of these settlements need to meet the top of their range, as long as the overall number balances out at approx. 90% of housing in these two areas, which it does. In Bawtry and Sprotbrough the shortfall against the target is relatively small and in Tickhill there are no other suitable sites. However, overall the borough is delivering enough housing across the plan period, and shortfalls are made up for in other areas. There is focus on the Main Urban Area, with over 50% of housing being delivered here between 2018 - 33. Broad Axe is a Green Belt site which scored moderately in the Green Belt Review - however the need to use Green Belt land in the Main Urban Area has been tempered by permissions granted at Hungerhill and Mere Lane, elsewhere in the Main Urban Area for a combined total of over 1,100 houses. Please see Site Selection Methodology and Green Belt Review / Topic Paper for more info.

Response:

Broad Axe Field Site 234  With the omission of Broad Axe Field from the list of proposed housing development sites. We believe the Local Plan is sound. Broad Axe Field is A) Green Belt and 'exceptional circumstances' under Green Belt Policy have not been triggered. B) Located adjacent a Scheduled Monument, and is therefore allocated rights to preserve its 'Setting' C) Is good quality agricultural land. D) In the Green Belt Review it is recognised the site avoids the merging of adjacent communities, acting as a Green Wedge.

Summary:
As site 234 (Broad Axe) is omitted from the list of proposed housing sites, we believe the Local Plan is sound. Broad Axe is Green Belt and there are no exceptional circumstances; adjacent to a scheduled monument and therefore allocated rights to preserve its setting; good quality agricultural land, and; acknowledged in the Green Belt review as avoiding merging the adjacent communities, being a 'green wedge'.

Response:
Comments noted and support for plan soundness welcomed.

### Comment:

Waterfront Site 438  The omission of any housing allocation in the Local Plan from site 438, is a serious simplification and misinterpretation of the Sequential Flood Risk Test. This site is vital for the strategic vision of the regeneration of the town centre. To leave this area in a rundown neglected state and lay the Greenbelt open to development is wrong. Appropriately designed housing and development needs to be directed to the area under the Exception Test. The Environment Agency saw no unmanageable risk in the development of this site with appropriate design. It should be possible to show the wider sustainable benefits from this site outweigh the flood risk.

### Summary:

The omission of site 438 (Waterfront) is a simplification & misinterpretation of the Sequential Flood Risk Test. The site is vital for the strategic vision of the town centre’s regeneration. It is rundown and neglected and leaving it as such whilst the Green Belt is developed is wrong. Appropriately designed housing could be directed here under the Exception Test. The Environment Agency saw no unmanageable risk in the development of this site with appropriate design. It should be possible to show wider sustainable benefits outweigh flood risk.

### Response:

No land is being allocated in flood zones. The site is noted as a Reserve Development site, where, subject to constraints being overcome, development would be appropriate - however these do not count towards any allocations totals or targets - as set out in the Housing Topic Paper.
Comment: The interactive policies map indicates that the site lies outside the proposed development boundary for Doncaster Urban Area. The allocation of the site an extension to the existing built form of the settlement means that the site will be part of the urban area and the development boundary of the urban area should be amended to include the allocated site. The proposal map needs amending on this basis. PROPOSED CHANGE 8. Amend the policies map to reflect the urban area boundary. As explained in detail above.

Summary:
Objects to Policies Map not includng site allocation (ref 164/430) within the development limits of the Doncaster Main Urban Area. Proposed change - amend Policies Map accordingly.

Response:
Development limits have been identified in line with the methodology which has been subject to previous consultation and was clear that greenfield allocations will sit outside of the settlement where identified on the edge of a town/village but will be incorporated through future reeviw of the plan when permission has been implemented and full details are known in respect to layout etc.
Comment Ref: C/Policy H6/03453/1/003

Attend Examination: Attend Hearing

Reason: We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Area: Chapter 16: Spatial Proposals

Policy: Doncaster Main Urban Area

Tests of Soundness: Positively prepared  Justified  Effective  Consistent with national  Legally Compliant

Comment:

Support is made in principle for the allocation of site 164 and 430 Land East of Warning Tongue Lane Doncaster. The site area is noted as 11.06 hectares with an indicative capacity of 275 dwellings. Objection is made to Table 5 of the Plan that sets out the housing requirement. The text indicates that the requirement is variable between the bottom and top of the requirement range, but the table sets out the requirement at the top of the range. It is therefore unclear. The Plan should allocate sites and plan for the top of the range figure, and allocate sufficient land to meet the remaining requirements for the 17 years of the Plan. The table as drafted allocates land for 15 years rather than 17 years and appears to under allocate the residual requirement which is 15,000 new homes. The supply figures in the table do not reconcile with the figures at paragraph 16.21. Some of this issue relates to the fact that sites with planning permission are also allocated. Allocating sites with permission is confusing the plan and sites with permission do not need to be specifically allocated. The Plan should be clear about what the contribution of the sites with Planning Permission is and how this number is discounted, and what are the new allocations. The Plan is imprecise as drafted.

PROPOSED CHANGE 4. Provide a table and plan in the text clearly indicating allocations. As explained in detail above.

Summary:

Support is made in principle for the allocation of site 164 and 430 but objects to Table 5 that sets out the housing requirement. The text indicates that the requirement is variable between the bottom and top of the range, but the table sets out the requirement at the top of the range. It is therefore unclear. The Plan should allocate sites and plan for the top of the range figure, and allocate sufficient land to meet the remaining requirements for the 17 years of the Plan. The table as drafted allocates land for 15 years rather than 17 years and appears to under allocate the residual requirement which is 15,000 new homes. The supply figures in the table do not reconcile with the figures at paragraph 16.21. Some of this issue relates to the fact that sites with planning permission are also allocated. Allocating sites with permission is confusing the plan and sites with permission do not need to be specifically allocated. The Plan should be clear about what the contribution of the sites with Planning Permission is and how this number is discounted, and what are the new allocations. Proposed change - Provide a table and plan in the text clearly indicating allocations.

Response:

Believe the table sets out the position clearly. Table 5 does not correlate with para. 16.21 as the former is a borough wide total and the latter is only related to the Main Urban Area. If every settlement delivered at the top of the range there would be an oversupply of housing. They are designed to allow some areas to deliver more or less based on local circumstances and site availability, whilst ensuring that overall the borough meets its housing targets. This has been achieved. The plan delivers enough housing to meet it’s 20 year requirement, and can show how it will deliver enough housing for the 15 year period 2018 - 33 and the remaining 2 years, as well as demonstrate supply via completions for the years 2015 - 18. Chapter 16 and the Housing Topic Paper show the sites which are permissions, and those which are non-permissioned allocations.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is detailed evidence which will need to be discussed orally.

We note that the Council has identified several sites proposed for housing allocations in accordance with Policy 3. However, it is considered that there are other more suitable sites, in more sustainable locations, to meet the housing needs of the Borough. Our clients own land at Warmsworth and, it is considered that their land provides logical and sensible sites to be allocated for residential development. As such, the Warde-Aldam Estates supports the future development of three sites within their ownership. The sites are known as follows: - "Mill Lane, Warmsworth" - HELAA Housing Site Reference 213 - "Common Lane, Warmsworth" - HELAA Housing Site Reference 212 & 214 - "West Farm Fields between High Road and Low Road West, Warmsworth" - HELAA Housing Site Reference 162": The three sites are set out in Figure 1 below. (SEE EMAIL FOR Figure 1 Plan of Three Sites) THIS REP IS ABOUT SITE 215 (referred to here as 162) - FOR THE OTHER SITES SEE REPS 04707 / 04708 / 04709

SITE 215 (referred to in representation as 162) including land at "West Farm Fields between High Road and Low Road West, Warmsworth" should be allocated for housing. Justification is given elsewhere in representation regarding specific local plan policies and designations.

The Site Selection Methodology, Green Belt Review and Topic Paper, and Local Green Space Methodology and Sites report all cover reasons why these sites have not been allocated for housing. 162 is a proposed Local Green Space allocation, as discussed more in the Local Green Space Methodology and Sites document.
The Site (Site Reference 162 in the HELAA), is located north of Low Road West and south of High Road (the A630). It is irregular in shape and is located in the centre of Warmsworth which is located within the Doncaster Main Urban Area. The site is circa 1.0 hectares in size and is surrounded by existing residential development, a hotel and restaurant. The land is currently used for agriculture and is generally flat in topography with a few old underused agricultural buildings located within the site boundary. The land is under a single private ownership. There are trees located along the northern boundary of the site but this would not be a constraint to development. The existing trees could be easily accommodated within a development scheme. Furthermore, site is located within Flood Zone 1 and is therefore not prone to flooding (see Figure 9 below for reference). (SEE EMAIL FOR Figure 8 Aerial Image of West Farm Fields between High Road and Low Road West, Warmsworth And Figure 9 Extract from the Governments Flood Risk Map - From Rivers and Sea) It can be confirmed that when viewing the existing Policies Map for the Doncaster Unitary Development Plan (UDP), part of the site (0.6 hectares) is located within the Residential Policy Area. The western half of the site is also identified as ‘open space’ (0.4 hectares). Whilst the entire site is located within the Warmsworth Conservation Area. Please see an extract from the UDP Policies Map below (Figure 10) for reference. (SEE EMAIL FOR Figure 10 Extract from the UDP Policies Map) Within the Council’s designated residential area, development which would result in unacceptable loss of residential accommodation or, land potentially suitable for housing purposes, will require appropriate justification if it is not to be developed for residential use (saved UDP Policy PH10). We support this current position. There are no constraints to bringing this eastern part of this site forward for development in the short term. This site is considered a well contain site within the Main Urban Area capable of accommodating future housing development to meet the objectively assessed housing need for the Borough over the Plan period. We therefore respectfully request that this site either 1) remains as existing (as currently set out in the UDP) in that the eastern part of the land remains within the Residential Policy Area, with the western parcel providing the open space for the area, or 2) is wholly allocated for residential development. It is considered that the site could accommodate circa 10-20 new dwellings over the Plan period. Please see our comments below in Section 4 for further detail regarding Local Green Space allocations. We therefore consider that the three aforementioned sites should be allocated for residential development during the Plan period to help meet the housing needs over the Plan period. Providing the right type of housing in the right places is essential to ensure that sustainable communities continue to thrive. We support, in principle, the need for all new housing developments to provide an appropriate mix of dwelling types and sizes, taking account of existing imbalances in the housing stock, site characteristics, viability and market considerations, and, the opportunity to facilitate self-build or custom build schemes. However, each site needs to be considered on a site by site basis, based on its individual merits. Furthermore, the Council cannot place too much reliance on existing commitments as the effect of non-delivery of some developments will have a significant effect on the housing land supply position. We therefore considered that the proposed housing allocations are reassessed and that our client’s land (as set out in Section 3 below) is considered favourably as future residential development sites to meet the housing needs of the Borough in the Main Urban Area. Finally, to protect the future development opportunities post plan period, it is considered that an alternative option is to safeguard land to ensure that the revisions to the Green Belt boundary are long lasting and do not require further amendments post plan period (e.g. future-proof the revised boundaries - identifying land for development beyond the Plan period). Paragraph 139 of the NPPF states that when defining Green Belt boundaries, plans should "where necessary, identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period". We therefore support the proposal to safeguard land at Warmsworth for future development in accordance with the NPPF.
Response:
The site is proposed to be allocated as Local Green Space and the justification for this is set out in the 'Local Green Space - Methodology and Sites' document. The Main Urban Area can meet its housing requirements without allocating this site. Safeguarding land relates to sites between the green belt and urban area and the Green Belt, and as such this site is not appropriate for this designation (nor is the Local Plan seeking to safeguard land).

Comment:
We note that the Council has identified several sites proposed for housing allocations in accordance with Policy 3. However, it is considered that there are other more suitable sites, in more sustainable locations, to meet the housing needs of the Borough. Our clients own land at Warmsworth and, it is considered that their land provides logical and sensible sites to be allocated for residential development. As such, the Warde-Aldam Estates supports the future development of three sites within their ownership. The sites are known as follows: - "Mill Lane, Warmsworth" - HELAA Housing Site Reference 213 - "Common Lane, Warmsworth" - HELAA Housing Site Reference 212 & 214 - "West Farm Fields between High Road and Low Road West, Warmsworth" - HELAA Housing Site Reference 162". The three sites are set out in Figure 1 below. (SEE EMAIL FOR Figure 1 Plan of Three Sites) THIS REP IS ABOUT SITE 213 - FOR THE OTHER SITES SEE REPS 04706 / 04708 / 04709

Summary:
Site 213 including land at "West Farm Fields between High Road and Low Road West, Warmsworth" should be allocated for housing. Justification is given elsewhere in representation regarding specific local plan policies and designations.

Response:
The Site Selection Methodology, Green Belt Review and Topic Paper, and Local Green Space Methodology and Sites report all cover reasons why these sites have not been allocated for housing. Site 213 is Green Belt. Site 213 has a moderately weak case for release in the Green Belt Review. Therefore it is felt that there are no exceptional circumstances or need to release this site.
Tests of Soundness:

Comment:

Land at Mill Lane at Warmsworth (Site Reference 213 in the HELAA), was identified as a Deliverable/Developable Site in the HELAA (although it does not have planning permission). (SEE EMAIL FOR Figure 2 Aerial Image of Land at Mill Lane) The Site would provide an urban expansion in the Doncaster Main Urban Area. The site is circa 40 hectares in size and is adjacent to existing residential development, the River Don and is split in two along the easterly part of the site by the A1(M). Please see Figure 1 above for reference. The land is currently used for agriculture and is generally flat in topography. The site is under a single private ownership and whilst subject to a tenancy, the tenancy is short term and therefore the development potential is available immediately. There are trees and hedgerows located along the boundary of the site but this would not be a constraint to development. Access is available off Mill Lane. The site is located within Flood Zone 2, (although it is acknowledged that the most northerly part of the land is within Flood Zones 2 and 3, however, it is not proposed that this northern part of the land would be subject to development). See Figure 3 below for an extract from the Flood Risk Map for the area. (SEE EMAIL FOR Figure 3 Extract from the Governments Flood Risk Map - From Rivers and Sea) Furthermore the site is not subject to surface water flooding. See Figure 4 below for an extract from the Surface Water Flood Risk Map for the area. (SEE EMAIL FOR Figure 4 Extract from the Governments Flood Risk Map - From Surface Water) There are existing footpaths located to the north and south of the site and these would be proposed to be retained as part of any future scheme, and the site is not subject to any scheduled ancient monument’s or heritage assets. In conclusion, there are no known physical or technical restrictions to bringing the site forward for development. The only constraint to bringing the site forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered a well contain site within the Main Urban Area to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years.

Furthermore, due to the sites location and uses bounding the site, it is not considered that the site conforms with the five purposes of the Green Belt as set out in the NPPF. In accordance with paragraph 134 of the NPPF, the Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The site does not achieve any of these and the site, as set out in the HELAA is a suitable site for future residential development. We therefore respectfully request that this site (Land at Mill Lane, Warmsworth - HELAA Site 213) is identified as a housing allocation in the next draft of the Local Plan. Based on a 75% developable area, it is considered that the site could accommodate circa 850 new dwellings.

Summary:

Site 213 (Land at Mill Lane, Warmsworth), should be allocated for housing. The Site would provide an urban expansion in the Doncaster Main Urban Area. There are no known physical or technical restrictions to bringing the site forward for development. The only constraint to bringing the site forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, due to the sites location and uses bounding the site, it is not considered that the site conforms with the five purposes of the Green Belt as set out in the NPPF.

Response:

The site is a large urban extension that would bring the Main Urban Area very close to the south of Sprotbrough. The Green Belt Review assesses that the site has a ‘Moderately Weak’ case for inclusion in further site selection work and the Green Belt Topic Paper clarifies why their are no exceptional circumstances for releasing this site from the Green Belt.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is detailed evidence which will need to be discussed orally.

Tests of Soundness:
- Positively prepared
- Justified
- Effective
- Consistent with national

Summary:
Site 214 including land at "Common Lane, Warmsworth" should be allocated for housing. Justification is given elsewhere in representation regarding specific local plan policies and designations.

Response:
The Site Selection Methodology, Green Belt Review and Topic Paper, and Local Green Space Methodology and Sites report all cover reasons why these sites have not been allocated for housing. 214 is Green Belt. Whilst having a moderate case for removal from the Green Belt, the site performs less strongly in the Sustainability Appraisal than other sites in this area which are proposed for release from the Green Belt, and therefore it is felt that there are no exceptional circumstances or need to release this site.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is detailed evidence which will need to be discussed orally.

Tests of Soundness:

Comment:

Land at Common Lane, Warmsworth (Site References 212 & 214 in the HELAA), was also identified as a Deliverable/Developable Site (although it does not have planning permission). (SEE EMAIL FOR Figure 5 Aerial image of site at Common Lane, Warmsworth) HELAA Sites 212 & 214 combined would provide an urban expansion in the Doncaster Main Urban Area. The sites together are circa 42 hectares in size and are located adjacent to existing residential development, sports grounds and a cemetery. The land is currently used for agriculture and is generally flat in topography. The land is under a single private ownership and whilst subject to a tenancy, the tenancy is short term and therefore the development potential is available immediately. There are trees and hedgerows located along the boundary of the site and also along field boundaries throughout the site but this would not be a constraint to development. The existing trees and hedgerows could be easily accommodated within a future residential development scheme. Access is available off Common Lane, Lords Head Lane and Broomhouse Lane. Whilst part of site is adjacent to sewage works (which would reduce the developable area of an overall scheme), it would not preclude future development. As part of any future planning application, an odour study can be provided if required. The site is mainly located within Flood Zone 1, (although it is acknowledged that some of the land near Warmsworth Beck is within Flood Zones 2). Notwithstanding this, it is not proposed that the area of land subject to Flood Zone 2, would be subject to sensitive development. See Figure 6 and 7 below for extracts from the Flood Risk Map for the area. (SEE EMAIL FOR Figure 6 Extract from the Governments Flood Risk Map - From Rivers and Sea And Figure 7 Extract from the Governments Flood Risk Map - From Surface Water Flooding) The Site is not subject to any scheduled ancient monument’s or heritage assets. As such, there are no known technical or physical restrictions to bringing the site forward for residential development. The only constraint to bringing these sites forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered to be a well contain site within the Main Urban Area to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. As set out at paragraph 3.18 above, is it considered that due to its location and the way that the Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts that the site does not conform with the five purposes of the Green Belt as set out in the 2018 NPPF. We therefore respectfully request that this site is identified as a housing allocation in the next draft of the Local Plan. Based on a 75% developable area, and taking into consideration the sewage works, it is considered that the site could accommodate circa 800 new dwellings over the Plan period.

Summary:

Site 214 (Land at Common Lane, Warmsworth) should be allocated for housing. There are no known technical or physical restrictions to bringing the site forward for residential development. The only constraint to bringing these sites forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered to be a well contain site within the Main Urban Area to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. It is considered that due to its location and the way that the Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts that the site does not conform with the five purposes of the Green Belt as set out in the 2018 NPPF.

Response:

Although it scores moderately in the Green Belt review, it scores less well than other urban area sites in the Sustainability Appraisal and sufficient allocations can be made without needing to include this site. There are no exceptional circumstances which justify releasing this site from the Green Belt.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is detailed evidence which will need to be discussed orally.

We note that the Council has identified several sites proposed for housing allocations in accordance with Policy 3. However, it is considered that there are other more suitable sites, in more sustainable locations, to meet the housing needs of the Borough. Our clients own land at Warmsworth and, it is considered that their land provides logical and sensible sites to be allocated for residential development. As such, the Warde-Aldam Estates supports the future development of three sites within their ownership. The sites are known as follows: - "Mill Lane, Warmsworth" - HELAA Housing Site Reference 213 - "Common Lane, Warmsworth" - HELAA Housing Site Reference 212 & 214 - "West Farm Fields between High Road and Low Road West, Warmsworth" - HELAA Housing Site Reference 162": The three sites are set out in Figure 1 below. (SEE EMAIL FOR Figure 1 Plan of Three Sites) THIS REP IS ABOUT SITE 212 - FOR THE OTHER SITES SEE REPS 04706 / 04707 / 04708)

Site 212 including land at "Common Lane, Warmsworth" should be allocated for housing. Justification is given elsewhere in representation regarding specific local plan policies and designations.

The Site Selection Methodology, Green Belt Review and Topic Paper, and Local Green Space Methodology and Sites report all cover reasons why these sites have not been allocated for housing. 212, 213 and 214 area all Green Belt. Site 212 is within Flood Zone 2/3 and therefore inappropriate to allocate.
We wish to discuss with the Inspector and Council our concerns regarding the Open Space allocation at Warmsworth. There is detailed evidence which will need to be discussed orally.

Site 212 (Land at Common Lane, Warmsworth) should be allocated for housing. There are no known technical or physical restrictions to bringing the site forward for residential development. The only constraint to bringing these sites forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered to be a well contain site within the Main Urban Area to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. As set out at paragraph 3.18 above, it is considered that due to its location and the way that the Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts that the site does not conform with the five purposes of the Green Belt as set out in the 2018 NPPF. We therefore respectfully request that this site is identified as a housing allocation in the next draft of the Local Plan. Based on a 75% developable area, and taking into consideration the sewage works, it is considered that the site could accommodate circa 800 new dwellings over the Plan period.

Summary:
Site 212 (Land at Common Lane, Warmsworth) should be allocated for housing. There are no known technical or physical restrictions to bringing the site forward for residential development. The only constraint to bringing these sites forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered to be a well contain site within the Main Urban Area to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. As set out at paragraph 3.18 above, it is considered that due to its location and the way that the Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts that the site does not conform with the five purposes of the Green Belt as set out in the 2018 NPPF.

Response:
The site is both Green Belt and partially within the flood zone, and so it is constrained. As set out in the Green Belt Topic Paper, there are no exceptional circumstances for releasing this site from the Green Belt, and the borough can meet its housing requirement without allocating this site. See Site Selection Methodology for more information.
The Site Ref 164/430, Site Name: Land east of Warning Tongue Lane. As a resident in the area opposite the proposed development, I am obviously concerned by the environmental and increased traffic impact that will be generated by a further 275 dwellings on Warning Tongue Lane. Warning Tongue lane is already a heavily trafficked road and since the opening of the Wildlife Park the increase in traffic and traffic speed raises safety issues. I have witnessed some very dangerous incidents that could have ended in tragedy. The automatic speed warning devices, two in all seem to have little effect on vehicle speed. However, as a retired automotive engineer who represented my former employer on the issue of vehicle emissions, I am concerned that a development on the east side of Warning Tongue Lane where the land slopes down toward the M18 motorway and is effectively a valley is a catchment area for a concentration of Nitrous Oxide (NOx) fumes emitted by motorway traffic. This is a major health issue which now attracts concerns worldwide. These emissions reportedly account for 30,000 premature deaths in the UK alone. In my opinion building homes in this location will be placing residents in harm’s way, Doncaster Council and its councillors and officers will do well to understand what a political “hot potato” vehicle emissions and their effects and consequences are. I fully understand the need to increase housing stock but to build dwellings next to a motorway given the likely health issues to those who will live there will not be acceptable. I intend to make my local councillor aware of my concerns so the issue can be raised at political level.

Summary:
Re site ref 164/430 - Land East of Warning Tongue Lane (Allocated housing site) 1. Building in this location will place residents in harm’s way. 2. Combination of site topography and proximity of M18 Motorway will result in a build-up of Nitrous Oxide (NOx) 3. Increased traffic as a result of site development will cause safety issues.

Response:
The impact on the road network has been assessed through transport modelling work. Developer Requirements cover the matters that need to be done when bringing this site forward through once adopted, and include design advice which seeks to lessen the visual impact and mirror the layout opposite. More detailed matters can be refined through the planning process.
Tests of Soundness:

Justified & Consistent with national

Comment:

OBEJCTION TO THE INCLUSION OF SITES 350/407: ROSE HILL, CANTLEY/ THE AVENUE, CANTLEY ("the Site") AS BEING SUITABLE FOR DEVELOPMENT In the Guidance Notes, "soundness" is described as meaning "whether or not [the Plan] is 'fit for purpose' and 'showing good judgement'. It continues that this is to be judged against the National Planning Policy Framework's four 'tests of soundness'. Two of these tests are as follows: - "Justified - the Plan should be based on evidence, and be an appropriate strategy for the Borough when considered against other reasonable alternatives. - "Consistent with national policy - the plan should enable sustainable development and be consistent with the Government's National Planning Policy Framework (NPPF)." In a number of key respects with regard to the approach taken generally and specifically in respect of Sites 350/407: Rose Hill, Cantley/ The Avenue, Cantley ("the Site"), the Plan fails under these two tests. As background, the Site is a diverse natural environment including scrubland, mature and younger trees, flowers and grasses, and bounded in parts by hedgerows, and supports a diverse array of flora and fauna, many of which are under threat and have declining habitats in the Doncaster area. Adjoining as it does existing woodland (Sandal Beat Wood which is a Local Nature Reserve and a SSSI), the Site should be considered a (dense) urban-regenerating woodland and a Local Wildlife Site, and part of the Local Nature Reserve and SSSI, and as such the Sustainability Appraisal for this site should have identified significant negative effects for development of this site. In summary, the proposal to build 168 houses on the Site should be reversed and the site re-designated as unsuitable for development for the following reasons: - The development of the Site is not justified as the development is not based on the evidence which demonstrates that as explained in detail below, development of the Site is contrary to the policies and objectives set out in Section 10, Green Infrastructure of the Local Plan. Under the Local Plan, the Site should have been designated as an Open Space, part of a Green Infrastructure corridor and/or included within the directly adjacent LNR/SSI. In this regard, the evidence shows that development of the Site will: - Have an adverse effect on the residential amenity of the local residents and community; - Result in an unacceptably high density / over-development of the site; - Have a detrimental visual impact of the development and effect on the character of the neighbourhood; - Have an adverse impact on highway safety with a lack of ability of the existing road system to cope with additional development; - Have an adverse impact on the existing infrastructure (e.g. drainage, etc) with no ability for it to be improved; and - Cause significant adverse environmental impact and loss of biodiversity. The Local Plan recognises this as it is stated on page 282, Appendix 2 of the Local Plan that "the site has biodiversity value and forms part of a wider network of connected and biodiverse greenspaces". The Site is in fact part of, or directly adjacent to, the Sandal Beat/ Loversall Green Infrastructure Corridor and the Bawtry Forest Green Infrastructure Corridor which the Local Plan identifies as part of its Green Infrastructure assets. The Site should therefore be identified on the Policies Map as a green infrastructure asset. The development of the Site is not consistent with national policy as development of the Site is not sustainable (involving the total destruction of a diverse and rich open space used by the community and valued for its proximity to the community, beauty, tranquillity, the richness of wildlife, recreational value and the significant impact it adds to the local character of the area) as development of the Site cannot be compensated for elsewhere, or within any development of the Site. Specifically, development of the site is contrary to DMBC's objectives and policies set out in Chapter 10, namely "to maintain, protect, enhance and extend all assets in the green infrastructure network in Doncaster" and in particular: Policy 27 - Green Infrastructure: "The Council will protect, maintain, enhance and, where possible, extend or create Doncaster's green infrastructure". Contrary to Policy 27, development of the Site will not: - Create, contribute towards or enhance green corridors, including rights of way; - Provide specific and dedicated spaces for wildlife to encourage a more robust and connected network of habitats; considers tranquility and provide for generous biodiversity rich open spaces; or - Avoid loss or damage or deterioration to green infrastructure assets. Policy 28 - Protecting Open Space and Non Designated Open Space: "The Council will protect open spaces which provide important opportunities for formal and informal recreation as well as those which provide a social, cultural and ecological role". Contrary to Policy 28, development of the Site: - Does not have nature conservation improvements as a key driver; - Will not ensure green infrastructure connections are retained; and - Is not a proposal in accordance with national policy; and - Is not a proposal where there is any community support whatsoever and for which no support through public consultation has been, or will be, demonstrated. Policy 30: Ecological Networks (Strategic Policy): "Proposals will only be supported which deliver a net gain for biodiversity and protect, create, maintain and enhance the Borough's ecological networks." Development of the Site will in fact result in a net loss of biodiversity and will not protect, enhance or maintain the ecological network. Further, development of the Site is contrary to DMBC's vision set out in the Local Plan on pp15–16 which states, inter alia: - [Doncaster will be] be a place where nature flourishes and wildlife can move easily across the Borough, through a network of well-connected green infrastructure; - [We will] protect and enhance our green infrastructure especially our areas of green space for sport, recreation, play and nature. - [We will] protect and enhance biodiversity and geodiversity and provide opportunities for people to access and appreciate wildlife and nature. The Site is totally unsuitable for development and should be retained as a greenfield open space to continue to add to the pleasant environment for the local community and a rich biodiversity environment for wildlife, and for future generations to enjoy (see below and the response to Q7 below). Description of the Site (Site 350/407 Rosehill/ The Avenue, Cantley) The Site is a diverse natural environment including scrubland, mature and younger trees, flowers and grasses, and which is bounded in parts by hedgerows and trees and elsewhere by other vegetation, and supports a diverse array of flora and fauna, many of which are under threat and have declining habitats in the Doncaster area. Adjoining as it does existing woodland (Sandal Beat Wood which is a Local Nature Reserve and a SSSI), the Site should be considered a (dense) urban-regenerating woodland and a Local Wildlife Site,
and part of the Local Nature Reserve and SSSI, and as such the Sustainability Appraisal for this site should have identified significant negative effects for development of this site. Further, the Site should have been identified in the Green Space Audit as being a site of local community value as it is publicly accessible and is widely used by horse riders, joggers, bird watchers, walkers and residents for recreation. In this regard, the green space is in direct proximity to the community it serves and is demonstrably special to the local community (as evidenced by the petitions and local activism mobilised to protect the Site). The Site has been identified by the local community (which has vociferously objected to development of this site) as a local green space being significant for a number of reasons including prominence to the community, beauty, tranquility, the richness of its wildlife, recreational value and the significant impact it adds to the local character of the area. The site should therefore have been given a UDP Open Space Policy Area designation in the Local Plan. Further being directly adjacent to the Sandal Beat LNR/SSSI, the site is on (or should be regarded as being part of) the Sandal Beat/ Loversall Green Infrastructure Corridor and the Bawtry Forest Green Infrastructure Corridor and should on this basis alone, not be developed as it forms an important part of the green infrastructure and the ecological networks and diversity in Doncaster. In this regard, it should be noted that the Local Plan recognises this as it is stated on page 282, Appendix 2 of the Local Plan that "the site has biodiversity value and forms part of a wider network of connected and biodiverse greenspaces".

The Site should be designated as an Open Space, part of a Green Infrastructure corridor and/or included within the directly adjacent LNR/SSSI. Evidence shows development will have adverse impacts on: residential amenity; unacceptable high density/over development; detrimental visual impact on character of the neighbourhood; highway safety concerns; lack of drainage infrastructure; environmental impacts and loss of biodiversity. The allocation is not consistent with national policy as development does not enable sustainable development. On the contrary, development of the Site will totally destroy a valuable biodiverse habitat, local green infrastructure asset and corridor, and open space. There is no mechanism by which the destruction of the Site and the habitat loss can be compensated for, or a biodiversity net gain be achieved. The following changes should therefore be made to the Local Plan: - The Site should be designated as an Open Space, part of a Green Infrastructure corridor and/or included within the directly adjacent LNR/SSSI. - The Site should be identified on the Policies Map as a green infrastructure asset. - The Doncaster 5-Year Deliverable Housing Land Supply Statement should be amended to remove the Site as land suitable for, or earmarked for, development. - The Doncaster Local Plan (and any and all other documents associated with the plan) should be amended to remove the Site as land suitable for, or earmarked for, development. - The Doncaster Local Plan (and any and all other documents associated with the plan) should be amended to protect the Site as a local community asset and for it to remain as an Open Space.

Summary:

Objects to housing site allocation Ref 350/407 - Rosehill, Cantley. The plan fails the 2 soundness tests in respect to being justified and consistent with national policy. The Sa should have identified significant negative effects for the site in respect to biodiversity as the site should be considered as a dense urban-regenerating woodland and a Local Wildlife Site, and part of the Local Nature Reserve and SSSI. Development of the site is contrary to the Green Infrastructure policies in Chapter 10 of the Local Plan itself. Should be designated as open space and part of a Green Infrastructure corridor and or included in the adjacent LNR/SSSI. Evidence shows development will have adverse impacts on: residential amenity; unacceptable high density/over development; detrimental visual impact on character of the neighbourhood; highway safety concerns; lack of drainage infrastructure; environmental impacts and loss of biodiversity. The allocation is not consistent with national policy and is not sustainable. The site is contrary to the Local plan policies 27, 28, and 30. The site is also incapable of supporting the volume of dwellings proposed for a variety of reasons being bounded on the eastern/ south-eastern side by a railway line, by the LNR/SSSI of Sandal Beat Wood on the northern side, and Doncaster racecourse on the western side. There is therefore no access possible to the site other than via two small access roads from the existing south-westerly development. Any dwellings built on the site would not therefore be accessible except through the small road network which currently exists and which is inadequate to service the combined existing and proposed further development and provide safe and adequate access to/from Bawtry Road. This road network is unable to be changed due to its layout and development of the Site will therefore result in unacceptable and unreasonable traffic problems for residents as noted by the Local Plan itself: "the concentration of outbound traffic at peak times is likely to result in excessive queuing on Rose Hill and potential unacceptable queuing and delays for motorists." Further, due to the access issues referred to above and the scale of development proposed, development of the Site will involve significant and severe disruption and disturbance to the amenity of the local residents for a long period of time (according to table H2(A), a period of 10 years) and is totally unacceptable and inappropriate. The tranquility and quiet environment of the existing development will be destroyed by development of the Site. Such development over a long period of time will also undoubtedly have a significant adverse impact on the adjoining LNR/SSSI and the green infrastructure corridor which runs through/ adjacent to the Site.

DMBC has acknowledged that the site was "previously unavailable for development" and is, it seems to the local community, only now proposed for development because DMBC, the owner of the site, has decided to sell it as a means of generating funds. A site should only be developed if it is appropriate to do so rather than, for example, to generate funds for DMBC. The significant negative effects of development on this site would, absent DMBC’s ownership of the site and desire to generate funds, have resulted in the Site being identified as unsuitable for development. PROPOSED CHANGE As set out in the answer to Q6 with regard to Sites 350/407: Rose Hill, Cantley/ The Avenue, Cantley ("the Site"). - Allocation of the Site for development is not justified as this fails to take into account the evidence which shows that development is contrary to a number of policies set out in the Local Plan. Development of such a greenfield site which serves as a rich and diverse habitat and is directly adjacent to an LNR/SSSI and is part of directly adjacent to a green infrastructure corridor. Further, the Site is a valued community asset, and development of the Site is inappropriate given the local infrastructure and significant detrimental impact on the local community and the existing neighbouring development which would occur. Development of the Site is not an appropriate strategy when considered against other reasonable alternatives. - Allocation of the Site for development is not consistent with national policy as development does not enable sustainable development. On the contrary, development of the Site will totally destroy a valuable biodiverse habitat, local green infrastructure asset and corridor, and open space. There is no mechanism by which the destruction of the Site and the habitat loss can be compensated for, or a biodiversity net gain be achieved. The following changes should therefore be made to the Local Plan: - The Site should be designated as an Open Space, part of a Green Infrastructure corridor and/or included within the directly adjacent LNR/SSSI. - The Site should be identified on the Policies Map as a green infrastructure asset. - The Doncaster 5-Year Deliverable Housing Land Supply Statement should be amended to remove the Site as land suitable for, or earmarked for, development. - The Doncaster Local Plan (and any and all other documents associated with the plan) should be amended to remove the Site as land suitable for, or earmarked for, development. - The Doncaster Local Plan (and any and all other documents associated with the plan) should be amended to protect the Site as a local community asset and for it to remain as an Open Space.
Response:
The site is being disposed of by Doncaster Council for housing development and has been marketed accordingly. The Developer requirements show the matters that must be addressed in delivering this site, and it has also been subject to a development brief which discussed matters in detail, when the site was marketed. The site has long been earmarked for development and is an urban site in an attractive location. It is available, deliverable and developable. It does not function now as a public open space, even if accessible to the public and used recreationally at present, nor is it earmarked for this use in future by the Council as landowner.

Reason:
Area: Chapter 16: Spatial Proposals
Policy: Doncaster Main Urban Area

Tests of Soundness:

Comment:
(This rep is for this this site only - see other reps for other two sites) 6.23. Avant Homes objects that Site 494 at Green Lane, Scawthorpe site is not allocated and should be identified as a housing site. Avant Homes object that the Council conclude that the site performs the same as other proposed housing allocations but that this site is not needed as "sufficient allocations are now identified". 6.24. Avant Homes is particularly concerned that there is an under provision of housing in Doncaster, which the spatial distribution suggests should be accommodating at least 50% of new homes. Doncaster is currently short of that requirement, and as indicated above Avant Homes consider that the yield of a number of sites within Doncaster Main Urban Area have been significantly over estimated. Doncaster is the focus for economic and housing growth and should be accommodating more housing. This need cannot be met in other settlements. 6.25. The site at Green Lane, Scawthorpe is located on the western edge of Doncaster close to major employment opportunities along the A1(M). The site is therefore in a sustainable and appropriate location for housing growth. New housing should be located on the western side of Doncaster to ensure Doncaster maximises the economic growth potential of these major inward investors. 6.26. The Green Lane, Scawthorpe site should therefore be allocated to deliver housing in the short term. A robust Green Belt boundary can be created utilising Green Lane and the Roman Road along the western boundary. This is a distinctive and long term urban boundary. To the south of the site is the proposed Broad Axe Field housing allocation (Site 234) 6.27. The site can be accessed through Green Lane and the adjacent Broad Axe Field housing allocation. 6.28. Avant Homes considers the proposed site is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term.

Technical studies are ongoing but initial assessments demonstrate the site's deliverability. 6.29. The deliverability and benefits of the Green Lane, Scawthorpe site are contained in the attached Advocacy Report: (SEE EMAIL FOR document) Proposed Change 6.37. To overcome the objection and address soundness matters, the Council should: - Allocate: o Site 494: Green Lane, Scawthorpe, Doncaster

Summary:
Site 494 should be allocated. Object that the council conclude that the site performs the same as others but is not needed as "sufficient allocations are now identified". There is an under provision of housing in Doncaster which should have 50% of new homes. There is currently an under supply and the yields have been significantly over - estimated. The needs cannot be met in other settlements. 494 is located close to employment opportunities along the A1(M). It is therefore sustainable and an appropriate location for housing growth. New housing should be located on the western side of Doncaster to ensure Doncaster maximises the economic growth potential of these major inward investors. 494 can deliver housing in the short term, and a robust Green Belt boundary can be created utilising Green Lane and Roman Ridge. To the south is the proposed allocation 234. The site can be accessed through Green Lane and the adjacent site 234. The site is available, suitable and achievable and therefore in accordance with the framework. Technical studies are ongoing but initial assessments demonstrate the sites deliverability.

Proposed change: 494 should be allocated

Response:
The Main Urban Area will provide more than 50% of the total allocated 15 year supply in the borough. Densities and build out rates were agreed with stakeholders early in the process. The Housing Topic Paper explores this further.
6.1. Avant Homes objects to Policy 6 and the proposed distribution of housing and that the following sites are not proposed allocations: Site 494: Green Lane, Scawthorpe - HELAA Site 1036: Melton Road, Newton - HELAA Site (871): Wadworth Hill, Wadworth. These sites are summarised below and technical information and advocacy reports will be submitted shortly. Test of Soundness 6.3. Avant Homes considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy. 6.4. Avant Homes is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 Avant Homes recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. Avant Homes is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. 6.6. The proposed distribution against the Council’s own targets shows a deficiency and a significant under-provision in: Doncaster - Adwick, Conisbrough - Denaby, Mexborough, Thorne, Moorends, Sprotbrough, Tickhill - Bawtry. 6.7. Avant Homes, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. 6.8. Avant Homes, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focuses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy. 6.9. Avant Homes is particularly concerned that there is an under-provision of housing in Doncaster, which the spatial distribution, established in policy 2, suggests should be accommodating at least 50% of new homes. This would equate to 9200 homes based on the requirement of 18400. The total permissions and allocations in Doncaster equate to 7441 homes (not accounting for completions). This is significantly short of the requirement for Doncaster, further the main urban area is identified as the focus for economic and housing growth and should be accommodating more housing. 6.10. Further Avant Homes are concerned about the deliverability of a number of allocations within the main urban areas. These include but are not limited to the following sites: Site 838, 843, 984. There are no completions on site and the site is not currently being developed. Further the council have been unable to produce any further deliverability information to support its inclusion within the Doncaster 5 Year Deliverable Housing Land Supply Statement. As a minimum the forecast contribution to the local plan should be reduced. 6.12. Avant Homes object to the allocation of site 843. Avant Homes consider that the delivery rates for this site are unrealistic based on performance at the site. The Residential Land Availability Report states that completions for the last year amounted to 39 dwellings. The local plan is suggesting a delivery rate of 70 dwellings per year. This is significantly short of what has been achieved at this site or indeed other sites in Doncaster according to data in the residential land availability report. 6.13. Avant Homes object to the allocation of Site 984. Avant Homes consider that the delivery rates for this site are unrealistic. The Local Plan indicates that this is an outline permission. There are significant constraints, it is a brownfield site that is entirely within Flood Zone 3. However the Local Plan is assuming a delivery rate of 56 dwellings per annum in the first five years and 64 dwellings per annum in year 6-10. This is overly optimistic, and not consistent with the planning status, constraints and likely viability issues associated with site. 6.14. Based on the above it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Doncaster to ensure that the Plans strategy can be delivered. 6.15. As indicated in response to Policy 2 Avant Homes are also concerned that the Plan does not provide sufficient support for development in Defined Villages. Avant Homes consider that in line with the provision of the Framework, paragraph 78, which is clear that to promote sustainable development in rural areas, ‘Housing should be located where it will enhance or maintain the vitality of rural communities. Planning Policies should identify opportunities for villages to grow and thrive, especially where this will support local services’. 6.16. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be deliverable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 Avant Homes suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.17. Avant Homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 6.18. However, Avant Homes consider that with the proposed allocations and the deletion or adjustment in anticipated delivery within the plan period of sites 838, 843, and 984 that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.19. To overcome the objection and address soundness matters, the Council should 6.20. Avant Homes consider that the following sites should be deleted or the yield within the plan period...
Summary:
Object to policy 6 and the proposed distribution of housing, and that the following sites are not allocated:  
- Site 494: Green Lane, Scawthorpe - HELAA Site 1036: Melton Road, Newton  
- HELAA Site (871): Wadworth Hill, Wadworth  
The Local Plan is not producing sufficient homes for the borough. Further to comments on Policy 3, further sites should be identified to meet and exceed the requirement and provide a suitable buffer to deal with any under delivery which is likely to occur from some sites. This ensures the plan is positively prepared and flexible. The distribution does not reflect the spatial strategy, but importantly does not address the focus for economic growth in the SCR and Yorkshire and the Humber as a whole. There is a deficiency and under provision in Doncaster; Adwick; Conisbrough - Denaby; Mexborough; Thorne - Moorends; Sprotbrough; Tickhill and; Bawtry. The plan does not provide for the growth of the borough and does not reflect the role, function and location of settlements.
Further housing is needed and an amended approach to the spatial strategy too. There should be further growth of Rossington to address regeneration and provide new infrastructure, as well as growth in Thorne - Moorends, and regeneration focus in Carcroft - Skellow should elevate the settlement to a Main Town. New housing should be provided in Tickhill as there is under provision here. Wadworth should accommodate some housing to reflect its role and function and provision should be made in the villages to address the rural economy. 9,200 new homes should be in the urban area according to Policy 2 and a total of 18,400 homes over the plan period. The total is 7,441 which is significantly short of this requirement. The urban area is identified as a focus for economic and housing growth and should accommodate more housing. There is also concern about deliverability in this location. Object to the allocation of 838 as the RLA indicates no completions and the site is not currently being developed. There is no information to support it in the 5 year supply statement. As a minimum the forecast contribution should be reduced. Object to the allocation of site 843 as the delivery rates for the site are unrealistic. Completions 17/18 were only 39, but 70 per annum is suggested - over what has been achieved on this and other sites. Object to the allocation of 984 as the delivery rates are unrealistic and the site is brownfield in flood zone 3 but assumes 56dpa in the first 5 years and 64dpa thereafter. Likely to be viability issues also. Further allocations are therefore required and delivery rates reviewed. There is not sufficient support for defined villages, opportunities should be identified for housing in these, especially when it will support local services in accordance with NPPF para. 78. There should also be safeguarded land identified. The policy is not justified or consistent with the framework and the Local Plan is therefore not sound - however with the proposed deletion or delivery adjustment for sites 838, 843 and 984, the plan can be found sound. Proposed change: delete or reduce the yield of 838, 843 and 984 and allocate 494, 1036 and 871.

Response:
As set out in the Housing Topic Paper, a buffer of additional sites is unnecessary as the housing calculations do not factor in a number of additional sources of supply, such as windfalls, small sites of 1 - 4 units, housing delivering beyond the plan period and the prospect of additional housing at the airport (amongst other sources). These thus create a buffer. Aside from Mexborough, the Main Urban Area and all the Main Towns mentioned are only short against the top of their ranges. As the Housing Topic Paper explains, not all of these settlements need to meet the top of their range, as long as the overall number balances out at approx. 90% of housing in these two areas, which it does. In Bawtry and Sprotbrough the shortfall against the target is relatively small and in Tickhill there are no other suitable sites. Policy 2 and 3 allow for some potential development in the defined villages, but no allocations are to be made in the Defined Villages. However, overall the borough is delivering enough housing across the plan period, and shortfalls are made up for in other areas. There is focus on the Main Urban Area, with over 50% of housing being delivered here between 2018 - 33. The Housing Topic Paper and Site Selection Methodology justify the approach to housing distribution and assess why sites have been omitted or included. Figures are related to allocations and not the total plan period supply, and in this case the Main Urban Area is delivering above 50% of the boroughs total allocations. The Council demonstrate three years of completions 2015 - 18 and supply for the final two years 2033 - 35. Matters of build outs and any relevant delivery amendments are covered in the Site Selection Methodology.
Melton Road, Newton (site 1036) is a proposed housing allocation. Technical studies are ongoing but initial assessments demonstrate the site’s deliverability. The site is available, suitable and achievable and able to come forward in the short term. To overcome the objection and address soundness issues, the Council should:

- Allocate:  
  o New Site: Melton Road, Newton, Doncaster

Summary:

Melton Road, Newton (site 1036) is a proposed housing allocation. Technical studies are ongoing but initial assessments demonstrate deliverability. The site is available, suitable and achievable and able to come forward in the short term. To overcome the objection and address soundness issues, the site should be allocated. Advocacy document provided.

Response:

Site 1036 is a large Green Belt site which scores moderately weakly in the Green Belt Review and is also adjacent to Cusworth Hall. It’s inclusion would impact the Green Belt and the setting of Cusworth Hall, and it is not deemed that there are exceptional circumstances to release this site from the Green Belt, nor is the site required to help meet the housing requirement for the Main Urban Area.
6.1. Avant Homes objects to Policy 6 and the proposed distribution of housing and that the following sites are not proposed allocations: - Site 494: Green Lane, Scawthorpe - HELAA Site 1036: Melton Road, Newton - HELAA Site (871): Wadworth Hill, Wadworth. These sites are summarised below and technical information and advocacy reports will be submitted shortly. Test of Soundness 6.3. Avant Homes considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.4. Avant Homes is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 Avant Homes recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. Avant Homes is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. The proposed distribution against the Council’s own targets shows a deficiency and a significant under provision in: - Doncaster - Adwick - Conisbrough - Denaby - Mexborough - Thorne - Moorend - Sprotbrough - Tickhill - Bawtry. 6.7. Avant Homes, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. Avant Homes, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy. 6.9. Avant Homes is particularly concerned that there is an under provision of housing in Doncaster, which the spatial distribution, established in policy 2, suggests should be accommodating at least 50% of new homes. This would equate to 9200 homes based on the requirement of 18400. The total permissions and allocations in Doncaster equate to 7441 homes (not accounting for completions). This is significantly short of the requirement for Doncaster, further the main urban area is identified as the focus for economic and housing growth and should be accommodating more housing. 6.10. Further Avant Homes are concerned about the deliverability of a number of allocations within the main urban areas. These include but are not limited to the following sites: 6.11. Further Avant Homes object to the allocation of site S83, which whilst benefiting from an extant permission the Residential Land Availability Report 2018 indicates that there are no completions on site and the site is not currently being developed. Further the council have been unable to produce any further deliverability information to support its inclusion within the Doncaster 5 Year Deliverable Housing Land Supply Statement. As a minimum the forecast contribution to the local plan should be reduced. 6.12. Avant Homes object to the allocation of site S84. Avant Homes consider that the delivery rates for this site are unrealistic based on performance at the site. The Residential Land Availability Report states that completions for the last year amounted to 39 dwellings. The local plan is suggesting a delivery rate of 70 dwellings per year. This is significantly over what has been achieved at this site or indeed other sites in Doncaster according to data in the residential land availability report. 6.13. Avant Homes object to the allocation of Site S94. Avant Homes consider that the delivery rates for this site are unrealistic. The Local Plan indicates that this is an outline permission. There are significant constraints, it is a brownfield site that is entirely within Flood Zone 3. However the Local Plan is assuming a delivery rate of 56 dwellings per annum in the first five years and 64 dwellings per annum in year 6-10. This is overly optimistic, and not consistent with the planning status, constraints and likely viability issues associated with site. 6.14. Based on the above it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Doncaster to ensure that the Plans strategy can be delivered. 6.15. As indicated in response to Policy 2 Avant Home are also concerned that the Plan does not provide sufficient support for development in Defined Villages. Avant Homes consider that in line with the provision of the Framework, paragraph 78, which is clear that to promote sustainable development in rural areas, ‘Housing should be located where it will enhance or maintain the vitality of rural communities. Planning Policies should identify opportunities for villages to grow and thrive, especially where this will support local services’. 6.16. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be deliverable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 Avant Homes suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.17. Avant homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 6.18. However, Avant Homes consider that with the proposed allocations and the deletion or adjustment in anticipated delivery within the plan period of sites S83, S84, and S94 that the Local Plan can be found sound. Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.19. To overcome the objection and address soundness matters, the Council should 6.20. Avant Homes consider that the following sites should be deleted or the yield within the plan period...
Summary:

Object to policy 6 and the proposed distribution of housing, and that the following sites are not allocated: - Site 494: Green Lane, Scawthorpe - HELAA Site 1036: Melton Road, Newton - HELAA Site 871: Wadworth Hill, Wadworth  The Local Plan is not producing sufficient homes for the borough. Further to comments on Policy 3, further sites should be identified to meet and exceed the requirement and provide a suitable buffer to deal with any under delivery which is likely to occur from some sites. This ensures the plan is positively prepared and flexible. The distribution does not reflect the spatial strategy, but importantly does not address the focus for economic growth in the SCR and Yorkshire and the Humber as a whole. There is a deficiency and under provision in Doncaster; Adwick; Conisbrough - Denaby; Mexborough; Thorne - Moorends; Sprotbrough; Tickhill and; Bawtry. The plan does not provide for the growth of the borough and does not reflect the role, function and location of settlements. Further housing is needed and an amended approach to the spatial strategy too. There should be further growth of Rossington to address regeneration and provide new infrastructure, as well as growth in Thorne - Moorends, and regeneration focus in Carcroft - Skellow should elevate the settlement to a Main Town. New housing should be provided in Tickhill as there is under provision here. Wadworth should accommodate some housing to reflect its role and function and provision should be made in the villages to address the rural economy.  9,200 new homes should be in the urban area according to Policy 2 and a total of 18,400 homes over the plan period. The total is 7,441 which is significantly short of this requirement. The urban area is identified as a focus for economic and housing growth and should accommodate more housing. There is also concern about deliverability in this location. Object to the allocation of 838 as the RLA indicates no completions and the site is not currently being developed. There is no information to support it in the 5 year supply statement. As a minimum the forecast contribution should be reduced. Object to the allocation of site 843 as the delivery rates for the site are unrealistic. Completions 17/18 were only 39, but 70 per annum is suggested - over what has been achieved on this and other sites. Object to the allocation of 984 as the delivery rates are unrealistic and the site is brownfield in flood zone 3 but assumes 56dpa in the first 5 years and 64dpa thereafter. Likely to be viability issues also. Further allocations are therefore required and delivery rates reviewed. There is not sufficient support for defined villages, opportunities should be identified for housing in these, especially when it will support local services in accordance with NPPF para. 78. There should also be safeguarded land identified. The policy is not justified or consistent with the framework and the Local Plan is therefore not sound - however with the proposed deletion or delivery adjustment for sites 838, 843 and 984, the plan can be found sound. Proposed change: delete or reduce the yield of 838, 843 and 984 and allocate 494, 1036 and 871.

Response:

As set out in the Housing Topic Paper, a buffer of additional sites is unnecessary as the housing calculations do not factor in a number of additional sources of supply, such as windfalls, small sites of 1 - 4 units, housing delivering beyond the plan period and the prospect of additional housing at the airport (amongst other sources). These thus create a buffer. Aside from Mexborough, the Main Urban Area and all the Main Towns mentioned are only short against the top of their ranges. As the Housing Topic Paper explains, not all of these settlements need to meet the top of their range, as long as the overall number balances out at approx. 90% of housing in these two areas, which it does. In Bawtry and Sprotbrough the shortfall against the target is relatively small and in Tickhill there are no other suitable sites. Policy 2 and 3 allow for some potential development in the defined villages, but no allocations are to be made in the Defined Villages. However, overall the borough is delivering enough housing across the plan period, and shortfalls are made up for in other areas. There is focus on the Main Urban Area, with over 50% of housing being delivered here between 2018 - 33. The Housing Topic Paper and Site Selection Methodology justify the approach to housing distribution and assess why sites have been omitted or included. Figures are related to allocations and not the total plan period supply, and in this case the Main Urban Area is delivering above 50% of the boroughs total allocations. The Council demonstrate three years of completions 2015 - 18 and supply for the final two years 2033 - 35. Matters of build outs and any relevant delivery amendments are covered in the Site Selection Methodology.
16.1. Metroland is supportive of Policy 6 and its allocation of the Alverley Lane, Balby, Doncaster site (site 115). However Metroland are concerned about the justification for some of the site specific requirements set out within Appendix 2 Development Requirements Site 115. Metroland therefore consider that the Development Requirements are unsound. Test of Soundness 16.2. Metroland considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 16.3. Metroland supports the allocation of the Alverley Lane, Balby and its identification as a proposed housing site. An Advocacy Report and illustrative masterplan is attached to these representations which demonstrates the site's deliverability. An overview of the proposals is provided in Section 17. 16.4. The proposal is an appropriate site to provide for the housing needs of Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Alverley Lane, Balby would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 16.5. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. 16.6. Metroland are concerned that the Development Requirements established in appendix 2 of the Local Plan are not sufficiently effective or justified. There is a requirement to for a set back from the southern boundary. The extent of the setback is unclear and could potentially impact on the site capacity and deliverability. It is not clear what density or net to gross ratio has been assumed by the council when calculating the capacity of the site. However it is clear that it is lower than the gross to net ratio and or density that form the viability assumptions in the whole plan viability report. Thus there may be a requirement for site specific viability testing. 16.7. Further Metroland are concerned that the sites locations is now considered to be in a Medium to high value area. It was previously identified as being within a low value area. There is therefore a requirement for 23% affordable housing. The adjacent area is identified within a medium value area. The viability report considers average sales values of #2,100 per sq.m. for medium value areas, and #2,350 per sq.m. in high value area. Metroland are concerned that the identification of the site within a medium -high value area does not reflect the sales values expected to be achieved at site 115. 16.8. Metroland is concerned that with all the policy requirements the local plan details, and limited refinement of value areas that this could undermine the delivery of housing through increased need for viability assessments, and the associated impact on delivery through extended negotiations. The Council should review the baseline aspirations of individual policies and the policies in combination to ensure that they are not too high and ensure that the requirements are well tested. 16.9. Metroland consider that the requirements in their current form are not fully justified or effective. The plan in its current form could fail to deliver sustainable development in accordance with the policies in the framework. 16.10. In these circumstances, Metroland do not consider the Doncaster Local Plan, in its current form, to be sound. 16.11. However, Metroland consider that with increased clarity, and justification for the development requirements and a review viability evidence and subsequent review of the sites capacity, the Local Plan can be found sound. The Metroland will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 16.12. To overcome the objection and address soundness matters, the Council should: 16.13. Review the development requirements, site capacity and whole plan viability to provide greater clarity and justification for the site requirements.

Summary:
Site 115 (allocated site) supports allocation of site. Appendix 2 - Developer Requirements 1. Site 115 - concerned re justification of requirements: 2. Set back & affordable housing level. 3. All impact on deliverability. 4. Suggest review of requirements and justification. Affordable Housing: Concerned that site is identified as being in a Medium to High value Area (23% affordable hsg) where it was previously a 'low value area'.

Response:
Support for allocation of the site is welcomed. The developer requirements are considered justified and set out some key principles to help guide successful planning applications in due course. See response to Policy 8 in respect to the viability testing evidence base.
4.1. Metroland is supportive of Policy 6 and its allocation of the Alverley Lane, Balby; MUA site (Site 115). Test of Soundness 4.2. Metroland considers that the Doncaster Local Plan - Publication Version 2015-2035 is sound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 4.3. Metroland supports the allocation of their site at Alverley Lane, Balby; MUA and its identification as a proposed housing site. Technical studies are ongoing but initial assessments demonstrate the site’s deliverability. 4.4. Metroland considers the proposed housing allocation is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 4.5. The deliverability and benefits of the Alverley Lane, Balby; MUA are set out in Section 18 and summarised below. 4.6. The proposal is an appropriate site to provide for the housing needs of Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Alverley Lane, Balby would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 4.7. Metroland would reiterate that Doncaster have recognised that some greenbelt land will need to be released in order to meet its housing needs. As indicated in the Advocacy previously submitted the land at Alverley Lane, Balby does not perform any of the five green belt functions, as set out in the Framework (paragraph 134), and its release from the greenbelt can be justified. 4.8. The submitted Advocacy document also summarised the technical work that had been undertaken. This concludes that a safe and suitable access can be made and confirms the highways networks ability to accommodate the proposed development. With regards to flooding and drainage the site is in Flood Zone 1 and is not in an area at risk from flooding. The drainage work identified a drainage strategy for the site. It confirmed attenuation was required on site and that the proposed location was suitable. The ecological survey confirmed that there are no ecological constraints and that the site is of low ecological value. Development of the site offers the opportunity to enhance the ecological value through new planting. Further there are no known infrastructure capacity issues that would preclude the development of this site. 4.9. The proposed allocation policy should therefore be flexible to reflect this evidence base and ensure delivery of the scheme. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. 4.10. Metroland supports the allocation of Site 115 consider that the Policy 6 is Sound in this regard. Proposed Change No Change

Summary:
Policy 6 - Housing Allocations. Supports site 115 Alverley lane Balby as a proposed allocation (includes detailed advocacy report).

Response:
Support welcomed
17.1. Metroland have previously submitted an Advocacy Report and illustrative masterplan to support the allocation of the Land at Alverley Lane, Balby. This submission is reiterated here to support of Housing Site 115. Justification 17.2. Metroland supports the allocation of the Alverley Lane, Balby site. An Advocacy Report and illustrative masterplan has been previously submitted and is re-attached to these representations. The Advocacy Report demonstrates the site’s deliverability. 17.3. Metroland considers the proposed housing allocation is available, suitable and achievable and therefore in accordance with the Framework. It is a deliverable site that is able to come forward in the short term. 17.4. The deliverability and benefits of the Alverley Lane, Balby is as follows: Overview of proposals 17.5. The site is located on the edge of an established residential area and benefits from easy access to the full range of services and facilities located within Balby, Doncaster. The site lies adjacent to the Edlington/Deanne Valley Railway Embankment Local Wildlife Site. The site is approximately 6.5ha gross and could accommodate in the region of 220 new homes. (SEE EMAIL FOR Plan of Site) Deliverability 17.6. The site at Alverley Lane provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by Metroland Ltd with interest in development from Persimmon Homes and Ongo Homes and is deliverable within the plan period. Availability 17.7. The land is being promoted by Metroland Ltd as landowner. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 17.8. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and development. This site allows housing to be delivered within an appropriate and sustainable location within Doncaster. Suitability 17.9. The site is located in a highly sustainable location and has residential development to the north, east and west. The site is within easy walking distance to Springwell Lane Local Centre with a range of facilities provided there as well as greater facilities within Doncaster Town Centre, a short bus ride away. There are a large number of primary and secondary schools in the vicinity of the site. 17.10. The site is well served by buses providing opportunities for sustainable travel to work in Doncaster and beyond with access to Doncaster Railway Station. 17.11. The development will provide additional quality development that will benefit the Doncaster and wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Green Belt 17.12. The housing needs of Doncaster are putting severe pressure on the local authority to review the Green Belt. To meet the housing requirement Doncaster Council recognises that some Green Belt land will need to be released for new housing land. 17.13. Alverley Lane, Balby demonstrably fails to perform any of the five Green Belt functions set out in the Framework and is therefore currently subject to an unjustified and out of date Green Belt status. This therefore provides an opportunity for a logical and justified release from the Green Belt which will not only offer a highly a sustainable site for housing delivery to meet identified need but also enforce a defensible and more permanent Green Belt boundary for the future beyond the Plan period. 17.14. In the Borough of Doncaster approximately 46% of the area is designated as Green Belt. This is the western part of the Borough which forms part of the South Yorkshire Green Belt surrounding urban areas. 17.15. The Framework considers that Green Belt boundaries can change "in exceptional circumstances" as part of a Local Plan review. Such a circumstance exists through the significant need to provide housing in Doncaster. To meet the housing need and economic growth aspirations the Council has stated it will need to revise the Green Belt boundaries for the emerging Local Plan and beyond to provide the new boundaries with some permanence. 17.16. The site does not currently perform any of the five Green Belt functions as identified within Paragraph 134 of the Framework: 1. To check the unrestricted sprawl of large built-up areas 17.17. Due to the Site’s specific context it does not in itself perform the objective of checking unrestricted sprawl. The southern boundary of the site is in the form of a continuous raised railway line with established tree belt which is significant in mass and scale and forms an impenetrable physical boundary to development of the urban area. It is therefore this feature that fulfils the objective for checking unrestricted sprawl and by default removes the onus of this function from the site itself. 2. To prevent neighbouring towns merging into one another: 17.18. There is a 2 kilometre distance between Balby and the next nearest village to the south and as such the site is not performing as a prevention of two towns merging into one another. As part of the recent Green Belt review the Council has stated "given the strength of the proposed boundary" (the railway line to the south) the site has no role in preventing neighbouring towns from merging. 3. To assist in safeguarding the countryside from encroachment: 17.19. The site is greenfield but is not considered ‘countryside’. The site is an agricultural field nestled in between suburban housing and a railway line forming a significant physical barrier distinctly separating the site both physically and visually from the countryside to the south. The development of this site could not therefore be considered an encroachment into the countryside or affect the openness of the Green Belt. 4. To preserve the setting and special character of historic towns: 17.20. Balby is not classified as a historic town nor acknowledged as having a special character or setting typically associated with a historic town and so the site does not therefore perform this function. 5. To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. 17.21. The site is located by the Council’s own definition as being in the Main Urban Area which is intended to accommodate the majority of the Borough’s development. The site is considered to form part of the ‘urban land’ considered in the context of the currently adopted Local Plan. The sites inclusion in the Green Belt actually restricts the availability of suitable urban land such as this site to deliver housing in turn putting more pressure on sites located in the countryside. There has to be a balance between green and brown field urban land owing to the deliverability issues often experienced on brownfield / redevelopment sites. 17.22. It is therefore concluded that the Site does not currently perform any of the five Green Belt functions and is therefore considered a justified release to deliver much needed private and affordable housing. 17.23. Not only is the site considered to be a justified release from the Green Belt but in doing so will have a strengthening
effect on the Green Belt boundary ensuring its permanence and defensibility into the future beyond the plan period. The Council has recently concluded that the existing boundary is considered to be irregular and inconsistent with the existing built form and that if the site were to be allocated then: 17.24. "The newly formed defined boundary would be a densely vegetated dismantled railway corridor to the south of the site and is considered to be strongly defined, recognisable and likely to be permanent. The resultant Green Belt boundary would result in a rounding of the existing built form and concluded as being a strong and defensible boundary". 17.25. Alverley Lane, Balby is a site which can demonstrate failure to perform all of the five Green Belt functions and as such is a justified release from greenbelt that will provide both an excellent opportunity to meet housing need but also strengthen the Green Belt boundary into the future Achievable 17.26. A range of technical work has been undertaken and further survey work is ongoing. From the initial assessments there are no technical issues that would prevent development or are insurmountable. The site is therefore considered to be achievable and therefore deliverable in accordance with national guidance. The technical assessments are summarised within the accompanying Advocacy Report and are available and can be submitted upon request. 17.27. The indicative masterplan shows how a mix of housing can be accommodated within the site, alongside connectivity, landscaping and drainage features. The site has interest from Persimmon Homes and Ongo Homes (Registered Provider). Efficient Use of Land 17.28. Although the site is greenfield, the proposed scheme will utilise and enhance existing infrastructure. Although the site is not previously developed it is currently under-utilised. The site is easily accessible and the proposed main access is off Alverley Lane. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing 17.29. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. Metroland considers that the site at Alverley Lane, Balby is deliverable in the short term and will reinforce the housing supply and address the Borough's housing needs in the early periods of the Local Plan. The site is fully capable of being delivered in the next 5 years and there is interest from housebuilders for the site. A Positive Response to the Key Objectives of the Framework 17.30. Framework sets out that the Governments key housing policy goal of boosting significantly the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to jobs, key services and infrastructure. Sites should also make effective use of land and existing infrastructure. 17.31. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, suitable and achievable for development. Benefits 17.32. The development of the site would provide significant benefits. The site would provide housing that would meet the needs of the Doncaster housing market. Therefore this site provides a unique opportunity in a sustainable location and without compromising the Green Belt function and purpose. 17.33. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 220 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The proposal will deliver public open space. - The scheme represents an opportunity to achieve gains for biodiversity through environmental and ecological enhancement. - The scheme will create direct and indirect job opportunities both during and after construction. 17.34. The proposal is an appropriate site to provide for the housing needs of Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Alverley Lane, Balby would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 17.35. The proposed allocation policy should therefore be flexible to reflect this evidence base and ensure delivery of the scheme. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework.

Summary:
Support Policy 6 and the allocation of Site 115. The site is suitable and could help provide for housing need in the borough. It can deliver a range of housing and a sustainable community. Can deliver in the short term to aid a robust trajectory. Concerned about some of the site specific requirements in the developer requirements, including the requirement to set development back from the southern boundary - which is unspecific and could harm the yield. It is not clear how the density has been calculated - it is lower than the gross o net assumptions in viability testing. Uncertainty means there may be a requirement to undertake further testing. Also concerned that the site is in a medium - high value area, whereas it was previously low value. There is now a 23% affordable housing requirement. This does not reflect the sales values expected on this site. Policy requirements and the value areas could undermine delivery and increase the need for viability assessments and negotiations. The baseline requirements should be considered holistically to ensure they are workable. Currently unsound and could fail to deliver sustainable development in line with the framework. Needs increased clarity and further viability work, site capacity work and reviewed developer requirements.

Response:
Support for allocation of the site is welcomed. The developer requirements are considered justified and set out some key principles to help guide successful planning applications in due course. See response to Policy 8 in respect to the viability testing evidence base.
This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Avant Homes in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. This representation relates to the 'Former Wheatley Hills Middle School, Leger Way' (site ref: 432 & 391). This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site.

**Site and Context**
The site comprises of land at the Former Wheatley Hill School, to the east of Leger Way, Doncaster and is approximately 5.4 ha in size. The site was formerly occupied by the Wheatley Hills Middle School, which closed in 1997 and has since been demolished, the remaining portion of the site was formerly used as school playing fields. The site is bound by Leger Way to the west, Wheatley Golf Course to the south and east, and business and industrial units surrounding Shaw Wood Way to the north / north west of the site. The site is flat, and is located within Flood Zone 1. The site is currently subject to a live full planning application for the development of 143 dwellings, this application is currently under consideration and due to be determined shortly.

**Proposed allocation**
The site is proposed to be allocated for housing under site reference 432 and 391 'Former Wheatley Hills Middle School, Leger Way'. Policy 6 'Housing allocations' sets out that Housing Allocations will help to deliver the Spatial Strategy, meet the needs for housing and support sustainable communities the Council have suggested an indicative capacity of 134 houses for this proposed allocation. The allocation of this site under policy 6 of the Publication Local Plan is supported, and the delivery of this site for housing is considered to be essential to delivering the spatial strategy for the Borough. Policy 3 'Level and Distribution of Growth', sets out that the Local Plan’s strategic aim is to facilitate the delivery of 18,400 homes in the period of 2015 - 2035 (920 annum), with sufficient land allocated to deliver 15 years’ supply of housing. To meet the Local Plan’s Spatial Strategy and Settlement Hierarchy, at least 50% of the Borough’s Total Housing will be located within the Doncaster Main Urban Area, which equates to at least 6,805 - 7,315 dwellings. The site is proposed to be located within the development boundary for Doncaster and is therefore included within the Doncaster Main Urban Area, this approach is supported. However, the site is identified in Table H2 (a) of the Local Plan to be able to accommodate at least 134 dwellings, we object to the indicated capacity of 134 on the grounds that there is an application currently lodged for 143 dwellings with Doncaster MBC. It is requested that this figure in Table H2 (a) is amended to accord with the proposed number of units and that capacity figures are reviewed elsewhere in the Local Plan area. The allocation of this site for housing meets the objective of paragraph 117 of the NPPF, which sets out that strategic policies should make use of previously developed land as much as possible.

**Summary**
An application for residential development on the site is currently under consideration by Doncaster MBC and pending decision. The site is proposed to be allocated for residential development under reference 432 & 981, with an indicative capacity for 134 dwellings. The delivery of this site will make the efficient use of previously developed land which is located within the Doncaster Main Urban Area and will make a notable contribution to housing supply in the Borough thereby supporting the spatial strategy for the plan period. The allocation of this site for residential development and this principle is supported, however, we object to the suggestion that the site can deliver 134 dwellings over the plan period and request that the indicative figure is increased to 143 units.

**Response**
The difference between the allocation capacity (137 units) and the pending planning application (143 units - 19/01170/FULM) is just 6 dwellings. The planning application was submitted in May 2019 after the Local Plan had commenced through the DMBC internal approvals process for decision to publish under Regulation 19. Policy 6 makes clear that capacities are indicative and that higher density schemes will be supported, for example where they lead to a more appropriate design solution.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Area: Chapter 16: Spatial Proposals

Policy: Doncaster Main Urban Area

Tests of Soundness:

Comment:

This site represents a sustainable, deliverable site which accords with the strategic aspirations of the plan. A Site Delivery Document (SDD) was previously submitted to the Council which outlines how the site contributes to achieving the three over-arching objectives of sustainability as set out at paragraph 8 of the Framework. The SDD has been re-submitted as part of these representations for consideration. (SEE EMAIL FOR Document) This site meets the three tests required to be considered a deliverable site. It is in the control of Persimmon Homes, the UK’s largest house builder and is immediately available and achievable for residential development. The site is suitable for development with no insurmountable technical constraints present. A section of the site is covered by Flood Zone 3. The implications and response to this are outlined in detail below. Site and Location For context, the site comprises two parcels of agricultural land extending to an area of 24.5 ha. The site has the capacity to accommodate at least 300 homes with the potential for over 400. It is located adjacent to existing residential areas on the edge of Kirk Sandall. Kirk Sandall is a sustainable settlement benefiting from excellent public transport links including regular train and bus services. It is well connected to the road network. Armthorpe Lane forms the eastern boundary of the site. Brecks Lane intersects the site (approximately two thirds of the way down) and provides a suitable access point to both parcels. There are numerous opportunities to provide pedestrian and cycle connections into Kirk Sandall from the western boundary of the site. A more detailed appraisal of the site is included in the SDD. Being located on the east side of the settlement of Kirk Sandall within the Doncaster Urban Area, the area of the Borough identified as being the most sustainable location for growth and the location that is intended to accommodate the highest number of houses in the plan period. It is well served by the shops and services (including schools, medical surgeries and bus and rail links) within Kirk Sandall itself. The Council's reason for exclusion This site is identified in the HELAA and has been assessed against the Council’s selection methodology but was rejected on the basis that the site fails to meet the flood risk sequential test. However, this assessment was a high level assessment which automatically ruled the site out because part of the site was located in Flood Zone 3. The assessment failed to consider if the sequential test could be met within the site and still provide a deliverable site which could meet all other policy objectives. By applying a blunt assessment methodology, the site has been discounted without further consideration of the wider sustainability credentials of the site. The sequential test can be met within the site. Flood Zone 3 covers parts of the northern section of the site and this area of the site is not proposed for residential development. A comprehensive masterplan has been developed for the site, which shows this area as public open space. This area provides opportunities for the incorporation of sustainable urban drainage systems (SUDS). It also allows for sufficient space to provide a buffer between Kirk Sandall and the nearby settlement of Barnby Dun, therefore avoiding coalescence of the two settlements. The appended SDD demonstrates how this could be accommodated without prejudicing a sustainable, comprehensive development being brought. National Designations As set out in the HELAA assessment, part of the site is located within Flood Zone 3 and is considered to fail the sequential test. The Framework requires; “All plans should apply a sequential, risk-based approach to the location of development - taking into account the current and future impacts of climate change - so as to avoid, where possible, flood risk to people and property. They should do this, and manage any residual risk, by: a) applying the sequential test and then, if necessary, the exception test as set out below; b) safeguarding land from development that is required, or likely to be required, for current or future flood management; c) using opportunities provided by new development to reduce the causes and impacts of flooding (where appropriate through the use of natural flood management techniques); and d) where climate change is expected to increase flood risk so that some existing development may not be sustainable in the long-term, seeking opportunities to relocate development, including housing, to more sustainable locations.” This process is augmented by advice within PPG which rightly promotes development in Flood Zone 1 as being sequentially preferable following the cascades set out in diagram 2. Neither the Framework nor PPG expressly prohibit the allocation of any site where any part of a site is within Flood Zone 3. The site at Kirk Sandall meets the sequential test as development would take place within the 75% of the site which falls within flood zone 1, it would be avoided within the 25% of the site which falls within flood zone 3. It is also worth noting that almost all of the other sites that have been rejected on this basis have a much larger proportion of their area in Flood Zone 3 or have other technical or policy constraints affecting their suitability (such as Green Belt). Armthorpe Lane has no such issues. The site selection process has failed to account for the fact that the vast majority of the land at Armthorpe Lane is located within Flood Zone 1 and that to exclude the small element of Flood Zone 3 on the site from accommodating residential (or any other inappropriate development) remains in accordance with both national policy and the strategic objective of the draft Local Plan. Local Designations The site is defined within the Local Plan policies map as being countryside due to it being beyond the defined development limit. It is in Persimmon Homes' opinion illogical for the boundary of the settlement to be drawn in this location. It is considered that Armthorpe Lane (forming the eastern boundary of the site) forms a more logical and permanent fixed boundary that will safeguard the countryside from encroachment. It is illogical for the site to be classified as countryside simply because it is outside a set boundary. The site adjoins the Doncaster Main Urban Area which is, by definition, the most urbanised part of the Borough, it should not therefore be classified as countryside and should be allocated within the Local Plan. The nearest settlement to which it could coalesce is Barnby Dun to the north, although the area of Flood Zone 3 is located in the northern portion of the site and would remain open in any event and providing a more definitive, established permanent open space buffer preventing coalescence. The site is farmed so doesn't...
provide any opportunities for outdoor sport and recreation (although informal amenity facilities could be provided as part of a development scheme) and non-renewable resources and rural communities would not be affected. Moreover, the allocation of this site would assist in directing development towards urban areas. Technical Matters An assessment of all of the key technical matters is included within the SDD and underpinned by up to date and site specific assessments. Matters of flood risk aside, there are no technical issues that prevent the site’s allocation. The site benefits from a number of potential access points without the need for new junctions to be introduced on the Armthorpe Lane itself with the opportunity for secondary pedestrian connections through to the existing properties to the west, allowing additional development to tie in coherently with the existing settlement. There are no areas of ecological sensitivity, is not contaminated and can be suitably drained. There are two large electricity lines running north-south through the site and these can either be accommodated within the design (as shown on our masterplan within the SDD) or relocated underground. Conclusions This site is sustainably located in the part of the Borough that the plan envisages will accommodate the highest level of growth. It is constrained only by a Flood Zone that is located on a portion of the site that is not necessary for sustainable development of the site and even creates an opportunity for more structured open space to prevent coalescence with Barnby Dun. The site is owned outright by Persimmon Homes and as such it is available and deliverable immediately. Further, it is noted that a number of the proposed allocations include sites that are less sustainably located, accommodating more significant flooding issues (such as in Barnby Dun) and have a track record of failed delivery (such as with the former Bombardier site in Hexthorpe). It is difficult to conclude how, in light of the above, how such locations can be considered more sustainable and deliverable than the site proposed here. In light of the above, it is respectfully requested that the site is allocated.

Summary:

Site 116 represents a sustainable, deliverable site which accords with the strategic aspirations of the plan. A Site Delivery Document (SDD) was previously submitted to the Council and has been re-submitted as part of these representations for consideration. This site is in the control of Persimmon Homes, is suitable for development with no insurmountable technical constraints present. A section of the site is covered by Flood Zone 3. Being located on the east side of the settlement of Kirk Sandall within the Doncaster Urban Area, the area of the Borough identified as being the most sustainable location for growth and the location that is intended to accommodate the highest number of houses in the plan period. It is well served by the shops and services (including schools, medical surgeries and bus and rail links) within Kirk Sandall itself. This site is identified in the HELAA and has been assessed against the Council’s selection methodology but was rejected on the basis that the site fails to meet the flood risk sequential test. However, this assessment was a high level assessment which automatically ruled the site out because part of the site was located in Flood Zone 3. The assessment failed to consider if the sequential test could be met within the site and still provide a deliverable site which could meet all other policy objectives. By applying a blunt assessment methodology, the site has been discounted without further consideration of the wider sustainability credentials of the site. The sequential test can be met within the site as development would take place within the 75% of the site which falls within flood zone 1. It is also worth noting that almost all of the other sites that have been rejected on this basis have a much larger proportion of their area in Flood Zone 3 or have other technical or policy constraints affecting their suitability (such as Green Belt). Armthorpe Lane has no such issues. The site is defined within the Local Plan policies map as being countryside due to it being beyond the defined development limit. It is in Persimmon Home’s opinion illogical for the boundary of the settlement to be drawn in this location. It is considered that Armthorpe Lane (forming the eastern boundary of the site) forms a more logical and permanent fixed boundary that will safeguard the countryside from encroachment. Matters of flood risk aside, there are no technical issues that prevent the site’s allocation. It is noted that a number of the proposed allocations include sites that are less sustainably located, accommodating more significant flooding issues (such as in Barnby Dun) and have a track record of failed delivery (such as with the former Bombardier site in Hexthorpe). It is difficult to conclude how, in light of the above, how such locations can be considered more sustainable and deliverable than the site proposed here.

Response:

It is noted that the flood risk issue has been negated by a submitted masterplan avoiding land in the flood zone. There are however very large overhead pylons that cross the site north to south. The masterplan avoids development beneath them with buffering/open space/landscaping. These constraints significantly reduce the potential capacity of the site from the estimated average of 646 dwellings. The Council still has concerns in respect to accessibility issues with taking access from Brecks Lane. No footways presently and Brecks plantation will constrain provision in the form of offsite highway works. Therefore does not necessarily conform with NPPF 108/110. Unable to determine whether visibility requirements for new accesses would meet requirements in accordance with 85th percentile wet weather speeds.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Persimmon Homes supports the proposed allocation of the land to the east of Warning Tongue Lane. The site is available, suitable and achievable for development. It is under the control of Persimmon Homes and situated in a popular market area. The Site is demonstrably suitable for residential development. There are no technical constraints which would prevent develop of the site which cannot be satisfactorily mitigated. The Site is located entirely in Flood Zone 1 and the vast majority of the site is identified as being at very low risk of flooding from surface water. There are no known infrastructure capacity issues which would preclude the development of the site and which cannot be satisfactorily addressed. The Site is located in a sustainable location directly adjacent to existing residential areas and located close to a wide-range of local services and amenities. As a site which is available, suitable and achievable, the site therefore meets the test in the NPPF to be considered a deliverable site which can be brought forward for development in the short-term. In order to provide a sufficient buffer of sites and reflect the comments regarding the scale of housing need above, the Council will need to identify additional sites which are available, suitable and achievable for residential development. Persimmon Homes is in control of two sites which both satisfy all three tests. These are located at Armthorpe Lane, Kirk Sandall and at Cemetery Road, Hatfield Woodhouse. The merits of both sites are described and it is respectfully requested that both sites are allocated. Site 116: Armthorpe Lane, Kirk Sandall The site is sustainably located in the part of the Borough that the plan envisages will accommodate the highest level of growth. It is constrained only by a Flood Zone that is located in a portion of the site that is not necessary for the sustainable development of the site and even creates an opportunity for more structured open space to prevent coalescence with Barnby Dun. The site is owned by Persimmon Homes and as such it is available and deliverable immediately. Further, it is noted that a number of the proposed allocations include sites that are less sustainably located, accommodating more significant flooding issues (such as Bawtry Dun) and have a track record of failed delivery (such as Bombardier site in Hexthorpe). It is difficult to conclude how, in light of the above, how such locations can be considered more sustainable and deliverable than the site proposed here. Site 119: Cemetery Road, Hatfield Woodhouse This site represents a deliverable site because it is available, suitable and achievable for development. However, it has been excluded as an allocation due to the positioning of Hatfield Woodhouse in the settlement hierarchy. The settlement hierarchy identifies Hatfield Woodhouse as a Defined Village. Hatfield Woodhouse is located less than a kilometre from the centre of Hatfield which is judged to be a sustainable location for growth. Within the settlement profile evidence document the Council concludes that Hatfield Woodhouse is closely related to the settlements of ‘Dunsrot, Dunsville, Hatfield and Stainforth’ and ‘Thorne and Moorends’ both of which have an excellent provision of services that can be easily accessed. These areas are identified as main towns and are expected to accommodate around 40% of new housing growth. As Hatfield Woodhouse is closely related to the settlements it would provide an excellent location for additional land to be allocated within a sustainable location to support the strategy of growth across the Borough. The site is located in Flood Zone 1 and is identified as being at very low risk of flooding from surface water sources. Furthermore, there are no known technical constraints which would prevent the development of the site.

Persimmon Homes supports the proposed allocation of the land (Sites 164/430) to the east of Warning Tongue Lane. The site is available, suitable and achievable for development. It is under the control of Persimmon Homes and situated in a popular market area. The Site is demonstrably suitable for residential development. There are no technical constraints which would prevent develop of the site which cannot be satisfactorily mitigated. The Site is located entirely in Flood Zone 1 and the vast majority of the site is identified as being at very low risk of flooding from surface water. There are no known infrastructure capacity issues which would preclude the development of the site and which cannot be satisfactorily addressed. The Site is located in a sustainable location directly adjacent to existing residential areas and located close to a wide-range of local services and amenities. As a site which is available, suitable and achievable, the site therefore meets the test in the NPPF to be considered a deliverable site which can be brought forward for development in the short-term. In order to provide a sufficient buffer of sites and reflect the comments regarding the scale of housing need above, the Council will need to identify additional sites which are available, suitable and achievable for residential development. Persimmon Homes is in control of two sites which both satisfy all three tests. These are located at Armthorpe Lane, Kirk Sandall and at Cemetery Road, Hatfield Woodhouse. The merits of both sites are described in submitted evidence and it is requested that both sites are allocated.

Support noted
It is very clear the draft Plan has been prepared with close attention to and consistent with the NPPF. It does not repeat NPPF policy unnecessarily and provides flexibility throughout the Plan period particularly in relation to housing and employment policies and commits to reviews at least every 5 years. The Plan carefully balances locally-generated housing needs, the development requirements flowing from the Council’s economic growth aspirations and the consequential additional housing requirements with landscape, environmental and other technical considerations. It would be a pleasure to support the Plan at Examination: not something I recall ever having said previously in connection with the many Local Plans with which I have been associated.

These representations are to be read in conjunction with separate representations which support the approach to the housing requirement in the draft Local Plan, the Plan’s aims, housing distribution policies and definition of the Doncaster Main Urban Area. The representations support the allocation of Site 033: Land adjacent to 163, Sheffield Road, Warmsworth for residential development. The land is owned by a small family company and has been held by them for the purpose of eventual residential development. It is therefore available and if considered appropriate could be developed (i.e. delivered) in years 1-5 of the Local Plan rather than in years 6-10 as currently anticipated in the Plan. The Site Assessment (draft Plan page 260) identifies 7 material planning considerations, which development of the site will need to address, to which we respond as follows: Archaeology The landowner is aware of the local significance of the tunnel which is accessed from within the allocated site (see attached photograph A) and appreciates the tunnel may be considered to be a non-designated Heritage Asset. The tunnel was constructed between 1872 and 1892 to supply water from the Thrybergh Reservoir to Edlington and Warmsworth. It is some 1.2km in length, constructed in brick and rock with four air shafts. The shafts lie outside the allocated housing site, to the south west. Photograph B shows the entrance to the tunnel, photograph C is taken within the tunnel although the precise location of the photograph is not known and photograph D looks up one of the off-site air shafts. The site owner appreciates the significance of the tunnel will need to be further considered as part of any planning application for the development of the site. The owner is content for the tunnel entrance to be retained and incorporated within the development if further assessment concludes that the asset is of sufficient significance to justify this. Biodiversity The protection and where necessary extension of tree and other biodiversity habitats can be incorporated in any detailed layout as part of the normal planning process. The areas identified in the Site Assessment run along the site boundaries and retaining these features would not affect the viability of the development. Design The design requirements set out in the Site Assessment, again, can readily be incorporated in any site layout. Education It is assumed the need for a contribution towards education will be reassessed at the time any planning application is submitted as the need for such contributions can vary significantly over relatively short timescales. If a contribution is needed, the requirement will be met as part of the development management process. Public open space Open space to meet Local Plan requirements can be incorporated within any site layout. Transport The Site Assessment offers options for access to the site but does not suggest this is likely to prove a constraint to development and preliminary advice from Highway Consultants confirms this to be the case. A Transport Assessment and Travel Plan will be submitted as part of any planning application and would be expected to incorporate vehicle routing proposals during construction, if considered necessary. Trees and hedgerows The Site Assessment here largely repeats comments made under Biodiversity (above). Again, these requirements will be taken into account in any detailed layout plans for the site. In conclusion, the site is available for development and no constraints to development have been identified which would affect its viability or delivery within the Plan period. (SEE EMAIL FOR Photographs)
Tests of Soundness:

Justified

Comment:

However, Table H1(A) suggests that the site will deliver 930 sites over the plan period. The current live planning application for the site proposes a maximum of 671 dwellings and therefore we object to the proposed yield for the site which should be amended to accord with the proposed scheme. The remaining 259 units should then be allocated elsewhere in the Borough.

Summary:

The capacity stated is 930, but this is projected to deliver 671 units - the remaining 259 should be allocated elsewhere in the borough.

Response:

The capacity will be amended accordingly.
The remaining part of the site, to the west of the housing allocation, is proposed to be retained within the Green Belt. The development proposals currently subject to determination proposes this land as undeveloped Green Space, therefore the proposed Green Belt allocation is supported.

**Summary:**
- Support Western part of site remaining as Greenbelt on the proposals map.

**Response:**
Support for the western area to remain washed over with Green Belt is welcomed.
Policy 6 'Housing allocations' sets out that Housing Allocations will help to deliver the Spatial Strategy, meet the needs for housing and support sustainable communities. The site is allocated under site reference 838 'Kirk Street/Ramsden Road/Eden Grove' for residential use. The allocation of the site is supported, and the delivery of this site for housing is considered to be essential to delivering the spatial strategy for the Borough.

Summary:
Policy 6 'Housing allocations' Supportive of allocation of site 838 and contribution towards objectives of the Policy.

Response:
Support welcome
This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Countryside Properties plc in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. This representation relates to ‘Kirk Street/Ramsden Road/Eden Grove, Hexthorpe’ (site ref: 838). This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site. Site and Context The application site comprises approximately 32 hectares of previously developed land comprising the former Bombardier Rail Works (now demolished). The site is located on the edge of Doncaster town centre within the Hexthorpe area. The site is relatively flat and due to the presence of the River Don to the north of the site, there are parts of the site located within Flood Zones 2 and 3. The site is bound by industrial uses to the east, residential development to the south and allotments to the west. (SEE EMAIL FOR Fig. 1: Aerial view of the site) The site has two extant planning permissions for residential development, which demonstrates that the site is a suitable location for residential development. A full planning application for 671 dwellings and associated infrastructure has recently been and has been subject to pre-application discussion with the Local Planning Authority. Countryside have recently acquired the site and subject to the granting of planning permission intend to commence development of the site in early 2020. Proposed allocation The site is currently proposed for a number of allocations, as per the Publication Local Plan Policies Map Extract in Fig.2. The eastern portion of the site is identified as an ‘Housing Allocation with Permission’ and the western portion of the site is identified as ‘Green Belt’. (SEE EMAIL FOR Fig.2: Doncaster Publication Local Plan Policies Map Extract)  

Summary:

Re site 838 Hexthorpe (former Bombardier site)  o Allocated site - residential o Supportive of allocation.

Response:

Support welcomed
The site is proposed to be allocated for residential development under site reference number: 838, and benefits from an extant planning permission for housing use. The delivery of this site will make best use of a previously developed site, which is situated in a highly sustainable location. The site has the capacity to make a significant contribution to the supply of housing in the Borough and is essential in meeting the spatial strategy for the plan period. The allocation of this site for residential development is supported, however, we object to suggestion that this site will deliver 930 dwellings and request that this figure is amended.

Summary:
The site is proposed to be allocated for residential development under site reference number: 838, and benefits from an extant planning permission for housing use. The delivery of this site will make best use of a previously developed site, which is situated in a highly sustainable location. The site has the capacity to make a significant contribution to the supply of housing in the Borough and is essential in meeting the spatial strategy for the plan period. The allocation of this site for residential development is supported, however, we object to suggestion that this site will deliver 930 dwellings and request that this figure is amended.

Response:
Support for the site is welcome. The capacity will be amended to reflect more up to date housing number assumptions.
Harron Homes have an interest in land to the north east of Rose Hill Rise, Bessacarr with the intention of bringing this forward for residential development. The Site lies within the urban area of Doncaster and is allocated for residential development within the adopted Unitary Development Plan, 1995 under saved policy PH1/UDP Area 2. (SEE EMAIL FOR UDP MAP EXTRACT) Site PH1(2/12), extends to 6.79ha of land off Rosehill Rise, Bessacarr and is allocated for 170 units. No development has taken place on this Site to date, but it is now being actively taken forward through pre-application discussions with the Local Planning Authority. Within the emerging Doncaster Local Plan 2015-2035 Publication Version, Policy 2 sets out the Spatial Strategy and Settlement Hierarchy with a focus on delivering sustainable growth appropriate to the size of individual settlements. At least 50% of new homes will be developed within the Main Urban Area of Doncaster. Policy 3 sets out the level of growth (18,400 homes in the period 2015 - 2035) and distribution with at least 50% of the Borough’s total housing requirements being focussed on Doncaster’s Main Urban Area. Policy 6, Housing Allocations is the strategic policy which seeks to deliver the housing requirement and distribution set out in Policy 3. Chapter 16 of the emerging Local Plan sets out the Plan’s Spatial Proposals. The Doncaster Main Urban Area (MUA) is defined as the contiguous built-up area of Doncaster comprising the town centre and distinct but connected districts including Cantley and Bessacarr and the Plan’s aim is to strengthen the area’s role in providing services for the whole Borough and beyond. The MUA is to remain the main focus for development in the Borough (Policy 2) and specifically, the main location for housing growth with at least 50% of the Borough total to be allocated in this area (paragraph 16.20 / Policy 3). Further details of sites for residential development are set out in accompanying tables. 6.71ha of land at Rose Hill / The Avenue is confirmed as an allocation for residential development within Table H2(A) (allocations without planning permission) (Site ref: 350/407 with an Indicative capacity of 166 dwellings. Anticipated delivery is set out as 70 units in Years 0-5 (2015 - 2020) and 96 units in years 6-10 (2020-2025). (SEE EMAIL FOR PLAN) Support is therefore given for the continued allocation of land off Rose Hill Rise/The Avenue which falls within the Main Urban Area of Doncaster and as such will make a valuable contribution towards the Borough’s housing requirement in this very sustainable location.

Summary:
Re sites 350 and 407 Rose Hill Cantley (allocated sites). o Support the allocation of the site. o Can contribute to objectives of Policy 6.

Response:
Support welcomed
The Housing Allocations policy sets out the various allocations by settlement. Whilst HLM/HBD do not pursue an objection to individual sites, it submits that further sites will be required based on our suggested increase in the housing requirement and potentially to maintain a five year supply of housing. In addition HLM/HBD raise an objection against the approach to identifying reserve sites. Table 5 at P44 sets out the Summary of Housing Requirement and Supply Position and identifies a ‘Reserved Sites Potential Capacity’ of 1483 dwellings. However, whether these sites are ‘deliverable’ or even ‘developable’ seems highly dubious based on the explanation at paragraph 4.82: "Reserve Development Sites have a capacity of 1,483 dwellings. This capacity is additional to the allocations capacity. These are sites where there is currently doubt about whether they could be developed in the plan period, due to HS2 Safeguarding Route, and/or where allocation cannot be justified in accordance with a sequential approach to addressing flood risk. The sites are however otherwise sustainably located within urban areas and development for housing (or mixed-use including housing) would be appropriate if flood risk and other issues can be overcome. New applications will be approved where flood risk sequential and exceptions tests and/or other development requirements can be satisfactorily addressed. Any completions on these sites will contribute to meeting the plan period housing requirement but have not been factored into housing supply.” The Green Belt Topic Paper at paragraph 3.3.40 further states: “The Local Plan also includes a number of ‘Reserve Development Sites’ which are sites that currently face constraints which mean they are unsuitable for allocation. This is generally as they fall within areas of risk of flooding.” It seems no significant weight can be attributed to these sites as ‘reserve sites’ as there is considerable doubt over their suitability. They should not therefore be counted as part of the overall supply or relied upon as a buffer. PROPOSED CHANGE We have identified that the Plan is failing to provide sufficient housing to meet a job led requirement for the whole of the Plan period. HLM/HBD is promoting land that can assist with meeting this shortfall. Parcels P5 and P6 on the enclosed capacity plan could provide circa 650 dwellings and 130 dwellings respectively. Within the Council’s evidence documents these are identified as sites 513 and 512. Parcel P5 (S13) This site is within the Green Belt. We understand it was formerly a proposed allocation in the Site Allocations Development Plan Document that was submitted for examination in 2014 and would have accompanied the Core Strategy prior to its withdrawal and a decision being made to undertake a new plan. The Green Belt Topic Paper identifies this site as having a ‘moderately strong case’ for inclusion in further site selection work and the Green Belt Review (P3, Appendix 1) states in respect of boundaries "The Proposed Green Belt boundary would be defined by Red House Lane in the north and east, and the extent of the Great North Road in the east. The Resultant Green Belt boundary would therefore result in a strongly defined feature which would represent a natural rounding off to north of Adwick le Street to mirror the extent of built form to the west of the Great North Road.” Indeed the site performs strongly against sites selected for development in the Green Belt, including Site No.33 - 163 Sheffield Road, Warmsworth (112 dwellings), Site No. 165/186 - Land N. of A1/ Land off Crabgate Lane, Skellow (300 dwellings), Site No. 929 - Land North of Cadby Rd, Sprotbrough (80 dwellings). The principal reason why the site has not been selected is that the lower range of the housing requirement for Adwick and Woodlands could be comfortably reached without intrusion into the Green Belt. At present the housing requirement range for Adwick and Woodlands is 255-765, with the ‘planned’ total (ie: allocations and permissions) standing at 482 dwellings. However, we have identified that a significant increase in overall housing number requirement is necessary and further that the methodology between the distribution between main towns appears to have undertaken on a household number basis, rather than a reflection of the sustainability credentials of each settlement. An increase in the overall level of housing and a re-distribution of housing across main town settlements, will potentially alter this position and in this context site S13 is well positioned to contribute positively to an increased housing provision for the Plan period. Even in a context where additional housing land was necessary in Adwick & Woodlands to help meet the overall housing requirement figure or as part of revised Adwick & Woodlands distribution, but 650 dwellings was not required to meet the minimum thresholds, the remaining land could assist the Council in providing a suitable buffer. We have previously identified that the ‘reserve’ sites appear to have significant constraints and can’t be relied upon as part of any flexibility within the Plan, and a greater buffer of ‘over-allocation’ would provide a robust position for the delivery of the Borough’s housing requirement. It is noted that the site selection work has identified that the site has archaeological constraints. Should the examination of the Plan find it unsound and further housing land is required as suggested above, HLM/HBD will submit archaeological evidence to demonstrate the suitability of the site. Parcel P6 (S12) This site has a clear and obvious relationship with parcels P4 and P5. As with Parcel P4 the site is identified as having a ‘moderately weak case’ for further site selection work but again this is an assessment in isolation, and when considered in the wider context of P4 and P5, the removal of this land from the Green Belt would result in a stronger boundary. This site was also discounted from selection on the grounds of failing the sequential test. However, as demonstrated by the appended capacity plan this only affects the northern section of this parcel and it would be the intention to limit housing development to areas within flood zone 1. This results in a reduced potential capacity of circa 130 dwellings. The necessity of this site to meet any revised housing requirement would need to be considered on its merits but in the context of a wider allocation for a sustainable urban extension providing residential and employment development, it is a logical addition and would strengthen the future Green Belt boundary. Should a case not be strong for inclusion within this Plan, the site could be identified as safeguarded land to help fulfil the objectives of Paragraph 139 of the NPPF.
No objections to the sites, but contends that more sites will be required based on the suggested increase in the housing requirement and potentially to maintain a 5 year supply of housing. Do object to the approach to identify reserve sites and the identified capacity of 1483 dwellings. It is highly dubious whether these sites are deliverable or developable based on para. 4.82 of the Local Plan and 3.3.40 of the Green Belt Topic Paper. It seems no weight can be given to these reserve sites as there is considerable doubt over their suitability. They should not be counted as part of the overall supply or relied on as a buffer. Proposed change: Have identified that the plan is failing to provide sufficient housing to meet a job led requirement for the whole Local Plan period. Site 512 and 513 could provide 130 and 650 dwellings respectively. Site 513: was previously promoted in the Site Allocation DPD. It has a moderately strong case in the Green Belt Review with strong resultant boundaries. Scores strongly compared to sites 165/186 (Carcroft - Skellow); 033 (MUA) and 929 (Sprotbrough). The principal reason this site has not been selected is because the range is lower and non Green Belt allocations / permissions get within it. However, a significant increase in housing is necessary and the distribution should be different - reflecting settlement sustainability credentials - and therefore the position may be altered and this site is well placed to contribute positively to increased housing provision in the plan period. Even if additional land is necessary but 650 dwellings not needed to meet minimum thresholds, the remaining land could assist in providing a suitable buffer, with an over-allocation to provide a robust position for the housing requirement delivery. Reserve sites cannot be relied on as part of plan flexibility. If archaeological concerns mean the site is found unsound, archaeological evidence can be provided to demonstrate site suitability. Site 512: If not seen in isolation, but as part of wider allocations in and around it (as proposed in this representation), the site would score better in Green Belt terms and can provide a stronger boundary. The site is discounted for failing the sequential test, however housing could be limited to areas in flood zone 1 (capacity of 130 dwellings). The necessity of the site to meet any revised housing requirement would be on its merits, but in the context of a wider allocation for a sustainable urban extension providing residential and employment land, it is a logical addition which would strengthen the future Green Belt boundary. Alternatively, the site could be identified as safeguarded land as per NPPF para. 139.

Response:
As the Green Belt Topic Paper explains, the Green Belt Review is part of the consideration for exceptional circumstances for removing sites from the Green Belt. It is not a case of picking the "next best" site in the overall scores, there are other considerations. Adwick - Woodlands is the smallest of the Main Towns and has a lower housing target, but can comfortably get in its range without utilising Green Belt. No sites are to be safeguarded, and the Reserve Housing Sites do not contribute to any housing totals, rather they are sites which are constrained but would be potentially suitable for housing subject to constraints being overcome.

Savills Assessment
Brownfield site in poor market area. The site has not started construction, instead a process of remediation is currently ongoing. Outline planning was granted in 2001 up until July 2018 a total of 150 dwellings have been built, yet over a similar period of the plan period 3.36. This issue is even more pertinent within the Main Urban Area as some of the constrained sites are large and make a significant contribution to the supply. Two clear examples are the Former McCormick Tractors International site (site ref: 984) which is entirely within Flood Zone 2/3. Here the over reliance on brownfield land has allowed for a very constrained site to come forward to the detriment of DMBC’s housing supply. 3.37. Another site constrained is Manor Farm, Bessacarr (site ref: 843). The site is somewhat constrained by the rail network and as part of the Section 106 agreement requires a crossing over the railway. This issue will have a knock on effect on the viability of the scheme which has possible impacts on the housing supply position. These two sites represent 46% of the Main Urban Area deliverable supply and could easily mean the overall housing supply falls well below its required level. 3.38. Table H1(A) details the number of sites within the Main Urban Area of Doncaster that have planning permission, with 57% having not started (27 sites). Of the sites all but 5 are on previously developed land. It cannot be argued that there should be a preference for brownfield sites over greenfield sites however the delay in sites impacting on supply must also be recognised. Brownfield sites do have a number of constraints as a result of the previous land use, often resulting in remediation and even the requirement of an EIA screening which can add long delays. It may be that more advantageous to include sustainable sites in the countryside as opposed to poor performing brownfield sites. 3.39.

to detail, building at density on PDL sites is only viable insofar as certain capital values can be reached otherwise developers will not build. This is due to certain economic realities and cash flow positions which result in greater challenges when compared with Green Belt or greenfield sites. The current average house price in Doncaster is £163,000 compared with the national average of £300,000 (see Figure 1). With Doncaster a lower value city when compared nationally it is unlikely to be attractive for large scale city/ district centre investment in historic buildings, such as mills, which represent higher build costs and increased technical difficulties. Caution must be made to focusing development on brownfield land as this could undermine the sustainable development aspirations outlined throughout the NPPF. (SEE EMAIL FOR Figure 1: Average house values in Doncaster and UK (Source: Zoopla, 2019))

Tests of Soundness:

 tests surrounding the site selection process and the figures attached to the supply of housing over the plan period. It must be remembered that sites need to be deliverable and developable as defined within the NPPF. DMBC already admit to site constraints, with Policy 6 stating that ‘much of the supply is not without constraints’. This admission proves that the council are fully aware of the issues surrounding their sites and as a result perceived supply over the plan period. 3.36. This site is even more pertinent within the Main Urban Area as some of the constrained sites are large and make a significant contribution to the supply. Two clear examples are the Former McCormick Tractors International site (site ref: 984) which is entirely within Flood Zone 2/3. Here the over reliance on brownfield land has all

to summarise, the below table provides an initial assessment of the housing supply within the MUA. The table takes into account a number of the key concerns Savills have with regards to the large housing allocations within the MUA. The assessment will look to consider site constraints and unjustified high build out rates to provide a more accurate assessment of the housing supply within the MUA. Please note we will be following this initial assessment with a more detailed analysis later in the year. Site information - SHLAA: 938 Site Address: Kirk Street/Ramsden Road (site ref: 838). 3.41. Using Manor Farm as a detailed example the sites overall capacity of 1,106 units was agreed under outline application ref: 14/00124/WCC. As of April 2018 the site has built 141 units over 4 years (since the original application in 2014). In contrast over the first 5 years of the plan the site is expected to build 350 dwellings, 70dpa. By looking at previous trends this seems rather ambitious and provides a dishonest supply of housing over the plan period. Size of Sites 3.42. While we recognise the contribution that small and medium sized sites make to meeting the housing requirement as set out within the NPPF there is an over reliance on a large number of small sites (10 units or below) within the Main Urban Area of Doncaster. Of those with planning permission there are 23 such sites, out of a total of 49 sites. This therefore means that there is a market saturation within the MUA of small sites and with a limited number of smaller housebuilders to be able to build them all during the plan period. This is further clarified by the fact 70% of the small sites with planning permission have still not started building (as of April 2018). Housing Supply Position - Savills Assessment 3.43. To summarise, the below table provides an initial assessment of the housing supply within the MUA. The table takes into account a number of the key concerns Savills have with regards to the large housing allocations within the MUA. The assessment will look to consider site constraints and unjustified high build out rates to provide a more accurate assessment of the housing supply within the MUA. Please note we will be following this initial assessment with a more detailed analysis later in the year. Site information - SHLAA: 938 Site Address: Kirk Street/Ramsden Road/Eden Grove Capacity Deliverable and Developable Assessment - Savills Assessment: 600 DMBC Assessment: 930 Difference: -330 Savills Commentary - Brownfield site in poor market area. The site has not started construction, instead a process of remediation is currently ongoing with an EIA screening opinion submitted 12th August 2019. (ref: 19/01920/SCRE). Over 70% of the site is within Flood Zone 2 and 3. An ambitious build out rate has been included between years 6-15 of the plan at 70dpa. Site information - SHLAA: 843 Site Address: Manor Farm, Bessacarr Capacity Deliverable and Developable Assessment - Savills Assessment: 650 DMBC Assessment: 965 Difference: -315 Savills Commentary - Since outline planning was granted in 2001 up until July 2018 a total of 150 dwellings have been built, yet over a similar period of time the council envisage the site to deliver 965 units. The site is somewhat constrained by the rail network and as part of the Section 106 agreement requires a
crossing over the railway. This has implications to the viability of the site as this could be a normal cost of #1million (Section 106 under document ref: 00770997). Site information - SHLAA: 984 Site Address: Former McCormick Tractors International, Wheatley Hall Road Capacity Deliverable and Developable Assessment - Savills Assessment: 350 over first 10 years DMBC Assessment:600 over first 10 years Difference: -250 Savills Commentary - The site is entirely situated within Flood Zone 2 and 3. The site is brownfield and as such will have associated remediation which has delays and additional costs associated with it. An ambitious build out rate has been included between years 0-10 of the plan, which would require immediate start to construction and a build out rate of 64dpa. Site information - SHLAA: 836 Site Address: Carr Lodge, Land South of Woodfield Way, Woodfield Capacity Deliverable and Developable Assessment - Savills Assessment: 680 DMBC Assessment: 980 Difference: -300 Savills Commentary - The original outline planning application for this site was submitted in 2010 (ref: 10/001313/OUTA). Work on site started late 2014, after a Reserved Matters Application was submitted in 2013 (13/00073/REM). So far only 309 dwellings on the site have been completed, resulting in a build out rate of 30dpa between 2010-2019. Taking previous build out rates into consideration ambitious build out rates have been included between years 6-15 of the plan, which would require immediate start to construction and a build out rate of 70dpa. The most recent planning applications for the site, are for Reserved Matters applications for 8 dwellings (17/018811/MAT) and 12 dwellings (16/02512/MAT) indicating a very slow progress. TOTAL -1195 Figure 2: Initial Savills Assessment of Supply of large sites 3.44. Using our initial analysis of the larger residential allocations it shows a reduction in the supply of dwellings over the plan period by c. -1,195 dwellings. By carrying out a more realistic assessment of the sites and by incorporating industry standards it shows in correctly adjusting the number of dwellings in the MUA alone over the plan period now there is now a shortfall of -9,817 units. Recommendation 6: DMBC should allocate more land for housing given an overall shortfall within the Main Urban Area of -9,817 plots. In the interests of a positive, justified and effective plan.

<table>
<thead>
<tr>
<th>Summary:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Urban area housing supply in terms of allocations, commitments and reserve dwellings is 8,640. Against a corrected target of 17,626 dwellings, this is a shortfall of 8,622 dwellings. There are also concerns related to a number of allocations in the urban area. Wording to Policy 6 states 'much of the supply is not without constraints', showing the council are aware of issues and as a result perceived supply in the plan period. Two sites are problematic: McCormicks (984) is entirely in FZ2/3. Here the overreliance on brownfield has allowed a very constrained site to come forward at the detriment of DMBC's housing supply. Secondly, Manor Farm (843) is constrained by network rail and the S106 which requires a railway crossing, which has a viability impact. These two represent 46% of the urban area supply and the housing supply could therefore fall well below the required level. Table H1(A) shows that out of urban area permissions 57% have not started (27 sites). All but 5 are on previously developed land - it cannot be argued there should be a preference for brownfield over greenfield however the delay impacting supply must also be recognised. Brownfield can have numerous constraints, need remediation and even EIA screening which can add long delays. It may be more advantageous to include sustainable countryside sites as opposed to poorly performing brownfield. There are also challenges relating to achieving capital values on brownfield land, focussing on brownfield development could undermine sustainable development aspirations set out in the NPPF. The urban area also has unjustifiably high build out rates. The over reliance on these rates for large schemes looks to be a way of helping to meet the level of supply. McCormicks, Manor Farm and Kirk Street are examples of ambitious build out rates. Manor Farm has built just 141 units in 4 years since the original application, when it is projected to deliver 350 in the first 5 plan years. It is ambitious and dishonest to the plan period supply based on previous trends. There is an over reliance on small sites (10 units or less) within the urban area. There is an urban area saturation of small sites and a limited number of smaller house builders to build them all during the plan period. 70% of the small sites with a planning permission have not started as of April 2018. The following is an assessment of MUA housing supply: Site information - SHLAA: 938 Site Address: Kirk Street/Ramden Road/Eden Grove Capacity Deliverable and Developable Assessment - Savills Assessment: 600 DMBC Assessment: 930 Difference: -330 Savills Commentary - Brownfield site in poor market area. The site has not started construction, instead a process of remediation is currently ongoing with an EIA screening opinion submitted 12th August 2019. (ref: 19/01920/SCRE). Over 70% of the site is within Flood Zone 2 and 3. An ambitious build out rate has been included between years 6-15 of the plan at 70dpa. Site information - SHLAA: 843 Site Address: Manor Farm, Bessacarr Capacity Deliverable and Developable Assessment - Savills Assessment: 650 DMBC Assessment: 965 Difference: -315 Savills Commentary - Since outline planning was granted in 2001 up until July 2018 a total of 150 dwellings have been built, yet over a similar period of time the council envisage the site to deliver 965 units. The site is somewhat constrained by the rail network and as part of the Section 106 agreement requires a crossing over the railway. This has implications to the viability of the site as this could be an abnormal cost of #1million (Section 106 under document ref: 00770997). Site information - SHLAA: 984 Site Address: Former McCormick Tractors International, Wheatley Hall Road Capacity Deliverable and Developable Assessment - Savills Assessment: 350 over first 10 years DMBC Assessment:600 over first 10 years Difference: -250 Savills Commentary - The site is entirely situated within Flood Zone 2 and 3. The site is brownfield and as such will have associated remediation which has delays and additional costs associated with it. An ambitious build out rate has been included between years 0-10 of the plan, which would require immediate start to construction and a build out rate of 64dpa. <tr>
<td>Many ways of calculating housing supply have been provided, it is disputed that there is an undersupply, especially such a large one (almost 10,000 short according to the representation) when more than 7,000 houses are being allocated in the Main Urban Area. The Peter Brett’s Report explains how figures have been derived and the Housing Topic Paper explains the distribution of the housing requirement, with the Site Selection Methodology explaining the site selection work. The HELAA methodology explains build out rates, which were agreed with the stakeholder group early in the plan process. Site capacities based on either permission information or agreed densities and build out rates, or the most up to date information. Where appropriate, greenfield sites have been allocated.</td>

</tbody>
</table>
Site Description

2.1. The Grange Farm site measures 11.2ha with wider landownership to the south and east measuring c.28 Ha in its entirety. It is located adjoining the Main Urban Area of Doncaster, directly south of Edenthorpe. The existing settlement boundary of Edenthorpe is located to the west and north of the site (Grid Reference: SE 61755 05966). This is shown on the enclosed Location Plan (Appendix 1). (SEE EMAIL FOR Appendices) 2.2. The site is adjacent to the south side of the A630, with its north western boundary at the junction between the A630 and the A18. The western boundary of the site runs the length of Sainsbury’s and its carpark, with the southern boundary of the site adjacent to Shaw Wood (designated SSSI). Discussions with Council Ecologists confirm this can be mitigated. 2.3. The site is currently in Agricultural use with a small number of agricultural buildings within the blue line area. A number of mature trees are located on the site but it is understood there are no TPOs. An access track for Grange Farm runs along the site’s eastern boundary. 2.4. There are a mixture of land uses near the site. The residential boundary of Edenthorpe lies to the north, on the other side of the A630. The town of Armthorpe lies beyond c.600m to the south of the site, separated by a number of fields. Edenthorpe provides a number of local amenities and facilities with a large convenience store adjacent (Sainsbury’s). Employment opportunities are located to the west of the site, and along the A630 to the east of the site at West Moor Park, where predominantly B8 storage and distribution businesses are located. Within the officer report to application 18/02592/OUTM, directly north west of the site it was written: "The site is in a highly sustainable location, close to services, facilities, existing infrastructure and public transport links." (Paragraph 8.33) 2.5. The Armthorpe Parish Council and Neighbourhood Plan boundary extends across the site, bordering the Westmoor Link Road, it therefore lies at the extreme north western edge but in reality bears a closer spatial relationship to the Main Urban Area. 2.6. In respect of sustainability, the site is located to the Main Urban Area of Doncaster as being well served by existing principal bus routes which run through the settlements of Armthorpe and Edenthorpe. The nearest bus stop is approx. 150 metres from the site and offers a high frequency bus service to Doncaster Town Centre (every 10 minutes). 2.7. The site is also well connected in terms of walking and cycling, with several well used routes nearby, for example, along Mere Lane and within Shaw Wood which is publically accessible. Site Context 2.8. The site is located adjoining the Main Urban Area of Doncaster, and is directly adjacent to Edenthorpe. The Main Urban Area is defined as the contiguous built-up area of Doncaster comprising a number of distinct but connected districts arranged around the town-centre. The Main Urban Area of Doncaster is the focus for housing development within the district. 2.9. Edenthorpe is regarded as a distinct local centre within the Main Urban Area. It has shops and services to meet day-to-day needs. The local centre is considered by Doncaster Metropolitan Borough Council (DMBC) as a sustainable location due to its high levels of access to alternative modes of transport, being located on a key bus route corridor, proximity to Doncaster Main Urban Area and varied community facilities and employment within and adjacent to the settlement. 2.10. Given the masterplan approach envisaged the site itself is well connected and forms a natural extension to the settlement, allowing for a contribution to the critical mass of residents to help support and sustain the existing facilities and economy. The site would also include design principles which continued the green wedge between Edenthorpe and Armthorpe. Planning Background 2.11. There is a pending hybrid application (reference: 12/02133/FULM) for 264 plots (detailed, phase 1) and outline for up to 300 plots (phase 2) on the land - up to 564 plots in total both of which were submitted in 2012. 2.12. In 2015 the hybrid application was formally reduced to a full application for 264 plots to take account of policy comments in respect of the green wedge -this is the site being brought forward within these representations. At the time the council expressed that the principle of development was not acceptable. There were also a number of outstanding matters including highways, public rights of way, public open space and premature in respect of the Armthorpe Neighbourhood Plan. The scheme was not taken to committee and instead held in abeyance. More recently however there have been a number of changes in circumstances which benefit the proposed site. These will be detailed within the Vision Document, at Appendix 2 and Chapter 4 of these representations. 2.13. The Armthorpe Neighbourhood Plan was adopted on the 22nd November 2018. The site lies at its extreme outer edge and is placed entirely in the Green Wedge. It sets out allocations but does not include the subject land. Like CS17, Policy ANP28 states that: "The Green Wedges overlay the Countryside Protection Policy Area designation and areas identified for development. Thus the identification of areas as being within a Green Wedge would not in itself exempt it from development." (Our emphasis). 2.14. We are currently discussing the land with Armthorpe Neighbourhood Plan, however it is our view that due to its poor spatial relationship with the settlement it will not impact on the fundamental principles, policies and aims of the plan.

Summary:

The site is 11.2ha with wider land ownership to the south and east measuring 28ha in total. The site adjoins the Main Urban Area and Edenthorpe is to the west and north. The site is south of the A630 with the NW boundary close to the junction between the A630 / A18. Impacts on Shaw Wood can be mitigated (has been discussed with Council ecologists). Site is agricultural. There are a mix of adjacent land uses, including housing in Edenthorpe to the north and fields separating the site from Armthorpe. Edenthorpe has a number of local amenities and there is employment at West Moor Park. The site is in the Armthorpe Parish Council boundary but better aligned spatially with the Main Urban Area. The site is served by a bus stop with high frequency services, as well as walking and cycling opportunities. The masterplan for this site considers that it is an extension of the urban area and supports services here, as well as continuing the green wedge between Armthorpe and Edenthorpe. There is a pending hybrid application 12/02133/FULM for 264 plots (detailed, phase 1) and outline for up to 300 plots (phase 2) on the land - up to 564 plots in total both of which were submitted in 2012. In 2015 this was reduced to a full application and the council expressed that that the
principle of development was not acceptable, and there were outstanding matters related to highways, PROW, open space and prematurity in the respect of the Armthorpe Neighbourhood Plan. It was held in abeyance. There have been a number of changes in circumstance since. The Armthorpe Neighbourhood Plan was adopted on the 22nd November 2018. The site lies at its extreme outer edge and is placed entirely in the Green Wedge. It sets out allocations but does not include the subject land. Like CS17, Policy ANP28 states that: "The Green Wedges overlay the Countryside Protection Policy Area designation and areas identified for development. Thus the identification of areas as being within a Green Wedge would not in itself exempt it from development." There is discussions with the Neighbourhood Plan but it has a poor spatial relationship with the settlement and does not impact on the principals, policies and aims of the plan.

Response:
Allocations in Armthorpe are set out in the Armthorpe Neighbourhood Plan. Unless a site has come forward as a commitment, no further allocations are being made here, and the settlement can comfortably meet its housing target, as per the Housing Topic Paper.
4.1. The land at Grange Farm represents a deliverable and developable site in accordance with the definitions contained with the NPPF. As part of the evidence base to substantiate the deliverability and developability a Vision Framework Document has been prepared and is included at Appendix 2. We welcome feedback and discussion from DMBC in terms of further targeted technical work in the interests of supporting a sound Local Plan. (SEE EMAIL FOR Appendices) 4.2. One of the key matters regarding the wider scheme was the impact on the Green Wedge between Armthorpe and Edenthorpe. In 2015 the scheme was formally reduced to a full application for just 264 plots to take in to account policy comments in respect of the green wedge, under application 12/02133/FULM. 4.3. The site is located adjoining the Main Urban Area of Doncaster, directly south of Edenthorpe and as such represents a Sustainable Urban Extension. Given the now reduced size of the site it would not impact on the neighbouring areas of Armthorpe and Edenthorpe from merging. 4.4. Further, the site represents a technically deliverable site capable of achieving sustainable growth in Doncaster in the following way: Landscape, Environment and Topography 4.5. The site will aim to make a positive contribution towards the management and enhancement of the landscape. The position of the site also provides the opportunity to create a clear defensible boundary between Armthorpe and Edenthorpe. 4.6. Landscaping is a key feature of the scheme especially due to the proximity to Shaw Wood SSSI. The majority of existing trees have been retained and new native trees and shrubs will be planted. The site provides a central area of open space and new buffer planting areas to take into account local views. The layout can also incorporate a wildlife corridor between Shaw Wood and Long Sandall Common. 4.7. A Phase 1 Ground survey was undertaken by Lithos Consulting, which proved that there were no fundamental constraints envisaged. This was later confirmed by the responses from the statutory consultee for the submitted application. 4.8. The majority of the site is not at risk from flooding, and is therefore within flood zone 1. A small area of the western part of the site is within Flood Zone 3, the extent of which has been agreed with the EA in earlier discussions. No development is proposed within Flood Zone 3 so it is a sequentially preferable site. Access, Highways and Transport 4.9. The early highways work indicates that safe access to the existing transport network, involving an adopted road can be successfully implemented. As part of the existing full application a number of specific design matters were highlighted, all of which are resolvable through the detailed working of the scheme. 4.10. More recently, the A630 West Moor Link improvement scheme was approved to include a new bridge, improve the width of the A18 carriageway and junction improvements. The work on the A18/A630 regeneration scheme started in July 2019. The improved road infrastructure will only help to alleviate some of the earlier transport concerns of the scheme. 4.11. In terms of public transport, the site is well served by existing principal bus routes which run through the settlements of Armthorpe and Edenthorpe. The nearest bus stop is approx. 150 metres from the site and offers a high frequency bus service to Doncaster Town Centre (every 10 minutes). 4.12. The site is located within the Main Urban Area of Doncaster as well as being well served by shops and services within the settlements of Armthorpe and Edenthorpe. 4.13. The site is also well connected in terms of walking and cycling, with several well used routes nearby, for example, along Mere Lane and within Shaw Wood. The site will offer improvements to existing road junctions and investment to improve existing and create new, safe pedestrian and cycle links. Design Principles 4.14. The Vision Document at Appendix 2 explores the physical and environmental character of the site and sets out how, by incorporating the following design principles, it can be brought forward in a way that enhances the surrounding area, these include: - Ensuring an appropriate amenity boundary between the site and existing residential properties; - The instatement of structural landscape within a framework of landscape and public open space approach across the site; - The retention of existing trees and hedgerows; - Provision of significant areas of publicly accessible green space as well as improvements to biodiversity through the new native species trees and shrubs planted on site; and - Maximising opportunities for pedestrian and vehicular access to the surrounding area. Deliverability 4.15. There are no known technical constraints (for example ecology, flood risk, drainage, ground and heritage) that would preclude this site coming forward. The outstanding matters raised within the current application of highways, Public Rights of Way and Public Open Space are all details which with further discussions with the council can be overcome. The site is under the control of a one landowner who is willing and able to develop their land, having already drawn up an agreement with house builder, Miller Homes. Miller Homes are a national housebuilder, with vast experience in delivering residential projects and producing places people want to live, ensuring deliverability of the site.

Summary:
Grange Farm is deliverable and developable in accordance with the definitions in the NPPF. A vision framework document has been drawn up. The revised site layout on the 2015 scheme now takes account of the green wedge concerns raised in the 2012 application. The site adjoins the urban area and is a sustainable urban extension. It now would not merge Armthorpe and Edenthorpe. It can contribute to delivering sustainable growth. The site will make a positive contribution towards the management and enhancement of the landscape. There will be a clear and defensible Armthorpe / Edenthorpe boundary created. The majority of existing trees have been retained and new native trees and shrubs will be planted. The site provides a central area of open space and new buffer planting areas to take into account local views. The layout can also incorporate a wildlife corridor between Shaw Wood and Long Sandall. There are no fundamental ground issues. The majority of the site is not at risk of flooding, no development is proposed in flood zone 3, so it is sequentially preferable. Safe access can be made to the existing transport network and all issues previously flagged regarding specific design can be resolved through detailed working of the scheme. The site is well located close to the A18 / A630 improvements which will only alleviate earlier concerns. It is well served by public transport with the nearest bus stop.
stop 150 metres away and has a high frequency service to Doncaster centre. The site is well served by shops in Edenthorpe and Armthorpe. It has good walking and cycling links which can be improved. It will include the following design principles: - Ensuring an appropriate amenity boundary between the site and existing residential properties; - The instatement of structural landscape within a framework of landscape and public open space approach across the site; - The retention of existing trees and hedgerows; - Provision of significant areas of publicly accessible greenspace as well as improvements to biodiversity through the new native species trees and shrubs planted on site; and - Maximising opportunities for pedestrian and vehicular access to the surrounding area. There are no technical constraints and outstanding matters of the current application are all details which can be overcome. The site has one owner who is willing to develop the land and has an agreement drawn up with a house builder - Miller Homes - a national house builder with experience in delivering residential projects and producing places people want to live in.

Response:
Comments and supporting site deliverability information are noted. However, the site is located within the parish of Armthorpe and is therefore within the designated boundary of the Armthorpe Neighbourhood Plan. Alternative sites in the Neighbourhood Plan area have been identified by the Neighbourhood Plan that are more than sufficient to meet the settlement’s Local Plan plan period target - see site selection methodology report and Armthorpe Neighbourhood Plan for more details.

CUSREF: 03008 Name: DLP Planning Ltd
Date: 30/09/2019 Organisation: DLP Planning Ltd
Representing: Mr R.J. Ogley

Comment Ref: C/Policy 6/03008/4/005
Attend Examination: Attend Hearing
Reason: To support the Representations Report and the Inspector’s understanding of the site.
Area: Chapter 16: Spatial Proposals
Policy: Main Town - Conisbrough-Denaby

Tests of Soundness:

Comment:
3.14 Policy 6 sets out that housing allocations will help to deliver the spatial strategy, meet the needs for housing and support sustainable communities. 3.15 The allocation of the site for housing under Policy 6 is supported in principle, and it is considered that the delivery of the site is essential in helping to deliver the spatial strategy for the Borough. 3.16 The site reference is 040, as shown in the map extract in Figure 2. (SEE EMAIL FOR Figure 2. Draft Local Plan Proposals Map Extract) 3.17 Table H2(D), which lists the Conisbrough housing allocations (without planning permission) as of 1st April 2018, describes the site as 8.91ha in size with an indicative capacity of 200 dwellings. The table also indicates that 175 dwellings are achievable in 6-10 years, and a further 25 dwellings are achievable in 11-15 years. The table does not describe any dwellings as being achievable in 0-5 years. 3.18 We object to the stated capacity and deliverable time scale for the site on the following grounds: 3.19 The site is considered to have a potential capacity of at least 234 dwellings based on a developable area of 80% and a density of 35 dwellings per hectare. There is a willingness from the landowner to market and develop the site as soon as possible given its unconstrained nature, and expressions of interest have been received from several developers. It is therefore considered that the site could come forward in the early stages of the plan period (0 - 5 years). Recommendation 3.20 We request that the information provided in Table H2(D) is amended to state that the site has an indicative capacity of at least 234 dwellings, and that development of at least 150 dwellings is achievable in 0 - 5 years.

Summary:
The allocation of site 040 under Policy 6 is supported in principle and it is considered that the delivery of the site is essential to helping deliver the boroughs spatial strategy. Object to the proposed capacity of site 040 and the delivery timescale. The site could accommodate 234 units (80% of the site developed at 35dpa), and there is a willingness to deliver this site as soon as possible - with interested developers who have submitted EOI’s, and no site constraints. Table H2 (D) should be amended to state the site capacity as being 234 units, and 150 deliverable in years 0 - 5.

Response:
Support noted. The site density has been based on a standard calculation, however Policy 6 stipulates that lower or higher densities will be supported if this can assist in the delivery of a better design solution.
2.1 The site at Sheffield Road comprises of approximately 9 hectares of land adjacent to the western settlement boundary of Conisbrough, as illustrated in Figure 1. (SEE EMAIL FOR Figure 1. Site Location) 2.2 The properties to the south west of the site (134, 136, 138 and 140 Old Road and the Hill Top Hotel) are not within the Ogley family’s ownership and they do not comprise part of the site. 2.3 The site comprises a single field of greenfield land which is currently in agricultural use (Grade 2). There are no known contaminants on the site. There is no previous planning history of relevance to the site. 2.4 There is an existing hedgerow around the perimeter of the site, and the topography of the site is relatively flat with a downward slope from north-west to south-east. 2.5 There are no public or private footpaths, or public rights of way, running through the site. 2.6 The site is located entirely within Flood Zone 1 on the Environment Agency’s flood maps, which means that the site has a less than 1 in 1,000 annual probability of flooding from a river or sea. The site is also at very low risk from surface water flooding, which means that each year the site has a less than 0.1% chance of flooding from surface water. It is of note that the National Planning Practice Guidance sets out that residential development is an appropriate land use in Flood Zone 1 areas (Paragraph 066, reference ID 7-006-20140306). 2.7 Access to the site could be obtained primarily from Sheffield Road to the south and / or Old Road to the west. It is of note that there are three existing dropped kerbs along the south-east boundary. There could be opportunities for access to be provided from the cul-de-sacs located to the north-east of the site. It is considered that residential development on the site would not create a demonstrably adverse impact on highway safety or volumes of traffic in the surrounding area. Available. 2.8 The site is held in trust by Mr James Ogley and his son Mr Anthony Ogley on behalf of the Ogley family. There has been frenetic interest in the site in the last few months alone by several substantial developers who the land owners have had correspondence and / or meetings with. Several of the developers have also suggested head of terms. Further to this, the land owners are also expecting more approaches in the upcoming months. Suitable. 2.9 There are no physical constraints to suggest that carefully designed residential development could not be brought forward during the plan period. 2.10 The issue of limestone underlying the site has previously been raised as a constraint by the Council. However, the area is not safeguarded for this particular use. Deliverable. 2.11 Given the size of the site and its potential capacity, the site provides opportunities to deliver vast developer contributions such as affordable housing, education and open space, subject to viability. 2.12 The Housing and Economic Land Availability Assessment (HELAA) housing map identifies the site as a deliverable / developable site for housing which does not currently have planning permission. This is supported. 2.13 The HELAA 2017 - 2018 update describes the site as having a capacity of 200 dwellings, 175 of which are considered achievable in 6-10 years and 25 of which are considered achievable in 11-15 years. 2.14 Further to the above, it is understood that in the 2011 SHLAA the Council envisaged that the site would be developed in 5-10 years. 2.15 We request that the information provided in the HELAA is amended to state that the site has an indicative capacity of at least 234 dwellings, and that development of all 234 dwellings is achievable in 0 - 5 years. 2.16 The site is considered to have a potential capacity of at least 234 dwellings based on 80% developable area and a density of 35 dpa. There is also a willingness to develop the site as soon as possible given its unconstrained nature. It is therefore considered that the site could come forward in the early stages of the plan period (0 - 5 years). Sustainability. 2.17 There are several local facilities and services located in close proximity to the site, including, but not limited to, the following: - Conisbrough Ivanhoe Primary Academy - Located to the north (< 500 metres) - Pennine View School - Located to the north (< 500 metres) - Supasave food store - Located to the north east (< 600 metres) - Old Road football pitches / Denaby United Football Club - Located to the north (< 700 metres) - Conisbrough cemetery - Located to the east (< 800 metres) - Conisbrough community centre - Located to the north east (< 1.3 kilometres) - Conisbrough Baptist Church - Located to the north east (< 1.4 kilometres) - Waites Cash & Carry - Located to the north east (< 1.5 kilometres) - Conisbrough post office - Located to the north east (< 1.5 kilometres) - Weldricks (Pharmacy) - Located to the north east (approximately 1.5 kilometres) - Sainsbury’s Local - Located to the north east (approximately 1.5 kilometres) 2.18 In addition to the above, it is of note that Conisbrough train station is located approximately 2 kilometres to the north east of the site. Northern services to Hull and Sheffield are available from the station. 2.19 There are also six bus stops (three per direction) located 400 metres or less to the north / north east of the site which provide access to the X78 bus (a first bus). There are several X78 services per hour during the day on all days of the week. The service provides access to Doncaster, Rotherham, Meadowhall and Sheffield.

**Summary:**

Properties to the south west of the site (134 - 140 Old Road) are not in the ownership of the land owner and not part of the site. The site is a single field, Grade 2 agricultural land with no known contamination or previous planning history. The site is relatively flat and bound by hedgerow. There are no paths or public rights of way. It is flood zone 1 and also at low risk of surface water flooding too. Access is achievable from Sheffield Road or Old Road. There are existing drop kerbs to the south eastern boundary. There are potential access points from cul de sacs to the north. There are not considered to be any highway impacts arising as a result of developing this site. The land is in familial ownership and there have been meetings with prospective developers. There are no physical constraints to suggest carefully designed residential could come forward. The issue of limestone underlying the site has been raised, however the land is not safeguarded for this use. The size of the site would allow the developer to make contributions to affordable housing, open space and education subject to viability. The HELAA conclusions for the site are supported. The site capacity should be recorded as 234 units, not 200, and the site deliverable in 0 - 5 years. This is based on 80% developable area and a density of 35dpa. There is a willingness to develop the site as soon as possible as it is unconstrained. The site is close to...
several local facilities and services, including schools, food stores, sport pitches, a cemetery, churches, cash and carry, post office and pharmacy. Conisbrough train station is also 2km away. There is also convenient access to the X78 bus via a number of nearby bus stops.

Response:

Comments noted. The red line boundary excludes the dwellings to the south west, and with regards to the capacity, this is based on a density agreed with the stakeholder group as per the HELAA Report. Policy 6 allows for higher or lower densities where they would result in a better design solution.

1.1 This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Mr James Ogley in response to the publication of the draft Doncaster Local Plan for consultation (Regulation 19). 1.2 This representation relates to "Land off Sheffield Road, Conisbrough" which remains available, developable and deliverable for residential development. 1.3 The site is proposed as a housing allocation (site ref. 040) in the draft Local Plan document. This representation supports the allocation of the site for housing, however raises objection to the stated capacity of the site and the time period for delivery. 1.4 This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site. 1.5 The site has previously been promoted by DLP Planning Ltd in the following consultations: - Sites and Policies Development Plan Document - September 2013 - Call for Sites - October 2014 - Issues and Options - Summer 2015 - Vision, aims and objectives - Summer 2015 - Homes and Settlements - April 2016 1.6 The structure of this representation will be as follows: - Description of the site including sustainability for development in Section 2; - Comments on the draft Local Plan policies in Section 3; and - Conclusion in Section 4.

Summary:

Site 040 remains available, developable and deliverable. The allocation is supported but there is an objection to the stated capacity of the site.

Response:

Support noted. Policy 6 allows for higher or lower densities where they would result in a better design solution.
We have previously submitted representations on behalf of MerryVale Developments for land at Conisbrough. The Green Belt is drawn tightly around Conisbrough, which has the consequent impact of limiting growth opportunities for the town. The MerryVale Developments site lies to the south-west of Conisbrough, on land between Drake Head Lane and Hereward Court. It is currently within the Green Belt and was considered in the Council’s Green Belt Review under the reference ‘Conisbrough 825: Fields off Drake Head Lane, Conisbrough’. We have previously proposed its removal from the Green Belt as a sustainable location for growth in Conisbrough. With regard to the Publication Version Local Plan specifically, we support the identification of Conisbrough as a ‘Main Town’ which will accommodate development with the main focus of growth in the Doncaster Urban area. It is logical that the main focus of growth remains around the Doncaster Urban Area. However, it is not sustainable to deliver all the requisite dwellings for the entire Borough in one place; therefore identifying the Main Towns as areas for growth, in combination with the focus at Doncaster is a sensible and sustainable solution to delivering the housing for the Borough. This is also crucial in ensuring that local housing needs are met locally. Whilst we broadly support the housing numbers directed to the Main Towns, as identified in the settlement hierarchy, the numbers proposed for Conisbrough and Denaby (465 - 975) contain a significant margin of difference. It is important that the Council builds flexibility into the Plan which does not stifle the growth potential. In this regard, it is important that the higher figure in the range is not seen as a maximum figure. Should the housing needs situation change over the Plan period it is crucial for the Plan’s sustainability that it is flexible enough to provide further development if and when the need arises. This should be made explicit in the Plan. In this regard, we are disappointed that land at Conisbrough, as identified above, has not been removed from the Green Belt or allocated in the Local Plan. The site presents an opportunity to deliver additional housing as necessary which could ‘round-off’ the settlement without detriment to the wider area and without encroachment toward other settlements, as the site does not extend beyond the current extent of Conisbrough in this area.

Summary:
The Green Belt is tightly drawn in Conisbrough and this limits growth. Support the identification of Conisbrough as a Main Town to deliver sensible and sustainable housing for the borough. This is crucial in ensuring local needs are met locally. Broadly support housing numbers and the range for Conisbrough contains a significant margin of difference. It is important flexibility is built in which does not stifle growth potential. The higher range figure should not be a maximum figure. Should housing needs change over the plan period, it is crucial for the plans sustainability that is flexible enough to provide further development if the need arises. This should be made explicit. Disappointed that the land has not been removed from the Green Belt and allocated. The site presents the opportunity to provide additional housing and round off the settlement without detriment to the wider area and without encroachment towards other settlements, as the site does not extend beyond Conisbrough.

Response:
General support for approach to housing at Conisbrough Denaby is noted. The Site Selection Methodology and Green Belt Topic Paper elaborated on why this site has not been preferred for housing here, and why other sites are preferable.
This representation has been prepared by Chartered Town Planning Consultants, John Handley Associates Ltd. It is submitted on behalf of the Klondyke Group Ltd, the owners and operators of the Strikes Garden Centre/Stringers Nurseries which is located on Crookhill Road, Conisbrough. The Strikes Garden Centre/Stringers Nurseries is a long established commercial garden centre business which operates as a successful and busy retail destination with an extensive car park, display areas and ancillary coffee shop. In addition to the existing garden centre at Crookhill Road, the Klondyke Group Ltd own land to the north and east. Following on from our submission to the Draft Policies and Proposed Sites Consultation in October 2018, and our Call for Sites Submission in 2017 we would request that this site (Housing Site 1000) is removed from the Green Belt and allocated as a new housing development opportunity. We have provided a summary of our earlier submission below, and have also attached a site location plan and indicative layout plan showing the extent of the proposed development site and its potential to accommodate new housing. The Local Plan Site Selection Methodology for sites within Conisbrough and Denaby is published as part of the Local Plan Evidence Base. This Methodology document rejects the site as a housing allocation on the basis that “the site is currently designated as Green Belt and the findings from the Phase 3 Green Belt Review concludes there is a moderately weak case for inclusion in further site selection work.” We disagree with this conclusion and have set out below our justification why the site should be allocated in the new Local Plan as a housing development opportunity. Requirement for Additional Housing Land to be Allocated In terms of the requirement for additional housing land in this area, Policy 3 of the Local Plan includes a target of between 465 - 975 new houses to be allocated for the Conisbrough - Denaby area. Paragraph 16.70 of the Local Plan confirms that there is an overall plan period housing supply of 528 new homes. A large brownfield reserve site capable of accommodating 325 further dwellings is identified at the former Earth Centre, Conisbrough. However, the Local Plan notes that this site has not yet passed the flood risk sequential and exceptions tests. It cannot therefore be confirmed as an effective housing site. The combined total number of housing units is 853 including the reserve site. On this basis, there is scope within the wider target of 975 houses for additional housing land to be allocated in the new local plan. In particular our client’s site which is located to the north of Stringers Garden Centre, Crookhill Road, Conisbrough should be removed from the Green Belt and allocated as a new housing site. The site is effective and deliverable in the short term and can contribute to the continuing housing land shortfall that has been identified in this area. Proposed Development The Klondyke site is located to the north and east of the existing garden centre operation, adjacent to existing housing and other built development. The site extends to 2.0 hectares and is surplus to operational requirements associated with the garden centre, it is therefore available for development and could deliver approximately 50 to 60 houses. Access can be provided from the existing access off Crookhill Road, with appropriate improvements and segregation of the existing garden centre parking and delivery areas. There is sufficient land along the frontage of the existing operations to rationalise the existing access and car parking arrangements to provide a separate access into the proposed housing development. The scale and density of development on the site would reflect that of the existing, established housing to the west, and the new housing area would represent a logical expansion of the existing housing adjacent. To reflect the site’s location on the edge of the existing settlement a new landscaped boundary could be provided as an integral part of the new development, and this would help to define and strengthen the Green Belt boundary in this location. Through a separate representation it is also proposed that the operational garden centre site is removed from the Green Belt as it is intensive built development and a non-conforming Green Belt use. This would further strengthen the Green Belt boundary at this location. Opportunities to improve pedestrian and cycle access could also be provided as an integral part of the new development, as well as enhancements to local habitats through native species planting. It is considered that the current review of the Local Plan provides an opportunity to assess the site’s contribution to the Green Belt and seek its allocation for new development. Given the surrounding uses, it is considered that residential development would be the most appropriate and viable new use for this former nursery site. This approach would “tie in” with the existing housing to the west, and would provide for a “rounding-off” of the existing settlement whilst also providing a new landscaped edge, ensuring the threat of coalescence is avoided between settlements. Summary Given the site’s location adjacent to existing housing and other built development, and its previous nursery uses, it is requested that the 2.0 hectare site lying to the north and east of the existing garden centre should be released for development with capacity for the delivery of approximately 50 to 60 houses. Whilst it is acknowledged that the site is currently covered by Green Belt policy, which places restrictions on most forms of new development, in order for the Council to meet its housing land requirements, sites which are currently in the Green Belt will have to be released as part of the local plan review. On this basis, and on behalf of the Klondyke Group Ltd, we would request that the 2.0 ha site at Crookhill Road, Conisbrough (as shown in the attached location plan) is allocated as a new housing development opportunity in the new local plan. In addition to the submitted location plan, we have also provided a copy of the indicative layout plan and supporting statement that accompanied our submission in August 2017. These provide further information in support of this latest submission. In summary, this site is an available, deliverable and viable new housing site, and for the reasons set out above we would urge Doncaster Council to support its removal from the Green Belt and its allocation as a new housing site for the development of 50 to 60 houses in the new Local Plan. PROPOSED CHANGE Requested Changes For the reasons set out above, we would request that the 2.0 ha site at Crookhill Road, Conisbrough (as shown in the attached location plan and identified as Housing Site 1000) is removed from the Green Belt and allocated as a new housing development opportunity with capacity for the development of 50 to 60 houses. (SEE EMAIL FOR Plans and 2017 Submission)
Summary:

Request that site 1000 is removed from the Green Belt and allocated for housing. Disagree with the conclusions of the Green Belt Review. The allocated sites in Conisbrough total 528 units + 325 on a reserve site - 853 in total and therefore short of the target of 975 homes. The site should be removed from the Green Belt and allocated - it is effective and deliverable in the short term and can contribute to the identified shortfall in the area. The site can deliver 50 - 60 houses with access from Crookhill Close, with appropriate improvements and segregation of existing garden centre parking / delivery areas. There can be a separate access to the housing development. New housing would reflect the existing housing to the west and a logical expansion of the existing adjacent housing. A new landscaped boundary could provide a strengthened Green Belt boundary in the area. Separately, it is also to be requested that the garden centre is removed from the Green Belt as it is insensitive development and non-conforming with Green Belt use. This would also strengthen the boundary. There can be improved walking / cycling / habitat enhancement. Residential development would be the most appropriate use for this former nursery site. This would tie in with the existing housing to the west and round off the settlement with a new landscaped edge which avoids the threat of coalescence between settlements. Indicative layout provided. Requested change: remove the site from the Green Belt and allocate as a residential site for 50 - 60 houses.

Response:

It is unclear what the objection to the Green Belt Review conclusions for this site are, however, as shown in the Green Belt Topic Paper, there are no exceptional circumstances for releasing further land in this location, and despite the reserve development site not actually counting towards housing totals here, Conisbrough & Denaby can get within its housing target range without releasing any further sites such as this. It should also be noted that the Green Belt Review indicates that there may be more preferable sites in Green Belt terms in this settlement.
**Covering Email:** We refer to your recent email inviting comments on the Draft Local Plan. On behalf of the Klondyke Group Ltd, the owners and operators of the Strikes Garden Centre/Stringers Nurseries which is located on Crookhill Road, Consibrough, we enclose a completed Representation Form requesting that the site of the current garden centre operation is removed from the Green Belt and identified as part of the exiting built-up area and falling within the Consibrough settlement boundary. As set out in the attached Representation Form, the Strikes Garden Centre/Stringers Nurseries is a long established commercial garden centre business which operates as a successful and busy retail destination with an extensive car park, display areas and ancillary coffee shop. The existing garden centre site extends to 1.769 hectares, and the extent of the existing operation is confirmed in the attached site location plan. (SEE EMAIL FOR LOCATION PLAN) The garden centre is a long established, intensive built development involving large scale retailing and ancillary commercial uses set within an area of car parking and storage areas. These uses on the site do not conform with Green Belt policy and the garden centre site should therefore be removed from the Green Belt and included within the Consibrough settlement boundary. We trust this request can be accommodated and would be happy to discuss this further with you. Please note, we have also made a separate submission requesting that the land to the north and east of the garden centre operation is allocated for residential development as Housing Site Ref: 1000. FORM: Strikes Garden Centre/ Stringers Nurseries, Crookhill Road, Consibrough

This representation has been prepared by Chartered Town Planning Consultants, John Handley Associates Ltd. It is submitted on behalf of the Klondyke Group Ltd, the owners and operators of the Strikes Garden Centre/Stringers Nurseries which is located on Crookhill Road, Consibrough. The Strikes Garden Centre/Stringers Nurseries is a long established commercial garden centre business which operates as a successful and busy retail destination with an extensive car park, display areas and ancillary coffee shop. The existing garden centre site extends to 1.769 hectares. It forms part of the built-up area of Consibrough and lies adjacent to existing built development. The extent of the existing operation is confirmed in the attached site location plan which has been submitted in support of this representation. Further to our submissions at the earlier consultation stage on this site, we therefore request that this operational garden centre development is removed from the Green Belt and identified on the Consibrough Denby Proposals Map as part of the exiting built-up area and falling within the Consibrough settlement boundary. Justification for Proposed Changes The Stringers Garden Centre is a long established, intensive built development involving large scale retailing and ancillary commercial uses set within an area of car parking and storage areas. It forms part of the built-up area. These existing and long established uses on the site do not conform with Green Belt policy and should therefore be removed from the Green Belt. Furthermore, the garden centre operation is visually and physical connected to the existing settlement and functions as part of the exiting settlement. It is a valuable local facility which helps to meet the local area’s retail needs. It should therefore be designated as falling within the exiting built-up area and within the Consibrough settlement boundary. We have also made a separate submission, requesting that the land to the north and east of the garden centre is allocated for residential development. As part of this separate proposal a new landscaped boundary could be provided which would help define and strengthen the Green Belt boundary at this location. The removal of the garden centre site from the Green Belt would, however, allow for a more robust and defined edge to the Green Belt at Consibrough. Requested Changes For the reasons set out above, we would request that the site of the existing Stringers Garden Centre at Crookhill Road, Consibrough (as shown in the attached location plan) is removed from the Green Belt and identified on the Consibrough Denby Proposals Map as part of the exiting built-up area and falling within the Consibrough settlement boundary.

**Summary:**

Request that the current garden centre operation is removed from the Green Belt and identified as part of the existing built up area and falling within the Consibrough settlement boundary. This is a long established site with retail, a coffee shop and extensive car parking. The uses do not conform with Green Belt policy and should therefore not be in the Green Belt. The garden centre is visually and physically connected to the existing settlement and functions as part of it. It is a valuable local facility meeting local retail needs and should therefore be included in the settlement boundary. Proposed change: request the garden centre is removed from the Green Belt and included within the settlement boundary for Consibrough.

**Response:**

This matter is covered in the Green Belt Topic Paper. There are no exceptional circumstances to justify this and doing so would replace a strong boundary with a weaker one. The use is acceptable in the countryside / Green Belt.
Harworth Group maintains its objection to the draft Local Plan specifically in relation to the omission of land at Hill Top Road / Eland Road, Denaby Main (site 1035) for employment and housing development which it considers to arise from the deficiencies in the preparation of the Plan that result in the Publication Version being unsound. 2. In particular, the distribution of development and the allocations proposed in the Publication Version are not justified on the basis of available evidence and do not represent an appropriate strategy when considered against other reasonable alternatives. 3. During the preparation of the Plan, Harworth Group has proposed the allocation of 11.5 ha of land in its control off Hill Top Road / Eland Road, Denaby Main for development comprising employment use (c. 4.2 ha) and housing (c. 7.3 ha). Such development would contribute approximately 7,000 sqm of employment space and around 200 houses to meet the needs of the borough in a sustainable manner. 4. Whilst currently within the Green Belt, site 1035 is considered to be suitable and deliverable for development in a sustainable manner given that it abuts the existing urban area (both an employment area to the north and a housing area to the east), is in arable agricultural use and of limited ecological value, and is bounded by existing belts of trees which would be retained. 5. Our objection to the Publication Version Local Plan in relation to Conisbrough & Denaby comprises the following points: i. Policy 3 ‘Level and Distribution of Growth’ fails to satisfactorily direct light industrial, manufacturing and small scale distribution to the Main Towns, and in particular those in the west of the borough. ii. Policy 4 and the associated Table 4 fail to allocate any land for employment development in the Main Town of Conisbrough & Denaby. iii. Policy 6 and the associated Table H2(D) allocate site 040 and site 383 for housing development without satisfactory evidence to demonstrate these to represent the most appropriate strategy when considered against other reasonable alternatives. iv. The Council’s Green Belt Assessment and related Site Selection Methodology result in the proposed removal of land from the Green Belt (site 040) which does not represent the most preferable option when considered in real terms, and propose allocation of land for development that is of significant value for biodiversity and open space for recreation/amenity (site 383). v. The allocation of Harworth Group’s site 1035 is demonstrated to be a preferable alternative in that it would facilitate development that is more sustainable, less harmful and of greater benefit than those sites proposed to be allocated for housing and address the omission of any land for employment development in this Main Town. 6. Besides the above, Harworth Group maintains the concerns set out in its representations of October 2018 in relation to the overall quantum of development and its distribution across the Borough.

Summary:
Distribution of development and allocations are not an appropriate strategy when considered against alternatives. Site 1035 can deliver housing and employment. May be Green Belt but can deliver a sustainable site and is suitable and deliverable. It abuts the urban area and is of little value as it is. Object on: i. Policy 3 ‘Level and Distribution of Growth’ fails to satisfactorily direct light industrial, manufacturing and small scale distribution to the Main Towns, and in particular those in the west of the borough. ii. Policy 4 and the associated Table 4 fail to allocate any land for employment development in the Main Town of Conisbrough & Denaby. iii. Policy 6 and the associated Table H2(D) allocate site 040 and site 383 for housing development without satisfactory evidence to demonstrate these to represent the most appropriate strategy when considered against other reasonable alternatives. iv. The Council’s Green Belt Assessment and related Site Selection Methodology result in the proposed removal of land from the Green Belt (site 040) which does not represent the most preferable option when considered in real terms, and propose allocation of land for development that is of significant value for biodiversity and open space for recreation/amenity (site 383). v. The allocation of Harworth Group’s site 1035 is demonstrated to be a preferable alternative in that it would facilitate development that is more sustainable, less harmful and of greater benefit than those sites proposed to be allocated for housing and address the omission of any land for employment development in this Main Town.

Response:
Policy 3 supports the uses mentioned and directs them to suitable Borough locations. Enough employment allocations have been made in suitable locations to meet the employment requirement. There is no need to utilise Green Belt land for this purpose. There are existing employment opportunities in the local area and the wider Dearne Valley. With regards to housing, suitable sites have been allocated, including 383 (adjacent, not Green Belt) and 040, which was assessed in the Green Belt review as having a stronger case for removal and justifiable exceptional circumstances. Other non - allocated local sites also scored more preferably in strength of case for Green Belt release. There are no exceptional circumstances to justify adding site 383 into the Green Belt, and this is a suitable site for development. Site 1035 scored as having a moderate case overall, and on balance there are no exceptional circumstances to release this site, and Conisbrough & Denaby can get within their housing range. There are also access concerns to the site.

**Comment:**

18. Harworth Group supports the direction of substantial housing development to Conisbrough & Denaby (and advocates a quantum towards the higher end of the identified range of 465-975 homes). However, the crux of this representation in relation to housing is the site selection in that the Council’s proposed allocations do not represent the most appropriate strategy, in terms of suitability and deliverability, when considered against other reasonable alternatives as required for the Plan to be justified and sound. 19. The draft Plan proposes the allocation of site 383 and site 040 for housing to deliver a total of 325 dwellings (125 and 200 respectively). Harworth Group contends that its site ref 1035, which is able to deliver c.200 dwellings, represents a more suitable and sustainable option than these sites, as discussed below. 20. The ‘Housing and Employment Sites Selection Methodology and Results Report (June 2019)’ indicates (at p158) that a further 262 dwellings are required to be allocated at Conisbrough & Denaby to meet the housing need, with further being required to contribute to any higher economic growth-led housing target. To meet this requirement, the Council assesses 5 prospective sites: numbers 040, 383, 435, 826 and 1035. These are assessed in two stages: first the non-Green Belt sites, and second the Green Belt sites. 21. Sites 383 and 435 are considered first as they are not within the Green Belt. Site 435 is rejected as it is an employment site and is therefore not considered further in these representations. Site 383 is proposed to be allocated for 125 dwellings, leaving a requirement for 137 units to meet the housing need target. The three remaining sites within the Green Belt are then assessed. 22. Given the specific nature of site 383, Harworth Group objects to the sequential preference of this site as a non-Green Belt site ahead of assessment of other potential sites at Conisbrough & Denaby which are currently Green Belt. 23. This is because, in physical and locational terms, site 383 is essentially meeting the definition of and serving the purpose of Green Belt. The only reason it is not Green Belt is that it is an allocated site from the preceding Plan (which itself raises questions about its attractiveness and deliverability), and not for any reason relating to its physical nature, location or function. The site is wrapped-around by Green Belt, is undeveloped and open, and at present forms a substantial part of the gap between two separate developed areas of the Conisbrough and Denaby Main settlements. 24. It is therefore strongly contended that the 4 prospective sites at Conisbrough & Denaby (i.e. excluding site 435) should be assessed equally i.e. without preference being given to greenfield non-Green Belt sites in this location. 25. This fresh assessment would seek to identify those sites which meet the housing need in the most sustainable manner, represent the most suitable employment site(s), protect biodiversity and open space for sports and recreation, and best preserve the overarching function of Green Belt around Conisbrough & Denaby. Within this assessment, consideration should be given to the designation of non-Green Belt land as Green Belt where the requirements of national planning policy are met.

**Summary:**

Site 1035 (Hill Top Denaby - Rejected Housing Site) It is contended that the 4 prospective sites at Conisbrough & Denaby (i.e. excluding site 435) should be assessed equally i.e. without preference being given to greenfield non-Green Belt sites in this location. This fresh assessment would seek to identify those sites which meet the housing need in the most sustainable manner, represent the most suitable employment site(s), protect biodiversity and open space for sports and recreation, and best preserve the overarching function of Green Belt around Conisbrough & Denaby. Within this assessment, consideration should be given to the designation of non-Green Belt land as Green Belt where the requirements of national planning policy are met.

**Response:**

There is no reason to disregard an available non-Green Belt site on the basis that the consultee states that it should be Green Belt. The fact is that it is not, and therefore such non-Green Belt sites should be the first to be considered for allocation. Failing finding enough suitable non-Green Belt sites, Green Belt land was considered, as is the case in Conisbrough. All sites have been assessed in the Sustainability Appraisal and where necessary in the Green Belt Review, which has informed decision making on sites.
Comment: Please see attached statement which provides full explanation and justification for Harworth Group's objection to the Publication Version Local Plan in relation to Conisbrough & Denaby, which comprises the following points: 3. Policy 6 and the associated Table H2(D) allocate site 040 and site 383 for housing development without satisfactory evidence to demonstrate these to represent the most appropriate strategy when considered against other reasonable alternatives. Given the above, it is considered that Publication Draft Local Plan does not meet the tests of soundness insofar as it must be justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. A 'reasonable alternative' which represents a more sustainable and preferable form of development is put forward by Harworth Group and described in the attached statement. Suggested changes to the Plan that are required to achieve this preferable 'reasonable alternative' are summarised below. PROPOSED CHANGE Please see attached statement which provides full explanation and justification for Harworth Group's suggested changes to the Publication Version Local Plan in relation to Conisbrough & Denaby which are summarised below. These changes are required to ensure that the Plan is justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns, as follows: Location: Employment - Light Industry & Manufacturing: Rail and manufacturing, particularly advanced manufacturing Local employment (including small scale distribution), Low carbon and "green industries" (including renewable energy) Location: Main Towns Employment - Light Industry & Manufacturing: As Doncaster Main Urban Area. Locations within and accessible to the existing town Unity (Hatfield Power Park and associated business parks) Table 4 (as referenced from Policy 4) should be amended to include the allocation of land at Conisbrough & Denaby for employment development as follows: Table 4: Employment Site Allocations Ref: 001 Address/ Location: Junction 6 M18, Thorne North Gross site area (Ha): 73.63 Area available for employment use (ha): 73.63 Ha to be developed in plan period: 51.54 Ref: 092 Address/ Location: Balby Carr Gross site area (Ha): 11.25 Area available for employment use (ha): 11.25 Ha to be developed in plan period: 8.60 Ref: 258 Address/ Location: Site 1, Middle Bank, Balby Gross site area (Ha): 8.48 Area available for employment use (ha): 5.00 Ha to be developed in plan period: 5.00 Ref: 441 Address/ Location: Land at Carcroft Common, Carcroft Gross site area (Ha): 49.28 Area available for employment use (ha): 24.64 Ha to be developed in plan period: 12.32 Ref: 941 Address/ Location: RHADS Site 1, Phase 4 Business Park Gross site area (Ha): 68.54 Area available for employment use (ha): 68.54 Ha to be developed in plan period: 68.54 Ref: 1032 Address/ Location: Bankwood Lane, Rossington Gross site area (Ha): 17.68 Area available for employment use (ha): 17.68 Ha to be developed in plan period: 17.68 Ref: 1035 Address/ Location: Land at Eland Road, Denaby Main Gross site area (Ha): 4.2 Area available for employment use (ha): 4.2 Ha to be developed in plan period: 4.2 [Plus other sites as appropriate] The following changes should be made to the site allocations and land designations as shown on the Policies Map: Site 1035 should be removed from Green Belt and allocated for employment (in part - 4.2 ha) and housing development (in part - 7.3 ha) with the settlement boundary adjusted to suit. Development of this site would deliver c.7,000 sqm of employment space and up to approximately 200 houses. Site 383 (in its current form) should be deallocated for housing and instead designated as Green Belt. To fully meet local housing need, the Council should consider identifying further land at Conisbrough & Denaby for housing which may be in the form of a reduced extent of site 040 and/or 383 (i.e. that preserves the biodiversity/amenity function and limits green belt incursion) or other suitable site. Accordingly, Table H2(D) of the Publication Version Local Plan should be amended as follows: Table H2(D): Allocations without planning permission (as at 1st April 2018): (SITE 040 AND 383 SHOWN AS STRIKE THROUGH BUT CANNOT BE SHOWN) Site Ref: 1035 Address: Land off Hill Top Road, Denaby Main Site Area (Ha): 7.3 Indicative Capacity (No of houses): 200 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 0 15-17 Yrs: 0 Beyond Plan Period: 0 Site Ref: Address: [Reduced extent of site 040 or 383 or other suitable site] Site Area (Ha): Indicative Capacity (No of houses): 125 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 125 11-15 Yrs: 0 125 15-17 Yrs: 0 Beyond Plan Period: 0

Summary:
Policy 6 and the associated Table H2 (D) Allocates site 040 and site 383 for housing development without satisfactory evidence to demonstrate these to represent the most appropriate strategy when considered against other reasonable alternatives

Response:
The evidence to support these is contained in a range of evidence base papers, including the Site Selection Methodology, Housing Topic Paper and Green Belt Review / Green Belt Topic Paper. The detailed background site work is not repeated in the Local Plan for brevity.
Please see attached statement which provides full explanation and justification for Harworth Group’s objection to the Publication Version Local Plan in relation to Conisbrough & Denaby, which comprises the following points: 5. The allocation of Harworth Group’s site 1035 is demonstrated to be a preferable alternative in that it would facilitate development that is more sustainable, less harmful and of greater benefit than those sites proposed to be allocated for housing and address the omission of any land for employment development in this Main Town. Given the above, it is considered that Publication Draft Local Plan does not meet the tests of soundness insofar as it must be justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. A ‘reasonable alternative’ which represents a more sustainable and preferable form of development is put forward by Harworth Group and described in the attached statement. Suggested changes to the Plan that are required to achieve this preferable ‘reasonable alternative’ are summarised below. PROPOSED CHANGE Please see attached statement which provides full explanation and justification for Harworth Group’s suggested changes to the Publication Version Local Plan in relation to Conisbrough & Denaby which are summarised below. These changes are required to ensure that the Plan is justified on the basis of evidence and represent an appropriate strategy when considered against other reasonable alternatives. Policy 3 should be amended to include within the table a criterion to facilitate allocation of further land for employment use which is well located in relation to the existing urban area of the Main Towns, as follows: Location: Employment - Light Industry & Manufacturing: Rail and manufacturing, particularly advanced manufacturing Local employment (including small scale distribution). Low carbon and “green industries” (including renewable energy). Location: Main Towns Employment - Light Industry & Manufacturing: As Doncaster Main Urban Area. Locations within and accessible to the existing town Unity (Hatfield Power Park and associated business parks) Table 4 (as referenced from Policy 4) should be amended to include the allocation of land at Conisbrough & Denaby for employment development as follows: Table 4: Employment Site Allocations Ref: 001 Address/Location: Junction 6 M18, Thorne North Gross site area (Ha): 73.63 Area available for employment use (ha): 73.63 Ha to be developed in plan period: 51.54 Ref: 092 Address/Location: Balby Carr Gross site area (Ha): 11.25 Area available for employment use (ha): 11.25 Ha to be developed in plan period: 8.60 Ref: 258 Address/Location: Site 1, Middle Bank, Balby Gross site area (Ha): 8.48 Area available for employment use (ha): 5.00 Ha to be developed in plan period: 5.00 Ref: 441 Address/Location: Land at Carcroft Common, Carcroft Gross site area (Ha): 49.28 Area available for employment use (ha): 24.64 Ha to be developed in plan period: 12.32 Ref: 941 Address/Location: RHADS Site 1, Phase 4 Business Park Gross site area (Ha): 68.54 Area available for employment use (ha): 68.54 Ha to be developed in plan period: 68.54 Ref: 1032 Address/Location: Bankwood Lane, Rossington Gross site area (Ha): 17.68 Area available for employment use (ha): 17.68 Ha to be developed in plan period: 17.68 Ref: 1035 Address/Location: Land at Eland Road, Denaby Main Gross site area (Ha): 4.2 Area available for employment use (ha): 4.2 Ha to be developed in plan period: 4.2 [Plus other sites as appropriate] The following changes should be made to the site allocations and land designations as shown on the Policies Map: Site 1035 should be removed from Green Belt and allocated for employment (in part - 4.2 ha) and housing development (in part - 7.3 ha) with the settlement boundary adjusted to suit. Development of this site would deliver c.7,000 sqm of employment space and up to approximately 200 houses. Site 383 (in its current form) should be reallocated for housing and instead designated as Green Belt; open space, sports and recreation; and as a local wildlife site. Site 040 (in its current form) should be omitted as a housing allocation and retained as Green Belt. To fully meet local housing need, the Council should consider identifying further land at Conisbrough & Denaby for housing which may be in the form of a reduced extent of site 040 and/or 383 (i.e. that preserves the biodiversity/amenity function and limits green belt incursion) or other suitable site. Accordingly, Table H2(D) of the Publication Version Local Plan should be amended as follows: Table H2(D): Allocations without planning permission (as at 1st April 2018): (SITE 040 AND 383 SHOWN AS STRIKE THROUGH BUT CANNOT BE SHOWN) Site Ref: 1035 Address: Land off Hill Top Road, Denaby Main Site Area (Ha): 7.3 Indicative Capacity (No of houses): 200 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 0 15-17 Yrs: 0 Beyond Plan Period: 0 [Site Ref: 001 Address/Location: Junction 6 M18, Thorne North Gross site area (Ha): 73.63 Area available for employment use (ha): 73.63 Ha to be developed in plan period: 51.54 Ref: 092 Address/Location: Balby Carr Gross site area (Ha): 11.25 Area available for employment use (ha): 11.25 Ha to be developed in plan period: 8.60 Ref: 258 Address/Location: Site 1, Middle Bank,
Balby Gross site area (Ha): 8.48 Area available for employment use (ha): 5.00 Ha to be developed in plan period: 5.00 Ref: 441 Address/ Location: Land at Carcroft Common, Carcroft Gross site area (Ha): 49.28 Area available for employment use (ha): 24.64 Ha to be developed in plan period: 12.32 Ref: 941 Address/ Location: RHADS Site 1, Phase 4 Business Park Gross site area (Ha): 68.54 Area available for employment use (ha): 68.54 Ha to be developed in plan period: 68.54 Ref: 1032 Address/ Location: Bankwood Lane, Rossington Gross site area (Ha): 17.68 Area available for employment use (ha): 17.68 Ha to be developed in plan period: 17.68 Ref: 1035 Address/ Location: Land at Eland Road, Denaby Main Gross site area (Ha): 4.2 Area available for employment use (ha): 4.2 Ha to be developed in plan period: 4.2 [Plus other sites as appropriate] Site 1035 should be allocated for employment and housing and removed from the Green Belt. Site 040 should be retained as Green Belt and 383 should be designated as Green Belt. 1035 can deliver 200 units, with 125 elsewhere meaning the area delivers 325 unit in total. Further objections on distribution as highlighted in previous comments.

Response:

Enough employment allocations have been made in suitable locations to meet the employment requirement. There is no need to utilise Green Belt land for this purpose. There are existing employment opportunities in the local area and the wider Dearne Valley. With regards to housing, suitable sites have been allocated, including 383 (adjacent, not Green Belt) and 040, which was assessed in the Green Belt review as having a stronger case for removal and justifiable exceptional circumstances. Other non-allocated local sites also scored more preferably in strength of case for Green Belt release. There are no exceptional circumstances to justify adding site 383 into the Green Belt, and this is a suitable site for development. Site 1035 scored as having a moderate case overall, and on balance there are no exceptional circumstances to release this site, and Conisbrough & Denaby can get within their housing range. There are also access concerns to the site.
Comment: 40. Harworth Group’s site ref 1035 and site 040 are considered to be equivalent in this regard as both are understood to be arable fields of limited biodiversity value and without use as open space for sports, recreation or other public access. 41. However, by contrast, site 383 is recognised by the Council to be of significant value for biodiversity, public access and amenity, yet its protection for these purposes is not considered given, that despite its nature and location, it is not Green Belt and is therefore prioritised as a housing allocation. 42. The Council’s ‘Housing and Employment Sites Selection Methodology and Results Report (June 2019)’ assesses sites in these regards and states that site 383 is ‘identified as having significant negative effects on biodiversity (Objective 12A(i))’ as it ‘entirely overlays part of a much wider Local Wildlife Site Conisbrough North Cliff (reference 5.8)’. 43. In recognition of these constraints, the commentary continues to state that ‘if the site was to be taken forward as an allocation, there would need to be significant mitigation and compensation for any habitat losses. In addition, the existing woodland would need to be retained and buffered from built development by at least 10m. The design of the site would also need to include a significant wide grassland/habitat corridor through the development connecting the habitat in the north to the wider countryside’. 44. The development requirements for site 383 stated within Appendix 2 of the Publication Draft Local Plan recognise that the site ‘is crossed by pedestrian routes and desire lines which should be taken into account’, that ‘the PROW needs to retain its green character’ and that the ‘skate park which is currently on site should be retained [with a landscape] buffer to be maintained around it’. 45. It is evident from this, that the allocation of site 383 is effectively proposing to develop housing on land which already forms well-used public open space and that is of significant biodiversity value. 46. A reasonable alternative which the Plan should consider is therefore the omission of site 383 as a housing allocation and its alternative designation for Open Space, Sports and Recreation and as a Local Wildlife Site. In this context it would also be appropriate for the site to be included within the Green Belt, thereby ensuring continuity of the Green Belt in this location. 47. As discussed above, site 383 is considered to serve the function of Green Belt at present (despite its allocation for housing in the preceding Plan) given that it is open land of a form and location that separates the two parts of the Conisbrough & Denaby settlement. 48. Harworth Group contends that this possible alternative designation of site 383 means that its proposed allocation for housing in the draft Plan is not justified given the availability of site 1035 to accommodate the required housing without harm to biodiversity or public open space etc. 49. As site 383 and site 1035 lie adjacent to one-another, the difference in the appraisal of accessibility to schools and existing centres is considered to be negligible in real terms. It is also evident that the matter of possible unstable land at these sites is not a determining factor in whether a site should be allocated as the Council proposes allocation of site 383. Indeed, as mentioned, Harworth Group is expert at the remediation and development of former mining sites. 50. In direct comparison of environmental, biodiversity and amenity factors, site 1035 is considered to be substantially preferable to site 383. In these respects, site 1035 is considered to be equal to site 040, but substantially preferable in terms of employment development, urban form and Green Belt as discussed above.

Summary: Bio-diversity  Makes comparison in terms of Bio-diversity between 1035 (Hill Top Denaby - Rejected Housing Site) and other sites. In direct comparison of environmental, biodiversity and amenity factors, site 1035 is considered to be substantially preferable to site 383. Site 1035 is considered to be equal to site 040, but substantially preferable in terms of employment development, urban form and Green Belt. The Green Belt Review indicates that there is a stronger argument for releasing site 040 ahead of this site in Green Belt terms.

Response: Site 383 is not in the Green Belt, unlike this site, and is available, deliverable and developable, as well as long being earmarked for development. It is preferable to use non - Green Belt land ahead of considering the release of Green Belt, and this is stipulated in the NPPF. The Green Belt Review indicates that there is a stronger argument for releasing site 040 ahead of this site in Green Belt terms.
Comment:

26. The Council’s site assessment report refers to the Green Belt Review by Arup and, in particular, the Stage 3 Site Re-Appraisal. This scores the sites against the five purposes of Green Belt and provides overarching comments on the boundaries and purpose which are factored together to generate a ‘strength of case’ for inclusion in further site selection work. 27. Despite being entirely akin to Green Belt in nature and location, site 383 is not assessed as it is not Green Belt. 28. When assessed side-by-side, Harworth Group’s site 1035 scores lowest in achieving the purposes of Green Belt (i.e. least beneficial) when the individual purpose scores are summed together, as shown in the table below. Site 1035 also does not make a very strong contribution (i.e. score 5) to any particular purpose. Site: 040 Purpose Scores - 1: 1 2a: 1 2b: 5 3a: 3 3b: 4 4a: 2 4b: 1 5: 3 Total: 20 Boundary: Strong Purpose: Moderate Strength of Case: Moderately Strong Site: 826 Purpose Scores - 1: 1 2a: 3 2b: 3 3a: 4 3b: 4 4a: 2 4b: 3 5: 3 Total: 23 Boundary: Strong Purpose: Moderate Strength of Case: Moderately Strong Site: 1035 Purpose Scores - 1: 1 2a: 1 2b: 0 3a: 3 3b: 4 4a: 2 4b: 1 5: 4 Total: 19 Boundary: Mixed Purpose: Moderate Strength of Case: Moderate 29. Notwithstanding this scoring, each of the three sites is deemed to perform ‘moderately’ against the ‘local interpretation of the Green Belt purposes’. Irrespective of any particular site scores, the output of purpose is distilled to strong, moderate or weak. 30. The fact that each of the three sites is rated moderate for purpose has the effect of reducing the differentiation between the sites to the matter of boundary strength only. The output of the Council’s assessment is, that as sites 040 and 826 have strong boundary features, these sites are preferable to site 1035 which has boundary features of mixed strength. 31. The overall grade reflects this as sites 040 and 826 are deemed to have a moderately strong case for inclusion in further site selection work whereas site 1035 has only a moderate case. Indeed, the Council’s assessment (paragraph 9.1.27) confirms this to be the differentiating factor as it states: ‘Site reference 1035 is found to have a moderate case so is less preferable than sites 040 and 826 in respect to Green Belt’. 32. Sites 040 and 826 are assessed against one another and site 040 is found to be preferable. Only then is site 1035 assessed and rejected on the basis that ‘sufficient sites have been identified to meet the Town’s local need housing requirement’ and that site 826 would present a ‘more preferable Green Belt allocation’ (resulting from the assessment outlined above). 33. However, there are key deficiencies in this form of assessment and its outputs. 34. In real terms, site 040 has been selected as preferable to site 1035 simply because it is bordered on two sides by roads, which are deemed to form ‘strong boundaries’, whereas site 1035 has ‘mixed boundaries’ despite the fact that the primary boundary is a substantial mature tree belt. 35. The ‘strong boundary’ of the roads has effectively outweighed the scoring which demonstrates that site 040 is superior to site 1035 in achieving the purposes of the Green Belt. Site 040 is highly prominent, entirely unscreened by existing features and highly visible across the landscape. Allocation and development of site 040 will project the urban form of Conisbrough out into the countryside, creating a ribbon form of development. 36. By comparison, site 1035 is largely enclosed by existing features and is better related to the existing urban form of the settlement. It is not a highly prominent or projecting site and it benefits from substantial screening of the tree belt. 37. In this regard, it is considered that the somewhat crude nature of the Green Belt assessment methodology and its influence on site comparative site assessment has resulted in the inappropriate identification of site 040 rather than site 1035 for housing allocation. 38. With regard to site 383, had this been assessed as a prospective Green Belt site, then it is considered that this would be found to very strongly serve the purpose to ‘prevent neighbouring towns from merging into one another’ (purpose 2) given its location within a linear section of Green Belt between two distinct and separate areas of Denaby Main and Conisbrough. 39. Harworth Group contends that the removal of site 1035 from the Green Belt rather than site 040 and/or the deallocation and designation of site 383 as Green Belt present a reasonable alternative option that is preferable to the Council’s proposal. Accordingly, the Publication Version Local Plan does not constitute an appropriate strategy for development at Conisbrough & Denaby.

Summary:

Disagrees with the assessment of sites in the area in comparison with site 1035 (Hill Top Denaby - Rejected Housing Site). Provides an alternative assessment.

Response:

The Green Belt Review has been carried out independently using a consistent methodology. This site has been assessed twice due to a slight boundary amendment and scored as moderate in both instances. In Conisbrough, there are allocated and unallocated Green Belt housing sites which score as being less important to the Green Belt. There are not deemed to be exceptional circumstances to release this site, as set out in the Green Belt Topic Paper. There are also reservations about whether suitable access can be achieved to the site.
We wish to participate at the oral part of the examination. The Doncaster Local Plan is not sound and hence there are a number of changes required to the plan including a number of strategic and development management policies as identified in the submitted representation letter. Persimmon Homes wishes to discuss the sites at Kirk Sandall and Hatfield Woodhouse which are achievable, suitable and deliverable which could support the housing growth required in Doncaster.

Tests of Soundness:

Comment:

This site represents a deliverable site because it is available, suitable and achievable for development. However, it has been excluded as an allocation due to the positioning of Hatfield Woodhouse in the settlement hierarchy. The settlement hierarchy identifies Hatfield Woodhouse as a defined village. In such locations, no allocations are identified and local needs are to be met within the Main Urban Area and Main Towns. Some development will be allowed with schemes of up to 20 dwellings and a cumulative level of growth of 30 dwellings allowed over the Plan Period. Any delivery in such locations will be additional to the allocated supply, and not form part of it. Hatfield Woodhouse is located less a kilometre from the centre of Hatfield which is judged to be a sustainable location for growth. Within the settlement profile evidence document the Council concludes that Hatfield-Woodhouse is closely related to the settlements of ‘Dunscroft, Dunsville, Hatfield and Stainforth’ and ‘Thorne and Moorends’ both of which have an excellent provision of services that can easily be accessed. These areas are identified as main towns and are expected to accommodate around 40% of new housing growth. As Hatfield Woodhouse is closely related to both settlements it would provide an excellent location for additional land to be allocated within a sustainable location to support the strategy of growth across the Borough. The site is located in Flood Zone 1 and is identified as being at very low risk of flooding from surface water sources. Furthermore, there are no known technical constraints which would prevent the development of the site.

Summary:

Site 119 represents a deliverable site because it is available, suitable and achievable for development. However, it has been excluded as an allocation due to the positioning of Hatfield Woodhouse in the settlement hierarchy as a defined village. Hatfield Woodhouse is located less a kilometre from the centre of Hatfield which is judged to be a sustainable location for growth. Within the settlement profile evidence document the Council concludes that Hatfield-Woodhouse is closely related to the settlements of ‘Dunscroft, Dunsville, Hatfield and Stainforth’ and ‘Thorne and Moorends’ both of which have an excellent provision of services that can easily be accessed. These areas are identified as main towns and are expected to accommodate around 40% of new housing growth. As Hatfield Woodhouse is closely related to both settlements it would provide an excellent location for additional land to be allocated within a sustainable location to support the strategy of growth across the Borough. The site is located in Flood Zone 1 and is identified as being at very low risk of flooding from surface water sources. Furthermore, there are no known technical constraints which would prevent the development of the site.

Response:

No allocations are being made in Defined Villages such as Hatfield - Woodhouse, and whilst it is close to Dunscroft, Dunsville, Hatfield and Stainforth, and Thorne and Moorends, this would likely require a car and, given that these Main Towns are sustainable in their own right, it is deemed more appropriate to direct new housing towards them instead of villages with poorer service provision.
17.1. Avant Homes have previously submitted and Advocacy Report and illustrative masterplan to support the allocation of the Land at Doncaster Road, Hatfield. This submission is reiterated here to support of Housing Site 170. Justification 17.2. Avant Homes supports the allocation of the Doncaster Road, Hatfield site. A Pre-Application has been prepared and submitted for this site which demonstrates the site’s deliverability. 17.3. Avant Homes considers the proposed housing allocation is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 17.4. The deliverability and benefits of the Doncaster Road, Hatfield site is as follows: Overview of Proposals 17.5. The site is located on the edge of an established residential area and benefits from easy access to the full range of services and facilities located within Hatfield. The site lies adjacent to a recent planning permission for residential development. The site is approximately 2ha gross and could accommodate in the region of 60 new homes. (SEE EMAIL FOR Aerial Photo) Deliverability 17.6. The site at Doncaster Road provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by Avant Homes which further demonstrates the site’s deliverability within the plan period. Availability 17.7. The land is being promoted by Avant Homes. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 17.8. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and development. This site allows housing to be delivered within an appropriate and sustainable location within Hatfield. Suitability 17.9. The site is located in a highly sustainable location and has residential development to the north, east and west and a residential planning permission exists on land to the south. The site is within easy walking distance to the centre of Hatfield with a range of facilities provided there, as well as greater facilities within Doncaster Town Centre, a bus ride away. There are a number of primary and a secondary school in the vicinity of the site. 17.10. The site is well served by buses providing opportunities for sustainable travel to work in Doncaster and beyond with access to Doncaster Railway Station. The site is also 2 miles from Hatfield Stainforth Railway Station with regular services to Doncaster, Sheffield, Hull and Scunthorpe as well as a daily service to Manchester Airport. 17.11. The development will provide additional quality development that will benefit Hatfield and the wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Achievable 17.12. A range of technical work is being undertaken and further survey work is ongoing. From the initial assessments there are no technical issues that would prevent development or are insurmountable and a pre-application request will be submitted shortly. The site is therefore considered to be achievable and therefore deliverable in accordance with national guidance. The technical assessments will be submitted in due course and are available upon request. Effective Use of Land 17.13. Although the site is greenfield, the proposed scheme will utilise and enhance existing infrastructure. Although the site is not previously developed it is currently under-utilised. The site is easily accessible and the proposed main access is off Doncaster Road. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing 17.14. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. Avant Homes considers that the site at Doncaster Road, Hatfield is deliverable in the short term and will reinforce the housing supply and address the Borough's housing needs in the early periods of the Local Plan. The site is fully capable of being delivered in the next 5 years. A Positive Response to the Key Objectives of the Framework 17.15. The Framework sets out that the Governments key housing policy goal of boosting significantly the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to jobs, key services and infrastructure. Sites should also make effective use of land and existing infrastructure. 17.16. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, suitable and achievable for development. Benefits of Doncaster Road, Hatfield 17.17. The development of the site would provide significant benefits. The site would provide housing that would meet the needs of the Hatfield and Doncaster Borough housing market. Therefore this site provides a unique opportunity in a sustainable location. 17.18. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 60 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes and Hatfield-Stainforth Railway Station. - The scheme will create direct and indirect job opportunities both during and after construction. 17.19. The proposal is an appropriate site to provide for the housing needs of Hatfield and Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site Doncaster Road, Hatfield would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable
4.1. Avant Homes is supportive of Policy 6 and its allocation of the Doncaster Road, Hatfield site (Site 170). Test of Soundness 4.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is sound. Which test of soundness are comments about? X Positively Prepared X Effective X Justified X Consistency with National Policy Justification 4.3. Avant Homes supports the allocation of their site at Doncaster Road, Hatfield and its identification as a proposed housing site. Technical studies are ongoing but initial assessments demonstrate the site’s deliverability and a pre-application request will be submitted shortly. 4.4. Avant Homes considers the proposed housing allocation is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 4.5. The deliverability and benefits of the Doncaster Road, Hatfield are set out in Section 18 and summarised below. 4.6. The proposal is an appropriate site to provide for the housing needs of Hatfield and Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site Doncaster Road, Hatfield would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 4.7. Avant Homes supports the allocation of Site 170 consider that the Policy 6 is Sound in this regard. Proposed Change No Change

### Tests of Soundness:

- **Positively prepared**
- **Effective**
- **Consistent with national**

### Comment:

16.1. Avant Homes is supportive of Policy 6 and its allocation of Site 170, Doncaster Road, Hatfield. However Avant Homes is concerned about the justification for some of the site specific requirements set out within Appendix 2 Development Requirements Site 170. Avant Homes therefore consider that the Development Requirements are unsound. Test of Soundness 16.2. Avant Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified - Consistent with National Policy Justification 16.3. Avant Homes supports the allocation of the Doncaster Road, Hatfield site and its identification as a proposed housing site. A Pre-Application has been prepared and submitted for this site which demonstrates the site’s deliverability. An overview of the proposals is provided in Section 17. 16.4. The proposal is an appropriate site to provide for the housing needs of Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Doncaster Road, Hatfield would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 16.5. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. 16.6. Avant Homes are concerned that the Development Requirements established in appendix 2 are not sufficiently effective or justified. The extent of the setback from Doncaster Road is unclear, nor justified through the appendix. It is unclear how this set back, and requirement for open space provision to the have been reflected in the indicative capacity of the site of 72, which appears to be based on generic assumption of 40dph and a net developable area of 90%. This is not consistent with the assumptions of the viability testing, and does not appear to be consistent with the nature of the development requirements. 16.7. Avant Homes are concerned that Site 170, Doncaster Road, Hatfield, is identified in appendix 5 of the Local Plan as being within a High Value area. Therefore, there is a requirement for 23% affordable housing. The adjacent area of Hatfield and Dunsbrook is identified as being within a Low Value area, where viability has been demonstrated to be an issue through the whole plan viability report. The viability report assumes an average sales value of #2350 sqm in High Value areas, in comparison to #1700/ sqm in a low value area. Avant Homes are concerned that the identification of the site within a high value area does not reflect the sales values expected to be achieved at site 170. 16.8. Avant Homes is concerned that with all the policy requirements the local plan details, and limited refinement of value areas that this could undermine the delivery of housing through increased need for viability assessments, and the associated impact on delivery through extended negotiations. The Council should review the baseline aspirations of individual policies and the policies in combination to ensure that they are not too high and ensure that the requirements are well tested. 16.9. Avant Homes consider that the requirements in their current form are not fully justified or effective. The plan in its current form could fail to deliver sustainable development in accordance with the policies in the framework. 16.10. In these circumstances, Avant Homes do not consider the Doncaster Local Plan, in its current form, to be sound. 16.11. However, Avant Homes consider that with increased clarity, and justification for the development requirements and a review viability evidence and subsequent review of the sites capacity, the Local Plan can be found in a more effective and efficient manner. The Avant Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 16.12. To overcome the objection and address soundness matters, the Council should: - Review the development requirements, site capacity, and whole plan viability to provide greater clarity and justification for the site requirements.

### Summary:

Support allocation of Site 170 but concerned about developer requirements. Subject to pre-applications which prove deliverability. Can deliver full range of housing including affordable units. Available, suitable and achievable. Concerned with Development Requirements established in appendix 2, that they are not sufficiently effective or justified. The extent of the setback from Doncaster Road is unclear, nor justified through the appendix. It is unclear how this set back, and requirement for open space provision to the have been reflected in the indicative capacity of the site of 72, which appears to be based on generic assumption of 40dph and a net developable area of 90%. This is not consistent with the assumptions of the viability testing, and does not appear to be consistent with the nature of the development requirements. Also concerned that the site is in a high value area and subject to 23% affordable housing requirement. Adjacent settlement in low value area. This does not reflect sales value expectations. This could undermine delivery with needs to negotiate or provide more viability assessments. Baseline requirements should be reviewed to ensure they are well tested and not too high. Requirements not justified or effective at present and the plan could fail to deliver affordable housing. The Council should review the development requirements, site capacity, and whole plan viability to provide greater clarity and justification for the site requirements.
Response:
The developer requirements are intended to help identify any constraints or design issues and requirements up front to assist in preparation of applications and are considered as being justified. Density and viability have been considered through the HELAA and Whole Plan Viability Testing.
Policy 6 is not sound as it is not positively prepared and is inconsistent with the NPPF for the reasons set out below. Plan Period The plan period runs from 2015 to 2035 however the plan period for land supply runs from 2018 and, in the case of housing only runs until 2033 (Table 5). This is an unnecessary complication and must be revised to ensure the plan period and supply period run from the same dates. Housing Trajectory The Housing Trajectory set out in Figure 3 confirms that the requirement of 920dpa will not be reached in the final 9 years of the plan period and 550dpa (Standard Method Requirement) will not be achieved for 7 years of the plan period. This will lead to significant and fundamental harmful issues with this approach as outlined below: - Fails to meet annual housing requirement - the OAN should be a minimum figure to be achieved on an annual basis - this is acknowledged within Appendix 12 of the draft Local Plan which confirms that net dwelling completions will be monitored each year against a target of 920dpa. The Council should therefore be making provision for delivery of a minimum of 920 each year throughout the plan period. The Council’s proposal to exceed 920dpa in the earlier years of the plan does not justify the significant decline in delivery proposed in later years. - Practical/Economic Implications - the differentiation between the levels of growth sought at the start of the plan period and those in the later years will have significant adverse economic impacts for Doncaster. The dramatic shift from over-provision to under-provision will lead to a significant drop in job availability within the construction industry and a significant decline in economic input from the house building industry in Doncaster in the later years of the plan. The housing delivery strategy must therefore be revised to ensure it sustains growth across the plan period and does not lead to a decline in Doncaster’s economy in the later years of the plan. Based on the position as outlined above, the strategy for delivery of housing in Doncaster is not positively prepared and fails to support growth. It is clear therefore that the delivery strategy must be revised and the Council must allocate additional sites for housing in addition to those currently proposed to ensure that a minimum annual delivery figure of 920 dwellings can be achieved every year. Delivery Rates at DN7 Unity (site ref. 418) We have significant concerns regarding delivery of housing across the plan period particularly given that delivery within the Dunscroft, Dunsville, Hatfield and Stainforth Main Town settlement across the plan period relies heavily on the DN7 Unity Site (site ref. 418). We have previously expressed concerns regarding the delivery of the DN7 initiative to Doncaster Council noting that this is a highly complex project that faces many challenges including a working colliery and spoil heap, existing landfill, a new railway station and live railway, Local Wildlife Sites (and other biodiversity value), flood risk, a network of drainage ditches, patchwork of arable fields and hedgerows and multiple ownerships. Despite these issues, the site remains identified as having a 5-year supply capacity of 175 units and up to 1,015 new homes across the plan period on the basis that "works on the new Junction 5 M18 link road are now undereway and Reserved Matters for housing [is] due imminently" (note 2 - Doncaster 5-Year Deliverable Housing Land Supply Statement (April 2018 - March 2023)). Considerable doubt remains however regarding when this project will deliver housing and how much for the following reasons: - The development has already been delayed significantly (set out originally anticipated delivery timeline). - Whilst the original outline planning permission (ref. 15/01300/OUTA) was minded to grant in 2016, a decision notice was not issued until April 2017 given issues in agreement of the S106 due to the multitude of land owners involved. - Since the granting of the original outline planning permission, a second outline planning permission has been approved on the site (ref. 18/00101/OUTM); this did not seek to increase the number of residential units or commercial floorspace approved but includes additional land to the outline planning permission. It is unclear why this additional land is needed to achieve the same amount of development. - Whilst the Council have stated that submission of Reserved Matters for housing at the Unity site is due imminently, there are no details currently available on Public Access and no evidence to suggest this is the case. Further to this, there is no information available which suggests any pre-commencement conditions relevant to the delivery of the residential elements have yet come forward. - It is acknowledged in a number of other sources that the size, infrastructure requirements and complexity of this site, delivery is likely to be a lengthy process. Such sources include: o Paragraph 52 of the Inspector’s report of Appeal Decision APP/F4410/W/16/3158500 (Land off Westminster Drive, Dunsville, Doncaster - see Attachment 1) states that: "this is a strategic extension which relies on the delivery of key infrastructure? It is a complex site in multiple ownership and will take some time for development to commence on site." o Paragraph 2.11 of the Planning Statement attached to planning application 18/00101/OUTM for the Unity development confirms: "It is accepted that Unity will come forward over a number of years. A development of this scale will take up to 20 years to complete and there will inevitably be changes to the masterplan during this period. The Unity planning consent allows a 25 year timeframe in which to submit reserved matters applications and this longevity is a fundamental requirement." (our emphasis) o Condition 1 of Decision Notice 18/00101/OUTM (second outline application at Unity) which allows applications for approval of Reserved Matters on the site to be submitted as late as April 2042. Cognisant of the above, there is clearly acknowledgement from the Council, applicant and PINS that delivery of this site is complex and will require extensive time to come forward. This is of particular concern given that, notwithstanding our position on housing requirement (set out in our response to Policy 3), whilst 3,945 units are identified as having planning permission within the Dunscroft, Dunsville, Hatfield and Stainforth Main Town settlement, 3,100 of these are within the Unity development site. Even when considering the discounted supply figure of 1,860 units set out at paragraph 16.83 (making provision for Unity units delivered after the plan period), 1,015 of these units (around 55% of the total supply in this settlement) are allocated within the Unity development site; the remainder of the sites allocated are to be delivered in the short term. With this in mind and the likelihood of further delay in its delivery during the Plan period, the Council should allocate additional housing sites within the Dunscroft, Dunsville, Hatfield and Stainforth Main Town settlement to ensure that sufficient levels of delivery are achieved in the medium term should the delivery of the Unity site be delayed. Allocations The approach contained in Policy 6 is unsound due
to a lack of justification for a number of the draft allocations. Sites with significant constraints including being located within Flood Zones 2 and 3 and without agreed mitigation or planning permission have been allocated before other sustainable sites which are not subject to such significant risks - this is contrary to the approach required by the NPPF which sets out at paragraph 155 that "Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future)". (Our emphasis). The above is of particular concern given the reasons for withdrawal of the Sites and Policies Development Plan (S&PDPD) document in Doncaster (which was intended to be read in conjunction with the Core Strategy). Following the submission of the S&PDPD to the Secretary of State an Inspector conducted an Examination in Public (EIP) to assess the soundness of the DPD. It was agreed that the EIP would be undertaken in two stages with the first stage examining the Council’s methodology for identifying potential allocation and the second stage examining the proposed allocation sites. After the Stage 1 Hearing the Inspector issued a letter on the 3rd June 2014 to the Council on the soundness and legal compliance of the DPD (see Attachment 2). The Inspector’s letter recommended the withdrawal of the Plan primarily on the grounds that the S&PDPD was not sound or lawful. It was not based on an objective assessment of housing need and the site selection, site assessment and Sustainability Appraisal processes were unsound. The Inspector found that the DPD was "extremely difficult to understand" (paragraph 7) and that the process that the Council had undertaken when assessing sites for allocation was "muddled, difficult to decipher and may not have been applied in a consistent manner" (paragraph 28). The Inspector criticised the Council’s approach to considering the deliverability of sites as well as crucial factors including flood risk, Green Belt and the countryside. As a result, it did not meet the basic legal requirements of a development plan document. Cognisant of the above therefore, it is concerning that issues relating to the methodology for site assessment and allocation have not been addressed in Doncaster’s new emerging Local Plan. A review of this methodology is required and should include a revision of the draft allocations proposed to ensure allocated sites are consistent with national planning policy. Our client’s site north of Woodhouse Lane, Hatfield is entirely within Flood Zone 1. Whilst it is located within the 'Countryside' for the purposes of Policy 2, it is adjacent to the proposed Hatfield settlement boundary, abuts emerging residential allocation 970 and is well related to the existing built form. Hatfield is identified within the Dunscroft, Dunsville, Hatfield and Stainforth Main Town (a Tier 2 settlement with only the Main Urban Area of Doncaster above it). The Settlement profile confirms that this settlement ranks as one of the best performing settlements in the borough against Settlement Audit criteria - being the best provided for area in the borough outside of the Main Urban Area for primary schools. Hatfield is identified as having its own centre (with relatively low vacancy rates), a library and Hatfield Outdoor Activity Centre. The settlement has its own train station situated between Hatfield and Stainforth and is well served by buses. Hatfield therefore is a highly sustainable location for new residential development. Development of this site would not cause significant adverse harm to the settlements character, setting or appearance. It is also consistent with the requirements of emerging Policy 2 (part 5) in that: - It is consistent with the role and service function of the settlement of Dunscroft, Dunsville, Hatfield and Stainforth; - The site is well related to existing built form of the settlement and would represent a logical extension to the built-up area and is of a scale and nature that is in keeping with the core shape, form and size of the settlement; - It will not cause significant adverse harm to the settlement’s character, setting or appearance or the intrinsic character of the surrounding countryside; and - It would accord with other policies in the Local Plan. Further to the above, the site is identified within the HELAA 2018 update as suitable but with local policy constraints (site ref. 1038) however remains unallocated within the draft local plan. This is inconsistent with the approach set within the NPPF given that sites which are located in Flood Zones 2/3 and without agreed mitigation or planning permission are proposed to be allocated ahead of our client’s site. The draft allocations proposed within the Doncaster Local Plan need to be reviewed to ensure sites allocated are consistent with the approach set out within the NPPF. Policy 6 Conclusion There is a pressing need for the Council to review its housing delivery strategy and ensure that sufficient sites are allocated to achieve the required minimum of 9200pa across the plan period. It is also imperative that the sites which are proposed for allocation are in line with the approach set out within the NPPF and do not propose allocation of sites in Flood Zones 2 and 3 without agreed mitigation or planning permission ahead of other less constrained and suitable sites. Based on the above, it is noted that a review of the current draft allocations should be undertaken and additional allocations including our client’s site should be added. Our clients site north of Woodhouse Lane is a suitable and sustainable location for residential development that would significantly assist in ensuring the Council can achieve the requisite delivery rates across the plan period on a site in Flood Zone 1, on the edge of a highly sustainable settlement. Site 1038 should therefore be allocated for the development of approximately 620no. units for delivery from 2021.

Summary: Objects to Policy 6 as not sound and not positively prepared and inconsistent with NPPF. The plan period runs from 2015 to 2035 but for land supply runs from 2018 and for housing only runs to 2033 which is unnecessary complication and should be revised to run to the same dates. The Housing Trajectory confirms the 9200pa requirement will not be reached in the final 9 years of the plan period and the standard method will not be achieved for the last 7 years leading to significant and fundamental harmful issues: and, Fails to meet annual housing requirement; adverse impacts on economic growth ambitions with a dramatic shift from over provision to under provision resulting in a drop in job availability in the construction industry. It is clear therefore that the delivery strategy must be revised and the Council must allocate additional sites for housing in addition to those currently proposed to ensure that a minimum annual delivery figure of 920 dwellings can be achieved every year. Unity (Site Ref 418) is a complex scheme and has deliverability issues (multiple land ownerships, no Reserved Matters yet submitted, infrastructure requirements, the scheme’s permission includes conditions and assessment that identifies that it will take up to 20 years+ to complete, and a 25 year timeframe to submit Reserved Matters and as late as 2042) and there is an over reliance on the scheme to meet the settlements requirement. This is of particular concern given that whilst 3,945 units are identified as having planning permission within the settlement, 3,100 of these are within the Unity development site. Even when considering the discounted supply figure of 1,860 units set out at paragraph 16.83 (making provision for Unity units delivered after the plan period), 1,015 of these units (around 55% of the total supply in this settlement) are allocated within the Unity development site; the remainder of the sites allocated are to be delivered in the short term. With this in mind and the likelihood of further delay in its delivery during the Plan period, the Council should allocate additional housing sites within the settlement to ensure that sufficient levels of delivery are achieved in the medium term should the delivery of the Unity site be delayed. Allocations - The approach contained in Policy 6 is unsound due to a lack of justification for a number of the draft allocations. Sites with significant constraints including being located within Flood Zones 2 and 3 and without agreed mitigation or planning permission have been allocated before other sustainable sites which are not subject to such significant risks - this is contrary to the approach required by the NPPF and is of particular concern given the reasons for withdrawal of the Sites and Policies Development Plan. It is concerning that issues relating to the methodology for site assessment and allocation have not been addressed in Doncaster’s new emerging Local Plan. A review of this methodology is required and should include a revision of the draft allocations proposed to ensure allocated sites are consistent with national planning policy. Our client’s site north of Woodhouse Lane, Hatfield is entirely within Flood Zone 1. Whilst it is located within the ‘Countryside’ for the purposes of Policy 2, it is adjacent to the proposed Hatfield settlement boundary, abuts emerging residential allocation 970 and is well related to the existing built form. Hatfield is identified within the Dunscroft, Dunsville, Hatfield and Stainforth Main Town (a Tier 2 settlement with only the Main Urban Area of Doncaster above it).
2018 to 2033 refers to the 15 year allocated supply and the figure breakdown is set out in Table 5. Trajectory matters are discussed in the Housing Topic Paper. The Council are confident of the delivery of the Unity initiative and infrastructure is underway which will help unlock the sites potential. Even without the Unity site, or allowing for slippage, the settlement would comfortably get within it's housing range of 575 -1,085 , as it has a total of 1,720 units from permissions, and a further 108 from allocations (1,828), and a total of 875 are projected to be delivered at Unity. No new allocations are being made in flood zones, however, where permissions exist / are being developed (which will have demonstrated they pass the sequential test), these are reflected in the supply. No further sites are required in this location.

Comment Ref: C/Policy 6: Site 170/05303/1/002
Attend Examination: Written Representation

Reason:
Area: Chapter 16: Spatial Proposals
Policy: Main Town - Hatfield-Stainforth

Tests of Soundness:

Comment:
Policy 6 'Housing allocations' sets out that Housing Allocations will help to deliver the Spatial Strategy, meet the needs for housing and support sustainable communities. The allocation of this site for residential development under policy 6 of the Publication Local Plan is supported, and the delivery of 72 dwellings on this site will help contribute to the delivery of the Borough’s Spatial Strategy. The proposed allocation of this site for residential development is supported.

Summary:
Policy 6 'Housing allocations Supportive of Policy and contribution site 170 can make.

Response:
Support welcomed
This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Avant Homes in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. This representation relates to ‘Land between Doncaster Road and Lings Lane, Hatfield’ (site ref: 170). This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site.

Site and Context
The site is located to the east of Doncaster Road and to the rear of residential development along Lings Lane, Hatfield. The site is bounded by hedgerows along its perimeter and is formed of agricultural farmland. The site is flat and located within Flood Zone 1. (SEE EMAIL FOR Fig.1 - Aerial view of the site)

Proposed allocation
The site is proposed for the allocation of housing under site reference 170 ‘Land at Doncaster Road, Hatfield’ and is stated to have an indicative capacity for 72 dwellings. (SEE EMAIL FOR Fig.2 - Doncaster Publication Local Plan Policies Map Extract)

Summary:
Re site ref 170 land between Doncaster Road and Lings Lane Hatfield. o Allocated site (residential). o Supports the allocation. o Has been subject to Pre application discussions.

Response:
Noted. Support welcome.

Area: Chapter 16: Spatial Proposals
Policy: Main Town - Hatfield-Stainforth
Tests of Soundness:

Comment:
The site is proposed to be allocated for residential development under site reference 170 and has been subject to pre-application discussions between Avant Homes and the Local Planning Authority. The delivery of this site will help to make a significant contribution to the delivery of homes in Hatfield and Stainforth over the plan period. There are clear intentions to deliver this site for housing by Avant Homes and its delivery will help to meet the overarching spatial strategy for the Borough. The allocation of this site for residential development is supported.

Summary:
Re Site 170 (allocated site) Supportive of the allocation of the site.

Response:
Support welcome
This site lies opposite the Mexborough Conservation Area and on the approach to the Grade II Listed Mexborough Station and Station House. We welcome the Development Requirements relating to Conservation and Heritage. These measures will help to ensure that potential developers are aware of the proximity of these assets and the opportunity the redevelopment of this area provides to enhance their significance.

Response:
Support welcomed
Comment:
The proposed development site is located to the immediate north of the Sheffield & South Yorkshire Navigation, which is managed by the Canal & River Trust. The site is supported by an existing retaining wall from the adjacent waterway. New development on site could result in additional loading upon the retaining structures here, which could increase the risk of collapse towards the canal. Whilst there are opportunities for any risk to be appropriately mitigated, we believe that there should be additional text within the ‘Design’ section of the associated text to make it apparent to decision makers (and developers) that any final layout is designed to ensure that any risk of land instability towards the canal is addressed. Without this being taken into account, there are risks that the impact of development on land stability may not be fully considered and addressed. This would make the local plan less effective in accordance with the aims of paragraphs 170 (part e) and 178 of the National Planning Policy Framework (NPPF), which require planning policies to take into account ground conditions and any risks from land instability. In addition to the above, there are potential heritage assets on site (including visible elements) which, although not listed, do have historic value and enhance the character and appearance of the existing waterway corridor. We believe that redevelopment of the site should consider the heritage value of these assets (any remaining buildings), and opportunities to set out a positive strategy for the conservation of heritage assets in accordance with the aims of paragraph 185 of the NPPF. The Trust do welcome consideration in the proposed text towards aims to enhance biodiversity, and for development to respond to the canal frontage; which would help ensure that the development accords with the aims of the NPPF and emerging policy. PROPOSED CHANGE Measures to address risks of Land Instability: We advise that the ‘Design’ criteria for the site should include a statement informing decision makers of the risk of land instability, and the need for the final design to incorporate measures to limit any risk of land instability on site. Suggested text is below. “The site is supported above the canal by existing retaining structure. The final design and layout shall incorporate measures to prevent any increase in risk to land instability caused by loading onto any existing or new retaining structures on site.” This change would make it apparent to decision makers about the risk of land instability, and measures to control the risk; which would help ensure that the aims of paragraphs 170 and 183 are fully met. Measures to address Heritage Matters: We advise that additional text is included in the heritage section to advise that the applicant should describe and assess the significance of the existing building on site, including any contribution made by its setting and the potential for the retention of the building on site. This would help ensure that any future application and assessment accord with the aims of paragraphs 186 and 190 of the NPPF, and allow decision makers to fully assess the impact of the proposal on the heritage asset.

Summary:
The development requirements for Site 155 should be amended as follows: Design: “The site is supported above the canal by existing retaining structure. The final design and layout shall incorporate measures to prevent any increase in risk to land instability caused by loading onto any existing or new retaining structures on site.” Heritage: Include additional text to advise that the applicant should describe and assess the significance of the existing building on site, including any contribution made by its setting and the potential for the retention of the building on site.

Response:
Comments noted. The design requirements will be updated accordingly with the suggestion. On heritage comments, there is only a small remnant of a building on site that was once part of a building that would have been of local interest - however what now remains is not. These will therefore not be amended.
Comment:
We as a farming family are very happy land 139 to the north of Wath rd Mexborough has been removed from the local plan. Agricultural land now is becoming very hard to find especially when it is grade 3a prime growing land and its on our doorstep, to loose this land to development would be a big loss not only for us but other farmers alike. Land like this in the future could come up for sale and we would look to purchase it for future growth and expansion and to build our profits for sustainability. We are relieved this land has been removed and would like it to remain that way in the future, we can now concentrate on our business without worrying about a major development effecting our business which has took years to develop. As small farmers the availability of this land is crucial in our future growth as agricultural land is becoming less and less and their is no more so it needs saving now before it’s too late. Could you please keep me informed of any development plans around me to do with agricultural land.

Summary:
Re site 139 - land North of Wath Road Mexborough. o Rejected housing site (previously proposed for allocation in 2018 consultation) o Support removal of site from proposed allocations. o Should be kept as agricultural land. o Agricultural land is increasingly in short supply.

Response:
Support for this site being rejected is noted.
C/Conclusion: Site 139/05256/1/008

Attend Hearing 985 which, although provides for the full local need target, "goes little towards providing the economic-growth led housing for one of the largest Main Towns outside of Doncaster.' The west urban extension site allows for an urban extension in a highly sustainable area which is of low flood risk. We strongly recommend Site 139, land north of Wath Road, Mexborough, be released from the Green Belt and be included as a housing allocation for 400 units. This in turn will assist in Doncaster delivering its required housing target for Mexborough. Benefits of Site 139 as a housing allocation: - Allows Mexborough to meet their housing target as identified in Core Strategy without exporting part of the requirement to Doncaster Main Urban Area. - Residential development in a sustainable location - Provision of circa 400 homes with a portion of affordable housing - Maintain the distance between settlements through design - Retention of the core shape and form of the settlement - An urban extension that would not significantly harm the character and appearance of the surrounding countryside or the rural setting of the settlement - Exceptional circumstances have been demonstrated - Urban extension consistent with national policy - Deliverable within the Plan Period - Economic Growth Led Housing Available. The site is within sole family ownership. Terms have been agreed between the owners and Countryside Properties to continue promoting the land for residential uses. Suitable. The emerging Local Plan requires additional housing in Mexborough. Mexborough currently has a shortfall in quantum allocated and is a settlement that is recognized to be constrained. Site 139 as a residential allocation offers a sustainable urban extension location within Mexborough that would bring in line the allocation numbers with the Core Strategy. Deliverable. The site is deliverable in the short, medium and long term. Countryside Properties have agreed an option agreement on the land should the land be allocated for residential development; the site would come forward within the plan period as demonstrated below. Plan Period: Years 1-5 Houses Delivered: 100 Plan Period: Years 6-10 Houses Delivered: 150 Plan Period: Years 11-15 Houses Delivered: 150 Plan Period: Total Houses Delivered: 400. The site is considered to provide a solution to the acuteness and intensity of housing that is required in Doncaster, Mexborough specifically in this instance. There are constraints on the supply and availability of other land whereas Site 139 has clearly been shown to be available, deliverable and suitable. The site should be released from the Green Belt, as it has been demonstrated that through design, there is no further coalescence of settlements. The delivery of 400 houses, which will include a proportion of affordable housing will assist in driving the economic led housing within Mexborough in a highly sustainable location. For the Local plan to meet its aims and objectives, a sufficient amount of housing needs to be allocated to Mexborough. This should be achieved by the removal of Site 139 from the Green Belt. Moreover, the site should be a Housing Allocation, which will support the Council in meeting its aims and objectives. In respect of the alternatives; "There is a complete lack of landowner representations for any land to the north of Mexborough, so deliverability of a northern extension cannot be justified which only leaves the western urban extension option. Given the site performs well through sustainability appraisal, and mitigation identified for any negative effects, on balance it is considered the benefits of allocating the site as a sustainable urban extension to one of the borough's largest Main Towns outweighs the Green Belt Review Phase 3 findings and exceptional circumstances can be demonstrated."

Summary: Not enough housing allocated to Mexborough. Allocate site 139 - remove from Greenbelt.

Response: Mexborough is the only Main Town which cannot get within its housing target range. However, as set out in the Green Belt Topic Paper, the settlement is constrained by the HS2 safeguarding route, physical infrastructure and the borough boundary, as well as Green Belt, which in this location separates Doncaster from neighbouring Barnsley and Rotherham. Site 139 was assessed in the Green Belt Topic Paper and found to be a strongly performing piece of Green Belt with a weak case for continuation in the site selection process. As set out in the Green Belt Topic Paper, it is felt that exceptional circumstances do not exist to justify the release of this site. The site selection methodology shows that all available urban / brownfield land has been allocated in this settlement.
The housing allocations are shown in Table H1(F): Allocations with planning permission (as at 1st April 2018), Table H2(F): Allocations without planning permission (as at 1st April 2018), and Table H3(C): Reserve Development Sites. The proposed allocated total results in a minimum shortfall of housing between 5 and of 515 dwellings. This is based on all the sites listed within the tables delivering their full quantum of housing. It is clearly evident that the allocations in the Plan for Mexborough are not positively prepared, justified, effective or consistent with national policy and thus, not sound. In accordance with national Policy when identifying land for homes, policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. The Local plan as it stands does not achieve this in Mexborough. The inclusion of Site 139 would assist in making the plan sound in relation to Mexborough as demonstrated in the table below, the inclusion of Site 139 would result in the allocated housing numbers meeting both the Core Strategy Requirement, and the Local plan requirement. Settlement: Mexborough Local Plan target: 475 - 985 Allocations with planning permission (as at 1st April 2018): 268 Allocations without planning permission (as at 1st April 2018): 202 + 400  602 Allocated Total: 870 Shortfall/Surplus: 870 (+395 or -115)

Identifying land for homes The NPPF states at paragraph 67 that Strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of a strategic housing land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. Planning policies should identify a supply of: a) specific, deliverable sites for years 1-5 of the plan period; and b) specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15 of the plan. The consultation undertook by Doncaster Council in October 2018 when proposing housing sites, in reference to Site 139 which was at the time a proposed housing site, stated: “Although land to the south-west is not at risk of flooding, this is the edge of the DMBC borough boundary and beyond it lays a large area of employment uses at Swinton (Rotherham MBC). There is a complete lack of landowner representations for any land to the north of Mexborough, so deliverability of a northern extension cannot be justified which only leaves the western urban extension option. Given the site performs well through sustainability appraisal, and mitigation identified for any negative effects, on balance it is considered the benefits of allocating the site as a sustainable urban extension to one of the borough’s largest Main Towns outweighs the Green Belt Review Phase 3 findings and exceptional circumstances can be demonstrated.” As the Council have acknowledged previously, this site offers a very suitable, deliverable and available urban extension for Mexborough. The inclusion of the site as a Housing Allocation would significantly assist Doncaster in housing delivery throughout the plan period. Safeguarded Sites in Mexborough There are a number of urban sites (mainly in the Doncaster Main Urban Area and Mexborough) where deliverability issues (mainly associated with addressing flood risk mitigation and/or directly impacted by the safeguarding route of HS2 and unstable land) have prevented them coming forward and where their development in the plan period cannot at this time be demonstrated. Site 154 is an example of where deliverability, suitability and availability are all seriously questioned. Whereas, Site 139 has demonstrated that it can come forward and deliver housing in an area that is otherwise constrained. There are three reserve development sites within Mexborough that have an indicative capacity of 242 dwellings. The inclusion of the proposed reserved development sites over the inclusion of Site 139 is not considered to be sound. Site 139 significantly outscores site 154 in the Sustainability Appraisal undertaken by the Council. When applying a scoring system of -2 to 2 relative to - ++, Site 154 was the most unsustainable site within Mexborough. The sustainability of the site is positively highlighted within the Councils Sustainability Appraisal. Site 139 scores higher than 154 in the following areas: - Distance to bus stops - Distance to cycle network - Access to secondary school - Access to GP surgery - Not being located on unstable land - Fibre broadband coverage - Biodiversity The comparison of sustainability of the two sites is appended to this representation. (SEE EMAIL FOR APPENDICES) Paragraph 72 of the NPPF states 'The supply of large numbers of new homes can often be best achieved through planning for larger scale development, such as new settlements or significant extensions to existing villages and towns, provided they are well located and designed, and supported by the necessary infrastructure and facilities.' The NPPF then goes on to list criterion that such developments should meet: a) consider the opportunities presented by existing or planned investment in the area’s economic potential and the scope for net environmental gains; b) ensure that their size and location will support a sustainable community, with sufficient access to services and employment opportunities within the development itself (without expecting an unrealistic level of self-containment), or in larger towns to which there is good access; c) set clear expectations for the quality of the development and how this is maintained (such as by following Garden City principles), and ensure that a variety of homes to meet the needs of different groups in the community will be provided; d) make a realistic assessment of likely rates of delivery, given the lead-in times for large scale sites, and identify opportunities for supporting rapid implementation (such as through joint ventures or locally-led development corporations); and e) consider whether it is appropriate to establish Green Belt around or adjoining new developments of significant size. It is considered that the allocation for residential development on Site 139 would align with the NPPF and achieve a well located and designed urban extension to Mexborough that is deliverable, sustainable and suitable. As current, the Publication Local Plan housing allocations within Mexborough, does not meet any of the following criteria is therefore not sound: Positively prepared - providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as...
Summary:

Policy 6 Housing Allocation. 1. There is a shortfall in Mexborough of between 5 and 515 dwellings. 2. Settlement allocation of 470 against a target of 475-985 does not provide for economic growth of one of the biggest Main Towns outside the Main Urban Area. 3. Including site 139 would meet both Core Strategy requirement and Local Plan requirement. Safeguarded sites in Mexborough o Site 154 - deliverability, suitability and availability is questionable. 3 reserve sites in Mexborough o Including these over site 139 is not considered to be sound. Sustainability Appraisal 1. In the SA (when applying numerical values) site 139 scores better than site 154. 2. Site 139 would help plan conform to NPPF para.72. Local Plan is not sound. 1. Is not positively prepared, suitable, effective or consistent with national policy. 2. Text is provided to support this argument but is difficult to understand.

Response:

All evidence should be read in conjunction with each other. The Core Strategy is irrelevant to this plan. There is a shortfall against the Local Plan target in Mexborough, however this is offset by over delivery in other Main Towns / the Main Urban Area, and due to the ranges ultimately evens out. The reason for the shortfall is a lack of viable sites, due to reasons such as the HS2 safeguarding route, physical infrastructure barriers and the Green Belt. In this case, the Green Belt Review assessed site 139 as being a strongly performing piece of Green Belt, and therefore on balance it was decided exceptional circumstances could not be justified in this case to release the site. More information is available in the Green Belt Review / Topic Paper and Site Selection Methodology. Reserve sites have not been included at the expense of this site, and only the non-Green Belt part of site 154 is listed as a Reserve Site (currently unavailable due to HS2 safeguarding).
Countryside Properties have agreed an option on the site. It would come with the provision of circa 400 homes with a portion of affordable housing. The site is deliverable within the Plan period. Countryside Properties have agreed an option agreement on the land for residential uses. Terms have been agreed between the owners and Countryside Properties to continue promoting the land for residential uses. Suitable The emerging Local Plan requires additional housing in Mexborough. Mexborough currently has a shortfall in housing needs to be allocated to the site. It has been shown to be deliverable in the short, medium and long term. Countryside Properties have agreed an option agreement on the land for residential development; the site would come forward within the plan period as demonstrated below. Plan Period: Years 1-5 Houses Delivered: 100 Plan Period: Years 6-10 Houses Delivered: 150 Plan Period: Years 11-15 Houses Delivered: 150 Plan Period: Total Houses Delivered: 400 The site is considered to provide a solution to the acuteness and intensity of housing that is required in Doncaster, Mexborough specifically in this instance. There are constraints on the supply and availability of other land whereas Site 139 has clearly been shown to be available, deliverable and suitable. The site should be released from the Green Belt, as it has been demonstrated that through design, there is no further coalescence of settlements. The delivery of 400 houses, which will include a proportion of affordable housing will assist in driving the economic housing within Mexborough in a highly sustainable location. For the Local plan to meet its aims and objectives, a sufficient amount of housing needs to be allocated to Mexborough. This should be achieved by the removal of Site 139 from the Green Belt. Moreover, the site should be a Housing Allocation, which will support the Council in meeting its aims and objectives. In respect of alternatives; “There is a complete lack of landowner representations for any land to the north of Mexborough, so deliverability of a northern extension cannot be justified which only leaves the western urban extension option. Given the site performs well through sustainability appraisal, and mitigation identified for any negative effects, on balance it is considered the benefits of allocating the site as a sustainable urban extension to one of the borough’s largest Main Towns outweighs the Green Belt Review Phase 3 findings and exceptional circumstances can be demonstrated.” Doncaster Local Plan, Draft Policies & Proposed Sites (2018)
Land North of Wath Road, Mexborough (Site 139) proposes a Western Urban Extension to Mexborough and is considered to provide a solution to the acuteness and intensity of housing that is required in Doncaster, Mexborough specifically in this instance. There are constraints on the supply and availability of other land in the settlement, whereas Site 139 has clearly been shown to be available, deliverable and suitable to deliver 400 homes. The site would be brought forward in two phases. Phase 1 would be the northern section of the site (250 dwellings), and Phase 2, the southern portion of the site (150 dwellings). The site should be released from the Green Belt, as it has been demonstrated that through design, there is no further coalescence of settlements and exceptional circumstances demonstrated. The delivery of 400 houses, which will include a proportion of affordable housing will assist in driving the economic led housing within Mexborough in a highly sustainable location. For the Local plan to meet its aims and objectives, a sufficient amount of housing needs to be allocated to Mexborough. This should be achieved by the removal of Site 139 from the Green belt. Moreover, the site should be a Housing Allocation, which will support the Council in meeting its aims and objectives. In respect of the alternatives; “There is a complete lack of landowner representations for any land to the north of Mexborough, so deliverability of a northern extension cannot be justified which only leaves the western urban extension option. Given the site performs well through sustainability appraisal, and mitigation identified for any negative effects, on balance it is considered the benefits of allocating the site as a sustainable urban extension to one of the borough’s largest Main Towns outweighs the Green Belt Review Phase 3 findings and exceptional circumstances can be demonstrated.” Source: Doncaster Draft Policies & Proposed Sites (2018)
An assessment of Site 139 against the five Green belt Criteria is as below: a) to check the unrestricted sprawl of large built-up areas; The site does not result in unrestricted sprawl of a large built up area. As noted within the Green Belt Review undertaken by Doncaster Council, the site is not considered to have a role in checking the unrestricted sprawl of a Large Built Up Area. The site meets this criterion. b) to prevent neighbouring towns merging into one another; The approach that would be taken, as demonstrated on the attached plan, is the built form of the proposed site and the existing built form will be no closer than currently exists. The site will not negatively impact on the visual or physical gap that currently exists. Nor would it result in the reduction of perceived separation between settlements. An existing physical and visual gap already exists due to the change in topography and the levels that exist between the two areas. The nearby settlement of Wath upon Dearne is situated 1.6km away. However, the built form of the commercial and industrial area extends towards Mexborough. The built form of the industrial area is currently just 240 metres from the existing built form. This would be maintained, and the Green Belt boundary could be well defined through the design of the development and the advanced planting that is currently being undertaken. c) to assist in safeguarding the countryside from encroachment; The area is characterised by residential to the east, Adwick Business Park to the south and south west and countryside to the north and west. The site would not negatively impact on the wetland structure. Development in this location would not have a negative impact on the physical landform as it would look to retain the settlement shape and would be designed in a manner to not have an adverse effect upon the landscape therefore the site meets this criterion. d) to preserve the setting and special character of historic towns; and The proposed site does not influence the preservation of the setting and special character of historic towns. Therefore, the site meets this criterion and there is no conflict. e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The site has a moderate role in encouraging the recycling of derelict and other urban land. The opportunity to recycle derelict land in Mexborough has been included within the Plan as safeguarded land. The safeguarded land is safeguarded in relation to HS2. The housing requirement of Mexborough requires more land than that is available through only derelict sites. Moreover, the constraints of Mexborough further restrict this. The site should be released from the Green Belt as it is required to meet the housing requirements for Mexborough as exceptional circumstances can be demonstrated as stated in the Councils Doncaster Local Plan Site Selection Methodology Part 3.

Response:
The Arup Green Belt Review is an impartial assessment of the borough's Green Belt. It finds this site to be a strongly performing area of Green Belt with a weak case for continuation in the site selection process. The Council are satisfied with the assessment and feel that, after consideration, there are no exceptional circumstances to release any Green Belt in Mexborough, even though the settlement will fall short of its housing target. The Green Belt Topic Paper explains this further.
Comment:

These representations are in response to the Doncaster Local Plan 2015-2035 Publication Version on behalf of Mr & Mrs Hardy. The consultation is between August and 30th September 2019. This representation is regarding the Land off Wath Road, Mexborough (site Reference 139). The site is referred to as Site 139 throughout this report. A site plan is attached to this representation. Site and Surroundings The site is an irregularly shaped agricultural field to the west of Mexborough contained by a well-defined western boundary. The site has an undulating topography. To the north of the site is open countryside and Lousy Busk Lane (a track); to the east is Mexborough Highwoods Primary School and Mexborough School, as well residential properties along Manvers Road and Highwoods Road. To the south-east of the site there is Mexborough West junction, Manvers Road Playground, Wath Road Skate Park, and a public footpath which connects the existing neighbourhood to the A6023, Wath Road. To the west there is a railway line and beyond that there is a Business Park and Dearne Valley College. Mexborough and its surrounding settlements (Wath upon Dearne, Swinton and Adwick upon Dearne) have a combination of visual or physical gaps that currently exist and perceived separations between the settlements. These are accomplished in different ways, whether it be the green field physical gap between Mexborough and Adwick upon Dearne or the differing levels created by the topography and transport links with Wath upon Dearne and Swinton. Timeline of allocations Stage: Call for Sites Date: December 2014 Status: Submitted as an available site for housing Stage: Local Plan Consultation - Draft Policies and Proposed Sites Date: September/October 2018 Status: Proposed Housing Site (418 dwellings) Stage: Local Plan Consultation - Publication Draft Policies and Proposed Sites Date: August/September 2019 Status: Green Belt This representation is to promote Site 139 (Land to the north of Wath Road) for Residential development and a housing allocation in the Doncaster local Plan 2015-2035. This representation is set out in the following structure: - Comments on Policy 2, 3 and 6 of the Local Plan publication Draft - Green Belt Assessment - Conclusion Appendix 1 - Indicative Layout plan Appendix 2 - Comparative Sustainability Assessment Appendix 3 - Extract from Local Plan Consultation - Draft Policies and Proposed Sites Appendix 4 - Previous Representations submitted. (SEE EMAIL FOR APPENDICES)

Summary:

Brief overview of the site and its promotion history.

Response:

Site details noted.
As shown in Figure 2, the sites are proposed to be allocated for housing within the Publication Local Plan under site reference: 927 'Land On The North West Side Of Pastures Road, Mexborough' and 678 'Land Off Pastures Road, Mexborough'. Policy 6 of the Local Plan identifies both sites as sites with planning permission as of 1st April 2018 and that these sites will help deliver the housing requirement. The allocation of this site for residential development under Policy 6 of the Publication Local Plan is supported. (SEE EMAIL FOR Figure 2: Doncaster Publication Local Plan Policies Map Extract)

Summary:
Policy 6. Supportive of allocation of sites 678/927 and contribution to Policy objectives.

Response:
Support noted. The sites in question have permission, and the units remaining reflect the situation as at April 2018.
Comment:
This Local Plan Representation has been prepared by DLP Planning on behalf of Avant Homes in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. This representation relates to land at Pastures Road, Mexborough. This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site. Site and Context  The site comprises approximately 16ha of land located within the settlement of Mexborough, to the south east of the main urban area of Doncaster (see Figure 1). (SEE EMAIL FOR Figure 1: Aerial view of the site) The area surrounding the wider site is characterised by a mix of land uses including employment, agricultural and open space. To the south of Pastures Road is the Pastures Lodge Hotel and Restaurant and open storage uses. Outline planning permission was received in 2010 for the development of the site comprising residential units, open space and B1 office development. Subsequent reserved matters applications have been approved for the residential elements of the site which have now been built out.

Summary:
Re sites 678 & 927 Pastures Road Mexborough (allocated - residential)  o Object to figures in Table H1 (f) 'Allocations with Planning Permission' in Local Plan document  o Site 678 - remaining capacity shown as 5. Site now built out.  o Site 927 - remaining capacity shown as 37. Site now built out.  o Recommend table H1 (f) is amended to reflect current position.

Response:
The capacities are as at April 2018, however the additional build out / site completions are noted. The 2019 RLA provides an updates on housing permissions and completions.

**Comment:**

The site is partially allocated as housing with planning permission under references 927 and 678. The rest of the site is allocated as a Residential Policy Area. The delivery of this site will help contribute to the housing provision for Mexborough. The allocation of this site for residential development is therefore supported, however we object to the number of units that have been identified as remaining to be built and have made recommendation for amendments in order to ensure that the plan is effective and sound.

**Summary:**

Allocation of sites supported. Object to the number of units that have been identified as remaining to be built and have made recommendation for amendments in order to ensure that the plan is effective and sound. (see previous comment summary for detail)

**Response:**

Support welcome. The information on units built has been updated in the 2019 RLA.
Table H1(F) of the Draft Plan states that site 678 has permission for 55 units with 5 units remaining. We object to this capacity as the 5 remaining units have now been built out. Recommendation It is requested that this figure in Table H1(F) is amended to accord with the current permission.

Table H1(F) also states that site 927 has permission for 147 units with 37 units remaining. We object to this capacity as the 37 remaining units have now been built out. Recommendation It is requested that this figure in Table H1(F) is amended to accord with the current permission.

Response:
The capacities are as at April 2018, however the additional build out / site completions are noted. The 2019 RLA provides an updates on housing permissions and completions.
| Tests of Soundness: | Justified |

As shown in Figure 2, the sites are proposed to be allocated for housing within the Publication Local Plan under site reference: 927 'Land On The North West Side Of Pastures Road, Mexborough' and 678 'Land Off Pastures Road, Mexborough'. Policy 6 of the Local Plan identifies both sites as sites with planning permission as of 1st April 2018 and that these sites will help deliver the housing requirement. The allocation of this site for residential development under Policy 6 of the Publication Local Plan is supported. (SEE EMAIL FOR Figure 2: Doncaster Publication Local Plan Policies Map Extract)

**Summary:**

**Response:**
Support noted. The sites in question have planning permission. The figures reflect the number of units built / remaining as at April 2018.

The capacities are as at April 2018, however the additional build out / site completions are noted. The 2019 RLA provides an updates on housing permissions and completions.
1.0 Mr George wishes to record his objections to the Draft Local Plan because the 0.9ha of land the subject of the representation has not been allocated for residential development. In support of this representation Mr George also includes previous submissions made on his behalf in the period leading up to the publication of the draft plan. 1.1 When Site 123 was assessed against multiple SA objectives/criteria it was nominally in competition with several other sites and the assessment graded sites according to their positive, neutral and negative effects. 1.2 One of the sites ref: 662 was identified as having significant negative effects because of the unstable nature of the ground. However this very large site (the former colliery) already had planning permission so the assessment was rather pointless and therefore was always going to be loaded against the merits of other sites in relation to meeting the need for housing. 1.3 Notwithstanding the Draft Plan goes on to allocate immediately to the south of site 662 a further area of unstable land ref: 247 also located within the Green Belt. 1.4 Taking the SA assessment at face value sites 123 and 247 have very similar merits. Where site 123 appears to fail is in relation to flood risk and archaeology. 1.5 In fact site 123 (0.9ha) is not subject to flood risk. 1.6 Neither is it a site in which there is any but routine archaeological interest whatsoever. The potential archaeological concern is believed to be associated with the old Roman Road (formerly the A1) and the site of a Roman Fort. 1.7 The route of the old road is known to be approximately 1km to the east of the site and the Fort is now known to be beneath the Park and Ride facility some 600m northeast. 1.8 Mr George believes that the misconceived assessment was in fact carried out for a larger site (later reduced in size to the current site) in relation to which representations were made at the outset of this Local Plan and its predecessor. 1.9 The attached copy document (my Document 1) from August 2012 "Where should new housing in Rossington go?" associated with the preparation of the preceding but aborted Local plan shows how the analysis and approach to this current site has not changed despite the very significant reduction in site area. 1.10 So much so that by referring to a much more recent but similarly entitled document (my Document 2) of September 2018 Site 123 doesn't feature at all in the text. Although the current site is only a part of the identified site on the small scale plan, it would seem the site is so insignificant as to not merit any attention. 1.11 BUT NOT SO SITE 247. 1.12 In September 2018 Site 247 as my Document 2 shows was clearly rejected as a possible housing site for several reasons - the document making it clear that not all the reasons related to the output from the permitted former colliery site. 1.13 Mr George is entitled to ask what has changed in such a short timescale? 1.14 Site 123 is easily deliverable both now and for the duration of the Local Plan and being clearly sustainable meets square on with National Policy and will assist in meeting local demand in the very likely event that the former colliery site will not deliver the number of dwellings anticipated. 1.15 Site 123 is more sustainable than site 247 albeit smaller in area. It is less detached from the remainder of the settlement and future residents can use public transport or easily walk to the existing Park and Ride facility. 1.16 When taking a broader view of housing land allocation to the south-east of Doncaster there is very little choice available for future residents but also for the smaller builder. This is disappointing that the Draft Plan should continue to perpetuate the favourable treatment of the volume builder and volume landholder especially given the economic stimulus provided by the nearby Airport, iPport and projected European Tour Golf Course. 1.17 Paragraph 16.129 of the policy text of the Draft Plan shows clearly that there continues to be doubt as to the contribution the former colliery site will make to housing need over the plan period. What has been developed so far hasn't hit expected targets and as a result of this shortfall further land has been allocated to the south in the Green Belt. That hardly seems to be a fair and balanced approach. 1.18 It follows from the above that Mr George objects to the settlement development limit for this part of Rossington but he also wishes to point out that the proposal for developing his site nevertheless remains consistent with Draft Policy2 (S)-proposed development adjacent to a Development Limit. 1.19 In order to rectify what Mr George sees as the defects in the Local plan he asks that his site is formally allocated for residential development. He also asks that the local plan is amended to make a clear statement that the Planning Authority will support all reasonable and sustainable proposals submitted by the small builder that meet with the objectives of the Local Plan. (SEE EMAIL FOR DOCUMENT 1 AND 2)

Summary:
Object to the Local Plan, which fails to allocate site 123. When assessed against the SA criteria, site 123 an 247 (area of unstable land in the Green Belt to the south of Rossington colliery) have similar merits. However, site 123 falls down on archaeology and flood risk. The site is not subject to flood risk, and the archeological concern referred to appears to be related to the old Roman Road and an old Roman fort - 1km and 600m away (and beneath a Park & Ride) respectively. The promoter believes the assessment was carried out on a larger site to what is currently proposed. It is still the same outcome as the assessment of the much larger site which was carried out for the previous Local Plan. The settlement summary (maps) in September 2018 does not feature at all in the text. It would appear the site is so insignificant it does not warrant attention. However, in 2018, site 247 was clearly rejected as a housing option for several reasons. The owner of Site 123 is entitled to know what has changed in such a short amount of time? Site 123 is deliverable, sustainable and fully complies with National Policy - and will assist in meeting local demand in the likely event that the former colliery site does not deliver all the proposed dwellings. 123 is more sustainable that 247 and is less detached from the remainder of the settlement. Future residents can use public transport or access the park and ride. In south - east Doncaster there is little choice for both future residents and smaller builders. It is disappointing the Local Plan favours volume builders, especially given the economic stimulus provided by the airport and PGA golf course. There is clear evidence (including current deliver and para. 16.129 of the policy text) which shows that there are doubts about what the colliery can contribute towards housing need in the plan period. Therefore,
there is an objection to the site. The proposal also remains consistent with draft policy 2 (5) - proposed development adjacent to a development limit. The site should be allocated, and the Local Plan should be amended to make a clear statement that the Planning Authority will support reasonable and sustainable proposals submitted by small builders which meet the objectives of the Local Plan.

Response:
An amended site boundary for this site has been considered (1040), however there are still flood risk concerns, and furthermore, as Rossington can meet and surpass its housing targets via permissions and urban sites, there is no need to release land in the countryside for development. Housing at Rossington Colliery is being delivered and sites 662 and 247 will deliver a significant amount of housing - the Council are confident in the delivery of this.
1. RHI object that their site, Land at the South of Grange Road has not been allocated for housing. The land south of Grange Road, Rossington (Figure 1 below), identified as Site No 306 in the Council's Site Assessment Report, would represent a sustainable urban extension in a location that is not at risk of flooding and is close to shops, community facilities as well as existing and future employment opportunities. The Councils' own Site Assessment Report confirms that the only constraint to housing development on this site is a policy constraint i.e. its Green Belt status. Unlike most other sites considered no other factors are identified would prevent development. (SEE EMAIL FOR Figure 1 Land South of Grange Rd, Rossington - Site 306) 2. The assessment below demonstrates that the inclusion of this site in the Green Belt can no longer justified, if indeed it ever was in the first place. Changes in local circumstances, in particular the development of iPort and the land raising and the creation of parkland on the Rossington Grange Farm land to the west, (see Figure 2 overleaf) means Site 306 does not need to be kept permanently open to achieve any of the five purposes for including land in the Green Belt. On this basis, the Local Plan is not compliant with national policy. RHI object to this site remaining within the Green Belt and consider that is should be allocated for housing. 3. Paragraph 134 of the NPPF states that there are five purposes for including land within the Green Belt: a) to check the unrestricted sprawl of large built-up areas; As the land South of Grange Road is being promoted for development through the Development Plan process its subsequent development could not be categorised as 'unrestricted sprawl' but would represent a planned expansion of the urban area that is both proportionate and necessary to address the anticipated development needs of Rossington and the Borough as a whole, both within and beyond the plan period. As a result, the Green Belt 'purpose' is not relevant in such circumstances. b) to prevent neighbouring towns merging into one another; The Land South of Grange Road lies on the south western edge of New Rossington, with the nearest town being 3km to the west (Wadworth). It is however important to note that the character of the gap between these two settlements has changed significantly in the last couple of years and is due to change even more in the future following the completion of the iPort development and development at Torne Park. Collectively these developments have already significantly reduced the gap between the built-up areas of Rossington and Wadworth (as shown at Figure 2 below). Any development on land South of Grange Road will lie well to the east of these new developments and as a result have no practical impact on the extent or perception of separation. It is also noted that the site does not extend any further south that the existing southern limit of the built-up area of New Rossington. As a result, development on the land south of Grange Road would not result in any merging of neighbouring towns into one another. As a result, the land south of Grange Road does not need to be allocated as Green Belt or retained to prevent neighbouring town merging into one another. c) to assist in safeguarding the countryside from encroachment; The site is physically well defined to the west, north and east that as a result its removal from the Green Belt and allocation for housing or safeguarding would not result in any further pressure for development or encroachment on the surrounding countryside in this part of Rossington. The site itself is in intensive agricultural use. It is not identified as being of particular ecoclogical or landscape or recreational value and being on the edge on urban areas it suffers from various urban fringe problems e.g. trespass. At the same time it occupies a sustainable location for new housing development. The Council, in its emerging Local Plan, already acknowledges the need to identify Greenfield land to meet the Borough's housing requirement over the plan period and in such circumstances we consider the land south of Grange Road to offer a sustainable development option with minimal impact in terms of countryside encroachment. d) to preserve the setting and special character of historic towns; and This purpose is not relevant to the land south of Grange Road. The site makes no contribution towards the setting or special character of any historic town. e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The recycling of by far the largest area of derelict land in Rossington (i.e. the former Colliery site) is already committed and well underway. The allocation of the land South of Grange Road for housing through the Local Plan will not compromise these works, but instead will assist in supporting the regeneration of Rossington. The more new housing that can be attracted to New Rossington, the more people will be attracted to the town with the resulting beneficial impact on the vitality and viability of local shops, services and community facilities. The prospect of 5000+ jobs being created on the edge of the town provides a unique opportunity to revitalise New Rossington. It needs to be complemented by new good quality housing in attractive and sustainable locations in and around Rossington to attract and retain the workforce. Housing development on the Rossington Colliery site on its own is not sufficient to maximise these benefits and additional sites need to be allocated through the Local Plan. (SEE EMAIL FOR Figure 2) 4. In the light of the above RHI would, the first instance, seek the allocation of Site 306 for housing as part of this emerging Local Plan in order to meet housing needs and demands and provide a range and choice of sites in the settlement. The site would represent a sustainable urban extension in a location that is not at risk of flooding and is close to shops, community facilities as well as existing and future employment opportunities. Failing this RHI would seek its removal from the Green Belt and its allocation as Safeguarded Land for potential housing development beyond the current Plan period. 5. RHI also would object to the strategy taken of Reserved Housing Allocations, rather than Safeguarded Land. As set out in paragraphs 4.82 - 4.83 of the Publication Draft, in order to maintain a 5-year housing land supply, the Local Plan is seeking to rely on windfall housing and 'Reserve Housing Allocations'. Reserve Housing Allocations are sites where there is currently doubt about whether they could be developed in the plan period, due to HS2 Safeguarding Route, and/or where allocation cannot be justified in accordance with a sequential approach to addressing flood risk. Therefore, there is no real guarantee that these sites will come forward. Whilst RHI do not object to the Reserved Housing Allocations themselves, the constraints they have mean that they may not be deliverable over the course of the plan period. This is not effective, and the lack of safeguarded land means the Plan is not compliant with National Policy. PROPOSED CHANGE As set out above, RHI do not consider the Local Plan to be sound as it is ineffective.
Summary:
RHI do not consider the Local Plan to be sound as it is ineffective and not compliant with national policy. RHI object that their site at Land at South of Grange Road (Site 306) has not been allocated for housing and seek the allocation as part of the Local Plan. The site would represent a sustainable urban extension in a location that is not at risk of flooding and is close to shops, community facilities as well as existing and future employment opportunities. Failing this RHI would seek its removal from the Green Belt and its allocation as Safeguarded Land for potential housing development beyond the current Plan period. RHI would suggest that in addition to Reserved Housing Allocations, Safeguarded Land should be included within the Local Plan. In RHI opinion these suggestions will allow the plan to be both effective and compliant with national policy.

Response:
There is no need to allocate any more land at Rossington, and the site is a Green Belt site which scored moderately weakly overall. As such, the allocation is not justified, and the matter is further covered in the Housing Topic Paper and Green Belt Topic Paper.
Please see attached statement which provides full explanation and justification for Harworth Group's objection to the Publication Version Local Plan in relation to Rossington, which comprises the following points: 1. Harworth Group supports the inclusion of site 662 and site 247 as allocations for housing development. 2. The draft Plan is not based on evidence as the allocation boundaries of site 662 and site 247 are incorrect insofar as they are inconsistent with the masterplan/outline planning permission, and with the extent of land identified by Harworth Group for future development. 3. The indicative capacity of dwellings of site 247 may not ensure that development makes “effective use of land” or “achieves appropriate densities” as required to be consistent with national policy. 4. The indicated rate of delivery from site 662 and site 247 is considered to be unduly low and therefore not evidence-based, given Harworth Group’s own evidence as master-developer of these sites and the delivery rate-to-date. Given the above, it is considered that Publication Draft Local Plan does not meet the tests of soundness insofar as it must be consistent with national policy and justified on the basis of evidence. Suggested changes to the Plan to ensure consistency with national policy and justification on the basis of evidence are summarised below. PROPOSED CHANGE Please see attached statement which provides full explanation and justification for Harworth Group’s suggested changes to the Publication Version Local Plan in relation to Rossington (sites 662 and 247). The following amendments are considered to be required to ensure that the plan is consistent with national policy, is based on appropriate evidence and therefore thereby justified and sound. 1. The south boundary of site 662 to be changed to match the outline planning permission masterplan and interface with the boundary of site 247 as proposed by Harworth Group. 2. Amend all boundaries of site 247 to match those proposed by Harworth Group as shown on plan ref. P13_4832_SK102. (SEE EMAIL FOR Plan) 3. Amend the Table H1(G) to reflect an expected delivery rate of 100 dwellings per annum (dpa) during years 0-5 and 70 dpa thereafter from site 662. 4. Amend Table H2(G) to reflect an indicative capacity of site 247 of 406 dwellings in accordance with the illustrative masterplan prepared by Harworth Group, to be delivered at a rate of 70 dwellings per annum. 5. Amend paragraph 16.129 to state: "The Local Plan identifies an additional phase therefore for the colliery to make good the balance of 1,200 units and realise the opportunity to make full and effective use of the former colliery land."

Table H1(G) Site Ref: 662 Address Site: Site of Former Rossington Colliery, off West End Lane, New Rossington Area (Ha): 51.7 Permission - Type: Outline/Full Status: Started Capacity (Net) - Total: 984 Units Remaining: 897 Achievability (deliverable & developable) - 0-5 Yrs: 464 5-10 Yrs: 350 11-15 Yrs: 83 15-17 Yrs: 0 Beyond Plan Period: 0 TOTALS Capacity (Net) - Total: 984 Units Remaining: 897 Achievability (deliverable & developable) - 0-5 Yrs: 464 5-10 Yrs: 350 11-15 Yrs: 83 15-17 Yrs: 0 Beyond Plan Period: 0 Table H2(G) Site Ref: 247 Address Site: Former Rossington Colliery, off West End Lane, Rossington Area (Ha): 14.1 Indicative Capacity (No of houses): 406 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 0 11-15 Yrs: 267 15-17 Yrs: 139 Beyond Plan Period: 0 Site Ref: 1056 Address Site: Former Tornedale School Playing Fields & Gattison House, Gattison Lane, Rossington Area (Ha): 3.5 Indicative Capacity (No of houses): 92 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 92 11-15 Yrs: 0 15-17 Yrs: 0 Beyond Plan Period: 0 TOTALS Indicative Capacity (No of houses): 498 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 92 11-15 Yrs: 267 15-17 Yrs: 139 Beyond Plan Period: 0

Summary:
Re sites 662 (Rossington Colliery Housing site with PP) and 247 (Rossington Colliery - allocated Housing Site) Suggested amendments: 1. The south boundary of site 662 to be changed to match the outline planning permission masterplan and interface with the boundary of site 247 as proposed by Harworth Group. 2. Amend all boundaries of site 247 to match those proposed by Harworth Group as shown on plan ref. P13_4832_SK102. 3. Amend the Table H1 (G) to reflect an expected delivery rate of 100 dwellings per annum during year’s 0-5 and 70 dpa thereafter from site 662. 4. Amend Table H2(G) to reflect an indicative capacity of site 247 of 406 dwellings in accordance with the illustrative masterplan prepared by Harworth Group, to be delivered at a rate of 70 dwellings per annum. 5. Amend paragraph 16.129 to state: "The Local Plan identifies an additional phase therefore for the colliery to make good the balance of 1,200 units and realise the opportunity to make full and effective use of the former colliery land."

Re Policies and Site 1035 (Hill Top Denaby - Rejected Housing Site) Policy 3 ‘Level and Distribution of Growth’ Fails to satisfactorily direct light industrial, manufacturing and small scale distribution to the Main Towns, and in particular those in the west of the borough. Policy 4 and the associated Table 4 1. Fails to allocate any land for employment development in the Main Town of Conisbrough & Denaby. 2. Site 1035 should be included as an Employment allocation (part and Housing (part) 3. Site 383 (allocated site) - should be Greenbelt/Open space/Spots and recreation/local wildlife site. 4. Site 040 (allocated site)-should be retained as Greenbelt. 5. To meet housing need further sites should be allocated at Conisbrough and Denaby. Policy 6 and the associated Table H2 (D) Allocates site 040 and site 383 for housing development without satisfactory evidence to demonstrate these to represent the most appropriate strategy when considered against other reasonable alternatives. Green Belt Assessment and related Site Selection Methodology Results in the proposed removal of land from the Green Belt (site 040) which does not represent the most preferable option Also included: Site assessment of site 1035 to show it should be a preferred option to comparable sites.
Response:

Site boundaries have been amended as noted. The northern boundary now reflects the permission boundary, and the southern extent of site 247 is agreed - although there will be an amendment to the east of this to create a neat Green Belt boundary. Amendments will be made to the site capacities to reflect the anticipated yields as per the Council’s methodology for consistency rather than the developers suggestion for site 247, however Policy 6 allows for more or less housing to come forward on sites subject to design, so the figures stipulated are not limits. This provides consistency. 247 is thus expected to deliver 349 units now. Similarly, anticipated build outs will remain as per the Council’s methodology for consistency, but these are not annual limits, rather informed estimates. Para. 16.129 will be amended as suggested. With regards site 1035, the ELNA, Colliers report and Green Belt Topic Paper set out why there is no need or exceptional circumstance justification for releasing land in Conisbrough Denaby for employment uses. Site 040 scores more preferably for Green Belt release, and site 383 is not Green Belt, nor is there justification to make it Green Belt. Both sites are available and deliverable and preferred to site 1035, where access reservations also remain. The justification for the sites is set out in background documents, including the Site Selection Methodology, Green Belt Review, and Green Belt Topic Paper. Site 040 has been shown to be more preferable for Green Belt release, and on the balance of this and other factors is the preferred option here.
1. Harworth Group supports the inclusion of site 662 and site 247 as allocations for housing development in the Doncaster Local Plan Publication Version. These sites constitute the former Rossington Colliery site which is currently under development by Harworth Group as the ‘Torne Park’ / ‘Pheasant Hill Park’ scheme. Harworth Group is owner of the sites and lead developer responsible for delivery of development parcels, infrastructure and open space. 2. Within the development parcels, houses are delivered by housebuilders in conformity to a site-wide outline planning permission. To date, the scheme has delivered 166 completions across two plots by Harron Homes (Plot R1) and Taylor Wimpey (Plot R2), of which only 8 homes are yet to be sold. Taylor Wimpey (Plot R3) and Barratt Homes (Plot R4) are currently active on site, both with a three-year build period to deliver 195 and 190 homes respectively. Whilst no dwellings have been completed with these plots yet, a number of sales have already been agreed. 3. For reference, site 662 is an allocation with planning permission for housing development indicated at Table H1(G) to deliver a total of 984 dwellings. Site 247 is an allocation without planning permission for housing development indicated at Table H2(G) to deliver a total of 230 dwellings. 4. At the Preferred Options stage of Local Plan preparation, Harworth Group submitted representations that served to define the area of land available for allocation beyond that already with planning permission. For ease of reference, the same plan is attached to these representations (ref. P13_4832_SK102 ‘Phase 2 Location Plan’). This defined an area of 14.1 ha with an indicative capacity of 406 dwellings. (SEE EMAIL FOR Location Plan) 5. The Publication Version of the Local Plan, however, appears to have defined site 247 with incorrect boundaries as shown on the diagram below. This relates both to the boundary between site 662 and site 247, and the outer boundary of site 247 which despite looking similar in shape does not define the same land for allocation. Harworth Group therefore objects to the boundaries and extent of site 662 and site 247 as drafted in the Plan. (SEE EMAIL FOR Plans) 6. To help ensure consistency between the between the allocation of site 662 and the corresponding planning permission (masterplan), the boundary of site 662 should be amended from that currently drafted to that proposed by Harworth Group. A corresponding change to the boundary of site 247 will also serve to ensure clarity and consistency in the planning process when an application for site 247 is submitted. 7. For the avoidance of doubt, the boundary that Harworth Group promotes for site 247 is compatible with the approved reclamation works and creation of public open space (in the form of a country park) to the south of the proposed development area, as described fully in our representations to the Draft Policies and Proposed Sites consultation (October 2018). 8. As there appears to be no reason why an alternative boundary has been plotted in the Publication Version of the Plan, it is feasible that this is simply a plotting error. Whether intentional or otherwise, a correction to the proposed site boundary is required to ensure the Plan is appropriately evidence-based. With incorrect boundaries it is considered that the Plan is not justified as based on evidence and representing an appropriate strategy. 9. Harworth Group reiterates that it supports the inclusion of site 247 as an allocation for housing. 10. However, it is noted that the number of dwellings indicated to be deliverable from site 247 in the Publication Version is 230 units (across the incorrect site area of 9.35 ha). Representations submitted to the Preferred Options version of the Plan confirm the site area to be 14.1 ha, of which approximately 2.5 ha may be allowed for on-site public open space, leaving 11.6 ha for residential development. To make effective use of land, site 247 could deliver significantly more dwellings than the 230 indicated. An illustrative masterplan prepared by Harworth Group and submitted with the previous representations indicates that the site could accommodate up to 406 dwellings. 11. It is understood that from paragraph 16.129 of the Publication Draft Plan that the allocation of site 247 for 230 dwellings ‘serves to make good the balance of 1,200 units’ as permitted by the Rossington Colliery planning permission, taking into account those units already completed. Harworth Group promotes for site 247 is compatible with the approved reclamation works and creation of public open space (in the form of a country park) to the south of the proposed development area, as described fully in our representations to the Draft Policies and Proposed Sites consultation (October 2018). 12. As indicated above, 166 units have been completed to date and construction is underway on two phases totalling a further 283 units. Harworth Group’s current estimate therefore remains that the outline planning permission will deliver 984 units. 13. It would be more appropriate for the supporting text to state that "The Local Plan identifies an additional phase therefore for the colliery to make good the balance of 1,200 units and realise the opportunity to make full and effective use of the former colliery land." 14. This change would help ensure that the Plan conforms to the chapter 11 ‘Making effective use of land’ of the National Planning Policy Framework, and in particular paragraphs 122 and 123 which relate to ‘achieving appropriate densities of development. With the number of dwellings stated it is considered that the Plan is not justified as based on evidence and representing an appropriate strategy. 15. The Publication Version Local Plan assumes delivery of houses firstly from site 662 and then from site 247 at a rate of 70 units per annum, presumably comprising of two housebuilder outlets each delivering 35 units per annum. 16. As per our preceding representations, Harworth Group maintains that the scheme will be progressed at a faster rate than this, with two housebuilder outlets each delivering 50 units per annum. The accords to the planned three-year build period for both Plot R3 (195 units by Taylor Wimpey) and Plot R4 (190 units by Barratt Homes) which are underway at present. 17. Whilst Harworth Group would seek to continue delivery of units across the remainder of the scheme at this rate, it may be appropriate to be conservative in relation to future phases and apply a rate of 70 units per annum in total (i.e. two housebuilder outlets each delivering 35 units per annum, or allowing for any periods of inactivity between phases). 18. The effect of this is that the anticipated delivery phasing as set out in Table H1(G) as referenced from Policy 6 is inaccurate (i.e. unduly conservative) and should be amended to reflect Harworth Group's current anticipated delivery rate as follows: Site Ref: 662 Address Site: Site of Former Rossington Colliery, off West End Lane, New Rossington Area (Ha): 51.7 Permission - Type: Outline/Full Status: Started Capacity (Net) - Total: 984 Units Remaining: 897 Achievability (deliverable & developable) - 0-5 Yrs: 464 5-10 Yrs: 350 11-15 Yrs: 83 15-17 Yrs: 0 Beyond Plan Period: 0 TOTALS Capacity (Net) - Total: 984 Units Remaining: 897 Achievability (deliverable & developable) - 0-5 Yrs: 464 5-10 Yrs:
Incorrect boundaries and capacities have been used for site 247 - both to the south (though similar) and between the site and site 662. These should be amended accordingly. Site Ref: 247 Address Site: Former Rossington Colliery, off West End Lane, Rossington Area (Ha): 14.1 Indicative Capacity (No of houses): 406 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 267 15-17 Yrs: 139 Beyond Plan Period: 0 Site Ref: 1056 Address Site: Former Tornedale School Playing Fields & Gattison House, Gattison Lane, Rossington Area (Ha): 3.5 Indicative Capacity (No of houses): 92 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 92 15-17 Yrs: 0 Beyond Plan Period: 0 TOTALS Indicative Capacity (No of houses): 498 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 92 11-15 Yrs: 267 15-17 Yrs: 139 Beyond Plan Period: 0 20. In summary, Harworth Group supports the allocation of site 662 and site 247 for housing in the Local Plan. However, it is considered that the following amendments are required to ensure that the plan is consistent with national policy, is based on appropriate evidence and therefore thereby justified and sound. - The south boundary of site 662 to be changed to match the outline planning permission masterplan and interface with the boundary of site 247 as proposed by Harworth Group. - Amend all boundaries of site 247 to match those proposed by Harworth Group as shown on plan ref. P13_4832_SK102. - Amend the Table H1(G) to reflect an expected delivery rate of 100 dwellings per annum (dpa) during years 0-5 and 70 dpa thereafter from site 662. - Amend Table H2(G) to reflect an indicative capacity of site 247 of 406 dwellings in accordance with the illustrative masterplan prepared by Harworth Group, to be delivered at a rate of 70 dwellings per annum. - Amend paragraph 16.129 to state: "The Local Plan identifies an additional phase therefore for the colliery to make good the balance of 1,200 units and realise the opportunity to make full and effective use of the former colliery land."
6.1. Firsure objects to Policy 6 and the proposed distribution of housing and that the following site is not a proposed allocations: - Site 302 and 305: Stripe Road, Rossington 6.2. The site is summarised below and technical information and advocacy report have been submitted alongside earlier representations. Further a report on the Role and Growth of Rossington is submitted alongside these representations. Test of Soundness 6.3. Firsure considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.4. Firsure is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 Firsure recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. Firsure is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. 6.6. The proposed distribution against the Council's own targets shows a deficiency and a significant under provision in: - Doncaster - Adwick - Conisbrough - Denaby - Mexborough - Thorne - Moorends - Sprotbrough - Tickhill - Bawtry 6.7. Firsure, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. 6.8. Firsure, as explained in response to Policy 2 and 3, considers that there needs to be further consideration of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy. 6.9. Firsure is particularly concerned that in Rossington there is only a single small housing allocation and an over reliance on one large allocated (formed by site 662 and 247). The role of Rossington should be the focus for growth and regeneration, given its strategic location next to the M18 with new infrastructure in the form of the Great Yorkshire Way, provision of major employment opportunities at i-Port and the airport, forming the largest employment allocations within Doncaster, which are adjacent to the settlement. Furthermore, the proposed new PGA golf course is adjacent to Rossington. With major expansion plans at the airport 'Aetropolis', Rossington is in a prime strategic location to benefit from such plans and associated housing should be provided to ensure Doncaster benefits from such inward investment. Firsure proposes that their site at Stripe Road can accommodate new housing 6.10. Further Firsure are concerned about the deliverability of a number of allocations within Rossington. 6.11. Site 662 and 247: The Colliery site. The Role and Growth of Rossington document considers the delivery rates currently achieved at the site. In 2017/18 there were 49 completions on site. Assuming delivery rates based on current and past performance at this site, then Firsure consider that only approximately 600 units will come forward on the Colliery site(s) within the Plan period. This is significantly below the delivery expected within the Local Plan which anticipates that 1127 homes can be delivered across the Colliery site(s). No further evidence on this site is put forward in the Doncaster five year deliverable housing land supply statement 6.12. Site 1056 - Former Torndale School Playing fields, This relatively small site is considered to be capable of delivering 92 dwellings. This is overly optimistic given the irregular shape of the site. The local plan identifies the site as delivering in years 6-10, thus the site does not appear to be capable of assisting with short term delivery in Rossington. 6.13. Based on the above it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in to ensure that the delivery of the plans strategy. 6.14. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designate Reserve Development Sites, yet those identified are not considered to be developable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 Firsure suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.15. Firsure consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 6.16. However, Firsure consider that with the allocation of site 302 and 305: Stripe Road, Rossington and adjustment in anticipated delivery within the plan period of sites 662 and 247 that the Local Plan can be found sound. Firsure will continue to work with the Council to develop appropriate modifications to the Local Plan. 6.17. To address these deficiencies in the Plan Firsure therefore suggest that the following sites be allocated: - Site 302 and 305: Stripe Road, Rossington 6.18. A short summary of the site is in the following sub-section and technical information and advocacy report have been attached to earlier representations. The Role and Growth of Rossington report is attached in support of the site.
Summary:
Objects to Policy 6 and the proposed distribution of housing.  Site 302 and 305: Stripe Road, Rossington, should be allocated for housing.  Technical information and advocacy report have been submitted alongside earlier representations. A report on the Role and Growth of Rossington is submitted as part of this representation. The Local Plan is not producing sufficient homes across the Borough. Further sites should be identified to meet and exceed the requirement and provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. The proposed distribution of new homes does not reflect the spatial strategy, and importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. The proposed distribution against the Council’s own targets shows a deficiency and a significant under provision in: - Doncaster; - Adwick; - Conisbrough ? Denaby; - Mexborough; - Thorne ? Mooresnds; - Sprotbrough; - Tickhill; and - Bawtry  As explained in response to Policy 2, the spatial strategy is incorrect, in that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements.  As explained in response to Policy 2 and 3, there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focuses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Mooresnds, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy. Particularly concerned that in Rossington there is only a single small housing allocation and an over reliance on one large allocated (formed by site 662 and 247). The role of Rossington should be the focus for growth and regeneration, given its strategic location next to the M18 with new infrastructure in the form of the Great Yorkshire Way, provision of major employment opportunities at i-Port and the airport, forming the largest employment allocations within Doncaster, which are adjacent to the settlement. Furthermore, the proposed new PGA golf course is adjacent to Rossington. With major expansion plans at the airport ‘Aetropolis’, Rossington is in a prime strategic location to benefit from such plans and associated housing should be provided to ensure Doncaster benefits from such inward investment.  Concerned about the deliverability of a number of allocations within Rossington, namely Site 662 and 247 and 1056. Based on this it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in to ensure that the delivery of the plans strategy. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be developable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period.

Response:
Supply at Rossington is healthy and can surpass the housing target for the settlement without utilising Green Belt. There is therefore no need to allocate further land in this settlement, less so Green Belt. Suitable additional allocations on urban sites have been made, however. Overall the borough can meet and surpass its housing targets and most settlements can meet their housing targets, or get within their ranges. Those that cannot be offset by supply elsewhere. This is explained in the Housing Topic Paper.
6.19. Firsure is particularly concerned that in Rossington there is only a single small housing allocation and an over reliance on one large existing commitment. The role of Rossington should be the focus for growth and regeneration, given its strategic location next to the M18 with new infrastructure in the form of the Great Yorkshire Way, provision of major employment opportunities at i-Port and the airport, which are adjacent to the settlement. Furthermore, the proposed new PGA golf course is adjacent to Rossington. With major expansion plans at the airport ‘Aetropolis’, Rossington is in a prime strategic location to benefit from such plans and associated housing should be provided to ensure Doncaster benefits from such inward investment. Firsure proposes that their site at Stripe Road can accommodate new housing to meet that need. 6.20. Firsure objects that Site 302 and 305 at Stripe Road, Rossington site is not allocated and should be identified as a housing site. It is noted that the councils site selection summary indicates that this is because Green Belt release cannot be justified as housing need is being met. However in our response to Policy 2, 3 and 6, Firsure maintain that the Plan does not identify sufficient sites to meet the needs of the area. 6.21. Firsure considers the proposed site is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 6.22. The deliverability and benefits of the Stripe Road, Rossington site is as follows: Overview of Proposals 6.23. The site is located on the edge of an established residential area and benefits from easy access to the full range of services and facilities located within Rossington. The site is surrounded by urban development with residential development on two sides and the East Coast Mainline. The site is approximately 18.5ha gross and could accommodate in the region of 500 new homes.  (SEE EMAIL FOR Plan) Deliverability 6.24. The site at Stripe Road, Rossington provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by Firsure which further demonstrates the site's deliverability within the plan period. Availability 6.25. The land is being promoted by Firsure. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 6.26. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and development. This site allows housing to be delivered within an appropriate and sustainable location within Rossington. Suitability 6.27. The site is located in a highly sustainable location and has residential development to the north, east and west. The site is within easy walking distance to local centres with a range of facilities provided there as well as greater facilities within Doncaster Town Centre, a bus ride away. There are a large number of primary and a secondary schools in the vicinity of the site. 6.28. The site is well served by buses providing opportunities for sustainable travel to work in Doncaster and beyond with access to Doncaster Railway Station. 6.29. The development will provide additional quality development that will benefit Rossington and the wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Green Belt 6.30. Due to the significant need and demand for housing and aspirations for economic and housing growth there is clearly a requirement for a strategic review of the approach to locations for future growth within the district. In order to plan for appropriate for the plan period there is a need to review the Green Belt boundaries. A thorough review of the development limits of Doncaster settlements would ensure a holistic approach to the location of development for the future of the Borough. 6.31. The housing needs of Doncaster are putting severe pressure on the local authority to review the Green Belt. To meet the housing requirement Doncaster Council recognises that some Green Belt land will need to be released for new housing land. Stripe Road, Rossington is a unique opportunity to positively use the Green Belt and meet the housing need for the area. 6.32. In the Borough of Doncaster approximately 46% of the area is designated as Green Belt. This is the western part of the Borough which forms part of the South Yorkshire Green Belt surrounding urban areas. 6.33. The Framework explains that there are five purposes of including land within the Green Belt, which is: 1. To check the unrestricted sprawl of large built up areas; 2. To prevent neighbouring towns merging into one another; 3. To assist in safeguarding the countryside from encroachment; 4. To preserve the setting and special character of historic towns; and 5. To assist in urban regeneration by encouraging the recycling of derelict and other urban land. 6.34. Contextually, the site is “contained” by development and activity being a “tongue” of land which protrudes into the urban area of Rossington surrounded by residential properties and the East Coast Main Line, beyond which is non-Green Belt countryside. Within this context the release of the site from the Green Belt has limited impact on "openness" and that redevelopment of the site would have low impact on the purposes of including land within the Green Belt. 6.35. The Framework states that Green Belt boundaries should be drawn so as not to include land which it is unnecessary to keep permanently open. The impact on the openness of the Green Belt will be limited. The site is bounded by the urban area to the north, and partially to the east and west. To the south is an established track from Stripe Road to a level crossing with a tree belt to the south of it. This track and tree belt form a robust boundary for the site. The tree belt will prevent views between the remainder of the Green Belt and the site. 6.36. The site is therefore contained and will not lead to unrestricted sprawl or encroachment. The site is a protrusion of Green Belt into Rossington and is contained within its setting. The site would not therefore lead to the coalescence of towns. Whilst the development would result in development of some countryside the degree of encroachment into the countryside would be minimised. The site has no impact upon the setting of a historic town. 6.37. Firsure propose that the new Green Belt boundary follows Stripe Road, Common Lane and the East Coast Main Line which is clear and well defined and would be a “rounding off” of Rossington. This boundary would accord with the Framework and ensure that the Green Belt is clearly defined using readily recognisable features to ensure permanency reinforcing the urban context whilst providing a robust boundary for the future. 6.38. All the boundaries have the potential to be further reinforced within the site through additional planting to ensure an effective transition between the development and the countryside beyond. Achievable 6.39. A range of technical work is being undertaken and further
survey work is ongoing. From the initial assessments there are no technical issues that would prevent development or are insurmountable. The site is therefore considered to be achievable and therefore deliverable in accordance with national guidance. The technical assessments will be submitted in due course and are available upon request. Effective Use of Land 6.40. Although the site is greenfield, the proposed scheme will utilise and enhance existing infrastructure. Although the site is not previously developed it is currently under-utilised. The site is easily accessible and the proposed main access is off Stripe Road. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing 6.41. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. Finsure considers that the site at Stripe Road, Rossington is deliverable in the short term and will reinforce the housing supply and address the Borough’s housing needs in the early periods of the Local Plan. The site is fully capable of being delivered in the next 5 years. A Positive Response to the Key Objectives of the Framework 6.42. The Framework sets out that the Governments key housing policy goal of boosting significantly the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to jobs, key services and infrastructure. Sites should also make effective use of land and existing infrastructure. 6.43. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, suitable and achievable for development Benefits of Stripe Road, Rossington 6.44. The development of the site would provide significant benefits. The site would provide housing that would meet the needs of the Rossington and Doncaster Borough housing market. Therefore this site provides a unique opportunity in a sustainable location. 6.45. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 500 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The scheme will create direct and indirect job opportunities both during and after construction. 6.46. The proposal is an appropriate site to provide for the housing needs of Rossington and Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Stripe Road, Rossington would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 6.47. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. Proposed Change 6.48. To overcome the objection and address soundness matters, the Council should: - Allocate: o Site 302 and 305: Stripe Road, Rossington

Summary:

Site 302 and 305 at Stripe Road, Rossington, should be allocated as a housing site. The councils site selection summary indicates Green Belt release cannot be justified as housing need is being met. However it is maintained that the Plan does not identify sufficient sites to meet the needs of the area. The proposed site: - is available, suitable and achievable and is therefore a deliverable site able to come forward in the short term. - can make an efficient and attractive use of the land and be delivered within an appropriate and sustainable location within Rossington. - is located in a highly sustainable location and has residential development to the north, east and west. It is within easy walking distance to local centres with a range of facilities provided there as well as greater facilities within Doncaster Town Centre, a bus ride away. There are a large number of primary and a secondary schools in the vicinity of the site. - is well served by buses providing opportunities for sustainable travel to work in Doncaster and beyond with access to Doncaster Railway Station. Due to the significant need and demand for housing and aspirations for economic and housing growth there is clearly a requirement for a strategic review of the approach to locations for future growth within the district. In order to plan for appropriate for the plan period there is a need to review the Green Belt boundaries. A thorough review of the development limits of Doncaster settlements would ensure a holistic approach to the location of development for the future of the Borough. Contextually, the site is "contained" by development and activity being a "tongue" of land which protrudes into the urban area of Rossington surrounded by residential properties and the East Coast Main Line, beyond which is non-Green Belt countryside. Within this context the release of the site from the Green Belt has limited impact on "openness" and that redevelopment of the site would have low impact on the purposes of including land within the Green Belt. The site will not lead to unrestricted sprawl or encroachment. The site is a protrusion of Green Belt into Rossington and is contained within its setting. The site would not therefore lead to the coalescence of towns. Whilst the development would result in development of some countryside the degree of encroachment into the countryside would be minimised. The site has no impact upon the setting of a historic town. It is proposed that the new Green Belt boundary follows Stripe Road, Common Lane and the East Coast Main Line which is clear and well defined and would be a "rounding off" of Rossington. The site is achievable. A range of technical work is being undertaken and further survey work is ongoing. From initial assessments there are no technical issues that would prevent development or are insurmountable. The site is an effective Use of Land. Although greenfield, the proposed scheme will utilise and enhance existing infrastructure. The site is easily accessible and the proposed main access is off Stripe Road. The scheme is therefore making an efficient and effective use of land and infrastructure.

Response:

Supply at Rossington is healthy and can surpass the housing target for the settlement without utilising Green Belt. There is therefore no need to allocate further land in this settlement, less so Green Belt. Suitable additional allocations on urban sites have been made, however. Overall the borough can meet and surpass its housing targets and most settlements can meet their housing targets, or get within their ranges. Those that cannot are offset by supply elsewhere. This is explained in the Housing Topic Paper.
### Comment:

This site adjoins the boundary of Thorne Conservation Area. Paragraph 185 of the NPPF sets out a requirement for Local Plans to conserve heritage assets in a manner appropriate to their significance. When considering the impact of a proposed development upon the significance of a designated heritage asset, Paragraph 193 of the NPPF makes it clear that great weight should be given to the asset's conservation and explains that significance can be harmed by development within its setting. In addition, the Council has a statutory duty under the provisions of the Planning (Listed Buildings and Conservation Areas) Act, 1990 to pay "special attention" to "the desirability of preserving or enhancing the character or appearance" of its Conservation Areas. The Conservation Area Appraisal identifies several areas of this site where the trees are considered to make a positive contribution to the character of the Conservation Area. The Appraisal also considered that the site made such an important contribution to the Conservation Area and to the setting of Thorne House (a building identified as a key unlisted building) that it recommended that the boundary of the Conservation Area be amended to include virtually all of this site. In view of the contribution which this site makes to the character of the Conservation Area, it is difficult to envisage how 24 houses could be built without harming elements which have been identified as contributing to the significance of the Conservation Area. PROPOSED CHANGE Delete Site 133

### Summary:

Suggest the site allocation should be deleted as the site adjoins the Thorne Conservation Area and makes an important contribution to the setting of the Conservation Area and the proposed capacity of 24 units is not realistic.

### Response:

The site has been identified via the emerging Thorne-Moorends Neighbourhood Plan as one of only a few sites available that are not constrained by flood risk. The capacity of 24 units is as per the Neighbourhood Plan also. The adjacent site has also been assessed by the Neighbourhood Plan, but is not being supported due to the loss of trees on the site. Capacities in the Local Plan are indicative and not binding. The Local Plan housing allocation policy (Policy 6) states that schemes with a lower density will be supported where they result in a better design solution. The developer requirements also set out some of the considerations that an application will need to take into account at the Development Management stage. Notwithstanding this, it is proposed to add further detail to the developer requirements (Appendix 2) to emphasise some of the important design considerations/constraints/solutions that will need to be overcome as follows: Conservation & Heritage The site makes an important contribution to the conservation area and the setting of Thorne House (key unlisted building). The contribution of the site to the significance of these heritage assets will need to be assessed in a heritage statement where it should also be demonstrated that 24 units would not result in harm to this significance. Potential tree planting and landscaping should be incorporated.
The Local Plan is not a true reflection of the local community desire to develop and or representative of the consultation carried out which promoted both sites 469 & 009 for residential development. It does not represent the neighbourhood plan covering Thorne Moorends. It fails to reflect the Borough Strategy (Doncaster Growing Together) and Doncaster's Inclusive Growth Strategy. The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. The Local Plan ignores the Objectively Assessed Need and Affordable Housing Need for Moorends. opting instead to cluster Thorne and Moorends together and in the process failing to meet the needs of both. The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 and 800 meters of site 009 however the housing allocation for Thorne and Moorends is a meagre 5.5%. The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. The site is sustainable and close to schools, retail, community facilities and transport links. PROPOSED CHANGE  Doncaster Councils Local Plan needs to accurately reflect the needs of individual communities. It should follow the NPPF principles of sustainable development. It should let all communities' share in Doncaster's growth and should follow the principles of the neighbourhood plan.

Summary:
Re sites 469 and 009 (rejected Housing allocations)  o The Local Plan does not reflect the outcomes of local consultation and does not fairly reflect the needs of the communities it serves. Growth in the area is supported by the majority of local people and the consultation promoted 469 and 009 for residential development.  o The Local Plan does not represent the Neighbourhood Plan for Thorne and Moorends, or the Borough Strategy, or the Inclusive Growth Strategy.  o It also does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends, and combines the areas of Thorne and Moorends which means it fails to meet the needs of both communities.  o The decision not to allocate land in Moorends is contrary to national policy.  o There is 11% (52ha) of the boroughs employment land adjacent to Thorne and Moorends, including 469 and 009 which are within 200m of allocated employment land, however the Thorne and Moorends housing requirement is just 5.5%.  o The Environment Agency have no objections if floor levels are above 3.5m, and other statutory consultees have not objected. The site is sustainable and close to schools, retail, community facilities and transport links. Proposed change:  o The Local Plan needs to accurately reflect the needs of individual communities and should follow the NPPF principles of sustainable development. All communities should be able to share in Doncaster’s growth and the Local Plan should follow the principles of the Neighbourhood Plan.

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
The Local Plan is unsound because it is not based / reflective of the extensive public consultation carried out locally which promoted site 469 for residential development. It failed in its duty to co-operate with Thorne Moorends Town Council throughout the preparation of both the Local Plan and the Thorne Moorends Neighbourhood Plan. It fails to reflect the Borough Strategy (Doncaster Growing Together) and Doncaster’s Inclusive Growth Strategy. The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework which positively promotes sustainable development in sustainable communities and Moorends is a very sustainable community readily recognised in both the Local Development Framework Core Strategy with a housing allocation of up to 400 and the Local Plan it is a main Town with a population well in excess of 5,000. Moorends is one of Doncaster’s most deprived communities with a desperate need for regeneration it as poor education, health, economic outcomes and housing regeneration is essential to stimulate improvement both to the current housing stock and the local economy. The Local Plan ignores both the Objectively Assessed Need and Affordable Housing Need for Moorends opting instead to cluster Thorne and Moorends together and in the process failing to meet the needs of both. The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 however the housing allocation for Thorne and Moorends is a meagre 5.5%. The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. The National Planning Policy Framework supports sustainable development site 469 is sustainable within 400 meters of 2 Schools a Health Centre, Children’s Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE Doncaster Councils Local Plan needs to accurately reflect the OAN and AHN for individual communities. It needs to truly reflect the NPPF principles of sustainable development. It needs to conform to the Borough Strategy ensuring all communities’ share in Doncaster’s growth. It should reflect the Inclusive Growth Strategy (no community being left behind.) To meet its Statutory Duty to Co-operate it should engage with local communities not pay lip service.

Summary:
The Local Plan is unsound. It is not based on, or reflective of the extensive public consultation carried out locally which promoted site 469 for residential development. The Local Plan has failed in its duty to co-operate with Thorne and Moorends Town Council throughout the preparation of both the Local Plan and the Thorne & Moorends. The Local Plan fails to reflect the Borough Strategy (Doncaster Growing Together) and the Inclusive Growth Strategy. Not allocating any development in Moorends is contrary to the NPPF which positively promotes sustainable development in sustainable communities. Moorends is very sustainable and was recognised as such in the Core Strategy with an allocation of up to 400. In the Local Plan it is a Main Town with a population above 5,000. Moorends is one of the most deprived communities in Doncaster and in need of regeneration. Housing regeneration is essential to stimulate improvement of the current stock and the local economy. The Local Plan ignores the Objectively Assessed Need and affordable housing need for Moorends and chooses to cluster it with Thorne and fails to meet the needs of both. 11% of the boroughs employment land (52ha) is within walking and cycling distance of Thorne and Moorends and 200m from site 469, however the allocation for Thorne and Moorends is only 5.5%. The Environment Agency have no objections to a floor level of 3.5m nor do any other statutory consultees object. Site 469 is sustainable and within 400m of two schools, a health centre, a children’s centre, community centre, retail centre and transport links. The NPPF supports sustainable development, and site 469 is.

Response:
The Local Plan has undertaken extensive public consultation. The site lies within flood zone 3, and the Local Plan is making no allocations in such areas, irrespective of location. Thorne and Moorends can get within its housing range without allocating this land or any land in flood zones. It is one settlement to reflect the town council boundary. Additionally, throughout the Local Plan process, Thorne and Moorends town Council have been kept informed of developments, consulted and have also met with Local Plans team officers.

**Area:** Chapter 16: Spatial Proposals  
**Policy:** Main Town - Thorne-Moorends

The Local Plan is not a true reflection of the neighbourhood plan nor does it represent the consultation carried out which promoted both sites 469 & 009 for residential development. It fails to reflect the Borough Strategy (Doncaster Growing Together) and Doncaster’s Inclusive Growth Strategy. The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework, it ignores the objectively assessed need and affordable housing need for Moorends. Due to this fact it now fails to meet the needs of both Thorne and Moorends. The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 and 800 meters of site 009. All compulsory statutory consultees have no objections. The National Planning Policy Framework supports sustainable development site 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children’s Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE Doncaster Councils Local Plan needs to accurately reflect the needs of individual communities and should follow the NPPF principles of sustainable development. It should let all communities’ share in Doncaster’s growth and should follow the principles of the Neighbourhood Plan.

**Summary:**

The Doncaster Local Plan is not a reflection of the neighbourhood plan, nor does it represent the consultation carried out which promoted site 469 and 009 for residential development. It does not reflect the Borough Strategy or Inclusive Growth Strategy; not allocating land in Moorends is contrary to the NPPF and ignores the affordable housing need here, and; it does not reflect the objectively assessed needs of the area and fails to meet the interests of both communities as it groups them together. There is 11% (52ha) of the boroughs employment land adjacent to Thorne and Moorends, including 469 and 009 which are within 200m of allocated employment land, however the Thorne and Moorends housing requirement is just 5.5%. The Environment Agency have no objections if floor levels are above 3.5m, and other statutory consultees have not objected. The site is sustainable and close to schools, retail, community facilities and transport links. Proposed change: The Local Plan needs to accurately reflect the needs of individual communities and should follow the NPPF principles of sustainable development. All communities should be able to share in Doncaster’s growth and the Local Plan should follow the principles of the Neighbourhood Plan.

**Response:**

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
The Local Plan is not a true reflection of the local community desire to develop or representative of the consultation carried out which promoted both sites 469 & 009 for residential development. It does not represent the neighbourhood plan covering Thorne Moorends. It fails to reflect the Borough Strategy (Doncaster Growing Together) and Doncaster’s Inclusive Growth Strategy. The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. The Local Plan ignores the Objectively Assessed Need and Affordable Housing Need for Moorends. opting instead to cluster Thorne and Moorends together and in the process failing to meet the needs of both. The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however the housing allocation for Thorne and Moorends is a meagre 5.5%. The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. The National Planning Policy Framework supports sustainable development site 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children’s Centre, Community Centre, Retail Centre and Public Transport Links. 

PROPOSED CHANGE Doncaster Council’s Local Plan needs to accurately reflect the needs of individual communities. It should follow the NPPF principles of sustainable development. It should let all communities’ share in Doncaster’s growth and should follow the principles of the neighbourhood plan. TICKED WRITTEN REP BUT INCLUDED FOLLOWING: The main reason I have completed this detail is due to the total disregard for the neighbourhood plan of Thorne and Moorends

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
6.1. H. Burtwistle & Son objects to Policy 6 and the proposed distribution of housing and that the following site is not a proposed allocations: - Site 244/331: Coulman Road, Thorne 6.2. The site is summarised below and technical information and an advocacy report have been submitted alongside earlier representations. Test of Soundness 6.3. H. Burtwistle & Son considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.4. H. Burtwistle & Son is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 H. Burtwistle & Son recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. H. Burtwistle & Son is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. 6.6. The proposed distribution against the Council's own targets shows a deficiency and a significant under provision in: - Doncaster - Adwick - Conisbrough - Denaby - Mexborough - Thorne - Moorends - Sprotbrough - Tickhill - Bawtry 6.7. H. Burtwistle & Son, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. 6.8. H. Burtwistle & Son, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carrcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy. 6.9. H. Burtwistle & Son is particularly concerned that there is an under provision of housing proposed in Thorne-Moorends, which the proposed spatial distribution should be accommodating in the region of 1,020 new homes. There is presently a significant under provision in the settlement (circa 736 dwellings), which cannot be met through allocations in other settlements. H. Burtwistle & Son proposes that their site at Coulman Road can accommodate part of that housing need. 6.10. Thorne-Moorends is a highly sustainable settlement with a range of shops and services available in the town. The proximity of these services and a number of businesses/employment parks to the site creates employment opportunities to any potential incoming residents into the locality. 6.11. H. Burtwistle & Son therefore consider that the settlement is able to and should accommodate more development, which would assist the regeneration and renewal of the settlement and assist in the economic and housing growth aspirations of the Borough and Region. Further it would assist with the delivery of the Spatial Strategy as set out in Policy 2, which seeks to deliver approximately 40% of new homes in the Main Towns, which would equate to approximately 7360 dwellings based on an annual requirement of 920 dpa. As stated in our response to Policy 3, H. Burtwistle & Son consider the requirement should be circa 1000/1300dpa. 6.12. Thorne-Moorends is in a prime strategic location near to significant existing and proposed employment parks and further housing provided to ensure Doncaster benefits from such inward investment. H. Burtwistle & Son proposes that their site at Coulman Road can accommodate new housing to meet that need. 6.13. Further H. Burtwistle & Son are concerned that there is an overreliance on smaller infill housing allocations, where due to nature of the site and flooding constraints viability may be an issue, or historic unitary development plan allocations that have not come forward to date. 6.14. H. Burtwistle & Son object to the allocation of Site 081/343. H. Burtwistle & Son note the currently undetermined planning application, however this is a longstanding allocation and there is little additional evidence available through the HELAA, Residential Land Availability Study or the Doncaster 5 Year Deliverable Housing Land Supply Statement to demonstrate that the site will come forward in the short term. 6.15. H. Burtwistle & Son object to the allocation of Site 795. This site had a permission but this has since lapsed and therefore raises significant questions about the deliverability of the site. 6.16. H Burtwistle & Son object to the allocation of Site 510. This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. 6.17. Based on the above it is clear that the deliverability of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Doncaster to ensure that the Plans strategy can be delivered. 6.18. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be developable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 H. Burtwistle & Son proposes suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.19. H. Burtwistle & Son consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 6.20. However, H. Burtwistle & Son consider that with the proposed allocation that the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan.
information and an advocacy report has been submitted alongside earlier representations. Site 244/331: Coulman Road, Thorne 6.23. H. Burtwistle & Son consider that Thorne-Moorends is able to and should accommodate more development, which would assist the regeneration and renewal of the settlement and assist in the economic and housing growth aspirations of the Borough and Region. Thorne is in a prime strategic location near to significant existing and proposed employment parks and further housing provided to ensure Doncaster benefits from such inward investment. 6.24. H. Burtwistle & Son objects that Site 244/331 at Coulman Road, Thorne site is not allocated and should be identified as a housing site. Technical studies are ongoing but initial assessments demonstrate the site's deliverability. 6.25. H. Burtwistle & Son object that the site has been discounted in relation to Flood Risk, particularly when other sites within Flood Zone 3 are being allocated within the Local Plan. A Flood Risk and Drainage Assessment, including a Sequential Assessment has been prepared and has been submitted alongside earlier representations, this demonstrates that the site is developable from a flood risk and drainage perspective. Technical studies are ongoing but initial assessments demonstrate the site's deliverability. 6.26. H. Burtwistle & Son considers the proposed site is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 6.27. The deliverability and benefits of the Coulman Road, Thorne site is as follows: Overview of Proposals 6.28. The site is located on the edge of an established residential area and benefits from easy access to the full range of services and facilities located within Thorne-Moorends. The site is surrounded by urban development with housing on to the west, which includes a new Keepmoat scheme, and employment development to the west. On the Unitary Development Plan Proposals Map the site is shown as part of an employment allocation - EMP2(26). The site is approximately 6ha gross and could accommodate in the region of 170 new homes. Deliverability 6.29. The site at Coulman Road, Thorne provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by the landowner H. Burtwistle & Son which further demonstrates the site's deliverability within the plan period. Availability 6.30. The land is being promoted by H. Burtwistle & Son. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 6.31. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and development. This site allows housing to be delivered within an appropriate and suitable location within Thorne-Moorends. Suitability 6.32. The site is located in a highly sustainable location and has residential development to the east and employment development to the west and south. The site is also partly an employment allocation in the Unitary Development Plan - EMP2(26). The site is within easy walking distance to the centre of Thorne-Moorends with a range of facilities provided there, as well as greater facilities within Doncaster Town Centre, a bus ride away. There are a number of primary schools and a secondary school in the vicinity of the site. 6.33. The site is well served by buses providing opportunities for sustainable travel to work in Doncaster. The site is also accessible to Thorne North and South Railway Stations, which has access to Doncaster, Sheffield, Hull, Scunthorpe and Manchester Airport. 6.34. The development will provide additional quality development that will benefit Thorne-Moorends and the wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Achievable 6.35. A range of technical work is being undertaken and further survey work is ongoing. H. Burtwistle & Son object that the site has been discounted in relation to Flood Risk. A Flood Risk and Drainage Assessment, including a Sequential Assessment has been prepared, which demonstrates that the site is developable from a flood risk and drainage perspective. 6.36. From the initial assessments there are no technical issues that would prevent development or are insurmountable. The site is therefore considered to be achievable and therefore deliverable in accordance with national guidance. The technical assessments will be submitted in due course and are available upon request. Effective Use of Land 6.37. The site is part brownfield with the site frontage forming part of an existing employment allocation - EMP2(26). The proposed scheme will utilise and enhance existing infrastructure and a currently under-utilised site. The site is easily accessible and the proposed main access is off Coulman Road. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing 6.38. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. H. Burtwistle & Son considers that the site at Northgate, Moorends is deliverable in the short term and will reinforce the housing supply and address the Borough's housing needs in the early periods of the Local Plan. The site is fully capable of being delivered in the next 5 years. A Positive Response to the Key Objectives of the Framework 6.39. The Framework sets out that the Government's key housing policy goal of boosting significantly the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to jobs, key services and infrastructure. Sites should also make effective use of land and existing infrastructure. 6.40. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, suitable and achievable for development. Benefits of Coulman Road, Thorne 6.41. The development of the site would provide significant benefits. The site would provide housing that would meet the needs of Thorne-Moorends and Doncaster Borough housing market. Therefore this site provides a unique opportunity in a sustainable location. 6.42. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 170 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The scheme will create direct and indirect job opportunities both during and after construction. 6.43. The proposal is an appropriate site to provide for the housing needs of Thorne-Moorends and Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Coulman Road, Thorne would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 6.44. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. Proposed Change 6.45. To overcome the objection and address soundness matters, the Council should: - Allocate: o Site 244/331: Coulman Road, Thorne

Summary:

Policy 6 Housing allocations 1. Under provision in Thorne and Moorends 2. Site 244 & 331 should be allocated (in depth advocacy for sites included). 3. Object to allocation of sites 81, 343, 795, 510 (various reasons but mainly deliverability)
Both site 244 and 331 are in Flood Zone 3, where no allocations are being made. 081 and 343 are subject to a planning application being determined, site 510 and 795 are in Flood Zone 1 and are supported in the Thorne & Moorends Neighbourhood Plan. Thorne & Moorends is projected to deliver within its range and therefore is meeting its targets - although flood risk means it cannot deliver to the top of its range.
6.1. H. Burtwistle & Son objects to Policy 6 and the proposed distribution of housing and that the following site is not a proposed allocations: Site 313/245: Northgate, Moorends

6.2. The site is summarised below and technical information and an advocacy report have been submitted alongside earlier representations. Test of Soundness

6.3. H. Burtwistle & Son considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification

6.4. H. Burtwistle & Son is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 H. Burtwistle & Son recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible.

6.5. H. Burtwistle & Son is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole.

6.6. The proposed distribution against the Council's own targets shows a deficiency and a significant under-provision in: Doncaster - Adwick - Conisbrough - Denaby - Mexborough - Thorne - Moorends - Sprotbrough - Tickhill - Bawtry.

6.7. H. Burtwistle & Son, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements.

6.8. H. Burtwistle & Son, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy.

6.9. H. Burtwistle & Son is particularly concerned that there is an under provision of housing proposed in Thorne-Moorends, which the proposed spatial distribution should be accommodating in the region of 1,020 new homes. There is presently a significant under provision in the settlement (circa 736 dwellings), which cannot be met through allocations in other settlements. H. Burtwistle & Son proposes that their site at Northgate can accommodate part of that housing need.

6.10. Thorne-Moorends is a highly sustainable settlement with a range of shops and services available in the town. The proximity of these services and a number of businesses/employment parks to the site creates employment opportunities to any potential incoming residents into the locality.

6.11. H. Burtwistle & Son therefore consider that the settlement is able to and should accommodate more development, which would assist the regeneration and renewal of the settlement and assist in the economic and housing growth aspirations of the Borough and Region. Further it would assist with the delivery of the Spatial Strategy as set out in Policy 2, which seeks to deliver approximately 40% of new homes in the Main Towns, which would equate to approximately 7360 dwellings based on an annual requirement of 920 dpa. As stated in our response to Policy 3, H. Burtwistle & Son consider the requirement should be circa 1000/1300dpa.

6.12. Thorne-Moorends is in a prime strategic location near to significant existing and proposed employment parks and further housing provided to ensure Doncaster benefits from such inward investment. H. Burtwistle & Son proposes that their site at Northgate can accommodate new housing to meet that need.

6.13. Further H. Burtwistle & Son are concerned that there is an over-reliance on smaller infill housing allocations, where due to nature of the site and flooding constraints viability may be an issue, or historic unitary development plan allocations that have not come forward to date.

6.14. H Burtwistle & Son object to the allocation of Site 081/343. H. Burtwistle & Son note the currently under-determined planning application, however this is a longstanding allocation and there is little additional evidence available through the HELAA, Residential Land Availability Study or the Doncaster 5 - Year Deliverable Housing Land Supply Statement to demonstrate that the site will come forward in the short term.

6.15. H Burtwistle & Son object to the allocation of Site 795. This site had a permission but this has since lapsed and therefore raises significant questions about the deliverability of the site.

6.16. H Burtwistle & Son object to the allocation of Site 510. This is a narrow and constrained infill site, with railway forming the southern boundary of the site. There is little evidence available through the Councils evidence base to indicate any developer interest in the site. Based on the above it is clear that the deliverability of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Doncaster to ensure that the Plans strategy can be delivered.

6.17. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be developable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 H. Burtwistle & Son proposes suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance.

6.18. H. Burtwistle & Son consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound.

6.19. However, H. Burtwistle & Son consider that with the proposed allocation that the Local Plan can be found sound. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan.

Proposed Change: 6.21. To address these deficiencies and overcome the objection and address soundness matters in the Plan the following site should be allocated: Site 313/245: Northgate, Moorends.

6.22. A short summary of the site is in the following sub-section and technical
information and an advocacy report has been submitted alongside earlier representations. Site 313/245: Northgate, Moornds 6.23. H. Burtwistle & Son consider that Thorne-Moornds is able to and should accommodate more development, which would assist the regeneration and renewal of the settlement and assist in the economic and housing growth aspirations of the Borough and Region. Moornds is in a prime strategic location near to significant existing and proposed employment parks and further housing provided to ensure Doncaster benefits from such inward investment. 6.24. H. Burtwistle & Son objects that Site 313/245 at Northgate, Moornds site is not allocated and should be identified as a housing site. This site is proposed in relation to Flood Risk. Other sites within Flood Zone 3 have been allocated for housing such as A Flood Risk and Drainage Assessment, including a Sequential Assessment has been prepared and has been submitted alongside earlier representations, this demonstrate a drainage strategy for the site and that the site is developable from a flood risk and drainage perspective. Technical studies are ongoing but initial assessments demonstrate the site's deliverability. 6.26. H. Burtwistle & Son considers the proposed site is suitable, sustainable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 6.27. The deliverability and benefits of the Northgate, Moornds site is as follows: Overview of Proposals 6.28. The site is located on the edge of an established residential area and benefits from easy access to the full range of facilities and services located within Thorne-Moornds. The site is surrounded by urban development with housing on two sides and a railway line and former colliery. The site is approximately 16ha and could accommodate in the region of 400 new homes. Deliverability 6.29. The site at Northgate, Moornds provides a development opportunity that is available, sustainable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by the landowner H. Burtwistle & Son which further demonstrates the site’s deliverability within the plan period. Availability 6.30. The land is being promoted by H. Burtwistle & Son. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 6.31. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and development. This site allows housing to be delivered within an appropriate and sustainable location within Thorne-Moornds. Suitability 6.32. The site is located in a highly sustainable location and has residential development to the south and east. The site is within easy walking distance to the centre of Thorne-Moornds with a range of facilities provided there, as well as greater facilities within Doncaster Town Centre, a bus ride away. There are a number of primary schools and a secondary school in the vicinity of the site. 6.33. The site is well served by the bus providing opportunities for sustainable travel to work in Doncaster. The site is also accessible to Thorne North and South Railway Stations, which has access to Doncaster, Sheffield, Hull, Scunthorpe and Manchester Airport. 6.34. The development will provide additional quality development that will benefit Thorne-Moornds and the wider district with economic, environmental and social benefits. It is therefore considered that the development is sustainable. Achievable 6.35. A range of technical work is being undertaken and further survey work is ongoing. H. Burtwistle & Son object that the site has been discounted in relation to Flood Risk. A Flood Risk and Drainage Assessment, including a Sequential Assessment has been prepared and has been submitted alongside earlier representations, this demonstrates that the site is developable from a flood risk and drainage perspective. 6.36. From the initial assessments there are no technical issues that would prevent development or are insurmountable. The site is therefore considered to be achievable and therefore deliverable in accordance with national guidance. The technical assessments will be submitted in due course and are available upon request. Effective Use of Land 6.37. Although the site is greenfield, the proposed scheme will utilise and enhance existing infrastructure. Although the site is not previously developed it is currently under-utilised. The site is easily accessible and the proposed main access is off Northgate. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing 6.38. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. H. Burtwistle & Son considers that the site at Northgate, Moornds is deliverable in the short term and will reinforce the housing supply and address the Borough’s housing needs in the early periods of the Local Plan. The site is fully capable of being delivered in the next 5 years. A Positive Response to the Key Objectives of the Framework 6.39. The Framework sets out that the Government’s key housing policy goal of boosting significantly the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to jobs, key services and infrastructure. Sites should also make effective use of land and existing infrastructure. 6.40. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, sustainable and achievable for development. Benefits of Northgate, Moornds 6.41. The development of the site would provide significant benefits. The site would provide housing that would meet the needs of Thorne-Moornds and Doncaster Borough housing market. Therefore this site provides a unique opportunity in a sustainable location. 6.42. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 400 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The scheme will create direct and indirect job opportunities both during and after construction. 6.43. The proposal is an appropriate site to provide for the housing needs of Thorne-Moornds and Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Northgate, Moornds would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 6.44. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. Proposed Change 6.45. To overcome the objection and address soundness matters, the Council should: - Allocate: o Site 313/245: Northgate, Moornds Summary: H Burtwistle & Son object to Policy 6 and the proposed distribution and that the site at Northgate Moornds (313/245) is not allocated. Concerned that the Local Plan is not producing sufficient homes across the Borough. The proposed distribution of new homes does not reflect the spatial strategy and does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. The proposed distribution against the Council's own targets shows a deficiency and a significant under provision in - Doncaster; - Adwick; - Conisbrough - Denaby; - Mexborough; - Thorne - Moornds; - Sprotbrough; - Tickhill; and - Bawtry The spatial strategy considers that the spatial strategy is incorrect, does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. As explained in response to Policy 2 and 3, there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. Consider that with the proposed allocations and the deletion or adjustment in anticipated delivery within the plan period of sites 081/343, 795 and 510 that the Local Plan can be found sound. To address the identified

Page 1184
deficiencies in the Plan Site 313/245 Northgate, Moorends, should be allocated: Deliverability; the site is available, suitable and achievable therefore considered deliverable. Availability: the land is being promoted by H Burtwistle & Son considered available. Suitability: the site is located in a highly sustainable location and has residential development to the south and east, within easy walking distance to the centre, which has a range of services and facilities. Well provided for area with well served public transport and number of schools. Therefore considered that the development is suitable. Achievable: object to the site been discounted in relation to flood risk technical work has been submitted to demonstrate that the site is developable. Therefore, considered achievable. Effective Use of Land: Although greenfield, the proposed scheme will utilise and enhance existing infrastructure. And is currently under-utilised. The site is easily accessible. Delivering a Flexible Supply of Housing: the site is deliverable in the short term and will reinforce the housing supply and address the Borough’s housing needs in the early periods of the Local Plan. - The site is suitable for housing and can deliver circa 400 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The scheme will create direct and indirect job opportunities both during and after construction.

Response:
Both sites 245 and 313 are in Flood Zone 3, where no allocations are being made. Aside from Mexborough, the Main Urban Area and all the Main Towns mentioned are only short against the top of their ranges. As the Housing Topic Paper explains, not all of these settlements need to meet the top of their range, as long as the overall number balances out at approx. 90% of housing in these two areas, which it does. In Bawtry and Sprotbrough the shortfall against the target is relatively small and in Tickhill there are no other suitable sites. However, overall the borough is delivering enough housing across the plan period, and shortfalls are made up for in other areas. Sites have been identified land in each settlement in the hierarchy.

Summary:
The Doncaster Local Plan is not a true reflection of the local community desire to develop and or representative of the consultation carried out which promoted both sites 469 & 009 for residential development. It does not represent the neighbourhood plan covering Thorne Moorends. It fails to reflect the Borough Strategy (Doncaster Growing Together) and Doncaster's Inclusive Growth Strategy. The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. The Local Plan ignores the Objectively Assessed Need and Affordable Housing Need for Moorends. opting instead to cluster Thorne and Moorends together and in the process failing to meet the needs of both. The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 and 800 meters of site 009 however the housing allocation for Thorne and Moorends is a meagre 5.5%. The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. The National Planning Policy Framework supports sustainable development site 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children's Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE  Doncaster Councils Local Plan needs to accurately reflect the needs of individual communities. It should follow the NPPF principles of sustainable development. It should let all communities' share in Doncaster's growth and should follow the principles of the neighbourhood plan.

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.

**Comment:**

I believe the Doncaster Local Plan has not been prepared in line with statutory regulations and is not fit for purpose in its current format for the following reasons: - The Doncaster Local Plan does not accurately represent the outcome of the local consultation process and therefore does not fairly reflect the needs/interests of the local communities it serves. Growth and development in the communities of Thorne and Moorends is supported by the majority of people who live in the area and the consultation carried out highlights this by promoting sites 469 & 009 for residential development. - The Doncaster Local Plan does not represent the neighbourhood plan covering the areas of Thorne & Moorends. - The Doncaster Local Plan does not reflect the Borough Strategy (Doncaster Growing Together) and Doncaster's Inclusive Growth Strategy. - The Doncaster Local Plan does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends combining the areas of Thorne and Moorends and in doing so, failing to meet the needs/interests of both communities. - The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. - The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however, the housing allocation for Thorne and Moorends is a disproportionate 5.5%. - The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. - The National Planning Policy Framework supports sustainable development and sites 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children's Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE - The Doncaster Local Plan requires amendment to ensure that it accurately reflects the needs/interests of the individual communities it serves. - The Doncaster Local Plan should follow the National Planning Policy Framework principles of sustainable development. - The Doncaster Local Plan should enable all communities to share in Doncaster's growth and should adhere to the principles of the neighbourhood plan.

**Summary:**

The Doncaster Local Plan does not: - Accurately represent the outcome of local consultation and the needs and interests of the local communities it serves. Most local people support growth and development and consultation highlighted that sites 469 and 009 should be allocated for development; - Represent the Thorne and Moorends neighbourhood plan; - Reflect the Borough Strategy or Inclusive Growth Strategy; - Reflect the objectively assessed needs of the area and fails to meet the interests of both communities; - Accord with the NPPF - not allocating land in Moorends is contrary to the NPPF; There is 11% (52ha) of the boroughs employment land adjacent to Thorne and Moorends, including 469 and 009 which are within 200m of allocated employment land, however the Thorne and Moorends housing requirement is just 5.5%. The Environment Agency have no objections if floor levels are above 3.5m, and other statutory consultees have not objected. The site is sustainable and close to schools, retail and community facilities and is sustainable. Proposed change: the Local Plan should accurately reflect the needs of individual communities, follow NPPF principals of sustainable development and let all communities share in Doncaster's growth, as well as following the principles of the neighbourhood plan.

**Response:**

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Summary:
The Local Plan does not reflect the outcomes of local consultation and does not fairly reflect the needs of the communities it serves. Growth in the area is supported by the majority of local people and the consultation promoted 469 and 009 for residential development. The Local Plan does not represent the Neighbourhood Plan for Thorne and Moorends, or the Borough Strategy, or the Inclusive Growth Strategy. It also does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends which means it fails to meet the needs of both communities. The decision not to allocate land in Moorends is contrary to national policy. There is 11% (52ha) of the borough’s employment land adjacent to Thorne and Moorends, including 469 and 009 which are within 200m of allocated employment land, however the Thorne and Moorends housing requirement is just 5.5%. The Environment Agency have no objections if floor levels are above 3.5m, and other statutory consultees have not objected. The site is sustainable and close to schools, retail, community facilities and transport links. Proposed change: The Local Plan needs to accurately reflect the needs of individual communities and should follow the NPPF principles of sustainable development. All communities should be able to share in Doncaster’s growth and the Local Plan should follow the principles of the Neighbourhood Plan.

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.

**Comment:**

The Local Plan neither accurately or fairly represents the consultation carried out nor echoes the local communities desire to develop the area and bring more affordable housing. Both areas which promoted both sites 469 and 009 for residential development. The plan fails to reflect both the Borough Strategy (Doncaster Growing Together) and Doncaster’s Inclusive Growth Strategy and the neighbourhood plan covering Thorne and Moorends. The decision made in the plan to allocate no development in Moorends is totally conflicting the National Planning Policy Framework and it fails to acknowledge the ‘objectively assessed need and affordable housing need in Moorends’. Instead going totally against the recommended plans by not choosing to develop. The plan has chosen to cluster Thorne and Moorends together, which has resulted in the failure of meeting the needs of either area. The emerging Local Plan allocates 52 hectares of employment land, approximately 11% of the Boroughs total allocation, within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 and 800 meters of site 009. However, the housing allocation for Thorne and Moorends is an absolutely inadequate 5.5%. The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. The National Planning Policy Framework supports sustainable development site 469 and 009 are both sustainable and very close to two Schools, Health Centre, Children's Centre, Community Centre, Retail Centre and Public Transport Links. I believe the plan has failed to put across adequate points as to why this development has been turned down as, from many (not just my own) point of view, there are a multitude of positive aspects this development would bring to the area, that far outweigh the negatives (if any). In my opinion, they have objected to plans to satisfy a minority of opposing views, rather than thinking of the needs of the greater community living in these areas. The population in Moorends will continue to grow and it is important that there are plans put in place to help these people by making affordable houses available. PROPOSED CHANGE The Doncaster Councils Local Plan should let all communities' share in Doncaster's growth and should follow the principles of the neighbourhood plan. The Plan needs to accurately reflect the needs of individual communities. Rather than bundling two areas together. It should also follow the NPPF principles of sustainable development.

**Summary:**

The Local Plan does not reflect the local community desire to develop or representative of consultation, which promoted site 469 and 009 for residential development. It does not represent the Thorne and Moorends Neighbourhood Plan, the Borough Strategy or the Inclusive Growth Strategy. Not allocating land in Moorends is contrary to the NPPF. The Local Plan ignores objectively assessed need and affordable housing need in Moorends and clusters Thorne and Moorends together and fails to meet the needs of both. There is 11% (52ha) of the boroughs employment land adjacent to Thorne and Moorends, including 469 and 009 which are within 200m of allocated employment land, however the Thorne and Moorends housing requirement is just 5.5%. The Environment Agency have no objections if floor levels are above 3.5m, and other statutory consultees have not objected. The site is sustainable and close to schools, retail and community facilities and is sustainable. The plan has failed to adequately explain why this development has been rejected as many people believe the development would bring many positives to the area which outweigh any negatives. The objection is to satisfy a minority of opposing views, rather than thinking of the greater local community needs. Development can provide affordable housing for Moorends growing population. Proposed change: the Local Plan should accurately reflect the needs of individual communities - not place Thorne and Moorends together; follow NPPF principals of sustainable development and let all communities share in Doncaster's growth and; should follow the principles of the neighbourhood plan - which the Local Plan disregards.

**Response:**

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.

Attend Examination: Written Representation

Comment:
I would like to submit my objection to the Local Plan in its current format because this plan does not meet with the views of the local communities of Thorne & Moorends. The approach currently taken by DMBC in the Local Plan does not capture or understand the views of the Thorne Moorends community and would deprave these areas of much needed growth. It goes directly against the neighbourhood plan covering Thorne Moorends. It fails to meet the objectively assessed need and affordable housing need for Thorne Moorends. I would like to promote both sites 469 & 009 for residential development. PROPOSED CHANGE Local Plan needs to follow the neighbourhood plan.

Summary:
The Local Plan does not accord with the views of the local community of Thorne & Moorends. DMBC's approach does not capture or understand the views of the local community and would deprive these areas of much needed growth. It is in conflict with the Neighbourhood Plan and fails to meet the Objectively Assessed Need and Affordable housing need for the area. Would like to promote site 469 and 009 for development.

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk.

**Response:**  
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk.
I believe the Doncaster Local Plan has not been prepared in line with statutory regulations and is not fit for purpose in its current format for the following reasons:

1. The Doncaster Local Plan does not accurately represent the outcome of the local consultation process and therefore does not fairly reflect the needs/interests of the local communities it serves. Growth and development in the communities of Thorne and Moorends is supported by the majority of people who live in the area and the consultation carried out highlights this by promoting sites 469 & 009 for residential development.

2. The Doncaster Local Plan does not represent the neighbourhood plan covering the areas of Thorne & Moorends.

3. The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Borough's total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however, the housing allocation for Thorne and Moorends is a disproportionate 5.5%.

4. The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee.

5. The National Planning Policy Framework supports sustainable development and sites 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children's Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE - The Doncaster Local Plan requires amendment to ensure that it accurately reflects the needs/interests of the individual communities it serves.

6. The Doncaster Local Plan should follow the National Planning Policy Framework principles of sustainable development.

7. The Doncaster Local Plan should enable all communities to share in Doncaster's growth and should adhere to the principles of the neighbourhood plan.

Objects to sites 469 and 09 being rejected for allocation as housing sites. Reasons:

1. Local consultation outcomes that support sites 469 and 09 for residential development.

2. The proposed Housing allocation for Thorne and Moorends is disproportionate to the Employment land allocation. Says 52ha (11%) of Employment land allocation and 5.5% of the Housing allocation.

3. The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework.

4. The decision to not allocate no development in Moorends is contrary to the NPPF (no specifics given)

5. Both sites are sustainable (in compliance with the NPPF) - close to schools/health centre/retail and public transport.

6. Flood risk: The EA have no objection to development in flood zone if floor level is set to 3.5 mt. (presume site 469) Other No other statutory consultee objects to the site (presume site 469 in relation to recent planning application)

Response:

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
I believe the Doncaster Local Plan has not been prepared in line with statutory regulations and is not fit for purpose in its current format for the following reasons: - The Doncaster Local Plan does not accurately represent the outcome of the local consultation process and therefore does not fairly reflect the needs/interests of the local communities it serves. Growth and development in the communities of Thorne and Moorends is supported by the majority of people who live in the area and the consultation carried out highlights this by promoting sites 469 & 009 for residential development. - The Doncaster Local Plan does not represent the neighbourhood plan covering the areas of Thorne & Moorends. - The Doncaster Local Plan does not reflect the Borough Strategy (Doncaster Growing Together) and Doncaster’s Inclusive Growth Strategy. - The Doncaster Local Plan does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends combining the areas of Thorne and Moorends and in doing so, failing to meet the needs/interests of both communities. - The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. - The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Borough’s total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however, the housing allocation for Thorne and Moorends is a disproportionate 5.5%. - The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. - The National Planning Policy Framework supports sustainable development and sites 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children’s Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE - The Doncaster Local Plan requires amendment to ensure that it accurately reflects the needs/interests of the individual communities it serves. - The Doncaster Local Plan should follow the National Planning Policy Framework principles of sustainable development. - The Doncaster Local Plan should enable all communities to share in Doncaster’s growth and should adhere to the principles of the neighbourhood plan.

Objects to sites 469 and 09 being rejected for allocation as housing sites. Reasons: Local consultation: 1. Local Plan does not reflect local consultation outcomes that support sites 469 and 09 for residential development. 2. Growth in Thorne and Moorends is supported by the local community. 3. The Local plan does not represent the Neighbourhood Plan. Local Strategies: o LP does not reflect the Borough Strategy (Doncaster Growing Together) and inclusive growth strategy - No specific reasons given. Housing figures/need: 1. The proposed Housing allocation of Thorne and Moorends is disproportionate to the Employment land allocation. Says 52ha (11%) of Employment land allocation and 5.5% of the Housing allocation. 2. LP does to reflect the objectively assessed housing need. 3. LP does not reflect the affordable housing need. 4. Combining the areas of Thorne and Moorends fails to meet the needs of both communities. NPPF 1. The decision to not allocate no development in Moorends is contrary to the NPPF (no specifics given) 2. Both sites are sustainable (in compliance with the NPPF) - close to schools/health centre/retail and public transport. Flooding risk: o The EA have no objection to development in flood zone if floor level is set to 3.5 mt. (presume site 469) Other o No other statutory consultee objects to the site (presume site 469 in relation to recent planning application)

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
Tests of Soundness:

Justified

Comment:

I believe the use of this site would cause harm to the intrinsic character of the surrounding countryside, to the woodland and the foraging habitat of the area. It supports Butterflies, moths, mammals, birds, ants, bees, wasps, beetles etc. I believe there are reasonable alternatives for land to build on rather than this area. Also any houses built here would be too near the railway and cause very high noise levels for residents who would live in this area. The plans wording is not clearly written and unambiguous and can be difficult to comprehend. There should be briefer summaries to read through. PROPOSED CHANGE Briefer summaries to be more comprehensible

Summary:

'Unsound' - objects to housing allocation 510 - Adj. Thorne South Station, South End, Thorne. Development would harm the intrinsic character of the surrounding countryside and tot he woodland and foraging habitat of the area. There are other reasonable alternative sites to develop. Houses will be too close to the railway line creating noise issues for new residents. The plan's wording is not clear and unambiguous and difficult to comprehend. There should be briefer summaries to read.

Response:

Briefer summaries were produced to accompany the Site Selection Methodologies to aid understanding. Developer requirements set out what is needed when developing the site, and the site is supported in the Thorne & Moorends neighbourhood plan, however neither ecologists nor design comments raise concerns about habitat impacts or noise issues. Ecology comments request that unavoidable habitat losses are accounted for and that biodiversity net gain is demonstrated.
I believe the Doncaster Local Plan has not been prepared in line with statutory regulations and is not fit for purpose in its current format for the following reasons: - The Doncaster Local Plan does not accurately represent the outcome of the local consultation process and therefore does not fairly reflect the needs/interests of the local communities it serves. Growth and development in the communities of Thorne and Moorends is supported by the majority of people who live in the area and the consultation carried out highlights this by promoting sites 469 & 009 for residential development. - The Doncaster Local Plan does not represent the neighbourhood plan covering the areas of Thorne & Moorends. - The Doncaster Local Plan does not reflect the Borough Strategy (Doncaster Growing Together) and Doncaster’s Inclusive Growth Strategy. - The Doncaster Local Plan does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends combining the areas of Thorne and Moorends and in doing so, failing to meet the needs/interests of both communities. - The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. - The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however, the housing allocation for Thorne and Moorends is a disproportionate 5.5%. - The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. - The National Planning Policy Framework supports sustainable development and sites 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children's Centre, Community Centre, Retail Centre and Public Transport Links. **PROPOSED CHANGE** - The Doncaster Local Plan requires amendment to ensure that it accurately reflects the needs/interests of the individual communities it serves. - The Doncaster Local Plan should follow the National Planning Policy Framework principles of sustainable development. - The Doncaster Local Plan should enable all communities to share in Doncaster's growth and should adhere to the principles of the neighbourhood plan.

**Response:**

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
Comment:

I believe the Doncaster Local Plan has not been prepared in line with statutory regulations and is not fit for purpose in its current format for the following reasons: - The Doncaster Local Plan does not accurately represent the outcome of the local consultation process and therefore does not fairly reflect the needs/interests of the local communities it serves. Growth and development in the communities of Thorne and Moorends is supported by the majority of people who live in the area and the consultation carried out highlights this by promoting sites 469 & 009 for residential development. - The Doncaster Local Plan does not represent the neighbourhood plan covering the areas of Thorne & Moorends. - The Doncaster Local Plan does not reflect the Borough Strategy (Doncaster Growing Together) and Doncaster's Inclusive Growth Strategy. - The Doncaster Local Plan does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends combining the areas of Thorne and Moorends and in doing so, failing to meet the needs/interests of both communities. - The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. - The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however, the housing allocation for Thorne and Moorends is a disproportionate 5.5%. - The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. - The National Planning Policy Framework supports sustainable development and sites 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children’s Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE - The Doncaster Local Plan requires amendment to ensure that it accurately reflects the needs/interests of the individual communities it serves. - The Doncaster Local Plan should follow the National Planning Policy Framework principles of sustainable development. - The Doncaster Local Plan should enable all communities to share in Doncaster’s growth and should adhere to the principles of the neighbourhood plan.

Summary:

The Doncaster Local Plan does not: - Accurately represent the outcome of local consultation and the needs and interests of the local communities it serves. Most local people support growth and development and consultation highlighted that sites 469 and 009 should be allocated for development; - Represent the Thorne and Moorends neighbourhood plan; - Reflect the Borough Strategy or Inclusive Growth Strategy; - Reflect the objectively assessed needs of the area and fails to meet the interests of both communities; - Accord with the NPPF - not allocating land in Moorends is contrary to the NPPF; There is 11% (52ha) of the boroughs employment land adjacent to Thorne and Moorends, including 469 and 009 which are within 200m of allocated employment land, however the Thorne and Moorends housing requirement is just 5.5%. The Environment Agency have no objections if floor levels are above 3.5m, and other statutory consultees have not objected. The site is sustainable and close to schools, retail and community facilities and is sustainable. Proposed change: the Local Plan should accurately reflect the needs of individual communities, follow NPPF principals of sustainable development and let all communities share in Doncaster’s growth, as well as following the principles of the neighbourhood plan.

Response:

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
I believe the Doncaster Local Plan has not been prepared in line with statutory regulations and is not fit for purpose in its current format for the following reasons:

- The Doncaster Local Plan does not accurately represent the outcome of the local consultation process and therefore does not fairly reflect the needs/interests of the local communities it serves. Growth and development in the communities of Thorne and Moorends is supported by the majority of people who live in the area and the consultation carried out highlights this by promoting sites 469 & 009 for residential development.
- The Doncaster Local Plan does not represent the neighbourhood plan covering the areas of Thorne & Moorends. - The Doncaster Local Plan does not reflect the Borough Strategy (Doncaster Growing Together) and Doncaster's Inclusive Growth Strategy.
- The Doncaster Local Plan does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends combining the areas of Thorne and Moorends and in doing so, failing to meet the needs/interests of both communities.
- The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework.
- The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however, the housing allocation for Thorne and Moorends is a disproportionate 5.5%. - The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee.

The National Planning Policy Framework supports sustainable development and sites 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children's Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE - The Doncaster Local Plan requires amendment to ensure that it accurately reflects the needs/interests of the individual communities it serves. The Doncaster Local Plan should follow the National Planning Policy Framework principles of sustainable development. - The Doncaster Local Plan should enable all communities to share in Doncaster's growth and should adhere to the principles of the neighbourhood plan.

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk. Moorends is grouped with Thorne to reflect the neighbourhood Plan and Town Council boundary and between the two areas, enough housing can be delivered to get within the housing range. Site 469 has generated numerous objections in both planning applications and the Local Plan.
I would like to submit my objection to the Local Plan in its current format because this plan does not meet with the views of the local communities of Thorne & Moorends. The approach currently taken by DMBC in the Local Plan does not capture or understand the views of the Thorne Moorends community and would deprive these areas of much needed growth. It goes directly against the neighbourhood plan covering Thorne Moorends. It fails to meet the objectively assessed need and affordable housing need for Thorne Moorends. I would like to promote both sites 469 & 009 for residential development. PROPOSED CHANGE: Local Plan needs to follow the neighbourhood plan.

Summary:
Object to the Local Plan as it does not meet with the views of the local communities of Thorne and Moorends. DMBCs approach does not capture or understand the views of the local community and would deprive these areas of much needed growth. The plan goes against the Thorne Moorends Neighbourhood Plan. Sites 009 and 469 are promoted for residential development. Proposed change: the Local Plan should follow the Neighbourhood Plan.

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk.

Comment:
The Local Plan is not serving the community as it should be. There is a desire to develop and grow our community from local people. There is no question that there is a lack of affordable housing in the community. The planned site of 469&009 are also very close to 2 schools, a Health centre, retail centre and public transport links.

Summary:
The Local Plan does not serve the community as it should. Local people want to see the community develop and grow. There is a lack of affordable housing in the community. Site 469 and 009 are close to schools, health centres, retail and public transport links.

Response:
Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk.

Chapter 16: Spatial Proposals

Main Town - Thorne-Moorends

1. The Local Plan should accurately reflect local consultation outcomes and in doing so be a true reflection of the needs/interests of the community it serves which this plan does not achieve. Growth and development in this area is supported by the majority of people who live in the community and the consultation carried out highlights this by promoting both sites 469 & 009 for residential development. 2. The Local Plan does not represent the neighbourhood plan covering Thorne & Moorends. 3. The Local Plan does not reflect the Borough Strategy (Doncaster Growing Together) and Doncaster’s Inclusive Growth Strategy. 4. The decision to allocate no development in Moorends is contrary to the National Planning Policy Framework. 5. The Local Plan does not reflect the Objectively Assessed Need and Affordable Housing Need for Moorends combining the areas of Thorne and Moorends and in doing so, failing to meet the needs/interests of both communities. 6. The emerging Local Plan allocates 52 hectares of employment land approximately 11% of the Boroughs total allocation within walking, cycling distance of both Thorne and Moorends and approximately 200 meters from site 469 & 800 meters of site 009 however, the housing allocation for Thorne and Moorends is a disproportionate 5.5%. 7. The Environment Agency have no objection to development at a finished floor level of 3.5 meters nor is there any objection from any other statutory consultee. 8. The National Planning Policy Framework supports sustainable development site 469 & 009 are both sustainable and very close to 2 Schools, Health Centre, Children’s Centre, Community Centre, Retail Centre and Public Transport Links. PROPOSED CHANGE 1. Doncaster Councils Local Plan should be changed to accurately reflect the needs of the individual communities it serves. 2. The Local Plan should follow the National Planning Policy Framework principles of sustainable development. 3. The Local Plan should enable all communities to share in Doncaster’s growth and should follow the principles of the neighbourhood plan.

Objects to sites 469 and 09 being rejected for allocation as housing sites. Reasons: 1. Local Plan does not reflect local consultation outcomes that support sites 469 and 09 for residential development. 2. LP does not reflect the Borough Strategy (Doncaster Growing Together) and inclusive growth strategy - No specific reasons given. 3. No development Moorends is contrary to the NPPF - No specific reasons given. 4. LP does to reflect the objectively assessed housing need. 5. LP does not reflect the affordable housing need. 6. Combining the areas of Thorne and Moorends fails to meet the needs of both communities. 7. The proposed Housing allocation of Thorne and Moorends is disproportionate to the Employment land allocation. Says 52ha (11%) of Employment land allocation and 5.5% of the Housing allocation. 8. The EA have no objection to development in flood zone if floor level is set to 3.5 mt. (presume site 469) 9. No other statutory consultee objects to the site (presume site 469) 10. Both sites are sustainable - close to schools/health centre/retail and public transport. 11. LP should enable all communities to share growth. 12. LP should follow the principles of the Neighbourhood Plan.

Response:

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk.

Response:

Site 469 and 009 are in flood zone 3. No allocations are being made anywhere in the borough in areas of flood risk and this would constitute unacceptable development in an area of flood risk.
If I read this correctly you are asking for resubmission of any call for sites information submitted in 2014. There are two sites (adjacent to each other) which I feel should be taken forward into the next development plan. I have attached location plans (2) and copies of the original call for sites forms (2) which were submitted in 2014. The areas concerned are one of the few sites (and possibly the only sites) within Thorne & Moorends which are in Flood Zone 1. The areas are very close to the Town Centre. The areas have both previously been allocated as Residential Land in the UDP (1989?). Why have they not previously been developed? There are several historic reasons, but none which would prevent development now. We considered an application some time ago but the land was judged to be subject to the Greenfield Moratorium. (wrongly in my view but it matters little now). We were then told that the Council would not accept an outline application because the land neighbours (but is not within) the Thorne Conservation area. We did not want to risk making a full application (which would have to be detailed and expensive) without the comfort of knowing that the land would be allocated for housing. I can’t see why a Council would not accept a red-line outline application with all matters reserved, as the council still have control over all matters (including density and external appearance) but that is how it was. I did not argue the point - at least, not for too long. We then became otherwise engaged in building a LIDL supermarket on another piece of (immediately) adjacent land. This large retail store is now complete and trading and has made a valuable addition to the Thorne Town Centre retail offer. After that we started (and are now almost complete) on a small, very high-quality, residential development in Lock Lane, Thorne. These two sites should be our next project. The town council very much are in favour of these sites being developed (refer to Cllr S, Durant). I would request that they be included in the forthcoming development plan. We would like to keep an option open on the larger area for another retail development but for the most part the areas would be housing sites. (SEE EMAIL FOR PLANS)

Promoting 2 sites in Thorne for residential use. Both off St Nicholas Road Thorne. Site Ref:133 (proposed for allocation) as well as Site Ref:283 (Rejected). States that the Town Council is supportive of these proposed developments. Is considering the option of some retail development on site 133.

Support for allocation of Site Ref:133 is welcomed. Site Ref:283 is rejected as the site was considered and assessed through the Thorne-Moorends Neighbourhood Plan but it was rejected on the grounds of too much loss of trees. The site is designated as Residential Policy Area in the Local Plan which could allow some small scale development is policies in the plan can be met, including those in relation to loss of trees.
5.1 The subject site (and wider Thorne/Moorends settlement) has long been recognised as a sustainable location for growth. The Draft Sites and Policies DPD, 2014 identified the northern and southern section of the subject site as a residential allocation (Appendix 02). Clearly, at the point of the proposed allocation it was known that the sites were within Flood Zone 3 but the Council proposed to allocate the sites for housing despite this designation. (SEE EMAIL FOR Appendices) 5.2 The Housing and Economic Land Availability Assessments (2018) identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. It is considered that this constraint can be overcome in respect of flood risk, similar to other proposed housing allocations within Thorne.  

Overview 5.3 The subject site, which comprises an irregular piece of agricultural land measuring 32 ha in size, is located off Marshland Road, between the settlements of Thorne and Moorends. It is surrounded by residential land uses to the east and employment land uses to the west. Ferndale Drive residential area is located to the immediate north-east of the site, with the wider Moorends residential area beyond. A large employment corridor runs in a north-east to southwest direction (parallel with the nearby M18) to the west of the site.  

5.4 The site is extremely well positioned from a transport perspective, with the M18 just 540 metres to the west and Thorne North Railway Station just 1 kilometre to the south west. Indeed, Thorne is the only settlement outside of the Main Urban Area to have two train stations. The site is also within walking distance of both the Moorends and Thorne High Streets.  

5.5 Vehicular access is available from both the north (Bloomhill Road) and east (Marshland Road) of the site and from the south from Lands End Road/Alexandra Street and potentially Ivy Road. Vehicular access is also available from Willow Avenue to the east of Ivy Road and also Ferndale Drive at the North East of the site.  

5.6 The River Don is located approximately 1.1 km west of the site. This river flows in a northerly/north-easterly direction to its confluence with the River Ouse at Goole approximately 10.0 km north-east of the site.  

5.7 In policy terms, the site is located within the Countryside and therefore is in a sustainable location which can deliver new housing on a non-Green Belt site. Sustainability 5.8 As noted above, both the Council and the Thorne and Moorends Town Council have previously recognised the northern and southern section of the subject site as a sustainable location for the delivery of houses. The site’s potential to support new housing was initially acknowledged through the allocation of the site under the Sites and Policies DPD (2014) allocated the northern and southern section of the site to meet Thorne/Moorends strategic housing requirements.  

5.9 The Council has also continued to recognise the wider Thorne/Moorends settlement as one of the most sustainable locations for housing within the Borough: "Thorne & Moorends is one of the best scoring settlements against the Settlement Audit criteria?The combined population is 17,295, and the settlement is one of only three in the borough to have a town centre, which serves a wider catchment than just the town itself? Thorne and Moorends is the only settlement in the borough (outside of the Main Urban Area) to have two train stations’ (Settlement Profiles, Local Plan Evidence Base) Flood Risk 5.10 The draft Local Plan recognises that over two fifths of the Borough is located within areas at a medium to high risk of flooding from both the river Don and Trent catchments (Paragraph 2.26). This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development and are otherwise appropriate locations for growth in line with wider spatial planning objectives.  

5.11 Furthermore, in respect of Thorne the Council state: The Local Plan housing allocation at the Main Town of Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding. Although sufficient sites have been identified to meet the town’s local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range. This is due to the town’s size and population as being one of our largest communities outside of the Main Urban Area with strong sustainability credentials, for example: 2 train stations; frequent bus links; large town centre with excellent range of services and facilities; and no Green Belt constraints to growth. (Paragraph 16.142)  

5.12 Despite the suitability of the subject site and the settlement, the Council has not identified the subject site as a preferred location for housing within the local plan. The Council has instead chosen to dismiss this site on flood risk grounds.  

5.13 Don Parkinson has met with the Environment Agency (EA) to discuss the proposed housing development of the subject site. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The scale of the subject site is such that an increase in floor levels to +3.5m AOD can be achieved without any negative impact in townscape terms. Don Parkinson is currently instructing further modelling work to support an application for residential development on the subject site, which is likely to indicate floor levels lower than a +3.5mAOD increase can be achieved.  

5.14 It is considered that the Council should review the application of the Sequential Test in relation to the proposed allocation of sites for residential development within Thorne. Whilst it is accepted that some sites have prepared site specific Flood Risk Assessments and passed the Sequential Test, a number of the Thorne sites were scored similar to the subject site within the Level 1 Strategic Flood Risk Assessment. As such, it is considered that there should be the opportunity through the local plan process for other sustainable sites, such as the subject site, to demonstrate it can overcome flood risk issues and be allocated for housing development to:  

1 Ensure that the Council has fully explored the extent of non-Green belt land available for development before releasing Green Belt land; and  

2 Ensure that Thorne is allowed to grow in line with the settlement hierarchy and the Council’s own consideration of the proportion of growth that should rightly be apportioned to the town.  

Summary 5.15 The Publication Draft Plan is not positively prepared as it fails to provide the required housing allocations to meet a NPPF-compliant Plan period. Nor does it allocate sufficient land to meet the borough’s housing requirement. The draft Plan is unsound on the
basis of its failure to give full consideration to the growth potential of Thorne as one of the borough's most sustainable locations and has failed to comply with NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the draft Local Plan. 5.16 The subject site represents a wholly sustainable location for growth for the following reasons: - The site is situated within one of Doncaster's Main Towns and is thus a location within which there is strong policy support for future growth - The site is located outside of the Green Belt and its allocation will reduce the need to seek to allocate additional housing sites which are located within the Green Belt, in accordance with the NPPF. - The site is well-contained and represents an excellent example of a rounding-off edge of settlement housing site being bounded by existing residential development to the north, east and south and the railway line to the west. - The site is well-connected to the existing settlement centres of Thorne and Moorends by both road and by foot. - There is a technical solution (raised finished floor levels) to the sites flood zone designation that would overcome floor risk concerns that would prevent this site from being developed. Discussions are ongoing with the EA in respect of this matter. - The site is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Summary:

The subject site (northern and southern section) was a housing allocation in the Sites and Policies DPD even though it was known it is in Flood Zone 3. The HELAA identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. The flood risk constrain can be overcome. The site is an irregular piece of agricultural land measuring 32 ha in size. It is located off Marshland Road, between Thorne and Moorends and is surrounded by residential land uses to the east and employment land uses to the west. A large employment corridor runs in a north-east to southwest direction to the west of the site. It is extremely well positioned with the M18 to the west and Thorne North Railway Station to the south west. It is within walking distance of Moorends and Thorne High Streets. Vehicular access is available from both the north, east and south. The site is within the Countryside and therefore in a sustainable location which can deliver new housing on a non-Green Belt site. Regarding flood risk, the Local Plan recognises that over two fifths of the Borough is located within areas at a medium to high risk of flooding. This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development. Paragraph 16.142 of the Local Plan states that the ?housing allocation at Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding and that although sufficient sites have been identified to meet the town's local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range.7 Despite the suitability of the site and the settlement, the site has not identified as a housing allocation but instead been dismissed on flood risk grounds. However discussions are taking place with the Environment Agency and they are satisfied that if appropriate finished floor levels can be achieved then the proposals could be delivered satisfactorily to address any flood risk concerns. An increase in floor levels to +3.5m AOD can be achieved without any negative impact in townscape terms. Further modelling work has been instructed to support an application for residential development on the subject site, which is likely to indicate floor levels lower than a +3.5mAOD increase can be achieved. The application of the flood Risk Sequential Test should be reviewed. Some sites have prepared site specific Flood Risk Assessments and passed the Sequential Test therefore there should an opportunity for other sustainable sites to demonstrate that flood risk issues can be overcome. This would then: 1. Ensure that the Council has fully explored the extent of non-Green belt land available for development before releasing Green Belt land; and 2. Ensure that Thorne is allowed to grow in line with the settlement hierarchy and the Council's own consideration of the proportion of growth that should rightly be apportioned to the town. In summary, the Publication Draft Plan is not positively prepared as it fails to provide the required housing allocations to meet a NPPF-compliant Plan period. It does it allocate sufficient land to meet the borough's housing requirement and is unsound as it has failed to give full consideration to the growth potential of Thorne. It has failed to comply with the NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the Local Plan. The site represents a wholly sustainable location for growth for the following reasons: - It is situated within one of Doncaster's Main Towns and is a location with strong policy support for future growth; - It is outside the Green Belt and its allocation will reduce the need to allocate additional housing sites which are located within the Green Belt; - It is well-contained and is an example of a rounding-off edge of settlement housing site; - It well-connected to the existing settlement centres of Thorne and Moorends; - There is a technical solution to the site's flood zone designation that would overcome flood risk concerns. - It is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Response:

No new sites are being allocated in Flood Zone 3, in line with national policy. This approach is supported by the Environment Agency. This is an entirely new plan and so the Sites and Policies DPD is irrelevant to emerging Local Plan site selection. Although Thorne & Moorends does not reach the top of its housing range, it does comfortably get within it, and overall the borough an deliver the required amount of housing. The idea of ranges is that some areas can deliver more, some less (depending on local circumstances) and overall this balances out. The Green Belt Topic Paper demonstrates how the issue of flood risk in the borough was carefully considered when considering to release Green Belt land. Overall Green Belt release is relatively modest and only taken where exceptional circumstances can be demonstrated, as shown in the Green Belt Topic Paper.
Comment:

4.4 Draft Policy 6 identifies the proposed housing allocation which will deliver the housing requirement during the plan period. The proposed allocations are detailed within Tables H1 and H2 of the local plan and identify allocations with and without planning permission. The distribution of housing is considered to be based on the settlement hierarchy set out within Draft Policy 3. As drafted, Don Parkinson considers that the policy is unsound and is not consistent with national policy. The local plan is proposing to allocate a number of sites (without planning permission) currently in the Green Belt (including Site refs. 033, 115, 040, 501, 777, 141, 165/186, 929, 1028) before considering other sustainable sites located outside of the Green Belt (NPFF paragraphs 135, 136, 137). 4.5 Whilst Don Parkinson accept that Green Belt land will need to be released to support the future housing needs of Doncaster, it is considered these sites should only come forward and Green belt land released after the opportunities to allocate and develop on non-Green Belt land have been exhausted. 4.6 It is considered that the Council must seek to allocate additional housing on Countryside land in the first instance, particularly in sustainable locations, where the current levels of housing allocation fall short of the Plan's own growth expectations under the terms of the settlement hierarchy. The distribution of additional dwellings should follow the Council's settlement hierarchy and therefore consider further housing allocations within Main Towns such as Thorne. Don Parkinson is promoting a site within a sustainable location, which can help deliver additional housing on non-Green Belt land located on the edge of and well-related to a sustainable Main Town settlement. Further details are provided within Section 5 below.

Summary:

Policy 6 is unsound and not consistent with national policy. There are a number of allocated sites which are in the Green Belt and these have been considered before other sustainable sites outside of the Green belt. It is accepted that Green Belt release is needed but these sites should only come forward after opportunities on non-Green Belt land have been exhausted. The Council must seek to allocate additional countryside for housing in the first instance where the current levels of housing allocations fall short of the plans own growth expectations. The distribution of additional dwellings should follow the settlement hierarchy and consider further housing allocations within the Main Towns such as the site in question.

Response:

Green Belt release must be considered in the context of the need to deliver the agreed spatial strategy which aims to spread housing growth across the borough. Focussing solely on non - Green Belt and non - flood risk sites in reality results in a potential over focus on the south east of the borough, and a skewed development pattern. The Green Belt Topic Paper explores this, but a relatively small amount of Green Belt land is required in the borough, and only in locations where exceptional circumstances are justified, as set out in the Topic Paper. In the event of a failure to demonstrate a 5 year supply, Policy 2 sets out that countryside development may be acceptable, subject to caveats.
5.1 The subject site (and wider Thorne/Moorends settlement) has long been recognised as a sustainable location for growth. The Draft Sites and Policies DPD, 2014 identified the northern and southern section of the subject site as a residential allocation (Appendix 02). Clearly, at the point of the proposed allocation it was known that the sites were within Flood Zone 3 but the Council proposed to allocate the sites for housing despite this designation. (SEE EMAIL FOR Appendices) 5.2 The Housing and Economic Land Availability Assessments (2018) identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. It is considered that this constraint can be overcome in respect of flood risk, similar to other proposed housing allocations within Thorne. Overview 5.3 The subject site, which comprises an irregular piece of agricultural land measuring 32 ha in size, is located off Marshland Road, between the settlements of Thorne and Moorends. It is surrounded by residential land uses to the east and employment land uses to the west. Ferndale Drive residential area is located to the immediate north-east of the site, with the wider Moorends residential area beyond. A large employment corridor runs in a north-east to southwest direction (parallel with the nearby M18) to the west of the site. 5.4 The site is extremely well positioned from a transport perspective, with the M18 just 540 metres to the west and Thorne North Railway Station just 1 kilometre to the south west. Indeed, Thorne is the only settlement outside of the Main Urban Area to have two train stations. The site is also within walking distance of both the Moorehends and Thorne High Streets. 5.5 Vehicular access is available from both the north (Bloomhill Road) and east (Marshland Road) of the site and from the south from Lands End Road/Alexandra Street and potentially Ivy Road. Vehicular access is also available from Willow Avenue to the east of Ivy Road and also Ferndale Drive at the North East of the site. 5.6 The River Don is located approximately 1.1 km west of the site. This river flows in a northerly/north-easterly direction to its confluence with the River Ouse at Goole approximately 10.0 km north-east of the site. 5.7 In policy terms, the site is located within the Countryside and therefore is in a sustainable location which can deliver new housing on a non-Green Belt site. Sustainability 5.8 As noted above, both the Council and the Thorne and Moorends Town Council have previously recognised the northern and southern section of the subject site as a sustainable location for the delivery of houses. The site’s potential to support new housing was initially acknowledged through the allocation of the site under the Sites and Policies DPD (2014) allocated the northern and southern section of the site to meet Thorne/Moorends strategic housing requirements. 5.9 The Council has also continued to recognise the wider Thorne/Moorends settlement as one of the most sustainable locations for housing within the Borough: "Thorne & Moorends is one of the best scoring settlements against the Settlement Audit criteria?The combined population is 17,295, and the settlement is one of only three in the borough to have a town centre, which serves a wider catchment than just the town itself? Thorne and Moorends is the only settlement in the borough (outside of the Main Urban Area) to have two train stations" (Settlement Profiles, Local Plan Evidence Base) flood risk 5.10 The draft Local Plan recognises that over two fifths of the Borough is located within areas at a medium to high risk of flooding from both the river Don and Trent catchments (Paragraph 2.26). This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development and are otherwise appropriate locations for growth in line with wider spatial planning objectives. 5.11 Furthermore, in respect of Thorne the Council state: The Local Plan housing allocation at the Main Town of Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding. Although sufficient sites have been identified to meet the town's local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range. This is due to the town’s size and population as being one of our largest communities outside of the Main Urban Area with strong sustainability credentials, for example: 2 train stations; frequent bus links; large town centre with excellent range of services and facilities; and no Green Belt constraints to growth. (Paragraph 14.142) 5.12 Despite the suitability of the subject site and the settlement, the Council has not identified the subject site as a preferred location for housing within the local plan. The Council has instead chosen to dismiss this site on flood risk grounds. 5.13 Don Parkinson has met with the Environment Agency (EA) to discuss the proposed housing development of the subject site. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The scale of the subject site is such that an increase in floor levels to +3.5m AOD can be achieved without any negative impact in townscape terms. Don Parkinson is currently instructing further modelling work to support an application for residential development on the subject site, which is likely to indicate floor levels lower than a +3.5m AOD increase can be achieved. 5.14 It is considered that the Council should review the application of the Sequential Test in relation to the proposed allocation of sites for residential development within Thorne. Whilst it is accepted that some sites have prepared site specific Flood Risk Assessments and passed the Sequential Test, a number of the Thorne sites were scored similar to the subject site within the Level 1 Strategic Flood Risk Assessment. As such, it is considered that there should be the opportunity through the local plan process for other sustainable sites, such as the subject site, to demonstrate it can overcome flood risk issues and be allocated for housing development to: 1 Ensure that the Council has fully explored the extent of non-Green belt land available for development before releasing Green Belt land; and 2 Ensure that Thorne is allowed to grow in line with the settlement hierarchy and the Council’s own consideration of the proportion of growth that should rightly be apportioned to the town. Summary 5.15 The Publication Draft Plan is not positively prepared as it fails to provide the required housing allocations to meet a NPPF-compliant Plan period. Nor does it allocate sufficient land to meet the borough’s housing requirement. The draft Plan is unsound on the
basis of its failure to give full consideration to the growth potential of Thorne as one of the borough’s most sustainable locations and has failed to comply with NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the draft Local Plan. 5.16 The subject site represents a wholly sustainable location for growth for the following reasons: - The site is situated within one of Doncaster’s Main Towns and is thus a location within which there is strong policy support for future growth - The site is located outside of the Green Belt and its allocation will reduce the need to seek to allocate additional housing sites which are located within the Green Belt, in accordance with the NPPF. - The site is well-contained and represents an excellent example of a rounding-off edge of settlement housing site being bounded by existing residential development to the north, east and south and the railway line to the west. - The site is well-connected to the existing settlement centres of Thorne and Moorends by both road and by foot. - There is a technical solution (raised finished floor levels) to the sites flood zone designation that would overcome flood risk concerns that would prevent this site from being developed. Discussions are ongoing with the EA in respect of this matter. - The site is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Summary:
The subject site (northern and southern section) was a housing allocation in the Sites and Policies DPD even though it was known it is in Flood Zone 3. The HELAA identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. The flood risk constrain can be overcome. The site is an irregular piece of agricultural land measuring 32 ha in size. It is located off Marshland Road, between Thorne and Moorends and is surrounded by residential land uses to the east and employment land uses to the west. A large employment corridor runs in a north-east to southwest direction to the west of the site. It is extremely well positioned with the M18 to the west and Thorne North Railway Station to the south west. It is within walking distance of Moorends and Thorne High Streets. Vehicular access is available from both the north, east and south. The site is within the Countryside and therefore in a sustainable location which can deliver new housing on a non-Green Belt site. Regarding flood risk, the Local Plan recognises that over two fifths of the Borough is located within areas at a medium to high risk of flooding. This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development. Paragraph 16.142 of the Local Plan states that the ?housing allocation at Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding and that although sufficient sites have been identified to meet the town’s local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range.? Despite the suitability of the site and the settlement, the site has not identified as a housing allocation but instead been dismissed on flood risk grounds. However discussions are taking place with the Environment Agency and they are satisfied that if appropriate finished floor levels can be achieved then the proposals could be delivered satisfactorily to address any flood risk concerns. An increase in floor levels to +3.5m AoD can be achieved without any negative impact in townscape terms. Further modelling work has been instructed to support an application for residential development on the subject site, which is likely to indicate floor levels lower than a +3.5mAoD increase can be achieved. The application of the flood Risk Sequential Test should be reviewed. Some sites have prepared site specific Flood Risk Assessments and passed the Sequential Test therefore there should an opportunity for other sustainable sites to demonstrate that flood risk issues can be overcome. This would then: 1 Ensure that the Council has fully explored the extent of non-Green belt land available for development before releasing Green Belt land; and 2 Ensure that Thorne is allowed to grow in line with the settlement hierarchy and the Council’s own consideration of the proportion of growth that should rightly be apportioned to the town. In summary, the Publication Draft Plan is not positively prepared as it fails to provide the required housing allocations to meet a NPPF-compliant Plan period. It does it allocate sufficient land to meet the borough’s housing requirement and is unsound as it has failed to give full consideration to the growth potential of Thorne. It has failed to comply with the NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the Local Plan. The site represents a wholly sustainable location for growth for the following reasons: - It is situated within one of Doncaster’s Main Towns and is a location with strong policy support for future growth; - It is outside the Green Belt and its allocation will reduce the need to allocate additional housing sites which are located within the Green Belt; - It is well-contained and is an example of a rounding-off edge of settlement housing site; - It well-connected to the existing settlement centres of Thorne and Moorends; - There is a technical solution to the subject site’s flood zone designation that would overcome flood risk concerns. - It is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Response:
No new sites are being allocated in Flood Zone 3, in line with national policy. This approach is supported by the Environment Agency. This is an entirely new plan and so the Sites and Policies DPD is irrelevant to emerging Local Plan site selection. Although Thorne & Moorends does not reach the top of its housing range, it does comfortably get within it, and overall the borough an deliver the required amount of housing. The idea of ranges is that some areas can deliver more, some less (depending on local circumstances) and overall this balances out. The Green Belt Topic Paper demonstrates how the issue of flood risk in the borough was carefully considered when considering to release Green Belt land. Overall Green Belt release is relatively modest and only taken where exceptional circumstances can be demonstrated, as shown in the Green Belt Topic Paper.
### Summary:
Policy 6 is unsound and not consistent with national policy. There are a number of allocated sites which are in the Green Belt and these have been considered before other sustainable sites outside of the Green Belt. It is accepted that Green Belt land needs to be released to support the future housing needs of Doncaster, but these sites should only come forward after opportunities on non-Green Belt land have been exhausted. The Council must seek to allocate additional countryside for housing in the first instance where the current levels of housing allocation fall short of the Plan’s own growth expectations under the terms of the settlement hierarchy. The distribution of additional dwellings should follow the Council’s settlement hierarchy and therefore consider further housing allocations within Main Towns such as Thorne. Don Parkinson is promoting a site within a sustainable location, which can help deliver additional housing on non-Green Belt land located on the edge of and well-related to a sustainable Main Town settlement. Further details are provided within Section 5 below.

### Response:
Green Belt release must be considered in the context of the need to deliver the agreed spatial strategy which aims to spread housing growth across the borough. Focussing solely on non-Green Belt and non-flood risk sites in reality results in a potential over focus on the south east of the borough, and a skewed development pattern. The Green Belt Topic Paper explores this, but a relatively small amount of Green Belt land is required in the borough, and only in locations where exceptional circumstances are justified, as set out in the Topic Paper. In the event of a failure to demonstrate a 5 year supply, Policy 2 sets out that countryside development may be acceptable, subject to caveats.
5.1 The subject site (and wider Thorne/Moorends settlement) has long been recognised as a sustainable location for growth. The Draft Sites and Policies DPD, 2014 identified the northern and southern section of the subject site as a residential allocation (Appendix 02). Clearly, at the point of the proposed allocation it was known that the sites were within Flood Zone 3 but the Council proposed to allocate the sites for housing despite this designation. (SEE EMAIL FOR Appendices) 5.2 The Housing and Economic Land Availability Assessments (2018) identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. It is considered that this constraint can be overcome in respect of flood risk, similar to other proposed housing allocations within Thorne. Overview 5.3 The subject site, which comprises an irregular piece of agricultural land measuring 32 ha in size, is located off Marshland Road, between the settlements of Thorne and Moorends. It is surrounded by residential land uses to the east and employment land uses to the west. Ferndale Drive residential area is located to the immediate north-east of the site, with the wider Moorends residential area beyond. A large employment corridor runs in a north-east to southwest direction (parallel with the nearby M18) to the west of the site. 5.4 The site is extremely well positioned from a transport perspective, with the M18 just 540 metres to the west and Thorne North Railway Station just 1 kilometre to the south west. Indeed, Thorne is the only settlement outside of the Main Urban Area to have two train stations. The site is also within walking distance of both the Moorsends and Thorne High Streets. 5.5 Vehicular access is available from both the north (Bloomhill Road) and east (Marshland Road) of the site and from the south from Lands End Road/Alexandra Street and potentially Ivy Road. Vehicular access is also available from Willow Avenue to the east of Ivy Road and also Ferndale Drive at the North East of the site. 5.6 The River Don is located approximately 1.1 km west of the site. This river flows in a northerly/north-easterly direction to its confluence with the River Ouse at Goole approximately 10.0 km north-east of the site. 5.7 In policy terms, the site is located within the Countryside and therefore is in a sustainable location which can deliver new housing on a non-Green Belt site. Sustainability 5.8 As noted above, both the Council and the Thorne and Moorends Town Council have previously recognised the northern and southern section of the subject site as a sustainable location for the delivery of houses. The site’s potential to support new housing was initially acknowledged through the allocation of the site under the Sites and Policies DPD (2014) allocated the northern and southern section of the site to meet Thorne/Moorends strategic housing requirements. 5.9 The Council has also continued to recognise the wider Thorne/Moorends settlement as one of the most sustainable locations for housing within the Borough: "Thorne & Moorends is one of the best scoring settlements against the Settlement Audit criteria?The combined population is 17,295, and the settlement is one of only three in the borough to have a town centre, which serves a wider catchment than just the town itself? Thorne and Moorends is the only settlement in the borough (outside of the Main Urban Area) to have two train stations" (Settlement Profiles, Local Plan Evidence Base) Flood Risk 5.10 The draft Local Plan recognises that over two thirds of the Borough is located within areas at a medium to high risk of flooding from both the river Don and Trent catchments (Paragraph 2.26). This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development and are otherwise appropriate locations for growth in line with wider spatial planning objectives. 5.11 Furthermore, in respect of Thorne the Council state: The Local Plan housing allocation at the Main Town of Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding. Although sufficient sites have been identified to meet the town’s local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range. This is due to the town’s size and population as being one of our largest communities outside of the Main Urban Area with strong sustainability credentials, for example: 2 train stations; frequent bus links; large town centre with excellent range of services and facilities; and no Green Belt constraints to growth. (Paragraph 16.142) 5.12 Despite the suitability of the subject site and the settlement, the Council has not identified the subject site as a preferred location for housing within the local plan. The Council has instead chosen to dismiss this site on flood risk grounds. 5.13 Don Parkinson has met with the Environment Agency (EA) to discuss the proposed housing development of the subject site. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The scale of the subject site is such that an increase in floor levels to +3.5m AOD can be achieved without any negative impact in townscape terms. Don Parkinson is currently instructing further modelling work to support an application for residential development on the subject site, which is likely to indicate floor levels lower than a +3.5m AOD increase can be achieved. 5.14 It is considered that the Council should review the application of the Sequential Test in relation to the proposed allocation of sites for residential development within Thorne. Whilst it is accepted that some sites have prepared site specific Flood Risk Assessments and passed the Sequential Test, a number of the Thorne sites were scored similar to the subject site within the Level 1 Strategic Flood Risk Assessment. As such, it is considered that there should be the opportunity through the local plan process for other sustainable sites, such as the subject site, to demonstrate it can overcome flood risk issues and be allocated for housing development to: 1 Ensure that the Council has fully explored the extent of non-Green belt land available for development before releasing Green Belt land; and 2 Ensure that Thorne is allowed to grow in line with the settlement hierarchy and the Council’s own consideration of the proportion of growth that should rightly be apportioned to the town. Summary 5.15 The Publication Draft Plan is not positively prepared as it fails to provide the required housing allocations to meet a NPPF-compliant Plan period. Nor does it allocate sufficient land to meet the borough’s housing requirement. The draft Plan is unsound on the
basis of its failure to give full consideration to the growth potential of Thorne as one of the borough's most sustainable locations and has failed to comply with NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the draft Local Plan. 5.16 The subject site represents a wholly sustainable location for growth for the following reasons: - The site is situated within one of Doncaster's Main Towns and is thus a location within which there is strong policy support for future growth - The site is located outside of the Green Belt and its allocation will reduce the need to seek to allocate additional housing sites which are located within the Green Belt, in accordance with the NPPF. - The site is well-contained and represents an excellent example of a rounding-off edge of settlement housing site being bounded by existing residential development to the north, east and south and the railway line to the west. - The site is well-connected to the existing settlement centres of Thorne and Moorends by both road and by foot. - There is a technical solution (raised finished floor levels) to the sites flood zone designation that would overcome flood risk concerns that would prevent this site from being developed. Discussions are ongoing with the EA in respect of this matter. - The site is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Summary:
The subject site (northern and southern section) was a housing allocation in the Sites and Policies DPD even though it was known it is in Flood Zone 3. The HELAA identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. The flood risk constrain can be overcome. The site is an irregular piece of agricultural land measuring 32 ha in size. It is located off Marshland Road, between Thorne and Moorends and is surrounded by residential land uses to the east and employment land uses to the west. A large employment corridor runs in a north-east to southwest direction to the west of the site. It is extremely well positioned with the M18 to the west and Thorne North Railway Station to the south west. It is within walking distance of Moorends and Thorne High Streets. Vehicular access is available from both the north, east and south. The site is within the Countryside and therefore in a sustainable location which can deliver new housing on a non-Green Belt site. Regarding flood risk, the Local Plan recognises that over two fifths of the Borough is located within areas at a medium to high risk of flooding. This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development. Paragraph 16.142 of the Local Plan states that the "housing allocation at Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding and that although sufficient sites have been identified to meet the town's local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range." Despite the suitability of the site and the settlement, the site has not identified as a housing allocation but instead been dismissed on flood risk grounds. However discussions are taking place with the Environment Agency and they are satisfied that if appropriate finished floor levels can be achieved then the proposals could be delivered satisfactorily to address any flood risk concerns. An increase in floor levels to +3.5m AOD can be achieved without any negative impact in townscape terms. Further modelling work has been instructed to support an application for residential development on the subject site, which is likely to indicate floor levels lower than a +3.5m AOD increase can be achieved. The application of the flood Risk Sequential Test should be reviewed. Some sites have prepared site specific Flood Risk Assessments and passed the Sequential Test therefore there should an opportunity for other sustainable sites to demonstrate that flood risk issues can be overcome. This would then: 1 Ensure that the Council has fully explored the extent of non-Green belt land available for development before releasing Green Belt land; and 2 Ensure that Thorne is allowed to grow in line with the settlement hierarchy and the Council's own consideration of the proportion of growth that should rightly be apportioned to the town. In summary, the Publication Draft Plan is not positively prepared as it fails to provide the required housing allocations to meet a NPPF-compliant Plan period. It does it allocate sufficient land to meet the borough's housing requirement and is unsound as it has failed to give full consideration to the growth potential of Thorne. It has failed to comply with the NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the Local Plan. The site represents a wholly sustainable location for growth for the following reasons: - It is situated within one of Doncaster's Main Towns and is a location with strong policy support for future growth; - It is outside the Green Belt and its allocation will reduce the need to allocate additional housing sites which are located within the Green Belt; - It is well-contained and is an example of a rounding-off edge of settlement housing site; - It well-connected to the existing settlement centres of Thorne and Moorends; - There is a technical solution to the site's flood zone designation that would overcome flood risk concerns. - It is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Response:
No new sites are being allocated in Flood Zone 3, in line with national policy. This approach is supported by the EnvironmentAgency. This is an entirely new plan and so the Sites and Policies DPD is irrelevant to emerging Local Plan site selection. Although Thorne & Moorends does not reach the top of its housing range, it does comfortably get within it, and overall the borough an deliver the required amount of housing. The idea of ranges is that some areas can deliver more, some less (depending on local circumstances) and overall this balances out. The Green Belt Topic Paper demonstrates how the issue of flood risk in the borough was carefully considered when considering to release Green Belt land. Overall Green Belt release is relatively modest and only taken where exceptional circumstances can be demonstrated, as shown in the Green Belt Topic Paper.

Area: Chapter 16: Spatial Proposals

Policy: Main Town - Thorne-Moorends

Tests of Soundness: Positively prepared Justified Effective Legally Compliant Consistent with national

Comment:

4.4 Draft Policy 6 identifies the proposed housing allocation which will deliver the housing requirement during the plan period. The proposed allocations are detailed within Tables H1 and H2 of the local plan and identify allocations with and without planning permission. The distribution of housing is considered to be based on the settlement hierarchy set out within Draft Policy 3. As drafted, Don Parkinson considers that the policy is unsound and is not consistent with national policy. The local plan is proposing to allocate a number of sites (without planning permission) currently in the Green Belt (including Site refs. 033, 115, 040, 501, 777, 141, 165/186, 929, 1028) before considering other sustainable sites located outside of the Green Belt (NPFF paragraphs 135, 136, 137). 4.5 Whilst Don Parkinson accept that Green Belt land will need to be released to support the future housing needs of Doncaster, it is considered these sites should only come forward and Green belt land released after the opportunities to allocate and develop on non-Green Belt land have been exhausted. 4.6 It is considered that the Council must seek to allocate additional housing on Countryside land in the first instance, particularly in sustainable locations, where the current levels of housing allocation fall short of the Plan's own growth expectations under the terms of the settlement hierarchy. The distribution of additional dwellings should follow the Council's settlement hierarchy and therefore consider further housing allocations within Main Towns should as Thorne. Don Parkinson is promoting a site within a sustainable location, which can help deliver additional housing on non-Green Belt land located on the edge of and well-related to a sustainable Main Town settlement. Further details are provided within Section 5 below.

Summary:

Policy 6 is unsound and not consistent with national policy. There are a number of allocated sites which are in the Green Belt and these have been considered before other sustainable sites outside of the Green belt. It is accepted that Green Belt release is needed but these sites should only come forward after opportunities on non-Green Belt land have been exhausted. The Council must seek to allocate additional countryside for housing in the first instance where the current levels of housing allocations fall short of the plans own growth expectations. The distribution of additional dwellings should follow the settlement hierarchy and consider further housing allocations within the Main Towns such as the site in question.

Response:

Green Belt release must be considered in the context of the need to deliver the agreed spatial strategy which aims to spread housing growth across the borough. Focussing solely on non - Green Belt and non - flood risk sites in reality results in a potential over focus on the south east of the borough, and a skewed development pattern. The Green Belt Topic Paper explores this, but a relatively small amount of Green Belt land is required in the borough, and only in locations where exceptional circumstances are justified, as set out in the Topic Paper. In the event of a failure to demonstrate a 5 year supply, Policy 2 sets out that countryside development may be acceptable, subject to caveats.
5.1 The subject site (and wider Thorne/Moorends settlement) has long been recognised as a sustainable location for growth. The Draft Sites and Policies DPD, 2014 identified the northern and southern section of the subject site as a residential allocation (Appendix 02). Clearly, at the point of the proposed allocation it was known that the sites were within Flood Zone 3 but the Council proposed to allocate the sites for housing despite this designation. (SEE EMAIL FOR Appendices) 5.2 The Housing and Economic Land Availability Assessments (2018) identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. It is considered that this constraint can be overcome in respect of flood risk, similar to other proposed housing allocations within Thorne. Overview 5.3 The subject site, which comprises an irregular piece of agricultural land measuring 32 ha in size, is located off Marshland Road, between the settlements of Thorne and Moorends. It is surrounded by residential land uses to the east and employment land uses to the west. Ferndale Drive residential area is located to the immediate north-east of the site, with the wider Moorends residential area beyond. A large employment corridor runs in a north-east to south-west direction (parallel with the nearby M18) to the west of the site. 5.4 The site is extremely well positioned from a transport perspective, with the M18 just 540 metres to the west and Thorne North Railway Station just 1 kilometre to the south west. Indeed, Thorne is the only settlement outside of the Main Urban Area to have two train stations. The site is also within walking distance of both the Mooernds and Thorne High Streets. 5.5 Vehicular access is available from both the north (Bloomhill Road) and east (Marshland Road) of the site and from the south from Lands End Road/Alexandra Street and potentially Ivy Road. Vehicular access is also available from Willow Avenue to the east of Ivy Road and also Ferndale Drive at the North East of the site. 5.6 The River Don is located approximately 1.1 km west of the site. This river flows in a northerly/north-easterly direction to its confluence with the River Ouse at Goole approximately 10.0 km north-east of the site. 5.7 In policy terms, the site is located within the Countryside and therefore is in a sustainable location which can deliver new housing on a non-Green Belt site. Sustainability 5.8 As noted above, both the Council and the Thorne and Moorends Town Council have previously recognised the northern and southern section of the subject site as a sustainable location for the delivery of houses. The site’s potential to support new housing was initially acknowledged through the allocation of the site under the Sites and Policies DPD (2014) allocated the northern and southern section of the site to meet Thorne/Moorends strategic housing requirements. 5.9 The Council has also continued to recognise the wider Thorne/Moorends settlement as one of the most sustainable locations for housing within the Borough: "Thorne & Moorends is one of the best scoring settlements against the Settlement Audit criteria?The combined population is 17,295, and the settlement is one of only three in the borough to have a town centre, which serves a wider catchment than just the town itself? Thorne and Moorends is the only settlement in the borough (outside of the Main Urban Area) to have two train stations" (Settlement Profiles, Local Plan Evidence Base) Flood Risk 5.10 The draft Local Plan recognises that over two fifths of the Borough is located within areas at a medium to high risk of flooding from both the river Don and Trent catchments (Paragraph 2.26). This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development and are otherwise appropriate locations for growth in line with wider spatial planning objectives. 5.11 Furthermore, in respect of Thorne the Council state: The Local Plan housing allocation at the Main Town of Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding. Although sufficient sites have been identified to meet the town's local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range. This is due to the town’s size and population as being one of our largest communities outside of the Main Urban Area with strong sustainability credentials, for example: 2 train stations; frequent bus links; large town centre with excellent range of services and facilities; and no Green Belt constraints to growth. (Paragraph 16.142) 5.12 Despite the suitability of the subject site and the settlement, the Council has not identified the subject site as a preferred location for housing within the local plan. The Council has instead chosen to dismiss this site on flood risk concerns. 5.13 Don Parkinson has met with the Environment Agency (EA) to discuss the proposed housing development of the subject site. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The site is not shown as at risk of flooding but rather is at a medium to high flood risk. However, the EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns. The EA is satisfied that if appropriate finished floor levels can be achieved on site then the proposals could be delivered satisfactorily to address any flood risk concerns.
basis of its failure to give full consideration to the growth potential of Thorne as one of the borough's most sustainable locations and has failed to comply with NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the draft Local Plan. 5.16 The subject site represents a wholly sustainable location for growth for the following reasons: - The site is situated within one of Doncaster's Main Towns and is thus a location within which there is strong policy support for future growth - The site is located outside of the Green Belt and its allocation will reduce the need to seek to allocate additional housing sites which are located within the Green Belt, in accordance with the NPPF. - The site is well-contained and represents an excellent example of a rounding-off edge of settlement housing site being bounded by existing residential development to the north, east and south and the railway line to the west. - The site is well-connected to the existing settlement centres of Thorne and Moorends by both road and by foot. - There is a technical solution (raised finished floor levels) to the sites flood zone designation that would overcome floor risk concerns that would prevent this site from being developed. Discussions are ongoing with the EA in respect of this matter. - The site is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Summary:
The subject site (northern and southern section) was a housing allocation in the Sites and Policies DPD even though it was known it is in Flood Zone 3. The HELAA identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. The flood risk constrain can be overcome. The site is an irregular piece of agricultural land measuring 32 ha in size. It is located off Marshland Road, between Thorne and Moorends and is surrounded by residential land uses to the east and employment land uses to the west. A large employment corridor runs in a north-east to southwest direction to the west of the site. It is extremely well positioned with the M18 to the west and Thorne North Railway Station to the south west. It is within walking distance of Moorends and Thorne High Streets. Vehicular access is available from both the north, east and south. The site is within the Countryside and therefore in a sustainable location which can deliver new housing on a non-Green Belt site. Regarding flood risk, the Local Plan recognises that over two fifths of the Borough is located within areas at a medium to high risk of flooding. This includes Main Towns such as Thorne which is considered to be in a very sustainable locations for development. Paragraph 16.142 of the Local Plan states that "the "housing allocation at Thorne-Moorends is constrained by a lack of potential development sites not at high risk of flooding and that although sufficient sites have been identified to meet the town's local needs housing, and some economic-growth led housing as well, were it not for this physical constraint to plan-making then the Main Town would have seen an allocation towards the top of the growth range.". Despite the suitability of the site and the settlement, the site has not identified as a housing allocation but instead been dismissed on flood risk grounds. However discussions are taking place with the Environment Agency and they are satisfied that if appropriate finished floor levels can be achieved then the proposals could be delivered satisfactorily to address any flood risk concerns. An increase in floor levels to +3.5m AOD can be achieved without any negative impact in townscape terms. Further modelling work has been instructed to support an application for residential development on the subject site, which is likely to indicate floor levels lower than a +3.5m AOD increase can be achieved. The application of the flood risk Sequential Test should be reviewed. Some sites have prepared site specific Flood Risk Assessments and passed the Sequential Test therefore there should an opportunity for other sustainable sites to demonstrate that flood risk issues can be overcome. This would then: 1 Ensure that the Council has fully explored the extent of non-Green belt land available for development before releasing Green Belt land; and 2 Ensure that Thorne is allowed to grow in line with the settlement hierarchy and the Council's own consideration of the proportion of growth that should rightly be apportioned to the town. In summary, the Publication Draft Plan is not positively prepared as it fails to provide the required housing allocations to meet a NPPF-compliant Plan period. It does it allocate sufficient land to meet the borough's housing requirement and is unsound as it has failed to give full consideration to the growth potential of Thorne. It has failed to comply with the NPPF by not considering non-Green Belt land before allocating substantive areas of Green Belt for development. The absence of the subject site as an allocation for housing development is a failure of the Local Plan. The site represents a wholly sustainable location for growth for the following reasons: - It is situated within one of Doncaster's Main Towns and is a location with strong policy support for future growth; - It is outside the Green Belt and its allocation will reduce the need to allocate additional housing sites which are located within the Green Belt; - It is well-contained and is an example of a rounding-off edge of settlement housing site; - It well-connected to the existing settlement centres of Thorne and Moorends; - There is a technical solution to the site's flood zone designation that would overcome flood risk concerns. - It is of a size and location capable of supporting a sustainable and viable mix of housing types, tenures and sizes.

Response:
No new sites are being allocated in Flood Zone 3, in line with national policy. This approach is supported by the Environment Agency. This is an entirely new plan and so the Sites and Policies DPD is irrelevant to emerging Local Plan site selection. Although Thorne & Moorends does not reach the top of its housing range, it does comfortably get within it, and overall the borough an deliver the required amount of housing. The idea of ranges is that some areas can deliver more, some less (depending on local circumstances) and overall this balances out. The Green Belt Topic Paper demonstrates how the issue of flood risk in the borough was carefully considered when considering to release Green Belt land. Overall Green Belt release is relatively modest and only taken where exceptional circumstances can be demonstrated, as shown in the Green Belt Topic Paper.
4.4 Draft Policy 6 identifies the proposed housing allocation which will deliver the housing requirement during the plan period. The proposed allocations are detailed within Tables H1 and H2 of the local plan and identify allocations with and without planning permission. The distribution of housing is considered to be based on the settlement hierarchy set out within Draft Policy 3. As drafted, Don Parkinson considers that the policy is unsound and is not consistent with national policy. The local plan is proposing to allocate a number of sites (without planning permission) currently in the Green Belt (including Site refs. 033, 115, 040, 501, 777, 141, 165/186, 929, 1028) before considering other sustainable sites located outside of the Green Belt (NPFF paragraphs 135, 136, 137). 4.5 Whilst Don Parkinson accept that Green Belt land will need to be released to support the future housing needs of Doncaster, it is considered these sites should only come forward and Green belt land released after the opportunities to allocate and develop on non-Green Belt land have been exhausted. 4.6 It is considered that the Council must seek to allocate additional housing on Countryside land in the first instance, particularly in sustainable locations, where the current levels of housing allocation fall short of the Plan’s own growth expectations under the terms of the settlement hierarchy. The distribution of additional dwellings should follow the Council’s settlement hierarchy and therefore consider further housing allocations within Main Towns should as Thorne. Don Parkinson is promoting a site within a sustainable location, which can help deliver additional housing on non-Green Belt land located on the edge of and well-related to a sustainable Main Town settlement. Further details are provided within Section 5 below.
Summary:
This Representation consists of a standard letter response that was submitted by 256 people stating that they do not support housing allocations in the west of Moorends on Bloomhill Road. The letters include direct quotes from the draft Thorne & Moorends Neighbourhood Plan and states that they do not agree with the Local Plan or Neighbourhood Plan. The area is high flood risk and the raising of the site to achieve the necessary mitigation will put existing property at more risk, as well as the wider village, and result in overlooking. The site would be an extension to the village rather than infill. The land is locked by the railway and existing properties. The infrastructure at Moorends is not sufficient to cope with the development (utilities, schools, GPs, and the roads would need widening). The site is greenfield and would result in the loss of wildlife (deer, frogs and newts).

Response:
The site(s) being objected to are rejected allocations in the Local Plan.
If I read this correctly you are asking for resubmission of any call for sites information submitted in 2014. There are two sites (adjacent to each other) which I feel should be taken forward into the next development plan. I have attached location plans (2) and copies of the original call for sites forms (2) which were submitted in 2014. The areas concerned are one of the few sites (and possibly the only sites) within Thorne & Moorends which are in Flood Zone 1. The areas are very close to the Town Centre. The areas have both previously been allocated as Residential Land in the UDP (1989?). Why have they not previously been developed? There are several historic reasons, but none which would prevent development now. We considered an application some time ago but the land was judged to be subject to the Greenfield Moratorium. (wrongly in my view but it matters little now). We were then told that the Council would not accept an outline application because the land neighbours (but is not within) the Thorne Conservation area. We did not want to risk making a full application (which would have to be detailed and expensive) without the comfort of knowing that the land would be allocated for housing. I can't see why a Council would not accept a red-line outline application with all matters reserved, as the council still have control over all matters (including density and external appearance) but that is how it was. I did not argue the point - at least, not for too long. We then became otherwise engaged in building a LIDL supermarket on another piece of (immediately) adjacent land. This large retail store is now complete and trading and has made a valuable addition to the Thorne Town Centre retail offer. After that we started (and are now almost complete) on a small, very high-quality, residential development in Lock Lane, Thorne. These two sites should be our next project. The town council very much are in favour of these sites being developed (refer to Cllr S, Durant). I would request that they be included in the forthcoming development plan. We would like to keep an option open on the larger area for another retail development but for the most part the areas would be housing sites. (SEE EMAIL FOR PLANS)

There are two adjacent sites which should be included in the next development plan. One of only a few sites locally which does not flood. Historic reasons why they have not yet been developed, including the Greenfield Moratorium, being told the Council will not support due to proximity to the conservation area, did not wish to risk making a full application. Two sites should be the next project in this area following Lidl and housing nearby, has town council support and should be in the development plan.

Response:
Site 133 has been allocated in the Local Plan. Support welcome.
We support many elements of this Policy which will assist in the continued regeneration of Doncaster. We particularly welcome the intention to:

- transform the Minster canalside and waterfront area into a vibrant mixed-use destination in its own right
- provide better opportunities for the independent and specialist retail and commercial sectors, particularly around Hallgate and the market
- create high-quality streets, public spaces and routes which are safe to walk and cycle between key destinations, particularly at Doncaster Waterfront, Doncaster Market, Doncaster Minster and St Sepulchre Gate West
- bring about environmental improvements to the character and appearance of the streetscape, especially at the station gateway, Hall Gate Triangle, and the Minster quarter
- create inviting and safe places for pedestrians, cyclists and disabled people, with special emphasis on reducing the severance caused by the Trafford Way/Church Way/Cleveland Street corridor and improving links to Doncaster Minster, St Sepulchre Gate West (including the railway station), Doncaster Waterfront
- encourage the retention and restoration of traditional shop fronts.

These measures will all help to deliver the Plan’s Objectives regarding quality of place and the historic environment.

Response:

Support welcomed.
Tests of Soundness:

Comment:

We support many elements of this Policy which will assist in the continued regeneration of Doncaster. We particularly welcome the intention to:
- transform the Minster canal side and waterfront area into a vibrant waterside quarter that reinforces and celebrates the minster (St George’s Church) and its relationship with the waterfront and the rest of the town centre
- Transform the station forecourt into a dynamic urban square which will provide a strong sense of arrival
These measures will all help to deliver the Plan’s Objectives regarding quality of place and the historic environment

Response:
Support welcomed
We note that the policy refers to the intention to identify the areas affected upon the Proposals Map. 2 Minster Canalside - We welcome the policy aims to regenerate and transform this area, including the general principles identified. 5 Doncaster Waterfront - We welcome the general policy aims. However, we do note that the text refers to the formation of a new footbridge over the river Don. Without full details of the location of this bridge, or its design, it is not possible for the Trust to confirm whether its installation would impact negatively upon the operation of the river as a navigable waterway. As a result, there is a significant risk that the policy, as worded to include the provision of the bridge, might not be able to be delivered. For example, the river Don is classified as a commercial waterway, and clearance of up to 5.5m may be required in order to accommodate commercial craft. The existing policy text is written in a fashion that indicates that the bridge is deliverable. This could be misleading to decision makers, and could mean that risks (concerning risks to navigation) could be negated by decision makers, which would make the Local Plan less effective in meeting aims to promote sustainable transport upon the Don Navigation (e.g. Publication Draft policy 13, part D). We note that the Local Planning Authority, in their summary report of comments received and their response to our comment (reference 03089), have highlighted that the policy text for Doncaster Waterfront was to be amended to include "where feasible a footbridge". However, this change does not appear to have been carried forward to the publication document. 7 Marshgate - We welcome reference to ecological networks and the formation of informal recreation routes, which we believe would improve access from the site to the waterway corridor, and could both enhance and encourage greater use of the strategic green infrastructure. PROPOSED CHANGE We note that the Local Planning Authority, in their summary report of comments received and their response to our comment (reference 03089), have highlighted that the policy text for Doncaster Waterfront was to be amended to include "where feasible a footbridge". However, this change does not appear to have been carried forward to the publication document. We recommend that this alteration is carried out, as it will make it clearer to decision makers about the need for an assessment of the feasibility of a footbridge, and would make the Local Plan more effective.

Support is given to Part 2 (Minster Canal side) and Part 7 (Marshgate). General support is given to Part 5 (Doncaster Waterfront). However, it is noted that the text refers to the formation of a new footbridge over the river Don. Without full details of the location of this bridge, or its design, it is not possible for the Canal & River Trust to confirm whether its installation would impact negatively upon the operation of the river as a navigable waterway. As a result, there is a significant risk that the policy, as worded to include the provision of the bridge, might not be able to be delivered. The existing policy text is written in a fashion that indicates that the bridge is deliverable. This could be misleading to decision makers, and could mean that risks (concerning risks to navigation) could be negated by decision makers, which would make the Local Plan less effective in meeting aims to promote sustainable transport upon the Don Navigation (e.g. Publication Draft policy 13, part D). It is noted that the Local Planning Authority, in their summary report of comments received to the 2018 Consultation highlighted that the policy text for Doncaster Waterfront was to be amended to include "where feasible a footbridge". However, this change does not appear to have been carried forward to the publication document. We recommend that this alteration is carried out, as it will make it clearer to decision makers about the need for an assessment of the feasibility of a footbridge, and would make the Local Plan more effective.

Response:

Noted and agree, additional wording proposed as per the suggested wording (Main Modification) provided and as follows: Policy 69, para 2 : New and improved pedestrian and cycle links, crossing facilities and greenspaces (including a new urban park and where feasible a footbridge over the river Don) will also be created, connecting the waterfront with the rest of the town centre.

Policy 70 within the Local Plan Publication Draft relates to the Unity regeneration project. "New mixed-use development, between Stainforth, Dunsville, Dunscroft and Hatfield, known as unity and as shown on the Policies Map and Inset Map, will be supported?". Under the Submission Policies Map, FCC's Bootham Lane landfilling is allocated as within a mixed use development area associated with the Unity regeneration project. Policy 70 goes onto state that "? B. The visual openness of the Bootham Lane landfill site and surrounding area will be safeguarded and promoted; proposals that would enhance its landscape, amenity, countryside, recreation and biodiversity will be supported?". Paragraph 16.90 goes onto state that "?There are also significant opportunities for further green infrastructure and leisure uses (such as a country park) on land to the south of the railway line, around the Bootham Lane Landfill Site, and north of the railway line (Colliery Tip), which was not subject to the outline planning application, or identified on the Masterplan, and is therefore additional to the 80 hectares as referenced in the Policy". FCC supports the wider Unity regeneration project and the mixed-use allocation over their Bootham Lane landfilling. It is considered that the FCC's Bootham Lane site could be integral to the wider Unity project by providing green infrastructure and leisure uses, and a site for potential low carbon renewable energy sources, once the landfill area has been fully restored. In addition, FCC have aspirations to develop the non-landfilled areas/former operational areas of the site for commercial uses to compliment the proposed development within the Unity project. There is also the opportunity to improve the wider regeneration projects green credentials with a possible solar farm development on the future restored landfill areas. Landfilling has been undertaken by FCC at the Bootham Lane landfill site for a number of years and is currently permitted to continue to February 2020 followed by site restoration works and aftercare. As waste input volumes have reduced from the original projections, FCC will be seeking to safeguard the remaining void on site and intend on submitting a planning application to extend the period over which landfilling can take place. The site is therefore considered valuable from a waste management perspective and the ongoing operations will also enable longer term development platforms to be formed. FCC support the safeguarding of Bootham Lane Landfill within the Barnsley, Doncaster and Rotherham Joint Waste Plan (adopted 2012). FCC seek to safeguard the continuation of Bootham Lane Landfill operations including the closure period, consisting of restoration, aftercare and gas / leachate management, which should not be compromised by the development of the wider Unity regeneration project.

Support noted.
NaCSBA's mission is to substantially increase the number of people able to build or commission their own home and they believe that opportunities should arise for prospective self and custom-builders through the Local Plan process. Custom & Self-Build Current custom and self-build (CSB) policy in England has evolved over the last 5 years with the Self-build and Custom Housebuilding Bill, receiving Royal Assent on 26 March 2015. The Bill is now an Act of Parliament. This Bill seeks to establish a register of prospective custom builders who are seeking a suitable serviced plot of land and requires LPAs to keep an up to date register of people within the district that wish to build their own home. NaCSBA are pleased to note that Doncaster Council do keep a self-build register which prospective self-builders can sign up to via the council’s website. The Right to Build legislation clearly demonstrates how the government intends for LPAs to respond to the requirements set out in the NPPF when drawing up new Local Plans. LPAs should take a proactive position to providing land and should undertake rigorous and effective evidence gathering to measure custom and self-build need in their districts. And LPAs that do not do so can expect their Local Plans to be found unsound at examination. The Housing and Planning Act 2016 conferred on LPAs the responsibility to “Give suitable development permission in respect of enough serviced plots of land to meet the demand for self-build and custom house building in the authority’s area?” The Act established that evidence of such demand would be provided by registers which LPAs are required to keep in accordance with the 2015 Self-Build and Custom Housebuilding Act. Paragraph 61 of the revised National Planning Policy Framework (NPPF) sets out the requirement for Local Planning Authorities (LPA) to plan for a wide choice of high quality homes to support sustainable communities and provide greater opportunities for home ownership. It goes on to state: "The size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes)."

Furthermore, the NPPF makes clear how small and medium sized sites can make an important contribution to meeting the housing requirement of an area. The identification and promotion of small and medium sites as per the NPPF paragraph 61 can be promoted in order to support the needs of custom and self-builders. Recent appeal decisions such as a proposal for the erection of up to 5 self-build dwellings at The Meadows, Bromsberrow Heath, Ledbury (APP/P1615/W/18/3213122) have highlighted and confirmed the weight that should be afforded to self-build as a material consideration in determining planning applications, which in turn demonstrates the importance of CSB in housing delivery. As a consequence of the policy and guidance outlined above, it seems clear that LPAs have a duty conferred upon them to actively meet the needs of those wishing to build their own homes. CSB in the Doncaster Local Plan whilst NaCSBA are pleased to note that the Local Plan review does contain reference to self-build, it is concerned that the provisions set out in Policy 8 and Policy 70 do not discharge the LPA's duties towards meeting the needs of those that wish to build their own home. Policy 70 promises the delivery of 0.4ha worth of land to be made available for self-build plots. At 40 dwellings per hectare this policy will ensure the delivery or just 16 self-build units or less than one a year over the plan period. Policy 8 pays lip-service to paragraph 61 of the NPPF by stating that the LPA will ‘encourage’ the provision of opportunities to accommodate custom build and self-build homes 'on housing allocations and elsewhere', but it does not set out the manner in which this will be achieved. In reality, the policy does not give certainty that any additional service self-build plots will be delivered over and above the 16 units promised by Policy 70. In order to meet the requirements, set out by national policy, it is important that the Local Plan is proactive and progressive in this area. It is not considered sufficient to simply include a policy that simply states that the LPA will ‘encourage’ delivery of building plots for custom and self-build. Instead, in order for the plan to be considered to be Positively prepared and Consistent with national policy it must demonstrate specifically and in some detail how it will ensure that the needs of custom and self-builders are to be met. PROPOSED CHANGE Recommendations There are a number a different policy mechanisms that could be employed to ensure a steady and sufficient provision of CSB opportunities within the borough, which would mean that the plan could be considered to meet needs of those wishing to build their own home, including: - Setting a requirement of, for example, 5% of units on large sites to be delivered as serviced self-build plots. In the case of oversupply a clause could be included stating that plots that are not sold within a certain timeframe (6-12 moths) can be built out by the developer - Allocating further small and medium-scale sites within the Plan specifically for custom and self-build to deliver a greater number of units than 16. - Allowing custom and self-build units outside, but adjacent to, settlement boundaries where the site is sustainable and does not represent an incursion into the open countryside. Particularly where the proposal would result in the ‘rounding off’ of the developed form of the settlement and the applicant is on the self-build register. It is considered that in order for the plan to be considered Positively prepared and Consistent with national policy at examination, it will be necessary to include at least two of the above recommendations in order to demonstrate that the delivery of self-build opportunities can meet the demand of those wishing to build their own home.

See previous comment summary.

Response:
See response to Policy 8.
These representations have been prepared on behalf of Gerald Eve's client, Waystone Hargreaves Land LLP, which is a joint venture (JV) between Waystone (a construction and development specialist) and Hargreaves Land (the property development division of Hargreaves Services plc), herein referred to as "the JV". Both parties previously submitted representations as part of earlier rounds of consultation relating to the Council's emerging Local Plan. These current representations are made on behalf of the joint venture and in respect of its land interests west of the M18 motorway at Hatfield and Stainforth - known as the Unity Regeneration Project - and additional land immediately to the north east, known as Ashfields Tip. Since the Council's previous round of consultation, which closed in October 2018, it is noted that many of the comments and proposed changes set out by the JV partners have been incorporated into the latest Publication Version. These changes are welcomed and fully supported; however, there remain some areas of concern regarding the structure and content of Policy 70, which require further attention to ensure the policy is entirely sound in line with the tests of paragraph 35 of the National Planning Policy Framework (NPPF). As the policy correctly notes, the Unity site benefits from a major long-term planning permission spanning some 25 years (planning reference: 15/01300/OUTA). The current policy criteria aim to carry over some of the key details of that outline permission to promote the effective and timely delivery of the regeneration project, including the preparation of reserved matters applications. Significant progress has been made since the previous round of consultation with works starting in April 2019 to implement the link road between junction 5 of the M18 motorway and Waggons Way in Stainforth, which are expected to open in summer/autumn 2020. This key piece of infrastructure will unlock the development site and will facilitate the delivery of new homes and commercial land uses, which could potentially start from 2020. In addition, efforts are being made towards implementing a separate planning permission relating to the delivery of a new marina forming part of Unity Life. As progress on site begins to gather momentum it is considered essential that the emerging policy for the Unity site is coherent alongside the planning permission and avoids the introduction of any additional restriction or ambiguity that may slow down the delivery of the regeneration project at a later date. Importantly in this instance, the extant planning permission and its conditions. As such, it is considered that the following policy criteria require attention to ensure the Local Plan is sound: - 70 A(1) - as drafted, the policy indicates a restricted delivery rate of 1,015 dwellings during the plan period up to 2035, which could equate to an annual build out rate as low as 60-70 dwellings per annum (dpa) if adhered to (based on 1,015 homes divided by 15 years). The planning permission already controls the rate of delivery through condition 17, which allows up to 1,200 homes to be built up to 1 January 2028, a potential delivery rate in the region of 170 dpa, more than twice that of the draft policy. Whilst it is difficult to predict the actual build out rate over the periods (either to 2028 in line with condition 17 or to 2035 in line with the plan period), it is considered necessary to align the policy with the terms of the outline permission. In this case, the policy should state that up to 1,200 dwellings could be delivered up to 1 January 2018. It is noted that the Council has included the lower delivery rate as part of its housing trajectory, which is separate to the aims of Policy 70. There is no objection to the Council's housing trajectory as this has been prepared in consideration of realistic borough-wide factors and which can function independently of Policy 70. Moreover, the Council's housing trajectory can be reviewed and updated within its annual monitoring report. - 70 A(1) * - criterion A(1) ends with a footnote reference which is set out in bold at the bottom of Policy 70, and which has been added since the previous round of consultation in 2018. The footnote effectively sets out the provisions of condition 43 of the outline planning permission. The reference to self-build homes within the criterion is considered appropriate but the footnote is unnecessary, as the planning permission controls this aspect of delivery. If the footnote has been added purely for information purposes, it should be moved into the Explanation rather than set out within the policy itself. - 70 A(2) - there is an apparent discrepancy between the areas of land noted within the criterion and the figures stated within Table 16. As drafted, the policy criterion indicates that 33.6 ha of land may be delivered for the specified land uses over the plan period with a total of 56 ha completed over the lifetime of the development. However, Table 16 indicates total net developable land for the regeneration project to be equal to 63.86 ha (i.e. the sum of rows 4-8 relating to Class B uses). Clarification is therefore required as to how the total figure within the policy have been calculated, otherwise the total land area should be amended to reflect the figures in Table 16 (i.e. 63.86ha). - 70 E - criterion E is a copy of condition 42 of the outline planning permission. It is considered unnecessary to include a copy of the condition within policy, as it is a detailed development control matter specifically imposed upon the planning permission. It is therefore suggested that a reference to the requirement is moved to the policy's Explanation, confirming that this forms part of the site's planning permission and must therefore be adhered to. If the Inspector considers it to be necessary to keep the provision within the policy itself, it is suggested that the wording be changed to objectify the requirement rather than using the condition's wording verbatim - suggested wording is provided within Section 7 below. - Paragraph 16.92 - the paragraph indicates an objective of delivering 20.2 ha of employment development for the Unity Energy phase, comprising employment and energy focussed land uses. This objective would be more effective if included within the policy itself, albeit some re-wording would be necessary as suggested in Section 7 below. However, a portion of this land (16 ha), is also identified within the Barnsley, Doncaster & Rotherham Joint Waste Plan (March 2012) as a New Strategic Site under Policy WCS3. To ensure consistency between the Development Plan Documents, it is suggested that a cross reference is added into the text to make clear that part of the land is also identified as being suitable for waste-related development, regardless of whether it
is moved into the policy. The points below briefly consider how the above points align with the tests of soundness set out by the NPPF:

- Effective - the issues identified above including the inconsistencies between the draft policy and the extant outline planning permission make the policy less effective than if it was fully aligned with the permission. In its current form, the policy would result in ambiguity during the determination of reserved matters applications, particularly if the delivery rates for housing were higher than the current draft policy allows.
- Consistent with national policy - paragraph 16(d) of the NPPF clearly indicates that local plan policies should be "clearly written and unambiguous, so it is evident how a decision-maker should react to development proposals." In its current form, the aspects of Policy 70 highlighted above could result in confusion between the established parameters, conditions and planning obligations of the outline planning permission and the policy's criteria. This has the potential to adversely affect the progress of reserved matters applications during the plan period. The changes indicated above and proposed within Section 7 below are considered necessary to ensure the policy is sound. PROPOSED CHANGE Further to the issues highlighted within Section 6 above, the following proposed modifications are considered necessary to make the policy sound:

- Policy 70 A(1) - amend the first line to read "up to 1,200 new homes up to 1 January 2028, and?"
- Policy 70 A(1)* - delete the asterisk from the end of criterion A(1) and the accompanying footnote relating to the submission of reserved matters, as this requirement is sufficiently controlled by the outline planning permission.
- Policy 70 A(2) & Table 16 - clarification is required between the areas stated within the criterion and the corresponding rows within Table 16.
- Policy 70 E - delete the criterion as the requirement is adequately controlled by the outline planning permission.

Should the inspector consider it to be necessary to keep this as an objective within the policy itself it is considered necessary to re-word the criterion along the lines of: "To ensure the development does not harm the supply or occupation of gypsy and traveller sites in the borough, the developer will be responsible for identifying an alternative site of a similar size, proportion and standard to accommodate 20 gypsy and traveller pitches to be transferred to the Council or its nominee in accordance with the planning permission." - Policy 70 new criterion - add new criterion to clarify the objective currently indicated in paragraph 16.92 of the Policy's Explanation, along the lines of: "70[x] - Unity Energy comprises approximately 20.2 hectares of land located north of the railway line and adjacent to the former Hatfield Colliery. The land will be used to deliver employment uses, including energy focused opportunities. Up to 16 hectares may also be used to support waste-related facilities to support the objectives of the Barnsley, Doncaster & Rotherham Joint Waste Plan."; or, in such instance as the Inspector considers it necessary to keep this as an objective within the policy itself it is considered necessary to re-word the criterion along the lines of: "To ensure the development does not harm the supply or occupation of gypsy and traveller sites in the borough, the developer will be responsible for identifying an alternative site of a similar size, proportion and standard to accommodate 20 gypsy and traveller pitches to be transferred to the Council or its nominee in accordance with the planning permission."

Summary:
Policy 70 should be amended to better reflect the site's outline planning permission and progress made since approval. The following policy criteria require attention to ensure the Local Plan is sound: Policy 70 A(1) - amend the first line to read "up to 1,200 new homes up to 1 January 2028, and?" to reflect condition 17 of the outline planning permission. (The lower delivery rate is included in the Local Plan housing trajectory, which is separate to the aims of Policy 70. There is no objection to the Council's housing trajectory as this has been prepared in consideration of realistic borough-wide factors and which can function independently of Policy 70. Moreover, the Council's housing trajectory can be reviewed and updated within its annual monitoring report.) Policy 70 A(1)* - delete the asterisk from the end of criterion A(1) and the accompanying footnote relating to the submission of reserved matters, as this requirement is sufficiently controlled by the outline planning permission. Policy 70 A(2) & Table 16 - clarification is required between the areas stated within the criterion and the corresponding rows within Table 16. There is an apparent discrepancy between the areas of land noted within the criterion and the figures stated within Table 16. As drafted, the policy criterion indicates that 33.6 ha of land may be delivered for the specified land uses over the plan period with a total of 56 ha completed over the lifetime of the development. However, Table 16 indicates total net developable land for the regeneration project to be equal to 63.86 ha (i.e. the sum of rows 4-8 relating to Class B uses). Clarification is therefore required as to how the total figure within the policy have been calculated, otherwise the total land area should be amended to reflect the figures in Table 16 (i.e. 63.86ha). Policy 70 E - delete the criterion as the requirement is adequately controlled by the outline permission (condition 42). Should the inspector consider it to be necessary to keep this as an objective within the policy itself it is considered necessary to re-word the criterion along the lines of: "To ensure the development does not harm the supply or occupation of gypsy and traveller sites in the borough, the developer will be responsible for identifying an alternative site of a similar size, proportion and standard to accommodate 20 gypsy and traveller pitches to be transferred to the Council or its nominee in accordance with the planning permission."

Response:
Policy 70 A(1) - Paragraph 16.89 of the draft Local Plan sets out the position in terms of the outline permission and condition attached to such consent, which clarifies the number of proposed dwellings (i.e. 1200 by 2028). The policy as drafted, sets out a revised trajectory for the purposes of housing land supply at the settlement to ensure sufficient sites are allocated to meet the plan period requirement. Retaining the 1200 dwellings figure by 2028 would require 150 dwellings pa to be completed every year from April 2020 at the time of drafting, the Council are still awaiting reserved matters applications. Factoring in, time determination, lead-in times, starts on site etc the 1,015 is considered to be more realistic yield. That said, the 1200 dwellings could come quicker, as per the condition of the outline permission. Policy 70 A(1)* - The footnote is helpful clarity. Policy 70 A(2) & Table 16 - The schedule of 'B type' employment uses in table 16 does equate to a slightly higher total employment land supply of circa 66 hectares for the Unity site compared to the figure (55ha) quoted in the policy and supporting table E3 and explanatory text. It is proposed to make minor amendments to the local plan document to refer to the larger circa 66ha figure therefor for clarity and consistency, but this does not affect the plan period supply from this development which is still 33.6ha within the plan period. Policy 70 E - Part E of the policy it considered to provide helpful clarity in the delivery. To ensure there is no overall net loss to the Gypsy and Traveller pitches in order to ensure sufficient pitches are available to meet the community needs in the borough. Policy 70 new criterion - The Barnsley, Doncaster and Rotherham Joint Waste Plan is not to be superseded by Doncaster's Local Plan. Therefore, waste matters are currently dealt with
Tests of Soundness:

Comment:

In addition to the land forming the extent of the masterplan area as shown within Figure 17 of the Publication Version, Hargreaves Land has previously submitted representations in respect of its land interests immediately north east of the masterplan area, which is commonly referred to as Ashfields Tip. Attachment 1 to these representations shows the extent and location of the land (annotated “Former Ashfields Tip - Potential Special Policy Area”), in relation to parcels of land within the former Hatfield Colliery site. The land equates to approximately 35 ha and represents an area, over tipped with colliery spoil originating from the former Hatfield Colliery. (SEE EMAIL FOR Attachment) The land currently lies outside of the allocated regeneration site area as shown on the Policies Map, immediately to the east of Unity Life, and which is bound by Kirton Lane to the south and the M18 motorway to the east. Whilst the JV does not consider the exclusion of the land to necessarily result in a direct conflict with the national tests of soundness, it believes that Policy 70 and the plan overall would be improved by its inclusion. The land forms an important part of the JV’s longer-term strategy, which is likely to extend well beyond the plan period, with potential to deliver further housing or employment uses to support the current masterplan. Spatially, the land in question forms a natural extension of the existing masterplan and which could also help to expand the green infrastructure associated with Unity Life. As it is recognised as a longer-term opportunity and one for beyond the plan period, it is considered appropriate to identify the land as Safeguarded Land. This approach would be:

- Consistent with national policy - specifically, the inclusion of Ashfields Tip would make the most effective use of land in line with the objectives of NPPF paragraph 118, and would also support the consideration of a “minimum 15 year period” from the point at which the local plan is adopted, in line with paragraph 22.
- Justified - the additional land would support the long-term regeneration of the Unity masterplan area and which would relieve the longer-term pressures on other areas of undeveloped land across the borough. Following this approach is considered to be of little consequence to the wider objectives of the Local Plan and would not have a direct impact on the Council’s land supply calculations.
- Moreover, it would provide additional land supply that could be drawn upon following a formal future review of the Local Plan (i.e. every 5 years in line with NPPF paragraph 33). PROPOSED CHANGE - Ashfields Tip - add a sub-heading after the main policy criteria stating, “Ashfields Tip”, below which a new paragraph should state something along the lines of: “The land at Ashfields Tip as shown on the Policies Map is to be safeguarded for development beyond the plan period. The land is suitably located to extend the Unity Regeneration Project area as it is confined to the spatial restrictions by way of existing infrastructure and allocated development land. The land should only be allocated following a formal review of the Local Plan’s strategic policies or may be considered for development where evidence clearly supports the early release of additional land to satisfy the Council’s objectively assessed needs.” - Ashfields Tip: Policies map amendment - amend the Policies Map and Key to identify the extent of the Ashfields Tip site. In making these changes, there are no adverse implications for any other strategic or non-strategic policies within the Publication Version.

Summary:

Include land (known as Ashfields Tip) to the north-east of the Unity Masterplan area within the Masterplan area as Policy 70 and the plan overall would be improved by its inclusion as this land forms an important part of the site’s longer-term strategy, which is likely to extend well beyond the plan period, with potential to deliver further housing or employment uses to support the current masterplan. Spatially, the land in question forms a natural extension of the existing masterplan and which could also help to expand the green infrastructure associated with Unity Life. Add a sub-heading after the main policy criteria stating, “Ashfields Tip”, below which a new paragraph should state something along the lines of: “The land at Ashfields Tip as shown on the Policies Map is to be safeguarded for development beyond the plan period. The land is suitably located to extend the Unity Regeneration Project area as it is confined to the spatial restrictions by way of existing infrastructure and allocated development land. The land should only be allocated following a formal review of the Local Plan’s strategic policies or may be considered for development where evidence clearly supports the early release of additional land to satisfy the Council’s objectively assessed needs.” Policies map amendment - amend the Policies Map and Key to identify the extent of the Ashfields Tip site.

Response:

The settlements housing requirement has already been hugely exceeded through the allocations identified in the Local Plan. In the context of there now been a statutory requirement to review Local Plans at least every 5 years, it is considered justified to re-visit at such a stage and/or for consideration through the emerging Stainforth Neighbourhood Plan.
We support many elements of this Policy which will assist in the continued regeneration of Mexborough. We particularly welcome the intention to:- - bring environmental improvements to enhance the streetscape - retain and sympathetically restore, Mexborough’s historic buildings (particularly in the Conservation Area); - encourage the retention and restoration of traditional shop fronts; These measures will all help to deliver the Plan’s Objectives regarding quality of place and the historic environment.

Response:
Support welcomed
Tests of Soundness:

Comment:
We support many elements of this Policy which will assist in the continued regeneration of Thorne. We particularly welcome the intention to:

- provide opportunities to improve connectivity between Finkle Street and King Street and develop the Market Place as a key focal point of the town centre;
- restore/bring listed buildings and other buildings of local importance back into active use;
- protect and enhance the setting of the scheduled monument (Peel Motte and Bailey Castle);
- respect the historic pattern and character of buildings and spaces within or on the edge of the town centre;
- encourage the retention and restoration of traditional shop fronts. These measures will all help to deliver the Plan’s Objectives regarding quality of place and the historic environment.

Summary:
'Sound'. We support many elements of this Policy which will assist in the continued regeneration of Thorne. We particularly welcome the intention to:

- provide opportunities to improve connectivity between Finkle Street and King Street and develop the Market Place as a key focal point of the town centre;
- restore/bring listed buildings and other buildings of local importance back into active use;
- protect and enhance the setting of the scheduled monument (Peel Motte and Bailey Castle);
- respect the historic pattern and character of buildings and spaces within or on the edge of the town centre;
- encourage the retention and restoration of traditional shop fronts. These measures will all help to deliver the Plan’s Objectives regarding quality of place and the historic environment.

Response:
Support welcomed.
It is considered that the Plan is sound in relation to the allocation of Site 925 which has outline planning permission for residential development and a reserved matters approval for approximately half of the site. Mr Fielder, the owner of the site and the person on whose behalf these representations are made, has entered into a contract for the sale of the whole 1.78ha site for residential and related development (i.e. a care home). Detailed pre-application negotiations have taken place between the developer and Council Planning and Highways Officers and the landowner has been formally notified that a planning application for the development has been lodged. At the date of these representations the application has not been posted on the Council’s public access website so we cannot give a reference for it. These representations, however, confirm that the site is available and that the development is deliverable within the Plan period.

**Summary:**
Re site 925 - land off Highfield Road Askern. o Site with Outline planning permission for residential development. o Support allocation of site.

**Response:**
Support for site allocation is noted.
Comment: 2.69 We object to the 'Development Limits' boundary of Askern as set out in the policies map. Recommendation 2.70 We recommend that the development limits boundary of Askern is amended to include the represented site as well as the adjacent former Askern Saw Mill site. Justification 2.71 In order to safeguard development growth within the settlement boundary.

Summary:
- Object to the 'Development Limits' boundary of Askern as set out in the policies map. 
- Recommend the development limits boundary of Askern is amended to include the represented site as well as the adjacent former Askern Saw Mill site.

Response:
Development limits have been drawn in line with the methodology and has been subject to previous consultation. There are no exceptional circumstances identified to include the Green Belt site adjacent to the Saw Mills either as an allocation or within the development limits for the settlement.
2.37 Policy 6 sets out the housing allocations that will help deliver the spatial strategy, meet the needs for housing and support sustainable communities. 2.38 As mentioned previously, the site is currently shown to be retained within the Green Belt within the draft Plan and has not been included as a Housing allocation. DLP objects to this approach as it is considered to be unsound and it is proposed that the land is allocated as a Housing allocation. 2.39 Paragraph 4.44 states that the new urban edge allocations have of necessity required land previously designated in the UDP as Green Belt or Countryside; and resulted in amendments to town and village development boundaries to create new defensible boundaries. 2.40 This process however has not been undertaken in an appropriate manner as it has omitted sites which clearly represent reasonable alternatives to the selected allocations. As such the assessment of the impact on the Green Belt of these proposed allocations, dealt with collectively under Policy 6 then individually in Tables H1, H2 and H3 (set out in detail in Chapter 16), has not been undertaken on a sound basis. 2.41 The approach to the assessment is described in detail in Appendix 1 of this objection. Our objection to the selected housing and mixed use allocations which are to be removed from the Green Belt is that the assessment of the impact of removing these sites from the Green Belt and their subsequent development is unsound. This is based on the fact that the approach assessed sites in an inappropriate manner which failed to take into account the nature and impact of the sites being considered for release. 2.42 In the case of land Adjacent Askern Saw Mill, the impact of the Green Belt was assessed as part of a much larger site of some 571.2 hectares which did not share the same Green Belt characteristics as the represented site itself. If the redevelopment of "land Adjacent Askern Saw Mill" only was to be assessed, then the impact of the Green Belt would be considerably different. This is illustrated by our assessment of the Green Belt function of the site in appendix 1. Recommendation 2.43 It is proposed that the site is removed from the Green Belt and allocated as a Housing allocation for up to 180 dwellings (based on a developable area of 6ha at a rate of 30 dwellings per hectare). Justification 2.44 For the reasons set out above and within the appended SPRU report, it is correct to accommodate growth based on meeting requirements under the full assessment of jobs-led growth (1,073 dpa) for the full plan period to 2035 and for a new allocation to be made at land adjacent to Askern Saw Mill to assist in meeting this requirement in the most sustainable way.

Summary:
Policy 6: Housing Allocations (Strategic Policy). Tables H1, H2, H3 and Chapter 16 Re land adjacent to allocated site: 1. Propose the site is removed from the Green Belt and allocated as a Housing Allocation. 2. If this site was assessed (GB review) on its own rather than as part of a larger site then the outcome would be different and the site could be released from the GB. 3. An assessment is provided to show that site can be removed from the GB.

Response:
Request noted. As set out in the Housing Topic Paper and Green Belt Topic Paper, no additional sites are required in Askern as the settlement can meet and surpass its housing targets, and there are no exceptional circumstances to justify any Green Belt release here.
Tests of Soundness:

4.1 This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Mr Ian Murray in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. 4.2 The SPRU report which can be found at Appendix 2, concludes that significantly greater levels of potentially suitable growth could be provided at different tiers of the settlement hierarchy. We also recommend the consideration of Tier 3 - Service Towns and Larger Villages as potential locations for additional growth, where sustainable growth opportunities are identified. Overall, the Local Plan should be updated to reflect the housing requirement of 1,073 dwellings per annum for the plan period to 2035. 4.3 The site is currently included within the Green Belt in the draft Local Plan document. DLP strongly objects to this designation. For the reasons set out within this representation it is recommended that the site be removed from the Green Belt. 4.4 The Council has demonstrated the Exceptional Circumstances for Green Belt release within the evidence base supporting the Local Plan. Within this context, DLP has undertaken a Green Belt assessment which specifically assesses the site against the five purposes of the Green Belt has also been prepared. This assessment demonstrates why the site should be allocated for development. 4.5 The site at “Land adjacent to the former Askern Saw Mill” has not been previously considered through the Local Plan process, however it is suitable, available and deliverable as a Housing allocation as confirmed in this representation and supported by the planning permission for mixed use development of the land to the west of the site at Askern Saw Mill. 4.6 The benefits of allocating the site for development include: - Supporting the growth of Askern and safeguarding development within the settlement boundary; - The retention and safeguarding of the provision of open space to the north of the site; - Supporting the adjacent built development; and - Providing an opportunity to deliver residential and possibly employment uses, which will complement the adjacent mixed use development site. 4.7 On the grounds of ensuring that a sound plan is progressed, DLP Planning object to policies 2, 3, 4, 6, 8, 29, 30, 66 and the policies map, as drafted and make a number of recommendations for amendments to ensure the soundness of the Plan.
1.1 This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Mr Ian Murray in response to the publication of the draft Doncaster Local Plan for consultation (Regulation 19). 1.2 This representation relates to “Land adjacent Askern Saw Mill” which remains available, developable and deliverable for mixed use development (residential and employment). (SEE EMAIL FOR Figure 1: Aerial view of site) 1.3 The site is currently included within the Green Belt in the draft Local Plan document. DLP strongly objects to this designation. For the reasons set out within this representation it is recommended that the site be removed from the Green Belt and allocated for Housing with the area of existing open space located to the north of the site remaining as Open Space. 1.4 The Council has demonstrated the Exceptional Circumstances for Green Belt release within the evidence base supporting the Local Plan. Within this context, DLP has undertaken a Green Belt assessment which specifically assesses the Askern Saw Mill site against the five purposes of the Green Belt has also been prepared. This assessment is referenced herein (and included at Appendix 1) to demonstrate why the site should be allocated for development. 1.5 This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site. 1.6 DLP Planning Ltd expressly objects to policies 2, 3, 4, 6, 8, 29, 30, 66 and the proposals map as currently drafted and requests the amendments set out herein, in order to ensure that the plan is sound. 1.7 The structure of this representation will be as follows: - Comments on the draft Local Plan in Section 2; - Site Assessment in Section 3; and - Conclusion in Section 4.
3.1 The site comprises undeveloped land extending to approximately 8.6ha and situated to the south east of the settlement of Askern and immediately adjacent the former Askern Saw Mill, as illustrated in Figure 2. (SEE EMAIL FOR Figure 2: Aerial view of site) 3.2 The site comprises of a single field bound by the railway line to the east, Stream Dike to the south and open space to the north. The site is located immediately adjacent the former Askern Saw Mills site which benefits from outline planning permission for a mixed use scheme comprising of the erection of up to 220 dwellings, Use Class A1/A3/AS use and Use Class B1(c) and B2 use (ref: 08/01077/OUTA). A subsequent reserved matters application is currently awaiting a decision which details access, appearance, landscaping, layout and scale for mixed use redevelopment of land (ref: 16/01651/REMM). 3.3 The area of land to the north of the site is currently used as public open space and will be retained as open space. 3.4 Given that the site and Askern Saw Mills are under the same ownership, access to the site can be achieved from Doncaster Road, through the former Askern Saw Mills site. The site is accessible to the strategic motorway network. The M62 runs to the north of Askern and can be accessed from the A19 (Doncaster Road), the A19 also provides direct access to the centre of Doncaster located to the south of Askern. 3.5 The site is situated within Flood Zone 2 according to Environment Agency’s flood risk map, an area at a medium risk of flooding. The adjacent site at Askern Saw Mill is also situated within Flood Zone 2, however planning permission has been granted for a mixed use scheme on this site and although it was initially objected to by the Environmental Agency on flood risk grounds, however an amended Flood Risk Assessment was submitted which resulted in the Environmental Agency accepting the amendment. 3.6 The site is allocated as Green Belt in the adopted Doncaster UDP. Policy ENV3 outlines the principles for this policy area and sets out criteria under which development may be undertaken are the relevant policies for the site. 3.7 It is considered that this policy guidance is outdated and no longer reflects the strategic and economic requirements which are relevant to the area today. It is evident that there is a need to provide additional housing, employment and investment in the locality and improve the overall physical quality of the environment. 3.8 Overall, it is considered that the site is large enough to accommodate uses including housing and possibly employment, with the opportunity to maintain a green landscape buffer around the site to the east and south. The development can form a logical extension to the adjacent former Askern Saw Mill site, which is being redeveloped into a mixed use scheme. 3.9 A Green Belt review of the site can be found at Appendix 1 of this representation which specifically assesses the Askern Saw Mill site against the five purposes of the Green Belt. This assessment demonstrates that when assessed as an individual site, the site scores differently than when it has been assessed as part of the wider “North 1” site within the Stage 1 Review. To summarise, when assessed individually against the criteria, the site performs better overall than when assessed as part of “North 1” and therefore represents a site that has the potential to be removed from the Green Belt. 3.10 Proposed Housing Allocation 3.10 In order to ensure that there is a sufficient and suitable supply of land to deliver their housing and previously developed land objectives, Local Planning Authorities are required at the local level to identify broad locations and specific sites which will enable a continuous delivery of housing for at least 15 years. Local Planning Authorities are also required to identify a further five years supply of specific housing sites for years 6-10 that are developable, and if possible specific sites for years 11-15 but if not broad locations for future growth. 3.11 Specifically, Local Planning Authorities should identify sufficient deliverable sites for the first five years, to be considered deliverable sites, at the point of adoption of the Local Plan. 3.12 For sites to be delivered they need to be: available (the site is available now), suitable (development of the site would contribute to the creation of sustainable communities) and achievable (there is a reasonable prospect that housing on the site will be deliverable on the site within 5 years). Availability 3.13 The site is within Mr Murray’s ownership with a strong interest in bringing the site forward for a housing-led development. There is also interest in developing the site from Empire Property Concepts, who are currently redeveloping the adjacent Askern Saw Mill site. Deliverability 3.14 Given the size of the site and its potential capacity, the site provides opportunities to make notable contributions to the housing provision in Askern such as affordable housing, education and open space (subject to viability). 3.15 It is considered that this site can be comprehensively developed to deliver residential and possibly employment uses, which will complement the adjacent mixed use development site. Suitability 3.16 There are no physical constraints to suggest that carefully designed residential development could not be brought forward during the plan period. Capacity 3.17 Based on a developable area of 6ha, the site could deliver up to 180 dwellings (based on 30 dwellings per hectare). This quantum of development would also provide for landscaping and new public open space to the north of the site, if appropriate. Sustainability 3.18 There are several local facilities and services located in close proximity to the site, including, but not limited to, the following: - Askern Spa Junior School (approx. 770m) - Askern Moss Road Infant School (approx. 700m) - Spa Academy Askern (approx. 1km) - Co-op Food (approx. 875m) - Heron Foods (approx. 710m) - Post Office (approx. 785m) - Lakeside cafe (approx. 640m) - Askern Community Library (approx. 690m) - The Lakeside Practice (approx. 630m) There are also several bus stops within close proximity of the site in the Askern settlement. The stops provide access to the following services: - Service 405: Selby - Doncaster Town Centre - Service 408: Pontefract - Doncaster - Service 51a: Askern - Doncaster - Service 412: Carcroft - Doncaster

Summary:

Site Assessment Re proposed site adjacent to (allocated) Saw Mills o Includes extensive site assessment to justify site being removed from GB and allocated for housing. Greenbelt o provides a ‘review’ of the GB assessment. Also included o ‘Soundness Assessment of the Proposed Jobs-Led Housing Requirement and Implications for the Proposed Spatial Strategy’
Response:

Request noted. This is the first time that the site has been put forward for consideration through the local plan process. As set out in the Housing Topic Paper and Green Belt Topic Paper, no additional sites are required in Askern as the settlement can meet and surpass its housing targets, and there are no exceptional circumstances to justify any Green Belt release here. The site is also flood risk so likely to have failed the flood risk sequential test.

Area: Chapter 16: Spatial Proposals

Policy: Service Town/Village - Auckley-Hayfield Green

Tests of Soundness:

Comment:

9.1 Draft LP policy 7 (DSA) does not allocate two areas of land which are part of the Airport Masterplan proposals. These parcels of land comprise the following: - Land at Gatehouse Lane (Site No. 1010) This site is envisaged in the Airport Masterplan (and within the Regulation 18 consultation version) for residential development (see attached plan contained in Appendix 5). Peel requests that this land is removed from the countryside and allocated for residential development. Development Limits should be amended to accommodate this allocation. The Site lies immediately adjacent to the east of Hayfield Green which forms part of the wider Auckley-Hayfield Green settlement and an outline planning application for the development of up to 150 dwellings is currently being prepared by Peel and is due to be submitted to the Council shortly. The site has been previously worked as a sand and gravel quarry and derelict buildings remain in a proportion of the site. It is located on the edges of Hayfield Green, with strong defensible boundaries defined by physical development to the north, east and south and presents a perfectly logical continuation of the Hayfield Green settlement. Conversely, it no longer presents a logical area of open countryside having been separated from countryside in all directions. The development will facilitate the delivery of a well-planned sustainable residential development which will provide a range of dwelling types and tenure in line with market demand, including affordable homes, within Hayfield Green. Furthermore, it offers an opportunity to provide additional public open space that is accessible to both existing and future residents and will also strengthen the character and definition of the settlement boundary in this part of Hayfield Green. (SEE EMAIL FOR Appendix) 9.2 These requests are considered appropriate as we consider that a more positive approach should be taken to ensure that the LP provides for the full level of housing need that the housing assessment identifies could reasonably be associated with supporting the economic growth objectives of the Council. This would require the Plan to provide for closer to 1,060 homes per annum, or close to 15,900 homes over the plan period. Notwithstanding this, and independent of future housing at DSA as controlled by draft Policy 7, Peel contend that there is currently a shortfall of 300 committed homes within the immediate vicinity of DSA as a result of the reduced number of 450 homes now built out at Hurst Lane under application reference 09/02048/OUTM. The LP Housing needs assessment assumes full delivery of the 750 units consented on this site; if the committed shortfall not provided elsewhere in the vicinity, then there will be an under-delivery against the numbers assumed in the LP evidence base. 9.3 The recent resolution to grant outline planning permission (subject to S106 agreement) at the March 2019 DMBC Planning Committee of up to 140 new homes on land off Hayfield Lane (application reference 18/01748/OUTM), has meant that this shortfall has now effectively been reduced to 160 new homes. The principle of applying this shortfall on separate residential sites was fully accepted by the Council when the Hayfield Lane application was reported to and considered by the March 2019 Planning Committee. The Committee report stated: ‘Policy CS6 of the Core Strategy recognises that the 750 dwellings approved off Hurst Lane will provide an additional source of housing to the allocations set out in Policy CS2, and any further housing growth at Hayfield Green would not be in accordance with the Core Strategy’ In practice however, the reserved matters permissions for the residential development have resulted in a shortfall of 300 dwellings at the Hurst Lane site, with the density of development being much lower than anticipated. As such, the principle of 750 homes to serve the airport and its business park is applicable, and given that the 750 homes are accounted for as additional to Doncaster’s housing growth allocations under Core Strategy policies CS2 and CS6, this planning application will go some way to making up this shortfall whilst not breaching the Councils wider housing delivery numbers. On this basis, given that development has already been previously been approved on the application site, and that there is headroom in the expected 750 dwellings to be delivered in this settlement as set out in the Core Strategy, it is considered that the principle of residential development is acceptable in this location.’ 9.4 Therefore, although now reduced to reflect the resolution to grant outline permission 18/01748/OUTM, a committed shortfall of 160 new homes serving the DSA area still remains to be delivered at Hayfield Green in line with Policy CS6 of the adopted development plan. The allocation of Gatehouse Lane as a residential site would ensure that this shortfall is positively planned and accounted for in the draft LP. This would also ensure the risk of other third party developers speculatively to ‘claim’ this shortfall and submitting speculative planning applications on sites where are less sustainable and suitable than Gatehouse Lane.

Summary:

The Local Plan fails to allocate Site 1010 - Gatehouse Lane: This site is in the airport masterplan for residential development. It should be removed from the countryside and allocated for residential use. It lies to the east of Hayfield Green and an outline for up to 150 dwellings is currently being prepared by Peel to be submitted shortly. The site was previously a quarry and derelict buildings remain on a portion of the site. It is on the edge of Hayfield Green with strong, defensible boundaries and development to the east, south and west, meaning it is a logical conclusion to Hayfield Green. It is no longer logical countryside as it is separated in all directions from this. It could deliver a sustainable housing site with a range of housing types in line with market demand, including affordable homes, as well as open space, and will strengthen the character and definition of the settlement. The requests are appropriate as it is a more positive approach to providing the full level of housing need that the housing assessment identifies could be reasonably associate with supporting the Council's economic aims, i.e. 1,060 dpa required. Notwithstanding this and independent of housing controlled in Policy 7, Peel contend there is a shortfall of 300 homes as a result of the reduction from 750 units to 450 units on the Hurst Lane application (09/02048/OUTM). The LP Housing needs assessment assumes full delivery of the 750 units consented on this site; if the committed shortfall not provided elsewhere in the vicinity, then there will be an under-delivery against the numbers assumed in the LP evidence base. Recent outline permission for 140 homes at land on Hayfield Lane reduced this to 160 dwellings. The
principal of applying this shortfall was considered at planning committee, the report said: 'Policy CS6 of the Core Strategy recognises that the 750 dwellings approved off Hurst Lane will provide an additional source of housing to the allocations set out in Policy CS2, and any further housing growth at Hayfield Green would not be in accordance with the Core Strategy?In practice however, the reserved matters permissions for the residential development have resulted in a shortfall of 300 dwellings at the Hurst Lane site, with the density of development being much lower than anticipated. As such, the principle of 750 homes to serve the airport and its business park is applicable, and given that the 750 homes are accounted for as additional to Doncaster's housing growth allocations under Core Strategy policies CS2 and CS6, this planning application will go some way to making up this shortfall whilst not breaching the Councils wider housing delivery numbers. On this basis, given that development has already been previously been approved on the application site, and that there is headroom in the expected 750 dwellings to be delivered in this settlement as set out in the Core Strategy, it is considered that the principle of residential development is acceptable in this location.'

Response:

Auckley - Hayfield Green can meet and surpass its housing target via existing commitments. There is no need to allocate any further land here. Additionally, there is further housing linked to jobs adjacent to the airport. Re: the shortfall and whether this can be made up on other sites - this was a matter related to that planning application and was a matter of judgement for the decision maker / committee at the time. It is not part of Local Planning Policy and therefore irrelevant to decision making for the Local Plan, where the focus is on delivering the specified growth in the places it is needed. The fact less will be delivered at Hurst Lane than originally anticipated has been factored in to housing calculations. The site is excluded from the development limits as per the development limits methodology.

Policy: Service Town/Village - Auckley-Hayfield Green

Tests of Soundness:

Comment:

9.1 Draft LP policy 7 (DSA) does not allocate two areas of land which are part of the Airport Masterplan proposals. These parcels of land comprise the following: - Land to the north of the Doncaster to Lincoln railway line (Site No.946) This site is proposed under the Masterplan to deliver a community rail station, parking and residential development. Peel requests this land be removed from the open countryside and allocated for residential/mixed use development. Development Limits should be amended to accommodate this allocation. More detailed representations are being submitted by the current landowner, with whom Peel have held discussions. Allocation of Site No.946 would assist with delivery of the community rail station in the event this rail option is required (this would be the case only if the preferred rail option to connect DSA to both the ECML and Doncaster to Lincoln line did not come to fruition). 9.2 These requests are considered appropriate as we consider that a more positive approach should be taken to ensure that the LP provides for the full level of housing need that the housing assessment identifies could reasonably be associated with supporting the economic growth objectives of the Council. This would require the Plan to provide for closer to 1,060 homes per annum, or close to 15,900 homes over the plan period. Summary:

Policy 7 does not allocate two areas of land in the masterplan: Land north of Doncaster to Lincoln railway line (946): This site is in the masterplan as a community rail station with parking and residential. This should be removed from the open countryside and allocated for residential / mixed use development. Development limits should be amended to include this. The landowner is making more detailed representations. The allocation will assist with the delivery of a community rail station in the event this option is required (if the ECML preferred line does not happen). The requests are appropriate as it is a more positive approach to providing the full level of housing need that the housing assessment identifies could be reasonably associate with supporting the Council’s economic aims, i.e. 1,060 dpa required. Notwithstanding this and independent of housing controlled in Policy 7, Peel contend there is a shortfall of 300 homes as a result of the reduction from 750 units to 450 units on the Hurst Lane application (09/02048/OUTM). The LP Housing needs assessment assumes full delivery of the 750 units consented on this site; if the committed shortfall not provided elsewhere in the vicinity, then there will be an under-delivery against the numbers assumed in the LP evidence base. Recent outline permission for 140 homes at land on Hayfield Lane reduced this to 160 dwellings. The principal of applying this shortfall was considered at planning committee, the report said: ‘?Policy CS6 of the Core Strategy recognises that the 750 dwellings approved off Hurst Lane will provide an additional source of housing to the allocations set out in Policy CS2, and any further housing growth at Hayfield Green would not be in accordance with the Core Strategy?In practice however, the reserved matters permissions for the residential development have resulted in a shortfall of 300 dwellings at the Hurst Lane site, with the density of development being much lower than anticipated. As such, the principle of 750 homes to serve the airport and its business park is applicable, and given that the 750 homes are accounted for as additional to Doncaster’s housing growth allocations under Core Strategy policies CS2 and CS6, this planning application will go some way to making up this shortfall whilst not breaching the Councils wider housing delivery numbers. On this basis, given that development has already been previously been approved on the application site, and that there is headroom in the expected 750 dwellings to be delivered in this settlement as set out in the Core Strategy, it

Page 1242
is considered that the principle of residential development is acceptable in this location. Therefore, the shortfall of 160 homes serving the DSA area still remains to be delivered in line with Core Strategy Policy CS6. The allocation of Gatehouse Lane would ensure this shortfall is positively planned and accounted for in the Local Plan. It would also stop 3rd party developers speculatively claiming this shortfall and submitting speculative planning applications on less suitable sites.

Response:

Land to the south of the railway line has been set aside for a potential station site. This site is not the preferred station site and it is unclear whether or not it will be needed. Sufficient land has been accommodated to support its delivery, and there is no need to allocate land north of the railway line in addition. Re: the shortfall and whether this can be made up on other sites - this was a matter related to that planning application and was a matter of judgement for the decision maker / committee at the time. It is not part of Local Planning Policy and therefore irrelevant to decision making for the Local Plan, where the focus is on delivering the specified growth in the places it is needed. The fact less will be delivered at Hurst Lane than originally anticipated has been factored in to housing calculations.
yet going forward the Local Plan does not seem to account for any overall lapse rate. The onus should be on the

Service Town / Larger Village - Auckley-Hayfield Green

Tests of Soundness: Effective

3.1 It is considered that Site 1013 should be allocated for housing in the Local Plan, for delivery within the Plan Period. The additional land immediately north east of Site 1013 should also be either identified for development or as a Reserve Development Site. The site is unconstrained by Green Belt or Flood Risk and is located on the edge of the settlement limit of Auckley which has no allocations proposed in the Local Plan, despite its sustainability credentials and proximity to the Airport. 3.2 Prior to addressing our site-specific reasons for the inclusion of the site we have some general comments on the Draft Policy 6 as currently presented, which remains unchanged since the previous Draft Policies and Proposed Sites consultation draft in September 2018. It would be helpful if the tables referred to in Policy 6 identifying sites with planning permission and without planning permission which are included within Chapter 16 were included in summary in Policy 6. 3.3 It would be helpful if a summary table was included in Policy 6 of total permissions, total proposed allocations and total proposed requirement within each settlement, in order to demonstrate how the distribution of proposed allocations fits with the strategy. 3.4 Having calculated the information relating to existing permissions within the Tables in Chapter 16, there appears to be over 11,600 permissions (net) which are relied on for delivery within and beyond the plan period, which equates to 63% of the housing requirement. There does not appear to be any information regarding a non-implementation allowance. The Council monitor lapse permissions - indeed the Council’s latest five-year housing land supply statement recognises lapse permissions - yet going forward the Local Plan does not seem to account for any overall lapse rate. The onus should be on the Council to provide evidence to justify the application (or not) of a non-implementation / lapse rate to existing permissions. A 10% discount is an approach that has been found acceptable (fair and reasonable) in planning appeals which albeit may relate to the calculation of five-year housing land supply, is still relevant to the principle of discounting capacity from planning permissions. 3.5 Furthermore, the Local Plan should identify more sites than are required to meet the housing requirement for the Plan Period to provide a buffer to account for lack of delivery from identified allocated sites and provide for choice and competition in the market. It is clear from the Council’s own evidence that allocations don’t always deliver, with the Council having to reassess the non-delivery of UDP sites, adopted in 1998 that have not yet had planning permission approved. There still appear to be sites being taken forward as allocations that were allocations in the UDP. While there may be genuine reasons why these sites have not delivered over the last twenty years but are now considered capable of delivery, it nonetheless underlines the likelihood that some of the sites currently proposed for allocation will not come forward as anticipated. To ensure that the Plan is effective, a buffer of sites should therefore be identified. 3.6 The identification of a buffer is in line with the Framework, which requires plans to be positively prepared and flexible, and accounts for the fact that the housing requirement should be seen as a minimum. In line with the Local Plan Expert Group’s (LPEG) recommendations, a buffer equivalent to 20% of the housing requirement should be planned for (Report to the Communities Secretary and to the Minister of Housing and Planning, Appendix 1, paragraph 41). (SEE EMAIL FOR Appendix) 3.7 Taking the above into consideration, it is considered that the Local Plan needs to identify additional land for housing, in order to identify sites to meet the requirement over the whole plan period and provide a buffer of sites. Without doing so, the Plan will not be effective in delivering its housing strategy and is therefore not sound. Site 1013 - Common Lane Auckley 3.8 We have set out in the preceding section, a number of reasons why the Local Plan needs to identify additional deliverable housing sites. It is considered that Site 1013 and land immediately to the north east is available, achievable and in a suitable location on land outside the Green Belt and areas of flood risk, which is deliverable within the plan period. 3.9 As referenced in relation to Policy 2 Spatial Strategy and Settlement Hierarchy, Auckley should be treated as a standalone Larger Village, and should therefore be apportioned it’s own housing requirement in the Local Plan separate from Hayfield Green to ensure that local need is met in the village 3.10 The Publication Draft proposes no allocations in Auckley, with all of the allocated homes being located in Hayfield Green. There is one existing site with planning permission in Hayfield Green (Site 837) and one proposed allocation in Hayfield Green (Site 223 RHADS Site 2A, Hayfield Lane, Hayfield Green) with an indicative capacity of 140 dwellings. It is considered appropriate and sound to identify housing land in Auckley for delivery within the plan period. Site 1013 and the adjacent land is the only site that has been put forward on the eastern edge of Auckley. It is accessible to services and amenities in the settlement; is not located in the Green Belt, nor is it in an area of high flood risk. The allocation of site 1013 would result in an appropriate extension to the eastern edge of Auckley. The sustainable growth of Auckley would align with the proposed growth of this part of the Borough given its proximity to the Airport. 3.11 The site is located on the eastern edge of Auckley where the only existing policy constraint is the Countryside Protection Policy Area (CPPA), which is a blanket designation of countryside in the east of the borough and carries limited weight. In his report on the now withdrawn Sites and Policies DPD, the Inspector noted that the CPPA had not been assessed for its special qualities, does not have any special status and should in fact be removed as a designation. The supporting text to Core Strategy Policy CS3 states that urban extensions on land previously designated CPPA will be necessary to meet the borough’s housing and employment requirement. Now is the appropriate time to identify suitable land for delivery in the Plan period and beyond in this Designated Service Town / Larger Village which is well located to the Main Urban Area and Doncaster Sheffield Airport. 3.12 In relation to the proximity of Auckley to Doncaster Sheffield Airport (DSA), we have commented previously on the intentional creation of an aerotropolis in the Sheffield City Region with the airport’s current site (Aero Centre Yorkshire), becoming a central hub. DSA is clear that the aerotropolis would help to transform the North of England, creating 73,000 new jobs for the Sheffield City Region and providing advanced manufacturing, logistics and aviation-led innovation opportunities. It is anticipated that the vision would deliver #3.2bn GVA per year by 2048 across the region. A new railway station (the
concept of which is supported by the draft 'Strategic Transport Plan for the North') is also proposed a few minutes from Auckley. With the central hub remaining and growing in close proximity to Auckley, there is a strong logic to allocate land in this location on sites not constrained by flooding or the Green Belt. 3.13 As mentioned earlier in this statement Site 1013 has been the subject of an Outline Planning Application (17/02278/OUTM) for the Residential Development of up to 82 no. dwellings. The planning application process and the documents submitted to support it have demonstrated that there are no technical barriers to delivery. Whilst the application was refused it is considered that the reasons for refusal relating to the access point and loss of hedgerow are not insurmountable (see earlier paragraph 1.31), leaving the sole reason for refusal relating to the current site lying within the Countryside. 3.14 A summary is provided below of the formal responses received in relation to the application:

- Urban Design - No Objections o This consultation response also stated "the application is accompanied by an LVIA, the conclusions of which I am in broad agreement with. Negative landscape impacts will largely be localised and mitigated over time by the proposed layout, location of open space and mitigation measures". - Soil Profile Summaries and Droughtiness Calculations - No Objections o An 'Agricultural Land Classification and Soil Resources Report' (ALC) was submitted to the Council in October 2017. The ALC confirmed that all profiles observed on the site are limited to Subgrade 3b on soil droughtiness. Land which is classified as Grades 1, 2 and 3a in the ALC system is defined as best and most versatile agricultural land. - Mineral Safeguarding - No Objections o A Minerals Assessment Review was submitted to Doncaster MBC (June 2017) conclusion are provided at Chapter 5 with the second bullet stating "The site interrelationship with highly sensitive receptors including adjacent residential housing and would preclude mineral extraction given that the environmental and physical impact are likely to be unacceptable". - Severn Trent Water Ltd (STWL): No Objections o In October 2017 STWL stated "no objection to the proposal" subject to the inclusion of an appropriately worded condition. - Transportation - No Objections o Following the submission of further information requested in my consultation response of 25th October 2017 the Council's Transport Planner confirm that I am happy with the contents of the Transport Note dated December 2017. I have no objection from a Transportation perspective. - Drainage - No Objections o The statutory consultee response received in October 2017 confirmed there was no objections subject to the inclusion of 2 no. conditions and the applicant having regard for 10 no. informatives. - Pollution Control - No Objections o In September 2017 Regeneration & Environment confirmed "The report follows standard methodology and uses data from recognised sources, therefore its conclusions can be accepted with a high degree of confidence". - Open Space - No Objections o In October 2017 Planning Policy (Public Open Space) provided an advice note informed by relevant policies of the UDP, CS and 2013 Green Spaces Audit. The current layout and any future layout will meet these requirements and will seek to remedy local public open space deficiencies. - Education - No Objections o In September 2017 an 'Analysis of School Places' summarised "Total Education Section 106 Contribution required #425,995.00. This reflects the current position across the Hayfield Pyramid and is subject to change as new housing developments are approved which will further reduce the availability of places in the future". - Internal Drainage Board - No Objections o In October 2017 the IDB stated "the applicant should ensure that any existing or proposed surface water discharge system has adequate capacity for any increase in surface water run-off to the area". The IDB provided some further comments and recommendations all of which can be addressed at a detailed design stage or through the discharge of suitably worded conditions. - Air Quality - No Objections o An Air Quality Assessment was submitted to the Council in January 2018. The report follows standard methodology and uses data from recognised sources; therefore its proposals and conclusions can be accepted with a high degree of confidence. - Trees and Hedges - Revised Plan Submitted o A revised access drawing was submitted to the Council in February 2018 as a direct response to comments raised by the Council's Tree Officer. The revised access drawing addresses the concerns raised and retains the existing hedgerow. - South Yorkshire Police (SYP) - No Objections o In September 2017 SYP recognised that this scheme would benefit from being built to Secured by Design Standards. This would be addressed through detailed planning submissions. - Natural England (NE) - No Objections o In September 2017 NE had no comments to make on this application. - Fire Service - No Objections o In September 2017 the FS stated "access for fire appliances should comply with Building Regulations Approved Document B Volume 1-Dwelling Houses, section 11". - Ecology - No Objections o In September the Council's Ecologist commented "I agree with the ecology survey in that I don't think there is the need for any additional protected species surveys to accompany this application. The main features of interest are the boundary hedgerows from an ecology point of view. I would like the opportunity to comment on a detailed landscaping scheme for the site. The area of open space and the strip of land adjacent to the eastern boundary of the site have the potential to be planted in a manner that increases the ecological value of the site. I would also expect the landscaping to retain and enhance the existing boundary hedgerows". - Environment Agency (EA) - No Objections o In November 2017 the Environment Agency stated "no objections as not discharging to ground". - Yorkshire Wildlife Trust (YWT) - No Objections o In October 2017 the YWT stated "We have reviewed the online documents and ecological surveys, and agree with DMBC Ecologist Helen Markland that there is no need for further surveys. We also agree that the hedgerows onsite are the most important ecological feature, and we too would like the opportunity to comment on a detailed landscaping scheme for the site". - Archaeology - No Objections o In January 2018 the South Yorkshire Archaeology Service (SYAS) comments "I have now had time to review the archaeological desk-based assessment for Common Lane, Auckley, undertaken as recommended in our earlier comments. The desk-based assessment, prepared by Prospect Archaeology, examined a good range of sources and provides a thorough summation of the known archaeological resource. It concludes that there is moderate potential for the site to contain previously unrecorded archaeological remains?An archaeological evaluation of the site is required in order to provide further information on the significance of any remains on this site. This should be carried out prior to the determination of the application to allow an informed planning recommendation to be made. This is in line with paragraph 128 of the NPPF". o An archaeological evaluation of the site has now taken place. The report has not yet been published but the initial conclusions suggest there is nothing present that would be of any major archaeological interest. 3.15 Site 1013 has been found to be a sustainable site, as acknowledged by the Council during the consideration of the outline planning application. As it stands the only real barrier to development is a settlement hierarchy (informed by a settlement audit) which does not allow sufficient flexibility or apportion allocations to sustainable settlements close to the Airport and instead can only be achieved by releasing Green Belt land and reserving housing sites in flood risk areas. Auckley is a relatively sustainable Larger Village with good links to the Doncaster Main Urban Area, the M18 and Doncaster Sheffield Airport; however most importantly there are parcels of land along Common Lane (this site and the adjoining field) that can be allocated without requiring the release of Green Belt land or areas of flood risk. 3.16 The allocation of Site 1013 would provide for a mix of dwellings, including affordable housing and public open space, including an extension to the existing allotments for the benefit of the wider community. The safeguarding of land immediately adjacent to Site 1013 will contribute towards a buffer of safeguarded sites to be drawn from as required. 3.17 Whilst sites have been identified in Auckley - Hayfield Green in excess of the settlement’s identified local need requirement (with all allocated sites located in Hayfield Green) there is a case for identifying land to meet the aspirational economic growth, and the allocation of Site 1013 and the adjoining land would provide an additional supply of housing outside the Green Belt and high flood risk zones, therefore in line with national policy to significantly boost the supply of housing and in support of the aspirational economic growth of Doncaster and the wider Sheffield City Region. We therefore request that Site 1013 is identified in the Local Plan as a Housing Allocation and land immediately beyond is identified as a reserve development site.
Summary:

Site 1013 should be allocated for housing and can deliver within the plan period. Land to the north of this should be allocated or allocated as a reserve development site. The site has no flood or green belt constraints as is on the edge of the settlement limit of Auckley which has no allocations despite Airport proximity. It would be helpful if Policy 6 referred to sites with or without planning permission as per Chapter 16, and if Policy 6 included a summary of permissions and allocations for each settlement to demonstrate which fit with the strategy. There appears to be 11,600 permissions net in total (including beyond the plan period), which is 63% of the housing requirement. There is no evidence of a non-implementation allowance. The council monitor lapses, but they are not included. The onus is on the council to provide evidence to justify the application or not of a non-implementation or lapse rate to existing permissions. 10% is the approach generally found acceptable in appeals, albeit on 5 year supply - it is still relevant. The plan should identify more sites than are needed to provide a buffer to account for the lack of delivery from identified sites and provide choice and competition. It is clear sites don’t always deliver - many UDP sites have yet to and some are still in this plan. Buffers and sites should be identified, and this is in line with the framework which means plans are positively prepared and flexible and accounts for the fact the housing requirement should be seen as a minimum. In line with local plan expert group recommendations. a buffer equivalent to 20% of the housing requirement should be planned for (Report to the Communities Secretary and to the Minister of Housing and Planning, Appendix 1, paragraph 41). Site 1013 is available, achievable and in a suitable location outside the Green Belt and areas of flood risk. It is deliverable in the plan period. Auckley should be a standalone village and therefore have it’s own requirement separate from Hayfield Green. None of the existing requirement is in Auckley, it is all in Hayfield Green. Land should be sought in Auckley. This is the only site on eastern Auckley proposed. It is accessible to services and amenities in the settlement and free of constraints. It would bring sustainable growth to Auckley and align with proposed growth in the borough given it’s proximity to the airport. The site is countryside but the countryside was noted in the sites and policies DPD as not being assessed for its special qualities, does not have a special status and therefore should be removed as a designation. The supporting text to CS3 notes countryside will be needed to meet the boroughs housing and employment - now is the right time to identify land for delivery in the plan period here, and the site is in a service town village and close to the airport and urban area. The airport are aiming to create an aerotropolis and this would help transform the north of England with 73,000 jobs, investment, employment opportunities, a railway station. There is strong logic to allocate land in this location not constrained by flood risk or Green Belt. The site is subject of an outline application 17/02278/OUTM for residential development of up to 82 dwellings. The documents show there are no technical barriers to deliver. The application was refused but the reasons related to hedgerow removal can be overcome. The other reason for refusal was countryside. There were no objections otherwise from Council or external consultees. Site 1013 has been found to be sustainable as acknowledged by the Council in the outline application. The only barrier is the settlement hierarchy which is inflexible and does not account for lack of constraints, less impact on the Green Belt or airport proximity. Auckley is a relatively sustainable larger village with good links to Doncaster, the M18 and the airport and the site requires no Green Belt release, nor is it in an area of flood risk. The allocation could provide a mix of dwellings, affordable housing and open space including allotment extension. Safeguarding land adjacent could contribute to a buffer of safeguarded sites to be drawn from when required. All other sites are in Hayfield Green and there is a case for identifying land for aspirational economic growth on unconstrained land. This is in line with national policy and would significantly boost the supply of housing in support of aspirational economic growth. Request 1013 is allocated an land adjacent is identified as a reserve development site.

Response:

There is no need to allocate any more land in Auckley - Hayfield Green as the settlement can already surpass its housing target via commitments and the preferred allocation (now permission) in the settlement. The calculations do not take account of a number of additional sources of supply, including windfalls, sites with permission in defined villages, small sites of 1 - 4 units and any housing delivered as part of Policy 7. In effect, there is therefore a buffer and some protection in terms of numbers against non - delivery - although the Site Selection Methodology justifies the assumptions made about build out rates. It should also be noted that Auckley Parish Council are preparing a Neighbourhood Plan and have undertaken a Call for Sites, which may result in sites being found within Auckley itself.
3.27 The Housing Allocations required to deliver the housing requirement and distribution as set out in Policy 3, are identified by Policy 6. Site 446 (Mosham Road) is not included as an allocation (see Figure 2) and is shown to be retained within the Countryside Policy Area. This approach is considered to be unsound and also conflicts with the objectives of the DSA masterplan, which identifies the site for housing. We strongly object to the omission of the site from allocation within Policy 6 on this basis. (SEE EMAIL FOR Figure 3. Draft Publication Local Plan Policies Map Extract) 3.29 Section 4 of this representation sets out a detailed assessment of Site 446 including reference to the site context, planning history, deliverability of the site, and an assessment of alternative sites promoted for development within Auckley, in order to demonstrate that the site is appropriate and deliverable for Housing-led development. 3.30 A Mixed Use redevelopment of the site has been subject to discussions with Blaxton and Auckley Parish Councils, reflecting the potential for the site to accommodate not only residential but also employment development in association with the new railway station. As set out in Appendix 3, there is support in principle for the development of the site in order to enhance the appearance of the land and secure the benefits that could accrue from the proposed development. (SEE EMAIL FOR Appendices) 3.31 Peel Investments, as the main stakeholder in the DSA Masterplan have also confirmed their support for the development of Site 446, as set out in Appendix 4. This support reflects the importance of the site's allocation to the delivery of the masterplan and specifically the proposed railway station, which was granted planning permission under LPA ref 06/000459/FULM, and is to be located as shown in fig, 4. (SEE EMAIL FOR Figure 4. Extract from DSA Masterplan including proposed railway station) 3.32 Land at Mosham Road, Auckley to be removed from the Countryside Policy Area and allocated for Housing. Reference to also be included to the potential provision of the new railway station and associated employment uses within the allocation. 3.33 Based on the total site area of 16 hectares and a developable site area of 11 ha. taking account of the railway station (including associated infrastructure), it is suggested that the site could accommodate up to 400 dwellings, subject to further requirements for open space provision and other policy requirements. 3.34 The site should be allocated for housing-led development in order to meet the future shortmedium term housing requirement, as discussed with reference to policy 3 above. The allocation would also take the opportunity to deliver new sustainable development on brownfield land, adjacent to an existing settlement in order to meet the needs of the local population. 3.35 The allocation of the site will also support the delivery of the DSA Masterplan, including the provision of the planned new railway station (LPA ref 06/00459/FULM) within the site, and will enhance the vitality and viability of services within the existing village. 3.36 Full justification for this recommendation is set out within Section 4 of this representation and outlines that the site is suitable, deliverable and developable. The site is also demonstrated to be sequentially preferable for development against other sites within Auckley as set out in section 4 of this representation.

Summary:

Policy 6 - Housing allocations 1. None allocation of site (446) conflicts with the DSA masterplan. 2. Peel support this site (rep includes a letter of support for mixed use development of the site) 3. Lack of clear evidence to demonstrate a deliverable housing supply. 4. Fails to consider alternative to allocations which may be undeliverable. 5. Housing figure does not meet the areas objectively assessed need. 6. Site should be allocated an include reference to potential of a Railway Station and Employment opportunities.

Response:

Auckley - Hayfield Green can far surpass it’s housing target through commitments. There is also potential additional housing at the airport, tied to jobs. There is no need to allocate further land in this location.

Comment:

4.54 The Site Selection Methodology which forms part of the Local Plan evidence base provides an overview of how the Council has assessed potential housing site options within the plan area. 4.55 A total of 14 potential development sites have been identified within Auckley. In order to demonstrate the suitability of the Mosham Road site, the remaining 13 sites within the settlement have also been considered and a summary of the results is provided in the table below. Table 1 - Assessment of alternative sites within Auckley/Hayfield Green Reference: 007 Constraints: Rejected site: - Flood risk area (Zone 2 and 3) - Fails the flood risk sequential test - Pollution to surface water bodies - Location issues- access to bus/train network, capacity of local schools Reference: 049 Constraints: Rejected site: - Deliverable units (36) are above the settlements need requirement - Location issues- access to bus and train network, capacity of local schools Reference: 174 Constraints: Rejected site: - Flood Zone 2 and within an EA flood warning area - Location issues- access to bus/train network, capacity of local schools Reference: 201 Constraints: Rejected site: - Deliverable units (48) are above the settlements need requirement - Location issues- access to bus and train network, capacity of local schools and access to existing centre Reference: 223 Constraints: Proposed site however there are location issues with limited access to the train station and the proximity to the existing centre. Reference: 299 Constraints: Rejected site: Deliverable units (276) are above the settlements need requirement Highways issues Location issues- access to bus/train network and access to services such as GPs and schools Pollution to surface water bodies Reference: 330 Constraints: Rejected site: - Deliverable units (28) are above the settlements need requirement - Location issues- access to bus/train network, capacity of local schools Reference: 422 Constraints: Rejected site: - Deliverable units (30) are above the settlements need requirement - Location issues- access to train network, capacity of local schools - No defensible boundary Reference: 464 Constraints: Rejected site: - Flood Zone 3 - Health & Safety risks - Biodiversity concerns- overlays a local wildlife site - Location issues- access to bus/train network, capacity of local schools - Heritage impacts Reference: 940 Constraints: Proposed conditional housing site: - Development of 940 units is subject to the delivery of jobs at the airport with the exception of 280 dwellings - Local policy constraints - Highway access issues - Heritage issues - Groundwater source protection concerns - Location issues- proximity to existing centre, train station, GPs and schools. - Biodiversity issues - Major archaeological concerns - Pollution to surface water bodies Reference: 1010 Constraints: Rejected site: - Deliverable units (162) are above the settlements need requirement - Pollution to surface water bodies Reference: 1013 Constraints: Rejected site: - Deliverable units (155) are above the settlements need requirement - No defensible boundary - Location issues- access to bus/train network, capacity of local schools - 4.56 Of the above sites, those identified in red and orange are considered to be more constrained and/or less sustainable than the Mosham Road site for the reasons identified. 4.57 Site 223 is coded green. It is located immediately to the south of the Mosham Road site beyond the railway line and has been partially developed previously for employment uses. The southern platform of the proposed new railway station would be located within this site if delivered and will occupy a significant proportion of the remaining available land. It is considered that any unused land could be bought forward for employment uses to reflect the existing uses at the entrance to the site. 4.58 Site 940, is proposed conditionally for housing in accordance with Policy 7 of the Publication Local Plan. However, there are a number of constraints relating to this site, as mentioned in the table above. The key constraint relates to the development being conditioned and reliant upon the delivery of jobs at the airport. There is no accurate method by which to calculate when the site may be delivered and the provision of housing within this location will not support the vitality or viability of existing settlements to the same degree as site 446, given the separation of the site from the established villages. Conclusions 4.59 Site 446 provides the opportunity to deliver additional, sustainably located housing adjacent to the existing settlement of Auckley. 4.60 The site has no overriding environmental constraints and would have significant positive effect through the removal of contaminated land. The site is available and deliverable in the short term and represents the most sustainably located site for housing within the Auckley - Hayfield Green area. 4.61 Based on the above information, the site is capable of delivering housing and employment development in the short term, if allocated for Mixed Use within the emerging Local Plan. This approach would ensure the soundness of the Local Plan and support delivery of the DSA Masterplan and the proposed railway station.

Summary:

14 sites have been identified in Auckley. To demonstrate the suitability of the Mosham Road site, an assessment of the other 13 sites has been undertaken: 007 Constraints: Rejected site: - Flood risk area (Zone 2 and 3) - Fails the flood risk sequential test - Pollution to surface water bodies - Location issues- access to bus/train network, capacity of local schools - Deliverable units (36) are above the settlements need requirement - Location issues- access to bus and train network, capacity of local schools 174 Constraints: Rejected site: - Flood Zone 2 and within an EA flood warning area - Location issues- access to bus/train network, capacity of local schools - Deliverable units (48) are above the settlements need requirement - Location issues- access to bus and train network, capacity of local schools and access to existing centre 223 Constraints: Proposed site however there are location issues with limited access to the train station and the proximity to the existing centre. 299 Constraints: Rejected site: Deliverable units (276) are above the settlements need requirement Highways issues Location issues- access to bus/train network and access to services such as GPs and schools Pollution to surface water bodies 330 Constraints: Rejected site: - Deliverable units (28) are above the settlements need requirement - Location issues- access to bus/train network, capacity of local schools - No defensible boundary - Location issues- access to bus and train network, capacity of local schools - Development of 940 units is subject to the delivery of jobs at the airport with the exception of 280 dwellings - Local policy constraints - Highway access issues - Heritage issues - Groundwater source protection concerns - Location issues- proximity to existing centre, train station, GPs and schools. - Biodiversity issues - Major archaeological concerns - Pollution to surface water bodies Reference: 1010 Constraints: Rejected site: - Deliverable units (162) are above the settlements need requirement - Pollution to surface water bodies Reference: 1013 Constraints: Rejected site: - Deliverable units (155) are above the settlements need requirement - No defensible boundary - Location issues- access to bus/train network, capacity of local schools - 4.56 Of the above sites, those identified in red and orange are considered to be more constrained and/or less sustainable than the Mosham Road site for the reasons identified. 4.57 Site 223 is coded green. It is located immediately to the south of the Mosham Road site beyond the railway line and has been partially developed previously for employment uses. The southern platform of the proposed new railway station would be located within this site if delivered and will occupy a significant proportion of the remaining available land. It is considered that any unused land could be bought forward for employment uses to reflect the existing uses at the entrance to the site. 4.58 Site 940, is proposed conditionally for housing in accordance with Policy 7 of the Publication Local Plan. However, there are a number of constraints relating to this site, as mentioned in the table above. The key constraint relates to the development being conditioned and reliant upon the delivery of jobs at the airport. There is no accurate method by which to calculate when the site may be delivered and the provision of housing within this location will not support the vitality or viability of existing settlements to the same degree as site 446, given the separation of the site from the established villages. Conclusions 4.59 Site 446 provides the opportunity to deliver additional, sustainably located housing adjacent to the existing settlement of Auckley. 4.60 The site has no overriding environmental constraints and would have significant positive effect through the removal of contaminated land. The site is available and deliverable in the short term and represents the most sustainably located site for housing within the Auckley - Hayfield Green area. 4.61 Based on the above information, the site is capable of delivering housing and employment development in the short term, if allocated for Mixed Use within the emerging Local Plan. This approach would ensure the soundness of the Local Plan and support delivery of the DSA Masterplan and the proposed railway station.
bus/train network, capacity of local schools 422 Constraints: Rejected site: - Deliverable units (30) are above the settlements need requirement - Location issues- access to train network, capacity of local schools - No defensible boundary 464 Constraints: Rejected site: - Flood Zone 3 - Health & Safety risks - Biodiversity concerns- overlays a local wildlife site - Location issues- access to bus/train network, capacity of local schools - Pollution to surface water bodies 832 Constraints: Rejected site: - Deliverable units (63) are above the settlements need requirement - Location issues- access to bus/train network, capacity of local schools - Heritage Impacts 940 Constraints: Proposed conditional housing site: - Development of 940 units is subject to the delivery of jobs at the airport with the exception of 280 dwellings - Local policy constraints - Highway access issues - Heritage issues - Groundwater source protection concerns - Location issues - proximity to existing centre, train station, GPs and schools. - Biodiversity issues - Major archaeological concerns - Pollution to surface water bodies 1010 Constraints: Rejected site: - Deliverable units (162) are above the settlements need requirement - Pollution to surface water bodies 1013 Constraints: Rejected site: - Deliverable units (155) are above the settlements need requirement - No defensible boundary - Location issues- access to bus/train network, capacity of local schools - With the exception of 223 and 940, all sites above are considered to be more constrained / less sustainable than 446 (Mosham Road). 223 is not - it is located immediately to the south of the Mosham Road site beyond the railway line and has been partially developed previously for employment uses. The southern platform of the proposed new railway station would be located within this site if delivered and will occupy a significant proportion of the remaining available land. It is considered that any unused land could be bought forward for employment uses to reflect the existing uses at the entrance to the site. 940 is a conditional allocation with numerous constraints. There is uncertainty about how much will therefore be delivered.

Response:
No further land is required in this location due to existing commitments. The settlement can meet and surpass its housing targets without allocating any more sites. 940 will deliver housing linked to job delivery at the airport, this is separate to the allocated requirement, which is met via permissions at Hurst Lane and Hayfield Lane.

C/Site 446: Introduction/05214/1/002

Organisation: DLP

Representing: South Yorkshire Housing Association

Comment Ref: Attend Hearing

Reason: To support the representation and Inspectors understanding of the site.

Area: Chapter 16: Spatial Proposals

Policy: Service Town/Village - Auckley-Hayfield Green

Tests of Soundness: Positively prepared - Effective

Comment:

2.1 This representation is made to the Doncaster Local Plan Publication Policies & Proposed Sites Consultation on behalf of SYHA Enterprises Ltd and A.A. Lund and relates to the site identified under Local Plan reference 446 as 'Blaxton Quarry Phase 2, Mosham Road, Auckley' (Fig. 1). 2.2 The Lund family has promoted Site 446 for development through the Local Plan consultation period for in excess of 15 years and during this period has engaged with local stakeholders including the Parish Council to secure stakeholder support for the appropriate development of the site. 2.3 Most recently submissions have been made to the informal consultation on the Draft Policies and Proposed Sites held between September - October 2018 and the Auckley Neighbourhood Development Plan consultation held in September 2018. 2.4 SYHA Enterprises Ltd is a housing association providing homes across the South Yorkshire Region. Their current growth strategy is to promote the delivery of housing-led and mixed use development sites, in order to facilitate the delivery of affordable housing. (SEE EMAIL FOR Figure 2. Site location Plan) 2.5 The site is sustainably located adjacent to the villages of Auckley and Blaxton and is brownfield land, as confirmed within the Walker Morris representation at Appendix 1, which concludes that the Site has not blended into the landscape and is not subject to any development management procedures to restore the land. The Site is therefore previously developed land and its redevelopment should be a priority, in accordance with the Framework and draft Local Plan policies. (SEE EMAIL FOR Appendices) 2.6 The site is also identified within the Doncaster Sheffield Airport (DSA) Masterplan Area. The Masterplan Consultation document (2018) identifies the site for the future delivery of housing in order to support the wider economic growth aspirations of the airport. The DSA Masterplan has been prepared by Peel Investments, as majority landowner, together with support from stakeholders including Doncaster Council. 2.7 Despite this, the site is indicated to be retained within a Countryside Policy Area in the draft Local Plan. DLP strongly objects to the omission of the site from the proposed Housing and/or potentially Employment allocations. 2.8 To this end, this representation considers the strategic approach to housing and employment delivery within the draft Local Plan and makes recommendations for amendments to specific policies in order to ensure the soundness of the plan. 2.9 The recommendations and accompanying justification set out the sustainable and extensive site specific characteristics, which indicate that Site 446 is an appropriate location for new development.

Summary:
Site 446 should be allocated for housing. The site is previously developed. It is a well located site and part of the DSA masterplan area. Strongly object to this being allocated as countryside and the site is appropriate for development. Site has been promoted to the Council and the Neighbourhood Plan.

Response:
The site has been allocated countryside as per the development limits methodology. There is no need to allocate more housing in this location.

Tests of Soundness: Positively prepared  Effective  Justified  Consistent with national

1.1 These representations are made on behalf of SYHA Enterprises Ltd and the Lund Family (as landowner) in response to the Doncaster Local Plan consultation 2019. These comments follow the extensive promotion of land south of Mosham Road, Auckley during previous consultation on the new Doncaster Local Plan. 1.2 This representation is made on the basis that the Doncaster Local Plan Publication draft, as prepared, contains significant deficiencies, in relation to the Site; the Strategic Policies and the Distribution of Growth. 1.3 DLP Planning Ltd is of the view that in order to provide for strategic housing requirements and sustained economic growth and regeneration of the Doncaster area, there will be a requirement for the allocation of relatively unconstrained land surrounding existing settlements to support the sustainable growth of the Borough. 1.4 It is our opinion that the level of housing and employment development discussed within this representation can only be delivered through the release of additional, unconstrained and underused sites that are attractive to the market. Such releases should be made in locations which meet other objectives such as the regeneration of Doncaster, realising the potential of airport, and the redevelopment of former mineral sites. 1.5 The release of brownfield land such as the site at Mosham Road, Auckley in these circumstances will increase the supply of allocations from brownfield land, in accordance with the National Planning Policy Framework, from the current figure of 41% of allocated land within the draft local plan. It will also minimise the need for Green Belt release in other locations. 1.6 We consider that there is significant scope within Auckley and Hayfield Green in particular to build upon the employment opportunities created by the airport to support the future sustainability of existing settlements. Land at the Former Blaxton Quarry, situated east of the site subject of these representations, is identified as an ‘Employment Allocation with Permission’ (Policy 4) (under 09/01292/OUTM as amended via 14/00877/WCC) in the Pre-Submission Local Plan. This site is within the Lund’s ownership and further reflects the support for economic development in this part of the plan area. 1.7 The Mosham Road site (LPA ref 446) subject of this representation, is located between the site of the proposed Airport railway station and the village of Auckley and is identified within the DSA Masterplan as an area for future housing delivery (see Figure 1 below). It is considered that this land can play an important role in delivering Local Plan objectives in this regard. (SEE EMAIL FOR Figure 1. DSA Masterplan Area (Mosham Road Site and location of proposed Lincoln Line Station indicated in red)) 1.8 In order to realise the potential of this site, this representation raises objections to a number of policies as drafted and sets out recommendations for proposed amendments, in order to ensure the soundness of the Local Plan.

Summary:
To support Local Plan sustained economic growth and strategic housing there will need to be a release of relatively unconstrained land around existing settlements that are attractive to the market. Local Plan has significant deficiencies. Such release should be in locations to meet regeneration objectives, support airport potential and redevelop former minerals sites. Site is brownfield and will increase amount of brownfield land in the plan from 41% currently, as well as minimising the need to release Green Belt. There is scope to build on airport employment opportunities and support future sustainability of existing settlements. Site is identified in the DSA masterplan. Object to a number of policies as drafted.

Response:
There is no need to allocate further land in this settlement for housing as it can meet and surpass its targets, and there is also potential additional housing being allocated adjacent to the airport linked to the proven delivery of jobs. Sites would still be needed in other settlements in the borough so this would not negate the need for Green Belt allocations, as per the Green Belt Topic Paper.
Tests of Soundness:

Comment:

Site and Context 4.1 The site referred to as 'Blaxton Quarry Phase 2, Mosham Road, Auckley' (Local Plan ref 446) is shown in Fig. 3. (SEE EMAIL FOR Figure 6. Location Plan) 4.2 The site is located immediately north of the Doncaster to Lincoln railway line, and to the south of Mosham Road, Auckley in Doncaster. The site is well defined by existing landscape features including hedgerows to site boundaries. 4.3 It is approximately 16 hectares in size and was previously worked for mineral extraction although this use has now ceased. Other quarries lie to the east and the west of the site with residential development to the north and south of the site, beyond the railway line. 4.4 There was no specific conditional requirement to comprehensively restore the site following mineral extraction and no topsoil remains. The site has only been backfilled to a limited degree. 4.5 The southern boundary of the site fronts onto a railway line, with housing beyond. Hurst Lane and Gatehouse Lane/Mosham Road adjoining the eastern and western boundaries respectively. Overall the site is enclosed being bounded by road and rail corridors, with residential, amenity, and commercial uses in adjacent areas. 4.6 The site is accessible to the strategic motorway network. The M18, A1(M) and the M180 run through the Doncaster area. Access to the motorway network can be gained from the A614 to the M180, M18/M62 and the A638 to the A1 (M). 4.7 Immediate road access to the site is via Hurst Lane, which runs south to the A638 (Great North Road). A route north from the site is provided by the A614. 4.8 The new railway station to serve the airport site and surrounding area is proposed on the part of the railway line directly adjacent to the site, for which planning permission (LPA ref 06/000459/FUULM) has previously been granted. Those exiting the northern platform would gain access to the local road network through the Mosham Road site. The strategically important nature of the sites location is illustrated in Fig. 7 in relation to the airport site, neighbouring villages and the employment area at the l-port to the west. (SEE EMAIL FOR Figure 7. Location of Site 446 within local context) Current UDP Designation 4.9 The site is allocated as Countryside in the adopted Doncaster UDP. Policy ENV2 outlines the principles for this policy area and policy ENV4 sets out criteria under which development may be undertaken are the relevant policies for the site. 4.10 It is considered that this policy guidance is outdated and no longer reflects the strategic and economic requirements which are relevant to the area today. It is evident that there is a need to provide additional housing, employment and investment in the locality and improve the overall physical quality of the environment. 4.11 Overall it is considered that the site can accommodate up to 400 dwellings together with landscape and open space requirements and alongside provision of the proposed railway station and associated infrastructure. 4.12 The site represents a significant opportunity to deliver much needed affordable homes and key worker accommodation for the rapidly expanding airport and its surrounding business park. This is particularly given the support from SYHA Enterprises. DSA Masterplan 4.13 As set out within this representation, the DSA Masterplan includes Site 446, which is shown for housing. The site is also anticipated to include the northern platform of the proposed DSA railway station. The railway station offers the opportunity to provide frequent public transport connections towards Sheffield and Lincoln. 4.14 The station would make the site an extremely sustainable location for housing development in terms of access to public transport, giving residents access to surrounding areas without being dependent on the car, which would promote sustainable transport in the area. 4.15 The development of the site for housing-led development alongside the delivery of the new railway station would create a highly sustainable link between the settlement of Auckley and the wider area. Proposed Housing Allocation 4.16 In order to ensure that there is a sufficient and suitable supply of land to deliver their housing and previously developed land objectives, Local Planning Authorities are required at the local level to identify broad locations and specific sites which will enable a continuous delivery of housing for at least 15 years. Local Planning Authorities are also required to identify a further five years supply of specific housing sites for years 6-10 that are developable, and if possible specific sites for years 11-15 but if not broad locations for future growth. 4.17 Specifically, Local Planning Authorities should identify sufficient deliverable sites for the first five years, to be considered deliverable sites, at the point of adoption of the Local Plan. 4.18 For sites to be deliverable they need to be: available (the site is available now), suitable (development of the site would contribute to the creation of sustainable communities) and achievable (there is a reasonable prospect that housing on the site will be deliverable on the site within 5 years). Deliverability 4.19 It is considered that this site can be comprehensively developed to deliver residential and employment uses together with commercial uses, which will complement the commercial development of the Airport and its hinterland. 4.20 Also included within this is the potential for the site to accommodate a new rail station to serve the new Airport and future industry. The planning permission for the Airport also included a new rail station to be located in part within the boundary of the site. Given that Doncaster at present has a lack of rail connected employment sites, this site provides real potential for delivering employment together with a transport interchange. 4.21 Comprehensive planned development around the airport is critically important, both to the long term success of the airport and the economic benefits it can bring, and to ensure that any environmental impacts are fully assessed, controlled and mitigated. The Mosham Road site is identified within the DSA Masterplan for housing as part of proposals to support the growth of the airport. It is unclear as to why the Council had not reflected this aspiration within the Local Plan as part of draft Policy 7. 4.22 The site is being jointly promoted by a housing association, who would look to deliver affordable housing as part of any proposal for the site. The Doncaster Housing Strategy document confirms that: "We are generally supportive of new affordable housing development in this area due to the amount of economic development taking place in the area around the airport, which is expanding its operations, and the number of jobs that are expected to be created in the near vicinity as a result of completing the airport link road 'the great Yorkshire Way'. 4.23 The figures collected by SYHA for housing bids in the period 2016-2018 confirm that there is a shortage of housing available for Auckley, Blaxton and Finningley. For example, no three bed units became available for the two years to the end of August 2018. 4.24 The figures however showed clear demand in the area for affordable housing in
Auckley, as the latest figures show that 117 people bid for one of the 3 beds that became available in the year ending August 2018 and two bed demand was also noted. 4.25 The provision of housing within the site would therefore address current need within the housing market.

Available & Achievable 4.26 The site is within the ownership of one land owner and therefore development of the site can be undertaken comprehensively. The landowner has promoted the site for development through the local plan preparatory process demonstrating their commitment to bring the site forward. 4.27 The proposals also have the support of SYHA Enterprises Ltd, who are an affordable housing provider and operator, committed to the delivery of the proposals to meet a range of housing needs within the locality. Suitable 4.28 It is considered that the site is located within a suitable location for development and would not only help to deliver Doncaster’s strategic employment and housing requirements but assist in providing market and affordable housing in an area in need of regeneration. Development on the site would also lead to the creation of a sustainable community. 4.29 The site and the surrounding area does not lie within the Doncaster Green Belt or within a floodplain therefore making allocation and subsequent development on the site more acceptable than would otherwise be the case. 4.30 Extensive site investigation reports have previously been undertaken to support earlier representations. The nature of the site and the individual characteristics of the area indicate that there are very few identified physical or environmental constraints to future development. 4.31 The site is well located in relation to the local schools and bus stops, providing access to settlements with a wider range of services and facilities. The site itself is bound by treeline which provides some separation from the wider countryside and as the site is situated between two residential areas, development would provide a logical extension to the south of the village between the two residential areas. 4.32 The site adjoins the existing settlement boundary of Auckley, which offers a range of services. The site lies in close proximity to a range of public services and facilities including: - The Hayfield School (320m) - St Saviour’s Church (500m) - Hayfield Lane Primary School (600m) - Nisa Local (650m) - Auckley Post Office (500m) - Co-op Food Auckley (550m) - Walkers Nurseries & Garden Centre (750m) - TaleGate Theatre (1km) - Eagle and Child Inn (1km) - Auckley Friery (900m) - Yorkshire Wildlife Park (1.7km) - Doncaster Sheffield Airport (1.5km) - Prospective employment site directly adjacent 4.33 The site is accessible by public transport with the nearest bus stop being located approximately 330m from the site on Hurst Lane. The services running from this location connect the site to Auckley, Doncaster Town Centre and Doncaster Sheffield Airport and include the following: - No. 57a: Doncaster - Cantley - No. 57c: Doncaster - Auckley - No. 588: Tickhill - Cantley - No. 57f: Doncaster - Finningley 4.34 The site currently benefits from informal access points on the western boundary and both Hurst Lane and Mosham Road benefit from footpaths and grass verges along the length of the site boundary, leading to adjacent residential areas. A vehicular access point could be achieved from Mosham Road to provide access to the adopted highway. 4.35 Additionally, the development of the Great Yorkshire Way link road between the M18 (junction 3) and the airport and the proposals for a new rail link significantly enhance the accessibility of the site. 4.36 The most recently available Housing and Economic Land Availability Assessment (HELAA) published July 2019 but with an April 2018 base data, identified the site under reference: 446 - Blaxton Quarry Phase 2, Mosham Road, Auckley. 4.37 The HELAA assessment identified that the site: - Has no physical constraints - Has no availability constraints - is suitable but with local policy constraints - is developable in a timeframe of 0-15 years for 357 units. 4.38 The Environmental Agency’s Magic Maps database indicates that the site is not subject to any environmental constraints or designations. 4.39 The site is entirely located in Flood Zone 1, as such it is considered to be at the lowest risk of flooding and is therefore suitable for residential development. Capacity 4.40 The site area extends to approximately 16 hectares and is considered to have capacity for up to 400 dwellings including landscape buffers and in addition to the proposed railway station and associated infrastructure. The allocation of this site for housing/employment would create a practical development to the south of Auckley. Landscape/Visual Impact 4.41 The landscape character of the site can be described as undulating with little hedge or field boundaries. The site displays an overall character of a degraded landscape with limited vegetation and a vacant land use. The lower land level generally curtails long distance views across the site. 4.42 It is our opinion that the poor quality degraded nature of the landscape can effectively accommodated change without having a detrimental impact upon the landscape and its surroundings. The ability of the site to accommodate change is determined by the diversity and value of elements within the site which are in this case degraded and of little landscape value in terms of their contribution to character and as such are considered to be of poor value. 4.43 The site is distinctly different in character to that of the land to the north of the site, which is more connected to the rural area. It is considered that mixed use development at the site would form a natural extension to the built form of the airport and its hinterland. 4.44 The character of the area is also assessed in the Council’s Landscape Character Assessment of Doncaster Borough published in March 2007. The Study was undertaken to inform the Doncaster LDF and includes landscape character descriptions, landscape capacity and design guidance for each landscape character area. A detailed strategic employment survey of the area to the north of the Airport has been undertaken. The area is described as a small area which extends from the settlements of West Barrier to Finningley and from the B road through Blaxton to the north and the existing airport infrastructure to the south. 4.45 It describes the area as fragmented with diverse land uses which include horticultural nurseries with lines of ornamental conifers; sand and gravel quarries; a well screened railway on an embankment; busy B roads and a partially tree screened fuel depot for the airport. Part of this area to the north of the airport is currently under development for large-scale strategic employment. Land to the west of the B1396 is currently being developed with new housing. There are isolated remnants of farmland, including pasture for bulls, with no readily identifiable arable field pattern. These are not easily viewed being surrounded by urban influences. 4.46 It describes the area as neither tranquil nor remote and is already surrounded and heavily influenced by new and existing urban development. It has an indistinct character, is in poor condition and is already isolated from rural influences. Therefore the landscape quality and value is considered low. 4.47 Due to the existing urban influences and the fragmented nature of much of the landscape strategic employment development would have a limited landscape impact. However, it would erase remnants which are not large enough to create a pattern. Any such a development would also fit with existing boundary lines and with appropriate treatment of the landscape has the potential to improve and unify this diverse landscape. However it would be very visible locally, such as from the new housing estate to the west of the B1396 and for residents on the southern edge of Blaxton, it would be visible from further away due to existing woodland and the well treed embankment. 4.48 Overall the landscape capacity for strategic employment on the northern edge of Doncaster Sheffield Airport is judged to be high. Based on this, it should also be considered that the landscape has the capacity to accommodate built development whether it is employment or housing development. 4.49 Golder Associates (UK) Ltd. were commissioned to carry out further landscape assessment to examine in greater detail localised areas where there is considered to be pressure for housing and/or strategic employment development. However this only relates to the area immediately to the west of the airport run way i.e. the area proposed for allocation under Policy 7 and therefore the 2007 Landscape Character Assessment is considered to remain the most relevant evidence to the consideration of the Mosham Road site. Soils 4.50 Due to extensive sand and gravel extraction there is limited soil resource across the site. The site is generally degraded and bereft of any top soils. Ecology 4.51 With regards to wildlife there is no indication of any protected plants or species existing within or using the site. Development of the site and the subsequent introduction of additional planting and potential wildlife habitats will assist in helping to attract and encourage wildlife to the area. 4.52 In conclusion, the environmental impacts from development of this vacant underused site are considered to be low and any concerns related to landscape or noise can be designed out of any scheme. New housing would support social, economic and aesthetic needs in the locality and provide for an enhanced environment. 4.53 Overall as a site, which is located on the fringes of the built up fringes of the airport, this site performs well in sustainability terms and can make an important contribution to the delivery of Doncaster’s housing trajectory.
Summary:
The site is well defined by existing landscape features. It was used for minerals extraction but no more. There is no condition to comprehensively restore the site following minerals extraction and no topsoil remains. Site has been backfilled to a limited degree. The site is enclosed by infrastructure. It has access to local and national road networks. It is well located for the airport and iport as well as neighbouring villages. It is allocated as countryside in the UDP which is outdated. There is a need for more employment and housing in the area and to improve the overall quality of the environment. Site can deliver up to 400 dwellings with landscaping and open space. It can deliver affordable homes and worker accommodation for the airport. Has support from South Yorkshire Housing Association and is included in the DSA masterplan and there is a railway station earmarked for the adjacent line. This would make for a very sustainable location for housing and promote sustainable transport. The site is suitable, available and deliverable. It can be delivered for housing and commercial uses together. Unclear why the Council are not reflecting the airport masterplan and supporting the site given the benefits. There is clear need for affordable housing in Auckley as shown in data collected by SYHA 2016 - 2018. 117 people bid for 1 3 bed flat in year ending August 2018. Site in single ownership and close to local services including schools and shops. Also accessible by car and bus to central Doncaster. HELAA found that site is suitable but with local constraints. The site has a degraded landscape meaning change will not be detrimental to the overall landscape. Land to the north of the site is more rural but this land is within a more urbanised area. Has capacity therefore for built development. No ecological concerns. New housing would support an enhanced environment. It is on the fringes of the built up fringes of the airport and performs well in sustainability terms.

Response:
The site has been allocated countryside as per the development limits methodology. There is no need to allocate more housing in this location. Policy 7 is specifically related to the airport and airport related development and provides for a significant amount of housing tied to the delivery of jobs, and supports elements of the draft airport masterplan - however this is an independent document and the Local Plan's role is not to reflect this verbatim, rather it supports certain elements of it.

**Comment Ref:** /Site 446: Introduction/05286/1/001

**Attend Examination:** Attend Hearing

**Reason:** To consider the housing requirement, errors in the Sustainability Appraisal, legal definition of previously developed land in relation to site ref: 446.

**Area:** Chapter 16: Spatial Proposals

**Policy:** Service Town/Village - Auckley-Hayfield Green

**Tests of Soundness:**
- Justified
- Effective
- Consistent with national

**Comment:**

> 1.1 These representations have been prepared on behalf of A.A. Lund in response to the Doncaster Local Plan Publication Version consultation (Regulation 19). 1.2 These representations can be read alongside those prepared by Clare Plant MRTPi AssocRICS of DLP Planning Ltd and John Goodall MRTPi also of DLP Planning Ltd. The objections raised in those representations are not repeated here, (but should be treated as so repeated) which also represent our client’s position on the Publication Version of the Doncaster Local Plan. 1.3 Our client owns the land east of Hurst Lane, Auckley (SEA site ref: 446) and has been engaged in promoting the site for mixed use development for a number of years. The Publication Local Plan proposals map indicates that the land will be identified as ‘Countryside’, where policy 26 in the Publication Local Plan restricts most forms of development. Our client objects to the proposed inclusion of this land as ‘Countryside’ and endorses the objections made by Clare Plant and John Goodall in their representations.

**Summary:**

Site 446 is being promoted for mixed use and should not be allocated as countryside.

**Response:**

Noted. The site is allocated countryside as per the Development Limits Methodology, and no further housing is required in this location.
Tests of Soundness:

Comment:

7.1 The Doncaster Local Plan Publication draft, as prepared, contains significant deficiencies, in relation to the Site; the strategic policies and the distribution of growth. 7.2 The objections prepared by Walker Morris LLP and DLP Planning Ltd highlight these deficiencies; explain why the Local Plan is unsound and, where necessary, explain how this can be overcome. 7.3 This representation provides a legal interpretation of the definition of 'previously developed land' and concludes that the Site has not blended into the landscape and is not subject to any development management procedures to restore the land. The Site is therefore previously developed land and its redevelopment should be a priority, in accordance with the Framework and draft Local Plan policies.

Summary:

Conclusion The Doncaster Local Plan Publication draft, as prepared, contains significant deficiencies, in relation to the Site; the strategic policies and the distribution of growth. Representation provides a legal interpretation of the definition of 'previously developed land' and concludes that the Site has not blended into the landscape and is not subject to any development management procedures to restore the land. The Site is therefore previously developed land and its redevelopment should be a priority.

Response:

This site is considered to be a greenfield site as it had restoration conditions attached to the permission. Furthermore, there is no need to allocate further housing land at Auckley - Hayfield Green, and the site is also within the Countryside.

### Comment:

4.1 There is a policy presumption in favour of considering brownfield land in preference to other sites. 4.2 The National Planning Policy Framework 4.3 Paragraph 117 of the Framework endorses a 'brownfield first' approach to promoting land to meet the need for homes "in a way that makes as much use as possible of previously developed or 'brownfield land'". 4.4 Paragraph 118.c) of the Framework is requires planning policies to give substantial weight to the value of using suitable brownfield land within settlements for homes and other identified needs and support appropriate opportunities to remediate despoiled, degraded, derelict, contaminated or unstable land. Paragraph 118.c) also promotes and supports the development of under-utilised land and buildings, especially where it would help to meet identified needs for housing where land supply is constrained and available sites could be used more effectively. 4.5 In Doncaster, where Green Belt land is being released for housing, paragraph 137 of the Framework is notable and significant to the consideration of previously developed land. Paragraph 137 requires local planning authorities to have examined fully all reasonable alternatives to meeting its identified need, before exceptional circumstances exist to justify the release of Green Belt land. 4.6 Doncaster Local Plan Publication Draft 4.7 The presumption in favour of considering brownfield land first is also a policy requirement and objective in the subject Doncaster Local Plan Publication draft. Paragraph 3.5 lists a series of objectives in order to achieve the Local Plan's objectives. These include: 4.7.1 encourage the re-use of sites and buildings, especially well located and underused brownfield land (e.g. redundant/unused land and empty properties and underused floorspace) to help revitalise areas of low demand and stimulate growth; 4.8 The 'Plan, Monitor and Manage' definition in the Glossary of the Local Plan reinforces the priority to use brownfield sites first, stating: 4.8.1 Approach to housing delivery replacing predict and provide, housing sites are released (i.e. granted planning permission) only as and when they are needed so as to avoid an oversupply of land and so that development can be tied to planned infrastructure improvements and meet sustainability objectives such as ensuring brownfield sites are developed before greenfield sites. 4.9 This representation raises no specific objections to the aims and objectives of the Local Plan or its preference to using brownfield land first. The objection focuses on the misapplication of the Framework's and Publication Local Plan's policies to brownfield sites. The Site is previously developed and its re-use for housing or an alternative use is encouraged in the Local Plan and Framework. The site scoring in the Sustainability Appraisal, which ultimately feeds into the prospective allocation of land in the Local Plan, is flawed and does not give priority to previously developed sites such as this. 4.10 It is notable that the Local Plan Publication draft proposes the release of land from the Green Belt to meet its identified housing need, while brownfield sites adjacent to villages such as this are prospectively retained as Countryside. 4.11 The allocations in the Local Plan Publication draft are contingent on accurate scoring in the Sustainability Appraisal. Whilst the Local Plan policies seek to give priority to brownfield land first, this objective is not carried through in the Sustainability Appraisal or the identification of land for housing. Consequently the evidence on which the Local Plan allocations are based is inaccurate and the Local Plan is unsound and inconsistent with national policy. The omissions in the Sustainability Appraisal also fail to consider reasonable alternatives to Green Belt release, and release of greenfield land, while brownfield land is available. The Local Plan is therefore unsound and fails to meet the 'Justified' test in the Framework.

### Summary:

Policy presumption that brownfield should be considered in preference to other sites. NPPF para 117 endorses a brownfield first approach and 118c also promotes and supports the development of under-utilised land and buildings, especially where it would help to meet identified needs for housing where land supply is constrained and available sites could be used more effectively. 137 gives consideration to brownfield land where Green Belt release is being considered before exceptional circumstances are justifiable. Presumption in favour of brownfield is also a policy requirement and objective of the Local Plan. As the site is brownfield it should be prioritised as a consideration for allocation and re-use. Sustainability Appraisal scoring is flawed and does not prioritise brownfield land despite this being a Local Plan objective. Green Belt is being proposed ahead of countryside adjacent to villages. Evidence on which allocations are made is therefore inaccurate and the Local Plan is unsound and inconsistent with national policy. There is no consideration of alternatives to Green Belt release.

### Response:

No further land is required in this location due to existing commitments, and as part of the spatial strategy, in order to achieve a balanced and equitable spread of growth to the places it is required, this site would not negate the need for Green Belt land to be allocated. It is considered that the land is greenfield as there is a restoration condition attached to the minerals permission.
2.1 The Planning and Compulsory Purchase Act 2004 2.2 The statutory framework for the preparation of Local Plans is set out in Section 19(1B) - (1E) of the Planning and Compulsory Purchase Act 2004 ("the 2004 Act"). Sections 19(1B) - (1E) requires each local planning authority to identify the strategic priorities for the development and use of land in the authority's area and to set these policies out in a development plan document. 2.3 In preparing a local development document, the local planning authority must have regard to national policies and advice; any other local development document prepared for the area; the resources likely to be available for implementing the proposals in the area and such other matters as the Secretary of State prescribes (Section 19(2) of the 2004 Act). 2.4 For the purposes of preparing a local plan, the national policies and advice are contained in the National Planning Policy Framework (February 2019) and the Planning Practice Guidance notes. 2.5 Such other matters as the SoS prescribes include The Town and Country Planning (Local Planning) (England) Regulations 2012. 2.6 Section 19(5) of the 2004 Act requires the local planning authority to carry out an appraisal of the sustainability of the proposals in each development plan document and to prepare a report of the findings of the appraisal. A Sustainability Appraisal has been prepared by Wood Environment & Infrastructure Solutions UK Limited on behalf of Doncaster Council and is considered in further detail below. Local Plan Representation - Regulation 19 2.7 The Town and Country Planning (Local Planning) (England) Regulations 2012 ("the Regulations") 2.8 In addition to the matters which a local planning authority should have regard to when preparing its development plan, as prescribed in Section 19(2)(a)-(2)(i) of the 2004 Act, the Regulations set out additional matters. These are contained in regulation 10 and include: 2.8.1 policies developed by a local transport authority in accordance with section 108 of the Transport Act 2000(1); 2.8.2 the objectives of preventing major accidents and limiting the consequences of such accidents by pursuing those objectives through the controls described in Article 12 of Council Directive 96/82/EC; 2.8.3 the need? (a) (i) in the long term, to maintain appropriate distances between establishments and residential areas, buildings and areas of public use, major transport routes as far as possible, recreational areas and areas of particular natural sensitivity or interest, and (b) (ii) in the case of existing establishments, for additional technical measures in accordance with Article 5 of Council Directive 96/82/EC on the control of major accident hazards involving dangerous substances so as not to increase the risks to people; 2.9 The National Planning Policy Framework ("the Framework") 2.10 The Framework is a material consideration in the determination of planning applications and "must be taken into in account in preparing the development plan". The Framework constitutes the 'national policies' referred to in Section 19(2)(a) of the 2004 Act, which the local planning authority "must have regard to". 2.11 Chapter 3 of the Framework ("Plan-making") provides the tests for the preparation and examination of soundness of development plans. There are 4 tests of soundness which a draft local plan will be examined against. These tests are set out in full below: (a) Positively prepared - providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; (b) Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; (c) Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and (d) Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this Framework. 2.12 The Doncaster Local Plan Publication draft has been assessed by both Walker Morris LLP and DLP against these tests of soundness. The objections to the Local Plan, by Walker Morris LLP and DLP, highlight the Plan's failure to comply with the various tests of soundness in the Framework.  

Summary: Introductory text on legal requirements for the Local Plan. The plan fails to comply with various tests of soundness.  

Response: Objections noted
6.1 The representations prepared by Jon Goodall and Clare Plant of DLP Planning Ltd are fully endorsed by our clients and summarised below.

6.2 National Policy and the Council’s Proposed Employment-led Housing Requirement
6.3 The Council’s objectives to provide more housing than the Standard Method indicates is supported. However, the economic growth anticipated has been arbitrarily constrained by the use of a shorter assessment period than the overall Plan Period. The Framework requires strategic policies to look ahead over a 15 year period. The approach in the Local Plan fails to consider reasonable alternatives, including calculating employment-led housing requirement in line with a 15 year outlook. Whilst it is agreed the employment-led housing requirement approach is supported as an exception to the Standard Method, this should not be artificially constrained by using a shorter period for assessment. 6.4 ‘Deliverable’ housing sites 6.5 Paragraphs 2.9 to 2.11 of Mr Goodall’s representation highlight the absence of ‘clear evidence’ required by the Framework to demonstrate housing sites are deliverable within 5 years. The representation notes that the local planning authority’s evidence (HELAA 2018) was prepared prior to the publication of the revised National Planning Policy Framework in July 2018. The July 2018 Framework contained the revisions to the definition of ‘Deliverable’ in the Glossary, which placed the onus on the Council to produce ‘clear evidence’ that a site (i.e. an allocation, outline planning permission or permission in principle site) would be delivered within 5 years. 6.6 Paragraph 74 of the Framework requires the local planning authority to establish a five year supply of deliverable housing sites in its local plan. 6.7 The evidence base includes the Doncaster 5-Year Deliverable Housing Land Supply Statement. However, the requirement figure in the Statement is based on the Standard Method and does not seek to demonstrate whether the identified sites are deliverable against the Local Plan requirement. 6.8 The evidence presented in the Housing Land Supply Statement does not include responses from developers, site owners or agents. 6.9 The absence of clear evidence to demonstrate a deliverable housing supply against the prospective housing requirement is a substantial failing of soundness. This fails to consider reasonable alternatives to prospective allocations which may be undeliverable and is inconsistent with the Framework and Planning Practice Guidance. 6.10 Overall quantum of housing required 6.11 Paragraphs 3.3 to 3.4 of Mr Goodall’s representation puts forward an alternative housing requirement figure based on the demand for labour supply over the full plan period to 2035. The housing requirement figure proposed by Mr Goodall is 1,073 dwellings per annum. 6.12 Should Mr Goodall’s requirement figure and approach to calculation be considered sound, the Sustainability Appraisal, spatial strategy and the scale of housing allocations would require reassessment. We support the justification provided in Mr Goodall’s representation. 6.13 The overall quantum of housing allocations and the Council’s spatial strategy are considered unsound as they do not aim to meet the area’s objectively assessed need. 6.14 Distribution of Growth 6.15 At paragraphs 3.10 to 3.26 of Clare Plant’s representation sets out the objection to the distribution of growth in the authority area. The recommendation here is to re-apply the housing provision to those settlements which are sustainable, desirable and close to economic growth. The approach in the Local Plan Publication draft is overly reliant on sites within the Main Urban Area of Doncaster. The unique nature of the Auckley/Hayfield settlement, with its proximity to the airport, should not be limited by an inflexible distribution to the Service Towns/Villages, in particular those which are not limited by Green Belt and are close to large employment centres. 6.16 Policy 7 of the Local Plan Publication draft does not support any contribution to housing growth at the Service Towns and Villages in close proximity to large employment centres. 6.17 Paragraphs 3.51 to 3.52 of Clare Plant’s representation also deal in detail with anticipated jobs growth at Doncaster Sheffield Airport. The Council have underestimated the jobs growth at the airport. The DSA Masterplan expects growth to 4,295 full time equivalent jobs by 2026, while the Council’s jobs growth forecast is 2,545 to the end of the Plan Period in 2035. Clearly the DSA expects significantly more growth than the Council. 6.18 The distribution of growth in the Local Plan Publication draft is inflexible and could fetter sustainable development in the borough. The distribution approach is therefore unsound and inconsistent with the policies in the Framework. 6.19 Housing allocations 6.20 Paragraphs 3.27 to 3.35 of Clare Plant’s representation support the allocation of the Site for housing and object to the retained ‘Countryside’ designation. These views are endorsed here and above. 6.21 For the reasons set out in Clare Plant’s representation at paragraph 3.27 to 3.35, and above, the site assessment in the Sustainability Appraisal is unsound. The Sustainability Appraisal fails to properly assess the site as brownfield land. Consequently the evidence on which the Local Plan allocations are based is inaccurate and the Local Plan is unsound and inconsistent with national policy.

Summary:
Providing more housing than the standard methodology is supported. Economic growth has been arbitrarily constrained by the use of a shorter plan period that the Local Plan’s 15 years. Employment led housing exception to the standard method is supported, but should not be constrained by a shorter period. 2018 HELAA prepared prior to the newly revised NPPF where “deliverable” was re-defined to put the onus on the Council to show clear evidence that a site would be delivered within 5 years and provide a 5 year supply - but this has been done against the standard method, not the housing requirement, which is a failing of soundness. Evidence of deliverability does not include feedback from developers, site owners or agents. There is a failure consider reasonable alternatives to prospective allocations which may be undeliverable and is inconsistent with the Framework and Planning Practice Guidance. New housing figure of 1,073 is suggested - this would require reassessment of the SA, strategy and scale of housing allocations. Allocations do not meet the scale of housing need required and the allocations and spatial strategy are therefore unsound as they do not meet local OAN. Suggest that growth should be re-apportioned to sustainable locations which are desirable and close to economic growth. Too much reliance on the urban area. Auckley - Hayfield Green, with it’s location close to the airport.
should not be limited by an inflexible approach to spatial distribution and is not limited by Green Belt and is close to large employment centres. Policy 7 does not support any contribution to housing growth in the service towns and villages. The Council have underestimated jobs growth at the airport, which is forecast to be 2545 by 3025, when the masterplan shows that 4295 jobs will be delivered by 2026. Object to the site being a countryside allocation. The SA is unsound and fails to assess the site as brownfield. Allocations therefore based on inaccurate info and the plan is unsound and inconsistent with national policy.

Response:
The Peter Brett’s report calculates the housing uplift using the Standard Methodology as a starting point, and this reflects national guidance. 1,073 units would have been the figure under the previous NPPF, where as 912dpa reflects the new NPPF. Over the 20 year plan period, Doncaster will deliver 18,400 homes and the Council is confident it can demonstrate that the allocated sites are deliverable as per the definitions set out in national policy. The Council consulted on the spatial strategy, and the proposed one was the preferred option. Local needs will be met locally in smaller settlements, with larger and more sustainable areas taking on a greater share of the housing requirement. Airport jobs have not been underestimated. 2545 is the figure of jobs owed in lieu of an up front allocation of 280 houses, as per Policy 7. Overall, the policy supports housing related to over 10,000 jobs at the airport, subject to proven delivery. This housing is linked to a specific site adjacent to the airport. Policy 7 is separate to Policies 2 and 3 and the wider spatial strategy, in recognition of the importance of the airport as a local economic asset. In total, approx 1,500 new homes could be delivered in Auckley - Hayfield Green in the plan period, there is no need to allocate more land in this location.

- Effective
- Consistent with national

Comment:

I refer to your Page 294 showing proposed site for change of use from Green Belt to possible building land, my additional comments are in red type. (This cannot be shown - the additional comments are therefore shown as CAPITAL) Plot 777 Archaeology The lack of substantial sub-surface development indicates that the potential for the survival of unrecorded buried remains is high. (AWAIT TO SEE THE REPORT FROM THIS) Further archaeological investigations are likely to be required to inform development proposals. (AGAIN WOULD LIKE TO SEE THE REPORT FROM THIS) Biodiversity From a wildlife point of view habitat compensation should be provided along the southern boundary of the site. To enhance the wildlife corridor that runs further to the south along the River Dearne. Design New development should front toward Doncaster Road echoing building lines opposite. New houses should back onto existing houses along the eastern and western edges with rear gardens locked together. THIS WOULD VASTLY DEPRECIATE CURRENT HOUSE PRICES, IS THERE A COMPENSATION SCHEME FOR RESIDENTS? WE ALREADY HAVE THE PROPOSAL OF THE HS2 DEVELOPMENT, THAT AGAIN BRINGS NO VALUE TO THE VILLAGE. THE APPEAL OF THE VILLAGE IS STRATEGICALLY PLACED PROPERTIES WITH GREEN SURROUNDING COUNTRYSIDE. SATURATING THIS VILLAGE WITH HOUSES WILL DRASTICALLY DEMORALISE THE SMALL COMMUNITY SPIRIT AND SAFETY FACTOR OF OUR ENVIRONMENT BY OVER POPULATION. THE ACCESS TO THIS PROPOSED SITE IS A CONCERN WITH ONCOMING ESTATES ALREADY FILTERING ON THE MAIN ROAD Houses should front southward. The Southern edge of the site requires appropriate stand-off distance from the overhead electricity transmission cables and a soft landscaped edge adjacent the countryside. Education A contribution towards education would be required. THIS WOULD INCUR FURTHER COSTS AND UNNECESSARY GROWTH TO A SMALL VILLAGE. Public Open Space On site open space provision suitable for children’s play will be required, including play equipment. (?! THE VILLAGE CURRENTLY HAS ADEQUATE CHILDREN'S PLAYING AREAS, THIS AREA IS WELL KNOWN FOR THE IDYLLIC QUIETNESS OF TYPICAL RURAL VILLAGE LIFE AND NATURE.) Transport The site can be directly accessed from Church Lane. (NOT SURE RE THIS COMMENT, CHURCH LANE HAS A SINGLE VEHICLE ACCESS POINT!!) Access should be designed for Streets. Any private accesses to classified routes require turning facilities within the site curtilage. A footway is required along the site frontage. There is currently limited bus service provision in this location. (THE BUS SERVICE IS ADEQUATE FOR THE CURRENT RESIDENTS, THIS WOULD BRING MORE TRAFFIC TO THIS VILLAGE AND THE ADDITION WOULD BE A DANGER TO THE CURRENT BUSY ROAD, WHICH IS AT PRESENT A THOROUGHFARE TO THE CALL CENTRES ON THE MANVERS ESTATES.) A Transport Statement will be required, and development may require a routing agreement during construction. Trees & Hedgerows The site is bordered by hedgerows deriving from the 1822 Barnburgh cum Harlington Enclosure Award with the 'light' N-S internal hedge of similar vintage; composition, structural and cultural surveys required. (WOULD LIKE SIGHT OF THIS PLEASE) THE FOLLOWING ARE SOME EXTRACTS AND CONCERNS WITH REGARDS TO YOUR DOCUMENT SUMMARY AND KEY PROPOSALS IN THE LOCAL PLAN, Diversify and support the rural economy whilst protecting and enhancing the character, quality and appearance of the countryside and the natural environment, including areas of landscape and biodiversity value. 16. protect and enhance biodiversity and geodiversity and provide opportunities for people to access and appreciate wildlife and nature. Climate change (flood risk) and energy: 17. reduce dependency on fossil fuels to reduce locally produced C) it will not cause significant adverse harm to a settlement’s character, setting and appearance (including partial or total coalescence with another settlement) or to the intrinsic character of the surrounding countryside; D) it accords with other policies in 6) Green Belt The openness and permanence of Doncaster’s Green Belt (as indicated on the Key Diagram) and defined on the Policies Map will be preserved. *The general extent of the Green Belt will be retained*. Within the Green Belt, national planning policy will be applied including the presumption against inappropriate development except in very special circumstances. Infill development in villages in the Green Belt (i.e. covered by Green Belt policy) is defined as the filling of a small gap in an otherwise built up frontage - a small gap is defined as a gap which fronts onto a highway and has a width of less than 20 metres between existing buildings. THIS SITE IS ACROSS TWO FIELDS (SO IS NOT A SMALL GAP TO FILL BETWEEN PROPERTIES!), CURRENTLY HOMES FOR HORSES, WHICH IN TURN PROVIDES PHYSICAL ACTIVITIES FOR THE RESIDENTS AND A FEELING OF OPEN SPACE AND THE COUNTRYSIDE LIVING THAT THE RESIDENTS OF HARLINGTON BOUGHT INTO WHEN INVESTING IN THIS VILLAGE. THE VIEW IS EXTREMELY APPEALING, AS OPPOSED TO THE ERECTION OF BUILDINGS WHICH WILL HAVE A SUBSTANTIAL ILL EFFECT BLOCKING MANY RESIDENTS OPEN VIEWS, WHICH ARE PRICELESS AND MAKES THE VILLAGE AND VILLAGE. * throughout this policy, the term ‘appropriate locations’ means a location which does not conflict, when taken as a whole, with national policy or policies in this Local Plan. In addition, to qualify as a ‘appropriate location’, the site, if developed, would: o retain the core shape and form of the settlement; o not significantly harm the settlement's character and appearance; and o not significantly harm the character and appearance of the surrounding countryside or the rural setting of the settlement. ** ‘exceptional circumstances’ in this policy is a matter for the decision maker to determine, but could be, for example, where there is a clear demonstrable need for a development, not foreseen by the Plan, that brings significant sustainable development benefits and is consistent with national planning policy in the NPPF. The provision of affordable homes is an example of development likely to meet this definition. For clarity, areas at risk of flooding (flood zone 2 or 3) are not considered as appropriate locations for the purposes of this part of the policy. *** the term ‘demonstration of clear local community support’ means that at the point of submitting a planning application to the Council, there should be clear evidence of local community support for the scheme, including, where appropriate, that of the applicable Parish or Town Council, generated via a Development Limits, Defined Villages and Countryside 4.9. The inclusion of land within a Development Limit does not automatically indicate that it is suitable for development. There may be areas of open space, woodland, areas at risk of flooding, areas that contribute to a settlement’s local distinctiveness and other protected sites that would be inappropriate for development. Additionally, other
Summary:

Objects to proposed Housing Allocation Ref: 777, Plot 3, Harlington. Would like to see archaeological report in respect to the site. House prices would be devalued; is there any compensation for residents? HS2 is already proposed near the village which brings no value with it. The appeal of the village is the surrounding countryside and saturating with houses will demoralise this small community. Access concerns - Church Lane has a single vehicle access point. There is already enough children's play space in the village. Would result in more traffic and highways will be dangerous as already a route for workers at Manvers. Would like to see the Transport Statement. The site is not a small infill gap but 2 fields which are homes for horses which provide physical activities for the residents and a feeling of open space and countryside living that residents have bought into when purchasing their houses. Loss of views. Site is at risk of flooding and contributes to the local distinctiveness and should be protected as Green Belt and is inappropriate for development. No support from local residents for the site. Lack of infrastructure in the village (schools, buses, drainage). No benefits to the village from building more houses. Allocating the site contradicts many of the local plan policies in respect to Green Belt and Countryside and will set a precedent for more loss of Green Belt.

Response:

South Yorkshire Archaeology Service have assessed the site for any potential archaeological impacts and recommended that further exploration would be required at application stage to inform development. The Highways team are satisfied that suitable access can be take from Church Lane. The site itself is not in an area of flood risk, although it is close to a functional floodplain to the south. The Local Plan developer requirements cover what is needed to help make this site deliverable. The Green Belt Review and Green Belt Topic Paper explain why exceptional circumstances exist which justify the release of this site.
Comment:
The site which extends to 0.605 Ha is located to the north east of Hickleton House. The settlement boundary of the village has expanded over recent years to include residential development on Hickleton Road and Barnburgh Lane. The site is currently designated as green belt not withstanding the development on three sides. The proposed removal of the site from the green belt for future residential development will not contradict the following five objectives of greenbelt designation:

- To check the unrestricted sprawl of large built up areas. The site is surrounded by a large body of open countryside which will not be adversely impacted by the proposed re-allocation.
- To prevent neighbouring towns from merging. There is a substantial distance from the site to other significant settlements.
- To safeguard the countryside from encroachment. The site is enclosed by development on three sides.
- To preserve the setting and special character of historic town. The site does not impact on the setting of other settlements.
- To encourage the recycling of derelict and other urban land. There is a limited number of suitable brownfield sites available in the village envelope.

A site in Harlington, which is currently located in the green belt at the edge of the settlement has been identified as being suitable for residential development. This site is both larger and less exposed than the land adjacent to Hickleton House. It is therefore suggested that this site be considered as an alternative or an additional allocation to provide resilience should demand in the area increase. (SEE EMAIL FOR PLANS)

Summary:
Suggested that the land adjacent Hickleton House is proposed as suitable residential development in the Local Plan. The site has development on three sides of the site and although greenbelt, would meet the five objectives of greenbelt designation. Compared to the proposed site at Harlington, this site is larger and less exposed and considered to be an alternative or additional allocation to provide resilience should demand increase.

Response:
The site has been assessed in the Green Belt Review and has been found to be more impactful on the Green Belt than site 777. The Green Belt Review and the Site Selection Methodology both explain why site 777 is the preferred option in this location, and also the exceptional circumstances which justify the release of site 777 (and why there are no exceptional circumstances which justify the release of site 1003).
Following receipt of [Planning Policy Officer] email dated 14 August 2019 confirming that the above detailed site has received support for a housing allocation in the Draft Local Plan, we have been instructed by the owners of the land to submit additional evidence to demonstrate the deliverability of the site for residential development and other considerations. Please find enclosed the following documents: - Site Ownership Plan - Site Constraints & Opportunities Plan - Proposed Access Arrangement - Historic Maps - Environment Agency Flood Map - Annotated Photographs - Barnburgh-Harlington Service Town / Village Plan (draft) (SEE SUPPORTING DOCUMENTS FOR Documents) Ownership / Land Use The site extends to approximately 2.35 hectares under title SYK381116, and is currently used as agricultural and pasture land. The owners of the land could be made available for development immediately upon formal allocation (subject to the appropriate planning approvals).

Contamination Any potential contamination issues resulting from the current use of the land would be dealt with through adequate remediation works prior to any development commencing. A desktop assessment of the historic maps of the area indicates that the site has been in agricultural use since at least the mid-19th Century. The surrounding area has also predominantly been in agricultural use during the same period, with a railway line constructed to the East of the site during the early 20th Century (now dismantled and redeveloped for residential and agricultural nursery use) and residential dwellings constructed to the North and West during the mid-20th Century. Given the historic / current use of the site and its immediate surroundings, it is highly unlikely that any ground contamination would be present. This would be confirmed through a full Phase 1 Ground Investigation submitted with any future planning application(s). Highways / Access A number of potential access points from the adopted highway are available along the Northern boundary of the site. The primary access point is expected to be towards the centre of the site, maximising the available visibility splays at the new junction - given the speed limit on Doncaster Road (30mph), 2.4x43m visibility splays are easily achievable - meeting the required distances set out in the South Yorkshire Residential Design Guide and national standards. It is also proposed that a 2.0m wide public footway to adoptable standards would be constructed along the adopted highway land adjacent to Doncaster Road (replacing the existing grass verge) as part of any future development, along with appropriate tactile crossing points. No public rights of way or bridleways cross the site.

Utilities The site benefits from all major utilities being located within the adopted highway that runs along the Northern boundary, including mains water supply, mains sewerage, electricity supply, gas supply and broadband. Overhead electricity power lines cross the site adjacent to the Southern boundary, with a metal lattice support tower located in the South-West corner of the site. It is envisaged that a surface water pumping station will be required to deal with surface water discharge from the Southern end of the site, connecting with the existing Yorkshire Water pumping station located on the Western site boundary (connecting into the drainage network in Mill Lane). Topography The site generally slopes down from North to South (away from Doncaster Road). Strategies will need to be developed during any future site layout design stages to deal with the existing topography, although it is not envisaged that retaining walls or major structural works would be required.

Landscape There are limited landscape features located within the site itself, other than fences and hedges that separate the agricultural fields; and no trees are located on the site (although a number of trees are located on land adjacent to the site). All of the boundaries of the site are defined by timber fences with mature hedges and trees. Flood Risk The land being put forward for residential use is almost entirely within Flood Zone 1 (with reference to the Environment Agency Flood Maps). A very small area portion of the land in the South-West corner of the site is within Flood Zone 2, although due to the location of the main overhead power lines this area would not be included within the developable area of the site. The area immediately to the South of the site is classified as a flood storage area for the River Dearne.

Covenants The landowners have checked with their solicitor and, as far as they are aware, there are no legal covenants or easements associated with the land that would prevent development. Accessibility The site is highly accessible, with excellent transport connection into Barnsley and Doncaster; and to the motorway network via the A1 (approximately 6 miles away). The 219 / 219A bus routes run along Doncaster Road feeding Barnsley and Doncaster every 30minutes - bus stops are located within 100m of the site. Within the village of Harlington is a shop and a public house, with a wide variety of additional facilities such as schools, medical centres, sports facilities, church, shops, cafes, public houses, a post office and a dentist within the settlement of Mexborough - around 7 miles away.

Summary:

Site 777 - land south of Doncaster Road Harlington (Allocated Housing site) - Supports allocation. - Representation includes additional evidence in support of the deliverability of the site.

Response:

Support welcome

### Reason:

### Area:
Chapter 16: Spatial Proposals

### Policy:
Service Town/Village - Barnby Dun

### Tests of Soundness:
- Positively prepared
- Effective
- Justified

### Comment:

Although DMBC had advertised its Local Plan by means identified in the publication document, individual sites were not. The photograph below show the only physical sign posted adjacent to site 147. The sign was strapped to a lamp post on a side of road with no footpath, in a bush (see photograph below). With considerably more visible locations to situate the sign this clearly identifies a shortfall and illustrates DMBC’s policy of discretion in advertising sites. This is totally unacceptable considering the changes proposed and much of Barnby Dun was unaware of the proposition of Site 147 until action was taken by community members. (SEE EMAIL FOR Photograph)

### Summary:
Publicity of the local plan was insufficient. There was only a single site notice posted adjacent to the proposed allocation which was poorly located which is unacceptable and most of the village were unaware until the local community took direct action.

### Response:
The Council went to great strides to publicise the informal consultation when this site was initially proposed, including press articles, signs and meeting the Parish Council in 2018 to discuss plans. The volume of responses show that the public were sufficiently made aware of this site.
Due to the long, narrow plot of Site 147, a large number of properties that border the site boundary are affected. Site 108 (dismissed) impacted only 7 new build homes rather than circa 60 early/mid 1900's homes overlooking uninterrupted views over site 147. The views and privacy are part of these properties and market advice confirms that losing these views and becoming overlooked will negatively impact property desirability and therefore reduce values. Means of suitably compensating affected residents needs to be considered should the development proceed. Greater steps should be documented to guarantee privacy for these affected property occupiers. In continuation to the above paragraph, by following the format of housing types with the area bungalows would maintain a level of privacy. Adequate tall hedging between the existing property and Site 147 boundaries should also be provided as a minimum and documented within the Local Plan. Consideration also needs to be given to the existing hedgerows and the impact on the existing wildlife in the surrounding areas with residents observing Bat, Deer and other animals regularly utilising Site 147 and the surrounding areas.

Neighbouring properties that are adjacent to site ref 147 are affected. Site ref 108 (rejected allocation) only impacted on 7 existing houses rather than the 60 affected by site ref 147. Loss of views will devalue property prices and compensation for residents should be provided. Bungalows would have least impact on existing properties and should be landscaping such as hedgerows. Loss of wildlife also needs to be considered.

Matters of views or house values are not planning matters. The Site Selection Methodology explains why Site 147 is the preferred option in Barnby Dun. Design considerations and other matters can be resolved through the application process, however the developer requirements do list the things needed to make this site deliverable - including from a design, trees, and ecological point of view.
Comment Ref: C/Site 147:Types of houses/04517/1/005
Attend Examination: Written Representation
Reason:
Area: Chapter 16: Spatial Proposals
Policy: Service Town/Village - Barnby Dun

Tests of Soundness:

Comment:
The positioning of Site 147 is amongst bungalow style houses. Consideration should be given to the type of homes to be erected within the Local Plan to ensure the developments are in-keeping with the area they are built. In the case of Site 147 this should be bungalow/dormer bungalow style houses. 3 storey 'town houses' should definitely not be permitted in this area of Barnby Dun. Consideration also to ensure there are no breaches of the Right of Light Act 1959 on the existing properties in the area due to the building of the new proposed homes. Bungalows are the most suitable styles of homes to satisfy this requirement.

Summary:
Site 147 is surrounded by bungalows so consideration should be given to the types of homes to be built to ensure in-keeping. 3 storey town houses should not be allowed and need to ensure no breaches of the Right of Light Act 1959.

Response:
Comments noted. The developer requirements note design requirements, however the design can be looked at it greater detail at application stage.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Area: Chapter 16: Spatial Proposals

Tests of Soundness:
- Positively prepared
- Effective
- Legally Compliant
  - Justified
  - Consistent with national

Comment:
We object to the Policies Map for Barnby Dun The site area shown on the interactive proposals map as housing allocation 147 is not the same as site 147 in previous documents and has been reduced at the eastern end, by at least 50 metres. There is no justification for the reduction in the site area. The map should be amended to exhibit the boundary as previously shown in draft documents. The gross site area should be noted as 11.65 hectares and not 10.11 hectares as listed in table H2(L). The Policies Map shows the extent of Flood Zone 3a, which extends within the red line of site allocation, this line of the purported flood zone does not correlate with our survey work based on site levels and should be amended as shown on the accompanying masterplan, which reflects the surveyed on site position. The site is shown as outside the development boundary of Barnby Dun. The development Boundary should be amended to include this extension land within the defined development boundary of the settlement as it will form an integral part of Barnaby Dunn PROPOSED CHANGE 9. Amend the polices map to reflect the settlement boundary.

As explained in detail above.

Summary:
Objects to Policies Map - the site area shown for housing allocation ref 147 - Hatfield Lane, Barnby Dun is not the same as previous representations/consultation of this site and the eastern edge has been reduced by at least 50 metres with no justification for this reduction. The map should be amended to reflect previous boundary and a gross site area of 11.65ha and not the 10.11ha as listed in table H2L. The EA Flood Map for Planning (as shown on the Policies Map) extends into the housing allocation but doe snot correlate with the technical survey work based on site levels and should be amended as per the accompanying masterplan. The allocation should be included within the development limits of Barnby Dun.

Response:
The allocation has been reduced in size to reflect that there are large areas in flood zone 3 where the site selection methodology has set out built development will not be supported in line with the sequential approach to avoidance of flood risk. The EA Flood Map for Planning has been the basis for applying the sequential test consistently across all site options. Development limits have been identified in line with the methodology which has been subject to previous consultation and was clear that greenfield allocations will sit outside of the settlement where identified on the edge of a town/village but will be incorporated through future review of the plan when permission has been implemented and full details are known in respect to layout etc.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

In the context of the Settlement Audit and other settlement work, Barnby Dun has a target of 105 new homes. This figure is objected to on the basis that this is a highly sustainable settlement where a higher growth figure can be accommodated on the proposed site allocation. This would reflect the sustainability of the settlement and its position close to the main urban area and transport facilities. The concept of target figures based on population and baseline growth only is flawed and the Plan should reflect allocations in the most sustainable service towns and villages that includes economic housing growth and should not be based solely on the existing population figures.

This housing target is in line with the settlements size and position in the settlement hierarchy, which has been derived from the Settlement Audit and other settlement work. Baseline growth is for all settlements, but larger settlements get a share of the economic growth. This is based on sustainability, as set out in the Settlement Audit and Housing Topic Paper.
Support is made in principle for the allocation of site 147 Land to the North of Hatfield Lane Barnby Dun, but objection is made to the reduced site area. It is clear that there are very few extant permissions in Barnby Dun, and the urban extension at site 147 has the full support of the landowners, to deliver the site to the market. However they object to the overall housing number allocated to the site in table H2L, which indicates that the number of dwellings that can be accommodated on the site is 98 units. Technical work undertaken on the site which includes a detailed topographical survey and flood risk assessment based on levels and information demonstrates that the site is capable of accommodating a minimum of 165 dwellings, within the area defined as the extent of the site on the proposals map. This can take place on land that is not at risk from flooding and also retains open space and amenity areas. The developable area could be further maximised following further flood risk analysis. (SEE EMAIL FOR Masterplan layout) The village which is acknowledged as the largest in the Doncaster area lies only just outside the main urban area of Doncaster, and has good links to the area and to Kirk Sandal railway station. On this basis this sustainable location should maximise the use of this site and increase the allocation on the site. Although the number of homes are purported to be indicative in table H2L the indicative figure is currently too low for a site of this size and sustainability. PROPOSED CHANGE 1. To include the proposed allocations 147 within the development limit of Barnby Dun. 2. Allocate sufficient land for the complete plan period and to meet the full housing requirement. 3. Provide consistency between the housing requirement calculations, the supply and the allocated sites. 4. Redistribute the full housing requirement to include the service towns and villages. 5. Provide a table and plan in the text clearly indicating allocations. As explained in detail above.

Response:
Support welcomed. The site density has been calculated using the HELAA methodology and also takes account of the fact some of the site is undevelopable due to flood risk. Barnby Dun only requires 105 new dwellings overall. Policy 6 does allow for higher or lower densities if it would result in a better design solution.
Introduction

Further to the invitation to make comment on the Publication Draft of the Local Plan for Doncaster, DCH Consulting Ltd, on behalf of our client Mr Alec Parkin-Coates would like to put forward the following comments on the whether the plan is legally compliant and sound and specifically in relation to Barnby Dun and the related draft policies and proposed allocations. Mr Parkin-Coates put forward his site at the Call for Sites Stage in relation to a potential housing development, in 2002 as a potential mixed-use site and has continued to promote the site. The site is located to the north of White House Farm, Bramwith Road, Barnby Dun. OS Grid Reference S12099 and is local plan reference 108. Positively Prepared. It is the view of our client that, by Doncaster Council discounting all sites in flood zone 3 and Green Belt sites, they have not prepared the plan positively. The environment agency is continuously re-modelling the flood risk areas and indeed there are areas of Barnby Dun that have been recently re-modelled, reducing the risk from flood zone 3 to 1. This is as a result of the EA understanding more about flood risk in the area and analysis that has been undertaken by technical consultants in respect of specific development sites. There are many Flood Zone 3 sites and Green Belt sites that have been blanked out which have a realistic potential of delivering the development needed for the borough more sustainably than some of the larger sites put forward for allocation. Justified. Mr Parkin-Coates has promoted his site through the local plan process. The most recent representation is attached. The Council have set out there objectively assessed housing need for Barnby Dun and in order to deliver the dwellings required seek to allocate alternative site ref 147, despite much local opposition. Our client is of the view that the Council have not considered his site as a reasonable alternative to deliver the housing need for Barnby Dun. Our client’s site is a brownfield site and is of the same flood risk as site 147. Site 147 has not been previously developed and also poses some potentially significant design issues such as access arrangements, impact on the local highway network and visual impact across the countryside. Site Comparison. Both sites are affected by a high risk of flooding. Both sites are just outside of settlement locations. Our client’s site is brownfield. It is therefore our clients view that the Council have not fully justified the strategy based on his site being a reasonable alternative. Effective. It is questionable whether the plan is deliverable. The plan, in relation to delivering homes, focuses on large scale sites, which are often in multiple ownership (including many of the Council’s own land) and are reliant on major infrastructure improvements. Many of the sites put forward for allocation are to be delivered in the longer term. The NPPF in paragraph 68 states that - Small and medium sized sites can deliver much needed housing development much quicker with less risky investment. Our client’s site could be classed as a small to medium sized site as around 34% is outside of Flood Zone 3, 10% would be open space as per the open space requirement in addition to the required landscaping and sustainable drainage areas required and potential water compatible uses. It is therefore put forward that the plan is not effective to deliver the key objectives to maintain a supply of deliverable housing land and the required new homes (18,400) over the plan period. Consistency with National Policy (NPPF) The National Planning Policy Framework (As Amended) February 2019 sets out the Governments Planning Policy for England. The presumption in favour of sustainable development sets out that for plan-making, plans should positively seek opportunities to meet the development needs of their area and be sufficiently flexible to adapt to rapid change. It is clear from recent re-assessment of the flood risks by the EA that the situation in respect of flooding changes rapidly and the initial studies undertaken by our client’s consultant is a positive start to development being safe from flooding. It is considered that our client’s site has not been considered as a reasonable alternative to the site put forward for allocation in that it is a brownfield site and the NPPF places weight on the re-use of brownfield sites. The site put forward is a greenfield site, is currently countryside and flood risk 3 the same as our client’s site. Weighing in favour of our client’s site is that the site is previously developed, deliverable, initial flood risk work indicates that the site can be developed, and the implications of flood risk can be mitigated against with further technical design. In addition, the development of our client’s site will have less impact on the local highway network as the site put forward is in an area of known highway network issues and there will be less visual impact on views across the open countryside, our clients site will be seen in context with the new development on the edge of the settlement. It is on this basis that, in relation to the site specifically, the plan allocation proposed is not consistent with national planning policy when weighed against our client’s site and the selection methodology. PROPOSED CHANGE. Consider our clients site (108) as a reasonable alternative to the site put forward (147) on the basis that it weighs in favour due to the re-development of a brownfield site, less significant highway and visual impact implications. (SEE EMAIL FOR Rep about site AND Flood Risk Appraisal)

Summary:

Re site 108 (Rejected Housing site) Barnby Dun. Site being promoted for allocation. Comparison with allocated site 147. 1. Is a Brownfield site (unlike 147) 2. Is same flood risk. 3. 147 has potential issues (Access/Impact on Highways/Impact on Countryside) 4. NPPF puts weight on BF sites. 5. Initial flood risk work indicates site can be developed with mitigation of risk. 6. Less impact on highways than 147. 7. Less impact on Countryside than 147. 8. Allocation of 108 would bring compliance with NPPF (para's 9 & 32) 9. Representation provides in depth supporting information covering natural Environment, Urban form, Highways, Infrastructure and Flood Risk as to why site 108 should be allocated.

Response:

Do not agree that the site is brownfield. The portion of site 147 allocated for housing is in Flood Zone 1. The Site Selection Methodology explains how decisions have been made about allocations in this settlement, and it is felt that Site 147 constitutes the best site option in Barnby Dun.
The Representation consists of a petition with 370 signatures objecting to the housing allocation at Barnby Dun (Site Ref: 147 - Hatfield Lane). The text states that villages across Doncaster are set to sprawl under housing proposals in the local plan. Whilst there may be a need for housing, there is a consensus throughout Doncaster and Barnby Dun that the quantity proposed far exceeds the borough's infrastructure capacity. Alternative sites should be sought that cause minimal impact to existing residents, infrastructure and amenities. The Local Plan has been relatively well advertised by DMBC. However, there have been shortfalls informing potentially affected residents of such drastic changes such as hidden signage adjacent to proposed sites. The Local Plan that shapes Doncaster's future development is found online. This petition supplements the completed Local Plan Comments Form attached. By signing this petition you object fully to the development of Site 147 and agree to the points raised on the Comments Form. Although this petition relates to site 147, other local residents are welcome to sign. It would be beneficial for other affected areas to adopt an approach like this to show clear dissatisfaction with DMBC and the Local Plan.

Summary:

The Representation consists of a petition with 370 signatures objecting to the housing allocation at Barnby Dun (Site Ref: 147 - Hatfield Lane). The text states that villages across Doncaster are set to sprawl under housing proposals in the local plan. Whilst there may be a need for housing, there is a consensus throughout Doncaster and Barnby Dun that the quantity proposed far exceeds the borough's infrastructure capacity. Alternative sites should be allocated which impact less on existing residents, infrastructure and amenities. Consultation has been relatively well advertised, but there have been shortfalls such as hidden signs adjacent to the proposed site.

Response:

Objections are noted. The site has been identified in line with the spatial strategy and settlement hierarchy as Barnby Dun, being a Service Village, has a local housing need allocation of 105 dwellings over the plan period and there are very few existing sites with permission to meet this target. The site has been identified through the site selection process and its overall size/allocation has been reduced to reflect concerns around the potential for more than the 105 dwellings identified on the site. The Local Plan is supported by an Infrastructure Delivery Plan and policies in the plan provide for contributions towards improving the capacity of infrastructure, such as schools. The Representation does not identify which alternative sites should be allocated instead, nor where such sites may exist that do not impact on existing residents or infrastructure. One of the core principles of national policy is to bring forward sustainable development in locations where people want to live and have access to services and facilities.

### Summary:

Pegasus have reviewed the sites allocated in Bawtry and research shows 18 to 20 units can be discounted from Bawtry's supply (site numbers 950 (no evidence development will commence), 966 (remove allocation), 982 (retirement housing), 141 (remove 6 units) and 499 (remove 4 to 6 units))

### Response:

Disagree with assessment that site numbers can be deducted. Yields are based on planning applications or the HELAA methodology as agreed by the stakeholder group. Confident that numbers proposed can be achieved and there is no need or justification to release further land in Bawtry.
Tests of Soundness:

Comment:
2.23 Our Client supports the proposed allocation of their land interests on Westwood Lane, Bawtry (site reference: 141), as this is a suitable and deliverable housing site that plays little Green Belt function. 2.24 However, our Client objects to the dismissal of their site (reference: 146) as a proposed housing allocation. More detailed information is provided in Section 3 of these representations.

Summary:
Policy 6 - Housing Allocations. 1. Supports allocation of site ref 141. 2. Objects to rejection of site ref 146.

Response:
Support for site 141 welcomed. Site 146 is a large Green Belt extension which scores as having a moderately weak case for removal from the Green Belt. It is not deemed that exceptional circumstances exist which justify the release of this site.
3.1 In addition to publishing the Publication Draft document the Council have also published their proposed housing allocations for consultation. As a major housebuilder within the borough, our Client has a keen interest in the proposed allocations. 3.2 It is noted that our Clients land interest at Tickhill Road, Bawtry (site reference: 146) has been rejected as a proposed housing allocation on the following grounds - "rejected housing site - this site is currently designated as Green Belt. The Phase 3 Green Belt Review concludes that the site has a Moderately Weak Case for inclusion in further site selection work". 3.3 It is important to note that the brief explanation does not dismiss this site on the basis of it having any physical constraints such as access or flood risk issues, it is dismissed on purely on the perceived harm to the Green Belt. 3.4 As per our previous comments and having reviewed the Green Belt Review that has been undertaken in 2016 by Arup on behalf of the Council, our Client has significant concerns regarding the way in which the assessment has been undertaken. Indeed, our Client commissioned a landscape rebuttal, prepared by Golby + Luck Landscape Architects, in response to the findings of the DMBC Green Belt Review. This rebuttal is attached at appendix 1. (SEE EMAIL FOR Appendix 1) 3.5 In addition to this rebuttal, at the previous consultation stage we raised fact that there appear to be flaws in the methodology and this in turn has lead to a negative assessment of our Client’s land, which had the assessment be undertaken in a different way, would not have occurred. 3.6 The Green Belt Review splits the Green Belt within the borough into 64 parcels, which are then assessed against the five purposes of the Green Belt. Whilst it is not disputed that an assessment against the five Green Belt purposes should be undertaken, it is the fact that only 64 parcels of Green Belt have been assessed, and in the case of site ref: 146, dismissed because it falls within a much wider parcel. 3.7 This is not a fair and reasonable way to undertake a Green Belt review and each site put forward should be assessed on its individual merits, not as part of a wider parcel of land, which may well score more poorly. The map extract below shows the extent of 'South 6', which is the parcel of land which site 146 falls within. The parcel is expansive with large areas of woodlands and plantations, however, that is very different context when considered our Clients site in isolation. To put this in this context, Our Clients site area totals 15 ha whilst the Green Belt review has assessed an area that totals over 1,500 ha. Our Clients land equates to just 1% of this of land immediately adjacent to the settlement boundary of Bawtry and 4.55 km from New Rossington to the North West. The site is highlighted in yellow in figure 3.1 below. (SEE EMAIL FOR Figure 3.1 - Extent of South 6 Green Belt Parcel) 3.8 An example of how this approach is flawed, is that under each question, an assessment is made, with reference to the various different areas within the parcel i.e. adjacent to New Rossington, the central area, and adjacent to Bawtry, but then an overall score is given, despite the fact that each of the areas mentioned above play greatly differing roles within the Green Belt. 3.9 It is clear from figure 3.1 above that our Clients site will not impact upon New Rossington or the central area and, when considering the prevention of merging or coalescence of neighbouring towns, the Green Belt Review specifically states that the Green Belt at this location (South 6) represents a 'Less Essential Gap' of a sufficient scale that development is unlikely to cause merging. Futhermore, under the question 'Green Belt General Area has a role in supporting the views into and out of the historic core' and an overall score of 3 is given, which means the following - 'views to the historic core of the settlement from the Green Belt or our from the historic core the settlement towards the Green Belt are dispersed and enclosed with moderate views to key historic elements within the core or out towards a surround. There are some medium scale detractors or nearby built form which have moderate impact on views to and from the Green Belt'. 3.10 However, the specific assessment relating to land around Bawtry states "views towards the historic core of Bawtry are relatively limited by a copse of woodland just beyond the western development extent of Bawtry. Views from the north west towards Bawtry are again limited by the outdoor storage area. Views from the historic core of Bawtry are limited by the modern built form on the settlement’s periphery". This does not align with scoring the site 3 on this test, and it demonstrates that the site has been scored unfairly due to it being included within a larger parcel. 3.11 Our Client objects to the methodology used within the Green Belt Review and we point out that ultimately, if the site was considered in isolation it would have been demonstrated that the land does not play an important Green Belt role and would represent a rounding-off of the settlement. The site is not constrained, a fact which does not appear to be disputed by the Council, and subject to the provision of a strong landscap belt along the western and northern boundaries of the site, would represent a suitable site for a housing allocation. Green Belt release in this location would allow additional housing in Bawtry at an acceptable scale and in an appropriate location. 3.12 An indicative masterplan has been prepared by JRP Architects and it shows how a scheme can be brought forward for 240 units, which only utilises approximately 50% of the overall site, thus reducing the potential impact of the development. This is considered to be a suitable and deliverable housing site, which is being promoted by a housebuilder with a track record for delivery, and this site could be delivered within the first five years of the plan, which could deliver a significant level of much needed affordable housing within this area. We would advise that the Council under take a specific Green Belt Assessment of this site in isolation. 3.13 With regards to our Clients other site in Bawtry, which is located off Westwood Road (site ref: 141), they fully support the proposed housing allocation. The site is not constrained and has defensible boundaries on three sides, and it plays a limited role in the Green Belt and therefore should be removed and allocated for housing.

Summary:
Site 146 (rejected) 1. Rejected because it is Greenbelt. 2. Contends that GB review and methodology was flawed. 3. Site is part of a much wider assessed parcel - do not agree with this. \ should have been assessed on its own merits. 4. Includes full rebuttal to Greenbelt assessment by Golby & Luck Site 141 (allocated) o Supports allocation.
Response:
The Green Belt Review is an independent document with an agreed methodology which has been consistently applied across the borough. Site 146 has been assessed on its own merits in the Stage 3 report, as well as part of a larger parcel in Stage 1, which considers all of the borough’s Green Belt. Site 146 scored as moderately weak in the Stage 3 review, having a mixed boundary and being strong on Green Belt purposes. The Stage 3 report is published and the Green Belt Topic Paper also examines the Green Belt options in Bawtry. Support for site 141 noted.

Area: Chapter 16: Spatial Proposals
Policy: Service Town/Village - Bawtry

Tests of Soundness:

Comment:
1.1 This representation is prepared by Pegasus Group on behalf of Mr. J. Wilson in relation to Land at Martin Lane, Bawtry. The representation considers the content within the Publication Draft of the Doncaster Local Plan. 1.2 In compiling this representation Pegasus Group have applied the four elements of soundness referred to in the National Planning Policy Framework, which are; positively prepared, justified, effective and consistent with national policy. 1.3 This representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018. The Publication Draft version identifies few substantive changes to the earlier iteration and as such our previous representations remain. The appended document promotes the site and illustrates why it should be allocated for residential development. The purpose of this submission is to focus on the matters within the Publication Draft, mainly the overall requirement and distribution of housing and update our previous representations. (SEE EMAIL FOR Appendix documents) The Site - Land at Martin Lane, Bawtry The site being promoted on behalf of Mr. J. Wilson is approximately 5.4ha of Land at Martin Lane which sits on the northern edge of the settlement of Bawtry. The site is promoted for approximately 100 dwellings. This site forms part of a larger parcel of land of approximately 55ha which has been previously promoted. This larger parcel remains available (outlined red on figure 1.1). However, at this stage our client seeks the allocation of the smaller parcel (outlined red on figure 1.1). 1.4 These changes have been made to address previous concerns regarding the scale of the site and its impact upon the Green Belt, this is discussed in greater detail within section 7 below. The site as now promoted will focus residential development within the red-line boundary. This is closely related to the current built form of Bawtry and is bounded on all sides by a clear defensible boundary. The amendments ensure that the site as now proposed will have minimal impacts upon the Green Belt. 1.5 The landowner is actively promoting the site as a suitable location for new homes. The area identified for residential development could accommodate circa 100 dwellings. The accompanying Site Concept Plan illustrates how development could be achieved on the site in a well-designed manner, responding to site conditions and local characteristics, including heritage setting considerations. (SEE EMAIL FOR Figure 1.1: Location Plan - Land at Martin Lane, Bawtry) 1.6 The site can deliver a range of type and tenure housing suitable for different groups in the community. The provision of new homes in this settlement will not only make an important contribution to meeting the housing requirement for the Borough, as a minimum, but will also have local and Borough-wide economic benefits in terms of construction impact and household expenditure once constructed. 1.7 We consider that land at Martin Lane is a suitable site at Bawtry for housing growth to contribute to the Borough’s growth and boost housing land supply. 1.8 We confirm that land at Martin Lane is available now, that the promotion of the site is supported by willing landowners, and that development on the site could be delivered in a timely manner to contribute to the Borough’s supply.

Summary:
Representation by Pegasus Group on behalf of Mr. J. Wilson in relation to Land at Martin Lane Bawtry. The site being promoted on behalf of Mr. J. Wilson is approximately 5.4ha of Land at Martin Lane which sits on the northern edge of the settlement of Bawtry. The site is promoted for approximately 100 dwellings. This site forms part of a larger parcel of land of approximately 55ha which has been previously promoted. This larger parcel remains available. However, at this stage our client seeks the allocation of the smaller parcel. These changes have been made to address previous concerns regarding the scale of the site and its impact upon the Green Belt.

Response:
Newly promoted site acknowledged. We will not be assessing further new sites at this stage of the process.
6.1 The following table reviews those sites allocated in Bawtry. We reserve the right to comment further on the suitability or otherwise of sites proposed, however our initial research indicates that 18 - 20 units can be discounted from Bawtry's supply. This provides further justification for the allocation of the site Land West of Bawtry Hall. Table 5.1: Review of Bawtry Sites Ref: 950 Address: Station Hotel, 93 Station Road, Bawtry Pegasus Initial Comments: - Original planning permission on the site, application ref. 14/01733/FULM, was granted in 2016. Condition 1 requires the permission to be commenced by 20th October 2019. - No evidence available to suggest that conditions have been discharged and the development will commence in time. Ref: 966 Address: Bawtry Hall, South Parade, Bawtry Pegasus Initial Comments: - Planning permission ref. 16/00733/FUL expired on 7th June 2019. As confirmed by the consultation document, the development has not commenced. - No further applications have been submitted to the Council and the intention to development the site is in doubt. - It is recommended to remove the allocation. Ref: 982 Address: Land and Buildings on the West Side of Top Street, Bawtry Pegasus Initial Comments: - Retirement housing. Accommodation is restricted to persons over 60 years of age. Ref: 141 Address: Westwood Road, Bawtry Pegasus Initial Comments: - Green Belt site. Exceptional circumstances considered to exist to justify removal from Green Belt - Council allocate the site for 20 dwellings, however the site layout submitted as part of planning application 16/01672/OUTM (withdrawn) illustrates a capacity of 14. - It is recommended to remove 6 dwellings from the allocation. Ref: 499 Address: Land off North Avenue, Bawtry Pegasus Initial Comments: - Allocated for 16 units in the 0-5 year period. Given the size, shape and orientation of the site, Pegasus believe the site could realistically deliver 10 - 12 units. - This is a proposed allocation only and no evidence is provided to show that the site will come forward in the 5 year period expected by the Council. - It is recommended to remove 4 -6 units from the allocation.

Summary:
Following a review of sites in Bawtry, it is felt 18 - 20 units can be discounted from supply, further justifying the site to the west of Bawtry Hall: Ref: 950 Address: Station Hotel, 93 Station Road, Bawtry Pegasus Initial Comments: - Original planning permission on the site, application ref. 14/01733/FULM, was granted in 2016. Condition 1 requires the permission to be commenced by 20th October 2019. - No evidence available to suggest that conditions have been discharged and the development will commence in time. Ref: 966 Address: Bawtry Hall, South Parade, Bawtry Pegasus Initial Comments: - Planning permission ref. 16/00733/FUL expired on 7th June 2019. As confirmed by the consultation document, the development has not commenced. - No further applications have been submitted to the Council and the intention to development the site is in doubt. - It is recommended to remove the allocation. Ref: 982 Address: Land and Buildings on the West Side of Top Street, Bawtry Pegasus Initial Comments: - Retirement housing. Accommodation is restricted to persons over 60 years of age. Ref: 141 Address: Westwood Road, Bawtry Pegasus Initial Comments: - Green Belt site. Exceptional circumstances considered to exist to justify removal from Green Belt - Council allocate the site for 20 dwellings, however the site layout submitted as part of planning application 16/01672/OUTM (withdrawn) illustrates a capacity of 14. - It is recommended to remove 6 dwellings from the allocation. Ref: 499 Address: Land off North Avenue, Bawtry Pegasus Initial Comments: - Allocated for 16 units in the 0-5 year period. Given the size, shape and orientation of the site, Pegasus believe the site could realistically deliver 10 - 12 units. - This is a proposed allocation only and no evidence is provided to show that the site will come forward in the 5 year period expected by the Council. - It is recommended to remove 4 -6 units from the allocation.

Response:
Disagree with assessment that site numbers can be deducted. Yields are based on planning applications or the HELA method as agreed by the stakeholder group. Confident that numbers proposed can be achieved and there is no need or justification to release further land in Bawtry.
Comment: The Town Council would not support the allocation of site 141 Westwood Road as sound. Although excluding the site would reduce the allocated units required by 20, a small development does little to achieve housing targets and as a Green Belt site, by its nature, does significant damage. We do not therefore consider that exceptional circumstances can be shown at this site to justify inclusion. Other sites proposed and considered may have been more suitable that were not Green Belt. We are also concerned about whether the plan has been "Positively Prepared - providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities" or "Effective - deliverable over the plan period, and based on effective joint working on cross boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground" In particular it has been established the above refers to section 106 monies between neighbouring counties. We have had recent examples of this not happening when developments are proposed in Harworth.

SUMMARY: 'Unsound' - Objects to the allocation of housing site 141 Westwood Road due to loss of Green Belt and there are no exceptional circumstances demonstrated to justify the decision. At just 20 dwellings the site contributes little towards the settlement's requirement. Other site options have been rejected that may have been more suitable and not Green Belt. Also raises concerns about cross boundary working with neighbouring authority (Bassetlaw District Council) in respect to development across the borough boundary at Harworth and its impact on the local road network and lack of Section 106 monies.

Response: Doncaster Council is working closely with Bassetlaw District Council with regard to the duty to cooperate and the impact that development in Harworth is having on the road network in Doncaster including Bawtry. Exceptional circumstances justifications are set out in the Green Belt Topic Paper, which is based in part on the findings of the Stage 3 Stage 3 review. Site 141 in Green Belt terms is the most strongly justified piece of Green Belt to remove, being an isolated island. There are no preferable Green Belt options in the settlement, and whilst 20 units is relatively modest, it is not insignificant in the scheme of Bawtry's requirement and helps the settlement to deliver 90 out of 110 proposed units.

**Comment:**

Proposed Housing Allocations Site Ref: 165,186 Location: Skellow Objection: Too peripheral to be sustainable. PROPOSED CHANGE Delete the proposed allocations for the reasons shown in our table above.

**Summary:**

Site 165 / 186 - object - too peripheral to be sustainable. Proposed change: delete the proposed allocation.

**Response:**

Disagree, the site results in a rounding off of the built form in this location, is not isolated and no more distant from existing services that the current residences in this area.
Comment: We object to the Policies Map for Carcroft /Skellow. The sites allocated as 186 and 165 should be included with the development boundary as they will form part of the settlement and should therefore be within the residential policy area. The alteration to the Green Belt Boundary to exclude sites 186 and 165 is supported. PROPOSED CHANGE 9. Amend the polices map to reflect the settlement boundary. As explained in detail above.

Summary: Object to the Policies Map for Carcroft /Skellow. The sites allocated (Refs: 186 /165) should be included with the development boundary as they will form part of the settlement and should therefore be within the residential policy area. Supports alteration to the Green Belt Boundary to exclude sites.

Response: Development limits have been identified in line with the methodology which has been subject to previous consultation and was clear that greenfield allocations will sit outside of the settlement where identified on the edge of a town/village but will be incorporated through future review of the plan when permission has been implemented and full details are known in respect to layout etc. Support to remove the site from the Green Belt welcomed.
The Chapter sets out the role and function of the settlements in the hierarchy. Paragraph 16.150 sets out that this level of settlement will receive growth relating to their share of the baseline requirement, with each settlement having a target figure relative to the existing population. Objection is made to the fact that only the baseline growth is apportioned to the service towns and villages and that the economic housing growth should also form part of the growth proposals for these settlements. Carcroft/Skellow has a target of 250 new homes. This figure is objected to on the basis that this is a highly sustainable settlement where a higher growth figure can be accommodated on the proposed site allocation. This would reflect the sustainability of the settlement and its position near to major industrial areas and allocations. The concept of target figures based on population and baseline growth only is flawed and the Plan should reflect allocations in the most sustainable service towns and villages that includes economic housing growth and should not be based solely on the existing population figures.

Response:
This housing target is in line with the settlements size and position in the settlement hierarchy, which has been derived from the Settlement Audit and other settlement work. Baseline growth is for all settlements, but larger settlements get a share of the economic growth. In this case, neighbouring Adwick-Woodlands has economic growth as a Main Town. This is based on sustainability, as set out in the Settlement Audit and Housing Topic Paper.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Area: Chapter 16: Spatial Proposals
Policy: Service Town/Village - Carcroft-Skellow

Tests of Soundness: Positively prepared  Justified  Consistent with national  Legally Compliant

Support is made in principle for the allocation of sites 186 and 165. Carcroft Skellow is the largest of the service towns and villages and a sustainable location with a good range of services. The sites total some 15.11 hectares and the indicative capacity is 300 new homes. It is not known why the development of the site should be included as delivering in years 6-15 of the Plan period, the site is available and deliverable early in the Plan Period. PROPOSED CHANGE 5. Provide a table and plan in the text clearly indicating allocations. As explained in detail above.

Support welcome. A table of allocations is provided in Chapter 16 of the Plan. The build out rates are explained in the HELAA methodology, but these are an assumption, and it is acknowledged that sites may be developed before or after this point.
PROPOSED CHANGE The area in which the proposed site for building homes is green belt land and I do not think it should be built on. The policy on building on green belt land states and you say that “The general extent of the Green Belt will be retained. Within the Green Belt, national planning policy will be applied including the presumption against inappropriate development except in very special circumstances. Infill development in villages in the Green Belt (i.e. covered by Green Belt policy) is defined as the filling of a small gap in an otherwise built up frontage - a small gap is defined as a gap which fronts onto a highway and has a width of less than 20 metres between existing buildings. * throughout this policy, the term ‘appropriate locations’ means a location which does not conflict, when taken as a whole, with national policy or policies in this Local Plan. In addition, to qualify as an ‘appropriate location’, the site, if developed, would: o retain the core shape and form of the settlement; o not significantly harm the settlement’s character and appearance; and o not significantly harm the character and appearance of the surrounding countryside or the rural setting of the settlement. ** ‘exceptional circumstances’ in this policy is a matter for the decision maker to determine, but could be, for example, where there is a clear demonstrable need for a development, not foreseen by the Plan, that brings significant sustainable development benefits and is consistent with national planning policy in the NPPF. The provision of affordable homes is an example of development likely to meet this definition. For clarity, areas at risk of flooding (flood zone 2 or 3) are not considered as appropriate locations for the purposes of this part of the policy. *** the term ‘demonstration of clear local community support’ means that at the point of submitting a planning application to the Council, there should be clear evidence of local community support for the scheme, including, where appropriate, that of the applicable Parish or Town Council, generated via a thorough but proportionate pre-application consultation exercise.” I not sure what the VERY SPECAIL CIRCUMSTANCES are that you need to build on this specific land. On a personal note I bought the property I own for the views of the countryside and wildlife such as deer, pheasant, many birds and bats. If the development was to go ahead I would look out on to a many, many roof tops. I think this would devalue my property and would be. The development of these houses in this location on a community would change this area to a quiet place to a urban area. The road are not equipped at present undertake the amount of people commuting to work down the A1 which regularly is congested and the slip road is not long enough. The development would only exasperate this and make it worse. The local amenities, it’s already a problem trying to get appointments at the local doctor’s surgery and schools in immediate area are full.

Summary: ‘Unsound’ - Objects to housing allocation 165/186 - Crabgate Lane, Skellow. The site is Green Belt and should not be developed based on the Council’s own Local Plan Policy 3 part 6. If the site was developed then would result in loss of countryside views, loss of wildlife and devaluation of property value. Would also impact on the quietness of the area. The highway network is insufficient already and the A1 is regularly congested and the slip road is not long enough and would all be exasperated by further development. Local amenities are also insufficient and at capacity, such as GP and schools.

Response:
Policy 2 part 6 applies to decision making, however as explained in the Housing Topic Paper and Green Belt Topic Paper, the release of Green Belt is sometimes necessary when justified by exceptional circumstances, as in the case of this site. Developer requirements explain what is required to make this site acceptable, and modelling of both the local road network and the strategic road network has been undertaken by AECOM and Highways England respectively.
Comment:

5.1 Land at Crabgate Lane is identified in Table H2(N) as having an indicative capacity of 300 dwellings when conjoined with allocation 165. This representation is supported by a Site Promotion Document which explains when the land at Crabgate Lane is a suitable location for new homes. It also illustrates how development could be achieved on the site in a well-designed manner, responding to site conditions and local characteristics. We confirm that Site 186 is capable of being delivered on a solus basis for in the region of 135 units; it is not related in deliverability terms to the rest of the Site 165 to the north; and represents the most suitable parcel of land within the Site 165 having the immediate boundary with the northern edge of the settlement. Notwithstanding this position, we recognize that a comprehensive, well-designed development would be necessary across the whole allocated site area, and the opportunities to link Site 186 to land to the north are illustrated in our accompanying Site Promotion document. We reserve the right to comment further on any site-specific requirements that may follow in regard to the wider land area (Site 165). (SEE EMAIL FOR Site Promotion Document)

5.2 The provision of new homes in this settlement will not only make an important contribution to meeting housing requirement for the Borough but will also have local and Borough-wide economic benefits in terms of construction impact and household expenditure once constructed. 5.3 We strongly support the inclusion of land at Crabgate as a housing allocation within the Publication Draft Local Plan. We concur with the Council’s assessment that this site represents the most suitable site at Carcroft & Skellow for housing growth to contribute to the level of growth directed at the settlement by the Plan’s strategic policies. Site 186 is available now, supported by a willing landowner and development on site could be delivered in a timely manner to contribute to the Borough’s supply.

Summary:

Land at Crabgate Lane is identified as being able to deliver 300 dwellings in conjunction with site 165. This is supported. The site is a suitable location which can be well designed. Site 186 is also available as a stand-alone site for 135 units and is the most suitable parcel of the two being the southern one - however it is accepted that a comprehensive well designed development would be necessary and will provide links to Site 186. Houses here will help meet the borough housing requirement, and also have wide economic benefits in terms of construction jobs and household expenditure when constructed. Strongly support the inclusion of this site in the Local Plan allocations, and the site has a willing landowner.

Response:

Noted. The preference is that both sites will be allocated and provide a coherent holistic new housing site in this location.
5.1 Land at Mill Lane, as promoted by this document is approximately 11ha of land immediately east of Mill Lane, to the north of residential development on Acacia Road, on the northern edge of the settlement Carcroft & Skellow. This representation is accompanied by a Site Promotion Document which explains why Site 185 represents a suitable location for new homes in accordance with the strategic draft policy targeting growth to the settlement of Carcroft & Skellow. It also illustrates how development could be achieved on the site in a well-designed manner, responding to site conditions and local characteristics. (SEE EMAIL FOR Site Promotion Document) 5.2 The provision of new homes in this settlement will not only make an important contribution to meeting the housing requirement for the Borough, as a minimum, but will also have local and Borough-wide economic benefits in terms of construction impact and household expenditure once constructed. 5.3 As discussed previously, we disagree with the Council’s reason for rejecting Site 185 - that "part of the site is within Flood Risk Zone 2/3 so allocation of the site would lead to inappropriate development in a high flood risk area - the site fails the flood risk sequential test." The presence of area of Flood Zone only on a proportionately small part of the site does not make the site unsuitable in its entirety. The Site Promotion document accompanying this representation demonstrates how the site is capable of being designed in a way that excludes built development from the Flood Zone. Flood risk mitigation is also possible over the wider site. The residential uses would be within Flood Zone 1, therefore there would be no failure in sequential flood terms. 5.4 We consider that Site 185 is a suitable site at Carcroft & Skellow for housing growth to contribute to the Borough’s growth and boost housing land supply. My clients are also promoting Site 186 in in Carcroft & Skellow (a proposed housing allocation) and it is considered that this site (Site 185) would assist in providing a flexible land supply for Carcroft & Skellow in addition to Site 186. Site 185 is available now, supported by a willing landowner, and development on the site could be delivered in a timely manner to contribute to the Borough’s supply. 5.5 We reserve the right to comment further on proposed sites in Carcroft & Skellow in subsequent consultations on the draft Plan.

Summary:
Promoting site 185 - 11ha to the east of Mill Lane on the northern edge of Carcroft Skellow. New homes in this settlement will make an important contribution to meeting the housing requirement for the borough but will also have borough wide economic benefits in terms of construction impacts and household expenditure when built. Disagree that being in flood zone 2 / 3 should rule this site out. The flood zone is only on a small part of the site and does not make the site unusable in its entirety. It can be designed in a way that excludes flood zone development and mitigates flood risk across the site. All residential land would be in flood zone 1 and would therefore not fail the sequential test. Client also promoting 186 and so 185 will assist in providing flexible land supply in this location. It can be brought forward in a timely manner to assist with housing supply in the borough.

Response:
Almost 22% of the site is in Flood Zones 2 and 3 (19% in the latter). Furthermore, the site was considered in the Green Belt Review and found to have a weak case for inclusion in the Site Selection Process. In both flooding and Green Belt terms, site 165 / 186 is preferable, being less impactful on the Green Belt, able to demonstrate exceptional circumstances, and containing no land at risk of flooding. If site 165 / 186 are allocated, no further land is required in this location.
6.1. Priority Space objects to Policy 6 and the proposed distribution of housing and that the following site is not a proposed allocation: - Site 273: Askern Road, Carcroft 6.2. The site is summarised below and technical information and advocacy reports have been submitted previously an updated flood risk assessment will be submitted shortly. Test of Soundness 6.3. Priority Space considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.4. Priority Space is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3, Priority Space recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. Priority Space is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. 6.6. The proposed distribution against the Council’s own targets shows a deficiency and a significant under provision in: - Doncaster - Adwick - Conisbrough - Denaby - Mexborough - Thorne - Moorends - Spotbrough - Tickhill - Bawtry 6.7. Priority Space, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. 6.8. Priority Space, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. Wadworth should accommodate some new housing to reflect its role and function and provision should also be made in the villages to address the rural economy. 6.9. Carcroft and Skellow is a highly sustainable settlement, but is only identified as a Service Town and Village which is proposed to accommodate 250 dwellings. However, the Settlement Audit 2017 and settlement profile demonstrates that the settlement sits within the top 10 settlements within the Borough based on primary services and facilities. It is the only other settlement to have the same score for primary services and facilities as settlements identified as Main Towns. Further the Settlement Background Paper 2018, notes the close relationship with Adwick Woodland. Stating in support for Adwicks position as a Main Town that it is co-located with Carcroft-Skellow and they share a number of services. However the co-location of settlements is not reflected in the scoring of facilities within the Carcroft-Skellow Settlement profile (within the Settlement Profile Document), nor is it reflected in Carcroft-Skellows’ position within the settlement hierarchy. 6.10. As outlined in the Settlement Audit (2017), Carcroft has a primary school and a high street with a range of shops including an Asda Superstore and a number of local shops and services offering a range of services. The proximity of these services, and a number of businesses, to the site creates employment opportunities to any potential incoming residents into the locality. 6.11. Priority Space therefore consider that the status of the settlement should be elevated and consider that is capable of and should accommodate more development. This would assist the regeneration and renewal of the settlement and assist in the economic and housing growth aspirations of the Borough and Region. 6.12. Priority Space would be concerned if the figures identified for each settlement are maximum’s. In accordance with the Framework, Priority Space considers the requirements for each settlement should be minimums to be achieved. This would provide the flexibility in order to achieve the overall housing requirement for the Borough. 6.13. Carcroft is in a prime strategic location near to significant existing and proposed employment parks and further housing provided to ensure Doncaster benefits from such inward investment. Priority Space proposes that their site at Askern Road can accommodate new housing to meet that need. 6.14. Priority Space is concerned that the single site identified in Carcroft-Skellow (Site 165/186) is located off-centre and will not benefit in relation to regeneration and economic growth to the same extent a site adjacent to the centre of the settlement. 6.15. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be developable within the Plan Period. As indicated in response to Policy 3 Priority Space suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.16. Priority Space consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, Priority Space do not consider the Doncaster Local Plan in its current form to be sound. 6.17. However, Priority Space consider that with the proposed allocations and the deletion or adjustment in anticipated delivery within the plan period of sites 165/168 that the Local Plan can be found sound. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.18. To overcome the objection and address soundness matters, the Council should: 6.19. Delete or reduce the expected yield of the following allocations: - Site 165/168. 6.20. To address these deficiencies in the Plan Priority Space therefore suggest that the following sites be allocated: - Site 273: Askern Road, Carcroft 6.21. A short summary of the site is in the following sub-section and an updated Flood Risk will be submitted in due course to supplement these representations.
Policy 6 - Housing allocations

1. Not producing enough homes across the Borough.
2. There are under provisions in numerous settlements (listed para. 6.6)
3. Spatial Strategy is incorrect.
4. Status of Carcroft/Skellow should be allocated commensurate with its role and function.
5. Figures in each settlement should be minimums to be achieved to allow for more flexibility.
6. Site 273 Askern Road Carcroft (rejected site) should be allocated (an in depth advocacy of the site is included).
7. Site 165/186 should be deleted or the expected yield reduce.

Response:

Overall the borough is meeting its housing targets, and generally settlements are too, where suitable and justified sites exist. The Main Urban Area and Main Towns use ranges and all but Mexborough, due to numerous constraints, are within or at the top of these. Not all settlements need to deliver at the top of the ranges, if they all did there would be an oversupply of housing in the borough. Most of the Service Towns and Villages meet, surpass, or almost meet their targets, with the exception of Tickhill which falls short due to Green Belt and access issues, and a lack of existing commitments. However, the shortfall in areas is picked up in other areas. Site 273 is in Flood Zone 3 and therefore not appropriate to allocate. 165/186 is not flood risk and has a moderately strong case for removal from the Green Belt, and it is deemed that exceptional circumstances exist that justify this site being removed from the Green Belt and allocated. It is not clear why, therefore, site 273 is preferable.
6.22. Priority Space consider that Carcroft is able to and should accommodate more development, which would assist the regeneration and renewal of the settlement and assist in the economic and housing growth aspirations of the Borough and Region. Carcroft is in a prime strategic location near to significant existing and proposed employment parks and further housing provided to ensure Doncaster benefits from such inward investment. 6.23. Priority Space objects that Site 273 at Askern Road, Carcroft site is not allocated and should be identified as a housing site. 6.24. Priority Space object that the site has been discounted in relation to Flood Risk. The site is well located in terms of proximity to services and facilities. An updated Flood Risk and Drainage Assessment, including a Sequential Assessment has been prepared and will be submitted shortly, which demonstrates a drainage strategy for the site and that the site has not flooded for a significant period of time. The additional modelling demonstrates that in the event of a breach of the flood defences and as the site levels are lifted to accommodate a flood from a breach, the water that would have inundated the site would be displaced over lower lying undeveloped parcels of land to the east, resulting in no flood risk to existing property. Priority Space have been in discussion with the Environment Agency, regarding the principles of development at this site, and have received a positive response indicating that they do no object to the development of the site subject to confirmation that sleeping accommodation is restricted to upper floors. Technical studies are ongoing but initial assessments demonstrate the site's deliverability. An updated flood risk assessment will be submitted in due course to supplement these representations. 6.25. Priority Space considers the proposed site is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 6.26. The deliverability and benefits of the Askern Road, Carcroft site is as follows: Overview of Proposals 6.27. The site is located within a mixed use area with employment uses located to the south of the site adjacent to Askern Road. Immediately adjacent to the north and west of the site are residential uses which form the settlement of Carcroft and an allocated undeveloped residential site from the UDP (1998). To the east of the site is open countryside. The site is currently accessed via North Street located to the north and Askern Road to the South. The site is circa 9.9ha and can accommodate in the region of 200 houses. (SEE EMAIL FOR Aerial Photo) Deliverability 6.28. The site at Askern Road, Carcroft provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by Priority Space which further demonstrates the site's deliverability within the plan period. Availability 6.29. The land is being promoted by Priority Space. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 6.30. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and development. This site allows housing to be delivered within an appropriate and sustainable location within Carcroft. Suitability 6.31. A site is suitable for housing development if it offers a suitable location for development and would contribute to the creation of sustainable mixed communities. 6.32. The site is adjacent to a partially underdeveloped UDP housing allocation (PH315 - Owston Road, Carcroft, Site 398 - 93 homes). This site is identified as a Reserved Site in the Local Plan and therefore there is potential for any future housing allocation to include the site as part of a larger housing allocation for sustainable growth in Carcroft and Skellow. Further the development of land off Askern Road may assist with the deliverability of Site 398. 6.33. The land at Carcroft is a highly appropriate site to assist with the housing need in Doncaster. The site is capable of delivering a residential scheme in a sustainable location with significant regeneration, infrastructure, economic, environmental and recreational benefits. 6.34. The site is within the settlement of Carcroft and Skellow which is a highly sustainable area as evidenced by the findings from the Settlement Audit (2017), Settlement Profile (2018) by Doncaster Council as part of the preparation of the Doncaster Local Plan. The site is well connected, within walking distance of bus and train service, local services including a school, community facilities and a wide range of shops. The site is accessible by a variety of modes of transport and is therefore suitable for development. 6.35. With reference to the Environment Agency's flood risk maps, the site is within Flood Zone 3 and as such is at a high risk of flooding with a medium to high risk of flooding from surface water. However, in context the majority of Carcroft is within Flood Zone 3 and as such these areas will need to be fully considered for new housing. Walker Ingram have undertaken an updated Flood Risk and Drainage Assessment. Consultations with the Environment Agency demonstrate that the site has not recently flooded and did not flood in 2007 with defences containing the flood water. Indeed, the site has not flooded in over 70 years. The additional modelling demonstrates that in the event of a breach of the flood defences and as the site levels are lifted to accommodate a flood from a breach, the water that would have inundated the site would be displaced over lower lying undeveloped parcels of land to the east, resulting in no flood risk to existing property. In relation to development of the site the report concludes that solutions are available and the site is capable of being developed for housing. the updated flood risk assessment will be submitted in due course and supplement these representations. Further the Environment Agency have responded positively and indicated that they do not object to the scheme subject to the confirmation that sleeping accommodation is restricted to upper floors. 6.36. The development will provide additional quality development that will benefit Carcroft and the wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Green Belt 6.37. Due to the significant need and demand for housing and aspirations for economic and housing growth there is clearly a requirement for a strategic review of the approach to locations for future growth within the district. In order to plan for appropriate for the plan period there is a need to review the Green Belt boundaries. A thorough review of the development limits of Doncaster settlements would ensure a holistic approach to the location of development for the future of the Borough. 6.38. The housing needs of Doncaster are putting severe pressure on the local authority to review the Green Belt. To meet the housing requirement Doncaster Council recognises that some Green
Belt land will need to be released for new housing land. Askern Road, Carcroft is a unique opportunity to positively use the Green Belt and meet the housing need for the area. 6.39. In the Borough of Doncaster approximately 46% of the area is designated as Green Belt. This is the western part of the Borough which forms part of the South Yorkshire Green Belt surrounding urban areas. 6.40. The Framework explains that there are five purposes of including land within the Green Belt, which is: 1. To check the unrestricted sprawl of large built up areas; 2. To prevent neighbouring towns merging into one another; 3. To assist in safeguarding the countryside from encroachment; 4. To preserve the setting and special character of historic towns; and 5. To assist in urban regeneration by encouraging the recycling of derelict and other urban land. 6.41. Contextually, the site is "contained" by development and activity being a "tongue" of land which protrudes into the urban area of Carcroft-Skellow surrounded by residential properties, a housing allocation and the employment land. Within this context the release of the site from the Green Belt has limited impact on "openness" and that redevelopment of the site would have low impact on the purposes of including land within the Green Belt. 6.42. The Framework states that Green Belt boundaries should be drawn so as not to include land which it is unnecessary to keep permanently open. The impact on the openness of the Green Belt will be limited. The site is bounded by the urban area to the north, east and south. To the south is Askern Road with employment uses beyond, to the north is housing and to the west is a housing allocation and Owston Road, which has housing and a primary school and some local businesses. 6.43. The site is therefore "contained" and will not lead to unrestricted sprawl or encroachment. The site is a protrusion of Green Belt into Carcroft-Skellow and is contained within its setting. The site would not therefore lead to the coalescence of towns. Whilst the development would result in development of some countryside the degree of encroachment into the countryside would be minimised. The site has no impact upon the setting of a historic town. 6.44. Priority Space propose that the new Green Belt boundary would "round off" Carcroft-Skellow and follow the defined drainage which is clear and well defined. This boundary would accord with the Framework and ensure that the Green Belt is clearly defined using readily recognisable features to ensure permanence reinforcing the urban context whilst providing a robust boundary for the future. 6.45. All the boundaries have the potential to be further reinforced within the site through additional planting to ensure an effective transition between the development and the countryside beyond. Achievable 6.46. A range of technical work is being undertaken and further survey work is ongoing. From the initial assessments there are no technical issues that would prevent development or are insurmountable. The site is therefore considered to be achievable and therefore deliverable in accordance with national guidance. The technical assessments will be submitted in due course and are available upon request. Effective Use of Land 6.47. Although the site is greenfield, the proposed scheme will utilise and enhance existing infrastructure. Although the site is not previously developed it is currently under-utilised. The site is easily accessible and the proposed main access is off Askern Road. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing 6.48. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. Priority Space considers that the site at Askern Road, Carcroft is deliverable in the short term and will reinforce the housing supply and address the Borough's housing needs in the early periods of the Local Plan. The site is fully capable of being delivered in the next 5 years. A Positive Response to the Key Objectives of the Framework 6.49. The Framework sets out that the Governments key housing policy goal of boosting significantly the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to services, jobs and infrastructure. Sites should also make efficient use of land and existing infrastructure. 6.50. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, suitable and achievable for development. Benefits of Askern Road, Carcroft 6.51. The development of the site would provide significant benefits. The site would provide housing that would meet the needs of the Carcroft and Doncaster Borough housing market. Therefore this site provides a unique opportunity in a sustainable location. 6.52. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 200 new homes. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and needs in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to services and facilities and also to bus stops for local bus routes. - The scheme will create direct and indirect job opportunities both during and after construction. 6.53. The proposal is an appropriate site to provide for the housing needs of Carcroft and Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site at Askern Road, Carcroft would assist with this delivery in the short term. The site is situated within a prime location suitable for residential development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 6.54. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. Proposed Change 6.55. To overcome the objection and address soundness matters, the Council should: - Allocate: o Site 273: Askern Road, Carcroft (SEE EMAIL FOR Flood Risk Assessment)

Summary:
Carcroft should be able to accommodate more development, which would assist regeneration and help the Borough meet it's housing targets.
Prime strategic location close to employment opportunities. Object to the rejection of the site due to flood risk. Site is well located in relation to services and facilities. An updated flood risk and drainage statement will be provided shortly. The site has not flooded for a significant period of time. Site levels can be lifted and any potential flood water distributed to fields to the east. The EA have responded positively to discussions on the site, including sleeping accommodation upstairs only. Updated flood risk assessment to follow. The site is in a mixed use area and is an unused UDP allocation. It can accommodate approx. 200 houses. It is available, suitable and achievable and therefore deliverable. The site is sustainable and can meet the housing needs of Carcroft, as well as the short term trajectory in the Local Plan. It can provide a mix of housing, including affordable housing and a sustainable community. Site 273 should be allocated.

Response:
No sites are being allocated in the borough in areas of flood risk. A suitable site has been found in Carcroft - Skellow which can deliver the settlements housing requirement and does not flood.
Our industrial estates are too remote from the motorway and much of the land is farmed and crossed by drainage ditches. Our villages require major road infrastructure investment to open it up for any further development. Furthermore, as I understand it, any further development of these sites would only provide the majority of non-employment uses e.g. lorry/transporter parks, motor dismantlers and spares. PROPOSED CHANGE The infrastructure for the proposed developments is not fit for purpose. The DMBC have a duty of care to their residents. The volume of traffic already is having a negative impact on health and safety of residents. In addition, the DMBC are already lacking in their duty to provide the social services that should be expected as a basic human right. The impact of the lack of social services not only impacts on the well-being of residents but also the environment.

Summary:
The B1220 is the main road supporting traffic through the village and the only route to/from the A1 to the Carcroft Enterprise Park and industrial estates. There have been numerous accidents on this road. Owston Park School and Carcroft Middle School are not in a position to accommodate an influx of children. Children already have to travel out of the area to secondary school as Outwood Academy is full. Waiting lists to get appointments at the local GP are long and even calling is difficult. Skellow and Carcroft are identified as the most deprived areas in Doncaster. Statistics provided by Public Health England clearly supports our argument that the impact of the existing negative environmental issues is contributing to the poor health of resident’s within our area. The exception rate for COPD and Asthma sufferers of all ages are some of the worst in Doncaster. COPD may be initiated by other route causes but it is no doubt exacerbated by the present condition of the environment and air quality. Industry/Employment: - Our industrial estates are too remote from the motorway network and much of the land is farmed and crossed by drainage ditches. Our villages require major road infrastructure investment to open it up for any further development. Furthermore, as I understand it, any further development of these sites would only provide the majority of non-employment uses e.g. lorry/transporter parks, motor dismantlers and spares. PROPOSED CHANGE The infrastructure for the proposed developments is not fit for purpose. The DMBC have a duty of care to their residents. The volume of traffic already is having a negative impact on health and safety of residents. In addition, the DMBC are already lacking in their duty to provide the social services that should be expected as a basic human right. The impact of the lack of social services not only impacts on the well-being of residents but also the environment.

Response:
The Council has liaised with relevant infrastructure providers throughout the Local Plan process. The education team have assessed the impact on schools in the borough and the developer requirements note where money will be required as part of future planning applications for housing. Please see the Infrastructure Delivery Plan for more details. Furthermore, the impact of development on both the local and strategic road network has also been assessed by AECOM and Highways England respectively with recommendations made on how to mitigate any forecast impacts in the transport modelling reports / IDP.
The addition of 300 houses (rather than 250 needed - DMC own figures) is a poorly thought out idea which shows a complete lack of knowledge of the local area. This is a disgrace that a local council lacks such understanding. 1) Schools - This year has already seen pupils in this area not being able to get into the local high school due to a lack of places! What School building is planned in the area to allow for 300 extra houses being added? 2) GP Surgery - The 2 local GP Surgeries have had to merge this year due to a lack of doctors & restrictive NHS funding. Has an increase in 300 house equate to more district nurses? What changes are planned in the Doncaster Royal infirmary A & E if we are going to fee the increased house building in this and other parts of Doncaster? waiting times are also bad now before adding more population ! 3) Local infrastructure Since the recent building of the Carcroft industrial estate there has been a huge increase in the number of HGV's using the road. There have been numerous approaches to the Council from local residents to ask for this to be assessed to no avail. Is there a plan by the Council to look at this and how it will be affected with the 300 new houses or has the Council again made the plan without actually looking at All aspects ? 4) Healthy living - With the governments healthy living policies increasing year on year has the local Council even considered the lack of enough green space for current residents before adding 300 more house?
1) It is suggested that the land off Crabgate Lane is a suitable site for 300 houses to be built based on the land’s suitability regarding not being a flood risk, this is incorrect. I have lived on Crabgate Lane for 7 years and we have had flooding on this land twice within those 7 years, one occasion resulted in the water flowing across the road and down our driveways. What guarantee’s can Doncaster Council offer to reassure homeowners on Crabgate Lane that building on this land will not increase the flooding risk to our properties? 2) In the draft local plan published last year, Doncaster Council have admitted that the B1220 (Skellow Road) does not have spare capacity for the further development of Carcroft Industrial Estate and recommends a link road be built to accommodate the extra vehicles. If there’s no infrastructure for the vehicles, how can 300 houses be built putting potentially 600 more vehicles on our local roads, this does not include deliveries to the houses, bin collections, all the building development vehicles. Is the link road going to be built prior to the housing development starting? 3) The target number of new houses to be built is 250 so why is Doncaster Council suggesting putting 300 on the site, our local services are already at full capacity, our GP Surgery has waiting lists of over a month for prebookable appointments, an hour wait for the blood clinic (I have 3 separate examples of this). Outwood Academy has no spaces and students are having to travel across Doncaster to other schools. What provisions are Doncaster Council going to make to accommodate 300 new households to the area? 4) Our area has a lack of green spaces that are suitable as recreation spaces, 300 new families to the area will further impact on what is already an issue that has been highlighted to Doncaster Council. Numerous Pit tops around Doncaster have been developed into woodland parks, Bullcroft has not been developed into a green space even after numerous requests from local residents. Is this lack of amenities for local residents and area to be reviewed by Doncaster Council? 5) Crabgate Lane has an issue with speeding vehicles, including the buses this has been previously highlighted to Doncaster Council, I did receive a reply from Nigel Raven but no action was to be taken, I asked for more road signs and traffic to be monitored, what is Doncaster Council going to propose to make our roads safer with more vehicles using it?

Summary:

Comments on sites 165 & 186 Crabgate Lane Skellow. Flood risk: 1. Land is a flood risk and has flooded twice in the last 7 years. 2. What guarantees can be offered that development will not increase the flood risk on Crabgate lane. Roads: 1. Impact on local road - The B1220 does not have any additional capacity (as acknowledged by DMBC 2018 consultation). How can it accommodate a potentially 600 plus additional vehicles? 2. Crabgate Lane has an issue with speeding vehicles. What will be done to make the roads safer with additional vehicles? Housing figure: 1. Target number of houses is 250. Why is the Council suggesting a capacity of 300? Impact on services: Concerned about increased pressure on local services - GP/Schools. Outwood academy has no spaces. Amenities: Lack of local amenities especially Green space to accommodate 300 new families.

Response:

The site is not in Flood Zone 2 or 3 (where we are not looking to allocate housing). Any flood risk mitigations will be decided through the eventual application for housing on this site, when such details can be covered thoroughly. The impact of development on both the local and strategic road network has also been assessed by AECOM and Highways England respectively with recommendations made on how to mitigate any forecast impacts in the transport modelling reports / IDP. Indicative capacities are based on build out rates agreed with the stakeholder group earlier in the Local Plan process, but will be clarified through the eventual planning application. The Council has liaised with the CG however NHS surgeries are not in the Council’s control. The Council has liaised with relevant infrastructure providers throughout the Local Plan process. The education team have assessed the impact on schools in the borough and the developer requirements note where money will be required as part of future planning applications for housing. Please see the Infrastructure Delivery Plan for more details. The Council has produced numerous Green Space information both before the Local Plan and as part of the process. The Green Space Audit is now seven years old and will be updated following the adoption of the Local Plan.
Further to email correspondence, Carter Jonas LLP is instructed by our client, KCS Developments Ltd, to submit representation to the Doncaster Publication Draft Local Plan (the DLP) regarding the development strategy for the settlement of Carcroft-Skellow, in particular the delivery of housing growth over the Plan period. A Site Promotional Document was issued to the Council in April 2019 identifying the site specific matters, availability and suitability of the land in question to the West of Ings Lane, Skellow, in particular the ability to deliver up to 80 dwellings, in close proximity to the village centre. A copy of that document is attached to this representation along with other technical and environmental reports as listed in the text below. Since the preparation of those documents further work has been undertaken with respect to flood risk and this representation sets out the consequences of that additional work and how it ties with the Local Plan strategy. To inform this representation two plans are attached as Appendices - Appendix 1 SK01A Site Layout Plan - Appendix 2 SK03 Site Plan A number of separate technical papers are also submitted for information: - Site Promotion Document (Carter Jonas) - Access Appraisal (Optima Highways) - Heritage Impact Assessment (Prospect Archaeology) - Coal Authority Report  (SEE EMAIL AND SUPPORTING DOCUMENTATIO FOR ADDITIONAL DOCUMENTS)

Summary:
A site promotion document was provided to the Council in April 2019 promoting the site for 80 dwellings. Since then further work has been done in relation to flood risk mitigation and the consequences of additional work for the Local Plan

Response:
The site has been promoted late in the process and therefore will not be considered for allocation at this time.
Comment Ref: C/Policy 6: H2(N)Crabgate/05319/1/012

Attend Examination: Attend Hearing

Reason: The matters raised in our representation go to the heart of the Local Plan. It is considered that attendance at the relevant hearing sessions will allow further comment to be made where appropriate.

Area: Chapter 16: Spatial Proposals

Policy: Service Town/Village - Carcroft-Skellow

Tests of Soundness:

Comment:
Paragraph 16.204 supplemented by Table H2(N) indicates the single site allocation (Sites 165 and 186) for land of Crabgate Lane. Totalling 15.1 hectares, the indicative capacity achieves 300 dwellings, assuming areas of lower density and/or buffer zones adjacent the A1(M) to mitigate concerns of noise generated by traffic. Being prudent, we would question the ability of the Crabgate Lane site to deliver the dwelling numbers as set out in Table H2(N). This states that the site will deliver 175 units over a five year period; i.e. 35 units per year. We would suggest that a delivery of 25 units per year is feasible, reflecting the yield for the following five year period. This would suggest that a number of the units will be delivered beyond the Plan period.

Summary:
Sites in Carcroft/Skellow: Crabtree Lane Site (165/186 proposed for allocation) may not deliver the number of dwellings proposed. Suggest that 25 units per year is more feasible than 35.

Response:
The yields and build out rates were agreed with the stakeholder group as set out in the HELAA methodology.
To address this concern we recommend that the Council should identify more land including further releases from the Green Belt. We consider that land to the west of Ings Lane, Skellow is a suitable and deliverable site. The site proposed for removal from the Green Belt is identified at Appendix 1 with a gross site area of 4.2ha. The boundaries would follow well defined hedgerow features. At Appendix 2 is a drawing indicating how much land is proposed for housing at this stage, extending to 1.5has, with a yield of 51 dwellings. A further area of around 1.0ha is currently the subject of further discussion with the Environment Agency to agree that it is not at risk of flooding. In the present circumstances this additional area is submitted as potential reserve land (in effect, safeguarded) at this stage. Details within the attached promotional document (which has been submitted to the Council previously) demonstrates how the larger site is available, suitable and achievable, capable of delivering around 75 dwellings (@30dph). This scale of development is considered proportionate to the village’s housing requirement. The site is in close proximity to the village centre and a level 100m walk to bus stops. Currently, the land is laid to pasture, formed of overgrown grass with a mix of thick woodland and hedging that forms a protective border around the site. The entire site is gently sloping with no obvious technical hurdles, both Ings Lane to the east and South Farm Drive to the north-west directly adjoin the property and are adopted highways, a further Local Authority search has confirmed the site is not crossed by any Public Rights of Way. Flood modelling carried out by JGP Group using 2018 Environment Agency data and a detailed topographical site survey has confirmed the entire site is located in Flood Zone 1, this is evidenced in a supporting map that highlights the difference in location between modelling from JGP and the Environment Agency when assessing the extent of Flood Zone 3. The Environment Agency’s flood mapping application is based on Ordnance Survey’s OS VectorMap, this data is to the nearest contour line, these are spread 10m apart and therefore EA mapping can only provide an indicative boundary, whereas JGP have modelled Environment Agency data with an up to date detailed site survey to deliver an accurate representation of flood risk on the site. Therefore we consider the Flood Zone 1 boundary using JGP Group’s analysis of 2018 EA data acceptable and further assessment of this data will be provided to assist the Council’s site selection methodology process for this site. The site has very few limitations that would restrict development other than being washed over with a Green Belt designation. The Council has already accepted that there are exceptional circumstances for removing land from the Green Belt. As set out in the attached promotional document we consider that the site performs weakly in protecting the Green Belt as evidenced in the Stage 3 Green Belt Review by site 42, a comparative neighbouring site immediately to the west. Additionally, this site maintains the characteristics of the tightly drawn Green Belt surrounding Carcroft-Skellow far more so than the provisional housing allocations of sites 165 and 186 at Crab Green Lane to the west of the settlement. These two sites (also in the Green Belt) are provisionally accepted because they are not at risk of flooding, the site we are proposing is neither at risk of flooding, nor within close proximity to the A1 motorway, which may negatively impact residential amenity. Therefore, we reflect that this site is as appropriate, if not more so for residential development than other sites under deliberation. To summarise, the site is immediately available and suitable for development with few restrictions. The Framework places a large emphasis on smaller sites that can deliver housing quickly and seeks to diversify the variety of housing within residential market areas. The removal of the Green Belt designation and inclusion of this site as a draft housing allocation conforms to the aspirations of the NPPF (2018) and creates a logical and efficient extension of the settlement. In order to assist the Council in its consideration of this site, in addition to the Promotion Document, the following reports are also included with this representation submission: - Access Appraisal (Optima Highways) - Heritage Impact Assessment (Prospect Archaeology) - Coal Authority Report Within reason, further reports will be commissioned should they be required to facilitate the Council’s consideration of this proposal.

Propose site at Ings Lane for allocation (housing) o More land should be released from Greenbelt at Carcroft/Skellow to meet shortfall. o Suggest Land West of Ings Lane is suitable and deliverable and achievable (rep includes details re site and yield etc.). o All site is in Flood Zone 1 (based on commissioned modelling - may differ from EA data) o Only limitation of the site it that it is Greenbelt. o Suggest that this site is 'weak' in GB protection terms. o Compares Ings Lane site with allocated sites 165 & 186 in terms of Greenbelt and Flood risk, o Ings Lane is appropriate for residential development potentially more than 165 & 186. o Rep includes several reports and a promotion document in support of the Ings Lane site.

Response:
The identified site (165 / 186) can deliver enough houses to meet the requirement for the settlement on a site without flood risk constraint which was assessed in the Green Belt Review as having a moderately strong case for removal from the Green Belt. The Ings Lane site could not deliver enough units to meet the local housing need, so irrespective of Green Belt / Flood issues etc., more land would be required in the area.
Support welcomed

Tests of Soundness:

Comment:
Please see the supporting letter referenced: 08.23.MP.YK5661P.Yorkshire Main Colliery - Local Plan Rep: This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Harworth Group in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. This representation relates to the 'Former Yorkshire Main Colliery, Broomhouse Lane, Balby' (site ref: 646). This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site. Site and Context The application site comprises 16.8 hectares of land to the north of Broomhouse Lane, Edlington. The site is forms part of the wider former Yorkshire Main Colliery site and is in the eastern part of the wider site in an area previously used for spoil tipping with associated engine house and railway sidings. Following the closure of the colliery tip washing operations were undertaken at the site to recover coal. Part of the former colliery to the south of Broomhouse Lane has been restored as Edlington Pit Wood Country Park, which is linked to the site via a footbridge. The application site is bounded to the north and east by agricultural land and to the west by Lords Head Lane. The proposals represent the final phase in the redevelopment of the former Yorkshire Main Colliery site, having already been developed for residential and industrial use to the west. In December 2018, hybrid planning permission was granted under reference 18/02100/OUTM, including outline permission for residential development of up to 375 dwellings and public house with associated access, landscaping and public open space and full planning permission was granted for the creation of a temporary access and enabling earthworks to create a development platform. Delivery The subject site is in the full ownership of Harworth Group. Harworth are currently engaging with housebuilders with a view to bringing the site forward for development in 2020/21, following the remediation and earthworks which will enable the land to be sold as a serviced site. Proposed Allocation The site is proposed to be allocated for housing within the Publication Local Plan under site reference: 646 ‘Site at Former Yorkshire Main Colliery, Broomhouse Lane, Balby’. Policy 6 identifies that the site has an indicative capacity for up to 375 dwellings and sets out that Housing Allocations will help to deliver the Spatial Strategy, meet the needs for housing and support sustainable communities. Policy 3 ‘Level and Distribution of Growth’, sets out that the Local Plan’s strategic aim is to facilitate the delivery of 18,400 homes in the period of 2015 - 2035 (920 annum), with sufficient land allocated to deliver 15 years’ supply of housing. To meet the Local Plan’s Spatial Strategy and Settlement Hierarchy, 10% of the Borough’s Total Housing need is earmarked to be delivered within Service Towns and Larger Villages. Edlington is identified within this classification and it is proposed that the settlement will deliver 230 dwellings over the plan period. Although the delivery of this site exceeds the housing target for Edlington, the oversupply of housing will help to deliver the final 2 years of housing supply for the plan and therefore support the wider borough plan period requirement for housing delivery. The allocation of this site for housing meets the objective of paragraph 117 of the NPPF, which sets out that planning policies should promote the effective use of land in meeting the need for homes and that strategic policies should make use of previously developed land as much as possible. Summary The site is proposed to be allocated for residential development under site reference number 646 and benefits from a live planning permission. The delivery of this site will make the best use of previously developed land in a highly sustainable location. The site has the capacity to make a significant contribution to the supply of housing in the Borough and is essential in meeting the spatial strategy for the plan period. The allocation of this site for residential development is therefore supported.

Summary:
Supports the plan as ‘sound’. Site reference 646 - Broomhouse Lane, Edlington is proposed to be allocated for residential development and benefits from a live planning permission. The landowner (Harworth Group) are currently engaging with house builders with a view to bringing the site forward for development in 2020/21 following remediation and earthworks to allow the land to be sold as a serviced site. The delivery of this site will make the best use of previously developed land in a highly sustainable location. The site has the capacity to make a significant contribution to the supply of housing in the Borough and is essential in meeting the spatial strategy for the plan period. The allocation of this site for residential development is therefore supported.

Response:
Support welcomed
C/Site 315 - Summary/0234/2/004

**Reason:** To support the Representations Report and the Inspector's understanding of the site.

**Area:** Chapter 16: Spatial Proposals

**Policy:** Service Town/Village - Finningley

**Tests of Soundness:**

<table>
<thead>
<tr>
<th></th>
<th>Justified</th>
<th>Effective</th>
</tr>
</thead>
</table>

**Comment:**

DLP Planning Ltd object on behalf of Mr and Mrs Honcharenko to the retention of this site within the Countryside Policy Area. It is recommended that the settlement boundary for Finningley is amended to incorporate the site. The site has been considered suitable, developable, deliverable and available by the Local Planning Authority and is sustainably located. Its inclusion within the settlement boundary for Finningley will not lead to an unsustainable form of built form and represents a logical limit which is tightly drawn in with the existing site boundary.

**Summary:**

Site 315 should be in the development limit for Finningley. It is suitable, deliverable and available (by DMBCs own records (HELAA)), and is also sustainable. The site will not lead to an unsustainable built form and represents a logical limit which is tightly drawn in with the existing boundary.

**Response:**

Such land is excluded from development limits as per the methodology, and as such has been allocated as countryside. There is no need to find additional housing land in Finningley as the local housing requirement can be met.
This Local Plan representation has been prepared by DLP Planning Ltd on behalf of Mr and Mrs Honcharenko in response to the publication Doncaster Local Plan (Regulation 19) for consultation. This representation relates to ‘Land west of Station Road, Blaxton’ (site ref: 315). This representation should be read alongside the formal response form that has also been completed and submitted in relation to this site.

**Site and Context**
The site is located on the edge of the settlement of Finningley to the rear of properties along Station Road (A614). The site comprises of an existing dwelling and with access taken from an existing track on Station Road. The site is bounded by agricultural land to the south and west and a rail line is located to the south of the site. The centre of the village of Finningley is located 500 metres to the south of the site on Doncaster Road. The site is located within Flood Zone 1.

**Proposed allocation**
The draft Local Plan document and Proposals Map shows the site washed over by Countryside Policy Area, this is despite the site being brownfield in nature. (SEE DOCUMENT FOR Fig 1 - Draft Policies Map Extract)

**Summary:**
Site 315 is on the edge of the settlement and comprises of an existing dwelling with access from Station Road. It is bounded by a rail line and agricultural land. It is close to Finningley centre (500m) and the site is located in flood zone 1. It is brownfield. Despite this, it is being washed over as countryside.

**Response:**
The site may have development on it (house), but it is largely greenfield, comprising of a garden and adjacent garden / paddock land. Such land is excluded from development limits as per the methodology, and as such has been allocated as countryside. There is no need to find additional housing land in Finningley as the local housing requirement can be met.
2.26 The Housing Allocations required to deliver the proposed housing requirement and distribution as set out in Policy 3, are identified by Policy 6. Site 189, the Higgin’s Site is not currently proposed for allocation, and is designated within the Countryside Policy Area (figure 2). 2.28 We strongly object to the current designation of the site within the Countryside Policy Area and the omission of the site from allocation within Policy 6. (SEE EMAIL FOR Figure 2: Extract of the site from the draft Doncaster Local Plan Proposals Map (2015-2035)) Recommendation 2.29 Site 189 should be removed from the Countryside Policy Area and added to the list of housing allocations and the Proposals Map should be updated to reflect this. 2.30 The site should be allocated for housing development in order to meet the future shortmedium term housing requirement, as discussed with reference to Policy 3 above. The allocation would also take the opportunity to deliver new sustainable development on land (part of which is brownfield) adjacent to an existing settlement in order to meet the needs of the local population. 2.31 Full justification for this recommendation is set out within Section 3 of this representation, which confirms that the site is suitable, deliverable and developable for housing, and capable of being brought forward and allocated for housing within the Local Plan. 2.32 The site adjoins the Finningley development boundary and contains existing built form associated with the commercial use of the site. The site is not protected for employment use, as more suitable sites are identified elsewhere within the Borough. 2.33 Furthermore, substantial growth is anticipated in association with the neighbouring airport site, resulting in job creation and a need for housing within the locality. It is considered to be both logical and sustainable to therefore focus housing growth within the area surrounding the airport, in order to support Policy 7 of the draft plan and to support the future sustainability of services within Finningley. 2.34 It is acknowledged that land has been identified for housing under Policy 7 in the draft Local Plan to facilitate the growth of the airport. The Airport Masterplan includes an initial allocation of 280 dwellings to help realise its economic aspirations under site ref: 223 ‘Land at Hayfield lane, Auckley’, as well as an additional 920 units, only to be released when jobs are evidenced to support the requirement for additional dwellings under site ref: 940 ‘Land East of Poplars Farm, Hurst Lane, Auckley’. Site ref 940 is isolated from the existing settlements surrounding the airport and would result in a residential scheme that in our view would not sympathetically integrate with the existing area. In addition, it is a significant distance from the centre of Auckley-Hayfield Green or Finningley and the services within it, therefore occupiers would be likely to be reliant on the use of private car. 2.35 The Higgin’s site is more sustainably located when compared to those sites within the DSA Masterplan, but not withstanding this, for the reasons set out within this representation, additional housing land should be allocated in any case to support the additional requirement that we have identified. In order to support the economic growth strategy set out within the Local Plan and the sustainability of existing settlements, it is recommended that site 189 is allocated for housing. 2.37 A number of the Housing allocations put forward within the draft Local Plan are currently within the Green Belt and/or within flood zone 3. 2.38 Allocated sites within the green belt include: - Site Ref: 33 ‘Land adjacent 163 Sheffield Road, Warmworth (112 units). - Site Ref: 40 ‘Land at Sheffield Road/Old Road, Hilltop, Conisbrough’ (200 units). - Site Ref: 115 ‘Alverley Lane’ (150 units). - Site Ref: 141 ‘Westwood Road, Bawtry’ (20 units). - Site Ref: 165 ‘Land North of the A1, Skellow’ and Site Ref: 186 ‘Land off Crabgate Lane, Skellow’ (300 units). - Site Ref: 777 ‘Plot 3, Harlington’ (66 units). - Site Ref: 929 ‘Land North of Cadey Road, Sprotbrough’ (80 units). - Site Ref 1028 ‘Sunderland Street, Tickhill’ (74 units). Allocated sites within flood Zone 3 include: - Site Ref: 81 ‘Alexander Street. Thorne’ (113 units). - Site Ref: 343 ‘Alexander Street, Thorne’ (74 units). - Site Ref: 396 ‘North Eastern Road, Thorne’ (53 units). - Site Ref: 147 ‘Land to the North of Hatfield Lane, Barnby Dun’ (175 units). 2.39 These sites are considered to be less sequentially preferable in policy terms for development when compared to the Higgin’s Site. As outlined in the National Planning Policy Framework (the ‘Framework’), exceptional circumstances are required to justify changes to Green Belt boundaries. The Framework also sets out that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk. 2.40 The Higgin’s Site is not situated within the Green Belt and is located within Flood Zone 1. Given that the site is suitable, available and achievable for housing development (as outlined in Section 3), and that housing on the site would support the economic growth of the Airport, the distribution of housing within the Local Plan should be reviewed as suggested to ensure accordance with the National Planning Policy Framework.

Summary:

Strongly object to the current designation of the site within the Countryside Policy Area and the omission of the Higgins site189 from allocation within Policy 6. Site 189 should be removed from the Countryside Policy Area and added to the list of housing allocations. Reasoning... to meet future short medium term housing requirement (see policy 3). Allocation would deliver new sustainable development on part brownfield land. Site 189 is suitable, deliverable and developable for housing, and capable of being brought forward and allocated for housing within the Local Plan. Site 189 borders the Finningley development boundary and contains existing built form associated with the commercial use of the site. Substantial growth is anticipated in association with airport site, resulting in job creation and a need for housing locally supporting policy 7. Policy 7. Site ref 940 is isolated from the existing settlements surrounding the airport and would result in a residential scheme that in our view would not sympathetically integrate with the existing area is a significant distance from the centre of Auckley-Hayfield Green or Finningley and would increase car usage. Higgins site 189 is more sustainably located. The representation lists greenbelt and flood zone three housing allocations put forward to the local plan as examples and says the sites are less sequentially preferred compared to Higgins site 189. Higgins’s Site is not situated within the Green Belt and is located within Flood Zone 1. Site 189 is suitable, available and achievable for housing development (as
Response:

There is no need to allocate any more land at Finningley (the location with the smallest housing requirement and the fewest services out of all the settlements identified for housing), and this site would form large urban extension to the settlement. Policy 7 / Appendix 3 and the Housing Topic Paper sets out the preferred location for potential housing at the airport and the rationale. Although there are a number of sites in the South East of the borough that are non-flood risk and not Green Belt, there is also a need to deliver a sustainable and appropriate pattern of delivery across the borough, not just focussing all housing delivery in areas which are not constrained.

Response:

As set out in the Housing Topic Paper, the requirement for Finningley is 55 units, and the Site Selection Methodology demonstrates that 50 of these can be delivered via existing commitments. There is no need to allocate any further sites in this location, and this site would result in a number of houses far in excess of what is required or justifiable in this peripheral village location which is also countryside.
3.2 The site, known as Higgin’s Potato Stores, Old Bawtry Road, Finningley (LPA ref: 189) is assessed within the Council’s HELAA document (2017), however, the emerging Local Plan discounts this site, along with other promoted land surrounding Finningley, on the basis that sufficient land is already committed within Finningley to meet the housing need. 3.3 The following section provides a detailed assessment of the Higgin’s Site and confirms why it is available, suitable and deliverable for development and should therefore be allocated for Housing to meet future need. Site Location: 3.4 Site 189 comprises land east of Old Bawtry Road, a significant part of which is currently occupied by the built form as shown in Fig. 3. 3.5 The site is located approximately 12.8km east of Doncaster and immediately to the east of Doncaster Sheffield Airport. (SEE EMAIL FOR Figure 3: Aerial View of the Site and Surrounding Area) 3.6 The site comprises of 36 hectares of part-brownfield, part-greenfield-land (with a capacity of up to 221 dwellings, but with an additional capacity of up to 827 dwellings if required). 3.7 Directly to the north of the site is Finningley village. To the east of the site is the A614 Bawtry Road and aggregate works access via Croft Lane. To the south of the site is dense woodland, beyond which is the Doncaster Moto Cross Centre. 3.8 Access to the site is currently taken from Old Bawtry Road on the western boundary of the site. This access point is well-established and has clear visibility. The principle of residential development would not create a demonstrably adverse impact on highway safety or volumes of traffic. Proximity to Local Facilities: 3.9 There are a number of local services and facilities within Finningley and the surrounding area, which are easily accessible from the site using alternative means of transport to the private car and include: - Post Office/Convenience Store - Village Hall - Public Houses - The Harvey Arms - Station Hotel - Primary Schools - St Oswald’s C of E Academy - Finningley C of E Primary School - Hayfield School (secondary school) - In neighbouring Ackworth - New College (sixth form) - in neighbouring Ackley - Mayflower Medical Practice (open every weekday) - Finningley Park - Golden Sun Takeaway. 3.10 The centre of Finningley is accessible from the site by public footpath along Old Bawtry Road. In addition, Public Rights of Way dissect the site and provide a direct link to the village centre. 3.11 The site is accessible by public transport with the nearest bus stop being located approximately 400 metres away at The Green in the centre of the village. This bus stop is served by routes 57f/58f, which provides access up to twice an hour to Doncaster town centre. 3.12 The DSA Masterplan confirms that funding is currently being sought for a new airport railway station, which would be located on the part of the existing railway line adjacent to the Hurst Lane. This would be within close proximity to Finningley village and would provide frequent public transport connections towards Sheffield and Lincoln. Landscape/Visual Impact: 3.13 The development of this site for housing would significantly improve the landscape character of the area given the large scale dominant buildings and vast areas of hardstanding and untidy storage areas within the site. The visual amenity of the surrounding area would be improved through the development of the site. 3.14 With the demolition of the large factory buildings on the site and the delivery of a sensitive residential development, it can be considered development would make a positive contribution to the local landscape and visual amenity. 3.15 The site topography is relatively flat with a significant block of woodland to the south west of the site. The existing settlement edge of Finningley is to the immediate north of the site and the site could form a natural extension to the village. 3.16 It is considered that residential development on the site could enhance the local landscape and make a positive contribution to visual amenity. Heritage Impact: 3.17 The site is not within a Conservation Area. There are no listed buildings or other defined heritage assets within the boundary of the site or within close proximity to the site. Flood Risk/Drainage: 3.18 The site is located in Flood Zone 1 as illustrated in the Environment Agency’s online flood map records. The site is considered to be at low risk of flooding. There are no known drainage constraints which would form insurmountable barriers to the delivery of this site subject to detailed design and consideration of infrastructure capacity. Ecology/Trees: 3.19 The brownfield parcel of the site is expected to have limited ecological value. The larger greenfield parcel of the site is currently in active agricultural use. There are very few trees onsite and the wider site is again expected to have little ecological value. 3.20 The site does benefit from established hedgerow boundaries which are expected to be of some ecological importance. By retaining the existing boundary treatment and enhancing where necessary alongside other opportunities for further planting within landscaped and garden areas, development of the site will enhance the ecological value of the site overall and offer an improved habitat network to the local green infrastructure network. 3.21 A Preliminary Bat Survey (PBS) has been undertaken by Wardell Armstrong (Appendix 2). The PBS consists of a desktop study and an inspection of the site. This confirms that there are several mature trees and four buildings which are suitable for roosting bats, and that it will be therefore necessary to undertake emergence surveys and/or climbed inspections in the event that development proposals are likely to adversely affect any roosts which may be present. (SEE EMAIL FOR Appendix 2) 3.22 The PBS states that the vegetated parts of the site are suitable for foraging bats. The PBS goes on to note that it may be necessary to undertake activity surveys to establish levels and distribution of site usage by foraging bats such that appropriate mitigation can be designed. 3.23 A botanical survey has been undertaken and recorded habitats to the south of the main access road (by the ponds), which are notable and ideally should be retained if at all possible. Elsewhere, the habitats identified should not constrain the proposal. 3.24 In relation to newts, ponds have been subject full EDNA surveys at the correct time this summer and no evidence of newts was found. 3.25 It is considered that the residential development of the site could be undertaken without adverse harm to biodiversity. Highways Safety: 3.26 A Highways Scoping Note (HSN) has been prepared to inform the initial consideration of the brownfield element of the site (Appendix 3). The HSN outlines that based on the anticipated number of trips generated by such residential development and the distribution of the local highway network, a number of nearby junctions are calculated to have an increase of 30 or more two-way movements during the network peak hours, and will have capacity assessments undertaken upon them. (SEE EMAIL FOR Appendix 3) 3.27 However, it is considered at this stage that the residential development would not create a demonstrably adverse impact on...
highway safety or volumes of traffic. 3.28 The HSN notes that site access will be controlled by a single priority controlled T-junction, and that no right turn ghost island is considered to be required given that the south, Old Bawtry Road turns into a dead end. HELAA Representations 3.29 The most recently available Housing and Economic Land Availability Assessment (HELAA) published July 2019, but with an April 2018 base data, identified the site under reference: 189 - Higgins Agriculture Ltd, Old Bawtry Road, Finningley. 3.30 The HELAA assessment identified that the site: - Is not on land that is contaminated. - Benefits from all essential utility services. - Could be appropriately mitigated from noise from the airport. - Is suitable, but with local policy constraints. - Is developable in a timeframe of 0-5 years for 827 units. Availability 3.31 The site is under single ownership and there is a strong interest in developing the site from Bellway Homes. The submission of the pre-application enquiry for the residential development of the site confirms interest in developing the site (Appendix 1 contains the reports and plans supporting this pre-application submission). The site is no longer required for commercial use by the landowner. (SEE EMAIL FOR Appendix 1) 3.32 There are no physical constraints to suggest that a carefully designed residential development could not be brought during the plan period. There is a significant opportunity to provide much needed housing for the settlement of Finningley. Suitability 3.33 The site is within a suitable location for residential development and this would contribute to the creation of sustainable, mixed communities. 3.34 The site is currently located within Countryside Policy Area, however it is partly brownfield land, is adjacent to the existing settlement boundary and is considered to be in a sustainable location, supported by village services and public transport links. 3.35 The village of Finningley has a number of local services. There are also convenient public transport links via bus into Doncaster and throughout the surrounding area. 3.36 The site itself, which is partly brownfield, has strong natural boundaries and is adjacent to existing residential development to the north, meaning the site could provide a natural extension to the village. Suitable access to the site is already established from Old Bawtry Road, where there is clear visibility in both directions. 3.37 Residential development on the site has been assessed as viable, and would be attractive to the market. There is more than a reasonable prospect that housing on the site will be deliverable within 5 years. Achievability 3.38 The site is available for residential development now, suitable in a sustainable location for growth with development readily achievable to commence within the next five years of the plan period. The allocation of this site for housing would help achieve the Government's aims and objectives regarding the delivery of additional residential stock throughout the Country and serve to meet the specific objectively assessed housing need. There are no insurmountable physical constraints which would prevent the efficient use of this site for residential development. 3.39 The site is within a sustainable location in terms of access to essential shops, services and infrastructure. The site is adjacent to the settlement boundary and would support the growth aspirations of the emerging Local Plan. Capacity 3.40 The site area is approximately 36 hectares and we would suggest that new residential development could initially be focused within the brownfield element of the site, providing capacity for up to 221 dwellings, with additional capacity for further dwellings in the longer term. Conclusions 3.41 Site 189 provides the opportunity to deliver additional, sustainably located housing adjacent to the existing settlement of Finningley. The site, which is partly brownfield land, is adjacent residential development and the allocation of this site for housing would provide a logical extension to the village of Finningley. The site has no overriding environmental constraints. The site is available and deliverable in the short term and represents the most sustainably located site for housing within the Finningley area. There is a strong interest in developing the site from Bellway Homes as confirmed by the submission of a pre-application enquiry for residential development at the site. 3.42 Based on the above information, the site is considered to be suitable, deliverable and developable and subject to policy designation is capable of being brought forward and allocated for housing within the emerging Local Plan.

Summary:

Verbatim comments provide detailed site specific information relating to Higgins site 189. Including site location, proximity to facilities, landscape and visual impact, heritage impact, flood risk and drainage, ecology and trees, highways and HELAA representations, availability, suitability, achievability, capacity and conclusion. Site 189 can deliver additional, sustainably located housing adjacent to the existing settlement of Finningley. The site, which is partly brownfield land, is adjacent residential development and the allocation of this site for housing would provide a logical extension to the village of Finningley. The site has no overriding environmental constraints. The site is available and deliverable in the short term and represents the most sustainably located site for housing within the Finningley area. There is a strong interest in developing the site from Bellway Homes as confirmed by the submission of a pre-application enquiry for residential development at the site. The site is considered to be suitable, deliverable and developable and subject to policy designation is capable of being brought forward and allocated for housing within the emerging Local Plan.

Response:

As set out in the Housing Topic Paper, the requirement for Finningley is 55 units, and the Site Selection Methodology demonstrates that 50 of these can be delivered via existing commitments. There is no need to allocate any further sites in this location, and this site would result in a number of houses far in excess of what is required or justifiable in this peripheral village location which is also countryside.
Tests of Soundness:

Comment:
This representation is prepared by Lichfields on behalf of our Client, Swan Homes Ltd. It presents our response to Doncaster Council's ("the Council") Local Plan Publication Draft (June 2019) (DLP) and considers whether the DLP has been positively prepared and is justified, effective and consistent with national policy. It is prepared in the context of our Client's land at Station Road, Finningley (HELAA reference 317) and our Client's interest in bringing forward a residential development at the site.

Summary:
Site 317 (countryside) should be included within the development limits of Finningley.

Response:
Noted
Policy 6 sets out the housing allocations for the DLP, both with and without planning permission. Table H1(O) shows the allocations for Finningley, with 50 units being allocated over three sites. However, para.16.220 of the DLP states that Finningley has a housing requirement of just 55 to meet its baseline local needs requirement for the plan period (based on Policy 3). This represents a shortfall of a minimum of five homes over the plan period which represents 10% of Finningley’s minimum housing requirement not being met. Policy 6 clearly fails to meet the NPPF’s call for positive plan preparation, outlining that plans should “be prepared positively, in a way that is aspirational but deliverable” (paragraph 16 of NPPF). By actively planning to fail to meet the minimum requirement at this stage, the DLP cannot be said to be sound within the bounds of the NPPF. This can be rectified by allocating additional land at Finningley for housing and revising the development limits of Finningley to allow for additional homes to be delivered. As detailed further below, our client’s land represents a suitable and sustainable location for new housing and we request that it is allocated for housing and that the development limit for Finningley is revised to include the site. Our client’s site is to the east of Station Road, Finningley, lies to the north of Robin Hood Airport and is approximately 10km east of Doncaster. The site measures approximately 0.8ha in size and comprises an area of hardstanding, scrubland and trees. It is bounded by: - Residential development off Station Road and on the site of White & Carter wholesalers, the plot of land immediately to the west of the proposal site also has planning permission for residential development; - An open field and Blakestone Glade residential development to the north; - Copses of trees and a storage area for caravans, trailers and haulage vehicles with a dirt track access road to the east; and - A caravan storage area and railway line to the south. Initial plans, subject of a pre-application enquiry submitted to the Council, demonstrate that the site could accommodate 39no. units of high-quality family housing and incorporate associated car parking, landscaping, open space and sustainable urban drainage. Our client’s site is in a sustainable location for housing and is well served by local public transport connecting Finningley to Doncaster Town Centre. There are two bus stops within 250m of the site, which run frequent bus services to Doncaster. The site is also in close proximity to a pub, sports pitches, a range of schools and healthcare facilities, including: - Nearest shop (Finningley Post Office): 450m - Nearest primary school (Hayfield Primary): 2.1km - Nearest secondary school (Hayfield School): 2.2km Neighbouring uses include recently completed earlier phases of Swan Homes Ltd’s residential development immediately to the north and west of the application site (45 houses in total) (08/00563/OUTM, 12/01327/EXTM) with approval recently granted for a further 14 houses to the west (18/02593/FULM). Storage areas and railway infrastructure lie to the south of the site, alongside the railway. There are large tracts of agricultural land and open space to the north and east. There are no listed buildings within 700m of the site. The site has been identified as suitable location for housing within Doncaster’s HELAA (2017) and is described as a brownfield urban extension site. The recent approval of applications for residential development immediately to the west clearly confirms the Council’s view that this is a suitable location for housing.

Summary:
Policy 6 - Housing Allocation. 1. Finningley is shown as having a shortfall of 5 units (10%) over the plan period. 2. Having a shortfall does not comply with the NPPF. 3. Site 317 should be allocated to meet the requirement. 4. Settlement profiles indicate that Finningley scores well and could support additional homes. Housing Strategy. 1. Para. 4.77 should read (2018-2033) not (2018-2035). 2. Fails to meet annual housing requirement. Should be a minimum figure to achieve annually (920). 3. Shift from over provision in early plan period to under provision later will have economic implications - job losses in construction industry. 4. Growth must be sustained across the plan period.

Response:
Although there is a shortfall of 5 units in Finningley, it is not felt that this is sufficient enough to warrant the allocation of any additional sites, the allocation of which would result in significantly more houses being delivered than necessary here. The Housing Topic Paper discussed trajectories more. Both the use of a range and using the Standard Methodology figure for calculating 5 year supply is supported in Planning Practice Guidance / NPPF.
17. It is clear that the Parish Council do not accept that there are any exceptional circumstances to justify development into the Green Belt in the area west of the A1(M). However it has considered which, if any, of the sites submitted under the Call for Sites would be the most suitable for new housing. The Parish Council would challenge the decision to choose site 929 Cadeby Road. 18. Throughout the whole of Sprotbrough 5 sites were submitted in the Call for Sites. Of these 3 were in Sprotbrough west of the A1(M) and therefore all in the Green Belt: 788 Melton Road just west of the A1(M) 252 Spring Lane 872 Melton Road towards High Melton (Site 929 Cadeby Road was added later) 19. The Sprotbrough Neighbourhood Plan Group’s view with regard to the 3 sites (endorsed by the Parish Council) was that the obvious site that would have the least impact on the Green Belt was site 788. It would have the least impact on other residential areas, it was on the bus route, was close to a primary school and, unlike the others, would not add to the major traffic/parking problems that already exist around the Main Street/Thorpe Lane area of Sprotbrough. 20. However DMBC planners decided that, in their opinion, site 929 Cadeby Road would be more suitable. Correspondence with Planning has revealed that their grounds for this opinion are in summary; that it would have the least impact on the Green Belt and was the right size for the proposed number of houses planned, whereas the other three sites were too big and could therefore be used to build more houses in the future. 21. The Parish Council believes that both opinions are mistaken. Site 788 makes much more sense: - 788 would clearly have the least impact on the Green Belt - unlike 929 - 788 would clearly have the least impact on other residential areas - unlike 929. - 788 has good access to public transport - unlike 929 - 788 would not add to the major traffic congestion and parking problems that already exist around the Main Street/Thorpe Lane area of Sprotborough - unlike 929. 22. The fact that site 788 was larger than 929 could be seen as an advantage looking to the future, not a disadvantage.

Summary:
Notwithstanding the Parish Council’s objection to a failure to demonstrate exceptional circumstances to justify development into the Green Belt in the area west of the A1(M), it has considered which, if any, of the sites submitted under the Call for Sites would be the most suitable for new housing. Sprotbrough Neighbourhood Plan Group’s view (endorsed by the Parish Council) is that the most obvious site that would have the least impact on the Green Belt is site 788. It would have the least impact on other residential areas, it on a bus route, is close to a primary school and, unlike the others, would not add to the major traffic/parking problems that already exist around the Main Street/Thorpe Lane area of Sprotbrough. However DMBC planners decided that, in their opinion, site 929 Cadeby Road would be more suitable because it would have the least impact on the Green Belt and was the right size for the proposed number of houses planned, whereas the other three sites were too big and could therefore be used to build more houses in the future.

Response:
Disagree that site 788 is the best option in this location. The Green Belt Review shows that Site 929 has less impact on the Green Belt, and this site can deliver the amount of houses needed in the settlement. 788 is a large linear site that is adjacent to the motorway and less well related to the settlement functionally and physically - and it would create an unusual, pincer like urban form in the settlement.
I submit that the Plan in relation to Sprotbrough does not meet "the Test of Soundness" as it is inconsistent with National Policy. Selection of Site 929 16. Even if there was a case for building in the Green Belt in the area, the question would arise which, if any, of the sites submitted under the Call for Sites would be the most suitable for new housing and I would challenge the decision to choose site 929 Cadeby Road. 17. Throughout the whole of Sprotbrough 5 sites were submitted in the Call for Sites. Of these 3 were in Sprotbrough west of the A1(M) and therefore all in the Green Belt: 788 Melton Road just west of the A1(M) 252 Spring Lane 872 Melton Road towards High Melton (Site 929 Cadeby Road was added later) 18. The obvious site that would have the least impact on the Green Belt was site 788. This was the view of the Parish Council. It would have the least impact on other residential areas, it was on the bus route, was close to a primary school and, unlike the others, would not add to the major traffic/parking problems that already exist around the Main Street/Thorpe Lane area of Sprotbrough. 19. However DMBC planners decided that, in their opinion, site 929 Cadeby Road would be more suitable even though Site 788 makes much more sense: - 788 would clearly have the least impact on the Green Belt - unlike 929 - 788 would clearly have the least impact on other residential areas - unlike 929. - 788 has good access to public transport - unlike 929 - 788 would not add to the major traffic congestion and parking problems that already exist around the Main Street/Thorpe Lane area of Sprotbrough - unlike 929

**Summary:**
Challenge the decision that 929 is the preferred site. Of the site options in Sprotbrough, the obvious site which would have the least impact on the Green Belt is Site 788. This was the view of the Parish Council. Unlike site 929, site 788 would have the least impact on the Green Belt, the least impact on residential areas, has good public transport access and would not exacerbate existing traffic and parking problems.

**Response:**
The Green Belt Review Stage 3 assessed all sites in Sprotbrough and shows that site 929 had a 'moderate' case for continuation in the site selection process, whereas the other three sites all had a 'moderately weak' case. The justification and exceptional circumstances for selecting site 929 is set out in the Green Belt Topic Paper.
Tests of Soundness:

Consistent with national

Comment:

I submit that the Plan in relation to Sprotbrough does not meet "the Test of Soundness" as it is inconsistent with National Policy. Encroachment into the Green Belt 1. Doncaster's Draft Local Plan reiterates the proposals in the Draft Sites and Policies of the Local Plan (autumn of 2018) and disregards the objection made by myself, the Parish Council, the Neighbourhood Plan Group and others. 2. The Draft Plan proposes an allocation of 80 new homes on: "A single greenfield urban extension, on land formerly designated as Green Belt, to the north of Cadeby Road and to the west of the village." 3. DMBC Planners have not clarified or explained the reasoning for their decision to divide Sprotbrough into two areas, east and west of the A1(M) and designate that to the west "Sprotbrough Village". The Draft Local Plan fails to address this crucial issue which is fundamental to the decision to encroach into the Green Belt. 4. The whole of Sprotbrough is one community and is all within the Parish boundary. It is vitally important for the maintenance of community cohesion that the whole of Sprotbrough is treated equally. However, DMBC Planners have drawn an arbitrary line on Melton Road at the A1(M). 5. The draft Neighbourhood Development Plan area covers the whole of Sprotbrough and it has been approved by DMBC. DMBC Planners have been advising the Neighbourhood Plan Group and no suggestion was made that Sprotbrough should be divided into two areas. 6. The reason this issue is crucial is because if Sprotbrough is not divided into two areas, the justification for encroachment into the Green Belt disappears. 7. The National Planning Policy Framework (NPPF) makes it very clear that development into the Green Belt should only be permitted in exceptional circumstances. Exceptional circumstances do not exist here.

Summary:

The Local Plan does not meet the test of soundness and is inconsistent with National Policy. Re: Site 929 (Sprotbrough site in the Green Belt): - The Local Plan has disregarded the objections previously made by the consultee, Parish Council and Neighbourhood Plan group, and others. - DMBC have not explained why Sprotbrough has been divided into two areas east and west of the A1 (west being the village). This is fundamental to the decision to encroach into the Green Belt as without this, there would be no need to encroach into the Green Belt. The Parish boundary incorporates land to the east and west of the A1 and should be treated equally for the purposes of community cohesion. - The Neighbourhood Plan has been approved by DMBC and no suggestion has been made to divide Sprotbrough into two areas. - Exceptional circumstances do not exist here to justify encroachment into the Green Belt.

Response:

This matter is covered in the Housing Topic Paper. It is felt that there is a clear distinction between the two, which are separated by a swathe of Green Belt and the A1(M), and so Sprotbrough Village has been assessed as a separate entity to the Main Urban Area. It should be noted that if the village was subsumed into the Main Urban area, then the housing requirement there would also increase, more sites would be required, and this site would remain a potential housing option for the Main Urban Area.

Comment:

I submit that the Plan in relation to Sprotbrough does not meet "the Test of Soundness" as it is inconsistent with National Policy. Doncaster Council's Housing Plans 8. DMBC's 10-year Housing Strategy adopted a figure of 920 new houses p.a. 9. The Council consulted on its 'Homes & Settlement' paper in March 2016. This set out the proposed distribution of housing around the borough. The Council also consulted on its updated Sustainability Appraisal of Doncaster's Growth Options which included an assessment of the Homes and Settlement paper. The consultation proposed that the economic growth-led housing be concentrated in and around Doncaster itself and the borough's seven main towns but that local needs for homes growth be distributed on a pro-rata basis (according to existing settlement size) to Doncaster and the Main Towns and also to ten other service towns and villages. The service towns and villages included only part of Sprotbrough, "Sprotbrough Village". 10. In other words it was not based on identified need in each area but on its share of Doncaster's total housing needs based on "settlement size". 11. This distribution produced figures for the plan period ranging from 42.71% (3,748 houses) for Doncaster Main Urban Area to 1.05% for the area they designated "Sprotbrough Village" (92 houses) which was defined as that part of Sprotbrough west of the A1(M). The rest of Sprotbrough was to be regarded as part of the Doncaster Urban Area. 12. As mentioned above, it has never been clear nor justified why a decision was taken to divide Sprotbrough in this way but separating that part of Sprotbrough west of the A1(M) from the rest of Sprotbrough and the Doncaster Urban Area and allocating new housing to this part of Sprotbrough inevitably meant any new housing would have to be in the Green Belt, since all the land surrounding the area is Green Belt. 13. Thus the only reason for any encroachment into the Green Belt was because DMBC planners had decided to divide Sprotbrough into two areas and allocate 1.05 % of new housing to the area west of the A1(M) on the basis of its "share" of Doncaster's overall housing requirements and not on any identified need in that part of Sprotbrough. (It is not clear if any attempt has ever been made to make an objective assessment of Sprotbrough's housing needs). 14. These are not "exceptional circumstances" in accordance with the National Planning Policy Framework. On the contrary, they arise as a result of a deliberate decision to develop into the Green Belt totally unnecessarily, even though there are plenty of other suitable areas of land around Doncaster. According to the council's Housing and Economic Land Availability Assessment (HELAA) "there is no shortage of suitable and deliverable/developable land in the borough to meet the emerging Local Plan's development needs for the plan period 2015 - 2032." 15. There is no justification for more houses to be built which encroach into the Green Belt around this area. Any new housing in the area would add substantially to the existing infrastructure problems.

Summary:

The housing distribution is not based on need, but on share of total housing needs based on settlement size. Sprotbrough has been split in two without any justification. Separating Sprotbrough village means that housing would inevitably have to go in the Green Belt, as all the land surrounding it is Green Belt. The only reason for encroachment is the fact the village has been separated and the need is based on a share of the overall borough housing requirement - not identified need. It is not clear if any attempt has been made to make objectively assess Sprotbrough's housing needs. These are not exceptional circumstances, rather they arise as the result of a deliberate decision to develop the Green Belt unnecessarily, even though there are plenty of other non - Green Belt sites around Doncaster. According to the HELAA there is no shortage of suitable deliverable / developable land in the borough to meet the emerging Local Plans development needs 2015 - 32. There is no justification to build on the Green Belt and any new housing would add substantially to the existing infrastructure problems.

Response:

This matter is covered in the Housing Topic Paper. It is felt that there is a clear distinction between the two, which are separated by a swathe of Green Belt and the A1(M), and so Sprotbrough Village has been assessed as a separate entity to the Main Urban Area. It should be noted that if the village was subsumed into the Main Urban area, then the housing requirement there would also increase, more sites would be required, and this site would remain a potential housing option for the Main Urban Area.

Consistent with national

Comment:
I submit that the Plan in relation to Sprotbrough does not meet "the Test of Soundness" as it is inconsistent with National Policy. "Test of Soundness" 20. The National Planning Policy Framework (NPPF) advises that the Planning Authority should submit a plan for examination which it considers is "sound": namely that it is: "Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this Framework." 21. The policies in the NPPF are very clear on the importance of the Green Belt, for example: "Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified." "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development." "Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm resulting from the proposal, is clearly outweighed by other considerations."

Summary:
Re: test of soundness The Local Plan should be consistent with national policy. The NPPF is clear on the importance of Green Belt, e.g. paras 137; 143; 144

Response:
The approach to Green Belt has been thoroughly and cautiously considered, as set out in the Green Belt Topic Paper. The NPPF is clear (para. 136) that boundaries can only be changed in exceptional circumstances and when updating a plan. The Local Plan is therefore fully in line with national policy and exceptional circumstances are set out in the Green Belt Topic Paper.
22. There are no "exceptional circumstances" or "very special circumstances" justifying development into the Green Belt. The proposal is not the result of an assessed need in that part of Sprotbrough but is solely the result of an allocation of housing to an area of its "share" of Doncaster’s total housing need, which would inevitably result in encroachment into the Green Belt. 23. Even if there were exceptional circumstances, site 788 would be the obvious choice for housing, not site 929. 24. I submit that the Draft Local Plan does not meet the "test of soundness" in respect of its housing proposals for Sprotbrough.

Summary:
There are no exceptional circumstances or very special circumstances for justifying this development in the Green Belt. It is not the result of assessed need, rather a share of Doncaster’s total housing need, which inevitably leads to Green Belt encroachment. Even if there were, 788 it the obvious choice for housing, not 929. The Local Plan does not meet the tests of soundness in respect of housing in Sprotbrough.

Response:
The exceptional circumstance justification is set out in the Green Belt Topic Paper. The Green Belt Review shows 929 is preferable in Green Belt terms to 788, and this provides a far more logical extension and site in this location to 788.

Area: Chapter 16: Spatial Proposals

Policy: Service Town/Village - Sprotbrough

Tests of Soundness:

Justified

Comment:
The planned building of houses on a greenfield site in Sprotbrough cannot be justified. That specific greenfield site is also the most sensitive out of the ones available. The roads in the middle of Sprotbrough cannot support a development that size. PROPOSED CHANGE Remove the requirement to build houses in Sprotbrough village and absorb the numbers elsewhere on brownfield sites. Building much needed housing should happen, particularly affordable ones but not on greenfield sites. Plenty of alternatives in the Doncaster area.

Summary:
The development of greenfield land in Sprotbrough cannot be justified. The site is one of the most sensitive out of those available. Local roads cannot support development of this size. Proposed change: Remove the requirement to build houses in Sprotbrough village and absorb the numbers elsewhere or on brownfield land. Building much needed housing should happen, particularly affordable ones, but not on greenfield sites. Plenty of alternatives in the Doncaster area.

Response:
The site has been identified in line with the site selection methodology. There are insufficient suitable and available brownfield sites to meet the borough's housing requirement without the use of some greenfield sites. Sites have been modelled to look at highway impacts in terms of both the local road network and strategic road network.
3.1 Our objection remains to the rejection of Site 252 and consider that the site should be allocated for housing in the Local Plan, for delivery within the Plan Period. The Publication Draft Local Plan identifies site 929 for housing to deliver a total of 80 dwellings in the plan period. It is not considered site 929 is the most appropriate site in Sprotbrough when considered against other reasonable alternatives as required for the Plan to be justified and sound. It is considered that site 252 represents a more suitable and sustainable option and should be included in the Local Plan for allocation. 3.2 Prior to addressing our specific reasons for the inclusion of the site we have some general comments on the Draft Policy 6 as currently presented, which remains unchanged since the previous Draft Policies and Proposed Sites consultation draft in September 2018. It would be helpful if the tables referred to in Policy 6 identifying sites with planning permission and without planning permission which are included within Chapter 16 were included in summary in Policy 6. 3.3 It would be helpful if a summary table was included in Policy 6 of total permissions, total proposed allocations and total proposed requirement within each settlement, in order to demonstrate how the distribution of proposed allocations fits with the strategy. 3.4 Having calculated the information relating to existing permissions within the Tables in Chapter 16 and referred to in Policy 6, there appears to be over 11,600 permissions (net) which are relied on for delivery within and beyond the plan period, which equates to 63% of the housing requirement. There does not appear to be any information regarding a non-implementation allowance. The Council monitor lapsed permissions, indeed the Council’s latest five-year housing land supply statement recognises lapsed permissions, yet going forward the Local Plan does not seem to account for any overall lapse rate. The onus should be on the Council to provide evidence to justify the application (or not) of a non-implementation / lapse rate to existing permissions. A 10% discount is an approach that has been found acceptable (fair and reasonable) in planning appeals which albeit may relate to the calculation of five-year housing land supply, is still relevant to the principle of discounting capacity from planning permissions. 3.5 Furthermore, the Local Plan should identify more sites than are required to meet the housing requirement for the Plan Period to provide a buffer to account for lack of delivery from identified allocated sites and provide for choice and competition in the market. It is clear from the Council’s own evidence that allocations don’t always deliver, with the Council having to reassess the non-delivery of UDP sites, adopted in 1998 that have not yet had planning permission approved. There still appear to be sites being taken forward as allocations that were allocations in the UDP. While there may be genuine reasons why these sites have not delivered over the last twenty years but are now considered capable of delivery, it nonetheless underlines the likelihood that some of the sites currently proposed for allocation will not come forward as anticipated. To ensure that the Plan is effective, a buffer of sites should therefore be included. 3.6 The identification of a buffer is in line with the Framework, which requires plans to be positively prepared and flexible, and accounts for the fact that the housing requirement should be seen as a minimum. Taking the above into consideration, it is considered that the Local Plan needs to identify additional land for housing, in order to identify sites to meet the requirement over the whole plan period and provide a buffer of sites.

Summary:

Objection remains to the rejection of Site 252 and consider that the site should be allocated for housing in the Local Plan, for delivery within the Plan Period. The Publication Draft Local Plan identifies site 929 for housing to deliver a total of 80 dwellings in the plan period. It is not considered site 929 is the most appropriate site in Sprotbrough when considered against other reasonable alternatives as required for the Plan to be justified and sound. It is considered that site 252 represents a more suitable and sustainable option and should be included in the Local Plan for allocation. It would be helpful if the tables referred to in Policy 6 identifying sites with planning permission and without planning permission which are included within Chapter 16 were included in summary in Policy 6. It would be helpful if a summary table was included in Policy 6 of total permissions, total proposed allocations and total proposed requirement within each settlement, in order to demonstrate how the distribution of proposed allocations fits with the strategy. There appears to be over 11,600 permissions (net) which are relied on for delivery within and beyond the plan period, which equates to 63% of the housing requirement. There does not appear to be any information regarding a non-implementation allowance. The Council monitor lapsed permissions, indeed the Council’s latest five-year housing land supply statement recognises lapsed permissions, yet going forward the Local Plan does not seem to account for any overall lapse rate. The onus should be on the Council to provide evidence to justify the application (or not) of a non-implementation / lapse rate to existing permissions. A 10% discount is an approach that has been found acceptable (fair and reasonable) in planning appeals which albeit may relate to the calculation of five-year housing land supply, is still relevant to the principle of discounting capacity from planning permissions. Furthermore, the Local Plan should identify more sites than are required to meet the housing requirement for the Plan Period to provide a buffer to account for lack of delivery from identified allocated sites and provide for choice and competition in the market. It is clear from the Council’s own evidence that allocations don’t always deliver, with the Council having to reassess the non-delivery of UDP sites, adopted in 1998 that have not yet had planning permission approved. There still appear to be sites being taken forward as allocations that were allocations in the UDP. While there may be genuine reasons why these sites have not delivered over the last twenty years but are now considered capable of delivery, it nonetheless underlines the likelihood that some of the sites currently proposed for allocation will not come forward as anticipated. To ensure that the Plan is effective, a buffer of sites should therefore be identified.
The Green Belt Review identified that Site 929 had a stronger case in Green Belt terms than other sites in this location. This fed into the consideration of exceptional circumstances, which, on balance it was determined did exist in the case of 929, which is also a smaller site more in line with the housing requirement here. It is considered that 929 is less harmful to the Green Belt and more suitable, as well as being a smaller site. Summaries of permissions and allocations are provided in the Housing Topic Paper for clarification. As the housing figure calculation for the Local Plan has not included things such as windfalls, permissions for 1 - 4 units, defined village development, potential airport development (as per Policy 7) amongst other things, the Council effectively has created a buffer and does not feel that further allowance needs to be made for this.

Tests of Soundness: Positively prepared Justified Effective Consistent with national

Comment:
1.1 This statement has been prepared to respond to the Doncaster MBC Local Plan Publication Draft having regard to whether the Draft Plan is sound when considered against the four tests of soundness as set out in the National Planning Policy Framework (the "Framework"). Plans are "sound" if they are: - Positively Prepared - providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; - Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; - Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and - Consistent with national policy - enabling the delivery of sustainable development in accordance with policies in this Framework. 1.2 Johnson Mowat make the following comments in relation to a number of Draft Policies in the Publication Draft and promote Site 252 off Spring Lane / Westmorland Way, Sprotbrough on behalf of the landowners Mr and Mrs S Hall. A separate Highways Supporting Statement is included at Appendix 1 which demonstrates the suitability of the site from a highways and transport perspective. It is considered that a justified reasonable alternative is to identify site 252 in Sprotbrough as a housing allocation, either in addition to or as an alternative to the Council’s chosen site 929. (SEE EMAIL FOR Appendix) 1.3 Johnson Mowat submitted representations to the Informal Consultation Draft Sites and Policies document in October 2018 on behalf of Mr and Mrs S Hall. A number of the comments made remain relevant, given the continuation of the Council’s approach in the Publication Draft.

Summary:
Introductory text in respect to the Local Plan, NPPF soundness tests and acting on behalf of landowners for Site ref 252 Spring Lane, Sprotbrough. A separate Highways Supporting Statement is included which demonstrates the suitability of the site from a highways and transport perspective. It is considered that a justified reasonable alternative is to identify site 252 in Sprotbrough as a housing allocation, either in addition to or as an alternative to the Council’s chosen site 929. Johnson Mowat submitted representations to the Informal Consultation Draft Sites and Policies document in October 2018 on behalf of Mr and Mrs S Hall. A number of the comments made remain relevant, given the continuation of the Council’s approach in the Publication Draft.

Response:
All sites in Sprotbrough have been assessed in the Green Belt Review, with site 929 clearly scoring as having less impact on the Green Belt than the other three site options, including this site. Additionally, site 252 would deliver a number of houses far in excess of what is required in Sprotbrough, unlike 929, and there are also significant access concerns with site 252.
Comment:

3.7 We have set out in the preceding section, a number of reasons why the Local Plan needs to identify additional deliverable housing sites. It is considered that Site 252 is a wholly logical site for inclusion in the Local Plan. It is available, achievable and in a suitable location for delivery within the plan period. There are no insurmountable constraints to future residential development and there is a commitment to delivering / developing residential dwellings in the short term. 3.8 As it stands the only real barrier to development is a settlement hierarchy (informed by a settlement audit) which can only be achieved by releasing Green Belt land and the reliance of allocating housing sites in flood risk areas. Sprotbrough is a sustainable Service Towns and Larger Village which is also very close to the Main Urban Area, yet does not receive a housing requirement proportionate to its sustainability status. The site is not in an area of high flood risk. The need to deliver housing in sustainable locations, close to the Main Urban Area, meeting the Governments aims of significantly boosting housing should not be disrupted by an inflexible settlement hierarchy approach and a Green Belt constraint.

Summary:

Site 252 is a wholly logical site for inclusion in the Local Plan. It is available, achievable and in a suitable location for delivery within the plan period. There are no insurmountable constraints to future residential development and there is a commitment to delivering / developing residential dwellings in the short term. As it stands the only real barrier to development is a settlement hierarchy (informed by a settlement audit) which can only be achieved by releasing Green Belt land and the reliance of allocating housing sites in flood risk areas. Sprotbrough is a sustainable Service Towns and Larger Village which is also very close to the Main Urban Area, yet does not receive a housing requirement proportionate to its sustainability status. The site is not in an area of high flood risk. The need to deliver housing in sustainable locations, close to the Main Urban Area, meeting the Governments aims of significantly boosting housing should not be disrupted by an inflexible settlement hierarchy approach and a Green Belt constraint.

Response:

All sites in Sprotbrough have been assessed in the Green Belt Review, with site 929 clearly scoring as having less impact on the Green Belt than the other three site options, including this site. Additionally, site 252 would deliver a number of houses far in excess of what is required in Sprotbrough, unlike 929, and there are also significant access concerns with site 252.
3.26 Site 252 is available now. The landowner has instructed Johnson Mowat, Martin Walsh Residential (Architects) and Andrew Moseley Associates (Transport and Development Planning Consultants) to positively progress the site towards 'Local Plan Allocation'. Such a commitment provides compelling evidence to demonstrate that Site 252 is available now. 3.27 Sprotbrough is a sustainable location. Further the Council has identified the site as being both developable, deliverable and suitable in the HELAA (December 2016). 3.28 At this stage the landowner is able to promote the site without involving strategic land promoters or housebuilders. Notwithstanding this position the landowner has had a number of written 'Expressions of Interest' from both; if this site becomes a Local Plan Allocation it would be the landowner’s intention to submit a planning application in the short term so as to ensure the site can be delivered at the earliest opportunity. Residential development is therefore achievable. Further, as the site is greenfield it is unlikely that there would be any abnormal costs capable of affecting viability. 3.29 Site 252 is not only deliverable and developable, it is also the most sustainable site within Sprotbrough and is now being supported by a pro development landowner. The site is well located and well served by local facilities. The site can be developed comprehensively without significantly diluting the five purposes of including land within the Green Belt. The site is better located in comparison with identified site 929 which would potentially dilute the five purposes of including land within the Green Belt by projecting the existing development limits toward existing properties on Melton Road and farm buildings on Toecroft Lane, thereby reducing the gap between Sprotbrough and High Melton. 3.30 The allocation of Site 252 would result in a logical rounding off to the north western edge of the settlement limit, with the ability to create a strong, durable and defensible new Green Belt boundary via appropriate design. 3.31 The allocation of Site 252 would provide for a mix of dwellings, including affordable housing and public open space. 3.32 Notwithstanding our consideration that the only site (site 929) in Sprotbrough identified to meet the settlement’s identified local need requirement is not as suitable as site 252, there is a case for identifying additional land to meet the aspirational economic growth of the Borough. Should Site 929 be retained, the allocation of Site 252 would provide an additional supply of housing therefore in line with national policy to significantly boost the supply of housing and in support of the aspirational economic growth of Doncaster and the wider Sheffield City Region. There is a clear need to identify additional land, outside areas of flood risk, in sustainable settlements. 3.33 Site 252 is an ideal candidate for a housing allocation in the Local Plan to meet the housing needs of Sprotbrough and the Borough within the Plan Period.

**Summary:**

Provides a summary of the site (Ref 252) and confirms that it is available, suitable and deliverable/developable and is in a sustainable location. There are expressions of interest from both land promoters and developers. The site is greenfield and free from abnormal development costs. It is the most sustainable site in the settlement and would not impact on Green Belt purposes. The site is better than the proposed allocation site (Ref 929) as this would protrude development limits towards High Melton. "52 is a logical rounding off to the north-western edge and can create a strong durable defensible boundary. The site can provide a housing mix including affordable housing and open space. There is a case for identifying additional land to meet the aspirational economic growth of the Borough. Should Site 929 be retained, the allocation of Site 252 would provide an additional supply of housing therefore in line with national policy to significantly boost the supply of housing and in support of the aspirational economic growth of Doncaster and the wider Sheffield City Region. There is a clear need to identify additional land, outside areas of flood risk, in sustainable settlements.

**Response:**

It is considered that site 929 is preferable in Green Belt terms to site 252 – as confirmed in the Green Belt Review. The incursion into the Green Belt is comparatively minimal for site 929 compared to 252, with the extension to the settlement is relatively in keeping with the existing built form. There is no need to identify additional land for release in addition to site 929 in Sprotbrough to meet the housing requirement.
The Stage 3 Arup Green Belt Sites Appraisal (May 2017) appraised 57 sites in the Green Belt that the Council identified as they were in settlements where there was known to be constraints on the supply of land. This included appraising Green Belt sites put forward in Sprotbrough. Following the Stage 3 Green Belt Sites Appraisal the Council have categorised the 57 appraised potential Green Belt sites into 5 categories of strength in terms of a case for further site selection work: Strong case Moderately Strong case Moderate case Moderately Weak case Weak case. 3.11 Site 252 was identified as a one of 19 sites in the 'Moderate weak case for inclusion in further site selection work.' We do however have a number of concerns with the scoring of the site against some of the Green Belt Purposes, and consider that the site scoring should be reconsidered. We consider that the site actually performs better than site 929, (which is the only other identified site in Sprotbrough, and has been identified as an allocation on the basis of it being the 'least sensitive' in Green Belt terms). 3.12 We disagree with the 'weak' score against the resultant boundary strength of Site 252. The Green Belt Review of the proposed green belt boundary, should the site be removed from the Green Belt is stated to be weakly defined by field boundaries which are unlikely to be durable. This has no consideration to the potential design mitigation, which could include a strong landscaped boundary to the north and west boundaries which could be durable. 3.13 We disagree with the scoring against Green Belt Purpose 2a. Site 252 is given the same score as site 929 on the basis of it falling within a 'Largely Essential Gap' between the Sprotbrough and High Melton to the west. Site 252 lies on the north western edge of Sprotbrough and does not encroach any further west than existing development. Site 929 lies on the south western edge of Sprotbrough and will undoubtedly encroach further west than the existing settlement edge, and should therefore be given a different score than Site 252. 3.14 It is considered that there is justification and exceptional circumstances to remove site 252 from the Green Belt. The benefits of allocating the site as a sustainable extension to the settlement limit of Sprotbrough outweighs the Green Belt Review Phase 3 findings. 3.15 The reasoning behind the rejection of site 252 is due to the Phase 3 Green Belt Review concluding that the site has a moderately weak case for inclusion in further site selection work. However, the Green Belt Review clearly states that it makes no decisions about what sites should or should not be allocated, 'which is up to the Council to decide based on an assessment of all evidence.' Indeed, the Council have chosen to allocate a site for 418 dwellings on a site with a 'Weak' case for inclusion, which is a poorer rating than site 252, therefore proving that the Council do not necessarily rely on the Green Belt Review in all cases. 3.16 In the case of Site 252, there is a need to consider all the evidence, that being Sprotbrough is a sustainable settlement, very close to the Main Urban Area, and the site is not within a flood risk area. There is a case for identifying additional housing land in such locations.

**Response:**

All sites have been scored in the Green Belt Review in a consistent manner by independent consultants Arup using an agreed methodology. It is considered a sound and rational approach to appraising the Green Belt. By their nature all Green Belt sites extend the settlement in one direction or another.
3.17 The Council’s Settlement Audit (December 2015) prepared as evidence base to inform the emerging Local Plan / Settlement hierarchy states that Sprotbrough has an overall score of 7 based on existing primary and secondary services in the village. Sprotbrough scored the same as Carcroft & Skellow, Tickhill and Bawtry which demonstrates it is one of the more sustainable of the designated Service Towns and Larger Villages identified in the settlement hierarchy. It is noted that the Council have updated and revised the Settlement Audit and prepared Settlement Profiles which has revised the scoring for Sprotbrough down to 4 services instead of 7. The Settlement Profile notes that "Sprotbrough is closely related to the Main Urban Area, which lies just eastwards across the A1 (M), and to the south at Warmsworth, meaning residents have quick access to the variety of services here via Melton Road." Despite being one of the more sustainable of the designated service towns and villages, which is close to the Main Urban Area the 'proposed total housing allocation' does not reflect this. In light of the flood risk concerns elsewhere in the Borough it is our view that further housing numbers should be directed towards Sprotbrough. Environment 3.18 Sprotbrough has three parks for walking and children’s play areas: Anchorage Lange, Sprotbrough Road and New Lane. The Sprotbrough Riverboat is a popular cruise that has been running through the beautiful waterways since 1975. Sprotbrough Flash Nature Reserve in the Don Gorge is a diverse area, rich in wildlife for bird watchers, enthusiasts and walkers. There is also Denaby Ings and cusworth Hall Museum & Park. Eating & Drinking 3.19 Sprotbrough has five pubs: The Boat Inn gastro-pub, The Ivanhoe, The Newton Inn, OTTO’s wine bar and Sprotbrough Country (private members) Club. Mehfil Indian Brasserie restaurant also serves the village. Further eating and drinking options are also available in nearbycusworth, Newton, Warmsworth as well as Doncaster have more options and international cuisine. Shopping 3.20 Convenience stores in the village are the Sprotbrough News and Spar Village Shop. In neighbouring Newton there is a Sainsbury's Local. There is a Morrisons in Doncaster and Asda in Balby. Education 3.21 Around the village and in the area there are a number of schools including: - Copley Junior School o Orchard Infant School o Saltersgate Junior School o Richmond Hill Primary School o Ridgewood School o Don Valley Academy o Outwood Academy Adwick o Campsmonth Academy Transport Links 3.22 A Highways Supporting Statement (See Appendix 1) has been prepared which makes it very clear that the site: - is capable of accommodating circa 185 dwellings. - Can be safely accessed from Westmorland Way and Spring Lane (see the Highways Supporting Statement). - Is the most sustainable site in Sprotbrough and can be easily accessed by non-car modes in line with national planning policy guidance. - Sprotbrough is just four miles west of Doncaster and that makes for easy access in the car as well as using public transport - buses number 49 and 219 run through the village every 15 minutes. It is also off the A1(M), for connections north and south, and to the M18. Robin Hood airport is 25 minutes away. (SEE EMAIL FOR Appendix) 3.23 The Sustainability Appraisal ('SA') of the Local Plan Publication Draft includes a summary of the sustainability appraisal of housing sites in Sprotbrough (Table 8.24). of the 34 sustainability criteria sites 252 and 929 have identical scores in 31. Site 252 scores better in two of the remaining criteria (3A ii Distance to Bus Stop, and 5A i Affordability. Therefore overall the SA scores site 252 better than site 929, yet site 929 is identified as a housing site in the Local Plan. - The inclusion of Site 929 ahead of Site 252 can be found in the Council’s summary of consultation comments to the previous consultation (Draft Sites and Policies in October 2018) which on page 222 states: "Ultimately it is felt that 929 will have the least impact on the Green Belt and can deliver the level of housing Sprotbrough needs, which has been determined through the Settlement Audit and Homes and Settlements work, and it is preferable to other sites at Sprotbrough." 3.25 We disagree with the Council’s conclusion that site 929 will have the least impact, for reasons outlined above. Further, site 929 does not allocate sufficient housing to meet the Council’s 95 dwelling requirement (minimum). A reasonable and justified alternative would be to delete site 929 and retain it in the Green Belt and allocate site 252. Whilst the indicative capacity of site 252 at circa 185 dwellings is above the Council’s 95 dwelling target in Sprotbrough, it should be remembered that this is an absolute minimum target. It would be appropriate to allocate land above the target given the sustainability of the Sprotbrough and its close connections with the Doncaster Main Urban Area.

Summary:
The Council’s Settlement Audit (December 2015) prepared as evidence base to inform the emerging Local Plan / Settlement hierarchy states that Sprotbrough has an overall score of 7 based on existing primary and secondary services in the village. Sprotbrough scored the same as Carcroft & Skellow, Tickhill and Bawtry which demonstrates it is one of the more sustainable of the designated Service Towns and Larger Villages identified in the settlement hierarchy. It is noted that the Council have updated and revised the Settlement Audit and prepared Settlement Profiles which has revised the scoring for Sprotbrough down to 4 services instead of 7. The Settlement Profile notes that "Sprotbrough is closely related to the Main Urban Area, which lies just eastwards across the A1 (M), and to the south at Warmsworth, meaning residents have quick access to the variety of services here via Melton Road." Despite being one of the more sustainable of the designated service towns and villages, which is close to the Main Urban Area the 'proposed total housing allocation' does not reflect this. In light of the flood risk concerns elsewhere in the Borough it is our view that further housing numbers should be directed towards Sprotbrough. The Representation provides a summary of the services and facilities available at Sprotbrough as well as a supporting Highways Statement. The Sustainability Appraisal of housing sites in Sprotbrough (Table 8.24) shows of the 34 sustainability criteria sites 252 and 929 have identical scores in 31. Site 252 scores better in two of the remaining criteria (3A ii Distance to Bus Stop, and 5A i Affordability. Therefore overall the SA scores site 252 better than site 929, yet site 929 is identified as a housing site in the Local Plan. We disagree with the Council’s conclusion that site 929 will have the least impact, for reasons outlined above.
Further, site 929 does not allocate sufficient housing to meet the Council's 95 dwelling requirement (minimum). A reasonable and justified alternative would be to delete site 929 and retain it in the Green Belt and allocate site 252. Whilst the indicative capacity of site 252 at circa 185 dwellings is above the Council's 95 dwelling target in Sprotbrough, it should be remembered that this is an absolute minimum target. It would be appropriate to allocate land above the target given the sustainability of the Sprotbrough and its close connections with the Doncaster Main Urban Area.

Response:
Sprotbrough's original score in the Settlement Audit included land in the Main Urban Area - this has now been amended to reflect Sprotbrough as a village, which scores 4 in the revised Audit and as such is less sustainable than other locations. This is reflected in the level of houses allocated to this settlement. Site 929 has less impact on the Green Belt compared to the other local site options, and can also deliver the level of housing required in the settlement. Therefore, there are deemed to be exceptional circumstances to release this site from the Green Belt. Housing can be found in the Main Urban Area and so housing is not required to be delivered in Sprotbrough to support the Main Urban Area.

Tests of Soundness: 

Comment:
We are the owners and promoters of site ref 929 in Sprotbrough village. We support DMBC's published version of the Local Plan and believe site ref 929 offers a sustainable, viable and deliverable site for residential housing. However, we wish to raise a technical objection to DMBC's view that the site will be developed in years 6 to 10 as we believe development can be substantially completed within the first 5 years due to the level of pre-work we have undertaken, and the current level of interest being expressed by building companies. We also wish to reserve the right to comment further on all sites proposed for Sprotbrough in subsequent stages of the Local Plan process. We have enclosed a document which provides an additional evidence base to support the retention of site ref 929 as the preferred and allocated development site for Sprotbrough village within the Local Plan. In particular the quantitative assessment of traffic impacts should be considered and used as an additional reason to retain site ref 929 as the preferred and allocated development site for Sprotbrough village within the Local Plan (SEE EMAIL FOR Document)

Summary:
As owners and promoters, support is given to Site ref 929 in Sprotbrough village. However, object to view that the site will be developed in years 6 to 10 ? consider development can be substantially completed within the first 5 years due to the level of pre-work we have undertaken, and the current level of interest being expressed by building companies. Document enclosed providing additional evidence base to support the retention of site ref 929 as the preferred and allocated development site for Sprotbrough village within the Local Plan.

Response:
Support welcome. The trajectory is an estimate based on assumptions on lead in times agreed when the HELAA methodology was established. Things may come forward more quickly or slowly than projected based on a range of factors in reality. Trajectory is covered in more detail in the Housing Topic Paper.
Comment:
As owners of site 109 Sunderland Street Tickhill, we submit this consultation response in support of the proposed allocation as part of site 1028. The land is available for residential development and subject to allocation will come forward for development to support Doncaster’s housing supply requirement and the housing needs of Tickhill. As owners we are not aware of any constraints or covenants which would prevent the site from being developed in the plan period. Lastly I would like to add that as part land owners of site 1028 we are willing to work with the other land owner(s) to enable development.

Summary:
Own site 109 Sunderland Street Tickhill. Support site proposal 1028. The land is available for residential development. As owners, not aware of any constraints or covenants

Response:
Support welcome.
Comment Ref: C/Site 1028/0213/12/002
Attend Examination: Written Representation

Reason:

Area: Chapter 16: Spatial Proposals
Policy: Service Town/Village - Tickhill

Tests of Soundness:

Comment:
With regard to development site 1028(Sunderland Street Tickhill), it appears that the size of the site should read 2.9ha. That this site would only accommodate 74 dwellings at 25.5 per hectare is inadequate use of the lane and would not lead to the size of dwellings that the community needs. We consider that the site should be capable of accommodating at least 100 dwellings which are affordable.

Summary:
The site density for site 1028 is too low and is an inadequate use of the land which would not lead to the size of dwellings the community needs. The site size should read 2.9ha and it should be capable of accommodating at least 100 affordable dwellings.

Response:
The site size has been amended however the capacity remains as 74, as per indicative layouts submitted.
Policy 3 of the draft Local Plan includes a target for 165 new houses to be allocated at Tickhill. This was based on a sound rationale and justification for the appropriate strategy for delivering new homes within the Borough and on a sustainable approach to delivering new homes. This would deliver homes where they were needed that would reduce use of the car and support local services and hence rural communities. However, it is stated in 16.237 that ‘only a single site, equating to 74 units, has been assessed through the Local Plan site selection methodology as being supportable for allocation. Other sites were dismissed either due to importance to Green Belt purposes or problems with creating a safe and viable access’. As such, the remainder of the settlement’s housing requirement of 165 new dwellings (91 units) has been proposed through allocated supply at the Doncaster Main Urban Area and some of the Main Towns. This approach is not in line with the agreed strategy for the delivery of growth across the borough and is not a sustainable approach in line with guidance in the NPPF (paragraph 16). Paragraph 65 of the NPPF confirms that ‘Within this overall requirement, strategic policies should also set out a housing requirement ?', which reflects the overall strategy for the pattern and scale of development'. In addition, to support the Government’s objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed (paragraph 59). The approach taken in the draft Local Plan does not propose to deliver an appropriate variety of sites or to meet the housing requirement where it is needed. Finally, paragraph 78 of the NPPF confirms that ‘To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive.’ Land adjacent to the south western boundary of Tickhill (to the east of Bawtry Road) has been proposed as a housing allocation to meet the identified required need for the settlement. The Green Belt study concluded that this was performing less well than other areas around Tickhill and, as such could be released from the Green Belt. It is a relatively small site with good pedestrian linkages to the existing network, is close to a bus services and within walking distance of the centre. The land is suitable for development and available. It is, therefore, deliverable and should be allocated to meet the identified housing requirement for this settlement. Submissions have been made to demonstrate that a safe access could be provided. The draft Local Plan is therefore NOT SOUND as it is: Not Positively Prepared - as it does not deliver new homes to meet the identified local need at Tickhill; Not Justified - as it is not an appropriate strategy for meeting the identified housing requirement across the Borough; Not consistent with national policy - see above PROPOSED CHANGE To make the Plan Sound land to the south west of Tickhill should be allocated for housing so that the identified housing requirement for Tickhill can be met.

Summary:
Policy 3 includes a target of 165 dwellings in Tickhill. This was based on a sound rationale and justification for the appropriate strategy for delivering new homes within the Borough and on a sustainable approach to delivering new homes. This would deliver homes where they were needed that would reduce use of the car and support local services and hence rural communities. However, only one site has been found with a capacity of 74 units. Other sites were dismissed due to access and Green Belt impacts. The shortfall of 91 is proposed elsewhere in the borough. This approach is not in line with the agreed strategy for the delivery of growth across the borough and is not sustainable in line with the NPPF (paras. 16, 59, 65 and 78). Land adjacent to the south western boundary of Tickhill (to the east of Bawtry Road) has been proposed as an allocation to meet the identified need in the settlement. The Green Belt review confirmed that this was performing less well than other areas in Tickhill and could be released from the Green Belt. The site is small with good pedestrian linkages, close to bus services and in walking distance of the centre. It is suitable and available. Submissions show safe access could be provided. The Local Plan is unsound as it does not meet the identified need at Tickhill, it is not an appropriate strategy for meeting the identified housing need across the borough and it is inconsistent with national policy. Proposed change: to make the plan sound, land to the south west of Tickhill should be allocated for housing so the local requirement can be met.

Response:
After thorough consideration, only one suitable site was found in Tickhill, which is accessible and not overly impactful on the Green Belt - thus helping the exceptional circumstances argument required to release land from the Green Belt. Sites in Tickhill are constrained by both access issues and Green Belt which makes finding suitable sites challenging. The shortfall can be met elsewhere in the borough as on balance, the harm to the Green Belt did not outweigh the need to deliver housing here.
Land of Lindrick Lane, Tickhill (Site Reference 356 in the HELAA), was identified as a Deliverable/Developable Site in the HELAA (although it does not have planning permission). (SEE EMAIL FOR Figure 4 Aerial Image of Land off Lindrick Lane, Tickhill) The Site would provide an urban expansion to the Service Town / Village of Tickhill. The site is circa 6.8 hectares in size and is adjacent to existing residential development, local highways (including the A60) and agricultural land / countryside. Please see Figure 4 above for reference. The land is greenfield in nature and is currently used for agriculture and is generally flat in topography. The site is under a single private ownership and whilst subject to a tenancy, this can be terminated and therefore the development potential is available immediately. There are trees and hedgerows located along the boundary of the site but this would not be a constraint to development. Suitable access is available off Worksop Road (A60). An improved / new junction can be designed to appropriate standards, including visibility spays with a second emergency access coming off Lindrick Lane. An Access Technical Note has been prepared by TPS consultants and this can be made available to the Council, if required. The site is located within Flood Zone 1. See Figure 5 below for an extract from the Flood Risk Map for the area. (SEE EMAIL FOR Figure 5 Extract from the Governments Flood Risk Map - From Rivers and Sea) Furthermore the site is not subject to surface water flooding. See Figure 6 below for an extract from the Surface Water Flood Risk Map for the area. (SEE EMAIL FOR Figure 6 Extract from the Governments Flood Risk Map - From Surface Water) There is an existing footpath located to the south east of the site however, any future development would retain this Public Right of Way (see Figure 7 below).

Furthermore, the site is not subject to any scheduled ancient monument’s or heritage assets. (SEE EMAIL FOR Figure 7 Extract from Doncaster’s Walking Map identifying Public Rights of Way) Finally, a Phase 1 Desk Survey was undertaken by Solmek which concluded that the site is unlikely to have been exposed to anything other than minimal contamination, with minimal construction/demolition waste from neighbouring sites to the north and possibly oils or fuel from vehicle spills the most likely sources local to the structures. Whilst the site is within a Coal Mining Reporting Area as defined by the Coal Authority, given that no negative findings are outlined in the Coal Mining Report, no further steps need to be taken to mitigate against risks from coal mining on this occasion. As such, there are no contamination concerns to prevent this site coming forward for development. The Phase 1 Desk Survey can be made available to the Council if deemed necessary. In conclusion, there are no known physical or technical restrictions to bringing the site forward for development. The only constraint to bringing the site forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered a suitable to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. The site does not comply with all of the five purposes of the Green Belt as outlined at paragraph 134 of the NPPF. For example, no settlement is located within close proximity to the South of Tickhill and subsequently development at the site will not impact on neighbouring towns. Oldcotes is the next settlement South of Tickhill and is located a substantial 5.1km away. It is also considered that development at the site would not have an impact on Tickhill Castle. Unlike other sites promoted in Tickhill as part of the Call for Sites Consultation, the site can accommodate the majority or all of the proposed 154 homes over the plan period to 2032. The site is sufficiently large enough for amenity space and green areas to be incorporated into a proposed site layout design. The Sandbeck Estate welcomes discussions with the Council should they want to allocate the site in its entirety or in part. The Estate also owns land south of the identified site and the Estate is also willing to discuss the potential to increase the suggested site boundary if favoured by the Council. The site has also received quite a bit of interest from volume housebuilders so it is considered a deliverable and viable site for future housing development. We therefore respectfully request that this site (Land at Lindrick Lane, Tickhill - HELAA Site 356) is deleted from the Green Belt and identified as a housing allocation in the next draft of the Local Plan. Based on a 75% developable area, it is considered that the site could accommodate circa 150 new dwellings and therefore easily accommodate the residual housing need for Tickhill.

Summary:

Site 356 ("Land off Lindrick Lane, Tickhill") should be allocated for housing. It is identified as a deliverable / developable sites in the HELAA and therefore has no physical or technical reasons as to why it could not come forward for residential development (the only constraint being that the land lies within Green Belt). Tickhill is a Service Town / Village located within twenty minutes of a number of a number of settlements which provide essential services and facilities. The landowner is supportive of residential development on the site which are available, suitable and achievable for residential development now. Tickhill has a housing requirement of 165 units and the Local Plan proposes a shortfall of 91 units which is made good through allocated supply at the Doncaster Main Urban Area and some of the Main Towns. This is unjustified and therefore unsound. Justification for this objection is based on work by landscape architects FPCR (supplied as an Appendix B). FPCR which provides a commentary on the Doncaster Green Belt Review (ARUP), and undertakes a ‘sense check’ of the published results. Site 356 would provide an urban expansion to the Service Town / Village of Tickhill. There are no known physical or technical restrictions to bringing the site forward for development (supporting information and maps provided). The site does not comply with all of the five purposes of the Green Belt as outlined at paragraph 134 of the NPPF. For example, no settlement is located within close proximity to the South of Tickhill and subsequently development at the site will not impact on neighbouring towns. Oldcotes is the next settlement South of Tickhill and is located a substantial 5.1km away. It is also considered that development at the site would not have an impact on Tickhill Castle. Unlike other sites promoted in Tickhill as part of the Call for Sites Consultation, the site can accommodate the majority or all of the proposed 154 homes over the plan period to 2032. The site is sufficiently large enough for amenity space and green areas to be incorporated into a proposed site layout design. The Sandbeck Estate welcomes discussions
with the Council should they want to allocate the site in its entirety or in part. The Estate also owns land south of the identified site and the Estate is also willing to discuss the potential to increase the suggested site boundary if favoured by the Council. The site has also received quite a bit of interest from volume house builders so it is considered a deliverable and viable site for future housing development.

Response:
The site has been assessed as having a weak case in Green Belt terms and there are reservations about access from Lindrick Lane. Every effort has been made to find suitable sites in Tickhill but there are a number of constraints which hamper this. The shortfall can be made up elsewhere. The Green Belt review carried out is independent and applies a consistent methodology.
There are a number of settlements located in close proximity to Tickhill which are listed below: - Doncaster (12.2km North); - Rossington (7.4km North East); - Harworth (7.4km South East); - Stainton (5km West); and, - Maltby (6.7km West). Tickhill is identified as a Service Town / Village and is located within twenty minutes of all the above settlements which provide essential services and facilities. The landowner is supportive of residential development at the three sites identified below which are available, suitable and achievable for residential development now. Tickhill has a housing requirement of 165 units to meet its local housing need target (See the Site Selection Methodology for the HELAA). The Regulation 19 Plan proposes to allocate a single site at ‘Sunderland Street’ for 74 units. As there are no commitments in the village, the Local Plan therefore proposes a shortfall of 91 units. The Draft Local Plan (paragraph 16.237) states that: As at 1st April 2018, there are no permissions large enough to allocate towards the town’s housing requirement (5+ units remaining) and only a single site, equating to 74 units, has been assessed through the Local Plan site selection methodology as being supportable for allocation. Other sites were dismissed either due to importance to Green Belt purposes or problems with creating a safe and viable access, from a Highways Development Management perspective, given the very rural nature of some of the road network around the settlement. Some sites are ruled out for both of these reasons. The remainder of the settlement’s housing requirement of 165 new dwellings (91 units) has therefore been made good through allocated supply at the Doncaster Main Urban Area and some of the Main Towns in line with Policy 3, which adds any unmet local housing need from settlements to the economic-led housing growth uplift. We fundamentally disagree with the findings of the Local Plan and consider that it is unjustified and therefore unsound. Our client’s site at Wong Lane (357) is preferable to the proposed site at Sunderland Street (1028). Our justification for this objection is based on work by landscape architects FPCR (Appendix B). FPCR were commissioned to undertake an Appraisal of the site known as ‘Land at Wong Lane’, to consider its contribution to the five Purposes of Green Belt, as set out in the NPPF, and to assess what the implications would be on the new Green Belt boundary should the site be removed from the Green Belt. This Appraisal provides a commentary on the Doncaster Green Belt Review (ARUP), and undertakes a ‘sense check’ of the published results, using professional judgement to reach conclusions on the suitability of this site for Green Belt release. The appraisal also provides a comparison between Sunderland Street and Land at Wong Lane, in terms of their contribution to the Green Belt Purposes, and the strength of the resultant Green Belt boundary (should these sites be removed from Green Belt) (SEE EMAIL FOR Appendix) Whilst ARUP conclude that both sites have moderate strength in terms of Purposes, it is important to acknowledge that Sunderland Street scores higher in terms of its contribution to the five Purposes of Green Belt. The combined scores for Sunderland Street are 20 (with 2 purposes scoring 4 or above), while the combined score for Wong Lane is only 14 (with 1 purpose scoring 4 or above). This also goes against the conclusion of the Stage 1 Assessment, in which General Area ‘Tickhill 7’ (in which Sunderland Street is located) scored significantly higher than ‘Tickhill 2’ (in which Land off Wong Lane’ is located). Development of Land off Wong Lane would not result in extending the existing settlement further north or west than currently defined by the development limits (or settlement boundary). As such, the development of this site would not lead to a reduction in the gap between Tickhill-Stainton and Tickhill-Wadworth, and would not therefore contribute to coalescence of settlements. In contrast, the development of Sunderland Street would result in a 5.38% reduction in the gap between Tickhill and Harworth. In terms of Purpose 4 (preserving the setting and special character of historic towns), the contribution of Sunderland Street is slightly greater than Land off Wong Lane, given its proximity to Tickhill Castle, and potential for glimpsed views of the motte from the southern extent of the site. Overall, Sunderland Street performs better than Land at Wong Lane in terms of contribution to Purposes, and such as the latter should be considered first in terms of further site selection work. It is considered that the Local Plan’s proposal to under-allocate sites in Tickhill and to use make good through the allocated supply in other towns is not an effective policy choice. It does not ensure that the vitality of Tickhill is maintained (as required by NPPF paragraph 78) and risks undermining local services such as the primary school and shops in the Tickhill. Our client has the following sites in Tickhill which are suitable, available and achievable and should be allocated for housing as part of the Doncaster emerging Local Plan: 1. "Land off Wong Lane, Tickhill" - HELAA Site 357; 2. "Land off Lindrick Lane, Tickhill" - HELAA Site 356; We also support the future allocation of the following two sites for residential development in the village of Stainton: 1. "Land at Manor Farm, Stainton" - HELAA Site 359 2. "Land North of Limekiln Lane, Stainton" - HELAA Site 358 Details of these five site are set out below respectively and location plans identifying the sites can be found at Appendix A. (SEE EMAIL FOR Appendix) (NOTE THIS REP IS FOR SITE 356 THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFNUMBER - SEE: 03569 / 04705)
Land off Wong Lane, Tickhill (Site Reference 357 in the HELAA), was also identified as a Deliverable/Developable Site (although it does not have planning permission). (SEE EMAIL FOR Figure 1 Aerial image of site off Wong Lane, Tickhill) HELAA Site 357 would provide an urban expansion to the Service Town/Village of Tickhill. The site is circa 3.65 hectares in size and are located adjacent to existing residential development and agricultural land. See figure 1 above for an aerial photograph of the site and surrounding land uses. The land is currently used for agriculture and is generally flat in topography. The land is under a single private ownership and whilst subject to a tenancy, the tenancy can be terminated for development purposes and therefore the development potential is available immediately. There are trees and hedgerows located along the boundary of the site but this would not be a constraint to development. The existing trees and hedgerows could be easily accommodated within a future residential development scheme. Access is available off Greystones Lane, off Wong Lane. An Access Technical Note was prepared by TPS Consultants Limited which concluded that a realigned access would be plausible along the northern boundary of the proposed housing site. The Access Technical Note can be made available if required by the Council. The site is located within Flood Zone 1 and is not subject to any flood risk issues. Furthermore, it is our understanding that Doncaster Metropolitan Borough Council has recently upgraded the main drains in this location. See Figure 2 and 3 below for extracts from the Flood Risk Map for the area. (SEE EMAIL FOR: Figure 2 Extract from the Governments Flood Risk Map - From Rivers and Sea Figure 3 Extract from the Governments Flood Risk Map - From Surface Water Flooding) The Site is not subject to any scheduled ancient monument’s or heritage assets. As such, there are no known technical or physical restrictions to bringing the site forward for residential development. This site has also received interest from volume housebuilders so it is considered a deliverable and viable site for future housing development. Furthermore, a Phase 1 Desk Survey was undertaken by Solmek which concluded that the site is unlikely to have been exposed to anything other than minimal contamination, with minimal construction/demolition waste from neighbouring sites and possibly oils or fuel from vehicle spills the most likely sources local to the site. Additionally, the site is within a Coal Mining Reporting Area as defined by the Coal Authority. No negative findings were outlined in the Coal Mining Report, thus no further steps need to be taken to mitigate against risks from coal mining on this occasion. Moreover, due to the sites current use and condition a ground gas assessment is not considered necessary. A copy of the Phase 1 Desk Survey can be made available to the Council, if required. The only constraint to bringing this site forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered to be a well contain site within the Service Town/Village of Tickhill to accommodate future housing development to meet the objectively assessment housing need for the Borough over the next 17 years. The site is sufficiently large enough for amenity spaces and green areas to be incorporated into the detailed design and layout stage. The Sandbeck Estate welcome discussions with the Council should they seek to allocate the site. This site, on its own, or alongside land off Lindrick Lane, Tickhill (site 1 above), would help meet the housing needs of the Service Town, in sustainable well sited locations. We therefore respectfully request that this site is identified as a housing allocation in the next draft of the Local Plan. Based on an 80% developable area, it is considered that the site could accommodate circa 90 new dwellings over the Plan period.

Summary:
Site 357 ("Land off Wong Lane, Tickhill") should be allocated for housing. It is identified as a deliverable / developable sites in the HELAA and therefore has no physical or technical reasons as to why it could not come forward for residential development (the only constraint being that the land lies within Green Belt). Tickhill is a Service Town / Village located within twenty minutes of a number of settlements which provide essential services and facilities. The landowner is supportive of residential development on the site which are available, suitable and achievable for residential development now. Tickhill has a housing requirement of 165 units and the Local Plan proposes a shortfall of 91 units which is made good through allocated supply at the Doncaster Main Urban Area and some of the Main Towns. This is unjustified and therefore unsound. Justification for this objection is based on work by landscape architects FPCR (supplied as an Appendix B). FPCR which provides a commentary on the Doncaster Green Belt Review (ARUP), and undertakes a ‘sense check’ of the published results. Site 357 would provide an urban expansion to the Service Town / Village of Tickhill. The land is under a single private ownership and whilst subject to a tenancy, the tenancy can be terminated for development purposes and therefore the development potential is available immediately. Access is available off Greystones Lane, off Wong Lane. There are no known physical or technical restrictions to bringing the site forward for development (supporting information and maps provided). A Phase 1 Desk Survey was undertaken by Solmek which concluded that the site is unlikely to have been exposed to anything other than minimal contamination, with minimal construction/demolition waste from neighbouring sites and possibly oils or fuel from vehicle spills the most likely sources local to the site. The only constraint to bringing this site forward for development in the short term is that the site is currently designated as Green Belt. Notwithstanding this, the site is considered to be a well contained site within the Service Town/Village of Tickhill. The site is sufficiently large enough for amenity spaces and green areas to be incorporated into the detailed design and layout stage.

Response:
The site has been assessed as having a moderately weak case in Green Belt terms, and it is not felt suitable access can be created, given this site would join the corner of Wong Lane (either via a new access or Wilsic Lane - Greystone Lane is an unmade farm track), which is a 'U' shaped bend. The Green Belt review carried out is independent and applies a consistent methodology.
Chapter 16: Spatial Proposals

Land off Wong Lane, Tickhill, which are combined with comments made and summarised elsewhere.

HELAA Site 357; 2. "Land off Lindrick Lane, Tickhill"

HELAA Site 356; Savills Plc

HELAA Site 358  Details of these five site are set out below respectively

HELAA Site 359 2. "Land North of Limekiln Lane, Stainton"

Rossington (7.4km SEE: 03568 / 04705)

Stainton (5km West); and,

We also support the future allocation of the following two sites for residential development in the village of Stainton: 1. "Land at Manor Farm, Stainton" - HELAA Site 359 2. "Land North of Limekiln Lane, Stainton" - HELAA Site 358 Details of these five site are set out below respectively and location plans identifying the sites can be found at Appendix A. (SEE EMAIL FOR Appendix)  (NOTE THIS REP IS FOR SITE 35)

Response:
The site has been assessed as having a moderately weak case in Green Belt terms, and it is not felt suitable access can be created, given this site would join the corner of Wong Lane (either via a new access or Wilsic Lane - Greystone Lane is an unmade farm track), which is a 'U' shaped bend. The Green Belt review carried out is independent and applies a consistent methodology.
To allow participation in discussions regarding the sustainability appraisal, settlement strategy, proposed housing requirement and distribution of development including site selection and allocations.

2.4 In providing an explanation of the choice of Option 4 as the preferred and improve traffic safety

Chapter 16: Spatial Proposals

2.11 Of the 35 sites in this Moderately which the council acknowledge is the distribution that is best able to ensure local housing need is met and to

2.16 there are no access constraints that would prevent the development of the site, either in isolation or in conjunction with the adjoining site, reference 281. We requested the opportunity to discuss this proposed access design with the council, but did not receive a response. 2.18 Nor are there other constraints which would prevent the development of the site. We have previously submitted a Development S

2.17 Therefore, and contrary to the findings of the Site Selection conclusion of the Site Selection concur with that assessment and eliminate the site for a single reason

2.7 For Tickhill specifically, the strategy calls for in the region of 165 dwellings to be delivered in the town. The Local Plan allocates sites capable of accommodating just 74 of those homes. This is justified on the basis that only a single site in the town is suitable for development. 2.8 This is not correct. 2.9 The Site Selection report (note 4 - 4 Housing & Employment Site Selection Methodology & Results Report Publication Version - June 2019) considers a range of potentially suitable housing development sites in Tickhill. Many of those sites were filtered out of the selection process due to the impact their development would have on the Green Belt. 2.10 The site at Worksop Road, Tickhill (identified as site 930 in the various reports) was not eliminated from consideration on this basis. In fact, it was one of the sites which was considered to have a "Moderately Strong" case for inclusion in further site selection work based on its Green Belt function. Only two sites in the whole borough - neither of which are in Tickhill - were in the higher "Strong" case category which would be more suitable for release. 2.11 Of the 35 sites in this Moderately Strong category, site 930 is one of only 8 sites considered to have strong boundaries (none of the other 7 sites are in Tickhill). The site is also considered to only moderately perform the purposes of the Green Belt - only 4 sites in this category weakly perform the purposes of the Green Belt. It is, therefore, one of the better performing sites based on Green Belt function, and one of the sites that is most suitable for development. 2.12 The conclusions of the Site Selection concur with that assessment and eliminate the site for a single reason - the council consider that it is not possible to accommodate a suitable vehicular access to the site and claim that access is only possible to Lindrick Lane. This assessment is not correct. 2.13 We have previously provided the council with an access design for the site prepared by Croft Transport Solutions which shows how a satisfactory access could be provided to Worksop Road. This design can be found in the Transport Issues report at Appendix 1. (SEE EMAIL FOR Appendix 1) 2.14 The access requirements for a site such as this should be based on the criteria set out in Manual for Streets. For a 30mph road, the required visibility splays would be 2.4 metres by 43 metres. Croft TS have prepared an access design onto Worksop Road which accommodates those requirements without the need for any third party land. 2.15 Although the current speed limit on Worksop Road is 40mph, the 30mph zone starts immediately past the site adjacent to the first residential properties on Worksop Road. As part of any development of the site, it would be expected that this 30mph zone would be extended to include the new development, broadly to the position indicated on the Croft TS access drawing. That would also reduce vehicle speeds - and improve traffic safety - at the Worksop Road / Lindrick Lane junction. 2.16 Pedestrian access into the site can be provided by both linking into the existing footway adjacent to Lindrick Lane to the east, and extending the existing footway adjacent to Worksop Road (through site reference 281). 2.17 Therefore, and contrary to the findings of the Site Selection paper, there are no access constraints that would prevent the development of the site, either in isolation or in conjunction with the adjoining site. (reference 281). We requested the opportunity to discuss this proposed access design with the council, but did not receive a response. 2.18 Nor are there other constraints which would prevent the development of the site. We have previously submitted a Development Statement which summarises the main technical considerations in respect of the site. A copy of that Statement can be found at Appendix 2. (SEE EMAIL FOR Appendix 2) 2.19 It is clear that there are no barriers to the site's development. It's allocation would help move closer to their proposed distribution of new homes - which the council acknowledge is the distribution that is best able to ensure local housing need is met and to minimise the amount of development on sites that are at risk of flooding. 2.20 The Local Plan, as drafted, is therefore not sound. 2.21 Firstly, the proposed spatial distribution of new homes has not been subject to a sustainability appraisal. While an SA has been carried out, it only considers
the proposed distribution of new homes, not the actual distribution that the Local Plan results in. There are significant differences between the proposed and actual distributions. The SA does not consider the actual distribution of new homes. It does not therefore, meet the relevant legal requirements and the plan is unsound on that basis. Nor is there any evidence that the proposed distribution takes adequate account of the constraint to development posed by flood risk - although the spatial distribution purports to reflect that constrain, the actual distribution of growth based on the proposed allocations does not. 2.22 Secondly, the Plan does not meet the local need for housing growth that is identified as being required in Tickhill. It will not, therefore be effective in delivering the strategy it purports to be trying to deliver. 2.23 Thirdly, the Plan is not justified based on the evidence. It is apparent that there is no evidential basis for the proposed distribution of development and that the selection of sites has not been based on the information available to the council. Nor has the Plan been arrived at from a consideration of reasonable alternatives. At no point have the council considered the spatial distribution that would result from maximising development on sites which are not at risk of flooding. 2.24 Fourthly, the Plan is not consistent with national policy. While the proposed distribution of housing growth purports to take flood risk into account, the significant deviation from the "preferred" distribution has not maximised the opportunity to deliver new homes in areas which are not at risk at flooding. 2.25 To ensure soundness, the council should consider to what extent sites outside of flood zones which are not currently allocated for new homes could contribute towards housing supply. Once those sites have been identified, consideration to be given to what spatial distribution possibilities this would give rise too, and the implications for sustainability of each.

Summary:

Site 930 (Worksop Road, Tickhill) should be allocated for housing. For Tickhill, the Plan Strategy identifies a need for 165 dwellings in the town. The Local Plan allocates sites capable of accommodating only just 74 dwellings on the basis that only a single site is suitable for development. This is not correct. The conclusions of the Site Selection eliminate the site for a single reason - that it is not possible to accommodate a suitable vehicular access to the site and that access is only possible to Lindrick Lane. This assessment is not correct. A supplied access design for the site prepared by Croft Transport Solutions shows a satisfactory access could be provided to Worksop Road. There are no access constraints that would prevent the development of the site, either in isolation or in conjunction with the adjoining site (reference 281). Nor are there are other constraints which would prevent the development of the site. A Development Statement is submitted which summarises the main technical considerations in respect of the site. There are no barriers to the site's development. Its allocation would help move closer to their proposed distribution of new homes - which the council acknowledge is the distribution that is best able to ensure local housing need is met and to minimise the amount of development on sites that are at risk of flooding. The Local Plan, as drafted, is therefore not sound. Firstly, the proposed spatial distribution of new homes has not been subject to a sustainability appraisal. While an SA has been carried out, it only considers the proposed distribution of new homes, not the actual distribution that the Local Plan results in. There are significant differences between the proposed and actual distributions. Secondly, the Plan does not meet the local need for housing growth that is identified as being required in Tickhill. It will not, therefore be effective in delivering the strategy it purports to be trying to deliver. Thirdly, the Plan is not justified based on the evidence. There is no evidential basis for the proposed distribution of development and that the selection of sites has not been based on the information available to the council. Nor has the Plan been arrived at from a consideration of reasonable alternatives. At no point have the council considered the spatial distribution that would result from maximising development on sites which are not at risk of flooding. Fourthly, the Plan is not consistent with national policy. While the proposed distribution of housing growth purports to take flood risk into account, the significant deviation from the "preferred" distribution has not maximised the opportunity to deliver new homes in areas which are not at risk at flooding. To ensure soundness, the council should consider to what extent sites outside of flood zones which are not currently allocated for new homes could contribute towards housing supply. Once those sites have been identified, consideration to be given to what spatial distribution possibilities this would give rise too, and the implications for sustainability of each.

Response:

The Council’s highways team are of the opinion that suitable access is not achievable from Worksop Road. The site is also Green Belt, so this needs to be hung in the balance, were access issues to be overcome. As it stands, although there is a shortfall of houses in Tickhill against the target of 165, but this can be made good elsewhere in the Borough, with the overall levels of housing delivered being on target. The SA will now assess the proposed actual distribution of housing as highlighted. No allocations have been made in areas of flood risk, although permissions form part of the allocated supply. The Council has maximised opportunity to deliver homes in areas not at risk of flooding, in spite of the spatial strategy including areas at risk of flooding where these are also sustainable settlements. There has not been a significant deviation from the proposed housing distribution, most locations in the Borough can meet their housing requirements and the spatial strategy is largely maintained. There are clear reasons why Tickhill cannot meet its housing requirement as set out in the methodology, green belt topic paper and housing topic paper.
Tests of Soundness: Justified

Comment: The Site is located to the east of Castle Farm and is circa 0.8 hectares in size. It is surrounded by existing residential development to the west (along with Castle Farm steading), Tickhill Castle is located to the north of the Site and agricultural land is located to the south and east. The land is currently used for agriculture and is generally flat in topography with some underutilised agricultural buildings located within the site boundary. The land is under a single private ownership. Please see Figure 8 below for reference. (SEE EMAIL FOR Figure 1 Aerial Image of Stud Farm, Tickhill) There are trees located along the southern and northern boundary of the site but this would not be a constraint to development. The existing trees could easily be accommodated within a development scheme subject to an appropriate Tree Survey being undertaken to establish the healthy trees within the site. Furthermore, the majority site is located within Flood Zone 1 and is therefore not prone to flooding (see Figure 9 below for reference). It is noted that some of the land along the southern boundary of the Site is located within Flood Zone 2, however, it is not proposed that this land would be subject to development. As such, flood risk is not considered a constraint to the general development of the site as a whole. (SEE EMAIL FOR Figure 2 Extract from the Governments Flood Risk Map - From Rivers and Sea) In conclusion, there are no constraints to bringing this site forward for development in the short term other than it being located within the Green Belt. This site is considered a well contained site within Tickhill capable of accommodating future housing development to meet the objectively assessed housing need for the Borough over the Plan period. As the site is already partly developed with existing agricultural buildings, it is considered that the redevelopment of the site with high quality, well designed residential properties would lead to an effective use of the site. Whilst Tickhill Castle is located to the north (A Scheduled Monument List UID: 1004828) it is not considered that development of this site would have an adverse impact on the Castle. Well-placed and designed development can actually act as enhancement to a listed building. It is therefore considered that the site could accommodate up to 20 new dwellings over the Plan period. We therefore consider that the three aforementioned sites at Tickhill should be reassessed and allocated for residential development to help meet the housing needs over the Plan period and beyond.

Response: Tickhill does have a shortfall of housing against its allocated target, however it has a number of constraints to the delivery of housing, including Green Belt and access issues. The site in question has a weak case in Green Belt terms for continuation in the site selection process. It is also adjacent to Tickhill Castle and within the view of St Mary's Church in the Tickhill conservation area. As such, site 1021 scores particularly strongly against the historic aims of the Green Belt.

There are a number of settlements located in close proximity to Tickhill which are listed below: - Doncaster (12.2km North); - Rossington (7.4km North East); - Warworth (7.4km South East); - Stainton (5km West) and, - Maltby (6.7km West). Tickhill is identified as a Service Town / Village and is located within twenty minutes of all the above settlements which provide essential services and facilities. The landowner is supportive of residential development at the three sites identified below which are available, suitable and achievable for residential development now. Tickhill has a housing requirement of 165 units to meet its local housing need target (See the Site Selection Methodology for the HELAA). The Regulation 19 Plan proposes to allocate a single site at 'Sunderland Street' for 74 units. As there are no commitments in the village, the Local Plan therefore proposes a shortfall of 91 units. The Draft Local Plan (paragraph 16.237) states that: As at 1st April 2018, there are no permissions large enough to allocate towards the town's housing requirement (5+ units remaining) and only a single site, equating to 74 units, has been assessed through the Local Plan site selection methodology as being supportable for allocation. Other sites were dismissed either due to importance to Green Belt purposes or problems with creating a safe and viable access, from a Highways Development Management perspective, given the very rural nature of some of the road network around the settlement. Some sites are ruled out for both of these reasons. The remainder of the settlement's housing requirement of 165 new dwellings (91 units) has therefore been made good through allocated supply at the Doncaster Main Urban Area and some of the Main Towns in line with Policy 3, which adds any unmet local housing need from settlements to the economic-led housing growth uplift. We fundamentally disagree with the findings of the Local Plan and consider that it is unjustified and therefore unsafe. Our client's site at Wong Lane (357) is preferable to the proposed site at Sunderland Street (1028). Our justification for this objection is based on work by landscape architects FPCR (Appendix B). FPCR were commissioned to undertake an Appraisal of the site known as 'Land at Wong Lane', to consider its contribution to the five Purposes of Green Belt, as set out in the NPPF, and to assess what the implications would be on the new Green Belt boundary should the site be removed from the Green Belt. This Appraisal provides a commentary on the Doncaster Green Belt Review (ARUP), and undertakes a 'sense check' of the published results, using professional judgement to reach conclusions on the suitability of this site for Green Belt release. The appraisal also provides a comparison between Sunderland Street and Land at Wong Lane, in terms of their contribution to the Green Belt Purposes, and the strength of the resultant Green Belt boundary (should these sites be removed from Green Belt) (SEE EMAIL FOR Appendix) Whilst ARUP conclude that both sites have moderate strength in terms of Purposes, it is important to acknowledge that Sunderland Street scores higher in terms of its contribution to the five Purposes of Green Belt. The combined scores for Sunderland Street are 20 (with 2 purposes scoring 4 or above), while the combined score for Wong Lane is only 14 (with 1 purpose scoring 4 or above). This also goes against the conclusion of the Stage 1 Assessment, in which General Area 'Tickhill 7' (in which Sunderland Street is located) scored significantly higher than 'Tickhill 2' (in which Land off Wong Lane' is located). Development of Land off Wong Lane would not result in extending the existing settlement further north or west than currently defined by the development limits (or settlement boundary). As such, the development of this site would not lead to a reduction in the gap between Tickhill-Stainton and Tickhill-Wadworth, and would not therefore contribute to coalescence of settlements. In contrast, the development of Sunderland Street would result in a 5.38% reduction in the gap between Tickhill and Harworth. In terms of Purpose 4 (preserving the setting and special character of historic towns), the contribution of Sunderland Street is slightly greater than Land off Wong Lane, given its proximity to Tickhill Castle, and potential for glimpsed views of the motte from the southern extent of the site. Overall, Sunderland Street performs better than Land at Wong Lane in terms of contribution to Purposes, and as such the latter should be considered first in terms of further site selection work. It is considered that the Local Plan's proposal to under-allocate sites in Tickhill and to "make good" through the allocated supply in other towns is not an effective policy choice. It does not ensure that the vitality of Tickhill is maintained (as required by NPPF paragraph 78) and risks undermining local services such as the primary school and shops in the Tickhill. Our client has the following sites in Tickhill which are suitable, available and achievable and should be allocated for housing as part of the Doncaster emerging Local Plan: 1. "Land off Wong Lane, Tickhill" - HELAA Site 357; 2. "Land off Lindrick Lane, Tickhill" - HELAA Site 356; We also support the future allocation of the following two sites for residential development in the village of Stainton: 1. "Land at Manor Farm, Stainton" - HELAA Site 359 2. "Land North of Limekiln Lane, Stainton" - HELAA Site 358 Details of these five site are set out below respectively and location plans identifying the sites can be found at Appendix A. (SEE EMAIL FOR Appendix) (NOTE THIS REP IS FOR SITE 1021 THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFNUMBER - SEE: 03568 / 03569)
6.22. Framecourt Homes is particularly concerned that in sufficient housing allocations are identified in Tickhill, which the proposed spatial distribution, Policy 3, suggests should be accommodating at least 165 new homes. There is presently a significant under provision in the settlement, which cannot be met through allocations in other settlements. Framecourt Homes proposes that their site at Apy Hill Lane, Tickhill (Site 1019) can accommodate part of that housing need. Framecourt Homes do not agree with the rejection of the site on access grounds and consider that this part brownfield site is deliverable and should be allocated, as summarised below. 6.23. Framecourt Homes maintains that the the Apy Hill Lane, Tickhill site 1019 should be considered and that it be identified as a mixed use housing and employment site. Technical studies are ongoing but initial assessments demonstrate the site's deliverability. 6.24. Framecourt Homes considers the proposed site is available, suitable and achievable and is therefore in accordance with the Framework a deliverable site able to come forward in the short term. 6.25. The deliverability and benefits of the Apy Hill Lane, Tickhill site is as follows: Overview of Proposals 6.26. The site is located on the edge of an established residential area and benefits from easy access to the full range of services and facilities located within Tickhill. Site location plan is show below and attached to these representations. The site is part brownfield and includes a current employment park. The proposed scheme would re-configure and upgrade the current industrial estate and provide new housing alongside. The site is approximately 3ha gross and could accommodate in the region of 60 new homes alongside a reconfigured and enhanced employment site, with a further 30 on land to the south as a later phase. (SEE EMAIL FOR Location Plan) Deliverability 6.27. The site at Apy Hill Lane provides a development opportunity that is available, suitable and achievable and therefore it is considered that the site is deliverable, in accordance with national planning policy and guidance. It is promoted by Framecourt Homes which further demonstrates the site's deliverability within the plan period. Availability 6.28. The land is being promoted by Framecourt Homes. The site is therefore available in accordance with the Framework and the National Planning Practice Guidance (PPG). 6.29. The proposed development can make an efficient and attractive use of the land. The site represents an excellent opportunity for future housing and development. This site allows housing to be delivered within an appropriate and sustainable location within Tickhill. Suitability 6.30. The site is located in a highly sustainable location and has residential development to the east and includes the remodelling and upgrading an existing industrial estate. The site is within easy walking distance to the centre of Tickhill with a range of facilities provided there, as well as greater facilities within Doncaster Town Centre, a bus ride away. There are a number of primary schools in the vicinity of the site. 6.31. The site is well served by buses providing opportunities for sustainable travel to work in Doncaster and beyond with access to Doncaster Railway Station. 6.32. The development will provide additional quality development that will benefit Tickhill and the wider district with economic, environmental and social benefits. It is therefore considered that the development is suitable. Green Belt 6.33. Due to the significant need and demand for housing and aspirations for economic and housing growth there is clearly a requirement for a strategic review of the approach to locations for future growth within the district. In order to plan for appropriate for the plan period there is a need to review the Green Belt boundaries. A thorough review of the development limits of Doncaster settlements would ensure a holistic approach to the location of development for the future of the Borough. 6.34. The housing needs of Doncaster are putting severe pressure on the local authority to review the Green Belt boundaries. To meet the housing requirement Doncaster Council recognises that some Green Belt land will need to be released for new housing land. Apy Hill Lane, Tickhill is a unique opportunity to positively use the Green Belt and meet the housing need for the area. 6.35. In the Borough of Doncaster approximately 46% of the area is designated as Green Belt. This is the western part of the Borough which forms part of the South Yorkshire Green Belt surrounding urban areas. 6.36. The Framework explains that there are five purposes of including land within the Green Belt, which is: 1. To check the unrestricted sprawl of large built up areas; 2. To prevent neighbouring towns merging into one another; 3. To assist in safeguarding the countryside from encroachment; 4. To preserve the setting and special character of historic towns; and 5. To assist in urban regeneration by encouraging the recycling of derelict and other urban land. 6.37. Contextually, the site is “contained” by development and activity being part brownfield/employment site and adjacent to residential properties and lying adjacent to a railway line to the west. Within this context the release of the site from the Green Belt has limited impact on “openness” and that redevelopment of the site would have low impact on the purposes of including land within the Green Belt. 6.38. The Framework states that Green Belt boundaries should be drawn so as not to include land which it is unnecessary to keep permanently open. The site lies on the edge of Tickhill with residential development located to the east, a railway line to the west and includes an employment site. 6.39. The site is therefore "contained" and will not lead to unrestricted sprawl or encroachment. The site is located on the edge of Tickhill and is contained within its setting. The site would not therefore lead to the coalescence of towns. Whilst the development would result in development of some countryside the degree of encroachment into the countryside would be minimised. The site has no impact upon the setting of a historic town. 6.40. Framecourt Homes proposes that the new Green Belt boundary follows Apy Hill Lane and the railway line and northern boundary of the current employment site and tree belt which is clear and well defined. This boundary would accord with the Framework and ensure that the Green Belt is clearly defined using readily recognisable features to ensure permanency reinforcing the urban context whilst providing a robust boundary for the future. All the boundaries have the potential to be further reinforced within the site through additional planting to ensure an effective transition between the development and the countryside beyond. Achievable 6.41. A range of technical work is being undertaken and further survey work is ongoing. From the initial assessments there are no technical issues that would prevent development or are insurmountable. The site is therefore considered to be achievable and therefore deliverable in accordance with national guidance. The technical assessments will be submitted in due course and are
available upon request. Effective Use of Land 6.42. The site is part brownfield and will reconfigure and enhance the existing employment site alongside the delivery of much needed new housing on a currently under-utilised site. The proposed scheme will utilise and enhance existing infrastructure. The site is easily accessible and the proposed main access is off Apy Hill Lane. The scheme is therefore making an efficient and effective use of land and infrastructure. Delivering a Flexible Supply of Housing 6.43. The Framework requires Local Planning Authorities to meet their full objectively assessed housing need. Framecourt Homes considers that the site at Apy Hill Lane, Tickhill is deliverable in the short term and will reinforce the housing supply and address the Borough’s housing needs in the early years of the Local Plan. The site is fully capable of being delivered in the next 5 years. A Positive Response to the Key Objectives of the Framework 6.44. The Framework sets out that the Government’s key housing policy goal of boosting significantly the supply of housing and proactively driving and supporting sustainable economic development to deliver homes, business and industrial units, infrastructure and thriving local places that the country needs. The Framework explains that the supply of new homes can sometimes be best achieved through planning for larger scale development, such as extensions to towns, and creating mixed and sustainable communities with good access to jobs, key services and infrastructure. Sites should also make effective use of land and existing infrastructure. 6.45. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, suitable and achievable for development. Benefits of Apy Hill Lane, Tickhill 6.46. The development of the site would provide significant benefits. The site would provide housing that would meet the needs of the Tickhill and Doncaster Borough housing market. Therefore this site provides a unique opportunity in a sustainable location. 6.47. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 60 new homes. - The proposal will reconfigure and update the existing employment site. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The scheme will create direct and indirect job opportunities both during and after construction. 6.48. The proposal is an appropriate site to provide for the housing needs of Tickhill and Doncaster in the short term. The allocation of the site would confirm its potential to help continue the provision of a balanced housing supply in the Borough in sustainable locations. The site can deliver a full range and mix of housing and a sustainable community. Development of the site would deliver housing and affordable housing. Doncaster needs to have a robust housing trajectory and the site Apy Hill Lane, Tickhill would assist with this delivery in the short term. The site is part brownfield and is situated within a prime location suitable for residential and employment development and as such would facilitate the development of land in a more effective and efficient manner. Development of the site would not harm or undermine the areas wider policy objectives, but seeks to reinforce the need to develop sites within sustainable locations as a priority. 6.49. The site is available, suitable and achievable and therefore deliverable in accordance with the Framework. Proposed Change 6.50. To overcome the objection and address soundness matters, the Council should 6.51. Framecourt Homes consider that the following sites should be deleted or the yield within the plan period should be significantly reduced: - Site 1028 6.52. To address the identified deficiencies in the Plan Framecourt Homes therefore suggest that the following sites be allocated: - Site 1019: Apy Hill Lane, Tickhill

Summary:

Concerned that insufficient housing has been identified in Tickhill, which should have 165 new homes. There is under provision at present that cannot be met elsewhere. Site 1019 can accommodate the housing need; do not agree with rejection on access grounds and consider this is part brownfield and deliverable and should be allocated as a mixed use housing and employment site. Site is available, suitable and achievable and in accordance with the framework. The site is on the edge of an established residential area and has easy access to a full range of services and facilities in Tickhill. Site is part brownfield and includes a current employment park. The new scheme would reconfigure and upgrade the current industrial estate and provide new housing alongside it. It is 3ha and could accommodate about 60 new homes plus a reconfigured enhanced employment site, plus 30 more houses on land to the south in a later phase. The site is available, suitable and achievable and considered deliverable. It is promoted by Framecourt Homes and is therefore in accordance with the NPPF and PPG. The development can make efficient and attractive use of the land and has an excellent opportunity for future housing and development. It allows housing in a more appropriate and sustainable location in Tickhill. It is in a highly sustainable location with residential development to the east and is in easy walking distance of Tickhill and it’s facilities as well as greater facilities within Doncaster Town Centre - a bus ride away. There are a number of primary schools in the vicinity of the site. The site is well served by buses providing opportunities for sustainable travel to Doncaster and beyond with Doncaster railway station. It will provide additional quality development to Tickhill. There is clearly a requirement for a strategic review of the locations for future growth and in order to plan appropriately in the plan period there is a need to review Green Belt boundaries. The Council have recognised this and site 1019 provides a unique opportunity to positively use the Green Belt and meet local housing needs. The site is constrained by development and activity being part brownfield / part employment and adjacent to residential properties and lying adjacent to the railway to the west. There would be limited impact on openness and redevelopment would have low impact on purposes of land in the Green Belt. The site is contained and will not lead to encroachment or unrestricted sprawl. It is on the edge of Tickhill and contained within this setting. There would be some loss of countryside but the degree of encroachment would be minimised. There would be no impact on the historic setting. The new Green Belt boundary should be along Apy Hill Lane and the railway line to the northern boundary of the site and the well-defined tree belt. The features would be clearly defined using recognisable features to ensure permanency. All boundaries could be further enforced and provide an effective transition between the development and the countryside beyond. A range of technical survey work is ongoing with the site. Initial work suggests there are no technical issues to prevent development that are insurmountable. Assessments will be submitted in due course or available on request. The site will utilise existing infrastructure and is easily accessible via the proposed access off Apy Hill Lane. The scheme makes efficient and effective use of land and infrastructure. The site can be delivered within 5 years. In relation to the Framework: - The proposal responds positively towards national guidance. - The site is appropriate for accommodating housing growth, being an expansion of an existing settlement. - The proposed site is accessible to existing local community facilities, infrastructure and services, including public transport. - The site has been assessed and is available, suitable and achievable for development. There will be significant benefits, including meeting local and borough wide housing needs and meeting the needs of the housing market. In accordance with the Framework this representation has shown that: - The site is suitable for housing and can deliver circa 60 new homes. - The proposal will reconfigure and update the existing employment site. - The proposal will deliver high quality housing. - The proposal will deliver affordable housing. - The proposal can provide a good mix of housing commensurate to the demand and need in the area. - The scheme uses land efficiently and effectively. - The proposal is in line with planning for housing objectives. - The site is within a sustainable location situated in close proximity to facilities and services and also to bus stops for local bus routes. - The scheme will create direct and indirect job opportunities both during and after construction. The proposal can bring housing in a sustainable location and deliver a full range and mix of housing and a sustainable community. It would bring affordable housing. The site would help the trajectory in the short term. The site is part brownfield and in a prime location suitable for residential and employment development and
would use the land in a more efficient manner. It would not undermine the areas wider policy objectives but seeks to reinforce the need to develop sites in sustainable locations as a priority. Proposed change - to overcome the objection and address soundness issues, the Council should delete or reduce the yield of site 1028 and allocate site 1019.

Response:

Whilst there is an under delivery against the target of 165 at Tickhill, this is due to the lack of viable alternatives. Sites have been discounted for a number of reasons, including access issues (given the rural nature of the settlement) and Green Belt. In the case of site 1019, the site is deemed to impact too much on the Green Belt, and furthermore there are significant access issues to the site. This is expanded on in the Site Selection Methodology and Green Belt Review / Topic Paper. Overall, the shortfall is made up in other settlements.
6.1. Framecourt Homes objects to Policy 6 and the proposed distribution of housing and that the following site is not a proposed allocation: - Site 1019: Apy Hill Lane, Tickhill 6.2. The site is summarised below and technical information and advocacy report has been submitted previously. Test of Soundness 6.3. Framecourt Homes considers that the Local Plan is currently unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 6.4. Framecourt Homes is concerned that the Local Plan is not producing sufficient homes across the Borough. Further to comments in relation to Policy 3 Framecourt Homes recommends that further sites are identified to meet and exceed the requirement but also to provide a sufficient buffer to deal with any under-delivery which is likely to occur from some sites. Such an approach would be consistent with the Framework requirements for the plan to be positively prepared and flexible. 6.5. Framecourt Homes is concerned that the proposed distribution of new homes does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. 6.6. The proposed distribution against the Council's own targets shows a deficiency and a significant under provision in: – Doncaster – Adwick- Conisbrough - Denaby - Mexborough - Thorne - Moorends - Sprotbrough - Tickhill - Bawtry 6.7. Framecourt Homes, as explained in response to Policy 2 and the spatial strategy considers that the spatial strategy is incorrect, that it does not provide for the growth of the Borough and does not reflect the role, function and location of the settlements. 6.8. Framecourt Homes, as explained in response to Policy 2 and 3, considers that there needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. 6.9. Framecourt Homes is particularly concerned that insufficient housing allocations are identified in Tickhill, which proposed spatial distribution in Policy 3 suggests should be accommodating at least 165 new homes. There is presently a significant under provision in the settlement, which cannot be met through allocations in other settlements. The current level of allocation of 74 units at Site 1028, does not reflect the role, and function of the settlement. Framecourt Homes proposes that their site at Apy Hill Lane (site 1019) can accommodate part of that housing need. 6.10. Further Framecourt Homes are concerned about the deliverability of a number of allocations within the main urban areas. These include but are not limited to the following sites: 6.11. Framecourt Homes object to the allocation of site 1028. The site does not have access and is not deliverable in the short term. Overcoming this constraint will have viability implications. It is a 1.5 ha site which has been identified as having a capacity of 74 dwellings. This is clearly based on unrealistic net developable area, and or density. It is a greenfield site, and priority should be given to the allocation of brownfield sites such as Site 1019. The site should not be allocated or as a minimum the forecast contribution to the local plan should be reduced to reflect more realistic density and net to gross ratios. 6.12. Based on the above it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Tickhill to ensure that the Plans strategy can be delivered and the identified needs of Tickhill can be met in full. 6.13. Therefore, Framecourt Homes consider their part brownfield site to the west of Tickhill (Site 1019), should be allocated to address the housing shortfall in the settlement. 6.14. As indicated in response to Policy 2 Framecourt Homes are also concerned that the Plan does not provide sufficient support for development in Defined Villages. Framecourt Homes consider that in line with the provision of the Framework, paragraph 78, which is clear that to promote sustainable development in rural areas, ‘Housing should be located where it will enhance or maintain the vitality of rural communities. Planning Policies should identify opportunities for villages to grow and thrive, especially where this will support local services’. 6.15. Furthermore, there does not appear to be any safeguarded sites identified within the Local Plan. This is concerning given Policy 6 states that the Plan will designated Reserve Development Sites, yet those identified are not considered to be developable within the Plan Period due to significant constraints relating to flood risk and HS 2 Safeguarding, thus could not be relied on to maintain the supply of housing should other sites fail to deliver in the Plan period. As indicated in response to Policy 3 Framecourt Homes suggest, that safeguarded sites be proposed, to provide additional flexibility in accordance with national guidance. 6.16. Framecourt Homes consider that the policy in its current form is not justified and is not consistent with the Framework the Plan in its present form could fail to deliver sustainable development in accordance with policies in the Framework. In these circumstances, we do not consider the Doncaster Local Plan in its current form to be sound. 6.17. However, Framecourt Homes consider that with the proposed allocation of Site 1019, Apy Lane, Tickhill and the deletion or adjustment in anticipated delivery within the plan period of sites 1028 that the Local Plan can be found sound. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 6.18. To overcome the objection and address soundness matters, the Council should 6.19. Framecourt Homes consider that the following sites should be deleted or the yield within the plan period should be significantly reduced: - Site 1028 6.20. To address the identified deficiencies in the Plan Framecourt Homes therefore suggest that the following sites be allocated: - Site 1019: Apy Hill Lane, Tickhill 6.21. A short summary of this site is in the following sub-section and detailed representations including an Advocacy has been admitted alongside previous representations.
Summary:
Object to Policy 6 and the proposed housing distribution, and that site 1019 is not proposed for allocation. The plan is currently unsound. Concerned that the plan is not producing sufficient homes across the borough. Further sites are needed to meet and exceed the requirement and also provide a buffer for under-delivery which is likely on some sites. Concerned that the proposed distribution does not reflect the spatial strategy, but importantly does not address the focus for economic and housing growth across the Sheffield City Region and Yorkshire and Humber as a whole. There is a deficiency of homes against council targets in: - Doncaster - Adwick - Conisbrough - Denaby - Mexborough - Thorne - Moorends - Sprotbrough - Tickhill - Bawtry There needs to be further provision of housing and a slightly amended approach to the spatial strategy, which focusses growth towards Doncaster. There should be further growth of Rossington to address regeneration and the provision of new infrastructure. There should be growth in Thorne-Moorends, and a regeneration focus in Carcroft-Skellow which should elevate the status of the settlement commensurate to its role and function. New housing should be provided in Tickhill to address the current under provision. The allocated 74 homes in Tickhill is not enough and site 1019 can accommodate part of the housing need. Object to site 1028 being allocated. Does not have access and is not deliverable in the short term. Overcoming the constraint will have viability implications. It is 1.5ha and is earmarked for 74 dwellings. This is based on an unrealistic net developable area and / or density. It is greenfield when priority should be given to brownfield such as site 1019. 1028 should not be allocated or as a minimum the forecast contribution to the Local Plan should be reduced to reflect a more realistic density and net to gross ratios. Based on the above it is clear that the deliverability and delivery rates of some of the sites in Doncaster ought to be reviewed to ensure that they reflect the site specific circumstances. Further allocations are required in Tickhill to ensure that the Plans strategy can be delivered and the identified needs of Tickhill can be met in full. The part brownfield site 1019 should be allocated to address the housing shortfall in the area. Also concerned that the plan does not provide sufficient support for development in Defined Villages in line with NPPF para. 78, which is clear that to promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities and identify opportunities for villages to grow and thrive, especially where they will support local services. There are also no safeguarded sites in the plan - sites should be proposed. The policy as drafted is not justified or consistent with the framework and the plan could fail to deliver sustainable development in accordance with the framework. As such, do not consider this to be sound. With the allocation of site 1019 and the adjustment or deletion of anticipated delivery within the plan period for site 1028, the Local Plan can be found sound. Proposed change: to overcome the objection and address soundness matters, the Council should - delete site 1028 or reduce the yield significantly - allocate site 1019

Response:
Whilst there is an under delivery against the target of 165 at Tickhill, this is due to the lack of viable alternatives. Sites have been discounted for a number of reasons, including access issues (given the rural nature of the settlement) and Green Belt. In the case of site 1019, the site is deemed to impact too much on the Green Belt, and furthermore there are significant access issues to the site. This is expanded on in the Site Selection Methodology and Green Belt Review / Topic Paper. Overall, the shortfall is made up in other settlements. Aside from Mexborough, the Main Urban Area and all the Main Towns mentioned are only short against the top of their ranges. As the Housing Topic Paper explains, not all of these settlements need to meet the top of their range, as long as the overall number balances out at approx. 90% of housing in these two areas, which it does. In Bawtry and Sprotbrough the shortfall against the target is relatively small and in Tickhill there are no other suitable sites, aside from 1028 (where access issues can be overcome). However, overall the borough is delivering enough housing across the plan period, and shortfalls are made up for in other areas. Note that Table HQ (2) has a lower site size that the actual size of the site, this has been amended which will address points raised about the yield.
5.1 Policy 3 identifies that just 165 dwellings should be provided within Tickhill. Given our comments upon the housing requirement and distribution, above, this is not considered a sound approach. This is further compounded by the Local Plan identifying just one allocation for 74 dwellings. The Local Plan identifies that; “The remainder of the settlement's housing requirement of 165 new dwellings (91 units) has therefore been made good through allocated supply at the Doncaster Main Urban Area and some of the Main Towns in line with Policy 3, which adds any unmet local housing need from settlements to the economic-led housing growth uplift” (para. 16.237) 5.2 There is a clear need for development within Tickhill the Council's approach to simply redistributing this need to the Main Urban Area is not considered appropriate. 5.3 Whilst we do not object to the inclusion of the allocation in Tickhill (Site Ref: 1028, Sunderland Street / Sunderland Farm Close, Tickhill) we do question whether it will deliver the 74 dwellings envisaged. Our concerns arise from the proximity of the site to the A1(M). As noted in the Local Plan site assessment (page 302) this will inevitably require significant noise attenuation measures, we also suggest consideration of air quality could be a factor. Given these issues the developable area is likely to be reduced and hence the quantum of new dwellings will be affected. 5.4 Our previous representation was accompanied by a Site Promotion document which explains why Paper Mill Fields (Site 824) represents a suitable location for new homes in accordance with the strategic draft policy targeting growth to the settlement of Tickhill. It also illustrates how development could be achieved on the site in a well-designed manner, responding to site conditions and local characteristics, including heritage setting considerations. 5.5 The Green Belt assessment identifies that exceptional circumstances for the release of Green Belt are justified across Doncaster. Given the lack of housing proposed in Tickhill and the lack of suitable alternatives we are strongly of the opinion that Land at Paper Mill Fields should be allocated to meet the housing needs of Tickhill.
Comment:

UKOOG Response: Coal Bed Methane (CBM): There is no specific reference or policy covering CBM within the Draft Plan. CBM is a form of natural gas extracted from coal beds comprising of methane absorbed into the solid matrix of the coal. Reference should be made in a revised section of Policy 65 and it’s supporting text for completeness. Coal Mine Methane: There is no specific reference or policy covering Coal Mine Methane within the Draft Plan. The Glossary states: ‘Gas collected from operating mines and used as an energy source’. This definition should be re-worded along the lines of: ‘Methane gathered from operating or decommissioned coal workings, which is used as an energy source rather than being cold vented to the atmosphere.’ Conventional Hydrocarbons: The Glossary states: ‘Oil and gas found within geological ‘reservoirs’ with relatively high porosity/permeability, extracted using conventional drilling and production techniques.’ The term ‘conventional’ refers to the geology in which the hydrocarbons are located, specifically those oil and gas resources contained within higher porosity/permeability reservoirs. ‘Conventional’ does not refer to the techniques used to extract the resource. Unconventional Hydrocarbons: The Glossary states: ‘Hydrocarbons such as coal bed and coal mine methane and shale gas, extracted using unconventional techniques, including hydraulic fracturing in the case of shale gas, as well as the exploitation of in situ coal seams through underground coal gasification.’ The term Unconventional refers to the geology in which the hydrocarbons are located. Specifically, those rocks in which the hydrocarbons are bonded within the structure of the geology, such as source rocks like Shale, where oil and gas extraction requires some form of treatment to the rocks to create pathways for the hydrocarbons to flow out. ‘Unconventional’ does not refer to the techniques used to extract the resource. Coal Mine Methane (CMM) is not considered an unconventional source, as the methane is gathered from within the workings of a mine, as the gas migrates from the coals surface into the worked areas. Therefore, CMM should be excluded from this definition. We suggest that the Council also refers to definitions provided by the Oil and Gas Authority; https://www.ogauthority.co.uk/site-tools/glossary-of-terms/  

Summary:

Appendix 1 Glossary. Comment? No policy or reference made to other energy minerals, such as coal or mine methane, except for a short statement on paragraph 14.76. Policy 65 should include text on Mine Methane and Coal. Amend glossary wording for conventional and unconventional hydrocarbons.

Response:

Comment noted. No proposed changes to policy 65 and supporting text. Amendments proposed to glossary with regard to energy minerals such as mine methane, conventional and unconventional hydrocarbons to clarify definitions.
IGas has the following comments in respect of the Glossary and definitions:

**Coal Bed Methane (CBM):** This abbreviation/term is included in the Glossary but there is no reference or policy for such in the Draft Plan. Whilst there are a number of definitions, coal be methane is a form of natural gas extracted from coal beds comprising of methane absorbed into the solid matrix of the coal. Reference should be made to such in Policy 65.  

**Coal Mine Methane:** This abbreviation/term is included in the Glossary but there is no reference or policy for such in the Draft Plan. Irrespective, it is considered the definition should include the term methane, rather than gas and be amended to 'Methane gathered from operating or decommissioned coal workings, which is used as an energy source rather than being cold vented to the atmosphere.' Reference should be made to such in Policy 65.  

**Conventional Hydrocarbons and Unconventional Hydrocarbons:** Conventional hydrocarbon is an individual hydrocarbon accumulation in a single trap with a uniform pressure system and oil and water contact. It is extracted using drilling and production methods many of which are common to the winning of 'unconventional' hydrocarbons. Unconventional Hydrocarbons are hydrocarbons that in some cases the oil and gas become trapped within shale rock itself and form traditional conventional reservoirs. Given such oil and gas may be found at considerably greater depths than conventional oil and gas, or is easily penetrated by liquids or gases, it requires a lot more effort to extract the hydrocarbons. Hydraulic fracturing is a method used to stimulate oil or gas either to begin or continue flowing and is employed to extract conventional and unconventional oil and gas to help improve the flow rates. The techniques employed to extract both are very similar other than in scale and perhaps frequency. Consequently it is considered a single definition for hydrocarbons would be sufficient; if not then the definition of unconventional hydrocarbons should be amended to exclude 'unconventional techniques' given the above. It is suggested the definitions provided by the Oil and Gas Authority should be used; [https://www.ogauthority.co.uk/site-tools/glossary-of-terms/](https://www.ogauthority.co.uk/site-tools/glossary-of-terms/)

**Summary:**
Hydrocarbon definitions in glossary should reflect those provided by oil and gas authority. Glossary references CBM and CMM, but not in policy or text justification

**Response:**
Comments noted. Amend glossary terms for conventional and unconventional hydrocarbons. Para 14.76 discusses other minerals such as peat and coal, but does not mention coal derivatives such as CBM /CMM. No proposed changes. It is not politically acceptable to make changes to policy 65 and supporting text.
Comment Ref: Appendix 2 Dev Guideline/03259/3/011

Attend Examination: Attend Hearing

Reason: We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Area: Appendix 2: Developer Requirements

Policy: Appendix 2: Developer Requirements

Tests of Soundness: Positively prepared Effective Legally Compliant

Justified Consistent with national

Comment:

Objection is made to the developer guidelines as set out on pages 272 and 273, the design comments are over prescriptive at this stage and may inhibit the development of the most appropriate layout of the site when the detailed site details have been established. The guidelines do not explain why an education contribution will be required and which schools this would benefit.

Summary:

Objects to developer requirements as too prescriptive and may inhibit most appropriate layout of site when detail is known and does not explain why a school contribution is required and for which school.

Response:

The requirements are not considered overly prescriptive for this stage of the plan-making process and are set out to inform early considerations of appropriate design and layout to assist with applicants submitted successful applications in due course. Sites have been assessed by colleagues in Education to determine where there are likely to be a need for contributions to increase capacity. A standard Department for Education formula is used.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Objects to developer requirements as the design comments are too prescriptive and may inhibit the development of the most appropriate layout of the site when such details have been established. The guidelines do not explain why an education contribution will be required and which schools this would benefit. PROPOSED CHANGE 7. Amend the developer guidelines to be flexible and justified. As explained in detail above.

The requirements are not considered overly prescriptive for this stage of the plan-making process and are set out to inform early considerations of appropriate design and layout to assist with applicants submitted successful applications in due course. Sites have been assessed by colleagues in Education to determine where there are likely to be a need for contributions to increase capacity. A standard Department for Education formula is used.
In summary, the existing development requirements do not adequately explain the Site and its characteristics. Further, full and proper consideration of the Site (including assessment against their own policies set out in the Local Plan) would have led DMBC to assess the Site as unsuitable for development. Quote: Archaeology: This site has a high potential for the survival of significant archaeological remains associated with Roman period pottery production and associated settlement, agriculture and pottery production. Given this evidence, further consideration of the impact on these will be required to establish the site’s capacity for development. A programme of archaeological evaluation (expected to be a combination of geophysical survey and trial trenching) will need to be discussed and agreed with the South Yorkshire Archaeology Service at an early stage. It will be key that this evaluation is completed at the design stage. The evaluation will characterise the nature, extent and state of preservation of the archaeological remains present on the site and provide information to ensure the design minimises any impact upon significant archaeological areas. A Heritage Statement detailing how the results of the evaluation have informed the design of the scheme can then be submitted alongside any planning application. This Heritage Strategy will also detail the proposed mitigation measures where less significant archaeological evidence will be impacted by the proposed scheme. The proposed mitigation will be designed to ensure that an understanding of the archaeological evidence affected is gained before that evidence is lost or damaged. Comments: This assessment should be performed prior to any permission being given for development starting. It is clear that as well as being a rich biologically diverse site and its value to the local community as a Green Open Space, the Site may well also have archaeological significance. Given this, there should be no question of the Site being developed. Quote: Biodiversity: The woodland / Local Wildlife Site to the northern part of the site should be protected with a buffer zone of planting. Similarly the corridor along the railway line could be enhanced with additional planting. The site has biodiversity value and forms part of a wider network of connected and biodiverse greenspaces. Habitat losses would need to be accounted for and would require compensation, which should contribute to the quality of the ecological network. This could potentially be delivered via a biodiversity net gain approach, subject to assessment of the habitats being lost and availability of suitable receptor sites. Comments: I agree that the site has "biodiversity value and forms part of a wider network of connected and biodiverse greenspaces." It is unclear how the development and complete destruction of this rich ecological and irreplaceable environment is in accordance with the stated policies in the Local Plan to “protect open spaces which provide important opportunities for formal and informal recreation as well as those which provide a social, cultural and ecological role” (Policy 28). Further, it is unclear why this site was not identified as a Local Green Space and why the development proposals were not therefore considered in accordance with national and local policy and guidance. No explanation is given as to how practically "habitat losses would need to be accounted for and would require compensation, which should contribute to the quality of the ecological network." The habitat on the site is irreplaceable and once gone, cannot be restored to the ecological network. It is totally unrealistic to destroy this site and then compensate for the habitat loss via a "biodiversity net gain approach, subject to assessment of the habitats being lost and availability of suitable receptor sites". No explanation is given as to how it is at all feasible for there to be a "biodiversity net gain" from destroying the Site (which is adjacent to a LNR/SSSI and part of a Green Infrastructure corridor) and from how this "biodiversity net gain" will be achieved. Should development on the site be potentially permitted, a detailed explanation of how the specified criteria will be achieved should be provided and independently reviewed prior to any development starting: this should be an absolute requirement of any development. In addition, prior to any permission to develop the Site is granted, a detailed wildlife assessment of the Site should be performed to assess whether the Site is home to endangered or protected flora and fauna. Given the rich eco-diversity of the site and its location next to a LNR/SSSI, and the number of birds and animals living on the site, together with a host of wildflowers, it is highly likely that endangered or protected species are resident on the Site. In this regard, it should be noted that the Site is home to [protected species] which are a protected species APPENDIX 2 OF THE PLAN SHOULD EITHER BE UPDATED TO REFLECT THE ABOVE AS REQUIREMENTS PRIOR TO PERMISSION BEING GRANTED TO DEVELOP THE SITE, OR PREFERABLY THE SITE SHOULD BE REMOVED FROM APPENDIX 2 AND DESIGNATED A PROTECTED OPEN GREEN SPACE. Quote: The site is potentially accessed through the existing Rose Hill Rise and The Avenue cul-de-sacs. A Transport Assessment & Travel Plan will be required. Section 6.6 of the disposal brief states that the concentration of outbound traffic at peak times is likely to result in excessive queuing on Rose Hill and potential unacceptable queuing and delays for motorists. The Transport Assessment will assess the operational capacity of the network and identify any measures required to mitigate against this. A residential travel plan will be required, and a routing agreement may be required during construction. Comments: The existing development adjacent to the site comprises around 180 dwellings. The access to the Site is via this development with only one exit, and two access roads in (due to one access road being one way). The existing road system will be totally unable to cope with an additional 166 dwellings, thereby effectively doubling the size of the development serviced by these roads. Given the location of the site (bounded on the other 3 sides by the Racecourse, a LNR/SSSI and a railway line/other development with no access roads), the roads in the Rose Hill Rise and the Avenue cul-de-sac are the only possible routes into and out of the Site. There is no conceivable way that the operational capacity of the roads can be increased and any mitigation of the significant increase in traffic, pollution and noise achieved. Development should not be permitted on this basis alone. Further, development of the Site (which will take years) will cause significant loss of amenity, disruption, noise and unacceptable detriment to the existing community (many of whom are elderly and value the tranquility of the existing development and its location) over a period of 5–10 years, the proposed timescale of the development. No residential travel plan or...
APPENDIX 2 OF THE PLAN SHOULD EITHER BE UPDATED TO REMOVE THE SITE FROM THE LOCAL PLAN DUE TO THE SIGNIFICANT ISSUES WITH ACCESS AND ROAD INFRASTRUCTURE AND THE SITE SHOULD BE REMOVED FROM APPENDIX 2 AND DESIGNATED A PROTECTED OPEN GREEN SPACE. Quote: The existing site boundaries include mixed species hedgerows with numerous mature trees within them. It will be a requirement of the development that these hedgerows and trees are retained and enhanced through additional and appropriate planting. Boundary oaks should be designed in as per the design brief. Layout should be informed by a tree survey. Comments: The Site itself (not just the boundaries) include numerous trees, shrubs and other flora which should be considered in the assessment. APPENDIX 2 OF THE PLAN SHOULD EITHER BE UPDATED TO REFLECT THE ABOVE, OR PREFERABLY THE SITE SHOULD BE REMOVED FROM APPENDIX 2 AND DESIGNATED A PROTECTED OPEN GREEN SPACE. Comments on Appendix 2 of the Doncaster 5-Year Deliverable Housing Land Supply Statement referring to Site 350/407 Rosehill/ The Avenue, Cantley In reference to the Site, it is stated that "No constraints or provision of any significant new infrastructure required". This is demonstrably incorrect. There are in fact significant constraints on the site as evidenced by the comments in Appendix 2 of the Doncaster Local Plan referred to above. As noted earlier, there is no conceivable way that the operational capacity of the roads can be increased and any mitigation of the significant increase in traffic, pollution and noise achieved. Further, significant new infrastructure will be required in order to deliver services such as drainage, electricity and gas, etc to any new development on the Site. The Site is not therefore a deliverable site as defined in this document.

Response:

These comments relate to objection of the site being proposed as an allocation as opposed to the developer requirements. See response to other Representations as well as the Site Selection report for reasons why the site is proposed to be re-allocated for housing.
Comment Ref: /Appendix 2/05187/1/009

Attend Examination: Attend Hearing

Reason: We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

Area: Appendix 2: Developer Requirements

Policy: Appendix 2: Developer Requirements

Tests of Soundness: Positively prepared Justified Effective Consistent with national Legally Compliant

Comment:

Pages 268-269. We object to the site development guidelines as drafted, the plan included on page 268 showing site 147 has been reduced in size from the draft plan and should be amended to the original site area of 11.65 hectares. There is no explanation of why an education contribution will required or which schools this would benefit. We object to the comments about flood zone 3. Our flood risk surveys indicate that based on the site topography the area of flood zone 3 is less than indicated on the supporting maps and plans. The narrowing of the site is in direct conflict with the objective set out in the developer guidelines to have development that fronts onto Hatfield lane and also the open countryside. The narrowness of the site as now drafted will limit the layout and the scope to achieve this objective. PROPOSED CHANGE 8. Amend the developer guidelines to be flexible and justified. As explained in detail above.

Summary:

Objects to the reduced site area as shown on the developer requirements plan and should be amended to the original extent. No explanation for education contribution (why needed and for which school?). Object to comments in respect to flood zone as the technical work shows the area of flood zone 3 is less than indicated by the EA Flood Map for Planning. The reduction of the site is in conflict with the objective set out in the requirements to have development fronting onto Hatfield Lane and also the open countryside as narrowing the site limits the layout and scope to achieve this objective.

Response:

The reasons for the reduced site area are set out in the Site Selection report. Colleagues in Education have assessed the capacity of schools and identified sites where contributions are likely to be required to increase capacity. They use a standard formula based on the Department of Education best practice.
### Comment Ref:
C/Appendix 11/05014/1/017

### Location:
- **Area:** Appendix 11: Noise
- **Policy:** Appendix 11: Noise

### Tests of Soundness:

### Comment:
The intentions of Policy 55 and Appendix 11 are supported, as they align with national policy and planning practice guidance. However, no provision is made for temporary uses or for short term operations, which would apply in the context of onshore oil and gas exploration and appraisal stages. As minerals can only be worked where they occur, and their extraction may generate noise over a temporary period, provision should be made for temporary impacts to be considered.

### Summary:
Appendix 11 noise. Intentions of policy 55 and appendix 11 are supported, but no provision is made for temporary uses or for short term operations, such as oil and gas exploration, appraisal and extraction.

### Response:
Comment noted. The policy and appendices are not just aimed at hydrocarbon development proposals. Where required Planning and Pollution Control will work with and liaise with the EA and relevant bodies to determine applications as required by NPPF / NPPG. The plan should also be read as a whole.
The intentions of Policy 55 and Appendix 11 are supported. However, no provision is made for temporary uses or for short term operations that may be noisy. This can typically be the case for mineral operations. Minerals can only be worked where they occur and may generate noise over a temporary period and over a short duration. Provision should be made for temporary impacts to be considered.

Summary:
The intentions of Policy 55 and Appendix 11 are supported. no provision for temporary uses

Response:
Comment noted. Policy relates to other forms of development not just minerals. Local Plan should be read as a whole. Para 14.33 identifies mineral extractions temporary
Appendix 12 - gives details of monitoring, but throughout the chapter and the appendix, there is little mention of planning enforcement. There are only 4 references which are very specific: one in the context of gypsy sites and this mentions 'sites which are immune from enforcement' (footnote to Table 6 on p64); one in Chapter 7, fig 7, which outlines the enforcement process in 'Transport Assessment of Planning Applications'; one in the context of HMO's where it states that 'the Council will utilise all its powers available including licensing and enforcement .... to ensure that our communities are not negatively impacted by the provision of such accommodation' (policy 10, paragraph F on p60) and one in the context of extraction of minerals where it states 'that there is a requirement for routine monitoring and if necessary enforcement to ensure conditions that mitigate impacts are complied with' (minerals policy paragraph 14.33 on p166). It is not at all clear why only these 4 specific areas have been selected for enforcement action policy. In order to have an effective Local Plan there must surely be a clear and unambiguous policy for enforcement across the board to deal with all transgressions in planning - whether unauthorised developments or non-compliance with authorised developments and their conditions. To have an effective plan, the Local Plan must be monitored and controlled and this must involve policing and enforcement of developments to ensure objectives are met. The current approach by DMBC to enforcement is haphazard and lacks any clarity and consequently this leads to confusion and abuse. The opportunity should be taken now to put forward a clear and unambiguous enforcement policy as a key part of the Local Plan. While much of the Local Plan appears to meet most of the requirements of 'soundness', in so far as the JRP can judge on the evidence provided, it can only be effective if there are robust monitoring and enforcement measures.

Summary:
Appendix 12 gives details of monitoring, but throughout the chapter and the appendix, there is little mention of planning enforcement. There are only 4 references which are very specific (details provided) and it is not at all clear why only these 4 specific areas have been selected for enforcement action policy. In order to have an effective Local Plan there must surely be a clear and unambiguous policy for enforcement across the board to deal with all transgressions in planning - whether unauthorised developments or non-compliance with authorised developments and their conditions. To have an effective plan, the Local Plan must be monitored and controlled and this must involve policing and enforcement of developments to ensure objectives are met. The current approach by DMBC to enforcement is haphazard and lacks any clarity and consequently this leads to confusion and abuse. The opportunity should be taken now to put forward a clear and unambiguous enforcement policy as a key part of the Local Plan. While much of the Local Plan appears to meet most of the requirements of 'soundness', in so far as the JRP can judge on the evidence provided, it can only be effective if there are robust monitoring and enforcement measures.

Response:
DMBC will always investigate any alleged breach reported to us and make a reasoned decision whether it merits action. However, because of the legal test of "expediency" we should only take formal enforcement action where it is fair and reasonable to do so. In making this decision we will assess the circumstances of the case and make reference to our adopted planning policies. In addition we must also consider Central Government enforcement policy and guidance. DMBC has its own separate Enforcement Policy which is available to view here: https://www.doncaster.gov.uk/services/planning/planning-enforcement
IGas supports the monitoring of the Plan and particularly the Objective Policy for Climate Change (Flood Risk) and energy set out in Strategic Objectives 17 and 18 in respect of CO2 emissions per Capita (Tonnes) (Chapter 3); and in respect of Policy 65 - Providing for Energy Minerals (Gas and Oil) (Hydrocarbons) (Chapter 14) by monitoring the number of applications approved for development by recognising the benefits of hydrocarbons as a target and assessment.

Summary:
IGas supports the monitoring of the Plan

Comment:
In terms of our area of interest, we would broadly agree with the evaluation and conclusions regarding the likely impact which the Policies and proposals of the Plan might have upon the historic environment and, where an adverse effect has been identified, support the proposed mitigation measures which have been proposed to reduce that harm. This opinion is based on the information provided by you in the document dated August 2019 and, for the avoidance of doubt, does not affect our obligation to advise you on, and potentially object to any specific development proposal which may subsequently arise from this or later versions of the plan which is the subject to consultation, and which may, despite the SA/SEA, have adverse effects on the environment.

### Comment:

In accordance with Section 19 of the 2004 Planning and Compulsory Purchase Act, policies set out in Local Plans must be subject to Sustainability Appraisal (SA) and also incorporate the requirements of the Environmental Assessment of Plans and Programmes Regulations 2004. The SA/SEA is a systematic process that should be undertaken at every stage of the Plan's preparation, assessing the effects of the Doncaster Local Plan's proposals on sustainable development when judged against reasonable alternatives. The Council should ensure that the results of the SA clearly justify the policy choices. In meeting the development needs of the area, it should be clear from the results of the assessment why some policy options have been progressed and others have been rejected. This must be undertaken through a comparative and equal assessment of each reasonable alternative. The Councils' decision making and scoring should be robust, justified and transparent.

### Summary:

Refers to the need for the Local Plan to satisfy the requirements of Sustainability Appraisal.

### Response:

Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum.
3.1 This objection relates to the fact that although the site at Brodsworth Quarry has been previously promoted to the Council as a reasonable alternative to accommodate a mixed use development compared to sites that are subject to flood restraint or are suitable for agricultural use, it has failed to be considered in the development of the strategy as a “reasonable alternative” within the Sustainability Assessment. 3.2 As well as being promoted to the Authority it has also been subject to a memorandum on the Office of the Deputy Prime Minister website which sets out that the land owner and Persimmon Homes have previously undertaken consultations with the local community adjoining the site about developing the site as a Millennium Village. The memorandum sets out that there is an appreciation amongst the local population that the redevelopment of the site could have positive impacts on the wider communities, such as improved access to facilities and services, and an improvement to the overall image of the area which is one of Doncaster’s more disadvantaged locations. 3.3 The Council’s approach to identifying the likely significant effects has not had sufficient regard to the evidence base for the Local Plan (including its assessment of full objectively assessed housing need, see SPRU objection to Policy 3). This limits the degree to which the Local Plan’s proposals can be shown to have been developed as part of an iterative process, taking account of the appraisal’s findings at each stage of preparation as required by Planning Practice Guidance (ID: 11-018-20140306). 3.4 The Council has not ensured that realistic alternatives are considered for key issues, and that the reasons for choosing them are documented, as part of assessing the plan’s strategic priorities and how these might be delivered. This is a requirement of legislation for Sustainability Appraisal. Specifically, it is a requirement that all reasonable alternatives tested are realistic and deliverable (ID: 11-018-20140306). This is not the case for the scenarios tested as part of the Council’s Sustainability Appraisal, which in-turn means the Sustainability Appraisal does not provide an accurate understanding of the potential effects of the selected strategy compared to other reasonable alternatives. 3.5 The PPG requires all reasonable alternatives to be assessed against the same baseline environmental, economic and social characteristics (following paragraph 152 of the NPPF 2012). Furthermore, it makes it clear that reasonable alternatives must be assessed to the same level of detail: “The sustainability appraisal needs to compare all reasonable alternatives including the preferred approach and assess these against the baseline environmental, economic and social characteristics of the area and the likely situation if the Local Plan were not to be adopted. ?The sustainability appraisal should identify any likely significant adverse effects and measures envisaged to prevent, reduce and, as fully as possible, offset them. The sustainability appraisal must consider all reasonable alternatives and assess them in the same level of detail as the option the plan-maker proposes to take forward in the Local Plan (the preferred approach).” 3.6 Planning Practice Guidance anticipates that a comprehensive range of options will be undertaken under ‘Stage B’ of the requirements for preparing the Sustainability Appraisal and align with the process for preparing the Local Plan at Regulation 18 stage (see ID: 11-013-20140306). 3.7 This has been considered through the Courts in Heard v Broadland (2012) EWHC 344 (Admin). In particular, see paragraphs 53 to 73, where the approach to the process of SA and alternatives are considered. In summary Ouseley J in paragraph 73 states: “?the aim of the directive, which may affect which alternatives it is reasonable to select, is more obviously met by, and it is best interpreted as requiring, an equal examination of the alternatives which it is reasonable to select for examination alongside whatever, even at the outset, may be the preferred option. It is part of the purpose of this process to test whether what may start out as preferred should still end up as preferred after a fair and public analysis of what the authority regards as reasonable alternatives?” 3.8 This is not the approach that has been taken by the Council in its assessment of reasonable alternatives. As such, its assessment is flawed in fundamental respects and does not follow the Regulations/the SEA Directive nor case law. 3.9 One such reasonable alternative is the site at Brodsworth Quarry which comprises of approximately 61 hectares of land adjacent to the western settlement boundary of Highfields, and immediately south of Adwick le Street, as illustrated in Figure 2. (SEE EMAIL FOR Figure 2. Site Location) 3.10 The site is a former limestone quarry that has been partly restored to low grade agricultural land. Due to its former use the site lies below the level of the surrounding land, which provides screening from surrounding sensitive uses. This is a very underutilised site with little or no environmental or ecological value and yet other sites have been considered more appropriate for promotion for development with the draft Plan. 3.11 While the site is connected to Highfields, it is also connected to Adwick le Street to the North and as such represents a very sustainable site. Review of Sustainability Criteria of Brodsworth Quarry 3.12 There are several local facilities and services in close proximity to the site, including, but not limited to, the following: - Allotments - Located to the north east (< 600 metres) - Highfields Primary School - Located to the east (< 800 metres) - Highfields Community Centre - Located to the east (< 800 metres) - Weldricks Pharmacy - Located to the north (< 800 metres) - The Woodlands Primary School - Located to the north (< 900 metres) - All Saints Church - Located to the north (< 900 metres) - Aagrah (Indian restaurant) - Located to the north east (< 1 kilometre) - Lloyds Bank - Located to the north (< 1.1 kilometres) - Woodlands Post Office - Located to the north (< 1.1 kilometres) - Woodlands Community Library and Hub - Located to the north (< 1.2 kilometres) - Outwood Academy - Located to the north (< 1.3 kilometres) - Adwick Leisure Complex - Located to the north east (< 1.4 kilometres) - Doncaster North Park and Ride - Located to the east (< 1.7 kilometres) 3.13 In addition to the above, it is of note that Adwick train station is located under 2.5 kilometres to the north east of the site. Northern services to Doncaster, Sheffield and Leeds are available from the station. 3.14 There are also several bus stops within 1.3 kilometres of the site in the Highfields settlement. The stops provide access to the following services: - 50: Doncaster - Skellow - 50a: Cantlel - Doncaster - Cartcroft - 50b: Doncaster - Skellow - 51: Doncaster - Skellow - Askern (Instoneville) - 51a: Doncaster - Skellow - Askern (Instonville) via Campsall - 52: Doncaster - Woodlands - Redhouse - South Elmsall - 54: Doncaster - Scawthorpe - Woodlands Circular - 203: Doncaster - Scawthorpe - Highfields - Pickburn - Hooton Pagnell - Clayton - Thurnscoe - Middlecliffe - Wombwell Site Description and accessibility
of Brodsworth Quarry 3.15 The site is relatively flat with a gentle decline in land levels towards Langthwaite Dyke to the north of the site. 3.16 To the north of the site beyond some significant tree coverage is the Adwick-le-Street and Woodlands settlement which comprises of predominantly residential development with a vast range of public transport links and local facilities and services. To the south east of the site along / beyond Green Lane there is a small amount of development which is predominantly residential, and to the south west beyond Green Lane there is greenfield land. 3.17 To the east of the site is the Highfields settlement which comprises of predominantly residential development, and to the west is the Brodsworth Community Woodland. Further to the west is the A1(M) Doncaster Bypass, and to the north west beyond the Brodsworth Community Woodland there is a garden centre and pet shop, a B&Q distribution centre and an Asda depot warehouse. 3.18 There are several existing pedestrian access points along Green Lane and South Street, and it is considered that vehicular access to the site could be provided from Green Lane. 3.19 Footpath "Brodsworth 6" runs along the south eastern boundary of the site, and footpath "Brodsworth 8" (Roman Ridge) runs directly adjacent to the eastern boundary of the site. 3.20 There are currently no utilities on the site. However, the proximity of the site to the urban area suggests that the service network could be extended to serve this site. 3.21 The site is located entirely within Flood Zone 1 on the Environment Agency's flood maps, which means that the site has a less than 1 in 1,000 annual probability of flooding from a river or sea. It is of note that the National Planning Practice Guidance sets out that residential development is an appropriate land use in Flood Zone 1 areas (Paragraph 066, reference ID 7-006-20140306). 3.22 The site is not located within a Conservation Area and there are no listed buildings or scheduled monuments on the site. The Woodlands Conservation Area is located to the north of the site beyond the tree coverage. Roman Ridge, which is a scheduled monument, runs directly adjacent to the eastern boundary of the site. 3.23 Within the site towards the eastern / south eastern boundary is the Tithe Barn Plantation which contains some agricultural buildings. The landowner has previously sought preapplication advice from Doncaster Metropolitan Borough Council regarding "Refurbishment and conversion of existing barn group into dwellings around existing central courtyard and demolition of steel framed barn adjacent" in the plantation area. The landowner intends to submit a planning application for the proposals in the near future. 3.24 It is understood that the ground conditions of the site have been dealt with by Wardell Armstrong who dealt with the restoration of the site, and a review of the site for contamination has been undertaken. Further to this, it is understood that a review of the site for mixed use and transport links has been undertaken, and an ecological assessment is available. The Deliverability of Brodsworth Quarry Available 3.25 The site is entirely within Mr Brealey's ownership. Mr Brealey has a strong interest in bringing the site forward for a mixed use development, and there has been previous interest in the site from Persimmon Homes. Suitable 3.26 The site does not have any physical constraints which suggest that a carefully designed mixed use development could not be brought forward during the plan period. Deliverable 3.27 Given the size of the site and its potential capacity, the site provides opportunities to deliver significant economic and housing growth, and vast developer contributions such as affordable housing, education and open space (subject to viability). 3.28 The Housing and Economic Land Availability Assessment (HELAA) housing map identifies Brodsworth Quarry (reference 184) as a deliverable / developable site which does not currently have planning permission. This is supported. 3.29 The HELAA 2017 - 2018 housing sites update firstly describes the site as a 61.379ha greenfield urban extension site which is proposed as a mixed use allocation but describes the site as greenfield. This description belies the fact that the land levels are clearly a result of the previous activity and the very low level of utility of the current land. 3.30 The housing update report describes the site as suitable for development (but with national policy constraints or physical constraints), available and deliverable, with a potential capacity of 1519 dwellings. Of these 1519 dwellings, 0 are considered developable in 0 - 5 years, 350 are considered developable in 6 - 10 years, 350 are considered developable in 11 - 15 years, and 819 are considered not developable beyond 15 years. 3.31 The HELAA 2017 - 2018 employment sites update also describes the site as suitable (but with national constraint) and available for economic development, but not marketable and therefore not deliverable. There is no reference to timeframe for delivery. 3.32 Similarly, the Site Selection Methodology and Results Report (dated June 2019) has an appendix (Appendix A1) which makes reference to sites that have been removed from the process as part of the housing and employment land availability assessment stage. Within the appendix, a number of employment sites are referenced which are considered to be suitable and available, but not marketable and therefore not deliverable. The site is included as one of these sites. (SEE EMAIL FOR Appendices) 3.33 In addition to the memorandum, it is understood that the site was also marketed by Fisher German in 2017. 3.34 It is also noted that the Council's employment land review (dated February 2018), which qualitatively assesses the suitability of potential sites that could become allocations for employment use, does not reference the site. 3.35 In light of the above, it is requested that the information in the HELAA is amended and the site is assessed by the Council in the same manner as the other sites in the employment land review were.

Summary:

Although Brodsworth Quarry has been previously promoted to the Council as a mixed use development, it is not considered as a "reasonable alternative" with the Sustainability Assessment. It has also been subject to a memorandum on the ODPM website setting out that the land owner and Persimmon Homes have previously undertaken consultations with the local community adjoining the site about developing the site as a Millennium Village. There is an appreciation amongst the local population that the redevelopment of the site could have positive impacts on the wider community. The Council's approach to identifying the likely significant effects has not had sufficient regard to the Local Plan evidence base (including its assessment of full objectively assessed housing need). This limits the degree to which the Local Plan evidence base can be shown to meet the reasons for refusal. There is a summary of the PPG requiring all reasonable alternatives to be assessed and a court case is also mentioned Heard v SA does not provide an accurate understanding of the potential effects of the selected strategy compared to other reasonable alternatives. This approach has not been taken by the Council. Therefore the assessment is flawed in and does not follow the Regulations/the SEA Directive nor case law. Brodsworth Quarry (61 hectares) adjacent to the western settlement boundary of Highfields, and immediately south of Adwick le Street is a reasonable alternative (see Figure 2 in email for site location). It is a former limestone quarry which has been partly restored to low grade agricultural land. It lies below the level of the surrounding land, providing screening from surrounding sensitive uses. It is very underutilised site with little or no environmental or ecological value and yet other sites have been considered more appropriate for promotion for development within the Plan. Review of Sustainability Criteria of Brodsworth Quarry There are several local facilities and services in close proximity to the site, including allotments; 2 primary schools; a community centre; a Pharmacy; a church; restaurants; a post office; library/community hub; secondary school; leisure centre; Park and Ride site and Adwick train station. There are also several bus stops in the Highfields settlement with services
across and beyond the borough boundary. The site is relatively flat with a gentle decline in land levels with significant tree coverage to the north. Adwick-le-Street and Woodlands are predominantly residential with a vast range of public transport links and local facilities and services. There is a small amount of development to the south which is predominantly residential and there is greenfield land to the south west. To the east is Highfields which is predominantly residential development, and to the west is the Brodsworth Community Woodland. Further to the west is the A1(M) Doncaster Bypass, and to the north west beyond the Brodsworth Community Woodland there is a garden centre and pet shop and employment units. There are several existing pedestrian access points along Green Lane and South Street, and vehicular access could be provided from Green Lane. There are footpaths on the site but no utilities but these could be extended to serve the site. It is within Flood Zone 1 and is not located within a Conservation Area and there are no listed buildings or scheduled monuments on the site. The Roman Ridge, which is a scheduled monument, runs directly adjacent to the eastern boundary of the site. The ground conditions of the site have been dealt with by Wardell Armstrong who dealt with the restoration of the site, and a review of the site for contamination has been undertaken. A review of the site for mixed use and transport links has been undertaken, and an ecological assessment is available. The Deliverability of Brodsworth Quarry The site is entirely within single ownership and there is a strong interest in bringing the site forward for a mixed use development with previous interest from Persimmon Homes. There are no physical constraints and the site provides opportunities to deliver significant economic and housing growth, and vast developer contributions such as affordable housing, education and open space (subject to viability). The HELAA (ref 184) identifies the site as deliverable / developable and this is supported. The HELAA description as greenfield belies the fact that the land levels are clearly a result of the previous activity and the very low level of utility of the current land. The site is mentioned in the housing update report and the HELAA 2017 - 2018 employment sites update. The Site Selection Methodology and Results Report (June 2019) Appendix A1 makes reference to sites that have been removed from the process as part of the housing and employment land availability assessment stage. A number of employment sites are referenced which are considered to be suitable and available, but not marketable and therefore not deliverable, including this site. The site was marketed by Fisher German in 2017. The Employment Land Review (dated February 2018) does not reference the site and it is considered that the HELAA is amended and the site is assessed by the Council in the same manner as the other sites in the Employment Land Review were.

Response:

Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum.
2.59 Having analysed the actual allocations in the Local Plan against the proposed target distribution in Policy 3 it is apparent that the distributions differ (see table on previous page). It is apparent that the Council's Sustainability Appraisal ('SA') has not considered the actual distribution of homes. Indeed the Sustainability Appraisal fails to assess the proposed distribution or the Local Plan target distribution. 2.60 The SA to accompany the 2015 Local Plan Issues and Options document included 6 alternative approaches to delivering the Boroughs growth needs and aspirations. This was refined following the consultation and a new hybrid option was developed which was appraised in the Growth Options SA Report in March 2016. The alternative options have then remained unchanged in the SA of the Informal Consultation Draft Policies and Proposed Sites (2018) and the SA of the Publication Draft (2019). All of alternative options have been based on a requirement of 920 dpa. The four SA options are: Option 1: Core Strategy approach Option 2: Doncaster and Main Town focus Option 3: Greater dispersal strategy Option 4: Hybrid option: urban concentration and dispersal. 2.61 Option 4 is the preferred approach which is a combination of Options 1 and 2. The appraisal of the 4 SA Options concludes that options 2 and 4 score best against the sustainability criteria. In summarising the preferred hybrid option the SA States at paragraph 5.2.10 that "It will maximise the regeneration of poorer urban areas, brownfield sites and existing service centres although could generate indirect regeneration benefits associated with greater delivery on higher value sites. This will ensure the benefits of growth, including jobs and housing, can be spread more widely across the Borough." 2.62 The SA of the Growth Options in March 2016 included a table of the distribution of the 920 dpa requirement in accordance with the 4 alternative distribution options. This is repeated overleaf in our Table 2. The distribution information of the individual options contained in the 2016 Growth Option SA is not repeated in the 2018 Informal Consultation SA or the 2019 Publication Draft SA, but the 2016 SA report is referred to. (SEE EMAIL FOR Table 2: Source SA of Doncaster’s Growth Options - March 2016). 2.63 The Hybrid Option in the above table is the preferred approach which is included in the Publication Draft SA. This distribution however differs from the Local Plan target distribution and the actual proposed distribution of allocations included in the Local Plan. Table 3 overleaf demonstrates this. It compares the actual housing distribution in the Local Plan with the 4 SA options. To assist in interpreting the figures the settlements shaded in green are settlements where the actual proposed allocations in the Local Plan fall within the SA Option 4 range (or within 20% of the Option 4 fixed target). Settlements highlighted in red are those settlements where the actual proposed allocations falls outside the SA Option 4 range (or more than 20% of the SA Option 4 fixed target). Of the 18 settlements in the hierarchy, only 8 settlements are proposing to deliver a level of housing that meets the distribution in the SA preferred Option 4. The Publication Draft SA therefore does not assess the Local Plan housing target distribution or the actual Local Plan proposed housing allocation distribution. This is a failing of the SA. Doncaster Main Urban Area SA Option 1: 6900-8832 SA Option 2: 7590-9660 SA Option 4: 6210-7590 SA Option 4 (Hybrid): 7136-7696 Local Plan Allocations: 7441 Local plan Target Distribution (Policy 3): 6905 - 7315 Main Towns Adwick - Woodlands SA Option 1: 483-690 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 270-829 Local Plan Allocations: 482 Local plan Target Distribution (Policy 3): 255 - 765 Armthorpe SA Option 1: 483-690 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 800 Local Plan Allocations: 1049 Local plan Target Distribution (Policy 3): 420 - 990 Conisborough & Denaby SA Option 1: 828-1035 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 450-1009 Local Plan Allocations: 528 Local plan Target Distribution (Policy 3): 465 - 975 Dunscroft, Dunsville, Hatfield & Stainforth SA Option 1: 897 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 1174 Local Plan Allocations: 1968 Local plan Target Distribution (Policy 3): 575 - 1805 Mexborough SA Option 1: 483-690 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 465-1024 Local Plan Allocations: 310 Local plan Target Distribution (Policy 3): 485 - 985 Rossington SA Option 1: 897 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 934 Local Plan Allocations: 1219 Local plan Target Distribution (Policy 3): 285 - 895 Thorne & Moorends SA Option 1: 828-1035 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 450-1009 Local Plan Allocations: 736 Local plan Target Distribution (Policy 3): 510 - 1020 Service Towns and Larger Villages SA Option 1: 483-690 SA Option 2: 138-276 SA Option 4 (Hybrid): 165 Local Plan Allocations: 691 Local plan Target Distribution (Policy 3): 165 - 414 Local Plan Allocations: 35 SA Option 4 (Hybrid): 105 Local Plan Allocations: 255 Local plan Target Distribution (Policy 3): 125 Barnburgh - Harlington SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 105 Local Plan Allocations: 66 Local plan Target Distribution (Policy 3): 108 Barnby Dun SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 105 Local Plan Allocations: 104 Local plan Target Distribution (Policy 3): 105 Bawtry SA Option 1: 0 SA Option 2: 138-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 105 Local Plan Allocations: 90 Local plan Target Distribution (Policy 3): 110 Carcroft - Skellow SA Option 1: Up to 345 SA Option 2: 138-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 255 Local Plan Allocations: 307 Local plan Target Distribution (Policy 3): 250 Edlington SA Option 1: Up to 345 SA Option 2: 138-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 226 Local Plan Allocations: 665 Local plan Target Distribution (Policy 3): 230 Finningley SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 45 Local Plan Allocations: 50 Local plan Target Distribution (Policy 3): 55 Sprotbrough SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 90 Local Plan Allocations: 80 Local plan Target Distribution (Policy 3): 95 Tickhill SA Option 1: 0 SA Option 2: 138-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 165 Local Plan Allocations: 74 Local plan Target Distribution (Policy 3): 95 Table 3: Comparison between the 4 SA Options and a comparison of SA Option 4 with the Local Plan Allocations.
Auckley and Hayfield Green and Tickhill) where there are no known flood risk constraints. “However, in reality, the actual proposed allocations in the Local Plan only collectively allocate/deliver 379 homes in those three named settlements (just 2.4% of the total). This hardly equates to a growth focus to the south west. 2.65 Whilst SA Option 4 purports to have taken into account flood risk - and its choice as the preferred option was partly justified on that basis - the final proposed distribution in the Local Plan bears little relation to Option 4, with only 8 out of the 18 settlements falling within the range or within 20% of the proposed Option 4 target. It is therefore not clear to what extent - if at all - flood risk has been taken into account in arriving at the proposed distribution of development. 2.66 Whilst the Housing and Site Selection Methodology and Results Report includes information following the Flood Risk Sequential and Exception Tests and individual site assessment results, there does not appear to be any information within the Publication Draft or evidence base that outlines the overall quantum of development proposed within the Borough in areas of high flood risk. While this information may be made available in the Flood Risk Topic Paper which will be issued at Plan Submission it should be available now to allow a proper consideration of whether flood risk has been adequately reflected. 2.67 The justifying text to Policy 3 at paragraph 4.41 states that: “The economic-led element of the housing allocation requirement (approximately 4,905 homes) is directed to the most sustainable and deliverable sites in the Doncaster Main Urban Area and Main Towns in accordance with defined ‘growth ranges’; these ranges provide flexibility to select the most sustainable and deliverable sites across these settlements. The sequential test approach is applied to urban sites and sustainable urban extensions across these settlements subject to the growth ranges. The Settlement Audit shows that Doncaster and the seven Main Towns are larger and have a greater service function than other settlements in the Borough. (underlining is our emphasis) 2.68 It appears from the above explanation, that the proposed distribution of dwellings has been considered ahead of the sequential test. This would be the inverse of the correct approach - the results of the sequential test should be a determining factor in establishing the proposed distribution. 2.69 Carrying out an SA of the Local Plan is a legal requirement which the Council have not met - instead they have carried out an assessment of an arbitrary housing distribution which bares little resemblance to the actual one being pursued. Nor has the SA considered a Spatial Distribution which seeks to minimise the amount of development to be delivered in the Green Belt and in areas at risk of flooding. Given national policy requirements in respect of both of those designations, that must be considered a reasonable alternative. The Local Plan is therefore unsound as it is not justified and is not reflective of national policy. Summary: The actual amount of homes distributed around the borough has not been assessed in the SA, which only considers the target distribution. The options have remained unchanged since the 2015 SA. The level of distribution in the SA does not reflect the actual distribution. Of the 18 settlements in the hierarchy, only 8 are proposing to deliver a level of housing that meets the distribution that is in the SA preferred option 4. It does not assess the target distribution or the actual Local Plan allocation distribution. This is a failing of the SA. Doncaster Main Urban Area SA Option 1: 6900-8832 SA Option 2: 7590-9660 SA Option 1: 8210-7590 SA Option 4 (Hybrid): 7136-7696 Local Plan Allocations: 7441 Local plan Target Distribution (Policy 3): 6805 - 7315 Main Towns Adwick - Woodlands SA Option 1: 483-690 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 270-829 Local Plan Allocations: 482 Local plan Target Distribution (Policy 3): 255 - 765 Armthorpe SA Option 1: 483-690 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 800 Local plan Allocations: 1049 Local plan Target Distribution (Policy 3): 420 - 990 Conisbrough & Denaby SA Option 1: 828-1035 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 1174 Local plan Target Distribution (Policy 3): 1968 Local plan Target Distribution (Policy 3): 575 - 1805 Mexborough SA Option 1: 483-690 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 465-1024 Local plan Allocations: 310 Local plan Target Distribution (Policy 3): 485 - 985 Rossington SA Option 1: 897 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 934 Local plan Target Allocations: 1219 Local plan Target Distribution (Policy 3): 285 - 895 Thorne & Moorends SA Option 1: 828-1035 SA Option 2: 497-690 SA Option 3: 497-690 SA Option 4 (Hybrid): 450-1009 Local Plan Allocations: 736 Local plan Target Distribution (Policy 3): 510 - 1020 Service Towns and Larger Villages Askern SA Option 1: 483-690 SA Option 2: 128-276 SA Option 3: 304 SA Option 4 (Hybrid): 165 Local Plan Allocations: 691 Local plan Target Distribution (Policy 3): 165 Auckley - Hayfield Green SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 105 Local Plan Allocations: 255 Local plan Target Distribution (Policy 3): 125 Barnburgh - Harlington SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 105 Local Plan Allocations: 66 Local plan Target Distribution (Policy 3): 60 Barnby Dun SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 105 Local Plan Allocations: 104 Local plan Target Distribution (Policy 3): 30 Bawtry SA Option 1: 0 SA Option 2: 138-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 105 Local Plan Allocations: 90 Local plan Target Distribution (Policy 3): 110 Carcroft - Skellow SA Option 1: Up to 345 SA Option 2: 128-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 255 Local Plan Allocations: 307 Local plan Target Distribution (Policy 3): 250 Edlington SA Option 1: Up to 345 SA Option 2: 138-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 226 Local Plan Allocations: 665 Local plan Target Distribution (Policy 3): 30 Finningley SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 45 Local Plan Allocations: 50 Local plan Target Distribution (Policy 3): 55 Sprotbrough SA Option 1: 0 SA Option 2: 0 SA Option 3: Up to 207 SA Option 4 (Hybrid): 90 Local Plan Allocations: 80 Local plan Target Distribution (Policy 3): 95 Tickhill SA Option 1: 0 SA Option 2: 138-276 SA Option 3: 276-414 SA Option 4 (Hybrid): 165 Local Plan Allocations: 74 Local plan Target Distribution (Policy 3): 165 Table 3: Comparison between the 4 SA Options and a comparison of SA Option 4 with the Local Plan Allocations. The SA also appears to consider the borough wide issue of flooding. It states in paragraph 5.2.23: that option 4 focusses more growth to the south west of the borough where there are less constraints, however, in reality the actual proposed allocations in the Local Plan only deliver 379 homes / 2.4% of the total so hardly equating to south west growth focus. Whilst the SA purports to have taken flood risk into account, the proposed distribution bears little resemblance to Option 4. Only 8 / 18 settlements fall within range or within 20% of the option 4 target. It is therefore unclear as to what extent, if at all, flood risk has been taken into account in the proposed distribution. The Site Selection Methodology includes info from the flood risk sequential test and site assessment results, there appears to be no evidence on the overall quantum of development proposed within the borough in areas of high flood risk. Info should be available now, not in a future flood risk paper, to allow proper consideration of it. From para. 4.41 of Policy 3 it appears the housing distribution was considered ahead of the sequential test. This would be the inverse of the correct approach. The results of a sequential test should determine the distribution. The council have not met the legal requirement to carry out an SA. They have assessed an arbitrary housing number which bares little resemblance to the actual one being pursued. It has not considered an option to minimised green belt or flood risk development. Given national policy requirements, that must be considered a reasonable alternative. The plan is therefore unsound and not justified or reflective of national policy.
The Council have commissioned Wood Environment & Infrastructure Solutions UK limited ('Wood') to undertake a Sustainability Appraisal (SA), and this includes an assessment of all sites that have been put forward for consideration as potential housing allocations. The SA sets out a series of sustainability objectives, which have a number of sub objectives along with a bullet point summary of how the objectives will be achieved. A qualitative scoring system has been adopted which is set out in Table 2 of the SA and copied below for ease of reference: (SEE EMAIL FOR image)

The scoring system used has four possible responses with: (+) Green being positive i.e. likely to assist with sustainable development, (-) red being a negative or incompatible i.e. likely to compromise sustainable development, - (0) white/blank being neutral i.e. likely to involve both compatible and incompatible effects; and - (?) Unlikely to be related or Uncertain i.e. effects cannot be judged at this stage. Our representations to the Local Plan should be read in conjunction with this assessment of the SA, however, our Client has fundamental concerns with the Council's approach to housing delivery over the Plan Period. Firstly, the Council have backdated the Plan to 2015 to enable historical completions to contribute to the housing requirement, this should only be from 2018 onwards, when the Council progressed with the Local Plan review. As such, our Clients view is that there should be a substantial increase in housing allocations over and above those which are proposed, and our Clients land interest in Bawtry (specifically site ref: 146 - Tickhill Road, Bawtry) represents the most suitable site in terms of a future housing allocation.

Notwithstanding our Clients position above, if the Council proceed with the plan as currently drafted, and only propose to allocate five sites in Bawtry (site ref: 950, 966, 982, and 499) in addition to our Clients site ref: 141. Tables H1 and H2 of the Publication Local Plan (below) split those sites into two categories, those with planning permission and those without. (SEE EMAIL for tables) Our Client has interests in site ref: 141 on Westwood Road but our view remains that our Clients site ref: 146 scores more favourably than site 499, Land off North Avenue and should be allocated. In order to make a robust comparison, we have added a simple numerical scoring system as follows: (+) Green = 2 (neutral) = 1 i.e. likely to involve both compatible and incompatible effects; and (-) red = 0 (?) Unlikely to be related or Uncertain i.e. effects cannot be judged at this stage. Based on these numerical scores we have compared site ref: 499 Land off North Avenue, Bawtry against our Clients' site ref: 146 Tickhill Road, Bawtry. As it stands the Council claim that site ref: 146 - Tickhill Road, Bawtry has a cumulative score of 35 and that site ref: 499 - Land off North Avenue, Bawtry has a cumulative score of 41. Having reviewed the Council's assessment of our Client's site (at Appendix N), we have concluded that a number of the assessments are incorrect, and our Clients' site has been downgraded based on inaccurate information. The inaccuracies are as follows: Objective 3A and Sub Objectives i), ii) and iii) relate to the promotion of the use of public transport. The commentary notes that the site lies within 1200m of a train station and between 400m - 800m of a high frequency bus stop. The site is also within recognised cycle distances of a cycle network and local services. Based on nationally recognised guidance the site is actually within walking or cycling distance of local schools, shops, employment opportunities and local amenities in Bawtry, all within 2km walking distance and 5km cycling distance of the site. These measures are drawn from the Institution of Highways and Transportation (IHT) document 'Guidelines for Providing for Journeys on Foot' (1998) which details the preferred maximum walking distance of 2km. The IHT and Department for Transport (DFT) document 'Cycle Friendly Infrastructure: Guidelines for Planning and Design' (1996) provides a guide on suggested cycle speeds associated with cyclists of varying confidence and ability. Using a speed of 10mph (16kph) a catchment of 5km would be available within approximately 20 minutes' cycle time. The Council have identified our site as Red (0) but given that the site falls within recognised walking and cycling distance of a train station and bus stop that this site should have been assessed as Green (2) Sub Objective 3B i) Will the site be accessible to an existing centre? Given the accepted distances highlighted above, relating to journeys on foot and by bicycle, the site is well located to an existing centre and shopping parade. We propose that the scoring of neutral (1) is assessed as green (2). Sub Objective 3B ii) Will the site be accessible to a primary school? The Council state that the site lies within 400m - 800m of a primary school which is within widely accepted walking distances. The Council have scored a neutral (1); we propose the site is assessed as green (2). Sub Objective 3B iii) Will the site be accessible to a secondary school? The Council comment that the site lies over 2km away from a secondary school, but it is worth pointing out that the site is within 800m of a bus stop. In addition, children of secondary school age are capable and more likely to travel to and from school by bus. We propose the negative Red (0) score is assessed as neutral (1) score. Sub Objective 3B iv) Will the site be accessible to a GP? The Council comment that the site lies within 800m of a GP surgery and is given a Green (2) score. We support this score but question why the accessibility of a GP surgery attracts a higher score than the accessibility of an existing centre or a primary school. We reiterate that the respective scores for access to those facilities should be assessed as Green (2). In summary, it is clear that the neutral and negative scores on this site in relation to accessibility should have been assessed as green (2) rather than amber (1) and red (0). The Council's assessment of the site is a flawed assessment as the site is located adjacent to the village boundary, 500m from the primary school and 600m from the GP Surgery with good public transport links. SD i) related to availability and specifically asks "Has the site been identified as an opportunity to address housing market failure?". The Council have given the score of neutral (1) and their reasons for doing so is that the site is not a formerly cleared housing site. The site is a green field agricultural site, adjacent to the settlement limits and is available for development as demonstrated within our previous representations. This objective should have been assessed as a Green (2) as opposed to a neutral (1). 8A iii) Will the site avoid known areas of landfill sites? And; iv) Will the site avoid known areas of unstable land? The Council have confirmed that the site not located within an area identified as containing a closed landfill site. Therefore, the site will avoid known areas of landfill and therefore fully complies with the objective. The site is an agricultural
field that has not had any buildings or alternative uses and the Council’s neutral (1) rating is unfounded, the rating should be Green (2) as it wholly complies with that element of the objective. 8B relates to infrastructure. Sub-objective i) asks “Will the site have an impact on the Strategic Road Network?” The Council comment that the impact upon the Strategic Road Network (SRN) is expected to be mitigated but other, committed, schemes. As such the Council are claiming that there is no impact upon the SRN. In light of this the score should be assessed as Green (2) rather than neutral (1). Sub-objective iii) Will any additional demand for primary school places be likely from the site? The council note that the site is located within the catchment of a primary school with additional places needed. The latest Ofsted report (note 1 - https://reports.ofsted.gov.uk/provider/21/106737) for the Bawtry Mayflower Primary School states that the school is currently under capacity with a surplus of spaces for new children to join. Given this evidence we propose that the negative red (0) score be assessed as a Green (2) score. Sub-objective iv) Will any additional demand for secondary school places be likely from the site? The council note that the site is located within the catchment of a primary school with additional places needed. The gov.uk website (note 2 - https://www.compare-school-performance.service.gov.uk/school/137141/serlyb-park-academy/absence-and-pupil-population) quotes the latest data and states that the total number of pupils attending the school is 831. The latest Ofsted report (note 3 - https://reports.ofsted.gov.uk/provider/28/137141) states that the capacity of the school is 834. Given that the school is currently slightly under capacity and that planning contributions would form part of any application on this scale we propose that the negative red (0) score be assessed as a Green (2) score. Objective 9 relates to improvement in the health and well-being of the borough’s population. Sub Objective 9A i) asks “Does the site have access to formal and informal open spaces?” The Council’s response is that the site is within the catchment of either a formal or informal open space. However, the Council have failed to acknowledge that a development of this size will no doubt include public open space with the development proposal and/or pay a commuted sum for the provision of such opportunities through associated legal agreements. We suggest the site is assessed as Green (2) rather than neutral (1). Objective 12 seeks to protect, increase and enhance the natural environment, including the landscape, its underlying geology and wildlife habitat. Sub Objective 12 A i) asks, Will the site affect biodiversity? The site is an agricultural field but the Council’s assertion that development of the site would negatively affect biodiversity is unfounded. As part of a comprehensive submission the proposed scheme could in fact result in a net gain in terms of biodiversity. The Council have scored this element as a negative red (0). We believe the site should be assessed as a neutral (1), potentially moving up to a Green (2) with suitable mitigation. Similarly, sub objective 12 B i) relating to the impact upon Landscape, states that the site located in a broad area assessed as having ‘moderate’ landscape capacity. The council have scored the impact as a neutral (1) however, with a comprehensive Landscape Visual Impact Assessment potential impacts could be mitigated and further enhanced. As such we believe the scoring should be Green (2). Objective 13 seeks to protect, conserve and enhance the historic and cultural heritage. The Councils comments relating to the impact upon heritage assets and archaeological features are essentially that there are no heritage assets that would be impact upon, and no known archaeological objection to the proposed allocation of the site. So, bearing in mind, the development will not affect a conservation area, a listed building or its setting, non-designated heritage assets, registered historic park or gardens, registered battlefields or a scheduled ancient monument. However, the Council consider that these objectives are assessed as neutral (1). We propose that, given there is no known impact, this objective should be assessed as Green (2). Objective 14 seeks to Protect and enhance soil, air and water quality (watercourses and ground water) Sub-Objectives B and C relate to water and air quality respectively. The council state that the site is located 25m or further from an identified surface water body and located outside of an AQMA or National Exceedance Area. Given that there appears to be no immediate impact, and that any application would include a suite of mitigation measures we proposed that these elements are assessed as Green (2), as opposed to neutral (1). Taking the numerous inaccuracies outlined above into account, we set out below how the site should be assessed, had the approach been fair and consistent. Site ref: 146 - Tickhill Road, Bawtry = 51 Scoring considerably higher than the allocated land off North Avenue. As noted from the above commentary, the Council’s assessment is inaccurate and has led our Clients land interest being substantially downgraded, when in fact it scores higher than the other proposed allocations within the settlements of Bawtry.

Summary:
Assessment of Sustainability Appraisal of Local Plan  Has concerns with the Sustainability Appraisal (Wood). 1. Plan should run from 2018. 2. Housing completions 2015-2018 should not contribute to supply. 3. Contends that site 146 should score better than site 149 (allocated) 4. Says assessment contains inaccuracies which result in site 146 being downgraded. 5. With 'inaccuracies' corrected site 146 scores better than 149

Response:
Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum
The Council have commissioned Wood Environment & Infrastructure Solutions UK limited ('Wood') to undertake a Sustainability Appraisal (SA), and this includes an assessment of all sites that have been put forward for consideration as potential housing allocations. The SA sets out a series of sustainability objectives, which have a number of sub objectives along with a bullet point summary of how the objectives will be achieved. A qualitative scoring system has been adopted which is set out in Table 2 of the SA and copied below for ease of reference:

The scoring system used has four possible responses with: (+) Green being positive i.e. likely to assist with sustainable development, (-) red being a negative or incompatible i.e. likely to compromise sustainable development, - (0) white/blank being neutral i.e. likely to involve both compatible and incompatible effects; and (? ) Unlikely to be related or Uncertain i.e. effects cannot be judged at this stage. Our representations to the Local Plan should be read in conjunction with this assessment of the SA, however, our Client has fundamental concerns with the Council's approach to housing delivery over the Plan Period. Firstly, the Council have backdated the Plan to 2015 to enable historical completions to contribute to the housing requirement, this should only be from 2018 onwards, when the Council progressed with the Local Plan review. As such, our Clients view is that there should be a substantial increase in housing allocations over and above those which are proposed, and our Clients land interest in Bawtry (specifically site ref: 146 - Tickhill Road, Bawtry) represents the most suitable site in terms of a future housing allocation.

Notwithstanding our Clients position above, if the Council proceed with the plan as currently drafted, and only propose to allocate five sites in Bawtry (site ref: 950, 966, 982, and 499) in addition to our Clients site ref: 141. Tables H1 and H2 of the Publication Local Plan (below) split those sites into two categories, those with planning permission and those without. (SEE EMAIL for tables) Our Client has interests in site ref: 141 on Westwood Road but our view remains that our Clients site ref: 146 scores more favourably than site 499, Land off North Avenue and should be allocated. In order to make a robust comparison, we have added a simple numerical scoring system as follows: (+) Green = 2 (neutral) = 1 i.e. likely to involve both compatible and incompatible effects; and (-) red = 0 (?) Unlikely to be related or Uncertain i.e. effects cannot be judged at this stage. Based on these numerical scores we have compared site ref: 499 Land off North Avenue, Bawtry against our Clients' site ref: 146 Tickhill Road, Bawtry. As it stands the Council claim that site ref: 146 - Tickhill Road, Bawtry has a cumulative score of 35 and that site ref: 499 - Land off North Avenue, Bawtry has a cumulative score of 41. Having reviewed the Council's assessment of our Client's site (at Appendix N), we have concluded that a number of the assessments are incorrect, and our Clients' site has been downgraded based on inaccurate information.

The inaccuracies are as follows: Objective 3A and Sub Objectives i), ii) and iii) relate to the promotion of the use of public transport. The commentary notes that the site lies within 1200m of a train station and between 400m - 800m of a high frequency bus stop. The site is also within recognised cycle distances of a cycle network and local services. Based on nationally recognised guidance the site is actually within walking or cycling distance of local schools, shops, employment opportunities and local amenities in Bawtry, all within 2km walking distance and 5km cycling distance of the site. These measures are drawn from the Institution of Highways and Transportation (IHT) document 'Guidelines for Providing for Journeys on Foot' (1998) which details the preferred maximum walking distance of 2km. The IHT and Department for Transport (DFT) document 'Cycle Friendly Infrastructure: Guidelines for Planning and Design' (1996) provides a guide on suggested cycle speeds associated with cyclists of varying confidence and ability. Using a speed of 10mph (16kph) a catchment of 5km would be available within approximately 20 minutes' cycle time. The Council have identified our site as Red (0) but given that the site falls within recognised walking and cycling distance of a train station and bus stop that this site should have been assessed as Green (2) Sub Objective 3B i) Will the site be accessible to an existing centre? Given the accepted distances highlighted above, relating to journeys on foot and by bicycle, the site is well located to an existing centre and shopping parade. We propose that the scoring of neutral (1) is assessed as green (2). Sub Objective 3B ii) Will the site be accessible to a primary school? The Council state that the site lies within 400m - 800m of a primary school which is within widely accepted walking distances. The Council have scored a neutral (1); we propose the site is assessed as green (2). Sub Objective 3B iii) Will the site be accessible to a secondary school? The Council comment that the site lies over 2km away from a secondary school, but it is worth pointing out that the site is within 800m of a bus stop. In addition, children of secondary school age are capable and more likely to travel to and from school by bus. We propose the negative Red (0) score is assessed as a neutral (1) score. Sub Objective 3B iv) Will the site be accessible to a GP? The Council comment that the site lies within 800m of a GP surgery and is given a Green (2) score. We support this score but question why the accessibility of a GP surgery attracts a higher score than the accessibility of an existing centre or a primary school. We reiterate that the respective scores for access to those facilities should be assessed as Green (2). In summary, it is clear that the neutral and negative scores on this site in relation to accessibility should have been assessed as green (2) rather than amber (1) and red (0). The Council's assessment of the site is a flawed assessment as the site is located adjacent to the village boundary, 500m from the primary school and 600m from the GP Surgery with good public transport links. SD i) related to availability and specifically asks "Has the site been identified as an opportunity to address housing market failure?". The Council have given the score of neutral (1) and their reasons for doing so is that the site is not a formerly cleared housing site. The site is a green field agricultural site, adjacent to the settlement limits and is available for development as demonstrated within our previous representations. This objective should have been assessed as a Green (2) as opposed to a neutral (1). 8A iii) Will the site avoid known areas of landfill sites? And; iv) Will the site avoid known areas of unstable land? The Council have confirmed that the site not located within an area identified as containing a closed landfill site. Therefore, the site will avoid known areas of landfill and therefore fully complies with the objective. The site is an agricultural
field that has not had any buildings or alternative uses and the Council's neutral (1) rating is unfounded, the rating should be Green (2) as it wholly complies with that element of the objective. 8B relates to infrastructure. Sub-objective i) asks "Will the site have an impact on the Strategic Road Network?" The Council comment that the impact upon the Strategic Road Network (SRN) is expected to be mitigated but other, committed, schemes. As such the Council are claiming that there is no impact upon the SRN. In light of this the score should be assessed as Green (2) rather than neutral (1). Sub-objective iii) Will any additional demand for primary school places be likely from the site? The council note that the site is located within the catchment of a primary school with additional places needed. The latest Ofsted report (note 1 - https://reports.ofsted.gov.uk/provider/21/106737) for the Bawtry Mayflower Primary School states that the school is currently under capacity with a surplus of spaces for new children to join. Given this evidence we propose that the negative red (0) score be assessed as a Green (2) score. Sub-objective iv) Will any additional demand for secondary school places be likely from the site? The council note that the site is located within the catchment of a primary school with additional places needed. The gov.uk website (note 2 - https://www.compare-school-performance.service.gov.uk/school/137141/seriby-park-academy/absence-and-pupil-population) quotes the latest data and states that the total number of pupils attending the school is 831. The latest Ofsted report (note 3 - https://reports.ofsted.gov.uk/provider/28/137141) states that the capacity of the school is 834. Given that the school is currently slightly under capacity and that planning contributions would form part of any application on this scale we propose that the negative red (0) score be assessed as a Green (2) score. Objective 9 relates to improvement in the health and well-being of the borough's population. Sub Objective 9A i) asks "Does the site have access to formal and informal open spaces?" The Council's response is that the site is within the catchment of either a formal or informal open space. However, the Council have failed to acknowledge that a development of this size will no doubt include public open space with the development proposal and/or pay a committed sum for the provision of such opportunities through associated legal agreements. We suggest the site is assessed as Green (2) rather than neutral (1). Objective 12 seeks to protect, increase and enhance the natural environment, including the landscape, its underlying geology and wildlife habitat. Sub Objective 12 A i) asks, Will the site affect biodiversity? The site is an agricultural field but the Council's assertion that development of the site would negatively affect biodiversity is unfounded. As part of a comprehensive submission the proposed scheme could in fact result in a net gain in terms of biodiversity. The Council have scored this element as a negative red (0). We believe the site should be assessed as a neutral (1), potentially moving up to a Green (2) with suitable mitigation. Similarly, sub objective 12 B i) relating to the impact upon Landscape, states that the site located in a broad area assessed as having 'moderate' landscape capacity. The council have scored the impact as a neutral (1) however, with a comprehensive Landscape Visual Impact Assessment potential impacts could be mitigated and further enhanced. As such we believe the scoring should be Green (2). Objective 13 seeks to protect, conserve and enhance the historic and cultural heritage. The Councils comments relating to the impact upon heritage assets and archaeological features are essentially that there are no heritage assets that would be impact upon, and no known archaeological objection to the proposed allocation of the site. So, bearing in mind, the development will not affect a conservation area, a listed building or its setting, non-designated heritage assets, registered historic park or gardens, registered battlefields or a scheduled ancient monument. However, the Council consider that these objectives are assessed as neutral (1). We propose that, given there is no known impact, this objective should be assessed as Green (2). Objective 14 seeks to Protect and enhance soil, air and water quality (watercourses and ground water) Sub-Objectives B and C relate to water and air quality respectively. The council state that the site is located 25m or further from an identified surface water body and located outside of an AQMA or National Exceedance Area. Given that there appears to be no immediate impact, and that any application would include a suite of mitigation measures we proposed that these elements are assessed as Green (2), as opposed to neutral (1). Taking the numerous inaccuracies outlined above into account, we set out below how the site should be assessed, had the approach been fair and consistent. Site ref: 146 - Tickhill Road, Bawtry = 51 Scoring considerably higher than the allocated land off North Avenue. As noted from the above commentary, the Council's assessment is inaccurate and has led our Clients land interest being substantially downgraded, when in fact it scores higher than the other proposed allocations within the settlements of Bawtry.

Summary:
Assessment of Sustainability Appraisal of Local Plan Has concerns with the Sustainability Appraisal (Wood). 1. Plan should run from 2018. 2. Housing completions 2015-2018 should not contribute to supply. 3. Contends that site 146 should score better than site 149 (allocated) 4. Says assessment contains inaccuracies which result in site 146 being downgraded. 5. With 'inaccuracies' corrected site 146 scores better than 149

Response:
Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum
Gateway 180, Bradholme Farm (Site 160) We are concerned that the merits of Site 160 and also the local support for this site have not been considered in significant detail, resulting in its deselection in favour of Site 001. As noted above, we consider Site 001 has more serious constraints and is not the most suitable or sustainable site for employment development near to Thorne within the M18/M180 corridor. Site 160, Bradholme Farm was originally identified for allocation within the informal consultation on the Draft Policies and Proposed Sites (September 2018). The Site Selection Methodology (Part 4) Report identified the following rationale within table 9.26 for the proposed allocation of the site within the Draft Policies and Proposed Sites (October 2018): “As with all the potential sites within the M18 corridor, this site fails the flood risk sequential test as it is within Flood Zone 3. It scores similar to the other sites through the Sustainability Process. It is currently within Countryside Policy Area as designated by the UDP and classified as ’Reserve’ in HELAA - attractive to the market after other sites have been developed. This site would provide a good job creation opportunity in the north of the borough. There is a requirement for flood mitigation and the creation of wildlife habitats and due to the size of the site but both these issues can be overcome. Although there are successful employment sites to the north of Thorne it is clear that there is clear developer intention to develop this site for B8 and B2 uses and it is within single ownership. Therefore there are no doubts over deliverability. It is sufficient large enough to be able to address any transport related issues such as public transport. It is considered that 70% of the site will be developed in the plan period (40.37 ha). The majority of development will be for B8 (80%)”. However, moving forwards, the Doncaster Local Plan Housing and Employment Site Selection Methodology and Results Report Publication Version (June 2019) and the Sustainability Appraisal of the Doncaster Local Plan 2015 - 2035: Publication Version identify that Site 160 was deselected for the following reasons: “As with all the potential sites within the M18 corridor, this site fails the flood risk sequential test as it is within Flood Zone 3. It scores similarly to the other sites through the Sustainability Appraisal process. It is currently within Countryside Policy Area as designated by the UDP Proposals Map. Core Strategy Policy CS3: Countryside also applies as it continues to protect the countryside to the east of the borough through Countryside Protection Policy Area. It is classified as ’Green’ in HELAA - attractive to the market. There is a requirement for flood mitigation and the creation of wildlife habitats and the developer can address this through the masterplan/design statement. The Informal Consultation on the Local Plan in September - October 2018 produced a number of consultation responses in opposition to this site – see Draft Policies and Proposed Sites Consultation Summary for further information. The allocation of this site would exceed the supply of employment land for this plan period. Sites other than this one have been chosen for allocation in order to provide a balanced distribution of employment land across the Borough”. This basis for rejection relies substantially on public objections which are not themselves supported by material planning considerations or ones which carry any significant weight. This again displays weaknesses in the Council’s site selection methodology as previously identified in the report of the Inspector who conducted the Core Strategy Examination in Public. With regards to the responses to the Draft Policies and Proposed Sites (September 2018) consultation we note that these predominately relate to the following: - Flood Risk - Accessibility - Loss of best quality Agricultural Land - Traffic Movements - Whilst technical information has previously been submitted in relation to these issues we set out below our rebuttal which demonstrated that there are no technical constraints to the delivery of Site 160, Bradholme Farm and also the flaws with the Sustainability Appraisal undertaken by Wood Environment and Infrastructure Solutions UK LTD. It should also be noted that the site is now in the control of Harworth Group Plc which has significant experience of delivering large strategic employment sites. Flood Risk - We note that the site has been given a negative score within the Sustainability Appraisal of the Doncaster Local Plan 2015 - 2035: Publication Version for main river flooding under Criterion 11 Ai. Current and earlier strategic and site specific Flood Risk Assessment (FRA) work has demonstrated the significant distance of Bradholme Farm from the River Don and the River Trent system. There are intervening barriers (motorway, railway) between the River Don and Bradholme Farm. Whilst much of the site is currently shown to be located within Flood Zone 3 of the EA’s flood map, the EA themselves, IDB and LLFA have all confirmed that Site 160 is located outside of the area of risk of flooding from Main Rivers, and the main source of flood risk is due to the potential failure of a pumping station, which pumps water from the Brierholme Carr Drain into the South Soak Drain. Further to this, the EA and LLFA do not regard Site 160 as being located within the design standard floodplain and therefore the site will not result in any loss of floodplain to the surrounding area and will not increase flood risk elsewhere. Therefore, there is no requirement for any floodplain compensation on the site. There has also been no history of flooding at Bradholme Farm. The Flood Risk Note prepared by BWB contained within Appendix 6 confirms that Bradholme Farm is outside of areas at risk from Main River Network. We therefore consider that the site should have been scored as neutral or at the very least neutral for Criteria 11 A(i). In relation to criterion 11A (iii) Areas Benefitting from Flood Defences, Bradholme Farm has been scored as negative. We note that the comment in the Bradholme Farm Site 160 assessment matrix at page 49 of the Sustainability Appraisal Appendix O states "the proposal is not within an area benefiting from flood defences and is at risk of main river flooding (FRZ2/3)". We assume that this is based on the SFRA or simple flood risk zone rating and takes no account of site specific FRA work past and current. Nor does it take account of the mitigating effect of barriers and distance between the site and the River Don. Bradholme Farm does benefit from flood risk defences relating to land drainage. We therefore consider that the site should have been scored as neutral for Criteria 11 A(iii). The above information has been raised during earlier representations and a recent pre-application enquiry. It is therefore worrying that this technical information has not been considered as part of the Sustainability Appraisal and demonstrates significant flaws in the Councils evidence base which has been used to inform the Publication Draft Local Plan. Accessibility A review of the accessibility of Site 160, Bradholme Farm is contained within the Accessibility Review prepared by
Development Planning Limited in support of these representations and is included within Appendix 4. It should be read alongside the comments raised below. The site scores relatively well within the Council's Sustainability Appraisal, and is identified as having a positive effect for criterion 3(Ai) promotion of the use of trains, a neutral score for criterion 3(Aii) the proximity to high frequency bus services and a positive score for criterion 3(Aiii) the proximity to a cycleway. We agree with the rating of criterion 3(Ai) and 3(Aiii) for the reasons set out below. The site is located adjacent to the southern boundary of Thorne, with continuous footways available from around 60m north of the site, once across the lightly trafficked canal bridge. For cycling, South End passes by the northern boundary of the site and provides a lightly trafficked low-speed route into Thorne. The closest railway station to Bradholme Farm is Thorne South railway station. Thorne South is on the routes to Scunthorpe and Doncaster. The railway station is located around 600m (7minute's walk) from the boundary of the site. The travel time to Doncaster from Thorne South is 21 minutes. The walking experience to the railway station is the same as a pedestrian accessing Thorne and is considered to be pleasant. We disagree however with the neutral score for criterion 3(Aii). The site currently benefits from bus routes 8, 8A and 84 passing the site. Overall, the services provide an approximate hourly frequency of buses in both directions, operating during the day from around 06:57am to 23:32pm. With the exception of the 06:00am 24-hour shift pattern start time, all other typical start and finish times can be accommodated on the existing services. Additional patronage could increase revenues on those services by #100k to #150k per year, helping to ensure their longer-term viability. We therefore consider that Site 160, Gateway 180, Bradholme Farm site should have a positive score for criteria 3(Aii) as there are a number of bus services which pass the site. Overall it is clear that Site 160, Bradholme Farm is significantly more accessible and sustainable than Site 001, T портал North. This is highlighted in the comparison table contained within the Accessibility Review in Appendix 4. Highways With regards to Highways Capacity (criterion 8(Ai) Bradholme Farm scores a negative rating within the Sustainability Appraisal of the Doncaster Local Plan 2015 - 2035: Publication Version. An initial Preliminary Feasibility Study (dated February 2017) and subsequent Technical Note in relation to M180 Junction 1 (January 2018) have also been prepared by Development Planning Limited (copies attached in Appendix 7). The Feasibility Study considers the existing and forecast local transport environment and potential implications of a mixed use employment scheme (and residential development - now discounted). The study identifies that a key junction on the local highway network is M18 Junction 5 due to its strategic importance for access to the site and also in terms of its inter-urban connections across the region. M18 Junction 5 was improved in 2015 as part of the Highways Agency Pinch Point funding programme. The first part of the study further improvements were proposed as part of the Unity development (west of the M18) which result in a very similar junction to that previously proposed as the highway mitigation scheme for the Hatfield Colliery site. The Transport Assessment for the Unity development forecasts that, with the exception of the Unity site access ('MOTO') arm of the roundabout, the fully improved M18 Junction 5 could operate satisfactorily in 2038. The 2008 Transport Assessment for Bradholme Farm forecast that the improvements proposed at M18 Junction 5 for the Hatfield Colliery site could accommodate the development proposals with no further improvement. It should be noted that the 2008 Transport Assessment for Bradholme Farm considered as part of application ref. 08/03189/FULM forecast that two additional local junctions could require signalisation as part of the development proposals. The Officers Report for the previous application ref. 08/03189/FULM at Bradholme Farm states that: "It will be necessary to improve two junctions on the local road network; the A18 Tudworth Road junction with the M180 westbound on-slip, and the A18 Tudworth Road/A641 Stone Hill junction, in order to accommodate the traffic generated by the proposed development. Both junctions are currently 'give-way' type layouts; it is proposed to signalise them to provide additional capacity. The Traffic Assessment has taken into account 'committed development' such as the Hatfield Power Park and other development around Junction 5 of the M18. Those proposals include the signalisation and widening of the Junction 5 roundabout but the assessment also provides for alternative highway works that could be implemented in the event of that committed development not taking place for whatever reason. The conclusion is that subject to the improvements referred to both Junction 5 and the slip roads at Junction 1 of the M180 are able to accommodate the traffic from the proposed development. " There were therefore no significant issues in relation to highways capacity in relation to this proposal. For a new B8 proposal on the Bradholme Farm site the forecast scale of traffic impact could result in a similar conclusion in marginal additional traffic impact. The traffic generation from a B2 land use is higher than that for a B8 land use and, as such, a predominantly B2 proposal could result in additional offsite highway works being required. All traffic impacts would need to be modelled in detail to confirm the mitigation requirements. The Technical Note in relation to junction 1 of the M180 identifies that a previous traffic study for the site provided a forecast traffic distribution of 90% of light vehicles and up to 100% of heavy vehicles being likely to route to the west of the site on the M180, or to local destinations via local routes to the north or south of the site. The residual (circa) 10% of vehicles which were forecast to travel to the east of the site are likely to use the A18, which provides a direct link to Scunthorpe (for light vehicles) and, also, provides access to the M180 (east) using the A161. Both the A18 and the A161 carry signs which confirm that they are recommended routes for goods vehicles. As such, if any of the B8 developments were to or from the east they are able to access the M180 (east) using the A18. The forecast impact on the A18 is around one additional vehicle movement per minute during the peak hours. Such a small impact is likely to have a minimal or negligible impact on the operation of an 'A' classification road. A Transport Assessment Scoping has been undertaken by Development Planning Limited dated September 2019 and was included as part of the EIA Scoping Request which was submitted to Doncaster Council on 24 September. A copy is included within Appendix 7. The Assessment Scoping sets out how the highways assessment will be undertaken. It includes full details of route choices and the traffic generation within the appendices. Initial discussions have taken place with Highways England and a copy has been sent to them for consideration in order to agree the scope of the Traffic Assessment, including the junctions which are to be analysed. Contact has also been made with Doncaster Council Highways Department to agree the objectives of the Transport Assessment. Overall it is considered that subject to the necessary Transport Assessments and modelling it is highly likely that an appropriate solution to highways capacity can be reached. Public Open Space We note that Bradholme Farm, Site 160 has a neutral score for criterion 7(Ai) within the Sustainability Appraisal. The illustrative masterplan included within Appendix 8 shows a significant areas of public open space within the site. Given the site is considered to include public open space within the site boundary, this score should be positive. Ecology For criterion 12(Ai) of the Council's Sustainability Appraisal, Bradholme Farm, Site 160 scores a negative rating. From an ecological perspective there are no Statutory Designated Sites within the site boundary. There are three Statutory Designated Sites of International nature conservation interest within proximity. Thorne & Hatfield Moors Special Protection Area (SPA), Thorne Moor Special Area of Conservation (SAC) and Hatfield Moor SAC, which both form part of the SPA. Thorne Moor lies 2.9km to the north east and Hatfield Moor 2.9km to the south east of the site. There is only one Statutory Designated Site of National nature conservation interest, Bunting's Wood, Thorne Local Nature Reserve (LNR) which lies 1.0km to the north west of the proposed development site. In line with the NPPF (paragraph 170) the development of the site will seek to minimise impacts on and provide net gains for biodiversity. To date there has been ecological input into the illustrative masterplan to ensure that mitigation is built-in to the proposed development design to retain key features, such as ditches, hedgerows and mature trees. The ecological effects are to be avoided as far as possible. Additional mitigation measures that may be required includes: - protection of ditches, hedgerows and trees during construction (e.g. with temporary fencing); - new habitat creation within the development, e.g. hedgerows, wildflower meadow, native tree and shrub planting and wetland creation; - measures to avoid direct impacts to protected species; e.g. undertaking vegetation clearance outside bird nesting season utilising method statements where required; - minimisation of lighting during construction (e.g. using low-level motion-activated security lighting) and ecological input to development lighting design to minimise impacts to bats and other nocturnal species; and - Provision of features to benefit protected and notable species such as bird and bat boxes. We
note that the previous application at Bradholme Farm ref: 08/03189/FULM received a positive response from Natural England with regard to the proposed biodiversity improvements. The principles applied to the previous application will be applied to the forthcoming planning application Given that there is potential for a range of biodiversity improvements we consider that Site 160, Bradholme Farm should have a positive score for Biodiversity. Landscape The Sustainability Appraisal rates Bradholme Farm, Site 160 neutrally in relation to landscape capacity (criterion 12Bi). The 2008 application (ref: 08/03189/FULM) for this site included an assessment which took into the Landscape Character Assessment and Capacity Study of 2007 which concluded that the capacity of this area for strategic employment development is generally limited. The assessment submitted in support of the application included a detailed survey of the specific area within a 5 kilometre radius of the site. The report demonstrated the capacity in this location is higher than the general area, due to disturbed and degraded elements of the landscape not typical of the landscape character area as a whole. Large scale built development and disturbance associated with the motorways is found on the edge of Thorne in the immediate vicinity of the site. It was accepted that the development proposed as part of the 2008 application would not be noticeably harmful to the generally undeveloped rural character of the area beyond, nor would it encroach into the intact farmland buffer zone around Thorne and Hatfield Moors. A copy of the Officer Report confirming the acceptance of the assessment in support of the 2008 application is included within Appendix 10. We note that the Council is still referring to the Landscape Character Assessment and Capacity Study of 2007 within the evidence base for the Publication Draft and therefore consider that the assessment undertaken as part of the 2008 application still stands: the capacity in this location is higher than the general area, due to disturbed and degraded elements of the landscape not typical of the landscape character area as a whole. The development of the site can be designed to incorporate mitigation measures such as coloured cladding to enable better assimilation into the background, fringing trees would be species native to the area and would soften, though not screen, the mass of the buildings. New areas of biodiversity would be included. Minerals We note that Bradholme Farm has been given a’?’ rating in relation to criterion 14 A(i) Minerals sterilisation on the Sustainability Appraisal. A Mining and Minerals Report was included within the planning application ref: 08/03189/FULM. This report identified that the thicknesses and lateral consistency of the deposits under Bradholme Farm are irregular, and together with an unfavourable overburden to mineral ratio, the deposits are not viable for commercial extraction. Over time three separate aggregate companies have surveyed the site and decided not to pursue further investigations. A copy of the Minerals and Mining Report is included within Appendix 10 for reference. We therefore consider that Site 160, Bradholme Farm should be rated positively in relation to criterion 14 A(i). Agricultural Land Criterion 14 A(ii) of the Sustainability Appraisal relates to best and most versatile agricultural land. We note that Bradholme Farm has been given a negative rating. This is despite the availability of an Agricultural Land Assessment by Agricultural Systems Analysis Limited from a previous application (ref: 08/03189/FULM) on this site. A copy of this report is included within Appendix 11 and the relevant illustrations are included below. The assessment identifies that the majority of the site has little agricultural potential, with 85% of the site assessed as subgrade 3b. (SEE EMAIL FOR Figure 1 Agricultural Land Classification Maps - Bradholme Farm) Survey work involved the examination of auger borings on a 100 metre grid and by examination of 1.5 metre deep soil profile pits, to ascertain stoniness subsoil structure and drainage class. The site is mainly composed of heavy clay loams, falling within similar severe wetness class grade IV, limiting the majority of the site to Grade 3b. We also note the officer’s report from the previous application (ref: 08/03189/FULM) concluded: “the application site comprises mainly Grade 3b agricultural land (according to the DEFRA classification) with approximately 12 hectares of Grade 3a. The loss of the better quality land is not assessed as significant bearing in mind that the capital accrued from the sale of the land will enable the farming business to re-invest in other more appropriate land. Moreover the topsoil from the better quality land would be re-used on and off the site”. All necessary additional information, including if required a Soil Management Plan will therefore be submitted as part of a forthcoming planning application. It is not considered that any potential significant effects will arise from the loss of agricultural land as part of the development of Gateway 180. (SEE SERVER FOR Appendices)

Summary:

Gateway 160, Bradholme Farm 160 Concluded that the merits and support for Site 160 have not been considered in significant detail. Site 001 has more serious constraints and is not the most suitable or sustainable site for employment near to Thorne. Site 160 was originally allocated as an employment site but has since been deselected. The basis being the amount of public objections which are not themselves supported by material planning considerations or ones which carry a significant weight. This displays weaknesses in the Council’s site selection methodology. Site 160 is now in the control of Harworth Group Plc which has significant experience in delivering large strategic employment sites. Flood risk Site 160 has been given a negative score under Criterion 11 Ai. Although much of the site is shown as Flood Zone 3 on the EA’s flood map, the EA, IDB and LLFA have confirmed that the site is located outside of the area at risk of flooding from main rivers and that the main source of flood risk is due to the potential failure of a pumping station. The development of the site will not result in any loss of floodplain and will not increase flood risk elsewhere. There is no requirement for any floodplain compensation. The site should be scored as positive or neutral for Criteria 11 Ai. Site 160 has been given a negative score for Criteria 11 Aii - Areas benefiting from Flood Defences. Assume this is based on the SFRA or simple flood risk zone rating and takes no account of site specific FRA work past and current. It does not take account of the mitigating effect of barriers and distance between the site and the River Don. Site 160 does benefit from flood risk defences relating land drainage. The site should be scored as neutral. This has been raised previously and it is worrying that this information has not been considered as part of the SA process which demonstrates flaws in the Council’s evidence base. Accessibility This is supported by an Accessibility Review prepared by Development Planning Limited. Site 160 scores relatively well within the Sustainability Appraisal. Agree with the rating of criterion 3(Ai) and 3(Aiii) but disagree with the neutral score for criterion 3Aiii). The site benefits from bus routes 8, 8A and 84 passing the site and the services provide an approximate hourly frequency of buses in both directions. Consider that Site 160 should have a positive score for criteria 3Aiii) as there are a number of bus services which pass the site. Site 160 is significantly more accessible and sustainable than Site 001. Highways Site 160 is scored as negative within criterion BAI. Additional work has been prepared by Development Planning Ltd. It considers the existing and forecast local transport environment and potential implications of a mixed use employment scheme. It identifies that M18 Junction 5 has strategic importance for access to the site and also in terms of its inter-urban connections across the region. M18 Junction 5 was improved in 2015 as part of a Highways Agency funding scheme. The Transport Assessment for the Unity development forecasts that, with the exception of the Unity site access ("MOTO") arm of the roundabout, the fully improved M18 Junction 5 could operate satisfactorily in 2038. The 2008 Transport Assessment for Bradholme Farm forecast that the improvements proposed at M18 Junction 5 for the Hatfield Colliery site could accommodate the development proposals with no further improvement. It should be noted that the 2008 Transport Assessment for Bradholme Farm considered as part of application ref. 08/03189/FULM forecast that two additional local junctions could require signalisation as part of the development proposals. The Officers Report for the previous application for Bradholme farm in 2008 stated that there ref. 08/03189/FULM at Bradholme Farm states that: "subject to the improvements referred to both Junction 5 and the slip roads at Junction 1 of the M180 are able to accommodate the traffic from the proposed development." Therefore there are no significant issues in relation to highways capacity in relation to this proposal. A new B8 proposal could result in a similar conclusion or marginal additional traffic impact. The traffic generation from a B2 land use is higher than that for a B8 land use and, as such, a predominantly B2 proposal could result in additional offsite highway works being required. All traffic impacts would need to be modelled in detail. The Technical Note in relation to junction 1 of the M180 identifies that a previous traffic study for the site provided a forecast traffic
distribution of 90% of light vehicles and up to 100% of heavy vehicles being likely to route to the west of the site on the M180, or to local destinations via local routes to the north or south of the site. The residual (circa) 10% of vehicles which were forecast to travel to the east of the site are likely to use the A18, which provides a direct link to Scunthorpe (for light vehicles) and, also, provides access to the M180 (east) using the A161. Both the A18 and the A161 carry signs which confirm that they are recommended routes for goods vehicles. As such, if there are any HGV movements to or from the east they are able to access the M180 (east) using the A18. The forecast impact on the A18 is around one additional vehicle per minute during the peak hours. Such a small impact is likely to have a minimal or negligible impact on the operation of an ‘A’ classification road. A Transport Assessment Scoping has been undertaken by Development Planning Limited (Sept 2019) and was included as part of the EIA Scoping Request (submitted to the Council on 24 Sept 2019). A copy is included (Appendix 7). Overall it is highly likely that an appropriate solution to highways capacity can be reached. Public Open Space Site 160 has a neutral score for criterion 9Ai. The illustrative masterplan (Appendix 8) shows a significant areas of public open space within the centre of the site. It is considered that the score should be positive. Ecology Site 160 has a negative score for criterion 12Ai. There are no Statutory Designated Sites within the site boundary. There are three Statutory Designated Sites of International nature conservation interest within proximity. Thorne & Hatfield Moors Special Protection Area (SPA), Thorne Moor Special Area of Conservation (SAC) and Hatfield Moor SAC, which both form part of the SPA. There is only one Statutory Designated Site of National nature conservation interest, Bunting Wood, Thorne Local Nature Reserve (LNR) which lies 1.0km to the north west of the proposed development site. In line with the NPPF (para 170 d) the development of the site will seek to minimise impacts on and provide net gains for biodiversity. The illustrative masterplan shows that mitigation is built-in to the proposed development design to retain key features, such as ditches, hedgerows and mature trees. Additional mitigation measures that may be required include: - protection of ditches, hedgerows and trees during construction; - new habitat creation within the development, e.g. hedgerows, wildflower meadow; - measures to avoid direct impacts to protected species; - minimisation of lighting during construction; and - Provision of features to benefit protected and notable species. The previous planning application received a positive response from Natural England and the same principles will be applied to the forthcoming application. Consider that Site 160 should have a positive score for Biodiversity. Landscape Site 160 has a neutral score for criterion 12Bi. The 2008 application included an assessment taken from the 2008 Landscape Character Assessment and Capacity Study. The Study concluded that the capacity of this area for strategic employment development is generally limited. The Council is still referring to the Study within the evidence base for the Publication Draft, therefore the assessment undertaken as part of the 2008 application still stands: the capacity in this location is higher than the general area, due to disturbed and degraded elements of the landscape not typical of the landscape character area as a whole. The development of the site can be designed to incorporate mitigation measures and new areas of biodiversity would be included. Minerals Site 160 has been given a '?' rating for criterion 14 Ai. A Mining and Minerals Report (included with the 2008 planning application) (also in Appendix 10) identified that the thicknesses and lateral consistency of the deposits under the site are irregular and are not viable for commercial extraction. Three separate aggregate companies have surveyed the site and have decided not to pursue further investigations. Consider that the site should be rated positively in relation to criterion 14 Ai. Agricultural Land Site 160 has been given a negative rating for criterion 14 Aii. An Agricultural Land Assessment (Appendix 11) was submitted as part of the original planning application in 2008. It identifies that the majority of the site has little agricultural potential - 85% of the site is assessed as subgrade 3b. This was reflected in the officer’s report to the 2008 application. All necessary information will be submitted as part of a forthcoming planning application.

Response:

The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. Detailed responses to the SA challenges are included in the Addendum to the SA Report published at Submission stage including revisions to criteria where appropriate in line with the Representation (Landscape, Agricultural Land, Ecology and, Minerals Sterilisation).
Policy 4 - Site 001 - Sustainability Appraisal Scores

3A(i) Access to train station
4.1 As stated in the attached report by Sanderson Associates (Appendix 1) and in our client's associated objection to the Site Selection Process, Thorne North is further than 1.2km of Thorne train station once practical walking distances are taken into account. 4.2 Furthermore, it is relevant to note that Thorne train station is served by an hourly train service that operates between Hull and Sheffield, via Doncaster. Between Doncaster and Thorne North, the service stops at Kirk Sandall and Hatfield & Stainforth only. Therefore, even if future occupiers of the Thorne North site were willing to walk or cycle to the train station, the available services are limited and are unlikely to be a viable option for most people; and will not necessarily provide a good and convenient means of accessing an employment site for a high proportion of the population, dependent very much on the location of stops and routes. 4.3 The neutral (yellow) score that has been awarded against this criterion should therefore be changed to a red (negative) score. 3A(ii) Distance to Bus Stop
4.4 Site 001 is located over 800m from a bus stop. Therefore, the negative red score currently provided for bus accessibility is considered to be correct. 4.5 It is noted that a number of planning applications have been submitted for the site (Applications No. 15/02252/OUTM & 16/02136/OUTM), which suggest that bus service improvements may be provided for the site, which could involve the diversion of the No. 87 bus service. However, the attached report by Sandersons (Appendix 1) notes that no details have been provided to confirm what, if any, bus service improvements would be delivered. Furthermore, it is noted that in the SYPT consultation response to planning application no. 15/02252/OUTM, it was confirmed that whilst a further diversion of bus service No. 87 (that currently diverts to The Range on Mount Pleasant Road twice per day) may be feasible, this service is not commercially viable and would require long term funding from the development. As such, Sandersons are of the view that the long-term viability of any bus service that may be re-routed to serve the site is not secure. 4.6 Sandersons further note that the No.87 bus service that the applicant has suggested may be diverted is made up of 3 bus routes (87, 87a and 87b) that serve different routes between Thorne and Doncaster. Therefore, the prospect of diverting multiple routes is unlikely and casts further doubt on whether a high frequency bus service could be provided for the development. 4.7 It is concluded by Sandersons that without evidence to the contrary, even with development S106 funding, Site 001 would not be served by a high-quality bus service; and therefore the negative bus accessibility is considered to be correct for this site. This is particularly so in the context for the need for a service to be self-funding when any developer subsidy is finished. Overall SA Scoring
4.8 The Site Selection Report asserts that Site 001 scores similarly to other scores through the SA process. However, the revised SA scores provided in the attached report by Sandersons indicates that there are considerable differences between Site 001 and West Moor Park East (Site 937/1031/938/1014) in respect of accessibility - as shown by the extract from the Sandersons report below. Site: 937/1031 West Moor Park East Train Accessibility: N/A Bus Accessibility: + Cycle Accessibility: 0 Road Access: + Ability to minimise travel to work distances: 0 Site: 001 Thorne North Train Accessibility: - Bus Accessibility: - Cycle Accessibility: 0 Road Access: + Ability to minimise travel to work distances: - Site: 092 Balby Carr Bank Train Accessibility: - Bus Accessibility: - Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: + Site: 441 Carcroft Common Train Accessibility: 0 Bus Accessibility: 0 Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: + Site: 878/1032 Rossington Train Accessibility: N/A Bus Accessibility: + Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: + Site: 941 Poplars Farm Train Accessibility: - Bus Accessibility: 0 Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: 0 4.9 In our client's associated objection to the Site Selection process we also demonstrate that there are material differences between Site 001 and West Moor Park East in respect of other SA criteria, with the latter site performing better overall. 4.10 In the light of the above, we consider that the SA process does not support allocation of Site 001 in preference to West Moor Park East. The proposed allocation of Site 001 is not justified in that regard. (SEE SUPPORTING DOCS for Appendices)

Summary:
Policy 4 - Site 001 - Sustainability Appraisal Scores
A(i) Access to train station
Thorne North is further than 1.2km of Thorne train station once practical walking distances are taken into account. The station is served by an hourly train service that operates between Hull and Sheffield, via Doncaster. Between Doncaster and Thorne North, the service stops at Kirk Sandall and Hatfield & Stainforth only. Services are limited and unlikely to be a viable option. This is not a good and convenient means of accessing an employment site for a high proportion of the population. The neutral (yellow) score should be changed to a red (negative) score. 3A(ii) Distance to Bus Stop
Site 001 is located over 800m from a bus stop. Therefore, the negative red score currently provided for bus accessibility is correct. Two planning applications have been submitted for the site (Applications No. 15/02252/OUTM & 16/02136/OUTM) and they suggest that bus service improvements could involve the diversion of the No. 87 bus service. It is noted that no details have been provided to confirm what improvements could be delivered. The SYPT consultation response to planning application no. 15/02252/OUTM says that whilst a diversion of service No. 87 may be feasible it is not commercially viable and would require long term funding. It is also noted that the applicant has suggested that the diversion could be made up of 3 bus routes (87, 87a and 87b). The prospect of diverting multiple routes is unlikely and casts further doubt on whether a high frequency bus service could be provided for the development. It is concluded that even with development S106 funding, Site 001 would not be served by a high-quality bus service. The negative bus accessibility score is correct for the site. Overall SA Scoring
The Site Selection Report says that Site 001 scores similarly to other scores through the SA process. However, the suggested revised SA scores indicate that there are considerable differences between Site 001 and West Moor Park East (Site 937/1031/938/1014) in respect of accessibility - see below: Site: 937/1031 West Moor Park East Train Accessibility:
N/A Bus Accessibility: + Cycle Accessibility: 0 Road Access: + Ability to minimise travel to work distances: + Site: 001 Thorne North Train
Accessibility: - Bus Accessibility: - Cycle Accessibility: 0 Road Access: + Ability to minimise travel to work distances: - Site: 092 Balby Carr Bank
Train Accessibility: - Bus Accessibility: 0/+ Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances: + Site:
878/1032 Rossington Train Accessibility: N/A Bus Accessibility: + Cycle Accessibility: 0 Road Access: 0 Ability to minimise travel to work distances:
+ Site: 941 Poplars Farm Train Accessibility: - Bus Accessibility: 0 Cycle Accessibility: 0 Road Access: 0/+ Ability to minimise travel to work
distances: 0 The SA process does not support allocation of Site 001 in preference to West Moor Park East. The proposed allocation of Site 001 is not justified.

Response:

Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum. The SA scoring
process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The Housing and Employment Site Selection and Result Report provides further information. The Housing and Employment Site Selection Methodology and Results Report sets out the reasoning for sites being allocated or rejected to support jobs growth and economic ambitions. The Sustainability Appraisal process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites.

Comment:

Policy 4 - Site 441 - Inaccurate Sustainability Score 4.1 As stated in the attached report by Sanderson Associates (Appendix 1) and in our client’s associated objection to the Site Selection Process, no evidence has been provided that Site 441 would be within a safe 400m walk from high frequency bus services. Existing footways between the site and bus stops on Doncaster Road (Services 405, 408 and 409) are narrow and there is a lack of safe crossing facilities on Doncaster Road. 4.2 There is an additional bus service (No. 412) on Doncaster Road that provides access to Carcroft. However, this only runs very infrequently (3 services during weekdays). Therefore, the bus accessibility to the residential population is inadequate. Given that one of the reasons for the Council proposing to allocate the site is that it will benefit the local community, this lack of bus access to Carcroft is a constraint. 4.3 In the absence of evidence to demonstrate that Site 441 could access high frequency bus services safely we consider that the SA score awarded to the site under Criterion 3A(ii) should be amended from a light green positive score to a neutral orange score. (SEE SUPPORTING DOCS for Appendices)

Summary:

Policy 4 - Site 441 - Inaccurate Sustainability Score There is no evidence that Site 441 is a safe 400m walk from high frequency bus services. The existing footways are narrow and there is a lack of safe crossing facilities. The additional bus service (No. 412) provides access to Carcroft but it runs very infrequently (3 services during weekdays). Bus accessibility is inadequate and is a constraint. The SA score under Criterion 3A(ii) should be amended from a light green positive score to a neutral orange score.

Comment:

Site Selection - Inaccurate Sustainability Appraisal Scores for Thorne North (Site 001) 4.1 Notwithstanding the concerns regarding the SA appraisal approach relating to public transport accessibility, which are detailed in the attached Sandersons Associates report (Appendix 1), there are also inaccuracies in the scoring of the Council’s assessment for a number of employment site options. These are set out below. Thorne North (Site 001) 4.2 3A(i) Access to train station - Thorne North is further than 1.2km of Thorne train station once practical walking distances are taken into account. 4.3 Furthermore, is it relevant to note that Thorne train station is served by an hourly train service that operates between Hull and Sheffield, via Doncaster. Between Doncaster and Thorne North, the service stops at Kirk Sandall and Hatfield & Stainforth only. Therefore, even if future occupiers of the Thorne North site were willing to walk or cycle to the train station, the available services are limited and are unlikely to be a viable option for most people; and will not necessarily provide a good and convenient means of accessing an employment site for a high proportion of the population, dependent very much on the location of stops and routes. 4.4 The neutral (orange) score that has been awarded against this criterion should therefore be changed to a red (negative) score. (SEE SUPPORTING DOCS for Appendices)

Summary:

Site Selection - Inaccurate Sustainability Appraisal Scores for Thorne North (Site 001) There are also inaccuracies in the coring of other employment site options. For Thorne North and SA objective 3A(i) Access to train station, the site (001) is further than 1.2km from Thorne train station once practical walking distances are taken into account. This station is served by an hourly train service that operates

Response:

Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum. The SA scoring process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The Housing and Employment Site Selection and Result Report provides further information.

Comment:
Site Selection - Inaccurate Sustainability Appraisal Scores for Carcroft Common (Site 441) 4.1 Notwithstanding the concerns regarding the SA appraisal approach relating to public transport accessibility, which are detailed in the attached Sandersons Associates report (Appendix 1), there are also inaccuracies in the scoring of the Council's assessment for a number of employment site options. These are set out below. Land at Carcroft Common (Site 441) 4.6 3A(ii) Access to bus services - no evidence has been provided that Site 441 would be within a safe 400m walk from high frequency bus services. The light green positive score awarded in the Council's SA should therefore be amended to a neutral (orange) score. (SEE SUPPORTING DOCS for Appendices)

Summary:
Site Selection - Inaccurate Sustainability Appraisal Scores for Carcroft Common (Site 441)

Response:
Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum. The SA scoring process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The Housing and Employment Site Selection and Result Report provides further information.
Site Selection - Inaccurate Sustainability Appraisal Scores for Land East of Poplars Farm, Auckley (Site 941)  

4.1 Notwithstanding the concerns regarding the SA appraisal approach relating to public transport accessibility, which are detailed in the attached Sandersons Associates report (Appendix 1), there are also inaccuracies in the scoring of the Council’s assessment for a number of employment site options. These are set out below. Site 2, Land east of Poplars Farm, Auckley (Site 941)  

4.7 3A(ii) Access to bus services - the bus services that operate along A638 Great North Road do not represent a high frequency service. As explained in the attached report by Sanderson Associates (Appendix 1), this is confirmed in the Local Highway Authority consultation responses to the pending planning application for Site 941, where the highways officer has commented that the services are not regarded as high frequency.  

4.8 The walking distance to the bus stops on the A638, close to the junction with High Common Lane, are approximately 500m from the proposed access junction for Site 941 and this walking distance will increase as a result of a new roundabout access. The site should therefore be awarded a neutral (orange) score rather than the light green positive score in the Council’s SA. (SEE SUPPORTING DOCS for Appendices)
We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

We are concerned that the absence of consideration of the available local labour pool for employment site options is a major omission in the site selection exercise that has been carried out by the Council. At Paras 3.5 to 3.8 of the attached Sanderson Associates report (Appendix 1) we provide data on the available population (existing and proposed) within 8km/5 miles of key proposed allocations. This shows that the employment option at West Moor Park East is ranked second out of five sites - Sandersons conclude that the site is well located to a large residential population, which will allow development at the site to minimise travel distances before any regard is taken of public transport and bus improvements. (ii) Scoping out of Economic and Growth Criterion for Employment Options 2.4 Appendix A3 of the Housing and Employment Site Selection Methodology Report indicates that economic and growth criteria have been removed from the SA of employment sites, but this seems an illogical decision when considering the relative merits of different options for the economy and job creation of Doncaster. Para 32 of the NPPF indicates that SA should consider opportunities for net gains in economic objectives. 2.5 Some sites will clearly have greater potential than others for economic benefits to Doncaster and it should be possible to differentiate those that would result in more modest positive effects and those that could give rise to significant positive impacts. As demonstrated by Dove Haigh Phillips, some sites due to their location and characteristics are not likely to be attractive to the market and will not deliver development or at least not at the rate the Local Plan suggests. This is a significant factor that goes to the ability to deliver and achieve the benefits and objectives of the Plan. If a site will not be able to deliver the benefits associated with the development suggested, this is highly relevant when taking account of the harm associated with its development in order to determine the soundness, justified and effective nature of the Plan when compared to reasonable alternatives. (iii) Unnecessary Consideration of Access to Centre for Employment Options 2.6 Criteria 3B(i) seeks to compare the relative accessibility of employment options to defined shopping centres. Whilst we agree that this is relevant to how easily occupants of housing sites will be able to meet everyday shopping and service needs, we do not consider that this is a relevant criterion when considering the sustainability of an employment option. 2.7 The larger scale allocations of the plan are likely to have ancillary on-site Class A3/A4/A5 facilities and many businesses have in-house canteens in order to reduce the need for employees to leave the site to obtain lunch for example. Most industrial estates are also visited by mobile catering companies where such facilities are not available or insufficient to meet demand. The accessibility of an employment site to a defined shopping centre is not therefore an important or relevant guide to its overall sustainability. (iv) Arbitrary Flood Risk Threshold 2.8 Appendix A3 of the Housing and Employment Site Selection Methodology Report confirms that the Council has scored all sites with 20% or greater in FZ3a with a negative score (11A(i)). However, the rationale for a threshold as low as this is not justified, and we do not agree that this is a sound way of comparing the relative sensitivity of sites to flood risk or for directing as much development as possible to the lowest zones of flood risk - which is the overriding objective of the sequential test. Para 158 of the NPPF states that: "Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding." 2.9 By way of example, 54% (48.6 hectares) of West Moor Park East (Site 937/1031/938/1014 (note 1 - 1 Please note that since submission of representations in respect of the October 2018 Local Plan Consultation the site boundary of West Moor Park East has been expanded to include Site 938/1014 - please see associated representations in respect of Policy 4)) is located in F21, with the remaining being located in F23a and F22. However, this site is awarded (in the Council SA) the same negative (pink) score as sites 001 and 441, 100% of which are in F23a. The total Local Plan contribution of Site 001 is 5.14 hectares and therefore nearly all of it could be provided within F21 at West Moor Park East. The total Local Plan contribution of Site 441 is 12.32 hectares and therefore all of it could be easily provided within F21 at West Moor Park East. 2.10 In the light of the sequential test it is therefore illogical and unsound for the SA to treat all sites with 20% or greater in F23a with the same negative score. We consider that the binary nature of Criterion (11A(i)) should be amended to one that allows employment sites with a significant proportion within F21 to be awarded higher scores than those that are wholly or substantially in zones of higher flood risk. (v) Consideration of Details of Public Transport Improvements by Site Promoters 2.11 Para 6.2.3 of the Housing and Employment Site Selection Methodology Report notes that where robust evidence has been provided by site promoters SA scores have been revised in order to give a post mitigation score for findings and criteria specific to the site. However, we are concerned that this exercise does not appear to have been undertaken in a complete manner, particularly in the case of West Moor Park East (Site 937/1031/938/1014). 2.12 At the 2018 Informal Draft Local Plan consultation stage Blue Anchor Leisure submitted a package of information specific to West Moor Park East, including written confirmation with costs from First Bus that an existing frequent bus route (Service 15) can be extended into the site; and that this service could become viable after five years without subsidy. However, there is no indication from Appendix S of the August 2019 SA that this
information has resulted in changes to the SA scores. By way of example, the extension of the 15 Service frequent bus route into the site should result in a green score in relation to ‘distance to bus stop (3A(ii))’ as this would result in a stop within centre of the proposed development, but West Moor Park East is currently awarded a pink (negative) score. 2.13 We consider that the relative accessibility of employment site options to high frequency bus services is of greater importance than the access to train services criterion included in the SA. As explained at Paras 4.4.1 to 4.2.3 of the attached report by Sanderson Associates (Appendix 1), a train service will not necessarily provide a good and convenient means of accessing an employment site for a high proportion of the population as it may dependant on the location of train routes and stations. 2.14 Consideration of Importance of Nature Conservation Site and Potential for Mitigation in Biodiversity Criterion 2.14 Appendix A3 of the Housing and Employment Site Selection Methodology Report indicates that under criterion 12A(i) all sites that overlay in (part or whole) a defined wildlife site will be awarded a double negative (red) score irrespective of the importance of the designation or the scope for mitigation. In our view this is an unsophisticated and crude approach to assessment of the biodiversity impact of employment sites. 2.15 Para 171 of the NPPF states that plans should distinguish between the hierarchy of international, national and locally designated sites and allocate land with least environmental value. However, at present criterion 12A(i) would award the same score to a site that overlays a local wildlife site (even if that overlay were on a very small area of the site in question) to one that fully overlays a SSSI or SAC, contrary to national policy. There is also no attempt within the SA to differentiate the degree of harm to the designation, taking into account the amount of overlap with the designation. 2.16 We are also concerned that there is no consideration of the likely actual impact on designated sites where a site promoter has supplied appropriate mitigation/enhancement information to the Council. In the case of West Moor Park East (Site 937/1031/938/1014), the SA makes reference to the fact that the site incorporates a small local wildlife site, Holme Wood. However, the Vision Document provided in our client’s response to the 2018 Informal Draft Local Plan consultation (Appendix 5) not only shows that no employment development is proposed in that part of the site, but it also indicates that new vegetation and SUDS features would be provided to enhance the setting of Holme Wood and create new wildlife habitat. At present criterion 12A(i) does not allow these benefits to be reflected in a SA score. 2.17 We therefore consider that criterion 12A(i) should be amended to distinguish between the hierarchy of international, national and locally designated sites; the degree of harm to the designation; and to allow for mitigation/enhancement to be considered where site promoters have provided such information. (vii) Highways Capacity 2.18 The Highways Capacity for housing and employment options is considered in a separate SA Technical Appendix. However, as explained in the attached Technical Report by Sanderson Associates (Appendix 1), this relates to a very high-level assessment undertaken in 2015 of potential impacts on key junctions on the trunk road network only. No quantitative or qualitative assessment of the impact of allocations on the local road network has been undertaken. It is therefore considered that the scoring criterion is inaccurate and unreliable and it provides an insufficient basis upon which to consider operation to the highway network and access to employment sites. 2.19 In respect of West Moor Park East (Site 937/1031/938/1014), the attached Technical Note by Fore Consulting (Appendix 2) includes a capacity study that demonstrates that development of this option for employment use would give rise to traffic that can be satisfactorily accommodated at Junction 4 of the M18. The current main operation issues on the local highway network relate to traffic queuing back from roundabouts on the A630 West Moor Link at certain times. The West Moor Link improvement scheme (the first phase of which is already under construction) will resolve the existing queuing issues on the A630 and further improve the capacity and operation of key junctions along the A630 corridor. 2.20 Given the above, there is no justification for the current red (considerable traffic impact) ranking of West Moor Park East within the Council’s Highway’s Capacity Study. (SEE SUPPORTING DOCS for Appendices)

Summary:
1. Omission of consideration of availability of labour for employment options An essential driver of the attractiveness of an employment site is the availability of labour in the area. Occupiers wish to be close to an appropriate labour pool and strong communication links for the workforce. An available, skilled and mobile workforce is often a pre-requisite. This is not considered in the SA. The site selection process does not take into account one of the key objectives of local and national transport planning policy related to the need to minimise travel to work distances. The location of employment sites to the nearby residential population is a major influencing factor in reducing the need to travel. This is a major omission from the site selection process. Regarding location to available population, West Moor Park East is ranked second out of five sites. It is well located to a large residential population. 2. Scoping out of Economic and Growth Criterion for Employment Options Appendix A3 of the Site Selection Methodology Report indicates that economic and growth criteria have been removed from the SA of employment sites. This seems an illogical decision when considering the relative merits of different options for the economy and job creation. Para 32 of the NPPF indicates that SA should consider opportunities for net gains in economic objectives. Some sites have greater potential than others regarding economic benefits and it should be possible to differentiate that result in more modest positive effects and those that could give rise to significant positive impacts. Some sites are not attractive to the market and will not develop at the rate the local plan suggests. This is highly relevant for determining the soundness, justified and effective nature of the plan. 3. Unnecessary Consideration of Access to Centre for Employment Options Criterion 3B1 compares the accessibility of employment options to defined shopping centres. Agree this is relevant for assessing housing sites, but it is not relevant when considering employment sites. The larger scale allocations are likely to have ancillary on-site Class A3/A4/A5 facilities and many businesses have in-house canteens in order to reduce the need for employees to leave the site to obtain lunch. Most industrial estates are also visited by mobile catering companies. This criterion is not important or relevant. 4. Arbitrary Flood Risk Threshold Appendix A3 of the Site Selection Methodology Report confirms that all sites with 20% or greater in FZ3a have been given a negative score (for 11A1). The rationale for a low threshold is not justified, and it is not agreed that this is a sound way of comparing the relative sensitivity of sites to flood risk or for directing as much development as possible to the lowest zones of flood risk - which is the overriding objective of the sequential test. Para 158 of the NPPF states that: "Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding." By way of example, 54% (48.6 hectares) of West Moor Park East is located in FZ1, with the remainder being located in FZ3a and F22. However, this site is awarded (in the Council SA) the same negative (pink) score as sites 001 and 441, 100% of which are in FZ3a. The total Local Plan contribution of Site 001 is 51.54 hectares and therefore nearly all of it could be provided within FZ1 at West Moor Park East. The total Local Plan Contribution of Site 441 is 12.32 hectares and therefore all of it could be easily provided within FZ1 at West Moor Park East. It is illogical and unsound for the SA to treat all sites with 20% or greater in FZ3a with the same negative score. The binary nature of Criterion 11Ai should be amended to one that allows employment sites with a significant proportion within FZ1 to be awarded higher scores than those that are wholly or substantially in zones of higher flood risk. 5. Consideration of Details of Public Transport Improvements by Site Promoters Para 6.2.3 of the Site Selection Methodology Report notes that robust evidence has been provided by site promoters SA scores have been revised. This does not appear to have been undertaken for West Moor Park East. During the Informal consultation stage a package of information was submitted including confirmation from First Bus that an existing frequent bus route (Service 15) can be extended into the site. This service could then become viable after five years without subsidy. There is indication that this information has resulted in changes to the SA scores. This should result in a green score in relation to ‘distance to bus stop (3A(ii))’ as this would result in a stop within centre of the proposed development, but West Moor Park East is currently awarded a pink (negative) score. Consider that the relative accessibility of employment sites to high frequency bus services is of greater importance than the access to train services. A train service will not necessarily
provide a good and convenient means of accessing an employment site as it is dependant on the location of train routes and stations. 6. Consideration of Importance of Nature Conservation Site and Potential for Mitigation in Biodiversity Criterion Appendix A3 of the Site Selection Methodology Report indicates that under criterion 12Ai all sites that overlay (in part or whole) a defined wildlife site will be awarded a double negative (red) score irrespective of the importance of the designation or the scope for mitigation. This is an unsophisticated and crude approach as para 171 of the NPPF states that plans should distinguish between the hierarchy of international, national and locally designated sites and allocate land with least environmental value. At present, criteria 12Ai would award the same score to a site that overlays a local wildlife site to one that fully overlays a SSSI or SAC, contrary to national policy. There is no attempt within the SA to differentiate the degree of harm to the designation, taking into account the amount of overlap with the designation. Concerned that there is no consideration of the likely actual impact on designated sites where a site promoter has supplied appropriate mitigation/enhancement information to the Council. For West Moor Park East 4), the SA makes reference to the fact that the site incorporates a small local wildlife site, Holme Wood. However, the Vision Document provided in our client’s response to the 2018 Informal Draft Local Plan consultation not only shows that no employment development is proposed in that part of the site, but it also indicates that new vegetation and SUDs features would be provided to enhance the setting of Holme Wood and create new wildlife habitat. At present criterion 12Ai does not allow these benefits to be reflected in a SA score. Consider that criterion 12Ai should be amended to distinguish between the hierarchy of international, national and locally designated sites; the degree of harm to the designation; and to allow for mitigation/enhancement to be considered where site promoters have provided such information. 7. Highways Capacity The Highways Capacity for housing and employment options is considered in a separate SA Technical Appendix. However this relates to a very high-level assessment undertaken in 2015 of potential impacts on key junctions on the trunk road network only. No quantitative or qualitative assessment of the impact of allocations on the local road network has been undertaken. The scoring criterion is therefore inaccurate and unreliable and it provides an insufficient basis upon which to consider operation to the highway network and access to employment sites. Our capacity study demonstrates that development West Moor Park East would create traffic that can be satisfactorily accommodated at M18 Junction 4. The current main operation issues on the local highway network relate to traffic queuing back from roundabouts on the A630 West Moor Link at certain times. The West Moor Link improvement scheme (first phase is under construction) will resolve the existing queuing issues on the A630 and further improve the capacity and operation of key junctions along the A630 corridor. There is no justification for the current red ranking of West Moor Park East within the Council’s Highway’s Capacity Study.

Response:
Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum. The SA scoring process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites. The Housing and Employment Site Selection and Result Report provides further information.
We have compiled a detailed submission which is underpinned by a number of technical and evidence-based studies. We consider that it will be necessary to discuss this evidence with Officers and the Inspector at the Examination.

**Tests of Soundness:**
- Positively prepared
- Effective
- Justified
- Consistent with national

**Comment:**

Site Selection - Revised SA Scores in Light of Comments on SA Methodology and Council's Inaccurate SA Scores

5.1 We attach at Appendix 6 revised SA scores for West Moor Park East (Site 937/1031/938/1014) and the other sites we refer to under Issue 3 where we identify inaccurate scores that the Council has applied. 5.2 Whereas the Council’s site selection document asserts that Sites 001, 441 and West Moor Park East score similarly to other sites through the SA process, our revised scores show material differences between Site 001 and West Moor Park East in particular. West Moor Park East has more green scores than Site 001 (7 versus 4), less red scores than Site 001 (1 versus 1) and less pink scores than Site 001 (3 versus 6). 5.3 In our view this casts considerable doubt over the soundness of the Council's SA process as a way of informing the site selection process for employment site options. This is before assessment of the delivery of sites has been taken into account in terms of market attractiveness that would only serve to underscore these outcomes in favour of the West Moor Park East site. (SEE SUPPORTING DOCS for Appendices)

**Response:**

The SA scoring process has been undertaken using a standard approach which has been independently checked by Wood. It has used a consistent approach for all sites including flood risk. The Housing and Employment Site Selection and Result Report provides further information. The Addendum to the SA Report has also considered challenges to the SA scores with more detailed responses accordingly.
5.1 The omissions in the Sustainability Appraisal are not limited to the Site’s definition as Greenfield land in agricultural use. At part 3B) Accessibility to Local Services, the Site is marked ‘0’ for access, within 400m-800m to a neighbourhood shopping parade. The neighbourhood shopping parade in Auckley lies some 550m to the north of the Site. The score of ‘0’ is defined in the Sustainability Appraisal as ‘Neutral - Proposal is unlikely to create any significant effects (positive or negative) at present or in the future’. The score of ‘0’ for a site which plainly meets the 400m-800m requirement is difficult to reconcile. It is assumed this is another error within the report and the Site should score a ‘+’ ‘Positive effects - The proposal will have a positive effect on the SA Objective when compared to the current and future baseline conditions. Minor adverse effects may result but the overall effect will be positive.’ 5.2 Similarly, the Sustainability Appraisal scores the Site ‘0’ on proximity to a primary school (within 400m-800m). However, the Site lies within 600m of Hayfield Lane Primary School and 600m of Auckley Junior and Infant School. This clear omission is unexplained and is assumed to be an error. 5.3 The Local Planning Authority’s site selection process is reliant on the scoring in the Sustainability Appraisal. Where clear errors of scoring do occur, such as the case here, these errors feed into the allocations process. The errors in scoring therefore lead to a skewed site selection process which omit sites as being unsustainable when in fact they meet the assessment criteria. 5.4 The evidence base and Local Plan is therefore unjustified as it fails to consider reasonable alternatives.

Summary:
The omissions in the Sustainability Appraisal are not limited to the Site’s definition as Greenfield land in agricultural use. At part 3B) Accessibility to Local Services, the Site is marked ‘0’ for access, within 400m-800m to a neighbourhood shopping parade. The neighbourhood shopping parade in Auckley lies some 550m to the north of the Site. The score of ‘0’ is defined in the Sustainability Appraisal as ‘Neutral - Proposal is unlikely to create any significant effects (positive or negative) at present or in the future’. The score of ‘0’ for a site which plainly meets the 400m-800m requirement is difficult to reconcile. It is assumed this is another error within the report and the Site should score a ‘+’ ‘Positive effects - The proposal will have a positive effect on the SA Objective when compared to the current and future baseline conditions. Minor adverse effects may result but the overall effect will be positive.’ Similarly, the Sustainability Appraisal scores the Site ‘0’ on proximity to a primary school (within 400m-800m). However, the Site lies within 600m of Hayfield Lane Primary School and 600m of Auckley Junior and Infant School. This clear omission is unexplained and is assumed to be an error. The Local Planning Authority’s site selection process is reliant on the scoring in the Sustainability Appraisal. Where clear errors of scoring do occur, such as the case here, these errors feed into the allocations process. The errors in scoring therefore lead to a skewed site selection process which omit sites as being unsustainable when in fact they meet the assessment criteria. The evidence base and Local Plan is therefore unjustified as it fails to consider reasonable alternatives.

Response:
The Addendum to the SA Report published at Submission sets out responses to challenges to the SA.
3.1 The Site was previously in use as a sand and gravel quarry from the 1940s to the 1960s. The use of the quarry was discontinued in the 1960s and since then no activity or remediation has taken place. 3.2 Appearance 3.3 The quarry retains its artificial land features, where the excavation of the quarry is visible, in uniform parcels separated by raised paths/old roads formed by bunds. The top soil has been removed and very little ruderal vegetation is able to grow. The absence of any remediation since the discontinuance of the quarry renders the Site unsuitable for agriculture. 3.4 The uneven topography is itself an alien feature in the landscape, which is unlike any of the surrounding flat fields. The Site is plainly dissimilar to the surrounding landscape. The Site has not "blended into the landscape" (Note 1 - 1 See previously developed land definition, page 70 National Planning Policy Framework.) 3.5 The Site is well enclosed by boundary mature hedgerows and trees. There are limited views into the site from the roads (Hurst Lane and Mosham Road). 3.6 Conditions 3.7 We understand the quarry did not go through the Review of Old Minerals Permissions (ROMP) and no conditions regarding the remediation were ever attached to permissions for the Site (or if so are no longer enforceable). 3.8 In the absence of any conditions or other development management procedure making provision for the Site's restoration, the Site is 'previously developed land' as defined in the Glossary, Annexe 2 of the Framework. 3.9 Sustainability Appraisal / Strategic Environmental Assessment 3.10 The relevance and significance of whether the land is classified as previously developed land is evident in the Sustainability Appraisal, prepared by Wood Environment and Infrastructure Solutions UK Limited. The Site (ref: 446) is identified in the Appraisal section as being Greenfield, rather than Brownfield. In the assessment matrix, the Site is scored ‘0’ for being located on greenfield land that has not previously been developed. The commentary for the Site also states this is on Grade 3 agricultural land, but that it is not possible to ascertain whether this is best and most versatile land. The land is not in agricultural use and almost all of the topsoil has been stripped form the land. The Site is Previously Developed Land. As such the Sustainability Appraisal cannot be relied upon to give an accurate assessment of the Site's suitability and sustainability, while these errors remain uncorrected. 3.11 Assessment of Previously Developed Land Definition 3.12 There is an interesting history to the definition of PDL. The 7th March 2000 version of PPG3 contained a longer definition than appears in the current version of the Framework which appeared to have two tests. That formulation of language was considered by Mr Justice Sullivan in Dodds and Hands v Secretary of State for the Environment, Transport and the Regions [2002] EWHC 84 (Appendix A) Admin which found the "clear reason" that could outweigh the reuse of the site was a separate distinct test. Subsequently, the June 2011 version of PP33 dropped the second limb of the test but kept the same language in respect of the provisions relating to "blended into the Landscape in the process of time (to the extent that it can reasonably be considered as part of the natural surroundings)". The 2012 version of the Framework dropped the words in brackets from its predecessor definition. The 2018 version of the Framework dropped the words "in the process of time". The 2019 version maintains that wording, thus the present definition is "and land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape". 3.13 The approach to the interpretation of PDL has been considered by the Courts on a number of occasions. This was recently considered in the Court of Appeal in Dartford Borough Council v Secretary of State for Communities and Local Government and others (2017) EWCA Civ 141 (Appendix B). Essentially the language is to be given its ordinary common sense meaning in context. There is no need to look at previous iterations of policy in order to understand the meaning of the language used in its current context. 3.14 The relevant context is that the current Framework provides significant emphasis and importance to the reuse of Previously Developed Land, especially in urban areas. Paragraph 118 (c) requires significant weight to be given to the value of using suitable brownfield land within settlements; paragraph 68 confirms the importance of using brownfield registers to identify housing land; paragraph 84 encourages the use of PDL for employment uses; even in the greenbelt paragraph 145(g) facilitates the complete redevelopment of PDL. 3.15 Although the language surrounding the concept of "blended into the landscape" has been reduced there is absolutely no reason to suppose that the trimming down of the language has altered its meaning or the policy. The fact that the phrase to the extent that it can be reasonably considered as part of the natural surroundings has been deleted does not alter its meaning. The words "blended into the landscape" must mean that a relevant site has blended into something to which it is adjacent ie, the surrounding landscape. This point has been before the Courts in R (Bristol City Council v First Secretary of State (i) and Edward Ware Urban Renewal Limited (ii) 2004 EWHC 1934 (Admin) (Appendix C). In that case an Inspector had referred to the fact that the subject site was within an urban area and that there are no natural surroundings". It was suggested by the Claimants (paragraph 16) that this was a misapplication of National Policy (then in Annex C PPG3) and was irrational. Mr Justice Sullivan dismisses the argument (see paragraphs 18 and 19) confirming that the test is "not to be applied in a mechanistic way". In concluding that there were no "natural surroundings" the Inspector had not been purporting to lay down some principle of general application but this was a factor that could be taken into account. The Court dismissed the challenge. 3.16 The phrase "permanent structure" is deliberately not confined to buildings. Thus, an artificial dome of a landfill or excavated quarry bottom and bunds would constitute such a structure in and of themselves, the latter remain readily apparent on the Site. 3.17 The Dodds and Hands case dealt with railway sidings. In Mrs Olive Mrs Edwards v Rhondda Cynon Taff County Borough Council [2014] UKUT 0435 (Appendix D) the Court considered whether a disused railway cutting would qualify under the PDL definition. In both cases it is clear that structures which create an artificial land form are plainly considered to qualify. A Secretary of State decision and Inspector's report (Appendix E and F) dealt with a former mineral site and the artificial structures of what remained qualified under the definition of PDL. Paragraphs 13.5 to 13.7 set out the Inspector's views on the nature of the site and whether it constituted PDL. In that case, there was a
significant amount of mounding, rubble and tracks on the site. Photographs showed extremely uneven land and lines of tracks. That site had a very unnatural and artificial landform as a result of its previous use. The mounding of the tracks were visible and had not blended into the landscape and bore no resemblance to any part of its surroundings. 3.18 The first relevant exclusion in the PDL definition is that the site is: "land that has been developed for mineral extraction or waste disposal by landfill, where provision for the restoration has been made through development management procedures." However, it appears that no conditions were imposed to ensure the remediation of the site and no ROMP took place here. The absence of any conditions or review of minerals permissions indicates there has been no development management procedures to restore this Site. This exclusion in the POL definition does not therefore apply to the Site. 3.19 Given the substantial amount of time since the cessation of quarrying activities to the present day, any residual or unidentified restoration requirements in a relevant planning permission, would be unenforceable. 3.20 The question then remains as to whether the site can be judged to have blended into the landscape. All of the cases referred to above provide discussion on this topic and do provide some helpful insights, but each case must be judged on its own merits. Ultimately, this is a matter of judgment for the decision maker. The bunds and excavations can clearly be seen on the Site which appear as an artificial and alien landform in the surrounding landscape. The vegetation which has grown is tall ruderal species, but with the majority of the site uncovered earth. The on-site views indicate a clearly artificial landscape which is distinct from surrounding fields and quarries and could not be said to have blended into the landscape. 3.21 The Sustainability Appraisal makes an erroneous reference to this Site being 'Greenfield' and to its agricultural land classification. The Sustainability Appraisal's assessment of this Site is not consistent with the Framework and is unsound for this reason.

Summary:
The quarry has been disused since the 1960s and no remediation has taken place. No remediation conditions, and even if so, unenforceable. Top soil removed and little vegetation able to grow. Site unsuitable for agriculture. Site is not blended into the landscape and sticks out. It is well bounded by physical features. SA states this is greenfield, but it scores '0' for this, and also that it is BMV agricultural land, but it is not possible to ascertain this. The SA can therefore not be relied on whilst errors remain uncorrected. Site does not meet with definitions of previously developed land. 2019 definition is: "land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape". This has been tested in the courts. National policy states brownfield development should be given substantial weight. The question for the decision maker is whether this site has blended back into the natural landscape. The bunds and excavations can clearly be seen on the Site which appear as an artificial and alien landform in the surrounding landscape. The vegetation which has grown is tall ruderal species, but with the majority of the site uncovered earth. The on-site views indicate a clearly artificial landscape which is distinct from surrounding fields and quarries and could not be said to have blended into the landscape.

Response:
The Addendum to the SA Report published at Submission sets out responses to challenges to the SA.
We are satisfied with the content of this topic paper, but have the following observations to make. We have also noted a number of minor/typing errors. Paragraph 1.2 There is a small typing error in this paragraph - 'Kaedby' should read Keadby. Paragraph 1.6 Main River Flooding The way this section is written makes it look like Flood Risk Zone 3b is part of the Environment Agency's Flood Map for Planning, which is not the case. Our flood map only defines three zones and does not separate flood zone 3 into 3a and 3b. We ask that it is made clearer that 3b is a designation derived from the Council's SFRAs and is not shown on our Flood Map for Planning. The way flood risk probability is communicated has subtly changed. We advise removing the word 'year' from the definition of probability. This has caused confusion for people in the past as they have an expectation that following a flood event, a further event would not happen for another '100' years. The definitions contained in the current PPG should be used (see 'Table 1: Flood Zones' in the Flood Risk and Coastal Change section). Figure 3 on page 3 Minor omission - the heading is incomplete - the year is missing. Figure 6 on page 6 The EA no longer has a Regional tier. The two EA water management areas are known as 'Yorkshire Area' and 'East Midlands Area'. We noted that there is no 'Figure 5' in the document so numbering may need to be updated. Paragraph 2.3 Minor typing error - "The sequential test is, in effect, is a sieving process" - suggest removing the second "is". Paragraphs 2.4 and 2.5. The Exception Test is referred to as singular in the NPPF. The section heading, and both paragraphs 2.4 and 2.5 refer to it as singular in some places, and plural in others. For consistency, "tests" should be amended to 'test'. Table 2 - EA Modelling Summary - Upper Humber Flood Risk Mapping Study DMBC District: River Don (downstream of the railway line Barnby Dun). Detail: This study follows a review of the Humber Flood Risk Management Strategy after tidal surge experienced in December 2013. The study builds upon previous work by improving understanding of tidal and fluvial interaction, floodplain interactions and the risk from defence breaches. Breach scenarios do not include an allowance for climate change. Timescales: Complete - Middle and Lower Don Modelling Study Detail: This project reviews the EA flood mapping (i.e. flood zones), investigates defended and undeclared scenarios, and takes account of the December 2016 climate change predictions. The defended model outputs have been signed off for use and the breach modelling has been scoped and is due to be run shortly. Timescales: Defended modelling now signed off for use. Breach modelling currently being scoped - The River Torne & Three Rivers Modelling Timescales: This modelling was completed in January 2019 and is now publicly available. Note - This modelling should be used in conjunction with the SFRAs and critical flood levels (CFL) when proposing finished floor levels. - The River Idle and River Ryton Timescales: Modelling is in the final stages and is programmed for delivery before the end of 2019. - The Isle of Axholme Flood Risk Management Strategy Timescales: The IoA FRMS was signed off by DEFRA in 2014. Note - A letter is due to be sent back to DEFRA imminently in 2019 detailing how the EA will continue to implement the recommendations of the IoA FRMS. Figure 8: Environment Agency Existing & Planned Flood Modelling Programmes We have requested an updated map from the team who produce it, but have not yet received it. We have requested this be produced as soon as possible and will send it to you as soon as it is available. Paragraph 3.5 - North Lincolnshire SFRA We are aware that North Lincolnshire Council (NLC) are currently carrying out a 'light touch' update to their SFRAs where they have lowered the FFL requirements to 4.1mAOD. This was due to the fact that the 4.1mAOD level already incorporated approximately 600mm of resilience to account for residual uncertainty and a further 300mm was added by NLC to be extra cautious. NLC have decided to remove the requirement for the further 300mm. We provided the council with our rationale behind the CFL by email on 16 September 2019. Paragraph 3.8 - Catchment Flood Management Plans Please note CFMPs are being replaced by Flood Risk Management Plans (FRMPs). Since the publication of FRMPs in 2016, CFMPs are no longer actively used within the EA as the policies and actions they contain are now considered to be out of date. The FRMPs are more relevant and up to date and these are now more widely used. Under the EU Floods Directive (2008), the EA is required to prepare FRMPs for flooding from main rivers, reservoirs and the sea, for all river basin districts in England, there are 10 altogether. LLFAs are required to prepare FRMPs for flooding from surface water, ordinary rivers and groundwater for areas with a significant risk of flooding. Paragraph 7.2 This paragraph states that all minerals developments all considered appropriate in all flood risk areas subject to passing the Sequential Test. It should be noted that whilst this true for flood zones 1, 2 and 3a, it is not the case for flood zone 3b where only sand and gravel workings (which are classified as water compatible) are considered appropriate. Paragraph 10.2, 1st bullet point refers to the Environment Agency "Yorkshire & Trent Regions", this should be amended to 'Yorkshire and East Midlands Areas'.
Tests of Soundness:

Comment:

2.1 Before commenting on individual draft policies, it is disappointing that a number of key evidence documents are not available as part of this consultation. There are a number of 'Topic Papers' that are referenced in the Publication Draft that are not yet available and will be issued at Plan Submission stage. This is not considered as acceptable as it fails to allow representors the opportunity to fully understand the evidence and justification behind the Council's approach in the Publication Draft. It is considered reasonable and fair that all the background evidence and Topic Papers which provide additional information regarding the content of the Publication Draft stage are made available at Publication Draft stage. The Topic Paper in relation to the distribution of the proposed housing requirement and the proposed requirement ranges is referred to in the Council's Consultation Summary of the 2018 Informal Consultation stating: "The Housing and Settlement Strategy Topic Paper (to be issued at Submission) will demonstrate a sound housing requirement has been identified, as proposed in Policy 3, to help deliver Policy 2." "The use of ranges will be explained in the Housing and Settlement Strategy Topic Paper (as an update to the Settlements Background Paper published alongside the 2018 Informal Consultation)." 2.2 An update to the Settlements Background Paper is a key piece of evidence that should be available at Publication stage for consideration alongside the Publication Draft policies. 2.3 A further evidence document that is not available relates to Flood Risk. The justifying text to Policy 2 adjacent to paragraph 4.17 informs that "A Topic Paper will be issued at Plan Submission explaining how the Council has considered the need to avoid flood risk where possible as part of Plan preparation." Over two fifths of the Borough is located within medium to high risk flooding areas, and the Sites and Policies DPD Inspector was concerned with the Council's weighing process which did not give due weight to flooding and was one of the reasons leading to the withdrawal of the Sites and Policies DPD. Given the clear issue of flood risk in the Borough it is surprising and unacceptable that this Topic Paper is not available at Publication Draft stage.

Summary:
It is disappointing that a number of key evidence documents are unavailable as part of this consultation. A number of topic papers are missing which is unacceptable as it does not allow consultees the opportunity to fully understand the evidence and justification for the approach. It is considered reasonable and fair that all the background evidence and Topic Papers are made available and Publication Draft stage. This is true of an update to the Settlements Background Paper and Flood Risk. The settlement background paper is a key piece of evidence and given the flood risk in the borough, it is surprising and unacceptable that the flood risk topic paper is unavailable.

Response:
Concerns are noted - the majority of the Topic Papers were available at both the 2018 informal consultation and Regulation 19. Agree that not all were published (e.g. flood risk) but contend that Topic Papers generally summarise existing evidence bases as opposed to providing new evidence in themselves.
2.1 Before commenting on individual draft policies, it is disappointing that a number of key evidence documents are not available as part of this consultation. ## Site Selection - Absence of Comprehensive Update to Colliers Employment Land Review

7.1 We note that the Council’s evidence base includes an addendum to the Colliers Employment Land Review (February 2018) that has been produced in light of the 2018 Informal Draft Local Plan consultation. However, this is only a very selective update. For example, the Addendum does not update the assessment of West Moor Park East (Site 937/1031/938/1014) in the light of the substantive response to the 2018 Informal Draft Local Plan consultation provided by Blue Anchor Leisure, and the considerable consultation that has taken place between our client and the Council. 7.2 In the absence of such an update we do not consider that the assessment of West Moor Park East provided within the Colliers Employment Land Review, a key element of the Local Plan evidence base for employment options, should be relied upon when considering the merits of this site for employment. However, we agree with the conclusion of Colliers at Appendix 3 that West Moor Park East is well located and a potential extension to the established employment destination at West Moor Park. 7.3 In the light of the various concerns referred to above we consider that the Site Selection Methodology is not positively prepared, justified, effective or consistent with national policy. Considerable amendments are required to the Council’s approach in order to make it sound.

## Summary:

Note that there is an addendum to the Colliers Employment Land Review (February 2018) produced as a result of the 2018 Informal Consultation. It is only a selective update and does not update the assessment of West Moor Park East in the light of the response to the 2018 Informal Consultation. It is considered that the assessment of West Moor Park East in the Colliers Employment Land Review should not be relied upon. Do agree with Appendix 3 of the Colliers report that West Moor Park East is well located and is a potential extension to West Moor Park. Due to the concerns referred to above, it is considered that the Site Selection methodology is not positively prepared, justified, effective or consistent with national policy. Considerable amendments are required to make it sound.

## Response:

There is an addendum to the Colliers Employment Land Review to reflect inaccuracies in the description of Site 001 ? Thorne North. It is not the remit of the Employment Land Review to amend SA scores.

**Comment:**

We object in the strongest form to current proposals to release land from the greenbelt. Greenbelt by definition is designated to prevent the coalescence of conurbations through development within the areas between settlements. Any removal, or re-designation of this land is by definition an erosion of this national policy of protection. As the current proposal seeks to release areas (particularly west of Sprotbrough village and within the Barnburgh/Harlington area) from protection, and encourage development, it is by definition an attack on the current greenbelt. Ordinarily housing would not meet "very special circumstance," and would not be allowed in greenbelt. The Authority’s current policy to suggest "exceptional" circumstances mean it should be removed from the greenbelt is still development of this land in the long-run. The borough contains many other places development could easily be supported. It is our opinion the as such any "exceptional" argument, put forward by the Authority, and created to redefine land to support development is purity semantic and without merit. Development should only take place outside the current greenbelt limits. Removal of land through the current plan process will only make more land more easily re-defined in the future. It sets a dangerous precedent. Beyond the obvious policy change this represents, it has been obvious over recent years that the authority has already been systemically "lowering the bar" in relation to, "very special circumstances." By way of specific examples, the Moto motorway service station proposal, Hampole Quarry/Sterfibre storage facilities, and current proposal to build housing and (essentially) industrial units on the former High Melton College site all seem to easily pass through the hands of officers, who willingly endorse proposals with "recommendations to approve." The Authority's attacks on greenbelt within Sprotbrough Ward are sustained and consistent by developers. Officers are meant to prevent it. A plan written by officers who now propose re-designation of greenbelt land underlines the contempt with which the Authority views National Planning Policy relating to greenbelt. Thankfully two of the above proposals were turned down by the Authority's Planning Committee (against officer recommendation) BUT subsequently BOTH refusals were then upheld at appeal/public enquiry. It is worrying that the current local plan ignores the important lessons in these appeal results. Sadly, the third proposal continues to progress through the system with support solely based on assumptions provided by a developer. Poorer still is the Authority's continued policy to accept developer assumptions and business cases entirely unverified by any external/independent assessment. These are not the basis to meet "very special circumstance" or "the exceptional ones" used to re-designate land. Finally upon greenbelt, underlining the need to reinforce the authority's commitment to existing greenbelt, it is clearly a matter of urgency that many officers seem to need to re-learn the importance of its headline in being the most protected status of land within our borough, and treated it as such.

**Summary:**

Objection is made to the removal of land from the Green Belt and allocation for development, particularly west of Sprotbrough village and within the Barnburgh/Harlington area. Development should take place outside of the currently defined Green Belt - the Borough contains many other places where development could easily be supported. Any "exceptional" argument, put forward by the Authority, and created to re-define land to support development is purity semantic and without merit.

**Response:**

Local Plan's can amend Green Belt boundaries where they have demonstrated exceptional circumstances for doing so. Such matters have been set out through numerous supporting documents including the Green Belt Review, Topic Paper and site selection methodology. The local plan is not significantly altering the general extent of the Green Belt and the vast majority of the west of the borough is being retained as Green Belt where national planning policy will apply. Other points raised are specific to planning applications/very special circumstances and not the local plan.
Comment:

We object in the strongest form to current proposals to release land from the greenbelt. Greenbelt by definition is designated to prevent the coalescence of conurbations through development within the areas between settlements. Other points raised are specific to planning applications/very special circumstances and not the local plan.
We act for a number of major land owners in the Doncaster area, we have detailed knowledge of the sites and the planning history of the Borough. We have previously been involved with the Core Strategy Plan and with the Examination of the draft Sites and Policies DPD. Our knowledge of the various land parcels, ownerships, the strategic land position and site specific details, means that we have information to inform the debate regarding the overall housing requirement and the specific allocation of sites which will assist the examination.

The alteration to the Green Belt Boundary at Carcroft Skellow around sites 186 and 165 is supported. The proposed new boundary is a logical and defensible boundary for the Green Belt, the A1 and Green Lane form substantial and well defined boundaries to the settlement. It is noted that the Proposals Map that the boundary now includes the two properties to the north west of the site; however the Map in the Developer Requirements on pages 272 and 273 do not have the same boundary shown. This Plan needs to be amended to match the Proposals Map.

Supports alteration to Green Belt Boundary to remove site allocation Ref 165/186 at Carcroft-Skellow. The new boundary is logical and defensible with well-defined boundaries. The Policies Map boundary includes the 2 properties to the north-west of the site but the developer requirements plan does not and should be amended to match the Policies Map. The allocation should also be included in the development limits of the settlement.

Support noted. The developer requirements map does not denote Green Belt, rather it reflects the red line boundary for sites 165/186. As per the development limits methodology, the site will not be included in the development limits as it is a greenfield allocation, however it will be shown as an allocation and removed from the Green Belt.
Tests of Soundness:

Comment:
Green Belt (6) the meaning of Green Belt is explained. However, - The removal of land from Green Belt in both service villages of Barnburgh-Harlington and Sprotborough (Appendix 2, sites 777 & 929 respectively) requires further justification with regards to ‘special circumstances’ (NPPF). Otherwise, precedents will be set for reducing the amount of Green Belt land.

Summary:
Policy 2, Part 6 : Green Belt. The meaning of Green Belt is explained. However, the removal of land from Green Belt in both service villages of Barnburgh-Harlington and Sprotborough (Appendix 2, sites 777 & 929 respectively) requires further justification with regards to ‘special circumstances’ (NPPF). Otherwise, precedents will be set for reducing the amount of Green Belt land.

Response:
The exceptional circumstances argument is set out in the Green Belt Topic Paper.
3.1 Paragraph 139 of the National Planning Policy Framework states that when defining Green Belt boundaries councils should “where necessary, identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period.” 3.2 Despite the council recognising the constraint that the borough’s Green Belt places on development, and the acceptance that some land should be released from the Green Belt to facilitate development, no land has been safeguarded for future development. The Local Plan is therefore contrary to national policy and is unsound. 3.3 To make the Local Plan sound some safeguarded sites should be identified.

Response:
As set out in the Green Belt Topic Paper, it is not considered "necessary" or appropriate to allocate safeguarded land at this time.
This representation applies to land off Charter Drive, Scawthorpe, Doncaster (Local Plan ref: 02992), which comprises a small plot of land of 0.079 hectares. Previous representations were prepared in relation to this plot of land and submitted during the Draft Policies and Proposed Sites consultation exercise in September/October 2018. The previous representations specifically requested that the Council revisit their Green Belt and settlement boundary Local Plan evidence base and to re-assess the site accordingly. It was considered that the site should be excluded from the Green Belt and that the Proposals Map should be clear in defining the extent of the Green Belt based on appropriate features on the ground. My client is pleased to see that their comments have been taken into account and that the Proposals Map clearly shows that the Green Belt boundary follows the line of an established hedgerow, which forms a clear and appropriate boundary that will endure the test of time. It is therefore considered that, without prejudice to the potential for the large adjacent sites to come forward for housing development, the proposed Green Belt boundary in the vicinity of the above site is appropriate and the Local Plan can therefore be considered to be legally compliant and sound to this effect.

Summary:
Land of Charter drive Scawthorpe. Support the proposed amendment to the Green Belt and considers the Local Plan to be legally compliant and sound.

Response:
Noted. Support welcomed.
Exceptional Circumstances for Green Belt Review

7.1 The Local Plan Evidence Base 'Green Belt Phase 3 Report Summary' identifies that there are known constraints on the supply of land at those settlements which form strategic settlements in the draft Local Plan Policy 2 - a Strategic Policy. In doing so, and in respect of NPPF paragraph 137, the Authority confirm that exceptional circumstances exist to justify changes to Green Belt boundaries in this Local Plan, and this approach is being taken at sustainable settlements within the Borough. 7.2 At this stage of the plan, only one small site at Bawtry is proposed to be removed from the Green Belt. Given the reasons set out above for additional growth to be provided for in the Borough more widely, and also at Bawtry; and the Flood Zone restrictions on the east side of the settlement, it is necessary and justified to provide further Green Belt releases for the settlement. Bawtry: Green Belt Review 7.3 The Local Plan Evidence Base 'Green Belt Phase 3 Report Summary' confirms the methodology for the assessments of Sites through the Green Belt Review. Each site has been assessed in two ways: for the strength of the boundary, and against the site's contribution to the five purposes of the Green Belt (NPPF, para 134). The site is then given an overall score through a 'Strength of Case' Matrix on the "strength of case for continuing in the site selection process". This could be strong, moderately strong, moderate, moderately weak or weak case. 7.4 The site promoted in this representation covers land previously considered as Site 873, as well as some additional land, as shown on the site location plan on page 3 of this representation. Site 873 Site A, Land at Martin Common Farm, was assessed as having a Weak Case for inclusion in further site selection work. We dispute this assessment and consider it unsound. 7.5 The Green Belt Review (Stage 3) for Site 873 states that "The proposed Green Belt boundary would be weakly defined by a field boundary supported by moderately dense field boundaries to the west, the A639 Great North Road in the east which represents a strongly defined Green Belt feature and a weakly defined boundary in the north which is based on no infrastructure or natural boundaries. Whilst release of the Proposed Green Belt site would result in a northern extension to Bawtry, the Proposed Green Belt boundary features, particularly to the north, are therefore considered to be weak." 7.6 To address these boundary issues the proposed residential development has been scaled back to the south west portion of the site. This area is bounded by Martin Lane to the south west, residential development to the east and a former airfield track to the north west. These boundaries can be further enhanced through appropriate landscaping. The development area as now proposed is, therefore, surrounded by clear defensible boundaries on all sides. In this respect the boundary feature should now be considered 'strong'. 7.7 In respect of the purposes of the Green Belt, The Green Belt Review (Stage 3), states that Site 873 strongly performs against local interpretation of the Green Belt purposes: it "performs weakly when assessed against the extent to which the Green Belt checks the unrestricted sprawl of a large-built up area, has a moderately weak role in preserving the setting and special character of Bawtry, and has a moderate role in preventing neighbouring towns from merging by resisting ribbon development. The Green Belt at this location is not considered to have a role in assisting urban regeneration by encouraging the recycling of derelict and other urban land, however the Site contains land which is considered to have a strong role in safeguarding the countryside from encroachment." 7.8 To minimise the impact of the proposals and minimise the effect of encroachment the development parcel has been scaled back to the area immediately abutting the residential development to the east. The existing residential development already forms a protrusion into the countryside particularly Ingham Road / Grange Avenue. The proposed residential development would simply 'round-off' the development limit at this point. 7.9 In landscape and visual terms, the site at Martin Lane provides the opportunity for a well-designed scheme to serve as an appropriate extension to the north-west of the village. 7.10 The landscape of the site was identified in the published Landscape Capacity Study (see appendix 2) to be of only 'moderate' quality and this is further influenced by the adjacent commercial premises. This would be generally well contained in views from the wider landscape, in part due to the screening brought about by dense largely coniferous Bawtry Forest to the north and west, and King's Wood to the east of the A638. This assessment was made on the previous submission which was larger in scale. The proposals as revised would further minimise the visual impacts. The Concept Masterplan (appendix 1) identifies that the build line will follow the existing built form in this area of Bawtry. Further, a green offset to Martin Lane is proposed. This will not only provide a visually attractive and interesting gateway to the site but will also minimise its visual impact. (SEE EMAIL FOR Appendices) 7.11 There is currently no formalised public access to the site and the development would therefore allow for new footpath links and connectivity which would be of benefit to existing residents in the north of the village. In addition, it would provide the opportunity for new areas of publicly accessible green space. 7.12 Overall, the scheme could be designed to serve as an appropriate rounding off of the village which would complement similar more recent residential development and its associated open space provision on the eastern side of the A683. With regard to the location of the site in the Green Belt, the development of this parcel of land would not result in any substantive or appreciable reduction in the separation between Bawtry and either Rosssington to the north, or Tickhill to the west. A well-designed scheme would allow for the creation of a new permanent and defensible Green Belt boundary formed by a clearly defined new vegetated buffer at the boundary of the site. The Concept Masterplan (appendix 1) that accompanies this representation provides a framework for development. 7.13 It is our position that this site should be allocated for residential development to meet the clear need for development within Bawtry and the wider borough.
Summary:
The authority confirm that exceptional circumstances exist to justify the amendment to Green Belt boundaries in the borough. Only one small Green Belt site is proposed in Bawtry to be removed from the Green Belt. Further release is needed. Dispute the outcome of the Green Belt review which assessed Site 873 as having a weak case for inclusion in further site selection work and consider this to be unsound. Flagged boundary issues have been noted and residential development scaled back to the SW portion of the site - bounded by Martin Lane, residential development and the former airfield track. Boundaries can be enhanced through appropriate landscaping. The development now proposed thus has clear defensible boundaries on all sides. It should now be considered strong. To address encroachment issues the development parcel has been scaled back to the area immediately abutting the residential development to the east. The existing residential development already protrudes into the countryside, particularly at Ingham Road / Grange Avenue. The residential development would round off the development limit. Martin Lane provides the opportunity for a well designed scheme to serve as an appropriate extension to the north west of the village. The Landscape Capacity Study identifies it as “moderate” quality. It would be generally contained in views from the wider landscape, in part due to screening from Bawtry Forest and Kings Wood. The assessment was made on the previous submission which is larger in scale. As revised, the visual impact would be minimised. The Concept Masterplan identifies that the build line will follow the existing built form. A green offset to Martin Lane is proposed. This will not only provide a visually attractive and interesting gateway to the site but will also minimise visual impact. There would be new footpaths / access and green space. Development would not reduce the separation between Bawtry and Rossington or Tickhill and a defensible boundary can be made. The site should be allocated for housing and meet the clear need for development in Bawtry and the borough.

Response:
The Green Belt review finds that this area of Green Belt has a weak case for continuation in the site selection process, based on an agreed and consistently applied methodology. As set out in the Green Belt Topic Paper, there are is no justification for releasing further land from the Green Belt in Bawtry to make up the shortfall of 20 units, given the lack of appropriately sized options and the harm to the Green Belt if releasing other land in this location (as established through the Green Belt Review). This is set out in the Green Belt Topic Paper.
4.1 The Doncaster Local Plan 2015-2035 - Policies Map and related Local Plan policies are, in part, unsound, this is primarily due to the inclusion of the iPort site within the Green Belt. 4.2 Policy 2, "settlements hierarchy" section 5 states: The openness and permanence of Doncaster’s Green Belt (as indicated on the key Diagram) and defined on the Proposals Map will be protected. The general extent of the Green Belt will be retained. Within the Green Belt, national planning policy will be applied including the presumption against inappropriate development except in very special circumstances. Safeguarded Land (shown on the Proposals Map) has been removed from the Green Belt but not allocated for development to meet longer development needs equivalent to 5 years beyond the Plan Period. The principles of protection given in national planning policy will apply to safeguarded land during the current Plan period. 4.3 RPS agree that the openness and permanence of Doncaster’s Green Belt should be protected, however the existing Policies Map fails to do this. DMBC state that the iPort development continues to be washed over by Green Belt because this reflects the very special circumstances that supported its development, as well as the site still being a long way from completion given its sheer size. (Para 16.123). 4.4 The continued retention of the iPort employment site in the Green Belt is not consistent with the character of the site; it has already been developed and built form is present. The continuation of its status as Green Belt land undermines the overall legitimacy of Green Belt policy. Paragraph 139 of the NPPF 2019 states that when defining Green Belt boundaries, local plans should: e) be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period. 4.5 DMBC have stated the following in their rebuttal of RPS’s previous representation: It is considered that amending the Green Belt will make no difference to the permitted scheme or its delivery in any eventuality, which can be developed as per the permission regardless of the site being Green Belt. 4.6 This approach is not in line with the National Planning Policy Framework, specifically Para 139 e) featured above. Regardless of how the Green Belt designation effects deliverability of the site, the land is, by virtue of its development, no longer permanently open. Para 134 sets out the five purposes of the Green Belt. The land at iPort cannot and does not contribute to the five purposes. It cannot assist in safeguarding the countryside from encroachment, as it has already been encroached by the granting of multiple planning permissions and subsequent developments on the site. 4.7 The iPort site abuts the settlement at Rossington, and there are several isolated parcels of land that serve little to no purpose trapped between the major transport links and developed land. In order for iPort to continue and expand its services into the future the developers of the site should be able to utilize the immediately adjacent land for ancillary development. The land around Bankwood roundabout north-east of iPort makes no contribution to the openness and purposes of the Green Belt. and therefore, should be removed in order for it to be developed in support of iPort and Rossington. 4.8 It is essential that there is some flexibility in the planning framework for the site, so that the iPort scheme can be updated to respond to changing economic circumstances. Retention of the site in the Green Belt limits the ability to respond promptly to changes, as even quite small changes to the scheme may have to be referred to the Secretary of State under the Green Belt consultation procedure. The introduction of a site-specific policy in the plan in parallel with the suggested Green Belt boundary change, could be used to ensure that the development of the site was consistent with the principles that underpinned the granting of the iPort permission. (SEE EMAIL FOR Photograph taken from Google Maps, looking west towards iPort from iPort Avenue. This site is included within the Green Belt, multiple applications have been approved by DMBC on site and much of the site has already been built out.) 4.9 RPS recommend that the Green Belt boundary is re-drawn and DMBC consider the following changes: - Exclusion of the entire iPort site from the Green Belt. - Exclusion of the land between the "Great Yorkshire Way (A6182)" and the north-east of iPort from the green belt boundary. (SEE EMAIL FOR Indicative drawing of the iPort area that should be released from the Green Belt. Existing Green Belt boundary is shown in Green and the area that should be released is outlined by a red)
Response:

iPort has an extant planning permission which allows the development to proceed even if it is still included within the Green Belt. A Green Belt Review has already been undertaken for this Local Plan and further information on the Green Belt can be found in the Green Belt Topic Paper. The Topic Paper also acknowledges that Green Belt boundaries are likely to be reviewed at the end of the plan period.
Response:

The Green Belt Review shows that this site has a moderately strong continuation in the site selection process, which makes it the joint best option in Green Belt terms along with site 826. 040 scores better in the SA, however, and can deliver approx. 200 homes, and therefore is the preferred option. The Green Belt Topic Paper sets out the exceptional circumstances for removing this site from the Green Belt, and also considers the options in Conisbrough Denaby fully in its assessment.
Comment:

5.33 Part of the site is currently allocated as open space and included in the Green Belt. The northern boundary of the site if formed by the existing employment allocation to the south of Broomhouse Lane, to the west are residential area and Edlington woods form the eastern and southern boundary. 5.34 The removal of the site from the green belt would provide the potential for an extension to the existing Broomhouse Lane industrial estate to provide additional land for the expansion of the existing Polypipe business which is in situ on the estate. 5.35 The proposed site boundary would bring the settlement boundary in line with the southern extent of the boundary to the west. Strong defensible boundaries would be formed by the existing Edlington woodland to the south and east. 5.36 The amendment to the Green Belt would enable a further employment allocation in the west of the borough to support and meet the needs of existing employers in this area providing choice and flexibility and ensuring that the existing business is able to expand and operate efficiently in the area to support the housing growth strategy. 5.37 A stable economy will ensure the inclusive and sustainable communities in the west of borough are maintained.

Summary:

Green Belt matters Part of the site is currently allocated as open space and included in the Green Belt removal of the site from the green belt would provide the potential for an extension to the existing Broomhouse Lane industrial estate proposed site boundary would bring the settlement boundary in line with the southern extent of the boundary to the west amending the Green Belt would enable a further employment allocation in the west of the borough to support and meet the needs of existing employers

Response:

There are no exceptional circumstances which justify the release of any sites from the Green Belt or amend the for employment use, as there is land available for employment development across the borough in non - Green Belt locations, and the settlement strategy for employment is not locationally specific (as it is with housing).
5.33 Part of the site is currently allocated as open space and included in the Green Belt. The northern boundary of the site if formed by the existing employment allocation to the south of Broomhouse Lane, to the west are residential area and Edlington woods form the eastern and southern boundary.  5.34 The removal of the site from the green belt would provide the potential for an extension to the existing Broomhouse Lane industrial estate to provide additional land for the expansion of the existing Polypipe business which is in situ on the estate.  5.35 The proposed site boundary would bring the settlement boundary in line with the southern extent of the boundary to the west. Strong defensible boundaries would be formed by the existing Edlington woodland to the south and east.  5.36 The amendment to the Green Belt would enable a further employment allocation in the west of the borough to support and meet the needs of existing employers in this area providing choice and flexibility and ensuring that the existing business is able to expand and operate efficiently in the area to support the housing growth strategy.  5.37 A stable economy will ensure the inclusive and sustainable communities in the west of borough are maintained.

Summary:
Part of the site is currently allocated as open space and included in the Green Belt removal of the site from the green belt would provide the potential for an employment extension proposed site boundary would bring the settlement boundary in line with the southern extent of the boundary to the west amendment to the Green Belt would enable a further employment allocation in the west of the borough to support and meet the needs of existing employers

Response:
The Green Belt Topic Paper sets out that there are no exceptional circumstances for amending the Green Belt for employment allocations, as there are development opportunities outside of the Green Belt in the borough, and the settlement strategy for employment does not stipulate allocations necessarily need to be made next to centres of population. In accordance with consultation on the strategy, employment can instead be in other locations and easily accessible.
Marr Parish Meeting note the overwhelming and very strong response to previous consultations where over 75% of the responses supported "The Borough's overall housing and employment needs should be met outside the Green Belt as far as possible so as to help protect the Green Belt". Marr Parish Meeting unanimously support this view and would like to see this strong opinion reflected in the Full Local Plan Draft. We further support previous Consultation Feedback: there were a significant number of responders who supported the use of Brown Field sites in preference to Green Belt for employment and development. This mirrors our very strong opinion, that it is crucial that the Green Belt bands between Doncaster, Wakefield, Barnsley and Rotherham are not eroded. It is our very strong opinion that Brownfield and existing redundant sites are prioritised over Greenbelt for development. Based on the Greenbelt reviews, Marr Parish are still unclear which sites /if any are to be proposed for development for new homes or job creation, or which sites are being considered, with a view to be taken out of Greenbelt. Interactive Maps have been provided, however they are unwieldy and not easily negotiated, feedback which we have already fed back to DMBC representatives. We believe more clarity is needed on these site locations. We maintain that affordable housing is not only needed and must be delivered within the Local Plan, however we do not believe that the Rural Communities can deliver the supporting services that will be needed e.g. public transport, health and Employment support etc. Even if development of this nature could be considered 'very special circumstances' under Greenbelt policies, we do not believe affordable housing in these locations could ever be sustainable. Affordable housing needs can only be realistically met within urban locations. We would again reiterate that our rural community maintains its view - that development in the small villages and hamlets must be proportionate, sympathetic and in keeping with their character to maintain our rural identities. Marr Parish strongly supports and would welcome the new proposed planning policies, where growth is directed to larger and more sustainable settlements and also those policies which seek to continually protect our rural communities and identities. Marr Parish fully supported being designated as a 'Smaller Greenbelt Village' with 'no Identified Development Limits' in the last 2018 consultation for the Local Plan. However, having consulted with communities to change their designation, which gained overwhelming support, DMBC have now withdrawn their intention and it will now no longer apply. Marr Parish maintains, that having completed a full review of the Greenbelt, with the sole purpose for this to act as a catalyst for changes to the Greenbelt for Doncaster, DMBC then proposed a change to designate of some of the villages to 'Smaller Greenbel Village'. However, although several other changes to the Greenbelt are now to be adopted within the Local Plan, the designation to 'Smaller Greenbelt Villages' has now been abandoned. With overwhelming support in favour of these new designations, Marr Parish advocate for this to be reinstated in the final version of the Local Plan. We maintain, Greenbelt and Agricultural land are a very precious resource which must be protected. Marr Parish continues to object to proposals for additional Greenbelt land to be 'safeguarded'. We do not believe that development necessitates the use of Greenbelt land but no more land should be taken out of Greenbelt than is vital. Land that will not be used for development 'over the life of the plan', does not in our opinion mean that Safeguard land can be considered vital and as such, it cannot be considered 'very special circumstances'. We strongly object to Greenbelt land being safeguarded and insist that it should remain Green Belt Land within the Local Plan.

Summary:
Support given to previous consultation feedback that overall housing and employment needs should be met outside the Green Belt as far as possible and that brownfield sites should be used in preference to Green Belt sites. Concern raised that it is unclear which of the proposed site allocations for new development are brownfield and which are proposed to be taken out of current Green Belt. Although it is considered Affordable Housing is not only needed, but should be delivered within the Local Plan, realistically it can only be provided in urban locations and could never be sustainable in Green Belt locations as rural communities cannot deliver the supporting services that will be needed such as public transport, health and employment support. Marr should be identified as a "Smaller Green Belt Village" with no identified 'Development Limits" as was proposed in the 2018 Consultation. Would not support identification of Green Belt Safeguarded Land because if such land is to remain undeveloped over the life of the plan then 'very special circumstances' cannot be demonstrated.

Response:
The Green Belt allocations have been clearly set out and justified in the Green Belt Topic Paper and Site Selection Methodology. Not all Green Belt proposals are in rural communities, and all sites proposed are part of settlements deemed sustainable. We would therefore expect affordable housing to come forward on these, and in some cases for this to be 23%, which is higher than many urban areas might be expected to deliver due to viability - as set out in the Viability report. The Green Belt Topic Paper explains why the Council reverted to the approach of defining Marr as a village inset in the Green Belt instead of covered by it. It is not considered that this approach was justifiable in Green Belt policy terms. The Council are not seeking to allocate safeguarded land for reasons set out in the Green Belt Topic Paper.

**Comment:**

Going forward, as per previous advice, the IDP represents an essential document to identify and guide the delivery of new and improved infrastructure, including transport infrastructure, to support the Plan's development aspirations and is an important consideration to Highways England when we come to consider whether a Plan is sound and based on a robust and credible evidence base. Highways England will continue to work with Doncaster Council to assess the cumulative impact of the Local Plan on the SRN. Once completed, should any infrastructure improvements be necessary to deliver the Local Plan it is expected that these will be included within the IDP along with information on how they will be funded and timescales for delivery.

**Summary:**

The Infrastructure Delivery Plan is an essential document for identifying and guiding the delivery of new and improved infrastructure, including transport infrastructure, to support the plans development aspirations and will be important for Highways England in considering whether the plan is sound and based on a robust evidence base. Highways England will continue to work with DMBC to assess the cumulative impact on the SRN. Once complete, should improvements be necessary to deliver the Local Plan, these should be in the IDP with information on how they will be funded and delivery timescales.

**Response:**

Noted - the IDP has been updated for Submission to include the mitigation schemes identified through the ongoing technical assessment.
One of the challenges described in the Local Plan, Chapter 2 (2.18) is to increase the proportion of highly-skilled workers, because Doncaster has a higher than average number in low-skilled employment. Clearly higher and further education will be a key driver, with Doncaster College as a prime mover. The JRP supports Doncaster’s ambitions to improve educational opportunities and higher skilled employment. To that end, it would support objectives to enhance the digital/media economy. However, in the Doncaster Infrastructure Strategy Annex, Education and Learning: Chapter 2, p15, 2.22 on Education, reads as though the High Melton site of Doncaster College is still operational, though it has not been used for any educational purposes over 2 years and as such, buildings are becoming derelict. Ch 8 6.14, gives details of a #4.1 million development grant for film and TV studios and other facilities including an hotel. Clearly, it is misleading to give the impression that this has been approved by DMBC, when the site is not yet sold, and any planning permission would need to take into account whether the planned buildings would be greater than the original footprint, which could therefore, encroach on Green Belt. This #4.1m development is nowhere near or close to being confirmed.

Response:
The evidence base makes reference to this project, but any planning application in the future would need to accord with both national policy and the relevant policies in the local plan, including in respect to Green Belt.
For your information we have set out some general guidelines that may be useful to you. Position Statement As a water company we have an obligation to provide water supplies and sewage treatment capacity for future development. It is important for us to work collaboratively with Local Planning Authorities to provide relevant assessments of the impacts of future developments. For outline proposals we are able to provide general comments. Once detailed developments and site specific locations are confirmed by local councils, we are able to provide more specific comments and modelling of the network if required. For most developments we do not foresee any particular issues. Where we consider there may be an issue we would discuss in further detail with the Local Planning Authority. We will complete any necessary improvements to provide additional capacity once we have sufficient confidence that a development will go ahead. We do this to avoid making investments on speculative developments to minimise customer bills. Sewage Strategy Once detailed plans are available and we have modelled the additional capacity, in areas where sufficient capacity is not currently available and we have sufficient confidence that developments will be built, we will complete necessary improvements to provide the capacity. We will ensure that our assets have no adverse effect on the environment and that we provide appropriate levels of treatment at each of our sewage treatment works. Surface Water and Sewer Flooding We expect surface water to be managed in line with the Government’s Water Strategy, Future Water. The strategy sets out a vision for more effective management of surface water to deal with the dual pressures of climate change and housing development. Surface water needs to be managed sustainably. For new developments we would not expect surface water to be conveyed to our foul or combined sewage system and, where practicable, we support the removal of surface water already connected to foul or combined sewers. We believe that greater emphasis needs to be paid to consequences of extreme rainfall. In the past, even outside of the flood plain, some properties have been built in natural drainage paths. We request that developers providing sewers on new developments should safely accommodate floods which exceed the design capacity of the sewers. To encourage developers to consider sustainable drainage, Severn Trent currently offer a 100% discount on the sewerage infrastructure charge if there is no surface water connection and a 75% discount if there is a surface water connection via a sustainable drainage system. More details can be found on our website https://www.stwater.co.uk/building-and-developing/regulations-and-forms/application-forms-andguidance/infrastructure-charges/ Water Quality Good quality river water and groundwater is vital for provision of good quality drinking water. We work closely with the Environment Agency and local farmers to ensure that water quality of supplies are not impacted by our or others operations. The Environment Agency’s Source Protection Zone (SPZ) and Safe Guarding Zone policy should provide guidance on development. Any proposals should take into account the principles of the Water Framework Directive and River Basin Management Plan for the Severn River basin unit as prepared by the Environment Agency. Water Supply When specific detail of planned development location and sizes are available a site specific assessment of the capacity of our water supply network could be made. Any assessment will involve carrying out a network analysis exercise to investigate any potential impacts. We would not anticipate capacity problems within the urban areas of our network, any issues can be addressed through reinforcing our network. However, the ability to support significant development in the rural areas is likely to have a greater impact and require greater reinforcement to accommodate greater demands. Water Efficiency Part G of Building Regulations specify that new homes must consume no more than 125 litres of water per person per day. We recommend that you consider taking an approach of installing specifically designed water efficient fittings in all areas of the property rather than focus on the overall consumption of the property. This should help to achieve a lower overall consumption than the maximum volume specified in the Building Regulations. We recommend that in all cases you consider: - Single flush siphon toilet cistern and those with a flush volume of 4 litres. - Showers designed to operate efficiently and with a maximum flow rate of 8 litres per minute. - Hand wash basin taps with low flow rates of 4 litres or less. - Water butts for external use in properties with gardens. To further encourage developers to act sustainably Severn Trent currently offer a 100% discount on the clean water infrastructure charge if properties are built so consumption per person is 110 litres per person per day or less. More details can be found on our website https://www.stwater.co.uk/building-and-developing/regulations-and-forms/application-forms-andguidance/infrastructure-charges/ We would encourage you to impose the expectation on developers that properties are built to the optional requirement in Building Regulations of 110 litres of water per person per day.

General guidelines are provided on: Position Statement As a water company we have an obligation to provide water supplies and sewage treatment capacity for future development. To further encourage developers to act sustainably Severn Trent currently offer a 100% discount on the clean water infrastructure charge if properties are built so consumption per person is 110 litres per person per day or less. More details can be found on our website https://www.stwater.co.uk/building-and-developing/regulations-and-forms/application-forms-andguidance/infrastructure-charges/ We would encourage you to impose the expectation on developers that properties are built to the optional requirement in Building Regulations of 110 litres of water per person per day.

Response:

Comments are noted. In respect to the optional requirement for Building Regulations of 110 litres of water per person per day, no substantive evidence has been found, or provided to the Council, demonstrating a need for the optional water standards in the Severn Trent Water area or within the wider Borough. Clean water is provided by Yorkshire Water who have not raised water availability as an issue and therefore this optional requirement has not been viability tested. The government commissioned Water stressed areas ? final Classification, July 2013, developed by the Environment Agency and Natural Resources Wales highlights utility suppliers in the vast majority of the Doncaster area as having moderate stress which is categorised as not serious.
Tests of Soundness: 

Comment: Please also find attached a copy of our high level assessment of the sites, the additional sites that we have assessed through this consultation as highlighted in Yellow or Red, the site at the Airport highlighted in Red is believed to be located within the Anglian water inset, therefore consultation with Anglian water will be needed or that site. (SEE EMAIL FOR HIGH LEVEL ASSESSMENT)

Summary: A copy of Severn Trent Water's high level assessment of site allocations is supplied (by attached email): the additional sites that have been assessed through this consultation are highlighted in Yellow or Red. The site at the Airport highlighted in Red is believed to be located within the Anglian water inset, therefore consultation with Anglian water will be needed or that site.

Response: The Council notes the assessment carried out by Severn Trent for sites within their catchment.
Soundness 3.1 Paragraph 35 of the National Planning Policy Framework ("NPPF") deals with examining Local Plans and states: "Local Plans and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sound. Plans are 'sound' if they are: a) Positively prepared - providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b) Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d) Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this Framework." 3.2 In addition, we note guidance published by the Planning Advisory Service entitled 'Soundness Self-Assessment Checklist (March 2014)' which is used by local authorities in the preparation of local plans. This guidance, although advisory, enables the preparation of a robust local plan which is positively prepared, justified, effective and consistent with national policy. 3.3 The Soundness Checklist advises that in terms of being "justified" the plan should be based on a robust and credible evidence base involving: - Research/fact finding: the choices made in the plan are backed up by facts. - Evidence of participation of the local community and others having a stake in the area. 3.4 In terms of the plan being the most appropriate strategy when considered against reasonable alternatives, the Soundness Checklist advises that these alternatives should be realistic and subject to sustainability appraisal. The plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved. 3.5 With regard to the test of "effective" the Soundness Checklists advises that this means that the plan should be deliverable, requiring evidence of: - Sound infrastructure delivery planning; - Having no regulatory or national planning barriers to delivery; - Delivery partners who are signed up to it; and - Coherence with the strategies of the neighbouring authorities, including neighbouring marine planning authorities. - The Plan should be flexible and able to be monitored. 3.6 The Soundness Checklist advises that the plan should be flexible to deal with changing circumstances, which may involve minor changes to respond to the outcome of the monitoring process or more significant changes to respond to problems such as lack of funding for major infrastructure proposals. General Policies 3.7 The NPPF contains a presumption in favour of sustainable development. Paragraph 11 provides: "Plans and decisions should apply a presumption in favour of sustainable development. For plan-making this means that: a) plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change; b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless: i. the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or ii. any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole." 3.8 With regard to plan making, paragraph 16 of the NPPF states that plans should: a) be prepared with the objective of contributing to the achievement of sustainable development; b) be prepared positively, in a way that is aspirational but deliverable; c) be shaped by early, proportionate and effective engagement between plan makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees; d) contain policies that are clearly written and unambiguous, so it is evident how a decision maker should react to development proposals; e) be accessible through the use of digital tools to assist public involvement and policy presentation; and f) serve a clear purpose, avoiding unnecessary duplication of policies that apply to a particular area (including policies in this Framework, where relevant)." 3.9 Having regard to the above policies and statutory context we do not consider that the Publication Draft Local Plan is sound for the reasons set out below.

Summary:
Soundness Paragraph 35 of the NPPF deals with examining Local Plans as does the Planning Advisory Service guidance note entitled 'Soundness Self-Assessment Checklist (March 2014). The plan should be based on a robust and credible evidence base and the strategy should consider realistic alternatives which have been subjected to sustainability appraisal. The plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved. The plan should be deliverable and flexible to deal with changing circumstances. General Policies Paragraph 11 of the NPPF contains a presumption in favour of sustainable development. It is considered that the Publication Draft Local Plan is not sound.

Response:
Noted
2.1. The Government’s core objectives as established through the 2018 National Planning Policy Framework (the 2018 Framework) are sustainable development and growth. Paragraph 11 of the Framework stresses the need for Local Plans to meet the objectively assessed needs of an area. The 2018 Framework sets out to boost significantly the supply of homes and that a sufficient amount and variety of land can come forward where it is needed. In terms of building a strong and competitive economy the 2018 Framework states that planning should help create the conditions in which businesses can invest, expand and adapt. The key focus throughout the 2018 Framework is to create the conditions for sustainable economic growth and deliver a wide choice of high quality homes. The sites identified to meet the housing target must be deliverable and developable.  

2.2. In relation to Local Plan formulation, paragraphs 15 to 37 of the Framework states that Local Plans are the key to delivering sustainable development which reflects the vision and aspirations of the local community. The Framework indicates that Local Plans must be consistent with the Framework and should set out the opportunities for development and provide clear policies on what will and will not be permitted and where.  

2.3. In relation to the examination of Local Plans, paragraph 35 of the Framework sets out the tests of soundness and establishes that:  

2.4. The Local Plan and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sounds. Plans are ‘sound’ if they are: Positively prepared - providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development  

Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate; Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this.  

2.5. This document therefore considers the content of the Draft Local Plan consultation document on behalf of H. Burtwistle & Son in light of this planning policy context.

The sites identified to meet the housing target must be deliverable and developable. 2.2. In relation to Local Plan formulation, paragraphs 15 to 37 of the Framework states that Local Plans are the key to delivering sustainable development which reflects the vision and aspirations of the local community. The Framework indicates that Local Plans must be consistent with the Framework and should set out the opportunities for development and provide clear policies on what will and will not be permitted and where. 2.3. In relation to the examination of Local Plans, paragraph 35 of the Framework sets out the tests of soundness and establishes that: 2.4. The Local Plan and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sounds. Plans are 'sound' if they are: Positively prepared - providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate; Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this. 2.5. This document therefore considers the content of the Draft Local Plan consultation document on behalf of H. Burtwistle & Son in light of this planning policy context.

Summary:
Sets out a summary of NPPF and relevant paras in relation to local plans, including the tests of soundness.

Response:
The NPPF seeks to support a pro-growth economy and significantly boost the supply of housing, however it is greatly frustrating that the Local Plan does not reflect this nor is it considered to be consistent with national policy in this respect. We would therefore strongly encourage the Council to plan ambitiously in order to facilitate sustainable economic growth. The NPPF is very clear in promoting and boosting the supply of new housing and employment land. Paragraph 59 of the NPPF is clear that: To support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay. With respect to economic development, paragraph 80 states: Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential. It is considered that the emerging Local Plan does not comply with the NPPF in this regard and therefore it cannot be found to be 'sound' in this respect. The Site at Nutwell South (149) is capable of delivering much needed employment and housing provision in addition to an access road which has the potential to serve the aforementioned uses in addition to the potential to provide a much bypass for Armthorpe. Such a bypass would benefit both the local and the wider communities, helping to deliver the required levels of identified growth within the Local Plan. There is a recognised national awareness of the importance of the deliverability of sites which is evidenced by the relatively recent introduction of the Deliverability Test in November 2019. We would therefore strongly encourage the Council to allocate additional sites for growth with a focus on those which are likely to come forward for development within the next five years, particularly those sites which are not reliant on infrastructure and other opening-up matters to come forward for development. Land at Nutwell Lane (149) is a site which is immediately deliverable, significantly supported by the construction of the adjacent road to the north. The allocation of Site 149 would therefore be consistent with the NPPF in this regard, given it advocates and supports any form of sustainable development. Recommendation 3: DMBC should revisit the evidence base and sustainability appraisal for discounting alternative sites to ensure that equal weighting is being applied to potential development sites. DMBC must be consistent in the site selection methodology and approach to allocating sites across the Borough. Recommendation 4: Include Site 149 along with site 818 for allocation, given that they both partially sit within flood zone 2/3 and both deliver essential infrastructure needed for the growth of the borough. Technical constraints can be overcome in this respect.

Summary:
The NPPF seeks to support a pro-growth economy and significantly boost the supply of housing. It is frustrating that the Local Plan does not reflect this and it is therefore not consistent with national policy. We would strongly encourage the Council to plan ambitiously to support sustainable economic growth. The NPPF is very clear in promoting and boosting the supply of new housing (para 59) and employment land (para 80) and it is considered that the emerging Local Plan does not comply with the NPPF in this regard and it cannot be found to be 'sound'. Site 149 is capable of delivering employment and housing provision together with an access road and an Armthorpe bypass. Such a bypass would benefit both the local and the wider communities, and help to deliver the required levels of growth within the Local Plan. We strongly encourage the Council to allocate additional sites for growth with a focus on those which are likely to come forward for development within the next five years, particularly those sites which are not reliant on infrastructure to come forward for development. Site 149 is immediately deliverable and supported by the construction of the adjacent road to the north. The allocation of Site 149 would therefore be consistent with the NPPF, given it advocates and supports any form of sustainable development. The Council should revisit the evidence base and sustainability appraisal for discounting alternative sites to ensure that equal weighting is being applied to potential development sites. The Council must be consistent in the site selection methodology and approach to allocating sites across the Borough. Site 149 should be allocated along with site 818, given that they both partially sit within flood zone 2/3 and both deliver essential infrastructure needed for the growth of the borough. Technical constraints can be overcome.
2.1. The Government’s core objectives as established through the 2018 National Planning Policy Framework (the 2019 Framework) are sustainable development and growth. Paragraph 11 of the Framework stresses the need for Local Plans to meet the objectively assessed needs of an area. The 2019 Framework sets out to boost significantly the supply of homes and that a sufficient amount and variety of land can come forward where it is needed. In terms of building a strong and competitive economy the 2019 Framework states that planning should help create the conditions in which businesses can invest, expand and adapt. The key focus throughout the 2019 Framework is to create the conditions for sustainable economic growth and deliver a wide choice of high quality homes.  

2.2. In relation to Local Plan formulation, paragraphs 15 to 37 of the Framework states that Local Plans are the key to delivering sustainable development which reflects the vision and aspirations of the local community. The Framework indicates that Local Plans must be consistent with the Framework and should set out the opportunities for development and provide clear policies on what will and will not be permitted and where.  

2.3. In relation to the examination of Local Plans, paragraph 35 of the Framework sets out the tests of soundness and establishes that:  

2.4. The Local Plan and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sound. Plans are ‘sound’ if they are: Positively prepared - providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; Effective - deliverable over the plan period, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in the Framework.  

2.5. This document therefore considers the content of the Doncaster Local Plan 2015-2035 on behalf of EON in light of this planning policy context.

Response:
3.1 These representations have been prepared in relation to the Doncaster Regulation 19 Publication Local Plan Consultation, August 2019. They address the following matters: - Local Plan vision - Strategic Approach - Employment Policy Areas and Allocations - Residential Policy Areas - Transport Access and Infrastructure - Green infrastructure - Spatial Proposals The National Planning Policy Framework (NPPF) 3.2 The National Planning Policy Framework (NPPF) was published in February 2019. As the Publication Plan was issued in August 2019, the document should wholly reflect the National Planning Policy Guidance set out in the NPPF. 3.3 Paragraphs 15-37 of the NPPF refer to plan making. Paragraph 16 advises that Local Plans must be prepared with the objective of contributing to the achievement of sustainable development which is a legal requirement. Therefore, they should be consistent with the principles and policies set out in the framework, including the presumption in favour of sustainable development. Paragraph 16 requires plans to be aspirational but deliverable. NPPF Tests of Soundness/European SEA Directive and Environmental Assessment of Plans and Programmes Regulations 2004 3.4 As the publication draft will subsequently be examined by an independent inspector, the document will be assessed on the basis of whether the plan has been prepared in accordance with the duty to cooperate, legal and procedural requirements and whether it is sound. Paragraph 35 of the NPPF advises: - "Local plans and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they area sound. Plans are 'sound' if they are; - Positively prepared - providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs, and is informed by agreements with other authorities so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; - Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; - Effective - deliverable over its period and based on effective joint working on cross boundary strategic priorities matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and - Consistent with National Policy - enabling the delivery of sustainable development in accordance with the policies in this framework.

Summary:

Response:
8. The Council is particularly concerned that the Thorne and Moorends Neighbourhood Plan was not actioned by DMBC when it was submitted for examination and referendum. The Neighbourhood Plan should have been adopted long before now and the Local Plan drafted with regard to it. Unfortunately long delays and omissions on the part of DMBC has meant that the Neighbourhood Plan has not gone forward and through the passage of time now requires modification before being formally submitted again. To this end it is believed that the plan has not been as positively prepared as it can be in taking account of local considerations.

Response:
The Local Plan has been drafted based on the emerging Thorne & Moorends Neighbourhood Plan i.e. the sites it proposes for allocation in flood zone 1 are also identified as allocations via the Local Plan. As set out in para 16.136 of the local plan, it is the Council?s current understanding that the Neighbourhood Plan is now looking to be revised to allocate additional sites in flood zone 3 before being re-submitted for Examination.
Comment:

4. Thorne Moorends Town Council is concerned that the consultation carried out in relation to the Local Plan has not been as inclusive as it could have been. There are concerns that some members of the public may have found it difficult to access a means to share their views, particularly those that do not have access to the internet who are not technically savvy with the use of websites and social media.

5. The Council believes that DMBC officers could have done more to fully engage its Parish and Town Councils in helping them to consider and evaluate the Local Plan.

Summary:

Consultation. 1. Consultation was not as inclusive as it could have been. Some members of the public are not tech savvy, are not on social media and do not have access to the internet. 2. More should have been done to engage Parish and Town Councils.

Response:

All stages of consultation have been carried out in accordance with, and often beyond the minimum requirements, as set out in the Statement of Community Involvement.
Throughout the draft Local Plan various references are made to Supplementary Planning Documents (SPDs). For example, paragraph 5.30 advises that in developing masterplans and design codes, applicants ‘must adhere to’ other relevant Local Plan policies and SPDs, whilst paragraph 7.52 states that ‘developers will be expected to provide walking provision in line with the relevant SPD’. On the Council’s ‘Supplementary Planning Documents’ page of the website, it is stated that the SPDs have been produced to provide further guidance about the implementation of specific planning policies and that they are material considerations. It is therefore not the intention that the guidance within the SPDs must be applied rigidly and that they must be adhered. This would result in an onerous and inflexible approach. Theakston Estates is concerned that the Local Plan is being used to give greater weight to the SPDs that was their original intention. Furthermore, it is considered to be inappropriate to reference an SPD in the Local Plan in advance of the SPD being prepared. It is therefore requested that reference to the SPDs are either deleted or the supporting text is amended to make it clear that the SPDs provide guidance. PROPOSED CHANGE As explained in response to question 6, it is requested that reference to the SPDs are either deleted or the supporting text is amended to make it clear that the SPDs provide guidance. This will ensure that the Plan is positively prepared and provides the most appropriate strategy through not being overly onerous. We suggest that where reference is made to SPDs at paragraphs 5.30, 7.21, 7.47, 7.52, 7.54, 12.24, that the text is amended to state that ‘developers should take into account the guidance provided within the SPD’.

### Summary:

SPD’s are referred to throughout the plan. The DMBC website states that these are further guidance about the implementation of planning policies and are material considerations. It is not therefore the intention that SPD guidance must be strictly adhered to and this would be inflexible and onerous. Theakston Estate is concerned the plan is being used to give greater weight to SPDs that originally intended, and it is inappropriate to reference an SPD in advance of it being prepared. Proposed change: references to SPDs should be removed or wording amended to make it clear these are guidance.

### Response:

All existing SPD’s will need to be reviewed in order to sit under the new local plan in due course. Likewise any new SPDs will be subject to the same process which includes consultation and provides an opportunity for any comments to be provided on such matters in due course. The glossary in the local plan is considered to be in line with that provided by NPPF i.e. they are to provide further detail to the policies in the development plan.
Third, we could not respond to the current consultation exercise by failing to raise the issue of enforcement. Whilst we concede that the primary purpose of the Local Plan is not to dictate how policy will be upheld in the real world, the enforcement process and how it is resourced will be critical to the plans delivery. Clearly there is little point in agreeing rules for the how, where, what, when etc of development if the Authority and its officers are not going to monitor, or bring to task those who do not uphold the plan’s principles. We would like to commend the plan for in places highlighting enforcement as a key issue - particularly as it relates to the Gypsy and Traveler development policy. However, highlighting enforcement in this area alone is simply not enough. Monitoring and enforcement must run through the whole document and support the whole of the plan. Without this key ingredient, developers have, and will continue to cross the lines drawn by the importance of the Local Plan. We would urge that a specific section be dedicated to enforcement to underline importance within the rural landscape. The primary start point for the policing of all developments is public reporting. By definition, urban based development is subject to higher level of public scrutiny because of its more public (urban) location. Policing and enforcement of developments within the rural landscape always suffer from the "perfect storm" of being (in the short term at least) less important to the wider borough. They are usually less visible, affect small villages or communities, are difficult or problematic for officers to access, time consuming or long term in nature. However, this should not compel those who live in rural ward to expect a lower quality service - yet it happens in all too many cases! The long-term effects of none traditional developments (mineral extraction, waste disposal, energy delivery, poor housing development etc) litter the countryside, and by example all are usually under temporary planning permission sometimes for as long as 25 years. Once development and associate revenue dries up, so does any willingness for officers of the Authority to enforce terms of restoration - usually detailed in the original planning permission to protect the environment or original landscape condition, to return to its original condition. In reality, restoration rarely happens, and rural communities continue to be blighted by abandon developments, or worse applications to turn them into landfills or some other inappropriate use. Temporary permissions should be just that - yet they are rarely just that. The plan should address this. To conclude, enforcement needs to be integrated in to the whole Local Plan. Without such, the whole document become nothing more than a dream.

Response:
Noted - enforcement has its own policy and further information can be found here: https://www.doncaster.gov.uk/services/planning/planning-enforcement

Comment:
Thank you for giving us the opportunity to comment on the above document and associated background documents. Please accept my sincere apologies for missing the consultation deadline. Whilst some of the comments/issues we raised in our previous response have been responded to in the Regulation 22 Statement, there are many others that have not and therefore we do not know what the council’s response to those comments is. We are therefore re-iterating those matters for consideration.

Summary:
Apologies for missing the deadline, notes that some of the comments from the last consultation have been addressed but there are others that have not been covered and reiterate such comments therefore.

Response:
Noted - see individual responses to the detailed comments set out on a policy-by-policy basis
1.1 These representations are made on behalf of West Moor Holdings Ltd who is the owner of the site identified as Site Reference 013 ("West Moor Park North") in the Publication Draft Local Plan. 1.2 The West Moor Park North Site is located immediately adjacent to the north-west of Junction 4 of the M18 motorway and is bounded to the south by the existing West Moor Park Industrial Estate. 1.3 Doncaster Council has published its Publication Draft Local Plan which is out for consultation until Monday 30 September 2019. 1.4 These representations relate to the omission of the West Moor Park North Site as an employment allocation for distribution warehousing and also consider the allocation of Site Reference 001 ("Thorne North") for employment use.

**Summary:**

Representation made on behalf of West Moor Holdings for site 013. The site is immediately adjacent to the north-west of M18 Junction 4 and has not been allocated in the Publication Draft Plan.

2.1 Section 20(5)(b) of the Planning and Compulsory Purchase Act 2004 requires an inspector (at an independent examination) to determine whether a development plan is "sound".

Summary:
Section 20(5)(b) of the Planning and Compulsory Purchase Act 2004 requires an inspector (at an independent examination) to determine whether a development plan is "sound".

Response: Noted
5.1 An assessment of the Publication Draft Local Plan and its supporting documents has been undertaken to establish whether its policies are “sound” with particular regard to the employment allocations in the Plan and the omission of the West Moor Park North Site.

**Summary:**
The West Moor Park site has previously been assessed and allocated for a distribution employment sites in earlier version of the development plan. A report to Full Council in on 7 March 2013 for the Sites and Policies DPD made it clear that West Moor Park North would have been the Council's preferred site. Although the document was withdrawn, the Inspector briefly addressed distribution warehousing and was not persuaded that the approach was inherently unsound.

**Response:**
Noted. It should be noted that this is a new plan with a new and revised evidence base in line with national guidance.
Comment:

As with previous responses our thoughts are those which respect the majority of opinion taken from our close work with local parish councils, parish meetings and gatherings of interested parties throughout the wider Sprotbrough Ward. As previously stated our previous responses community representatives continue to ask us to underline the feeling that the development of local planning policy continues to "ride roughshod" over rural community opinion. Urban centric policy ideas continue to dominate the process, and as a result, policy seeks only to solve urban centric problems, through the exploitation of rural communities, their assets, and surrounding landscapes. In relation to the current version out for consultation we would like to submit three perspective on behalf of the Sprotbrough Ward.

3.1. Strata Homes is concerned that the Doncaster Local Plan - Publication Plan is deficient in its content and the evidence base does not reflect national guidance. Test of Soundness  
3.2. Strata Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy 
3.3. Strata Homes is concerned that the draft Local Plan does not reflect the Framework (2019). Strata Homes is concerned that the housing requirement does not reflect economic growth ambitions, the level of employment allocations, nor is it sufficient to meet the identified needs for affordable housing. Further Strata Homes are concerned that there are insufficient housing allocations to meet the housing requirement.  
3.4. Strata Homes is concerned that there is a lack of up to date, available, and robust evidence base to accompany the Plan, particularly in respect of an up to date Housing Needs Assessment, whilst a 2019 update is referred to in the Plan, it is not yet publically available, the Viability Evidence (May 2019), which requires further testing to support its conclusion, and specific evidence to justify key policies. 3.5. Strata Homes consider that the Policies in the Local Plan are not justified and does not provide an appropriate strategy. The Plan is its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 3.6. In these circumstances, Strata Homes do not consider the Doncaster Local Plan, in its current form, to be sound. 3.7. However, Strata Homes consider that the plan can be made sound subject to proposed changes as set out within the following sections of these representations. Strata Homes will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change  
3.8. To overcome the objection and address soundness matters, the Council should: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Summary:

The draft Local Plan does not reflect the NPPF (2019) and the housing requirement does not reflect economic growth ambitions, the level of employment allocations, nor is it sufficient to meet the identified needs for affordable housing. There are insufficient housing allocations to meet the housing requirement. There is a lack of up to date, available, and robust evidence base to accompany the Plan, particularly an up to date Housing Needs Assessment (whilst a 2019 update is referred to in the Plan, it is not yet publically available) the Viability Evidence (May 2019) (which requires further testing to support its conclusion) and specific evidence to justify key policies. Strata Homes consider that the Policies in the Local Plan are not justified and do not provide an appropriate strategy. The Plan could fail to deliver sustainable development and is not consistent with national policy. Strata Homes do not consider the Doncaster Local Plan, in its current form, to be sound. However, Strata Homes consider the plan can be made sound subject to proposed changes as set out within the following sections of these representations. To overcome the objection and address soundness matters, the Council should: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Response:

Noted - the response provides a summary of the Representation and proposed changes which will be addressed via the individual sections/specific parts of the Representation elsewhere in the response.
This letter is submitted in response to the consultation on the Doncaster Local Plan (DLP) Publication Version and provides the comments of Gladman Developments Limited (Gladman). Gladman specialises in the promotion of strategic land for residential development with associated community infrastructure. From this experience, Gladman understands the need for the planning system to ensure that local communities have access to both decent homes and local employment opportunities. Gladman also has a wealth of experience in contributing to the Development Plan preparation process, having made representations on numerous local planning documents throughout the UK and having participated in many Local Plan public examinations. It is on the basis of this experience that these representations are made. Through this submission, Gladman have highlighted areas where the Local Plan's policies require further clarity or justification in order to be found sound at Examination, in the light of changes brought about by the Revised National Planning Policy Framework (2019) (RNPPF). Gladman would welcome the opportunity to discuss these at the Local Plan Examination in Public hearing sessions. Context The revised NPPF introduces a number of major changes to national planning policy. The changes reaffirm the Government's commitment to ensuring that up-to-date plans are in place which provide a positive vision for the areas they cover. Plans should also provide a framework for addressing housing needs and other economic, social and environmental priorities, and provide a platform for local people to shape their communities. Paragraph 35 of the RNPPF sets out four tests that must be met for Local Plans to be considered sound. In this regard, we submit that in order for it to be found sound it is fundamental that the Doncaster Local Plan is: a) Positively prepared - providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b) Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) Effective - deliverable over the plan period, and based on effective joint working on crossboundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d) Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this Framework. The potential strategy for the future development of Doncaster is now gaining clarity. It is therefore essential that these tests are carefully considered from the initial stages of local plan production.

Summary:
Introduction is made to comments made to various parts of the Local Plan summarised elsewhere; includes a summary of the soundness test requirements of NPPF

Response:
Introductory type comments to the Representation; no response needed
Comment:
0.1 These representations are made on behalf of Mr Ian Brealey in response to the Doncaster Local Plan consultation 2019. These comments follow the extensive promotion of Brodsworth Quarry, Green Lane, Doncaster for Mixed Use development during previous consultation on the Doncaster Local Plan. 0.2 This representation is made on the basis that the Doncaster Local Plan Publication draft, as prepared, contains significant deficiencies, in relation to the Site; the strategic policies and the distribution of growth. 0.3 DLP Planning Ltd is of the view that in order to provide for strategic housing requirements and sustained economic growth and regeneration of the Doncaster area, there will be a requirement for the allocation of relatively unconstrained land surrounding existing settlements to support the sustainable growth of the Borough. 0.4 It is our opinion that the level of housing and employment development discussed within this representation can only be delivered through the release of additional, unconstrained and underused sites that are attractive to the market. Such releases should be made in locations which meet other objectives such as the regeneration of Doncaster, realising the potential of airport, and the redevelopment of former mineral sites.

Summary:
The Publication Draft of the Local Plan contains significant deficiencies in relation to the site, strategic policies and the distribution of growth. In order to provide for strategic housing requirements, sustained economic growth and the regeneration of the Doncaster area there is a requirement for the allocation of unconstrained land around existing settlements. The level of housing and employment discussed in this representation can only be delivered through the release of additional, unconstrained and underused sites. Releases should be made in locations which meet other objectives such as the regeneration of Doncaster, realising the potential of the airport and the redevelopment of former mineral sites.

Response:
1.1 This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Mr Ian Brealey in response to the publication of the draft Doncaster Local Plan for consultation (Regulation 19). 1.2 The site has previously been promoted by DLP Planning Ltd through the following consultations: - Sites and Policies Development Plan Document 'Engagement Draft' - September 2012 - Call for Sites - October 2014 - Homes and Settlements - March 2016 1.3 This representation relates to "Brodsworth Quarry, Green Lane, Doncaster" (HELAA site ref 184) (Figure 1) which remains available, developable and deliverable for mixed use development (residential and employment). (SEE EMAIL FOR Figure 1. Site location) 1.4 The site is currently included within the Green Belt in the draft Local Plan document. DLP strongly objects to this designation. For the reasons set out within this representation it is recommended that the site be removed from the Green Belt and allocated for Mixed Use. 1.5 The Council has demonstrated the Exceptional Circumstances for Green Belt release within the evidence base supporting the Local Plan. Within this context, DLP has undertaken a Green Belt assessment which specifically assesses the Brodsworth Quarry site against the five purposes of the Green Belt. This assessment is referenced herein (and included at Appendix 1) to demonstrate why the site should be allocated for development. (SEE EMAIL FOR Appendices) 1.6 This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site. 1.7 The structure of this representation will be as follows: - Comments on the draft Local Plan in Section 2; - Site Assessment in Section 3; and - Conclusion in Section 4.

Summary:
Brodsworth Quarry on Green lane, Doncaster remains available, developable and deliverable for mixed use development (residential and employment) (see Figure 1: Site location). The site is currently within the Green Belt and DLP strongly object to this designation. The site should be removed from the Green Belt and allocated for Mixed Use. The Council has demonstrated the exceptional circumstances for Green Belt release within the Local Plan evidence base. DLP has undertaken a Green belt assessment which assesses the Brodsworth Quarry against the five purposes of the Green Belt (email includes Green Belt Assessment)
1.1 This representation is made on behalf of Bellway Homes (Yorkshire) and Mr D Higgins (as landowner) in response to the Doncaster Local Plan Publication Consultation in relation to the Higgin’s Site, Old Bawtry Road, Finningley (Figure 1). The site is identified under draft Local Plan site reference ‘189 - Higgins Agriculture Ltd, Old Bawtry Road, Finningley’. (SEE EMAIL FOR Figure 1. Location Plan) 1.2 The site has previously been promoted for residential development by DLP Planning at the following stages:  - Sites and Policies Development Plan Document - September 2013  - Call for Sites - October 2014  - Issues and Options - Summer 2015  - Vision, aims and objectives - Summer 2015  - Homes and Settlements - April 2016  1.3 The site is a partial brownfield parcel of land, sustainably located adjacent to the Finningley settlement boundary. The site is also immediately adjacent to Doncaster Sheffield Airport, which is specifically identified as a key driver of economic growth during the proposed local plan period.  1.4 Despite this, the site is indicated to be retained within a Countryside Policy Area in the draft Local Plan. DLP strongly objects to the omission of the site from the proposed Housing and/or potentially Employment allocations.  1.5 To this end, Section 2 of this representation considers the strategic approach to housing and employment delivery within the Publication Local Plan, objecting to the policies as drafted and providing recommendations regarding the level of housing as set out in the draft Local Plan, in order to ensure the soundness of the plan. A number of objections are also raised and recommendations provided on other relevant draft policies.  1.6 Section 3 goes on to provide a detailed site-specific assessment of the Higgin’s Site (Site 189) in order to demonstrate the capacity, suitability and deliverability of the site for development in order to support the Local Plan objectives.  1.7 Section 4 confirms the primary objections raised in the representation and recommends that the land at the Higgin’s Site, Finningley should be identified as a Housing allocation, in order to meet the housing need in the Borough. This approach will ensure the plan I positively prepared and sound in accordance with the National Planning Policy Framework (2019).
1. Spawfords have been instructed by H. Burtwistle & Son to submit representations to the Doncaster Local Plan 2015-2035 Publication Version, for their site at Coulman Road, Thorne. 1.2. Appended to these representations is a report assessing the housing requirement, prepared by Regeneris Consulting. (SEE EMAIL FOR Regeneris Report) 1.3. H. Burtwistle & Son welcome the opportunity to contribute to the emerging Local Plan for Doncaster and is keen to further the role of Doncaster within the Sheffield City Region, South Yorkshire and the Yorkshire and Humber Region as a whole. 1.4. H. Burtwistle & Son has significant land interests in the area, which can positively contribute towards the economic and housing growth agenda. 1.5. H. Burtwistle & Son would like to make comments on the following topics and sections in the Doncaster Local Plan 2015-2035 Publication Version: - General Comments - Policy 2 - Spatial strategy and settlement hierarchy - Policy 3 - Level and distribution of growth - Policy 6 - Housing Allocations - Sites 244/331: Coulman Road, Thorne - Policy 8 - Delivering the necessary range of housing - Policy 19 - Development affecting public rights of way - Policy 20 - Access, design and layout of public rights of way - Policy 29 - Open space provision in new developments - Policy 46 - Housing design standards - Policy 66 - Developer contributions - Policy 67 - Development viability 1.6. In each case, observations are set out with reference to the provisions of the Framework and where necessary, amendments are suggested to ensure that the Local Plan is found sound. 1.7. H. Burtwistle & Son welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public. 1.8. We trust that you will confirm that these representations are duly considered to these comments. 1.9. Please do not hesitate to contact us to discuss any issues raised in this Representation further.

Summary:

General 1. Housing requirement does not reflect the growth ambitions or the level of employment allocations. 2. Housing requirement does not meet the need for affordable housing. 3. Lack of an up to date housing needs assessment. 4. Local Plan in current form is not consistent with national Policy. Proposed changes: 1. Higher housing requirement 2. Review of supporting evidence 3. Additional 'whole plan viability report' required. 4. Increased flexibility. Policy 2 - Spatial strategy and Settlement Hierarchy. 1. Distribution of housing should be reviewed and include more at service towns and villages. 2. Defined villages should have some growth. 3. Rossington/Thorne Moorhouses/Carcroft Skellow should have a greater share. 4. This would be a more sustainable approach. Reserve sites 1. The identified sites have significant technical constraints. 2. They are not a suitable pool of sites. 3. Object to them being in the Plan. Greenbelt Boundaries 1. Boundaries as drawn are too tight. 2. Likely they will need re-drawing at next review of plan. Safeguarded land 1. Not an adequate amount of safeguarded Land. 2. Should be identified across the spatial hierarchy. Proposed changes: 1. Policy should reflect economic and housing growth aspirations. 2. Spatial strategy should be amended. 3. Identify safeguarded land or suitable reserve sites. Policy 3 - Level and Distribution of Growth. 1. Housing requirement not sufficient and not aligned with forecast economic growth. 2. Plan identifies more employment land than target. 3. Mismatch between employment land allocated and level of housing allocated. 4. Housing requirement - have commissioned own report by 'Regeneris Consulting' for OAN and economic forecasts (enclosed as Appendix) 5. Housing requirement should be 1,100 dpa (Regeneris) 6. Peter Brett forecast is for 2015-2032 - not clear if provision is made for 2032 to 2035. 7. There is a discrepancy in employment land allocated. Provision is 565.77 Ha against 481 requirement (para 5.21). 8. Employment allocation is 83.77 above requirement therefore need more housing. 9. Estimate circa 7,532 additional homes are required to balance emp/hsg requirement. 10. Recent high housing delivery rates and evidence from Employment land Needs Assessment (2019 update) suggest a higher housing need requirement (based on the success of the 2015-18 period) 11. Concerned that affordable housing rates are not viable. 12. 920 will not deliver sufficient affordable housing. 13. Requirement would need to be 1,393 dpa to meet 15% requirement (based on last 3 years of monitoring). 14. Housing requirement should be at least 1,100. 15. Current completions (2015-18) are gross and not net. 16. Plan will struggle with supply late in the plan period. 17. Evidence base needs updating - no HELA or RLA for 2019. 18. Existing commitments - assumes 100% delivery - a discount should be applied for some non delivery. 19. Concerned about viability/deliverability of several sites with PP (list the sites) 20. Some of the allocations are a deliverability risk (includes list and comments on sites) 21. Need to be more realistic on delivery rates. 22. Should review existing commitments to ensure deliverability. 23. Propose site 244 & 331 Coulman Road for allocation. Proposed Changes: 1. Increase housing requirement to 1,100 - 1,300 dpa. 2. Reduce the potential from current commitments. 3. Include a none delivery allowance. 4. Identify safeguarded land 5. Allocate sites 244 & 331. Policy 6 Housing allocations 1. Under provision in Thorne and Moorwoods 2. Site 244 & 331 should be allocated (in depth advocacy for sites included). 3. Object to allocation of sites 81, 343, 795, 510 (various reasons but mainly deliverability) Policy 8 - Delivering the necessary range of housing - SHMA and Housing needs study are out of date - evidence base needs updating. Housing Mix 1. Lack of evidence for approach taken. 2. Local Plan should not seek to control the housing mix - to prescriptive. 3. This aspect of policy should 'encourage' rather than require. 4. Flexible approach should be taken - need to vary rea to area. 5. Mix in Policy has not been appropriately viability tested. Affordable Housing 1. Little evidence to support target of 15% in low value areas. 2. Little justification of the 23% target. 3. The need for regular viability assessment could undermine deliverability. 4. Unrealistic to negotiate each site on a one by one basis - could jeopardise delivery. 5. Policy needs to reflect NPPF 2019. Adaptable and Accessible Homes 1. Re Part D 2. Support principles of policy but does not consider it appropriate to require all developments to include this provision. 3. Should be a more flexible approach, Custom and self-build Homes 1. Further evidence needed of the level of demand. 2. Para 6.3 provides little explanation as to evidence to support the policy. 3. Should be a more flexible approach. Policy 19 - Development affecting Public Rights of Way. 1. Concerned with Part D 2. Approach to
none definitive footpaths is onerous and restrictive and could hinder delivery. 3. Should incorporate some flexibility. Policy 20 - Access, design and layout of Public Rights of way. 1. Parts B&C restrictive and could hinder development. 2. Incorporate some flexibility or remove restrictive elements. Policy 29 - Open space Provision. 1. Level of Green space requirement could impact on deliverability. 2. Part B - commuted sums -this is excessive, could undermine deliverability. 3. Policy not consistent with Policies 66 & 67 re open space requirements. 4. Flexibility need to accord with policies 66 & 67. 5. Amend Parts A & B (and para 10.22 & 10.25) to 'encourage' rather than 'require'. Policy 46 - Housing Design Standards. 1. Policy could impact on deliverability and viability. 2. Part A - national space Standards - no evidence to justify implementation. 3. Remove or increase flexibility 4. Part B - remove or reduce the requirement (65% of all new homes to be accessible/adaptable). Policy 66 - Developer Contributions. 1. Should not impact on viability. 2. Need for viability assessment of schemes on a regular basis could undermine deliverability. 3. Review and update viability assessment and then modify policy requirements accordingly. Policy 67 - Development Viability. 1. Policy is an impediment to development and compromises deliverability. 2. Viability assessment should be reviewed and updated. 3. Provide clarity in Part B or remove trigger points - they are a burden on development.

Comment:

1.1. Spawforths have been instructed by H. Burtwistle & Son to submit representations to the Doncaster Local Plan 2015-2035 Publication Version, for their site at Northgate, Moorends. 1.2. Appended to these representations is a report assessing the housing requirement, prepared by Regeneris Consulting. (SEE EMAIL FOR Regeneris Report) 1.3. H. Burtwistle & Son welcome the opportunity to contribute to the emerging Local Plan for Doncaster and is keen to further the role of Doncaster within the Sheffield City Region, South Yorkshire and the Yorkshire and Humber Region as a whole. 1.4. H. Burtwistle & Son has significant land interests in the area, which can positively contribute towards the economic and housing growth agenda. 1.5. H. Burtwistle & Son would like to make comments on the following topics and sections in the Doncaster Local Plan 2015-2035 Publication Version: - General Comments - Policy 2 - Spatial strategy and settlement hierarchy - Policy 3 - Level and distribution of growth - Policy 6 - Housing Allocations - Sites 313/245: Northgate, Moorends - Policy 8 - Delivering the necessary range of housing - Policy 19 - Development affecting public rights of way - Policy 20 - Access, design and layout of public rights of way - Policy 29 - Open space provision in new developments - Policy 46 - Housing design standards - Policy 66 - Developer contributions - Policy 67 - Development viability 1.6. In each case, observations are set out with reference to the provisions of the Framework and where necessary, amendments are suggested to ensure that the Local Plan is found sound. 1.7. H. Burtwistle & Son welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public. 1.8. We trust that you will confirm that these representations are duly made and will give due consideration to these comments. 1.9. Please do not hesitate to contact us to discuss any issues raised in this Representation further.

Summary:

Reps are provided by Spawforths on behalf of H Burtwistle & Son and in respect to their landholdings at Northgate, Moorends.

Comment:
We have been instructed on behalf of the Sandbeck Estate, who are landowners within the Borough, to submit a response to the Doncaster Local Plan Regulation 19 Consultation. Our client's interest is in respect of the settlements of 'Tickhill' and 'Stainton'. We previously submitted representations to the Regulation 18 Consultations promoting these sites and we reiterate some of this evidence again. Furthermore, we have prepared additional evidence in the form of a 'Comparative Landscape and Green Belt Assessment' which compares our client's site at Wong Lane to the Regulation 19 Local Plan preferred site (Sunderland Street) in terms of Green Belt purposes (See Appendix B). Our comments focus on the settlements of Tickhill and Stainton. The Sandbeck Estate is committed to working alongside Doncaster Metropolitan Borough Council to bring forward deliverable sites under its ownership. Please see Appendix A for a Location Plan of the five sites. We therefore suggest that several changes should be made to the aforementioned draft strategies and policies before the Plan could be considered sound. We also propose that "Land off Lindrick Lane, Tickhill" (HELAA Reference Site 356), "Land off Wong Lane, Tickhill" (HELAA Reference Site 357) and Land at Stud Farm, Tickhill" (No current HELAA Reference) are deleted from the Green Belt and allocated for housing development in Tickhill over the plan period. The site at Sunderland Road - the Local Plan's preferred site should be removed. We also support the future allocation of "Manor Farm" and "Land to North of Limekiln Lane" at Stainton. Our suggested changes (and associated justification) to the Local Plan policies and proposals are set out in Section 2 below. (SEE EMAIL FOR Appendices) (NOTE THIS REP IS FOR SITE 356 AND THE OTHER COMMENTS ARE ONLY THOSE WHICH REFER TO THIS SITE, THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFNUMBER - SEE: 03569 / 03570 / 03571 / 04705)

Summary:
Comments made regarding Site 356 - Land off Lindrick Lane, Tickhill, which are combined with comments made and summarised elsewhere.

Response:
The site has been assessed as having a weak case in Green Belt terms and there are reservations about access from Lindrick Lane. Every effort has been made to find suitable sites in Tickhill but there are a number of constraints which hamper this. The shortfall can be made up elsewhere. The Green Belt review carried out is independent and applies a consistent methodology.
Some land within our client's ownership was assessed as part of the HELAA evidence base. Our client's sites at Tickhill and Stainton are set out below. The sites are known as: - "Land off Wong Lane, Tickhill" - HELAA Site 357; - "Land off Lindrick Lane, Tickhill" - HELAA Site 356; - "Land at Stud Farm, Tickhill" (not assessed in the 2017 HELAA) - "Land at Manor Farm, Stainton" - HELAA Site 359 - "Land North of Limekiln Lane, Stainton" - HELAA Site 358  Sites 356, 357, 358 & 359 were all identified as Deliverable / Developable Sites in the HELAA and therefore there were no physical or technical reasons as to why the sites could not come forward for residential development (the only constraint being that the land lies within Green Belt). In conclusion, following the assessment of the sites in the Doncaster HELAA update, we consider that our clients land should be deleted from the Green Belt, where necessary and allocated as housing sites in the Local Plan. Our comments with regard to individual sites are in respect of the settlements of Tickhill and Stainton. (NOTE THIS REP IS FOR SITE 356 AND THE OTHER COMMENTS ARE ONLY THOSE WHICH REFER TO THIS SITE, THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFNUMBER - SEE: 03569 / 03570 / 03571 / 04705)

Summary:

Comments made regarding Site 357 - Land off Wong Lane, Tickhill, which are combined with comments made and summarised elsewhere.

Response:

The site has been assessed as having a moderately weak case in Green Belt terms, and it is not felt suitable access can be created, given this site would join the corner of Wong Lane (either via a new access or Wilsic Lane - Greystone Lane is an unmade farm track), which is a 'U' shaped bend. The Green Belt review carried out is independent and applies a consistent methodology.

We have been instructed on behalf of the Sandbeck Estate, who are landowners within the Borough, to submit a response to the Doncaster Local Plan Regulation 19 Consultation. Our client’s interest is in respect of the settlements of 'Tickhill' and 'Stainton'. We previously submitted representations to the Regulation 18 Consultations promoting these sites and we reiterate some of this evidence again. Furthermore, we have prepared additional evidence in the form of a 'Comparative Landscape and Green Belt Assessment' which compares our client’s site at Wong Lane to the Regulation 19 Local Plan preferred site (Sunderland Street) in terms of Green Belt purposes (See Appendix B). Our comments focus on the settlements of Tickhill and Stainton. The Sandbeck Estate is committed to working alongside Doncaster Metropolitan Borough Council to bring forward deliverable sites under its ownership. Please see Appendix A for a Location Plan of the five sites. We therefore suggest that several changes should be made to the aforementioned draft strategies and policies before the Plan could be considered sound. We also propose that "Land off Lindrick Lane, Tickhill" (HELAA Reference Site 356), "Land off Wong Lane, Tickhill" (HELAA Reference Site 357) and Land at Stud Farm, Tickhill" (No current HELAA Reference) are deleted from the Green Belt and allocated for housing development in Tickhill over the plan period. The site at Sunderland Road - the Local Plan’s preferred site should be removed. We also support the future allocation of "Manor Farm" and "Land to North of Limekiln Lane" at Stainton. Our suggested changes (and associated justification) to the Local Plan policies and proposals are set out in Section 2 below. (SEE EMAIL FOR Appendices) (NOTE THIS REP IS FOR SITE 359 AND THE OTHER COMMENTS ARE ONLY THOSE WHICH REFER TO THIS SITE, THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFN - SEE: 03568 / 03569 / 03570 / 04705)
Some land within our client’s ownership was assessed as part of the HELAA evidence base. Our client's sites at Tickhill and Stainton are set out below. The sites are known as:

- “Land off Wong Lane, Tickhill” - HELAA Site 357;
- “Land off Lindrick Lane, Tickhill” - HELAA Site 356;
- “Land at Stud Farm, Tickhill” (not assessed in the 2017 HELAA);
- “Land at Manor Farm, Stainton” - HELAA Site 359;
- “Land North of Limekiln Lane, Stainton” - HELAA Site 358

Sites 356, 357, 358 & 359 were all identified as Deliverable / Developable Sites in the HELAA and therefore there were no physical or technical reasons as to why the sites could not come forward for residential development (the only constraint being that the land lies within Green Belt). In conclusion, following the assessment of the sites in the Doncaster HELAA update, we consider that our clients land should be deleted from the Green Belt, where necessary and allocated as housing sites in the Local Plan. Our comments with regard to individual sites are in respect of the settlements of Tickhill and Stainton. (NOTE THIS REP IS FOR SITE 359 AND THE OTHER COMMENTS ARE ONLY THOSE WHICH REFER TO THIS SITE, THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFNUMBER - SEE: 03568 / 03569 / 03570 / 04705)

Comments made regarding Site 359 - Land at Manor Farm, Stainton, which are combined with comments made and summarised elsewhere.
With regard to Stainton, our client has two sites that are considered suitable for future residential development. The two sites are: 1. "Land at Manor Farm, Stainton" - HELAA Site 359; and, 2. "Land North of Limekiln Lane, Stainton" - HELAA Site 358. These two sites are set out below respectively. (NOTE THIS REP IS FOR SITE 359 THE COMMENTS FOR THE OTHER SITE IS INCLUDED UNDER THEIR REFNUMBER - SEE: 03570)

Summary:
Comments made regarding Site 359 - Land at Manor Farm, Stainton, which are combined with comments made and summarised elsewhere.

Response:
Comment:
Thank you for your consultation on the above which was received by Natural England on 12 August 2019. Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development. Overall, Natural England considers the Doncaster Local Plan to be legally compliant and in accordance with the relevant tests of soundness. Natural England does have the following comments to make on the Doncaster Local Plan Publication.

Summary:
Introduction is made to comments made to various parts of the Local Plan summarised elsewhere.

Response:
The Joint Rural Parishes (JRP), which represents the rural communities to the west of Doncaster, held a number of meetings to formulate a joint response to the Doncaster Local Plan 2015-2035, which is being examined by the Inspector on its soundness and legal compliance. This submission should be considered a general overview which reflects the majority opinion and key concerns of the following communities: Barnburgh and Harlington, Brodsworth incl. Green Lane, Cadeby, Clayton and Frickley, Hickleton, High Melton, Hooton Pagnell, Skelbrooke and Hampole, Marr and Pickburn. In addition Parishes may also submit responses on issues that are more specific to their individual community.

Consideration has been given to the Local Plan in its entirety, including the Appendices, HELAA, Settlement Background Paper, Settlement Audit, Local Plan Evidence Base, Doncaster Infrastructure Strategy, Green Belt Topic Paper, Green Belt Stage 3 Site Summaries, Vision, Aims and Objectives 2015, Section 106 Monitoring Report, Interactive Maps and NPPF March 2019. The JRP has agreed that the Local Plan has been positively prepared, effective and consistent with national policy, though it has reservations about its effectiveness, which will be explained more fully in the text.

Tests of Soundness: Justified Effective Consistent with national

1.1 This report is prepared by Turley on behalf of our clients the Peel Group and Doncaster Sheffield Airport Limited (hereafter referred to as "Peel/DSA"). It provides representations to Doncaster Council (DC) in respect of the Proposed Publication Version Local Plan (LP) which is currently the subject of public consultation. 1.2 The Report has been prepared in general support of the LP and in particular draft policy 7 which supports the expansion of Doncaster Sheffield Airport (DSA). It does though provide suggested modifications to the wording of the draft policy (and its supporting justification) to ensure it aligns with the ambitions and objectives of Peel/DSA and its draft Airport Masterplan (DSAM). However, there are elements of the LP which are considered to be unsound as they are not justified, effective or consistent with national planning policy. As a result, Peel considers that several modifications are necessary to make the LP sound. This relates to other policies including draft spatial policy 3 relating to housing provision and the proposed policy on the open countryside. Other modifications are sought on a number of non-strategic policies. Moreover, the representations also seek to rectify deficiencies and inconsistencies in the LP, including omission sites. In this respect, land east of Gatehouse Lane is proposed within the draft DSAM for residential development and accordingly, the Regulation 18 Consultation in October 2018 identified it as a Late Housing Site (not yet assessed) with a reference number of 1010. A residential allocation has been requested, however notwithstanding it appearing as an unassessed housing site in October 2018, the LP now proposes that it remains in countryside. We comment further on this at paragraphs 5.8 and 9.1 below. 1.3 The remainder of this representation is structured as follows: - Chapter 2: provides a summary of the Peel Group and the regional economic framework which supports the growth of DSA; - Chapter 3: provides an overview of DSA and its vision for growth as articulated through the draft DSAM; - Chapters 4-6: consider specific LP policies; - Chapter 7: considers sites that are identified within the DSAM but are omitted from the LP by the absence of a positive land allocation; and - Chapter 8: provides summary and conclusions.

Summary:

General support for Policy 7, but suggest modified policy wording and supporting text wording to ensure in aligns with the ambitions of the Airport owners and the Airport masterplan. Elements of the Local Plan are considered unsound and several modifications are required to make it sound. There are also omitted sites that should be included, such as land to the East of Gatehouse Lane.

Response:

Introductory type comments - specific detailed aspects of the Representation will be picked up through the subsequent parts of this summary/response document.
2.1 The Peel Group is one of the leading infrastructure, real estate and investment enterprises in the UK. Peel operates a diverse network of businesses, ranging from ports to airports; land to leisure; media to hotels; wind farms to biomass, and holds a portfolio of investments in major public companies. 2.2 Peel is passionate about the growth, regeneration and prosperity of the North. It has worked with partners in the private and public sectors to drive economic growth in the North of England. Peel is excited by the Government's plans to build a Northern Powerhouse. 2.3 It believes that it is important to plan for economic growth at local, city region, and pan-regional levels. In 2008, Peel launched "Ocean Gateway" which brings together its assets across Liverpool, Cheshire and Manchester and seeks to redefine the economic role the combined area would have for the UK. Since 2010, Peel and other partners have supported "Atlantic Gateway" - a broader economic growth and regeneration programme across this area. By combining its key assets with those of the major partners working to support the LEPs, an even more ambitious programme of economic growth has developed. In 2013, a review of the first five years of Ocean/Atlantic Gateway recorded a direct investment of #2bn, annual Gross Added Value (GVA) of #466m and over 10,000 net additional jobs. 2.4 Government priorities in creating a Northern Powerhouse include stimulating economic growth, raising productivity, and improving connectivity. Peel support these objectives and is keen to explore how their aspirations and key projects can align across the North of England to help deliver a Northern Powerhouse. Peel believes that the Northern Powerhouse has the potential to: - improve connectivity, locally, nationally and internationally, for people and freight - create more private sector jobs - rebalance the economy and close the 'North-South divide' - improve skills, education and training - retain talented workers in the North and attract new talent - deliver more and better housing - be economically self-sufficient and reduce state dependency - drive urban regeneration - create great places to live and work - champion environmental quality 2.5 Peel wishes to be a key investor partner in delivering the Northern Powerhouse. In 2015 Peel launched "Peel in the Northern Powerhouse", a statement of commitment to partnership in helping deliver the Northern Powerhouse. It features 150 projects across the North of England which can be part of the economic and social transformation which Government seeks. 2.6 One of these 150 projects is the continued planned expansion of DSA. Indeed the Government itself clearly recognises the role the airport can play in delivering a Northern Powerhouse: 2.7 "The International gateway to Sheffield City Region for passengers and part of the logistics hub. Over #113m is currently being invested to improve its surface connectivity which will increase passenger numbers, and hence heighten its strategic significance and GVA benefits to the north."

2.6.1 One North: A Proposition for an Interconnected North (HM Government, July 2014) The Regional Economic Framework 2.8 The Sheffield City Region (SCR) Strategic Economic Plan (SEP) sets an ambitious target to increase GVA within the City Region by #3.1bn by 2025. Achieving this ambition will strengthen SCR's contribution to the national economy and its role within the Northern Powerhouse. It targets 70,000 net additional jobs within SCR and it identifies seven long term spatial areas of growth and change where a significant proportion of growth is expected to occur. 2.9 One of the seven SCR areas of growth and change is the Doncaster Sheffield Airport corridor which is: "Recognised as a catalyst for business development, inward investment and job creation with regard to logistics, engineering and associated aviation activities." 2.10 It is crucial the LP fully aligns with the objectives of the SEP. 2.11 To support the SCR SEP, an Integrated Infrastructure Plan (IIP) has been published. The IIP articulates and evidences required infrastructure, spatial requirements linked to supporting the economic priority areas identified in the SEP. In essence, it seeks to provide the infrastructure necessary to create the best opportunities for economic growth, jobs and homes, to create the best attractive environments for businesses and residents. To focus investment, the IIP identifies a number of strategic spatial priorities: 1. Growth of the advanced manufacturing innovation district; 2. Provide growth and enhance the role of DSA and the surrounding area; 3. Maximise the benefits of HS2 in the Sheffield City Region; and 4. Stimulate growth and regeneration in Town and City Centres. 2.12 DSA is expressly identified as a growth area which is currently being developed as an engineering and aero-industry centre "alongside and including" housing growth. The IIP encourages Spatial Frameworks such as the Doncaster LP to be prepared to identify strategic areas of future housing delivery aligned with the ambitions of the Growth Areas and Urban Centres - this should include strategic opportunities for housing as an integrated element of Growth Areas. Global Innovation Corridor 2.13 DSA is working with partners in the Sheffield City Region, including the Local Enterprise Partnership, universities and advanced manufacturers, to create the Global Innovation Corridor (GIC): a destination for research, development, manufacturing, maintenance, repair and overhaul. 2.14 GIC will traverse the heart of the City Region capitalising on assets of global significance - linked by the region's multi-modal transport connectivity to drive growth through innovation-led research, advanced manufacturing and engineering. 2.15 An expanded DSA will provide the global connectivity required to benefit the businesses within the GIC and deliver further high-quality investment to the DSA site and wider GIC. Businesses such as Rolls Royce require specialist facilities and a live airport for on-site training. 2.16 Focused around our R&D assets and skilled specialisms, the GIC will be a global magnet for people, industry and innovators, that will to grow our advanced manufacturing, wellbeing and digital clusters underpinned by great transport infrastructure. 2.17 The GIC will connect assets such as theAdvanced Manufacturing Innovation District, Advanced Manufacturing Research Centre, Advanced Wellbeing Research Centre, the Sheffield Olympic Legacy Park, National College for High Speed Rail, Barnsley's Digital Media Centre and Doncaster Sheffield Airport.
Summary:

Peel is passionate about growth, regeneration and prosperity in the North of England. Peel has a track record of delivering economic growth programmes in the North. It supports Northern Powerhouse objectives and the potential of the North, and has committed to this via its Peel in the Northern Powerhouse statement (2015). DSA is one of 150 projects. The government clearly recognise the role an airport can play in delivering the northern powerhouse: "The International gateway to Sheffield City Region for passengers and part of the logistics hub. Over #113m is currently being invested to improve its surface connectivity which will increase passenger numbers, and hence heighten its strategic significance and GVA benefits to the north." (One North: A Proposition for an Interconnected North (HM Government, July 2014)) The Sheffield City Region Economic Plan sets ambitious growth targets and one of seven city region areas of growth and change is DSA. It is crucial the Local Plan fully aligns with the SCR Strategic Economic Plan. To support this, the Integrated Infrastructure Plan identifies spatial priorities, including expressly DSA as a growth area for engineering and aero industry, "alongside and including" housing growth. This encourages spatial frameworks to identify strategic areas for housing aligned with the ambitions of growth areas and urban centres. DSA is working with partners in the Sheffield City Region, including the Local Enterprise Partnership, universities and advanced manufacturers, to create the Global Innovation Corridor (GIC): a destination for research, development, manufacturing, maintenance, repair and overhaul. An expanded DSA can provide the connectivity business in the GIC require and deliver high quality investment to DSA and the wider GIC. The GIC will be a global magnet for people, industry and innovators. The GIC will connect assets such as the Advanced Manufacturing Innovation District, Advanced Manufacturing Research Centre, Advanced Wellbeing Research Centre, the Sheffield Olympic Legacy Park, National College for High Speed Rail, Barnsley's Digital Media Centre and Doncaster Sheffield Airport.

**Comment:**

1.1 This submission has been prepared by Longwall Property on behalf of Inherent Property Ltd in response to the consultation on the Publication version of the Doncaster Local Plan. 1.2 Inherent Property are working with the owners of a site on Worksop Road in Tickhill (reference 930) to promote it through the emerging Local Plan as a potential residential development site. We have previously written to the council regarding the site and provided a Development Statement identifying the site’s development potential. 1.3 These comments have also been prepared with the knowledge of the owners of the adjoining site (reference 281). Both parties have indicated a willingness to work together to ensure the wider site can be delivered.

**Summary:**

Introduction is made to comments made to various parts of the Local Plan summarised elsewhere.

Comment:
Please find enclosed a representation prepared by Pegasus Group on behalf of The Gascoine Group in relation to Land of West Bawtry Hall, Bawtry. The representation considers the content within the Publication Draft of the Doncaster Local Plan. The representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018 and promotional document which are enclosed. (SEE EMAIL FOR other documents)

Summary:
The representation considers the content within the Publication Draft of the Doncaster Local Plan. (on behalf of The Gascoine Group in relation to Land of West Bawtry Hall, Bawtry) The representation should be read in conjunction with the accompanying information produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018 and promotional document which are enclosed.

Response:
1.1 This representation is prepared by Pegasus Group on behalf of The Gascoine Group in relation to Land of West Bawtry Hall, Bawtry. The representation considers the content within the Publication Draft of the Doncaster Local Plan. 1.2 In compiling this representation Pegasus Group have applied the four elements of soundness referred to in the National Planning Policy Framework, which are; positively prepared, justified, effective and consistent with national policy. 1.3 This representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018. That document promotes the site and illustrates why it should be allocated for residential development. The purpose of this submission is to focus on the matters within the Publication Draft only, mainly the overall requirement and distribution of housing. (SEE EMAIL FOR other documents)

Summary:

Pegasus Group have applied the four elements of soundness referred to in the National Planning Policy Framework, which are; positively prepared, justified, effective and consistent with national policy in considering the content of the Local Plan representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018. Focusing on publication draft, the information identifies why the site should be allocated for residential development
1.1 This statement has been prepared to respond to the Doncaster MBC Local Plan Publication Draft having regard to whether the Draft Plan is sound when considered against the four tests of soundness as set out in the National Planning Policy Framework (the "Framework"). Plans are "sound" if they are: - Positively Prepared - providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is consistent with achieving sustainable development; - Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; - Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and - Consistent with national policy - enabling the delivery of sustainable development in accordance with policies in this Framework. 1.2 Johnson Mowat make the following comments in relation to a number of Draft Policies in the Publication Draft and promote Site 1013 and land immediately adjacent, to the south of Common Lane, Auckley on behalf of The Strategic Land Group (SLG), who have an interest in the site. Appendix 1 contains a plan showing the extent of the site. 1.3 An Outline planning application for residential development (of up to 82 dwellings) which was validated by Doncaster Council on 13th September 2017 was refused on 19th July 2019 (Application Ref 17/02278/OUTM). The application was refused for three reasons, the first reason relating to the current location of the site within the Countryside Policy Area. The other two reasons for refusal relate to the access design and resultant loss of part of an existing hedgerow. It is considered that in light of the highway details submitted to the Council’s highways team in the months leading up to the refusal, that the highways reason for refusal is not insurmountable. In relation to the third reason for refusal (regarding loss of part of a hedgerow), the proposed removal of some hedging will be required to accommodate a new access point. The LVIA and the revised drawings submitted to the Council provide a comprehensive landscape design which will be an important part of the development proposals. The Landscape Framework Plan describes measures to enhance the biodiversity of the site, including the use of native planting, linking wildlife corridors, and the creation of attenuation ponds to assist in water management and create new habitats. In light of these facts it is considered that the third reason for refusal can be overcome. Appendix 2 contains the indicative site layout that formed part of the Outline application. The Outline application relates to Site 1013. 1.4 Details of additional land to the immediate north east of the site have also been put forward to the Council which relates to land outlined in blue on the plan at Appendix 1. 1.5 Johnson Mowat submitted representations to the Informal Consultation Draft Sites and Policies document in October 2018 on behalf of SLG. A number of the comments made remain relevant, given the continuation of the Council’s approach in the Publication Draft. (SEE EMAIL FOR Appendices)
We have been instructed on behalf of the Sandbeck Estate, who are landowners within the Borough, to submit a response to the Doncaster Local Plan Regulation 19 Consultation. Our client's interest is in respect of the settlements of 'Tickhill' and 'Stainton'. We previously submitted representations to the Regulation 18 Consultations promoting these sites and we reiterate some of this evidence again. Furthermore, we have prepared additional evidence in the form of a 'Comparative Landscape and Green Belt Assessment' which compares our client's site at Wong Lane to the Regulation 19 Local Plan preferred site (Sunderland Street) in terms of Green Belt purposes (See Appendix B). Our comments focus on the settlements of Tickhill and Stainton. The Sandbeck Estate is committed to working alongside Doncaster Metropolitan Borough Council to bring forward deliverable sites under its ownership. Please see Appendix A for a Location Plan of the five sites. We therefore suggest that several changes should be made to the aforementioned draft strategies and policies before the Plan could be considered sound. We also propose that "Land off Lindrick Lane, Tickhill" (HELAA Reference Site 356), "Land off Wong Lane, Tickhill" (HELAA Reference Site 357) and Land at Stud Farm, Tickhill" (No current HELAA Reference) are deleted from the Green Belt and allocated for housing development in Tickhill over the plan period. The site at Sunderland Road - the Local Plan's preferred site should be removed. We also support the future allocation of "Manor Farm" and "Land to North of Limekiln Lane" at Stainton. Our suggested changes (and associated justification) to the Local Plan policies and proposals are set out in Section 2 below. (SEE EMAIL FOR Appendices) (NOTE THIS REP IS FOR SITE 1021 AND THE OTHER COMMENTS ARE ONLY THOSE WHICH REFER TO THIS SITE, THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFNUMBER - SEE: 03568 / 03569 / 03570 / 03571)

**Summary:**

Comments made regarding Site 1021 - Land at Stud Farm, Tickhill, which are combined with comments made and summarised elsewhere.

**Response:**

Tickhill does have a shortfall of housing against its allocated target, however it has a number of constraints to the delivery of housing, including Green Belt and access issues. The site in question has a weak case in Green Belt terms for continuation in the site selection process. It is also adjacent to Tickhill Castle and within the view of St Mary's Church in the Tickhill conservation area. As such, site 1021 scores particularly strongly against the historic aims of the Green Belt.
Tests of Soundness:

Justified

Comment:

Some land within our client's ownership was assessed as part of the HELAA evidence base. Our client's sites at Tickhill and Stainton are set out below. The sites are known as: "Land off Wong Lane, Tickhill" - HELAA Site 357; "Land off Lindrick Lane, Tickhill" - HELAA Site 356; "Land at Stud Farm, Tickhill" (not assessed in the 2017 HELAA) - "Land at Manor Farm, Stainton" - HELAA Site 359 - "Land North of Limekiln Lane, Stainton" - HELAA Site 358. Sites 356, 357, 358 & 359 were all identified as Deliverable / Developable Sites in the HELAA and therefore there were no physical or technical reasons as to why the sites could not come forward for residential development (the only constraint being that the land lies within Green Belt). In conclusion, following the assessment of the sites in the Doncaster HELAA update, we consider that our clients land should be deleted from the Green Belt, where necessary and allocated as housing sites in the Local Plan. Our comments with regard to individual sites are in respect of the settlements of Tickhill and Stainton. (NOTE THIS REP IS FOR SITE 1021 AND THE OTHER COMMENTS ARE ONLY THOSE WHICH REFER TO THIS SITE, THE COMMENTS FOR THE OTHER SITES ARE INCLUDED UNDER THEIR REFNUMBER - SEE: 03568 / 03569 / 03570 / 03571)

Summary:

Comments made regarding Site 1021 - Land at Stud Farm, Tickhill, which are combined with comments made and summarised elsewhere.

Response:

Tickhill does have a shortfall of housing against its allocated target, however it has a number of constraints to the delivery of housing, including Green Belt and access issues. The site in question has a weak case in Green Belt terms for continuation in the site selection process. It is also adjacent to Tickhill Castle and within the view of St Mary's Church in the Tickhill conservation area. As such, site 1021 scores particularly strongly against the historic aims of the Green Belt.
National Grid has appointed Wood to review and respond to development plan consultations on its behalf. We are instructed by our client to submit the following representation with regard to the current consultation on the above document. About National Grid National Grid Electricity Transmission plc (NGET) owns and maintains the electricity transmission system in England and Wales and National Grid Electricity System Operator (NGESO) operates the electricity transmission network across the UK. The energy is then distributed to the eight electricity distribution network operators across England, Wales and Scotland. National Grid Gas plc (NGG) owns and operates the high-pressure gas transmission system across the UK. In the UK, gas leaves the transmission system and enters the UK’s four gas distribution networks where pressure is reduced for public use. National Grid previously owned part of the gas distribution system known as ‘National Grid Gas Distribution limited (NGGDL). Since May 2018, NGGDL is now a separate entity called ‘Cadent Gas‘. To help ensure the continued safe operation of existing sites and equipment and to facilitate future infrastructure investment, National Grid wishes to be involved in the preparation, alteration and review of plans and strategies which may affect National Grid’s assets.

Summary:
Information about National grid and its role is provided as introductory information to their main representations.

1.1 These representations have been prepared by Barton Willmore on behalf of Barratt and David Wilson Homes (Yorkshire East) (hereafter referred to as the 'Client'). 1.2 Our Client has a keen interest in the future development of Doncaster and is grateful for this opportunity to engage in the forward planning process. Our Client is keen to ensure that the emerging Local Plan is sound and will bring forward the Authority's housing and employment needs. Our Client is pleased to have the opportunity to positively engage with Doncaster Council (hereafter referred to as the 'Council') to help it achieve a robust Local Plan. About Barratt and David Wilson Homes 1.3 Barratt and David Wilson Homes is Britain's best-known house builder and has built over 300,000 new homes around the country, including 17,579 homes last year. Our Client is leading in the field of low carbon design, urban regeneration, social housing and innovation. 1.4 Barratt and David Wilson Homes is one of the largest residential developers in the UK, helping to meet housing demands in a range of towns, cities and rural areas. Our Client builds a variety of housing from first-time buyers apartments to family houses, plus many for social rent and shared ownership. 1.5 Our Client currently has interests in the following sites within Bawtry: - 141 - Westwood Road, Bawtry (allocated for housing); - 146 - Tickhill Road, Bawtry (promoted for housing allocation, but dismissed).

Responses to Representations in respect to SA are set out in the Wood Environment & Infrastructure SA Report Addendum
1.1 These representations have been prepared by Barton Willmore on behalf of Barratt and David Wilson Homes (Yorkshire East) (hereafter referred to as the ‘Client’). 1.2 Our Client has a keen interest in the future development of Doncaster and is grateful for this opportunity to engage in the forward planning process. Our Client is keen to ensure that the emerging Local Plan is sound and will bring forward the Authority's housing and employment needs. Our Client is pleased to have the opportunity to positively engage with Doncaster Council (hereafter referred to as the ‘Council’) to help it achieve a robust Local Plan. About Barratt and David Wilson Homes 1.3 Barratt and David Wilson Homes is Britain’s best-known house builder and has built over 300,000 new homes around the country, including 17,579 homes last year. Our Client is leading in the field of low carbon design, urban regeneration, social housing and innovation. 1.4 Barratt and David Wilson Homes is one of the largest residential developers in the UK, helping to meet housing demands in a range of towns, cities and rural areas. Our Client builds a variety of housing from first-time buyers apartments to family houses, plus many for social rent and shared ownership. 1.5 Our Client currently has interests in the following sites within Bawtry: - 141 - Westwood Road, Bawtry (allocated for housing); - 146 - Tickhill Road, Bawtry (promoted for housing allocation, but dismissed).
The landowner has sought to work collaboratively with Doncaster Metropolitan Borough Council (DMBC) over recent years to explore the development options on the land at Nutwell South, Nutwell Lane, Armthorpe. In doing so, the landowner has submitted several site submissions and written representations to support the development of Site 149 as part of the emerging Local Plan process. Such submissions have included evidence which strongly supports the proposed allocation. The landowner has also sought to meet with DMBC at every opportunity to discuss the site in more detail in addition to at tempting to work with the Neighbourhood Plan Steering Group in order to promote the site for development as part of this process. Unfortunately the Site was not progressed as part of the Neighbourhood Plan which has since been adopted. Irrespective of the evidence base to support an allocation at the Site, the Site has not been allocated for development as part of the emerging Local Plan either. It is strongly advisable that Site 149 should be re-considered now for a mixed-use development comprising both residential and employment uses, within which, the proposed development would include the opportunity for a bypass road to facilitate traffic management within the village. The draft indicative masterplan previously submitted is appended for reference. This masterplan demonstrates how the site could be developed and emphasises that development on the site is entirely feasible and will assist the Council in meeting its housing and employment land targets. Pre-application meetings with various departments from across the Council were undertaken in the summer of 2017 including attendance from Assistant Director of Development, Head of Planning, Investment and Tourism Team Manager, Investment and Tourism Team Manager, Highways, and Economic Development. A copy of the Pre-Application Document is again appended for reference. The pre-application submission focussed on the delivery of small and medium enterprises (SME's) at the site however, it’s considered that there is also potential for a mixed-use development across the wider site to provide both residential and employment uses. A further pre-application meeting was held with the Council in December 2018 following submission of the representations submitted in October 2018. The meeting was requested by the landowner following a change in circumstances and the material start on the adjacent employment site at West Moor Park. The purpose of the meeting was the discuss the principle of a mixed use development on the site and the need to review the site selection methodology and site assessments in this respect, to ensure a consistent approach from the Council across the Borough. The Council welcomed the opportunity to discuss the site and the site selection methodology in more detail in this respect. The Council advised that the site selection methodology would be reviewed in advance of the next round of Consultation which was welcomed by all however, from a review of the evidence base to support the emerging Local Plan this has not been implemented in advance of this Local Plan Consultation which is grossly disappointing. As outlined above, since the aforementioned meeting with DMBC in December 2018, phase one of the site adjacent to the north (West Moor Park Extension) is now complete. The adjacent development includes a road which leads directly to the northern site boundary and effectively 'opens up' and unlocks the site at Nutwell Lane for development. Site 149 is therefore now entirely available and there are no known technical constraints to the site being brought forward for development in the short-medium term. The provision of a road up to the site boundary of Site 149 also presents an opportunity for the development of the site to provide a much needed bypass for Armthorpe and the local area. This is a rare opportunity to improve the local transport network which should not be ignored by DMBC.

Summary:
The landowner has sought to work collaboratively with the Council over the years to explore development options for land at Nutwell South. Several representations have been submitted to support the development of site 149. The site was not progressed as part of the Neighbourhood Plan or as part of the emerging Local Plan. Site 149 should be re-considered for a mixed-use development (housing and employment) which would include a bypass road to help with traffic management. The draft indicative masterplan is submitted as an appendix. Development on the site is entirely feasible and will help meet housing and employment land targets. Pre-application meetings have been held (2017) and a copy of the document is included as an appendix. It focused on the delivery of small and medium enterprises, but there is also the potential for a mixed use development for both residential and employment. A further meeting took place in October 2018 with the Council in which the landowner wanted to discuss the principle of development and the need to review the site selection methodology and site assessments. The Council advised that the site selection methodology would be reviewed in advance of the next consultation. However a review of the Local Plan evidence base has not been implemented. This is grossly disappointing. Phase 1 of West Moor Park Extension (to the north of site 149) is now complete and includes a road which 'opens up' and unlocks site 149. This means that site 149 is entirely available and there are no known technical constraints to bringing the site forward. There is an opportunity to provide an Armthorpe bypass.

Response:
Comment:
These representations have been prepared by Savills (UK) Ltd on behalf Mr Philip Lodge (the landowner) in respect of his landholding at Nutwell Lane, Armthorpe, in response to Doncaster Metropolitan Borough Council’s (DMBC) Local Plan Publication Consultation. Our client’s land is identified in the plan’s evidence base as Site 149 Nutwell South. These representations focus on the soundness of the Draft Plan. As such these representations focus on the Soundness and Legal Tests contained within Paragraph 35 of the NPPF which states plans must be: a. Positively prepared - providing a strategy which, as a minimum, seeks to meet the area’s housing and employment needs; and is informed by agreement with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b. Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c. Effective - deliverable over the plan period, and based on effective joint working on cross - boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d. Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this Framework. These representations build upon previous comments made at the Informal Consultation in October 2018 and the follow on meeting with the Council in December 2018. A copy of the previous representation is appended for completeness. Savills remain significantly concerned with the Council's methodology and site selection process. As such, Savills remain concerned with the Council’s ability to allocate and deliver sufficient deliverable sites for both housing and employment uses across the Borough over the Plan period. Site 149 is considered to be a highly sustainable and deliverable site for an employment led, mixed use development and the justification for discounting the site is significantly unfounded without due appropriate evidence.

Summary:
This representation builds upon previous comments made to the Informal Consultation stage in October 2018 and with a meeting with the Council in December 2018. Savills remain significantly concerned with the Methodology and Site Selection Process. There is a concern with the Council's ability to allocate and deliver sufficient deliverable housing and employment sites over the plan period. Site 149 is highly sustainable and deliverable site for employment led, mixed use development. The justification for discounting the site is significantly unfounded without due appropriate evidence.

Response:
Noted
UKOOG is the representative body for the UK onshore oil and gas industry, including exploration and production. We support the process of local plan making and want to ensure that any proposed plan with respect to onshore oil and gas is sound and meets with the criteria and policies outlined by Government in the NPPF, Planning Practice Guidance and related Written Ministerial Statements. In our view, minerals plans should establish clear criteria-based policies against which proposals can be transparently assessed on a case by case basis. This letter should be read in conjunction with our previous response to the 'Informal Consultation: Draft Policies and Proposed Sites', which closed on 26th October 2018. Our response to this earlier consultation is appended in annex 1. The planning process for onshore oil and gas is one of five regulatory processes that are required under the current policy framework set by government. As such the proposed plan should include a review of each regulatory function and identify those areas which fall outside of the planning process. PPG 012 and PPG 112 make clear that planning authorities are not responsible for matters covered by other regulatory regimes. MPAs “should assume that these regimes will operate effectively. Whilst these issues may be put before mineral planning authorities, they should not need to carry out their own assessment as they can rely on the assessment of other regulatory bodies.” This planning policy principle has been re-confirmed in a number of legal cases including most recently. (Frack Free Balcombe Residents Association) v West Sussex CC 2014.

Summary:
supports the process of local plan making. The representation clarifies the planning authority as one of five regulatory regimes and PPG 012 and PPG 112 make clear that planning authorities are not responsible for matters covered by other regulatory regimes.

Response:
Comments noted
Felsham Planning and Development is instructed to submit a representation to the Local Plan consultation on behalf of INEOS Upstream Ltd. This representation deals with Policy 65 covering unconventional gas and associated development management policies, in particular Policy 55 Pollution and Policy 64 Reclamation of Minerals Sites (Restoration, Aftercare and After-Use). We have previously expressed concerns about the wording of policy 65, which did not reflect the positive approach to unconventional gas required by the Written Ministerial Statement (WMS) of 17th May 2018 and revised NPPF 2018. The subsequent WMS of 23rd May 2019 reiterated the approach to policy making that the Government requires. We are pleased to note the revisions made to policy 65 to provide a simple policy that makes a positive statement in support and removes all the very restrictive text in the draft. However, it leaves any hydrocarbon application to be judged against the other policies of the plan, which could easily be used to block any applications. In addition it fails to follow the Government’s explicit direction to provide policy guidance for each phase of the process namely exploration, appraisal and production. Whilst the policy has been revised to provide the positive statement we sought there is a need for a simple set of criteria which set out the principles against which any application will be assessed. Without that the current draft policy is unsound because it is simply a statement and provides no guidance about specific points to address. Therefore, INEOS is supportive of the positive policy approach but believe that some amendments are necessary. At the outset it is important to note: - The planning process for onshore oil and gas is one of five regulatory processes that are required under the current policy framework set by government. As such the proposed plan should include a review of each regulatory function and identify those areas which fall outside of the planning process. PPG 012 and PPG 112 make clear that planning authorities are not responsible for matters covered by other regulatory regimes. Minerals planning authorities should assume that these regimes will operate effectively. Whilst these issues may be put before mineral planning authorities, they should not need to carry out their own assessment as they can rely on the assessment of other regulatory bodies. This planning policy principle has been re-confirmed in a number of legal cases including most recently, (Frack Free Balcombe Residents Association) v West Sussex CC 2014. - Unconventional gas is a national resource for the benefit of all. National policy recognises that minerals development has certain characteristics, such as temporary use over a long period of time and adverse impacts which may require mitigation (PPG 001); that impacts will vary from site to site (PPG 013); are best assessed through the EIA process but that does not mean that an EIA is necessarily required (PPG 011); and impacts are best controlled through the imposition of appropriate work programmes (PPG 015). Assessments and decisions should be made, and mitigation applied, on a case-by-case basis as envisaged by national policy. PPG 018 refers to the need for any proposed separation distance [to] be established on a site specific basis and should be effective, properly justified and reasonable. - The point of appraisal is to understand the potential in any given area. At the point of making an application for an appraisal well it will not be possible to supply a completed appraisal of the hydrocarbon resource field because the purpose of the appraisal well is to help to gather such information. - National policy does not require that production is undertaken within a specific timescale.

**Summary:**

Introduction The representation deals with Policies 55, 64 and 65. pleased to note the revisions made to policy 65 to provide a simple policy that makes a positive statement in support and removes all the very restrictive text. There is a need for a simple set of criteria which set out the principles against which any application will be assessed INEOS is supportive of the positive policy approach but amendments are required.

Comments noted. the introduction identifies policy responses to policies 55, 64 and 65 in relation to Written Ministerial Statements. See policy responses to policies 55, 64 and 65 for detailed response.
Comment:
Cuadrilla Resources Limited (Cuadrilla) welcomes the opportunity to participate in the 2019 consultation of the Doncaster Local Plan 2015 - 2035 (Publication Version). We support the process of local plan drafting and consultation and wish to ensure that this is undertaken with due consideration to the onshore oil and gas industry, in particular ensuring consistency with policies set out in the National Planning Policy Framework (NPPF), associated Planning Practice Guidance (PPG) and related Written Ministerial Statements. This letter should be read in conjunction with our previous response (dated 26th October 2018) to the informal consultation of the Doncaster Local Plan (Draft Policies and Proposed Sites) September 2018. Cuadrilla is a member of United Kingdom Onshore Oil and Gas (UKOOG), the representative body for the UK onshore oil and gas industry, including exploration and production. Cuadrilla is aware that UKOOG has made a submission to Doncaster Council in relation to this consultation; Cuadrilla supports the representations made by UKOOG in that submission. Cuadrilla's own submission is set out below. We focus our submission on the content of Policy 65 (Providing for Energy Minerals (Onshore Gas and Oil (Hydrocarbons)).

Summary:
Support the process of local plan drafting and consultation and wish to ensure that this is undertaken with due consideration to the onshore oil and gas industry, in particular ensuring consistency with policies set out in the National Planning Policy Framework (NPPF), associated Planning Practice Guidance (PPG) and related Written Ministerial Statements.

Response:
Comments noted.
IGas supports the views of UKOOG, the representative body for the UK onshore oil and gas industry, including exploration and production. IGas makes the following comments in respect of the vision and objectives of the plan and those policies considered relevant to the hydrocarbon industry.

**Comment:**

1.1. Spawforths have been instructed by EON to submit representations to the Doncaster Local Plan 2015-2035 Publication Version. 1.2. EON welcomes the opportunity to contribute to the Doncaster Local Plan and are keen to further the role of Doncaster Council within the Sheffield/Leeds City Region, and Yorkshire and Humber as a whole. 1.3. As you are aware, EON has significant land interests in the area and has made representations to earlier stages of the emerging Local Plan. EON operate Tween Bridge, which comprises 22 turbines and has a total power output of 44MV. In 2015, the wind farm met around 30,000 homes annual electricity needs. 1.4. The Tween Bridge Wind Farm provides a community fund towards worthwhile local projects and initiatives. This fund will provide approximately £1.25 million over the life of the wind farm for the benefit of local people. Tween bridge also contributes around £400k in business rates to Doncaster MBC. 1.5. Significantly, Tween Bridge was determined to be an appropriate location for wind energy development following the scrutiny of a public inquiry. Notwithstanding the requirement to ensure appropriate environmental safeguards, particularly in respect of nature conservation interests on the adjoining Thorne Moors and to ensure the safe operation of Doncaster Sheffield Airport, the scheme was deemed to be acceptable subject to conditional control. 1.6. Although Tween Bridge, like all other onshore wind energy schemes has been approved for a temporary period, the operational turbines at the wind farm form an integral component of the landscape. 1.7. Given the availability of additional grid network capacity at Tween Bridge and informed by initial baseline assessment work and consultation, EON has commenced work on a feasibility study to explore the scope to deliver up to four further wind turbines on the site. There are a number of potential options that could be pursued to achieve this objective. In this context it would seem sensible to keep the potential option open to develop further wind turbines at Tween Bridge. 1.8. Having reviewed the Local Plan 2015-2035 Publication Version and the published evidence base documents it is clear that Policy 60 of the Local Plan and the Background Policy Document on Wind Energy Development seek to confirm an Area of Search for wind energy development that would not include the existing wind energy developments within the Borough such as Tween Bridge. Instead, the proposed Area of Search would encompass land to the west of the Borough and to the south east of Barnby Dun - a location that does not, at least as of yet, accommodate any wind energy development. 1.9. The Background Policy Document has been principally driven by outdated landscape assessment work that was undertaken before Tween Bridge and other wind energy developments within the Borough became operational. Hence the document fails to acknowledge that existing turbines, including the 22 turbines at Tween Bridge, form an integral part of the landscape. Wind energy operators do not appear to have been consulted on the Background Policy Document and EON only became aware of the document through the Doncaster Local Plan Informal Consultation: Draft Policies and Proposed Sites, September 2018. 1.10. EON would like to make comments on the following policy in the Doncaster Local Plan 2015-2035 Publication Version: - Policy 60 Wind Energy Development and associated Background Policy Document on Wind Energy Development and Landscape Character Study. 1.11. Observations are set out below with reference to the provisions of the Framework and amendments are suggested to ensure that the Local Plan is made sound. 1.12. EON welcome the opportunity for further engagement and the opportunity to appear at the Examination in Public. 1.13. We trust that you will confirm that these representations are duly made and will give due consideration to these comments. 1.14. Please do not hesitate to contact us to discuss any issues raised in this Representation further.

Comment:

Please find enclosed a representation prepared by Pegasus Group on behalf of Mr. J. Wilson in relation to Land at Martin Lane Bawtry. The representation considers the content within the Publication Draft of the Doncaster Local Plan. The representation should be read in conjunction with the representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018, which is enclosed (appendix 2). This representation is accompanied by a revised Concept Masterplan (appendix 1). In addition appendix 2 also includes the Initial Appraisal of Key Landscape & Visual Issues and Housing Need Evidence Appraisal. (SEE EMAIL FOR Appendices)

Summary:

Representation by Pegasus Group on behalf of Mr. J. Wilson in relation to Land at Martin Lane Bawtry

Response:
Comment:
Please find enclosed a representation prepared by Pegasus Group on behalf of Metacre Limited in relation to Land at Crabgate Lane, Carcroft & Skellow. The representation considers the content within the Publication Draft of the Doncaster Local Plan. The representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018, which is enclosed.

Summary:
Promoting site at Crabgate, Skellow

Response:
1.1 This representation is prepared by Pegasus Group on behalf of Metacre Limited in relation to Land at Crabgate Lane, Carcroft & Skellow. The representation considers the content within the Publication Draft of the Doncaster Local Plan. 1.2 In compiling this representation Pegasus Group have applied the four elements of soundness referred to in the National Planning Policy Framework, which are; positively prepared, justified, effective and consistent with national policy. 1.3 This representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018. That document promotes the site and illustrates why it should be allocated for residential development. The purpose of this submission is to focus on the matters within the Publication Draft only, mainly the overall requirement and distribution of housing.

Summary:
Pegasus have compiled the representation considering the tests of soundness referred to in the National Planning Policy Framework, which are; positively prepared, justified, effective and consistent with national policy.

Response:
Comment:
Please find enclosed a representation prepared by Pegasus Group on behalf of Metacre Limited in relation to Land at Mill Lane, Carcroft & Skellow. The representation considers the content within the Publication Draft of the Doncaster Local Plan. The representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018, which is enclosed.

Summary:
Representing site 185 - Mill Lane, Carcroft.

Response:
1.1 This representation is prepared by Pegasus Group on behalf of Metacre Limited in relation to Land at Mill Lane, Carcroft & Skellow. The representation considers the content within the Publication Draft of the Doncaster Local Plan. 1.2 In compiling this representation Pegasus Group have applied the four elements of soundness referred to in the National Planning Policy Framework, which are; positively prepared, justified, effective and consistent with national policy. 1.3 This representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018. That document promotes the site and illustrates why it should be allocated for residential development. The purpose of this submission is to focus on the matters within the Publication Draft only, mainly the overall requirement and distribution of housing.

Summary:
The representation will consider the four tests of soundness - positively prepared, justified, effective and consistent with national policy.

Response:
Framecourt Homes welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public.

Reason: Test of Soundness:
- Positively prepared
- Effective
- Justified
- Consistent with national

Comment:
3.1. Framecourt Homes is concerned that the Doncaster Local Plan - Publication Plan is deficient in its content and the evidence base does not reflect national guidance. Test of Soundness 3.2. Framecourt Homes considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X Positively Prepared X Effective X Justified X Consistency with National Policy

3.3. Framecourt Homes is concerned that the draft Local Plan does not reflect the Framework (2019). Framecourt Homes is concerned that the housing requirement does not reflect economic growth ambitions, the level of employment allocations, nor is it sufficient to meet the identified needs for affordable housing. Further Framecourt Homes are concerned that there are insufficient housing allocations to meet the housing requirement. 3.4. Framecourt Homes is concerned that there is a lack of up to date, available, and robust evidence base to accompany the Plan, particularly in respect of an up to date Housing Needs Assessment, whilst a 2019 update is referred to in the Plan, it is not yet publicly available, the Viability Evidence (May 2019), which requires further testing to support its conclusion, and specific evidence to justify key policies 3.5. Framecourt Homes consider that the Policies in the Local Plan are not justified and does not provide an appropriate strategy. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 3.6. In these circumstances, Framecourt Homes do not consider the Doncaster Local Plan, in its current form, to be sound.

3.7. However, Framecourt Homes consider that the plan can be made sound subject to proposed changes as set out within the following sections of these representations. Framecourt Homes will continue to work with the Council to develop appropriate modifications to the Local Plan.

Proposed Change 3.8. To overcome the objection and address soundness matters, the Council should: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the Plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Summary:
The Local Plan is unsound. It does not reflect the framework (2019) and also does not reflect the economic growth ambitions, level of employment allocations and is insufficient to meet identified affordable housing needs. There are also insufficient housing allocations. There is a lack of up to date and robust evidence to accompany the plan, especially an up to date housing needs assessment. The 2019 version is unavailable at this stage. It does not provide an appropriate strategy and could fail to deliver sustainable development in accordance with the policies in the framework, and is inconsistent with national policy. Changes can be made to make this sound: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the Plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Response:
1.1. Spawforths have been instructed by Framecourt Homes Ltd to submit representations to the Doncaster Local Plan 2015-2035: Publication Version, for their site at Apy Hill Lane, Tickhill. 1.2. Appended to these representations is a report assessing the housing requirement, prepared by Regeneris Consulting. (SEE EMAIL FOR Regeneris Report) 1.3. Framecourt Homes welcomes the opportunity to contribute to the emerging Local Plan for Doncaster and is keen to further the role of Doncaster within the Sheffield City Region, South Yorkshire and the Yorkshire and Humber Region as a whole. 1.4. Framecourt Homes has significant land interests in the area, which can positively contribute towards the economic and housing growth agenda. 1.5. Framecourt Homes would like to make comments on the following topics and sections in the Doncaster Local Plan 2015-2035 Publication Version: - General Comments - Policy 2 - Spatial strategy and settlement hierarchy - Policy 3 - Level and distribution of growth - Policy 6 - Housing Allocations - Site 1019: Apy Hill Lane, Tickhill - Policy 8 - Delivering the necessary range of housing - Policy 19 - Development affecting public rights of way - Policy 20 - Access, design and layout of public rights of way - Policy 29 - Open space provision in new developments - Policy 46 - Housing design standards - Policy 66 - Developer contributions - Policy 67 - Development viability 1.6. In each case, observations are set out with reference to the provisions of the Framework and where necessary, amendments are suggested to ensure that the Local Plan is found sound. 1.7. Framecourt Homes welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public. 1.8. We trust that you will confirm that these representations are duly made and will give due consideration to these comments. 1.9. Please do not hesitate to contact us to discuss any issues raised in this Representation further.
Comment Ref: C/Introduction/05177/1/002

Attend Examination: Attend Hearing

Reason: The iPort is a logistics and warehousing site of regional and national importance, therefore it is appropriate that a representative is able take part in the hearing sessions.

Area: Miscellaneous - Introductions

Policy: Tests of Soundness: Justified Effective Consistent with national

Comment:

1.1 RPS have written this note on behalf of our client Troy Verdion, who is developing the iPort. Doncaster council’s website states; iPort is a Strategic Rail Freight Interchange (SRFI) which is delivering more than six million sq. ft (562,000 sq. m) of Grade A logistics warehousing linked with a high specification rail freight intermodal container facility. This will provide rail freight services to all major UK ports and the Channel Tunnel. 1.2 In recent months transport company Maritime Group and print specialist Kingsbury Press have agreed separate deals to take space at iPort, however there still remains availability on the site for logistics and warehousing. 1.3 Verdion strongly supports the local plan Objective of encouraging and supporting a competitive, diverse and stable economy (para 3.5.1) and will continue to work with DMBC in order to achieve it.

We welcome the recognition given so far to the role of iPort at draft paragraph 7.18. However, it is considered that there is a significant risk that this objective will not be achieved because of some aspects of the Local Plan that are unsound, namely employment allocations and Green Belt boundaries.

Summary:

Strongly support the Local Plan objective of encouraging and supporting a competitive, diverse and stable economy (para 3.5.1). Welcome the recognition of the role of iPort (para 7.18). There is a significant risk that this will not be achieved because some aspects of the Local Plan are unsound ? employment allocations and Green belt boundaries.

To overcome the objection and address soundness matters, the Council should: - Review and make available supporting evidence for the plan as indicated in these representations; - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Response:
1. Spawforths have been instructed by Avant Homes to submit representations to the Doncaster Local Plan 2015-2035 Publication Version and for their site at Doncaster Road, Hatfield (Site 170). 1.2. Avant Homes welcomes the opportunity to contribute to the Doncaster Local Plan and are keen to further the role of Doncaster within the Sheffield City Region, South Yorkshire and the Yorkshire and Humber Region as a whole. 1.3. Avant Homes have a significant land interest in the area which can positively contribute towards the economic and housing growth agenda. 1.4. Avant Homes would like to make comments on the following policies in the Doncaster Local Plan 2015-2035 Publication Draft:

- Policy 6 - Housing Allocations, Site 170: Doncaster Road Hatfield.
- Policy 8 - Delivering the Necessary Range of Housing.
- Policy 14 - Promoting Sustainable Transport in New Developments.
- Policy 27 - Green Infrastructure.
- Policy 29 - Open Space in New Developments.
- Policy 42 - Character and Local Distinctiveness.
- Policy 43 - Good Urban Design.
- Policy 46 - Housing Design Standards.
- Policy 66 - Developer Contributions.
- Policy 67 - Development viability.

1.5. In each case, observations are set out below with reference to the provisions of the Framework and amendments are suggested to ensure that the Local Plan is made sound. 1.6. Avant Homes welcome the opportunity for further engagement and the opportunity to appear at the Examination in Public. 1.7. We trust that you will confirm that these representations are duly made and will give due consideration to these comments. 1.8. Please do not hesitate to contact us to discuss any issues raised in this Representation further.

Response:
This statement, prepared by Lichfields on behalf of Hallam Land Management, provides a response to Doncaster Council’s ("the Council") Local Plan Publication Draft Consultation. This response is prepared in regard to our client’s land interests at Woodhouse Lane, Hatfield and considers whether the emerging Local Plan has been positively prepared, is justified, is effective and is consistent with national policy.

**Summary:**
This statement, prepared by Lichfields on behalf of Hallam Land Management, provides a response to Doncaster Council’s ("the Council") Local Plan Publication Draft Consultation. This response is prepared in regard to our client’s land interests at Woodhouse Lane, Hatfield and considers whether the emerging Local Plan has been positively prepared, is justified, is effective and is consistent with national policy.

**Response:**
Noted
3.1. Priority Space is concerned that the Doncaster Local Plan - Publication Plan is deficient in its content and the evidence base does not reflect national guidance. Test of Soundness 3.2. Priority Space considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 3.3. Priority Space is concerned that the draft Local Plan does not reflect the Framework (2019). Priority Space is concerned that the housing requirement does not reflect economic growth ambitions, the level of employment allocations, nor is it sufficient to meet the identified needs for affordable housing. Further Priority Space are concerned that there are insufficient housing allocations to meet the housing requirement. 3.4. Priority Space is concerned that there is a lack of up to date Housing Needs Assessment, whilst a 2019 update is referred to in the Plan, it is not yet publically available, the Viability Evidence (May 2019), which requires further testing to support its conclusion, and specific evidence to justify key policies 3.5. Priority Space consider that the Policies in the Local Plan are not justified and does not provide an appropriate strategy. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 3.6. In these circumstances, Priority Space do not consider the Doncaster Local Plan, in its current form, to be sound. 3.7. However, Priority Space consider that the plan can be made sound subject to proposed changes as set out within the following sections of these representations. Priority Space will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 3.8. To overcome the objection and address soundness matters, the Council should: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the Plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Summary:
General 1. Housing requirement does not reflect the growth ambitions or the level of employment allocations. 2. Housing requirement does not meet the need for affordable housing. 3. Lack of an up to date housing needs assessment. 4. Local Plan in current form is not consistent with national Policy. Proposed changes: 1. Higher housing requirement 2. Review of supporting evidence 3. Additional 'whole plan viability report' required. 4. Increased flexibility

Response:
1.1. Spawforths have been instructed by Priority Space Ltd to submit representations to the Doncaster Local Plan 2015-2035 Publication Version, for their site at Askern Road, Carcroft. 1.2. Appended to these representations is a report assessing the housing requirement, prepared by Regeneris Consulting. 1.3. Priority Space welcomes the opportunity to contribute to the emerging Local Plan for Doncaster and is keen to further the role of Doncaster within the Sheffield City Region, South Yorkshire and the Yorkshire and Humber Region as a whole. 1.4. Priority Space has significant land interests in the area, which can positively contribute towards the economic and housing growth agenda. 1.5. Priority Space would like to make comments on the following topics and sections in the Doncaster Local Plan 2015-2035 Publication Version: - General Comments - Policy 2 - Spatial strategy and settlement hierarchy - Policy 3 - Level and distribution of growth - Policy 6 - Housing Allocations - Sites 273: Askern Road, Carcroft - Policy 8 - Delivering the necessary range of housing - Policy 19 - Development affecting public rights of way - Policy 20 - Access, design and layout of public rights of way - Policy 29 - Open space provision in new developments - Policy 46 - Housing design standards - Policy 66 - Developer contributions - Policy 67 - Development viability. 1.6. In each case, observations are set out with reference to the provisions of the Framework and where necessary, amendments are suggested to ensure that the Local Plan is found sound. 1.7. Priority Space welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public. 1.8. We trust that you will confirm that these representations are duly made and will give due consideration to these comments. 1.9. Please do not hesitate to contact us to discuss any issues raised in this Representation further.

Summary:

General 1. Housing requirement does not reflect the growth ambitions or the level of employment allocations. 2. Housing requirement does not meet the need for affordable housing. 3. Lack of an up to date housing needs assessment. 4. Local Plan in current form is not consistent with national Policy. Proposed changes: 1. Higher housing requirement 2. Review of supporting evidence 3. Additional 'whole plan viability report' required. 4. Increased flexibility
Comment: 3.1. Firsure is concerned that the Doncaster Local Plan - Publication Plan is deficient in its content and the evidence base does not reflect national guidance. Test of Soundness 3.2. Firsure considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy Justification 3.3. Firsure is concerned that the draft Local Plan does not reflect the Framework (2019). Firsure is concerned that the housing requirement does not reflect economic growth ambitions, the level of employment allocations, nor is it sufficient to meet the identified needs for affordable housing. Further Firsure are concerned that there are insufficient housing allocations to meet the housing requirement. 3.4. Firsure is concerned that there is a lack of up to date, available, and robust evidence base to accompany the Plan, particularly in respect of an up to date Housing Needs Assessment, whilst a 2019 update is referred to in the Plan, it is not yet publically available, the Viability Evidence (May 2019), which requires further testing to support its conclusion, and specific evidence to justify key policies. 3.5. Firsure consider that the Policies in the Local Plan are not justified and does not provide an appropriate strategy. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 3.6. In these circumstances, Firsure do not consider the Doncaster Local Plan, in its current form, to be sound. 3.7. However, Firsure consider that the plan can be made sound subject to proposed changes as set out within the following sections of these representations. Firsure will continue to work with the Council to develop appropriate modifications to the Local Plan. Proposed Change 3.8. To overcome the objection and address soundness matters, the Council should: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the Plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Summary: The housing requirement does not reflect economic growth ambitions, the level of employment allocations, nor is it sufficient to meet the identified needs for affordable housing. Furthermore, there are insufficient housing allocations to meet the housing requirement. There is a lack of up to date, available, and robust evidence base to accompany the Plan, particularly in respect of an up to date Housing Needs Assessment and the Viability Evidence (May 2019) which requires further testing to support its conclusion, and specific evidence to justify key policies. The Council should: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the Plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Response:
1.1. Spawforths have been instructed by Firsure Ltd to submit representations to the Doncaster Local Plan 2015-2035 Publication Version and for their site at Stripe Road, Rossington. 1.2. Appended to these representations is a report assessing the housing requirement, prepared by Regeneris Consulting. (SEE EMAIL FOR Regeneris Report) 1.3. Comments noted.

Response:
Comment: On behalf of our client, FCC Environment (FCC), we are writing to make representations in response to the Doncaster Local Plan Publication Draft Consultation. FCC are making representations in respect of their landholdings at i) Barnsdale Bar, an active limestone quarry; and ii) Bootham Lane, an active landfill site. FCC Environment is one of the largest waste and resource management companies in the UK; employing over 2,400 staff and operating more than 200 facilities in England, Scotland and Wales. Each year they handle around 15 million tonnes of household, commercial and industrial waste including waste from contracts with more than 50 local authorities across England, Scotland and Wales.

Summary: Introduction to representations made by FCC Environment, summarised elsewhere.

Response: comment noted
We are instructed by Hallam Land Management & Henry Boot Developments ("HLM/HBD") to submit representations on a number of a strategic and allocation policies. Our view is that the submitted Publication Draft of the Local Plan is unsound and the reasons for this are explained in detail below. HLM/HBD is promoting a number of sites in the Adwick & Woodlands area and these are identified in the plan (ref: 8915-L-01A) appended to these representations and have been subject to previous representations. HLM/HBD is the appointed development partner of the landowner and their appointment represents a significant step forward in the planning and delivery of the sites.

Summary:
The Local Plan is unsound. Hallam Land Management are the appointed development partner of the landowner which represents a significant step forward in planning and delivery of sites.
This Local Plan representation has been prepared by DLP Planning Ltd on behalf of A J Atkinson & Sons in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. This representation relates to Manor Farm, Marr. This representation should be read alongside the formal response form that has also been completed and submitted in relation to the site. Site and Context The site at Manor Farm measures 1ha in total and is located to south of Barnsley Road, within the village of Marr, which lies 7km to the north west of the centre of Doncaster. The site lies opposing Church Lane to the north east, Grove Court to the immediate north, and with Blacksmiths Lane to the west. (SEE EMAIL FOR Fig.1 - Aerial view of the site) The site has historically been in agricultural use; with the more modern agricultural sheds still used for storing of crops. The farmstead comprises Grade II Listed Buildings, as illustrated in Figure 2 below. The later parts of the building which form the western extent of the farmstead are not detailed within the Listing, but due to their proximity and relationship are considered as curtilage listed. The Farmhouse which is situated to the south of the site and outside the red line is also Grade II listed (ref: SE5139205163) and comprises a prominent two storey render dwelling which is occupied by the site owners and operator of the farm holding. Planning History An application reference: 17/02585/FULM and 17/02586/LBCM for erection of 7 new dwellings and the conversion of existing buildings to form 5 dwellings, with the repair of colonnade feature, access, landscaping and addition of stone wall to Barnsley Road was approved by Doncaster Council on 28th August 2019. The site is currently being marketed with planning permission and it anticipated that the sale will be agreed shortly.

Summary:
Re site at Manor farm Marr o Greenbelt in Local Plan. o Site has planning permission (17/02586 Aug 2019) for 7 dwellings and conversion of existing dwellings. o Requests that site is removed from Greenbelt to reflect PP. o Also wants adjacent land to west of the site taken out of the GB to provide a "logical rounding off" to the settlement of Marr.

Response:
Comment:

1.1 Following instructions from Polypipe Ltd, ID Planning are commissioned to make representations to the Doncaster Publication Local Plan consultation, September 2019.  1.2 These representations are made in the specific context of the development potential of two areas of land off Broomhouse Lane, Edlington which support the growth of the existing Polypipe operation in accordance with the growth strategy which seeks to support existing businesses to expand.  1.3 Polypipe Building products operate from two sites in Doncaster manufacturing above and below ground plastic building products used in housebuilding and the DIY market.  1.4 The company headquarters are at their site on Broomhouse Lane industrial estate where they have operated from for 40 years. The site employs approximately 850 staff, many of whom come from the local area.  1.5 The site is constrained and additional expansion areas are required to ensure the efficient and viable operation of the business in the future.  1.6 The areas of land that are being promoted for development are shown on the plans attached at Appendix 1 and comprise; - Site 1 - Land to the north east of the existing Polypipe site. Site is bounded by Broomhouse Lane and Lords Head Lane, Edlington. - Site 2 - Land to the south of Broomhouse Lane. Site comprises the existing car park and land immediately to the south. (SEE EMAIL FOR PLAN) (THIS REP IS FOR ONE SITE - FOR OTHER SITE SEE REP 05311)  1.7 Polypipe own site 1 and part of site 2, currently used as car parking. The remainder of the proposed development site is public open space and in the ownership of Doncaster Council.  1.8 A review of the Publication Local Plan has been undertaken in conjunction with consideration of the Councils evidence base.  1.9 These representations seek to make comment on the relevant parts of the Publication Plan and to promote the two sites at Edlington for identification as employment land to provide short and long term employment land to allow Polypipe, one of the regions large employers to continue to operate in an efficient and effective way in Doncaster.

Response:

"Attend Examination: Attend Hearing"

Reason: Attendance at the hearing will enable a thorough discussion regarding the deliverability of the strategy of the plan.

Area: Miscellaneous - Introductions
1.1. These representations have been prepared by Savills (UK) Ltd on behalf of Miller Homes in response to the Doncaster Publication Draft Local Plan and in support of the land at Grange Farm, Doncaster identified on the attached Site Location Plan (Appendix 1), with the proposals explained in the Vision Framework Document (Appendix 2). (SEE EMAIL FOR Appendices) 1.2. The thrust of these representations is to share the significant concerns we have over DMBC's current strategy to allocate sufficient developable housing sites within the Main Urban Area of Doncaster. Having established a minimum target for the MUA of 17,262 dwellings against a supply of 7,445 dwellings based on our initial assessment the current draft strategy shows a shortfall of -9,817 dwellings. 1.3. It is therefore recommended that new sites should come forward which can clearly demonstrate developability and deliverability. The land at Grange Farm represents an opportunity to deliver essential growth adjacent to the Main Urban Area of Doncaster. Comments have also been made in relation to location of housing, housing mix, affordable housing and sustainable transport. 1.4. The land at Grange Farm represents an opportunity to deliver essential growth adjacent to the Main Urban Area of Doncaster. Comments have also been made in relation to location of housing, housing mix, affordable housing and sustainable transport and Neighbourhood Planning. 1.5. The Vision Document (Appendix 2) outlines a strong vision and opportunity for high quality place making on the site, whilst also setting out the headline deliverability and developability of the land for c.264 new homes. The Document demonstrates how the site constitutes sustainable development in the context of the National Planning Policy Framework (NPPF), paragraph 11, and how the development of this site can deliver high quality sustainable, well connected housing in accordance with the emerging plan. The site should clearly be a preferred option and future development site. 1.6. This representation has been prepared in accordance with paragraph 35 of the NPPF which states plans must be: a. Positively prepared - providing a strategy which, as a minimum, seeks to meet the area's LHN; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b. Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c. Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d. Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this Framework. 1.7. The following sections of this report are arranged as follows: - Section 2: Provides background to the site; - Section 3: Sets out our comments on the Initial Draft Local Plan; - Section 4: Outlines the Vision and Developability of the site; and, - Section 5: Concludes and summarises the report.

Summary:

Representation by Savills on behalf of Miller Homes and Grange Farm. Significant concern over the strategy to allocate sufficient developable housing sites within the urban area. Having established a minimum target for the MUA of 17,262 dwellings against a supply of 7,445 dwellings based on our initial assessment the current draft strategy shows a shortfall of -9,817 dwellings. New sites must therefore come forward which can clearly demonstrate developability and deliverability. Grange Farm presents a chance to deliver essential growth adjacent to the urban area. There is a strong vision and opportunity for high quality place making on the site - deliverable and developable land for c. 264 new homes. The site can be high quality, sustainable and well connected housing. Site should clearly be preferred.

Response:

Noted - introductory comments with the detail being picked up through the various parts of the local plan the Representation refers to elsewhere in this summary/response document.
2.1 Thorne is defined as one of the Boroughs Main Towns and is expected to accommodate 510 - 1,020 dwellings which equates to 5.5% of the 40% of new homes allocated to this centre over the plan period. The Policies Map allocates sites (without planning permission) capable of supporting just 345 dwellings (736 dwellings including allocations with permission) within Thorne/Moorends, allowing few opportunities for choice and competition in the local housing market and a reduced delivery of much needed affordable housing. The reminder of the proposed allocations to Moorends is made up of sites with extant planning permission, although not necessarily being delivered or capable of being delivered.  

2.2 Don Parkinson is concerned that the number of dwellings proposed to be allocated for the Borough has been significantly underestimated in this iteration of the Local Plan. We note that this concern has been shared by a number of other parties during the local plan consultation process, with a number of the parties raising similar concerns as part of earlier representations. In summary, Don Parkinson considers that contrary to the Council’s latest claims in relation to its housing needs, the number of houses currently identified will not meet the objectively assessed housing needs of the community over the plan period, particularly in locations such as Thorne/Moorends where significant employment growth is expected.
Comment:

1. Lichfields is instructed by Don Parkinson Partnership (Don Parkinson) to make representations to the Publication Version of the Doncaster Local Plan published for consultation by Doncaster Council (the Council) on 12 August 2019. 1.2 These representations relate specifically to an area of land measuring approximately 32 ha in size between the existing built up areas of Thorne and Moorends, identified in earlier iterations of the draft local plan as Sites 002, 003, 004 and 005, and referred to for the remainder of these representations as the ‘subject site’ (Appendix 01). They build on earlier representations made by J R A Moorhouse Planning to the Draft Policies and Proposed Sites October 2018 consultation on behalf of the same landowner. (SEE EMAIL FOR Appendices) 1.3 The land is in the full control of Don Parkinson, the site is strategically positioned to accommodate housing and there are no insurmountable constraints to bringing this land forward for development as an allocation in the Local Plan. Further, there is no justification for reversing the Council’s previous decision to allocate the land for housing development in the previous draft Local Plan. 1.4 The land (and wider Thorne/Moorends settlement) has long been recognised as a sustainable location for growth. The Draft Sites and Policies DPD (2014) identified the northern and southern section of the site as a residential allocation (Appendix 02). The Housing and Economic Land Availability Assessments (2018) identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. The Settlement Profiles, Local Plan Evidence Base (2018) report identified the settlement as having excellent access via road and rail and “one of the best scoring settlements against the Settlement Audit Criteria.” 1.5 Despite the site’s obvious strengths and long-standing history as a preferred location for residential growth, the Publication Draft of the Local Plan fails to identify the site as a preferred location for residential growth. 1.6 The remainder of these representations are dedicated to demonstrating that the Plan in its current form is unsound when considering relevant national policies, and that despite the Council’s latest conclusions on the suitability of this site for housing, there are no insurmountable constraints to bringing the subject site forward in the plan period. In particular, it is the view of Don Parkinson that the Plan fails to deliver a sustainable pattern of development, by not allocating sufficient growth to Thorne/Moorends in line with the Plan’s own hierarchy.

Summary:

The land in question measures 32 ha between Thorne and Moorends. It was identified in earlier versions of the plan as Sites 002, 003, 004 and 005. It is solely owned by one person and there are no insurmountable constraints to bringing this land forward for development. There is no reason for the Council to reverse its decision to allocate the land for housing. The land (as well as Thorne and Moorends) is recognised as a sustainable location for growth and the Draft Sites and Policies DPD identified the northern and southern sections of the site for a residential allocation. The HELAA identifies the site as ‘available, deliverable and developable within the first 6-10 years, and capable of supporting 754 units and is suitable for development but with national policy or physical constraints. The Settlement Profile report identifies the settlement as having excellent access via road and rail and one of the best scoring settlements. The Plan is currently unsound against national policies and there are no insurmountable constraints to bringing the subject site forward in the plan period. The Plan currently fails to deliver a sustainable pattern of development, by not allocating sufficient growth to Thorne/Moorends in line with the Plan’s own hierarchy.

Response:
2.1 Thorne is defined as one of the Boroughs Main Towns and is expected to accommodate 510 - 1,020 dwellings which equates to 5.5% of the 40% of new homes allocated to this centre over the plan period. The Policies Map allocates sites (without planning permission) capable of supporting just 345 dwellings (736 dwellings including allocations with permission) within Thorne/Moorends, allowing few opportunities for choice and competition in the local housing market and a reduced delivery of much needed affordable housing. The remainder of the proposed allocations to Moorends is made up of sites with extant planning permission, although not necessarily being delivered or capable of being delivered.  

2.2 Don Parkinson is concerned that the number of dwellings proposed to be allocated for the Borough has been significantly underestimated in this iteration of the Local Plan. We note that this concern has been shared by a number of other parties during the local plan consultation process, with a number of the parties raising similar concerns as part of earlier representations. In summary, Don Parkinson considers that contrary to the Council’s latest claims in relation to its housing needs, the number of houses currently identified will not meet the objectively assessed housing needs of the community over the plan period, particularly in locations such as Thorne/Moorends where significant employment growth is expected.
Lichfields

1.1 Lichfields is instructed by Don Parkinson Partnership (Don Parkinson) to make representations to the Publication Version of the Doncaster Local Plan published for consultation by Doncaster Council (the Council) on 12 August 2019. These representations relate specifically to an area of land measuring approximately 32 ha in size between the existing built up areas of Thorne and Moorends, identified in earlier iterations of the draft local plan as Sites 002, 003, 004 and 005, and referred to for the remainder of these representations as the 'subject site' (Appendix 01). They build on earlier representations made by J R A Moorhouse Planning to the Draft Policies and Proposed Sites October 2018 consultation on behalf of the same landowner. (SEE EMAIL FOR Appendices) 1.3 The land is in the full control of Don Parkinson, the site is strategically positioned to accommodate housing and there are no insurmountable constraints to bringing this land forward for development as an allocation in the Local Plan. Further, there is no justification for reversing the Council's previous decision to allocate the land for housing development in the previous draft Local Plan. 1.4 The land (and wider Thorne/Moorends settlement) has long been recognised as a sustainable location for growth. The Draft Sites and Policies DPD (2014) identified the northern and southern section of the site as a residential allocation (Appendix 02). The Housing and Economic Land Availability Assessments (2018) identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. The Settlement Profiles, Local Plan Evidence Base (2018) report identified the settlement as having excellent access via road and rail and "one of the best scoring settlements against the Settlement Audit Criteria". 1.5 Despite the site's obvious strengths and long-standing history as a preferred location for residential growth, the Publication Draft of the Local Plan fails to identify the site as a preferred location for residential growth. 1.6 The remainder of these representations are dedicated to demonstrating that the Plan in its current form is unsound when considering relevant national policies, and that despite the Council's latest conclusions on the suitability of this site for housing, there are no insurmountable constraints to bringing the subject site forward in the plan period. In particular, it is the view of Don Parkinson that the Plan fails to deliver a sustainable pattern of development, by not allocating sufficient growth to Thorne/Moorends in line with the Plan's own hierarchy.

Summary:
The land in question measures 32 ha between Thorne and Moorends. It was identified in earlier versions of the plan as Sites 002, 003, 004 and 005. It is solely owned by one person and there are no insurmountable constraints to bringing this land forward for development. There is no reason for the Council to reverse its decision to allocate the land for housing. The land (as well as Thorne and Moorends) is recognised as a sustainable location for growth and the Draft Sites and Policies DPD identified the northern and southern sections of the site for a residential allocation. The HELAA identifies the site as ‘available, deliverable and developable within the first 6-10 years, and capable of supporting 754 units and is suitable for development but with national policy or physical constraints. The Settlement Profile report identifies the settlement as having excellent access via road and rail and is one of the best scoring settlements. The Plan is currently unsound against national policies and there are no insurmountable constraints to bringing the subject site forward in the plan period. The Plan currently fails to deliver a sustainable pattern of development, by not allocating sufficient growth to Thorne/Moorends in line with the Plan's own hierarchy.
Comment:
2.1 Thorne is defined as one of the Boroughs Main Towns and is expected to accommodate 510 - 1,020 dwellings which equates to 5.5% of the 40% of new homes allocated to this centre over the plan period. The Policies Map allocates sites (without planning permission) capable of supporting just 345 dwellings (736 dwelling including allocations with permission) within Thorne/Moorends, allowing few opportunities for choice and competition in the local housing market and a reduced delivery of much needed affordable housing. The remainder of the proposed allocations to Moorends is made up of sites with extant planning permission, although not necessarily being delivered or capable of being delivered. 2.2 Don Parkinson is concerned that the number of dwellings proposed to be allocated for the Borough has been significantly underestimated in this iteration of the Local Plan. We note that this concern has been shared by a number of other parties during the local plan consultation process, with a number of the parties raising similar concerns as part of earlier representations. In summary, Don Parkinson considers that contrary to the Council’s latest claims in relation to its housing needs, the number of houses currently identified will not meet the objectively assessed housing needs of the community over the plan period, particularly in locations such as Thorne/Moorends where significant employment growth is expected.

Summary:
Thorne is a main Town and is expected to accommodate 510 - 1,020 dwellings equating to 5.5% of the 40% of new homes. The Policies Map allocates sites (without planning permission) capable of supporting 345 dwellings (736 dwellings including allocations with permission) within Thorne/Moorends. There are few opportunities for choice and competition in the local housing market and a reduced delivery of much needed affordable housing. The remainder of the Moornds allocations are sites with extant planning permission and may not be delivered or capable of being delivered. Concerned that the number of dwellings proposed for the borough has been significantly underestimated. This concern was raised by a number of parties as part of earlier representations. The number of identified houses will not meet the objectively assessed housing need in areas such as Thorne and Moorends where significant employment growth is expected.

Comment:  

1. Lichfields is instructed by Don Parkinson Partnership (Don Parkinson) to make representations to the Publication Version of the Doncaster Local Plan published for consultation by Doncaster Council (the Council) on 12 August 2019. 1.2 These representations relate specifically to an area of land measuring approximately 32 ha in size between the existing built up areas of Thorne and Moorends, identified in earlier iterations of the draft local plan as Sites 002, 003, 004 and 005, and referred to for the remainder of these representations as the 'subject site' (Appendix 01) They build on earlier representations made by J R A Moorhouse Planning to the Draft Policies and Proposed Sites October 2018 consultation on behalf of the same landowner. (SEE EMAIL FOR Appendices) 1.3 The land is in the full control of Don Parkinson, the site is strategically positioned to accommodate housing and there are no insurmountable constraints to bringing this land forward for development as an allocation in the Local Plan. Further, there is no justification for reversing the Council's previous decision to allocate the land for housing development in the previous draft Local Plan. 1.4 The land (and wider Thorne/Moorends settlement) has long been recognised as a sustainable location for growth. The Draft Sites and Policies DPD (2014) identified the northern and southern section of the site as a residential allocation (Appendix 02). The Housing and Economic Land Availability Assessments (2018) identifies the full site as available, deliverable & developable within the first 6-10 years, capable of supporting 754 units and suitable for development but with national policy or physical constraints. The Settlement Profiles, Local Plan Evidence Base (2018) report identified the settlement as having excellent access via road and rail and "one of the best scoring settlements against the Settlement Audit Criteria" 1.5 Despite the site's obvious strengths and long-standing history as a preferred location for residential growth, the Publication Draft of the Local Plan fails to identify the site as a preferred location for residential growth. 1.6 The remainder of these representations are dedicated to demonstrating that the Plan in its current form is unsound when considering relevant national policies, and that despite the Council's latest conclusions on the suitability of this site for housing, there are no insurmountable constraints to bringing the subject site forward in the plan period. Response:
This Local Plan representation has been prepared by DLP Planning Ltd on behalf of 360 Degrees Media in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. This representation relates to the 'Former Doncaster College Campus, High Melton' and should be read alongside the response form that has also been completed and submitted in relation to the site. 360 Degrees Media are working alongside Doncaster Metropolitan Borough Council and Sheffield City Region to prepare proposals for a commercial film and media hub at the former Doncaster College site in High Melton. This entails the creation of film and TV studios, visual effects production facility (VFX), a film, TV and VFX training academy and hotel and events business. An element of residential development is proposed enabling development to support the wider scheme. 360 Degrees Media is focused on attracting a diverse range of new businesses to the High Melton site near Doncaster to create a unique digital ecosystem around the creative industries. Working closely with existing digital businesses in the region 360 aims to build a hub for new entrants to the industry as well as seasoned companies who can benefit from this ecosystem. In this way 360 aims, over the next 3-5 years, to build a sustainable network of companies that can support and attract larger businesses to relocate at High Melton and further expand the site as a hub for the creative and digital industries in South Yorkshire and nationally. The development has the potential to create around 6,700 new jobs in Doncaster within the film sector and its supply chain. Site and Context The site is circa 23ha in size and comprises the former Doncaster College Campus, which consists of a number of college buildings, a large car park, a number of listed buildings and open spaces. The site also encompasses the High Melton Golf Course. The southern portion of the site possesses a large band of mature trees. (SEE EMAIL FOR Fig.1: Aerial view of the site) The village of High Melton is located to the north/north-east of the site. The site bounded by agricultural land to the west, east and south. The site is located within Flood Zone 1. Proposed Allocation The draft Local Plan document and Proposals Map currently shows the site washed over by Green Belt and included within a Parks and Gardens of Local Historic Interest area as indicated in Figure 2. This is despite the long established brownfield nature of the northern portion of the site which adjoins the High Melton Settlement boundary. (SEE EMAIL Fig. 2: Policies Map Extract) DLP Planning objects to the failure of the plan to designate the site for development. To ensure the soundness of the Local Plan the remainder of this letter sets out how the Plan should be modified to address soundness.

Summary:
Re former High Melton College site. Proposals Map currently shows the site washed over by Green Belt and included within a Parks and Gardens of Local Historic Interest area. This is despite the long established brownfield nature of the northern portion of the site which adjoins the High Melton Settlement boundary. Objects to the failure of the plan to designate the site for development.
Comment:
Please find enclosed a representation prepared by Pegasus Group on behalf of Peter Kelly, Graham White, Paul Pennington and Stewart Oades in relation to Land at Paper Mill Fields, Tickhill. The representation considers the content within the Publication Draft of the Doncaster Local Plan. The representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018. (SEE EMAIL FOR Accompanying representation)

Summary:
Reps are provided by Pegasus Group on behalf of Peter Kelly, Graham White, Paul Pennignton & Stewart Oades in respect to land at Tickhill (Paper Mill Fields).

Response:
1.1 This representation is prepared by Pegasus Group on behalf of Peter Kelly, Graham White, Paul Pennington and Stewart Oades in relation to Land at Paper Mill Fields, Tickhill. The representation considers the content within the Publication Draft of the Doncaster Local Plan. 1.2 In compiling this representation Pegasus Group have applied the four elements of soundness referred to in the National Planning Policy Framework, which are; positively prepared, justified, effective and consistent with national policy. 1.3 This representation should be read in conjunction with the accompanying representation produced by Pegasus Group to the draft policies and proposed site informal consultation in September 2018. That document promotes the site and illustrates why is should be allocated for residential development. The purpose of this submission is to focus on the matters within the Publication Draft only, mainly the overall requirement and distribution of housing.
Comment:

1.1 Following instructions from Polypipe Ltd, ID Planning are commissioned to make representations to the Doncaster Publication Local Plan consultation, September 2019. 1.2 These representations are made in the specific context of the development potential of two areas of land off Broomhouse Lane, Edlington which support the growth of the existing Polypipe operation in accordance with the growth strategy which seeks to support existing businesses to expand. 1.3 Polypipe Building products operate from two sites in Doncaster manufacturing above and below ground plastic building products used in housebuilding and the DIY markets. 1.4 The company headquarters are at their site on Broomhouse Lane industrial Estate where they have operated from for 40 years. The site employs approximately 850 staff, many of whom come from the local area. 1.5 The site is constrained and additional expansion areas are required to ensure the efficient and viable operation of the business in the future. 1.6 The areas of land that are being promoted for development are shown on the plans attached at Appendix 1 and comprise; - Site 1 - Land to the north east of the existing Polypipe site. Site is bounded by Broomhouse Lane and Lords Head Lane, Edlington. - Site 2 - Land to the south of Broomhouse Lane. Site comprises the existing car park and land immediately to the south. (SEE EMAIL FOR Plan) (THIS REP IS FOR ONE SITE - FOR OTHER SITE SEE REP 05285) 1.7 Polypipe own site 1 and part of site 2, currently used as car parking. The remainder of the proposed development site is public open space and in the ownership of Doncaster Council. 1.8 A review of the Publication Local Plan has been undertaken in conjunction with consideration of the Council’s evidence base. 1.9 These representations seek to make comment on the relevant parts of the Publication Plan and to promote the two sites at Edlington for identification as employment land to provide short and long term employment land to allow Polypipe, one of the regions’ large employers to continue to operate in an efficient and effective way in Doncaster.

Summary:

Introduction Representations relate to - Site 1 - Land to the north east of the existing Polypipe site. Site is bounded by Broomhouse Lane and Lords Head Lane, Edlington. - Site 2 - Land to the south of Broomhouse Lane. Site comprises the existing car park and land immediately to the south. Polypipe own site 1 and part of site 2 The representations seek to make comment on the relevant parts of the Publication Plan and to promote the two sites at Edlington for identification as employment land to provide short and long term employment land to allow Polypipe (THIS REP IS FOR ONE SITE - FOR OTHER SITE SEE REP 05285)

Response:
The matters raised in our representation go to the heart of the Local Plan. It is considered that attendance at the relevant hearing sessions will allow further comment to be made where appropriate.

Please see attached correspondence, promotional and technical reports: Doncaster Council should be congratulated for progressing the Local Plan. We do raise concerns however, that the slippage in progress may have unintended consequences of the need to introduce further changes for example an extension to the Plan period to ensure consistency with national policy, of a minimum 15 year period from adoption. We have raised concerns regarding the housing requirement identified and the disjoint with the economic development policies. In blunt terms a failure to adequately address local housing needs will act as brake upon economic growth aspirations. We have suggested that the housing requirement be increase accordingly, and stated as a minimum. With regards delivering growth it is welcomed that the Council recognise that exceptional circumstances have been demonstrated requiring the release of land from the Green Belt. In doing so however, we have concerns regarding the approach to the settlement of Carcroft-Skellow. It is our view that the spatial strategy fails to meet the basic requirement for the settlement. It is welcomed the Council recognise the need to review the Green Belt boundary around the town and allocate land. However, it is considered that the main site off Crabtree Lane, may not deliver the number of dwellings proposed across the Local Plan. Furthermore the Council has identified a reserve site which is carried forward from the UDP. That site off Owston Road Carcroft is identified within a flood risk zone (a matter which has not been addressed through the plan making process). Furthermore given that that particular site has been allocated for some 20 years it is questioned whether it is deliverable. In these circumstances we suggest that land to the west of Ings Lane, Skellow is removed from the Green Belt and allocated for the delivery of up to 80 dwellings in the early part of the Plan period. A Promotion Document has been prepared by Carter Jonas which has been submitted to the Council previously, but is contained as part of this representation along with a number of other technical and environmental studies. (SEE EMAIL AND SUPPORTING DOCUMENTATION FOR ADDITIONAL DOCUMENTS)

Summary:
- Plan period should be a minimum 15 years from adoption.
- A failure to adequately address local housing needs will act as brake upon economic growth aspirations. Suggest that the housing requirement be increase accordingly, and stated as a minimum.
- Spatial strategy fails to meet needs of Carcroft and Skellow.
- Concerned 'Crabtree Lane' site will not deliver enough houses.
- Reserve site at Owston Road Carcroft is flood risk and has not been developed despite being allocated 20 years.
- Suggest land West of Ings Lane Skellow (Greenbelt) is allocated.
Comment:

Doncaster Council published a revised Local Development Scheme (LDS) which suggests that a draft version of the Plan would be submitted in Late Autumn 2019 with the Inspector’s Report in Spring 2020 following an Examination in Public. On balance we consider that the timescale set out in that document is optimistic, and the Council should anticipate that the adoption may be delayed into 2021. Soundness Given the stage of progress of the DLP, Paragraph 35 of the Framework requires Plans submitted for examination to be prepared in accordance with legal and procedural requirements and meet the four tests of ‘soundness’ for Local Plans to be: - Positively prepared; - Justified; - Effective; and - Consistent with National Policy.

Summary:

Suggests Local Plan timescales are optimistic and adoption will not be until 2021.

**Comment:**

Cadeby Parish Meeting broadly supports the response of the JRP, which will be submitted separately. There are three additions (two of which are particular to Cadeby) that we would like to make.

**Response:**

Noted. Please see response to comments of Joint Rural Parishes.
The issues are complex and require further debate during Public Examination of the Local Plan.

Please see Theakston Estates’ response to Policies 2, 3 and 6 in relation to the housing requirement, housing supply, development in the Main Urban Area and the approach to the reserve development sites.

Please see Theakston Estates’ response to Policies 2, 3 and 6 in relation to the housing requirement, housing supply, development in the Main Urban Area and the approach to the reserve development sites.

1.1. Spawfords have been instructed by Strata Homes Ltd to submit representations to the Doncaster Local Plan 2015-2035 Publication Version, for their site at Broad Axe, Scawthorpe (Site 234). 1.2. Appended to these representations is a report assessing the housing requirement, prepared by Regeneris Consulting (SEE EMAIL FOR REGENERIS REPORT) 1.3. Strata Homes welcomes the opportunity to contribute to the emerging Local Plan for Doncaster and is keen to further the role of Doncaster within the Sheffield City Region, South Yorkshire and the Yorkshire and Humber Region as a whole. 1.4. Strata Homes has significant land interests in the area, which can positively contribute towards the economic and housing growth agenda. 1.5. Strata Homes would like to make comments on the following topics and sections in the Doncaster Local Plan 2015-2035 Publication Draft: General Comments - Policy 2 - Spatial strategy and settlement hierarchy - Policy 3 - Level and distribution of growth - Policy 6 - Housing Allocations - Site 234: Broad Axe, Scawthorpe - Policy 8 - Delivering the necessary range of housing - Policy 19 - Development affecting public rights of way - Policy 20 - Access, design and layout of public rights of way - Policy 29 - Open space provision in new developments - Policy 46 - Housing design standards - Policy 66 - Developer contributions - Policy 67 - Development viability 1.6. In each case, observations are set out with reference to the provisions of the Framework and where necessary, amendments are suggested to ensure that the Local Plan is found sound. 1.7. Strata Homes welcomes the opportunity for further engagement and the opportunity to appear at the Examination in Public. 1.8. We trust that you will confirm that these representations are duly made and will give due consideration to these comments. 1.9. Please do not hesitate to contact us to discuss any issues raised in this Representation further.
Comment:

Carter Jonas LLP has been instructed by our client Harworth Group Plc (Harworth) and the Gilliat Family to submit representations to the Doncaster Publication Draft Local Plan (“the DLP”) in support of Gateway 180, Bradholme Farm, Thorne, Doncaster Site Ref. 160. The Council will be aware that representations to the emerging local plan in respect of this site were made to the September 2018 Informal Consultation, Draft Policies and Proposed Sites document, and promotion as part of previous iterations of the plan on behalf of the landowners and developers.

During this period there have also been on-going discussions between Council Officers [Planning Policy Officers], Harworth and Carter Jonas in respect of the site. In parallel with the progression of the emerging Local Plan, a pre-application enquiry was submitted on 17 May 2019 and a subsequent meeting with Officers was held on 11 July 2019 to discuss the principle of development of the site, the associated scheme specifics, the technical detail required as part of a planning application and the requirement for an Environmental Statement (ES). A copy of the pre-application response is attached in Appendix 1 for reference. An EIA screening request was subsequently submitted on 25 July 2019 (ref: 19/01782/SCRE) and a response was received on 12 August 2019 confirming that the proposed development at Gateway 180 to include employment space (B1(c) B2 and B8) with ancillary offices, including necessary earthworks, access roads, landscaping, and flood risk and drainage works due to the physical scale and potential increase in traffic, emissions, air quality and noise would require an EIA. A copy of the Screening Opinion dated 12 August 2019 is also attached within Appendix 2 for reference. Our comments and representations to the Publication Draft Local Plan are set out below. For reference these representations include the following information:

- Pre-application Response dated September 2019 (Appendix 1)
- Screening Opinion dated 12 August 2019 (Appendix 2)
- Employment Land Review, prepared by Knight Frank dated September 2019 (Appendix 3)
- Accessibility Note prepared by Development Planning Limited dated September 2019 (Appendix 4)
- Ecology Note prepared by AES-LTD dated 23rd August 2019 (Appendix 5)
- Flood Risk Technical Note prepared by BWB Consulting Ltd, dated September 2019 (Appendix 6)
- Illustrative Masterplan prepared by Harris Partnership (Appendix 8)
- Officers Report for application ref: 08/03189/FULM (Appendix 9)
- Mining and Minerals Report prepared by Geoffrey R Marsden dated June 2008 (Appendix 10)
- Agricultural Land Classification prepared by Agricultural Systems Analysis (appendix 11)
- Inspectors Letter in relation to the withdrawn Sites and Policies Development Plan document dated (SEE SERVER FOR Appendices)

In brief summary we consider that Site 160: Gateway 180, Bradholme Farm is significantly more acceptable and thus preferable in planning terms than the draft allocation at Site 001: Thorne North. Soundness Paragraph 35 of the NPPF requires Plans submitted for examination to be prepared in accordance with legal and procedural requirements and meet the four tests of ‘soundness’ for Local Plans to be: - Positively prepared; - Justified; - Effective; and - Consistent with National Policy.

Summary:

Carter Jonas on behalf of Harworth Group are submitting representations to the Publication Local Plan in support of Gateway 180, Bradholme Farm, Thorne (site 160). A list of information included is given. In brief summary it is considered that Site 160: Gateway 180, Bradholme Farm is significantly more acceptable and preferable in planning terms than Site 001: Thorne North.

As you will be aware, we act on behalf of Tanks & Vessels Industries (TVI) who currently own significant areas of land on the eastern / northern side of the Bankwood Lane Industrial Estate in Rossington and are considering future redevelopment proposals for their land. A plan showing the location of the site is attached (see Plan 1). INTRODUCTION ID Planning are instructed by TVI to make representations to the Doncaster Publication Draft Policies & Proposed Sites Consultation (August 2019) in relation to their land interests at Bankwood Lane Industrial Estate, Rossington. Land at Bankwood Lane Industrial Estate is largely occupied for employment and industrial uses. Our client controls an extensive area of land in the northern part of the industrial estate. With rationalisation of the business in recent years a substantial part of the main TVI site in the eastern part of the industrial estate is becoming surplus to requirements and the potential exists for further employment and/or residential development on this land. The adopted Doncaster Unitary Development Plan (1998) allocated part of the Bankwood Lane Industrial Estate as an 'Employment Site' with the wider industrial estate identified as an 'Employment Policy Area'. The following representations relate to the continued use of our client's land at the industrial estate for employment purposes. A review of the Publication Draft Policies & Proposed Sites Consultation documents has been undertaken, following which we wish to make comments in respect of: - Policies 2, 4 and 5 of the Doncaster Publication Draft Policies & Proposed Sites Draft Policies (August 2019); and - Submission Policies Map.

Introduction letter explaining representation in relation to the continued use of our client's land at the industrial estate for employment and we wish to make comments in respect of: - Policies 2, 4 and 5 of the Doncaster Publication Draft Policies & Proposed Sites Draft Policies (August 2019); and - Submission Policies Map.

Response: Noted.
On behalf of our client, Teakwood Partners and Godwin Developments, please find enclosed representations to your consultation on the Doncaster Local Plan (DLP): Publication Draft Plan (Regulation 19). This letter comprises our formal comments to the consultation. We have also completed and enclosed the associated ‘Comments Forms’. Teakwood Partners and Godwin Developments have recently acquired and are looking to redevelop land at Watch House Lane (the “Site”) for residential uses, as shown in Figure 1 below. Pre-application discussions have been undertaken with Officers regarding the Site, who are supportive of its redevelopment for residential. (SEE EMAIL FOR Figure 1: Site and Surrounding Area)

Summary:
Introduction to representations made by Quod Limited, summarised elsewhere, in support of land at Watch House Lane, Doncaster.

Response:
Support welcome
In order to provide further information and/or clarification regarding the support for Policy 2 / 3 / 31. In order to provide further information and/or clarification on any of the points raised within the accompanying Representations Report and/or Delivery Statement in respect of Policy 4 and the allocation of Site 001: J6, M18, Thorne North for employment use and to directly address any comments that may be raised by objectors to the allocation.

The representation is supported by a number of documents and provides support for the allocation of land at Junction 6 of the M18 to the north of Thorne (site reference 001) for employment uses under Policy 4: Employment Allocations (Strategic Policy). A separate Delivery Statement has been prepared, and is attached to this email and Representations Document, which demonstrates that Site 001 is available for immediate development; is suitable for the development of employment uses as proposed by the allocation; and comprises a viable development site for which there is evident commercial interest and market demand. The site is therefore wholly deliverable in order to meet Doncaster’s objectively assessed employment needs in the forthcoming plan period in accordance with the requirements of national planning policy. The Representations Document and Delivery Statement are also supported by an indicative masterplan which shows how a mix of B8, B2 and B1c uses can be delivered on the site (see Appendix 2 to the Representations Document) The Representations Document also provides support for other strategic policies associated with the delivery and location of employment land across the Borough (Policies 2 and 3), and comments on a limited number of wider thematic policies (notably Policy 31). Specific reference is made to the tests of soundness as relevant throughout the response. As such the consultation response comprises the following documents, all of which are attached to this email: 1. Four separate response forms (in respect of policies 2, 3, 4 and 31); 2. A Representations Report (September 2019) - including the Delivery Statement and Illustrative Masterplan as appendices; and 3. A separate copy of the Delivery Statement (September 2019) and associated appendices. We respectfully request the opportunity to expand upon the comments made within these representations at the Examination in Public. I would be grateful if you could confirm receipt of the representation, and should you require any further information please do not hesitate to contact me. (SEE EMAIL FOR Appendices)

The representation is supported by a number of documents and provides support for the allocation of land at Junction 6 of the M18 to the north of Thorne.

Noted.
Comment:
2.1. The Government's core objectives as established through the 2018 National Planning Policy Framework (the 2019 Framework) are sustainable development and growth. Paragraph 11 of the Framework stresses the need for Local Plans to meet the objectively assessed needs of an area. The 2019 Framework sets out to boost significantly the supply of homes and that a sufficient amount and variety of land can come forward where it is needed. In terms of building a strong and competitive economy the 2019 Framework states that planning should help create the conditions in which businesses can invest, expand and adapt. The key focus throughout the 2019 Framework is to create the conditions for sustainable economic growth and deliver a wide choice of high quality homes. 2.2. In relation to Local Plan formulation, paragraphs 15 to 37 of the Framework states that Local Plans are the key to delivering sustainable development which reflects the vision and aspirations of the local community. The Framework indicates that Local Plans must be consistent with the Framework and should set out the opportunities for development and provide clear policies on what will and will not be permitted and where. 2.3. In relation to the examination of Local Plans, paragraph 35 of the Framework sets out the tests of soundness and establishes that: 2.4. The Local Plan and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sounds. Plans are ‘sound’ if they are: Positively prepared - providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development. Justified - an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; Effective - deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in the Framework. 2.5. This document therefore considers the content of the Doncaster Local Plan - Publication Version (2015-2035) on behalf of Strata in light of this planning policy context.

Summary:
Summarises and quotes from NPPF indicating that subsequent comments are made in light of this policy context.

Policy: Tests of Soundness and national Green Belt Policy

Tests of Soundness:

Comment:

23. The National Planning Policy Framework (NPPF) advises that the Planning Authority should submit a plan for examination which it considers is "sound": namely that it is: "Consistent with national policy - enabling the delivery of sustainable development in accordance with the policies in this Framework." 24. The policies in the NPPF are very clear on the importance of the Green Belt, for example: "Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified." "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development." "Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm resulting from the proposal, is clearly outweighed by other considerations."

Summary:
Summarises and quotes from NPPF that plans should be consistent with national policy and makes reference to national policy on exceptional circumstances for altering Green Belt boundaries based on having assessed all other reasonable options for meeting identified development needs.

Response:
Representation repeats the tests of soundness and national Green Belt policy; no response required
Comment:
I trust that the Council will find these comments useful as it continues to progress its Local Plan. I would be happy to discuss these issues in greater detail or assist in facilitating discussions with the wider house building industry.

Comment:

3.1. H. Burtwistle & Son is concerned that the Doncaster Local Plan - Publication Plan is deficient in its content and the evidence base does not reflect national guidance. Test of Soundness 3.2. H. Burtwistle & Son considers that the Doncaster Local Plan - Publication Version 2015-2035 is unsound. Which test of soundness are comments about? X - Positively Prepared X - Effective X - Justified X - Consistency with National Policy

Justification 3.3. H. Burtwistle & Son is concerned that the draft Local Plan does not reflect the Framework (2019). H. Burtwistle & Son is concerned that the housing requirement does not reflect economic growth ambitions, the level of employment allocations, nor is it sufficient to meet the identified needs for affordable housing. Further H. Burtwistle & Son are concerned that there are insufficient housing allocations to meet the housing requirement. 3.4. H. Burtwistle & Son is concerned that there is a lack of up to date, available, and robust evidence base to accompany the Plan, particularly in respect of an up to date Housing Needs Assessment, whilst a 2019 update is referred to in the Plan, it is not yet publicly available, the Viability Evidence (May 2019), which requires further testing to support its conclusion, and specific evidence to justify key policies 3.5. H. Burtwistle & Son consider that the Policies in the Local Plan are not justified and does not provide an appropriate strategy. The Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. 3.6. In these circumstances, H. Burtwistle & Son do not consider the Doncaster Local Plan, in its current form, to be sound. 3.7. However, H. Burtwistle & Son consider that the plan can be made sound subject to proposed changes as set out within the following sections of these representations. H. Burtwistle & Son will continue to work with the Council to develop appropriate modifications to the Local Plan.

Proposed Change 3.8. To overcome the objection and address soundness matters, the Council should: - Identify a higher housing requirement to meet economic and affordable housing ambitions and needs. - Identify sufficient supply of housing to meet the identified housing requirement. - Review and make available supporting evidence for the Plan as indicated in these representations. - Review and provide additional testing in the Whole Plan Viability Report; and - Respond to the evidence and provide increased flexibility in the Plan, refer to specific proposed changes under each policy.

Summary:

General 1. Housing requirement does not reflect the growth ambitions or the level of employment allocations. 2. Housing requirement does not meet the need for affordable housing. 3. Lack of an up to date housing needs assessment. 4. Local Plan in current form is not consistent with national Policy. Proposed changes: 1. Higher housing requirement 2. Review of supporting evidence 3. Additional 'whole plan viability report' required. 4. Increased flexibility.

Comment:

10.1 Peel welcomes the opportunity to comment on the draft policies of the Doncaster Local Plan which includes consideration for the proposed expansion of DSA and its surroundings. 10.2 Peel generally supports the Doncaster LP and in particular draft spatial policy 7 which supports the growth and expansion of DSA. However some modifications are considered necessary to be made to this policy, and a number of other policies, to make the Local Plan sound. 10.3 Peel would welcome the opportunity to discuss these representations with the Council with a view to agreeing suitable revisions.

Summary:

Generally supports the Local Plan and Policy 7 in particular which supports the growth and expansion of DSA, but some modifications are necessary to make the policy and others sound. Welcome the opportunity to discuss these reps with the Council and agree revisions.

Response:

Conclusion type comments - specific detailed aspects of the Representation will be picked up through the previous parts of this summary/response document.
Comment:
2.7 A brief summary of our comments on the Draft Policies are as follows: - Missing evidence in Topic Papers that will not be available until Submission stage. - Lack of explanation of the settlement strategy in Policy 2. - The combined Service Town and Larger Village of Auckley - Hayfield Green is not justified. - Auckley should be identified as a standalone Larger Village within the Service Towns and Larger Village settlement hierarchy tier. - Concerns with the 920 pa Housing Requirement (Policy 3). - We object to the Local Plan only allocating sites for 15 years rather than the whole plan period. - The distribution of growth is not adequately explained or justified within the Local Plan text. There are concerns with the baseline distribution based on existing percentage of households in each settlement; and the lack of distribution of any economic uplift to the Service Towns and Larger Villages. - Exceptional circumstances for the release of Green Belt are inadequate. - Lack of analysis in the Sustainability Appraisal for minimising Green Belt release. - Not all reasonable alternatives have been considered - Airport focus to sustainable settlements e.g. Auckley - The SA Preferred Option 4 doesn't align with the Policy 3 housing target distribution. - The proposed distribution of housing growth differs from the Policy 3 housing distribution, neither of which have been subject to SA. - Concern over deliverability of over 11,600 dwellings via existing permissions. A non-implementation buffer is required. - Additional housing land should be identified to allow for a buffer, under delivery over the plan period and market choice. - Further information is required in relation to the justification for a number of policy requirements - Policy 67 Development Viability - concerns with viability reassessment once development commences / trigger points. Uncertainty for developers / landowners.

Please see attached Statement which provides a full explanation of Mr and Mrs Hall’s objection to the Local Plan Publication Draft and promotes land off Spring Lane, Sprotbrough. PROPOSED CHANGE Please see attached Statement which provides a full explanation for the suggested changes. In summary it is considered a reasonable alternative strategy to allocate Site 252 off Spring Lane in Sprotbrough for housing, either in addition to or instead of Site 929.

Summary:

Please see attached Statement which provides a full explanation of Mr and Mrs Hall’s objection to the Local Plan Publication Draft and promotes land off Spring Lane, Sprotbrough as well as suggested changes. In summary it is considered a reasonable alternative strategy to allocate Site 252 off Spring Lane in Sprotbrough for housing, either in addition to or instead of Site 929.

Response:
In summary, the Draft Plan is not considered to be positively prepared, justified, effective or consistent with national policy. We therefore consider that the Draft Plan is considered to be 'unsound' in this context. We have grave concerns with the inconsistency of the site selection process and the conclusions that have been drawn in discounting the potential development sites. We remain concerned with the proposed levels of growth for both housing and employment and would encourage the Council to plan more positively in this respect. It is acknowledged that the Local Plan should plan for additional growth to ensure that sufficient available and deliverable land is allocated to meet the new stricter tests imposed by national policy. As previously stated, we have no objection to the broad locations of development however, sufficient, deliverable sites need to be allocated within each settlement to ensure the housing and employment land requirements are met across the Borough across the Plan Period. We are hopeful that DMBC will now utilise this representation in the spirit of proper plan making and adopt the recommendations within, which will help to make the Plan Sound in accordance with the requirements of the upcoming Examination in Public and the associated assessment by the appointed Independent Planning Inspector. The Council are encouraged to revisit the proposed draft allocations in terms of their opportunities and constraints focussing on those sites which are deliverable. Consideration should be given to the infrastructure that is in place as well the wider spatial strategy, given the inaccuracies contained within the HELAA and SAM, particularly with regard to discounting Site 149 on flood risk grounds; and the implication on the site not being appropriately considered for allocation in the emerging Local Plan. It is requested that the site's merits are reconsidered prior to the upcoming Local Plan Examination.
IGas Energy PLC (IGas) welcomes the opportunity to respond to the consultation on the Doncaster Local Plan Publication Version 2019 (the Plan). We note the publication of the Plan follows the consultation on the Draft Policies and Proposed Sites and on which IGas provided comments. IGas is concerned that Policy 65 - Providing for Energy Minerals, does not meet the requirements of the Government’s National Planning Policy Framework in that: o The Policy has not been positively prepared o Does not clearly distinguish between, and plan positively for, the three phases of development (exploration, appraisal and production), whilst ensuring appropriate monitoring and site restoration is provided for. o Does not make reference to all hydrocarbons.

Introduction
IGas is a British company listed on the Alternative Investment Market of the London Stock Exchange. It is a leading UK onshore oil and gas exploration and production company with a portfolio of assets in the north west, east Midlands and the Weald Basin in Southern England. Through the UK onshore licensing regime, IGas has made commitments to Government to explore whether hydrocarbons exist within the licence areas and establish if the UK has a viable onshore oil and gas resource. The UK is globally recognised as a leading example for oil and gas industry regulation. IGas has more than thirty years’ experience of successfully and safely extracting and producing hydrocarbons onshore in the UK working closely with local communities, regulators and MPAs. IGas is committed to the protection of the environment and communities and providing safe and healthy working conditions for its employees and contractors. It is also committed to maintaining close and responsive relationships with the communities in which it operates and has a long record of accomplishment of engaging with local residents. IGas has been operating its own voluntary Community Fund since 2008, which over the last decade, has distributed almost #1 million to local projects that are charitable, educational or benevolent in purpose. IGas holds a number of onshore UK licence interests in three regions many of which it both owns and operates: - North West: EXL273 and PEDLs 056, 145, 147, 184, 188, 189, 190, 193, 293 and 295. - East Midlands: AL009, EXL288, ML 3, 4, 6 and 7, PEDLs 006, 012, 139,140, 146, 169, 200, 210, 273, 278, 305, 316, 317 and 337 and PLs 162, 178, 179, 199 and 220. - Weald Basin: DL002 and 004, ML 18 and 21, PEDLs 021, 070, 235,257 and 326 and PLs 182, 205, 211, 233, 240 and 249. PEDL’s 139, 169, 273, 278, 305 and EXL288 fall within the emerging local plan boundary and extend into Nottinghamshire and Lincolnshire. IGas therefore has a particular interest in the preparation of the Plan. IGas is pleased to see the PEDLs have been included on the Policies map in accordance with Government guidance. IGas currently extracts oil and gas from 16 hydrocarbon fields and 80 production sites in the East Midlands, primarily in the Welton and Gainsborough areas. These areas account for c.50% of the company’s production, totalling more than 47 million barrels of oil to date. Current production is principally from “conventional” reservoirs, where the hydrocarbon is stored in porous geological formations and flows to the surface under its own pressure. This is distinct from “unconventional” reservoirs where hydrocarbons are stored in non-porous rocks and stimulation techniques are deployed to release the hydrocarbon. IGas is actively pursuing interest in unconventional reservoirs within the licences it holds through the carrying out of surveys and investigatory drilling.

Summary
IGas supports the vision and objectives of the Plan for future development and is of the view that onshore oil and gas could make a significant contribution towards achieving sustainable development by the efficient use of natural mineral resources and which would contribute to the economy. IGas is concerned that Policy 65 - Providing for Energy Minerals, does not meet the requirements of the Government's National Planning Policy Framework in that: The Policy has not been positively prepared Does not clearly distinguish between, and plan positively for, the three phases of development (exploration, appraisal and production), whilst ensuring appropriate monitoring and site restoration is provided for. o Does not make reference to all hydrocarbons. The supporting explanation to Policy 65 does not reflect the requirements of the Town and Country Planning (Environmental Impact Assessment Regulations) 2017 and does not set out the roles of other regulators. The definitions for hydrocarbons set out in the Glossary should reflect those provided by the Oil and Gas Authority.

Response:
Comment noted
The Local Plan is unsound. This is because there are several issues with Green Belt boundaries, Employment allocations and structure of Local Plan. Please refer to accompanying representation document for details. PROPOSED CHANGE - Inclusion of a site-specific policy for iPort. (please refer to part 5 of the submitted representation document) - Amendment of Greenbelt boundary to exclude iPort and immediate land to the North East of the site. (please refer to part 4 of the submitted representation document) - Amendment of Policies 4 and 5 of the Local Plan, in order to include a section on employment land being phased. (please refer to part 3 of the submitted representation document) - Removal of some of the employment sites featured in Policies 4 and 5 of the Local Plan, as well as the Policies Map, or introduction of an appropriate phasing policy. (please refer to part 2 of the submitted representation document)
51. Harworth Group therefore contends that a clearly preferable alternative option to that proposed at Conibrough & Denaby exists to meet local housing need, support local jobs and economic growth, protect biodiversity and open space for recreation whilst defining an appropriate new boundary between the settlement and surrounding Green Belt. 52. This alternative option would comprise of the following elements and associated changes to the Policies Map: 53. Site 1035 to be removed from Green Belt and allocated for employment (in part - 4.2 ha) and housing development (in part - 7.3 ha) with the settlement boundary adjusted to suit. Development of this site would deliver c.7,000 sqm of employment space and up to approximately 200 houses. This would contribute significantly to meeting the requirement of 262 dwellings to meet local housing need. 54. Site 383 (in its current form) to be deallocated for housing and instead designated as Green Belt; open space, sports and recreation; and as a local wildlife site. 55. Site 040 (in its current form) to be omitted as a housing allocation and retained as Green Belt. 56. To fully meet local housing need, the Council should consider identifying further land at Conisbrough & Denaby for housing which may be in the form of a reduced extent of site 040 or 383 (i.e. that preserves the biodiversity/amenity function and limits green belt incursion) or other suitable site. 57. Accordingly, Table H2(D) of the Publication Version Local Plan should be amended as follows: (SITE 040 AND 383 SHOWN AS STRIKE THROUGH BUT CANNOT BE SHOWN) Site Ref: 1035 Address: Land off Hill Top Road, Denaby Main Site Area (Ha): 7.3 Indicative Capacity (No of houses): 200 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 0 15-17 Yrs: 0 Beyond Plan Period: 0 Site Ref: Address: [Reduced extent of site 040 or 383 or other suitable site] Site Area (Ha): Indicative Capacity (No of houses): 125 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 0 11-15 Yrs: 125 15-17 Yrs: 0 Beyond Plan Period: 0 TOTALS: Indicative Capacity (No of houses): 325 Achievability (deliverable & developable) - 0-5 Yrs: 0 5-10 Yrs: 200 11-15 Yrs: 125 15-17 Yrs: 0 Beyond Plan Period: 0 58. To assist in meeting economic growth aspirations, supporting the Main Towns and the west of the borough, employment land should be allocated at Conisbrough & Denaby by amendment to Table 4 of the Publication Version Local Plan as follows: Table 4: Employment Site Allocations Location: Employment - Light Industry & Manufacturing: As Doncaster Main Urban Area. Locations within and accessible to the existing town Unity (Hatfield Power Park and associated business parks) Table 4 (as referenced from Policy 4) should be amended to include the allocation of land at Conisbrough & Denaby for employment development as follows: Table 4: Employment Site Allocations Ref: 001 Address/ Location: Junction 6 M18, Thorne North Gross site area (Ha): 73.63 Area available for employment use (ha): 73.63 Ha to be developed in plan period: 51.54 Ref: 092 Address/ Location: Balby Carr Gross site area (Ha): 11.25 Area available for employment use (ha): 11.25 Ha to be developed in plan period: 8.60 Ref: 258 Address/ Location: Site 1, Middle Bank, Balby Gross site area (Ha): 8.48 Area available for employment use (ha): 5.00 Ha to be developed in plan period: 5.00 Ref: 441 Address/ Location: Land at Carcroft Common, Carcroft Gross site area (Ha): 49.28 Area available for employment use (ha): 24.64 Ha to be developed in plan period: 12.32 Ref: 941 Address/ Location: RHADS Site 1, Phase 4 Business Park Gross site area (Ha): 68.54 Area available for employment use (ha): 68.54 Ha to be developed in plan period: 68.54 Ref: 1032 Address/ Location: Bankwood Lane, Rossington Gross site area (Ha): 17.68 Area available for employment use (ha): 17.68 Ha to be developed in plan period: 17.68 Ref: 1035 Address/ Location: Land at Eland Road, Denaby Main Gross site area (Ha): 4.2 Area available for employment use (ha): 4.2 Ha to be developed in plan period: 4.2 [Plus other sites as appropriate]

Summary:
- Site 1035 to be removed from Greenbelt and allocated for Housing.
- Remove other allocated sites (383/040)
- Identify more land for housing at Conisbrough and Denaby.

Response:
5.38 It is considered that the allocation of sites adjoining the existing Employment policy area, Broomhouse Lane Industrial Area will provide flexibility to the main existing occupier, Polypipe. 5.39 Polypipe are a main employer in the local area and wider borough that are important to the economy and provide significant wider social benefits to the communities in which they operate. 5.40 The UDP included a large area of land, site ref 646 that would have enabled expansion but this is now allocated for housing with planning permission. With the exception of site 743, no additional employment sites have been allocated in Edlington or the wider areas in the west of the Borough. 5.41 Polypipe is a national company that provides significant economic and social benefits to Edlington and the wider borough particularly the western areas. The company is significantly constrained on its existing site as a result of the loss of the expansion area to the east. It is therefore necessary to allocated the proposed sites to provide additional areas for the expansion of the company to ensure its efficient operation and growth in the future. 5.42 The delivery of the additional employment areas in this location to support the growth of an existing business and maintain Edlington and the main towns of Mexborough and Consibrough as sustainable, inclusive communities and would ensure the plan is justified and effective in delivering the vision and strategy set out in the Plan.

Summary:
Summary to be found on pages 20 to 21 of the DLP representation on behalf of Polypipe. Allocating the sites will provide flexibility for the employer Polypipe (a national company) provides important economic and social benefits UDP included a large area of land, site ref 646 that would have enabled expansion but this is now allocated for housing with planning permission No additional employment sites have been allocated in Edlington Current location constrained. the two sites should be allocated to allow for expansion Delivery of the additional employment areas in this location to support the growth of an existing business and maintain Edlington and the main towns of Mexborough and Consibrough
3.1 Overall, we support the focus of development in the most sustainable locations and within the Main Urban Areas of Doncaster and with the new approach to development in the countryside (Draft Policy 2), bringing it in line with the new NPPF. 3.2 We do however have fundamental concerns over DMBC's draft strategic approach. 3.3 Our principal comments relate to the district's LHN figure (draft Policy 3). We have concerns over the developability of certain sites and failure to adequately sufficiently allocate the most deliverable housing sites within the Main Urban Area of Doncaster (draft policy 6 and as outlined in tables H1-3, chapter 16). 3.4 We have also provided comments on Draft Policy 1 (Presumption in Favour of Sustainable Development) in terms of Neighbourhood Planning, Draft Policy 8 (Delivering the Necessary Range of Housing), and Draft Policy 14 (Promoting Sustainable Transport in New Developments). 3.5 We therefore wish to make the following points in the interests of assisting DMBC with a sound Local Plan.

Summary:
Support focus of developing in the most sustainable locations in the urban area and the new countryside approach, but have concerns about strategic approach. Wish to make following points to assist in a sound plan.

Response:
Noted - introductory comments with the detail being picked up through the various parts of the local plan the Representation refers to elsewhere in this summary/response document.
DLP Planning have made representations on behalf of 360 Degrees Media for the allocation of land at the Former Doncaster College, High Melton to be allocated as a Special Policy Area to better reflect its brownfield nature and to support the development of this site for creative media industries, or at least to be designated as Major Developed Site in the Green Belt. The future development proposals for this site have been subject to discussion with Doncaster MBC and Sheffield City Region and are supported by these two bodies. The proposed development will have significant positive economic and skills benefit to the Borough and City Region, making the best use of previously developed land and securing the long term future of heritage assets located on the site.

Summary:
Re former High Melton College site. Should be allocated as a Special Policy Area to better reflect its brownfield nature and to support the development of this site for creative media industries, or at least to be designated as Major Developed Site in the Green Belt. The future development proposals for this site have been subject to discussion with Doncaster MBC and Sheffield City Region and are supported by these two bodies. The proposed development will have significant positive economic and skills benefit to the Borough and City Region, making the best use of previously developed land and securing the long term future of heritage assets located on the site.

Response:
5.38 It is considered that the allocation of sites adjoining the existing Employment policy area, Broomhouse Lane Industrial Area will provide flexibility to the main existing occupier, Polypipe. 5.39 Polypipe are a main employer in the local area and wider borough that are important to the economy and provide significant wider social benefits to the communities in which they operate. 5.40 The UDP included a large area of land, site ref 646 that would have enabled expansion but this is now allocated for housing with planning permission. With the exception of site 743, no additional employment sites have been allocated in Edlington or the wider areas in the west of the Borough. 5.41 Polypipe is a national company that provides significant economic and social benefits to Edlington and the wider borough particularly the western areas. The company is significantly constrained on its existing site as a result of the loss of the expansion area to the east. It is therefore necessary to allocated the proposed sites to provide additional areas for the expansion of the company to ensure its efficient operation and growth in the future. 5.42 The delivery of the additional employment areas in this location to support the growth of an existing business and maintain Edlington and the main towns of Mexborough and Consibrough as sustainable, inclusive communities and would ensure the plan is justified and effective in delivering the vision and strategy set out in the Plan.

Summary:

the allocation of sites adjoining the existing Employment policy area, will provide flexibility to the main existing occupier Polypipe are a main employer in the local area. UDP included a large area of land, site ref 646 that would have enabled expansion but this is now allocated for housing with planning permission. Polypipe is a national company that provides significant economic and social benefits to Edlington and the wider borough particularly the western areas. The company is significantly constrained on its existing site as a result of the loss of the expansion area to the east should allocate the proposed sites to provide additional areas for the expansion of the company to ensure its efficient operation and growth in the future delivery of the additional employment areas in this location to support the growth of an existing business
### Summary:

Recommendations for the publication draft are as follows, in the interests of effective, justified, consistent and positive plan making:

1. **Recommendation 1**: Doncaster should continue to strive for economic, social and environmental sustainability as well as provide further details on the relationship between the Local Plan and Neighbourhood Plan in the interests of consistency with national policy and justified plan making.

2. **Recommendation 2**: Ensure that a sustainable growth strategy is incorporated to guarantee consistency with DMBC's aims and objectives and the NPPF in the interests of positive plan making. The plan should however ensure that all housing allocations are the most deliverable and can contribute to the supply of housing over the plan period in the interests of effective and justified plan making.

3. **Recommendation 3**: Ensure that a positive growth strategy is incorporated into the LHN to ensure consistency with DMBC's aims and objectives and the SCR growth strategy. In order to achieve this DMBC should adopt a housing target of at least 1,073 dwellings per annum in the interests of positive, consistent and effective plan making.

4. **Recommendation 4**: Ensure that the shortfall of 3,195 units from the previous plan period is accounted for within the new housing target. In the interests of justified and effective plan making.

5. **Recommendation 5**: DMBC should heighten the role of Doncaster within its growth distribution, planning for at least 17,262 dwellings over the plan period within or adjacent to the Main Urban Area in line with Recommendations 2 and 3 and in the interests of effective, justified and positive planning.

6. **Recommendation 6**: DMBC should allocate more land for housing given an overall shortfall within the Main Urban Area of -9,817 plots. In the interests of a positive, justified and effective plan.

7. **Recommendation 7**: DMBC should review its housing need so to provide an up to date assessment to make sure the evidence is up to date in the interests of justified and effective plan making.

8. **Recommendation 8**: Ensure that sustainable transport is incorporated into the design of developments in the interests of effective and positive planning.

For more information please refer to comments in attached report.

### Response:

Noted - these recommendations are a summary of the Representation's proposed changes which will be picked up through the various detailed responses elsewhere in this summary/response document.

Comment:
Gladman welcome the opportunity to comment on the Publication Version of the Doncaster Local Plan consultation. Having considered the Publication Version of the Local Plan for Doncaster, Gladman are concerned about a range of matters and reiterate many of the same points made on the draft version of the Plan. Blanket policies that seek to unduly restrict development opportunities should be avoided and, where possible, policies should include the provisions necessary for flexibility that allow an NPPF-compliant assessment of the benefits and harm that would arise from a development proposal. The Plan must be positively prepared, effective, justified and consistent with national policy to be found sound at examination. The Council should explore all sources of supply in order to maximise the delivery of its assessed housing need. It is hoped that comments made within this representation are of value to the Council in the preparation of the Local Plan.

Summary:
Concluding statement referring to representations summarised elsewhere.

Response:
Conclusion type comments to the Representation; no response needed
### Comment:

4.1 This Local Plan Representation has been prepared by DLP Planning Ltd on behalf of Mr James Ogley in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. 4.2 This representation supports the removal of site ref. 040 from the Green Belt and its allocation for housing in the publication version of the Local Plan is supported, and it is considered that the allocation is essential in helping to deliver the spatial strategy for the Borough. The suitability, availability and deliverability of the site is confirmed in this representation. 4.3 This representation objects to the current wording of Policies 6, 27, 29, 30 and 66, and of Appendix 2, and makes a number of recommendations for amendments to ensure the soundness of the Plan.

### Summary:

Site 040 is supported and its suitability confirmed. Objections have been raised to policies 6, 27, 29, 30 and 66, and Appendix 2, and recommendations are made to ensure plan soundness.

### Response:
Comment: 4.1 This Local Plan objection has been prepared by DLP Planning Ltd on behalf of Mr Ian Brealey in response to the publication of the Doncaster Local Plan (Regulation 19) for consultation. 4.2 The suitability, availability and deliverability of the site is confirmed in this representation. 4.3 This representation objects to the current wording of Policies 2, 3, 27, 29, 30 and 66, as well as the lack of considering reasonable alternatives in the Sustainability Assessment and makes a number of recommendations for amendments to ensure the soundness of the Plan.

Summary:
This objection confirms that Brodsworth Quarry is suitable, available and deliverable. We object to the current wording of Policies 2, 3, 27, 29, 30 and 66, as well as the lack of considering reasonable alternatives in the Sustainability Assessment. We make a number of recommendations for amendments to ensure the soundness of the Plan.

Response:
This representation is submitted on behalf of Bellway Homes (Yorkshire) and Mr D Higgins in response to consultation on Doncaster Council’s Draft Policies & Proposed Sites (2018). This representation relates specifically to the promotion of Site 189 Higgins Agriculture Ltd, Old Bawtry Road, Finningley for Housing allocation. 4.2 This representation follows on from previous representations made to Local Plan consultation between 2012 and 2018. 4.3 Section 2 of this representation considers the strategic approach to housing and employment delivery within the Publication Local Plan. Our representations demonstrate that the overall housing requirement is above that currently planned for and should be distributed in a more flexible manner, in order to ensure that the economic growth objectives of the plan are fully supported, as well as meeting local housing need. 4.4 Within this context, the representation objects to the current wording of Policies 3, 6, 7, 27, 29, 30 and 66, and of Appendix 2, and makes a number of recommendations for amendments to ensure the soundness of the Plan. 4.5 Section 3 provides a detailed individual site-specific assessment of the Higgin’s Site in order to demonstrate the suitability and deliverability of the site for housing development. Such development will complement the growth of the Airport and its hinterland. 4.6 The site has previously been considered for housing within the Council’s HELAA document and assessed as being a suitable, achievable and deliverable in order to accommodate further housing growth. 4.7 Therefore, it is recommended that the site should be allocated for housing in order to provide housing including affordable housing, within a sustainable location, which can make a viable contribution to the vitality and sustainability of the village, in accordance with the aspirations of the Framework.

The representation objects to the current wording of Policies 3, 6, 7, 27, 29, 30 and 66, and of Appendix 2, and makes a number of recommendations for amendments to ensure the soundness of the Plan. Section 3 provides a detailed individual site-specific assessment of the Higgin’s Site to demonstrate a suitable and deliverable site. HELAA document assessed the site as being a suitable, achievable and deliverable for housing. Consultants recommend that the site should be allocated for housing, including affordable housing, within a sustainable location, which can make a viable contribution to the vitality and sustainability of the village, in accordance with the aspirations of the Framework. There are a number of tables, figures and appendices within the representation that will require referencing and consideration alongside the comments within the database. These include ten year housing supply, spatial distribution based on employment led housing need, site specific survey requirements, building description, highways scoping appendices.
Comment:

Our client's interest is in respect of the settlements of 'Warmsworth' and 'Clayton'. Our comments therefore focus on these settlements and the associated draft policies. We support the presumption of sustainable development as set out in Policy 1 and that Doncaster's Spatial Strategy will focus on delivering sustainable growth in settlements in accordance with the identified Settlement Hierarchy (Policy 2). However, we do request that the prescriptive restrictions on infill sites and development limits are amended within Policy 2 and that settlements, such as Clayton, should be considered with regard to the current restrictive development boundaries (e.g. existing settlement limits and Green Belt), to ensure that the village can accommodate appropriate future growth to continue to support the existing community and associated local services and facilities. Additionally, the housing figures identified in Policy 3 are very much a minimum target, and not a cap to future growth / development up to 2035. With regard to housing allocations, there are three sites at Warmsworth that are within our client's ownership that are considered suitable for future residential development. The sites are known as: - "West Farm Fields between High Road and Low Road West, Warmsworth"; - "Mill Lane, Warmsworth"; and, - "Common Lane, Warmsworth". It is considered that the above three sites would provide suitable and deliverable residential development sites within the Main Area of Doncaster to help meet the housing needs of the Borough over the emerging Plan period. Furthermore, to protect the future development opportunities post plan period, it is considered that an alternative option is to safeguard land to ensure that the revisions to the Green Belt boundary are long lasting and do not require further amendments post plan period (e.g. future-proof the revised boundaries - identifying land for development beyond the Plan period). For example, paragraph 139 of the NPPF states that when defining Green Belt boundaries, plans should "where necessary, identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period". We therefore support the proposal to safeguard land for future development also. There are also concerns regarding the overly onerous policy criteria set out in Policy 26 and 28 as the proposed restrictions are not considered to be in accordance with the 2018 NPPF. Amendments are therefore proposed to Policy 26 and 28. Finally, there are also strong concerns over a proposed Local Green Space in Warmsworth that is on land within our client's ownership. In conclusion, it is considered that further consideration needs to be given to the draft policies along with greater consideration to the proposed housing allocations and a Local Green Space allocation. We therefore respectfully request that the Council reconsider the proposed Housing Allocations; particularly in respect of land at Warmsworth, and to allocate our client's land for residential development to meet the identified housing need for the Borough.

Summary:

Concluding summary of comments made to various parts of the Local Plan summarised elsewhere (not included here to avoid repetition).

Response:

4.1 These representations have been prepared on behalf of our Client, Barratt and David Wilson Homes (Yorkshire East), who are an interested stakeholder in the borough, with land interests in Bawtry. 4.2 Whilst our Client welcomes the Council’s proposals to prepare a new Local Plan, they have a number of concerns regarding the content of the publication document. A number of these issues relate to the soundness of the Plan and there are concerns that the tests of paragraph 35 of the Revised National Planning Policy Framework will not be met as currently written. Our Client’s comments on Development Management policies are provided with the intention of helping to speed up the decision-making process, and to remove any unnecessary complications. This is to help to ensure the speedy delivery of much needed housing within the borough. 4.3 The principal concerns in terms of the policies as drafted within the publication version of the Plan are the proposed housing figure which the Council have identified as their housing requirement for the plan period. The evidence base which underpins this figure is considered to be flawed and there is an overreliance on the reintroduction of empty homes as well as a disproportionate distribution of housing to the top tiers of the settlement hierarchy. For example, the surplus of housing that is diverted away from villages without a sufficient service function should be distributed evenly across all six tiers of the settlement hierarchy, not just the top two. 4.4 The general Council’s approach to the distribution of housing through the borough is concerning, as they are seeking to deliver 90% of all housing in the main urban area and the main towns, with just 10% of housing in the service towns and villages. There are deliverability issues within the area, which has been demonstrated by the fact the Council have been unable to demonstrate a five-year housing land supply and despite this, the Council are carrying forward the same approach to distribution as is within the adopted Core Strategy. This is unacceptable, and the Council have to propose housing in areas where it can be delivered. Our Client strongly objects to the distribution as currently proposed, and a more even spread through the district should be brought forward. 4.5 Our Client supports Green Belt release in order to meet the housing requirement. Our Client supports Green belt release in order to meet housing requirements and objects to the exclusion of their land interests at Tickhill Road, Bawtry (site ref: 146). The sole reason it has been dismissed is because it scores poorly as part of the Green Belt Review. We have demonstrated within these representations that the Green Belt Review is flawed and the site has been unfairly assessed based on the fact it forms part of a wider Green Belt Parcel that was assessed, rather than being assessed on an individual basis. 4.6 However, our Client does support the proposed allocation of their other site in Bawtry, site reference 141. 4.7 We welcome the opportunity to outline these in further written representations and also in verbal representations at the Examination in Public in the near future.

Summary:
Comments noted. All issues are covered in previous sections of the responses.

Response:

Response:
IGas welcomes the opportunity to comment on the policies in the Plan. IGas supports the vision and objectives of the Plan for future development and is of the view that onshore oil and gas could make a significant contribution towards achieving sustainable development by the efficient use of natural mineral resources and which would contribute to the economy. However, IGas is concerned that Policy 65 - Providing for Energy Minerals does not reflect the requirements of the Government’s National Planning Policy Framework in that: IGas is concerned that Policy 65 - Providing for Energy Minerals does not reflect the requirements of the Government’s National Planning Policy Framework in that the Policy has not been positively prepared, does not clearly distinguish between, and plan positively for, the three phases of development (exploration, appraisal and production), whilst ensuring appropriate monitoring and site restoration is provided for and does not make reference to all hydrocarbons. It is considered that the supporting explanation to Policy 65 should reflect the requirements of the Town and Country Planning (Environmental Impact Assessment Regulations) 2017 and should set out the roles of other regulators. The definitions for hydrocarbons set out in the Glossary should reflect those provided by the Oil and Gas Authority. IGas maintains its suggestion that the Council may wish to refer to specific policies and supporting explanations relating to hydrocarbon developments in local plans prepared by other mineral planning authorities that have been through examination, found sound and subsequently adopted. IGas would welcome the opportunity to meet with the Council to assist in the development of the policies to the local plan, particularly in respect of hydrocarbons, to ensure they are consistent with national policy and planning guidance to make the plan sound. We look forward to the next stage of the process.

Summary:
Conclusion / summary provided

Response:
Comment note on conclusion. see individual policy representations for detail response
6.1 In order to achieve soundness in the Local Plan, DMBC, should approach Employment Land supply through a rational and sustainable approach. The Local Plan could utilize a practical scheme of phasing to deal with employment land; sites could be released gradually, in order to meet demand, avoiding excess supply of employment land. Overallocation of land is unsustainable in the long term, as land in Doncaster is a finite resource. By ensuring an aggregate supply of employment land is provided into the future for other uses besides B8, Doncaster is preparing for a diversified and adaptive local economy, which will include various uses, development and infrastructure. Ultimately, a Local Plan that designates employment sites in a hierarchical fashion, applying practicality alongside regional vision will promote sustainable development, and ensure schemes such as iPort are viable. Furthermore, RPS request that the inclusion of a site-specific policy focused on iPort. In order for iPort to be able to develop and remain viable, RPS recommend that the Green Belt boundary is redrawn and DMBC consider the changes highlighted above. 6.2 A site-specific policy would ensure that the development of the site was consistent with the principles that underpinned the granting of permission.

Summary:
Concludes that employment land should be released using a phased approach. Such an approach will ensure iPort is viable. Requests a site specific policy in respect to iPort. iPort should be taken out of the Green Belt.

Response:
Noted. There is no requirement for a phased approach as this would hinder the market. There is no need for a site specific policy as iPort benefits from planning permission. There is no requirement at this time for iPort to be taken out of the Green Belt.
Tests of Soundness:

Comment:

5.1 This representation is submitted on behalf of SYHA Enterprises Ltd and A.A Lund in response to consultation on the draft Doncaster Local Plan (Reg 19) 2019. This representation relates specifically to the promotion of Site 446: Mosham Road, Auckley for Mixed Use allocation. 5.2 Site 446 is retained within the Countryside Policy Area within the draft Local Plan. DLP objects strongly to this designation and to policies 3, 6, 7 and 8 for the reasons set out within this representation. 5.3 The site has been extensively promoted for redevelopment throughout the Local Plan preparation period. The housing led development of the site is supported in principle by Blaxton and Auckley Parish Councils, and by Peel Investments, as promoters of the DSA Masterplan. 5.4 Within this context, Section 3 of this representation provides detailed analysis of the spatial strategy set out within the draft Local plan, in order to demonstrate that the overall housing requirement is above that currently planned for and should be distributed in a more flexible manner, in order to ensure that the economic growth objectives of the plan are full supported, as well as meeting local housing need. The recommendations set out herein are proposed to ensure the soundness of the plan and ensure the most sustainable approach is taken to support the level of location of housing and employment growth sought within the Borough. 5.5 The wide ranging benefits of allocating Site 446 are set out in Section 4 of this representation and it is considered that this site can be comprehensively developed to deliver housing-led uses together with transport infrastructure relating to the proposed railway station, which will complement the growth of the Airport and its hinterland. 5.6 The sites inclusion for housing within the DSA masterplan reflects its under-utilised brownfield status and the sites suitability for development as a cleared level site with good accessibility, being in flood zone 1, with no environmental constraints. 5.7 The development of the sites will contribute towards facilitating the development of a new airport railway station, providing sustainable transport connections not only to the airport but also to settlements within the wider area. The site already benefits from a good public transport service serving Auckley village and is not therefore reliant on a critical mass of new development to secure new public transport links in order to ensure sustainability. 5.8 In respect of the consideration of other sites within Auckley for development, the site has been demonstrated to perform strongly against other sites identified within the Site Selection Methodology document. The site is also demonstrated to be a suitable, achievable and deliverable in order to accommodate further housing growth. 5.9 Therefore, it is recommended that the site should be allocated for housing in order to provide market and affordable housing, as well as other uses, in the short-medium term, within a sustainable location, which can make a viable contribution to the vitality and sustainability of the village in accordance with the aspirations of the Framework. 5.10 The landowners has a confirmed interest to purchase the land for development from SYHA Enterprises, who are committed to bringing the site forward for development in the short term. 5.11 The Local Plan as drafted is unsound because it does not meet the full housing requirement for the Local Plan period, as set out within this representation and is not therefore consistent with the Framework Paragraph 22, which requires strategic policies to cover a minimum 15 year period. 5.12 The resulting housing provision to meet future need is therefore considered unsound. It cannot be regarded as positively prepared, and is not justified by the evidence base for the Plan; nor can it be treated as consistent with national policy and support for the plan-led approach. 5.13 In order to address the overall failure of the plan to designate sufficient land for development, and to take the significant strategic opportunity presented by the proximity of the Auckley site to the airport and the location of the proposed railway station on the southern boundary of the site, we make a number of recommendations herein, including that Site 446 be removed from the current Open Countryside designation and re-allocated as a Housing site in order to contribute to the overall supply of such land within the Borough and assist in the regeneration of the locality.

Summary:

Re site 446 Auckley (rejected Housing site) 1. Site in Countryside Policy Area in Local Plan. 2. Wants site allocating for housing. 3. Says site is Brownfield. 4. Contests 'Woods' SA description of it being a Greenfield site. 5. Attached with the rep are copies of several legal cases and planning appeals that feature Brownfield land interpretation. 6. Allocation would minimise release of other Greenbelt sites. 7. Is needed to support regeneration in an area of growth opportunity. 8. Local Plan does not meet the full housing requirement for the plan period (not consistent with NPPF para 22. 9. Identified in Airport masterplan as an area for future housing growth.

Response:
This letter and enclosed forms set out our Teakwood Partners and Godwin Development’s representations to the Doncaster Local Plan: Publication Draft Plan (Regulation 19). In relation to the Site at Watch House Lane, Teakwood Partners and Godwin Development support its removal from the Employment Policy Area and re-designation into the Residential Policy Area given:

- The Site has been unsuccessfully marketed for a considerable period of time with no viable interest or market demand for the Site for employment purposes.
- The surrounding area is changing in nature from a mix of industrial and residential uses to primarily residential uses.
- The Site is suitable and can provide more appropriate uses such as residential.

However, in relation to the draft policies listed below, the DLP as currently drafted is not justified and unsound. To make the plan sound, the following amendments noted above are required:

- **Policy: Policy 8** Topic: Affordable Housing Requested Change: The DLP should warrant BtR specific recognition, whilst a specific policy approach for BtR should be provided, addressing how DC intents to address affordable housing for BtR schemes.

- **Policy: Policy 14** Topic: Car Parking Requested Change: Policy should be amended to confirm that all schemes, including those outside of the town centre, will be considered on a site by site basis, acknowledging that the minimum car parking standards may not be appropriate or necessary in some areas.

- **Policy: Policy 46** Topic: Housing Design Standards Requested Change: The Policy should be amended to reflect that a deviation to NDSS will be allowed, where the characteristics or circumstances of a development means it is appropriate to do so, specifically referencing BtR as a format where this is the case.

**Summary:**

Concluding comments of other representations made, not summarised here to avoid repetition.

**Response:**

Conclusions are noted.
In conclusion, FCC support the proposed allocations over their landholdings at Barnsdale Bar (Policy 62) and Bootham Lane (Policy 70) as illustrated on the Submissions Policies Map. In addition, FCC wish to safeguard the continuation of the Bootham Lane landfill operations as the Unity regeneration project develops.
Both Edenthorpe and Armthorpe provide a number of recommendations:

**Recommendation 6:** DMBC should allocate more land for housing given an overall shortfall within the Main Urban Area. The Main Urban Area is a key focus for growth and regeneration within the district. The site will create new, safe pedestrian and cycle links to the site itself is well connected and offers the potential to make a significant contribution to housing numbers in line with the Doncaster's Spatial Strategy and offers the potential to make a significant contribution to housing numbers. For these reasons we have over DMBC's current strategy to allocate sufficient developable housing sites within the Main Urban Area of Doncaster. The thrust of these representations is to share the significant concerns we have established a minimum target for the MUA of 17,262 dwellings against a supply of 7,445 dwellings based on our initial assessment this shows a current shortfall of -9,817 dwellings. It is therefore recommended that new sites should come forward which can clearly demonstrate developability and deliverability. The land at Grange Farm represents an opportunity to deliver essential growth adjacent to the Main Urban Area of Doncaster. Comments have also been made in relation to location of housing, housing mix, affordable housing and sustainable transport. We set out our recommendations on the Publication Draft Local Plan as follows, in the interests of effective, justified, consistent and positive plan making. Recommendation 1: Doncaster should continue to strive for sustainable development on the grounds of sustainability (economic, social and environmental) as well as provide further details on relationship between the Local Plan and Neighbourhood plan in the interests of consistency with national policy and justified plan making. - Recommendation 2: Ensure that a sustainable growth strategy is incorporated to guarantee consistency with DMBC's aims and objectives and the NPPF in the interests of positive plan making. The plan should however ensure that all housing allocations are the most deliverable and can contribute to the supply of housing over the plan period in the interests of effective and justified plan making. - Recommendation 3: Ensure that a positive growth strategy is incorporated into the LHN to ensure consistency with DMBC's economic aims and objectives and Sheffield City Region Growth Strategy. In order to achieve this DMBC should adopt a housing target of at least 1,073 dwellings per annum in the interests of positive, consistent and effective plan making. - Recommendation 4: Ensure that the shortfall of 3,195 units from the previous plan period is accounted for within the new housing target. In the interests of justified and effective plan making. - Recommendation 5: DMBC should heighten the role of Doncaster within its growth distribution, planning for at least 17,262 dwellings over the plan period within or adjacent to the Main Urban Area in line with Recommendations 2 and 3 and in the interests of effective, justified and positive planning. - Recommendation 6: DMBC should allocate more land for housing given an overall shortfall within the Main Urban Area of -9,817 plots. In the interests of a positive, justified and effective plan. - Recommendation 7: DMBC should review its housing need so to provide an up to date assessment to make sure the evidence is up to date in the interests of justified and effective plan making. - Recommendation 8: Ensure that sustainable transport is incorporated into the design of developments in the interests of effective and positive planning. As set out within the accompanying Vision Document Miller Homes are committed to delivering the Grange Farm scheme, providing an exceptional place-making opportunity across 11.2 ha of land with an ability to deliver 264 new homes for the district immediately, delivering public open space, improved walking and cycling facilities as well as access to the Armthorpe's public open spaces. The site is located adjoining the Main Urban Area of Doncaster, directly south of Edenthorpe and as such represents a Sustainable Urban Extension. Given the now reduced size of the site it would not impact on the neighbouring areas of Armthorpe and Edenthorpe from merging and would instead constitute a Sustainable Urban Extension. Initial analysis of the site's technical considerations demonstrates there are no insurmountable constraints to the development coming forward on the site therefore the site can be considered as deliverable and developable in the context of the definitions contained within the NPPF. The proposed residential use of the site meets the three strands of sustainable development (social, economic and environmental) as follows: - The Main Urban Area is a key focus for growth and regeneration within the district. - The site is situated close to a number of key bus routes and is also well connected in terms of walking and cycling. - The site will create new, safe pedestrian and cycle links to allow improved access to the green spaces within the area, including Shaw Wood SSSI. - Both Edenthorpe and Armthorpe provide a number of local amenities and facilities. Employment opportunities are also located within close proximity to the site. - The site itself is well connected and will build a critical mass of residents to help support and sustain the existing facilities and services of Armthorpe. - The development of the site offers the potential to make a significant contribution to housing numbers in line with the Doncaster’s Spatial Strategy and would help provide affordable housing and meet housing needs in a sustainable location. - The development of the site will contribute towards sustainable economic growth through direct construction employment and indirect employment and would create an increase in spending power arising from the additional population amongst other fiscal benefits. - The development would contribute to attracting an influx of people in to the area by offering a range of houses and would also assist in the urban regeneration of the area given the economics of the area. We consider the site to be a highly sustainable, deliverable and developable allocation which should be supported for residential development within the emerging DMBC Local Plan. We welcome the opportunity to maintain engagement in the preparation of the new Local Plan and would be happy to discuss any of the points raised within this report. We will also seek to meet with relevant Council officers during 2019 and beyond in the context of carrying out greater evidence base working on the site and supporting the council in delivering a sound Local Plan.
Summary:
Grange Farm is available for immediate development and can come forward in the next 5 years, delivering 264 dwellings to help supply in the urban area. There are concerns with DMBCs current strategy to allocate sufficient developable housing istes in the urban area. There is a calculated shortfall of 9,817 dwellings in this location in the plan. New sites must therefore come forward, such as Grange Farm. The recommendations are: - Recommendation 1: Doncaster should continue to strive for sustainable development on the grounds of sustainability (economic, social and environmental) as well as provide further details on relationship between the Local Plan and Neighbourhood plan in the interests of consistency with national policy and justified plan making. - Recommendation 2: Ensure that a sustainable growth strategy is incorporated to guarantee consistency with DMBC’s aims and objectives and the NPPF in the interests of positive plan making. The plan should however ensure that all housing allocations are the most deliverable and can contribute to the supply of housing over the plan period in the interests of effective and justified plan making. - Recommendation 3: Ensure that a positive growth strategy is incorporated into the LHN to ensure consistency with DMBC’s economic aims and objectives and Sheffield City Region Growth Strategy. In order to achieve this DMBC should adopt a housing target of at least 1,073 dwellings per annum in the interests of positive, consistent and effective plan making. - Recommendation 4: Ensure that the shortfall of 3,195 units from the previous plan period is accounted for within the new housing target. In the interests of justified and effective plan making. - Recommendation 5: DMBC should heighten the role of Doncaster within its growth distribution, planning for at least 17,262 dwellings over the plan period within or adjacent to the Main Urban Area in line with Recommendations 2 and 3 and in the interests of effective, justified and positive planning. - Recommendation 6: DMBC should allocate more land for housing given an overall shortfall within the Main Urban Area of -9,817 plots. In the interests of a positive, justified and effective plan. - Recommendation 7: DMBC should review its housing need so to provide an up to date assessment to make sure the evidence is up to date in the interests of justified and effective plan making. - Recommendation 8: Ensure that sustainable transport is incorporated into the design of developments in the interests of effective and positive planning. The site is a well located sustainable urban extension with god transport links and links to existing settlements and services. It meets the strands of sustainable development: - The Main Urban Area is a key focus for growth and regeneration within the district. - The site is situated close to a number of key bus routes and is also well connected in terms of walking and cycling. - The site will create new, safe pedestrian and cycle links to allow improved access to the green spaces within the area, including Shaw Wood SSSI. - Both Edenthorpe and Armthorpe provide a number of local amenities and facilities. Employment opportunities are also located within close proximity to the site. - The site itself is well connected and will build a critical mass of residents to help support and sustain the existing facilities and services of Armthorpe. - The development of the site offers the potential to make a significant contribution to housing numbers in line with the Doncaster’s Spatial Strategy and would help provide affordable housing and meet housing needs in a sustainable location. - The development of the site will contribute towards sustainable economic growth through direct construction employment and indirect employment and would create an increase in spending power arising from the additional population amongst other fiscal benefits. - The development would contribute to attracting an influx of people in to the area by offering a range of houses and would also assist in the urban regeneration of the area given the economics of the area Ongoing dialogue would be welcome, and the respondent will seek to meet relevant Council officers in 2019.

Response:
Noted - conclusion comments with the detail being picked up through the various parts of the local plan the Representation refers to elsewhere in this summary/response document.
3.40 Overall, Policy 4 and the allocation of Site 001 for the delivery of employment uses is considered to be: 1 Positively prepared - in allowing for the delivery of objectively assessed needs; 2 Justified - in providing an appropriate strategy and site specific allocation which accords with the spatial strategy and priorities for the location and distribution of growth identified in strategic policies 2 and 3, including the delivery of employment allocations across the Borough, including in the defined Main Towns and in locations that can accommodate large buildings with good access to the M18/M180 and wider strategic road network; 3 Effective - in comprising a site which is deliverable over the plan period; and 4 Consistent with national policy - in facilitating the delivery of sustainable development in environmental, social and economic terms.

3.41 A number of amendments to the site-specific development requirements (set out in Appendix 2 of the Local Plan: Publication Version) are recommended in order to reflect the work undertaken and agreed to date on the current planning application, and to ensure that the site’s development and employment opportunities presented can be maximised in line with emerging market demand and the regeneration objectives established by the Doncaster Local Plan.
In order to provide further information and/or clarification regarding the support for Policy 2 / 3 / 31. In order to provide further information and/or clarification on any of the points raised within the accompanying Representations Report and/or Delivery Statement in respect of Policy 4 and the allocation of Site 001: J6, M18, Thorne North for employment use and to directly address any comments that may be raised by objectors to the allocation.

Policy: Miscellaneous - Conclusions

Tests of Soundness:

5.1 As the major landowner and delivery partner of Site 001: Thorne North J6 M18, Mr Donald Parkinson and Barmston (Thorne) Ltd submit their full support for the allocation of this site for employment uses under Policy 4 of the Doncaster Local Plan. 5.2 The Council is justified in allocating Site 001 on the basis of the strategic spatial strategy (Policy 2) and identified priorities for the location and distribution of growth (Policy 3), and the presence of Site 001 itself also demonstrates that sites which accord with these spatial priorities are available and that DMBC is justified in adopting this approach. 5.3 This report, and the accompanying Delivery Statement and Illustrative Masterplan, has demonstrated that Site 001 is available for immediate development; is suitable for the development of employment uses as proposed by the allocation; and comprises a viable development site for which there is evident commercial interest and market demand. 5.4 The site is therefore wholly deliverable in order to meet Doncaster’s objectively assessed employment needs in the forthcoming plan period and thus comprises an effective and deliverable policy in accordance with the tests of soundness set out in the National Planning Policy Framework NPPF. 5.5 Overall, Policy 4 and the allocation of Site 001 for the delivery of employment uses is considered to be: 1 Positively prepared - in allowing for the delivery of objectively assessed needs; 2 Justified - in providing an appropriate strategy and site specific allocation which accords with the spatial strategy and priorities for the location and distribution of growth identified in strategic policies 2 and 3, including the delivery of employment allocations across the Borough, including in the defined Main Towns and in locations that can accommodate large buildings with good access to the M18/M180 and wider strategic road network; 3 Effective - in comprising a site which is deliverable over the plan period; and 4 Consistent with national policy - in facilitating the delivery of sustainable development in environmental, social and economic terms. 5.6 A number of amendments to the site-specific development requirements (set out in Appendix 2 of the Local Plan: Publication Version) are recommended in order to reflect the work undertaken and agreed to date on the current planning application, and to ensure that the site’s development and employment opportunities presented can be maximised in line with emerging market demand and the regeneration objectives established by the Doncaster Local Plan. 5.7 Comments are also made on a limited number of wider thematic Local Plan policies where these are of relevance to the future development of the site, notably to ensure constancy with the Habitats Regulations in terms of European designated sites and to ensure that the policies are positively prepared, effective, justified and consistent with national planning policy and other relevant habitats legislation, and can therefore be considered sound. 5.8 The Parkinson family and Barmston (Thorne) Ltd would be happy to provide further information and/or clarification on any of the points raised within this response, and wish to play an active role in participating in any future hearing sessions on such matters as part of the examination of the plan.

Summary:

The major landowner and delivery partner of Site 001 offer their full support for the allocation of this site for employment uses under Policy 4 of the Local Plan. The Council is justified in allocating Site 001 on the basis of the strategic spatial strategy (Policy 2) and identified priorities for the location and distribution of growth (Policy 3). Site 001 demonstrates that sites which accord with these spatial priorities are available. This representation demonstrates that Site 001 is available for immediate development; is suitable for employment uses and is a viable development site which has commercial interest and market demand. The site is wholly deliverable to meet Doncaster’s objectively assessed employment needs and comprises an effective and deliverable policy in accordance with the Tests of Soundness. Policy 4 and the allocation of Site 001 is considered to be: 1. Positively prepared - in allowing for the delivery of objectively assessed needs; 2. Justified - in providing an appropriate strategy and site specific allocation which accords with the spatial strategy and priorities for the location and distribution of growth identified in strategic policies 2 and 3, including the delivery of employment allocations across the Borough, including in the defined Main Towns and in locations that can accommodate large buildings with good access to the M18/M180 and wider strategic road network; 3. Effective - in comprising a site which is deliverable over the plan period; and 4. Consistent with national policy - in facilitating the delivery of sustainable development in environmental, social and economic terms. It is recommended that a number of amendments to Appendix 2 of the Local Plan to reflect the work undertaken and agreed to date on the current planning application and to ensure that the site’s development and employment opportunities can be maximised in line with market demand and regeneration objectives.

**Comment:**

7.1 In these representations it has been demonstrated that the draft Local Plan is not sound as drafted. This is due to the plan not being positively prepared and failing to identify and allocate deliverable non-Green Belt sites before considering the release of Green Belt land in accordance with the NPPF. Don Parkinson considers that the Council should revisit its strategy for housing allocations and seek to deliver housing on non-Green Belt sites in the first instance.  7.2 Don Parkinson has control of a sustainable site within Thorne which is not currently allocated but suitable to help meet the Council's housing requirement and reduce the need for Green Belt release sites. Don Parkinson has entered into discussions with the Environment Agency in respect of the site currently in a Flood Zone 3 designation and it is considered that there is a suitable technical solution to support the delivery of housing on the subject site.  7.3 Other policies which should be modified to ensure they are capable of being considered sound include, Policies 2 and 26, which restrict the delivery of sustainable unallocated housing sites coming forward if the Council can demonstrate a five-year supply. Furthermore, the policy seeks to restrict housing delivery to circumstances which justify a rural location. These policies do not reflect the fact that areas of Countryside are located adjacent to Main Towns which are more urban in character and can be brought forward as sustainable extensions to established settlements.  7.4 Don Parkinson considers that the proposed amendments to the Plan, which could result in the Plan being considered to be both positively prepared and sound, can be achieved through the process of Main Modifications to the Publication Plan, should it proceed to Examination in the current form.

**Summary:**

The Local Plan is not sound. It is not positively prepared and fails to identify and allocate deliverable non-Green Belt sites before considering the release of Green Belt land in accordance with the NPPF. The Council should revisit its strategy for housing allocations and seek to deliver housing on non-Green Belt sites in the first instance. The site is sustainable and if allocated could help meet the housing requirement and reduce the need for Green Belt release. Discussion are taking place with the EA and there is a suitable technical solution to support the delivery of housing on the site. Policies 2 and 26 should be modified in order to be made sound. They currently restrict the delivery of sustainable unallocated housing sites coming forward. They restrict housing delivery to circumstances which justify a rural location. The policies do not reflect the fact that areas of Countryside are located adjacent to Main Towns which are more urban in character and can be brought forward as sustainable extensions to established settlements. It is considered that the proposed amendments could be achieved through Main Modifications and would mean that the plan would be positively prepared and sound.

**Response:**
Comment:

7.1 In these representations it has been demonstrated that the draft Local Plan is not sound as drafted. This is due to the plan not being positively prepared and failing to identify and allocate deliverable non-Green Belt sites before considering the release of Green Belt land in accordance with the NPPF. Don Parkinson considers that the Council should revisit its strategy for housing allocations and seek to deliver housing on non-Green Belt sites in the first instance. 7.2 Don Parkinson has control of a sustainable site within Thorne which is not currently allocated but suitable to help meet the Council’s housing requirement and reduce the need for Green Belt release sites. Summary:

The Local Plan is not sound. It is not positively prepared and fails to identify and allocate deliverable non-Green Belt sites before considering the release of Green Belt land in accordance with the NPPF. The Council should revisit its strategy for housing allocations and seek to deliver housing on non-Green Belt sites in the first instance. The site is sustainable and if allocated could help meet the housing requirement and reduce the need for Green Belt release. Discussion are taking place with the EA and there is a suitable technical solution to support the delivery of housing on the site. Policies 2 and 26 should be modified in order to be made sound. They currently restrict the delivery of sustainable unallocated housing sites coming forward. They restrict housing delivery to circumstances which justify a rural location. The policies do not reflect the fact that areas of Countryside are located adjacent to Main Towns which are more urban in character and can be brought forward as sustainable extensions to established settlements. It is considered that the proposed amendments could be achieved through Main Modifications and would mean that the plan would be positively prepared and sound.

Response:
Doncaster Council should be congratulated for progressing the Local Plan to this stage. We do raise concerns however, that the slippage in progress may have unintended consequences for the need to introduce further changes. For example this may result in an extension to the Plan period to ensure consistency with national policy; i.e., a minimum 15 year plan period from the date of adoption. We have raised concerns regarding the housing requirement identified and the disjoint with the economic development policies. In blunt terms a failure to adequately address local housing needs will act as brake upon economic growth aspirations. We have suggested that the housing requirement be increase accordingly, and stated as a minimum. With regards delivering growth it is welcomed that the Council recognise that exceptional circumstances have been demonstrated requiring the release of land from the Green Belt. In doing so however, we have concerns regarding the approach to the settlement of Carcroft-Skellow as set out in this version of the Local Plan. It is our view that the spatial strategy fails to meet the basic requirement for the settlement. It is welcomed the Council recognise the need to review the Green Belt boundary around the town and allocate land. However, it is considered that the main site off Crabtree Lane, may not deliver the number of dwellings proposed across the Local Plan. Furthermore the Council has identified a reserve site which is carried forward from the UDP. That site off Owston, Road Carcroft is identified within a flood risk zone (a matter which has not been addressed through the plan making process). Furthermore given that that particular site has been allocated for some 20 years it is questioned whether it is deliverable. In these circumstances we suggest that land to the west of Ings Lane, Skellow is removed from the Green Belt in its entirety and allocated for the delivery of up to 51 dwellings in the early part of the Plan period.

Layouts attached as Appendices 1 and 2 to this representation indicates how the site may come forward. Additionally a Promotion Document has been prepared by Carter Jonas which has been submitted to the Council previously, but is contained as part of this representation along with a number of other technical and environmental studies to assist the Council in the consideration of this additional sustainable site.

**Summary:**

General (all points covered in other sections of the representation and analysis)
- Plan period should be 15 years from adoption.
- Housing requirement should be increased and stated as a minimum.
- Support release of land from Greenbelt in some circumstances but have concerns regarding approach at Carcroft/Skellow (see comments in other sections)
- Promotes Ings Lane site for release from Greenbelt and casts doubt on deliverability/viability of other allocated sites (covered in other sections of this rep.)

**Response:**

Comment:
Whilst Marr Parish Meeting welcomes the opportunity to provide input into the development of the Local Plan, we are still extremely concerned that the process would seem to prioritise the demands and requirements of Developers and Landowners resulting in a plan driven by the commercial aspirations of private organisations and not by the residents of Doncaster. We further believe, if the right balance is not achieved, then the resulting Plan cannot be considered robust, effective, sound or fit for purpose nor in the best interest of the Borough nor its residents. We ask that Marr Parish’s submission be included in the Doncaster Local Plan Consultation and we request that the content of our feedback is forwarded to the Inspector and that it will be carefully considered.

Summary:
